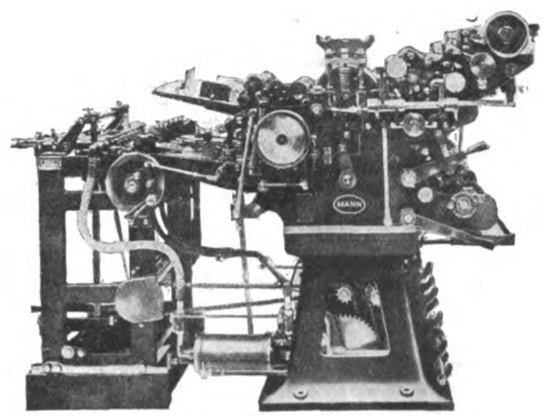
with operators and mechanics because of its great simplicity and ease of operation, and with master printers because it is, like all Intertypes, standardised and interchangeable, so that there is no fear of capital loss through obsolescence. Another point which makes the Intertype "Mixer" attractive to the printer is the fact that its price is very little more than that of an ordinary Intertype of the same capacity. An Intertype sales and service depot has been opened at 140, West Nile-street, Glasgow, and the company is running a permanent exhibition of Intertype supplies at that address. Intertypes have always been popular in Scotland, where they are used by nearly every progressive printing house. It is intended to continue this policy of establishing a chain of show-rooms and service depots which will cover the whole of the British Isles. Business has increased to such an extent that the works at Britannia-street, King's cross, London, although extensive, are becoming inadequate.

Printing Inks: Lorilleux and Bolton, Ltd.

A special service for overseas consumers of printing inks has been built up for a long period by Messrs. Lorilleux and Bolton, Ltd. Their factory in the heart of one of London's busiest industrial areas, has been specially selected because of the facilities provided for manufacturing inks under the best conditions. Accordingly the factory has been scientifically planned to manufacture the highest grade of products. Covering a large area, the factory premises include a varnish plant, colour stores, mixing rooms, mill rooms, mechanics' shop, offices and canteen. The colour mills are manufactured to designs which are the outcome of over a century of experience, and a well organised system of periodic inspection and overhaul ensures the highest efficiency essential to the production of good quality. Within their carefully built up organisation Messrs. Lorilleux and Bolton, Ltd., have a department devoted exclusively to the export side of their business. All the inks required for shipment abroad are prepared specially to suit the different climates and seasons. Apart from the attention given to the manufacture of the inks themselves special care is taken in the packing of goods. Accordingly patent air tight tins are used for letterpress or inks of soft consistency. A feature of these tins is the saving of waste. The holding capacity of the tin is made variable according to the specific gravity of the ink—this ensures the tin being completely filled, so that no skin accumulates, and gives every protection against the most severe atmospherical conditions. Again tins are lacquered, thus preventing rusting of the metal, and the labels adhere more firmly than on untreated tin. Colonial and foreign printers in hot climates will readily understand and appreciate the merit and economy afforded by this method. Thus after a long sea voyage and the keeping of the tins in stock for a considerable time the outside appearance is maintained, and on opening the tins the contents will be found to be perfect and ready for immediate use. Altogether Messrs. Lorilleux and Bolton have brought their export service up to a very high state of efficiency.

Offset Machinery: George Mann and Co., Limited.

Of the many unique offset machines introduced during the last fifty odd years by this well-known firm of London and Leeds, there is one which stands out from the rest. It is their patent two-colour and perfecting rotary offset machine. This machine is fitted with independent damping units and printed-side-up pile delivery. It is claimed to be the only machine with three main cylinders which will print either two colours on the front of the sheet, same colour front and back (perfecting), different colour front and back (perfecting), or single colour front or back. The change from two-colour to perfecting is made in a few minutes by three simple adjustments. The damping units are away from the feed board, being situated below inking, and either of these units may be used to damp both plates or only one plate. The beauty of the machine



Mann Patent Two-Colour and Perfecting Rotary Offset Machine

With Independent Damping Units to each plate.

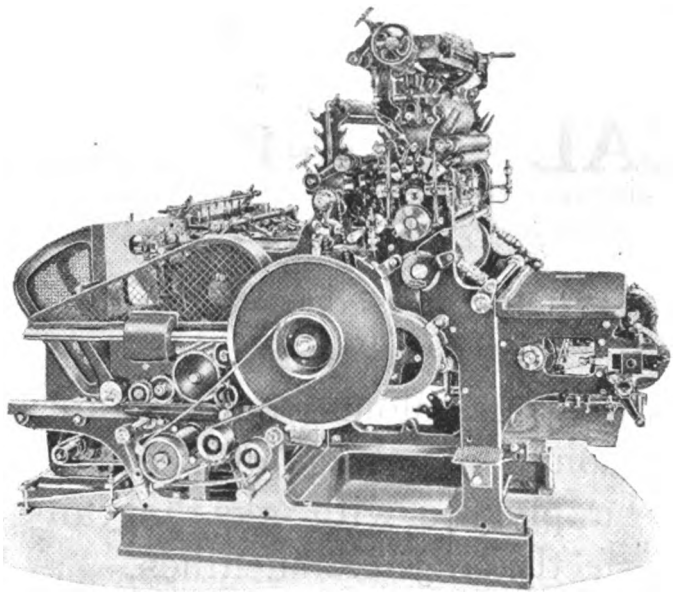
is its remarkable ease of operation, a point which has been specially studied in the construction of all Mann offsets. Mention should also be made of the Mann "Baby" (demy folio) single colour offset. Hand-fed, this machine is usually run at a speed of 3,000 to 3,500 impressions per hour, but as this speed by no means represents the maximum, the firm have designed an automatic suction pile feeder, so that now, an output of 4,000 to 6,000 per hour is obtained, according to the class of stock used. Being exceeding simple to set and entirely automatic when running, this feeder is admirably suited for the "Baby," whether used for short or long runs. Another notable feature of this machine is its surprisingly small floor space. Without the feeder it occupies only 6½ by 4½ feet, and with the feeder, 7½ by 4¾ feet; so one can quite understand why it is stated that "It will just fit that empty corner."

Book-Sewing Machines: Aug. Brehmer (British Successors), Ltd.

Improvements of a most important character have been effected in the design of the latest Brehmer book-sewing machines. These machines, manufactured by the old-established firm of Gebruder Brehmer-Leipzig, are the embodiment of insistent study of the requirements as asked for by the printing and bookbinding trade. A sterling piece of engineering is the Brehmer No. 33½ thread book-sewing machine. With such subtle calculation have otherwise common reciprocating motions been utilised to obtain 60 feed-saddle sewings per minute that the absence of all jerks, vibrations and undue noises is quite astonishing, which goes to prove the value of perfectly designed cam-curves and well-balanced levers. With a sewing speed of 60 sheets per minute, the bookbinder has here a machine with which to produce, at a very low cost, books of the highest quality of sewing. Books, either letterpress or stationery, sewn on the Brehmer No. 33½ machiae compare favourably at all times with hand-sewn books. Not only the master binder, but also the machine operator has specially been considered. All classes of books are sewn with ease, and last, but not by any means least, the setting up of the machine for different sizes of books has been so simplified that tools, screw drivers, etc., are much less in need than ever before. This reduces the formerly lost time by less than half. Brehmer's straight needles guide themselves,

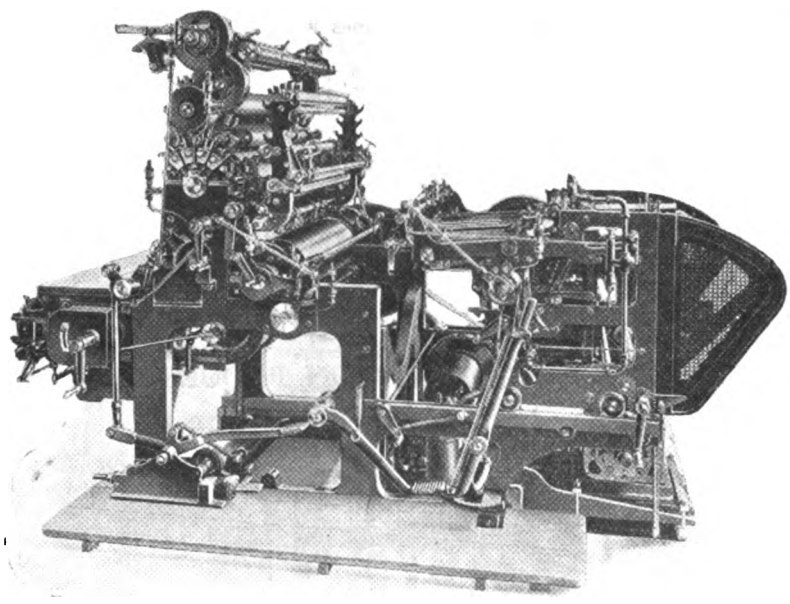
Mann "Baby" (Demy Folio) Single-Colour Rotary Offset Machine

With Automatic Feeder.



and need not be guided by detachable fittings. The machines may be used with or without insertable blocks as the work requires. To firms who make letterpress sewing their speciality, two most important sewing machines, *i.e.*, the No. 38½ and No. 38¾, should be recommended, since these machines attain a speed of up to 70 sheets per minute, and do not require any alteration of setting when changing over from one book size to another. The handling of these machines is so simple that the merest novice is able to obtain the maximum results. Gebruder Brehmer have appointed Messrs. Aug. Brehmer (British Successors), Ltd., of 12, City-road, London, E.C.1, as their official agents for Great Britain and Colonies. In their well-appointed show-

Digitized by Google



rooms at 12, City-road, the many models of Brehmer's machines can be viewed and seen demonstrated in a practical manner.

Offset Machinery: Francis J. Connolly, Limited.

As the lithographic trade is well aware, the standard No. 1 (medium) Marinoni Voirin rotary offset machine has achieved notable success in this country and throughout the world. Numerous printers have made a point of installing two or more, and to many of these machines automatic feeders are attached. To meet the present day need of maximum output, this medium machine is now offered as an entirely automatic unit, *i.e.*, with a pile (suction type) feeder and piling delivery, the feeder and delivery being integral parts of the machine. This new Marinoni-Voirin machine is capable of turning out first-class half-tone and colour work at a speed of 4,000 impressions per hour. Such a speed of printing sheets 23½ ins. by 18½ ins. is an inestimable advantage to the lithographic printer. The great advantage in a fully automatic machine, apart from the high speed, is that the sheets are fed into the feeder piled on a board and, after passing through the machine, the piled sheets on the delivery board can be wheeled away on a trolley for reinsertion in the feeder in multi-colour work, without the sheets being disturbed by hand. Printers will still have fresh in their minds the fact that at the Printing Trades' Exhibition in May this year, a thirteen-colour calendar was printed most satisfactorily on a Marinoni-Voirin medium offset in perfect register, the colours being mainly those of a "flat" nature, which show "gear-marking" on the least opportunity. An important innovation is the new Marinoni-Voirin patented drive. The motor is stowed away under the machine and the drive is direct to the main shaft at any high speed. To alter the speed of the machine the belt tension is removed by means of a brake, the actual driving pulley is removed and a larger or smaller one substituted according to the speed required. This whole operation can be done in a matter of seconds and costly electrical speed regulators are unnecessary. This new driving mechanism is illustrated in the illustration (1) on this page showing the driving side of the machine and illustrating the new method of driving. The machine is silent in operation—a feature eminently desirable for ideal printing conditions. New catalogues, printed photo-offset on a medium offset, will be gladly sent to any printer on application to Francis J. Connolly, Ltd., Union Works, 60, Park-street, Southwark, London, S.E.1.

1.—Marinoni-Voirin Medium (23½" by 18½") Single-Colour Rotary Offset
With Automatic Pile Feeder and Piling Delivery.

With Automatic Pile Feeder and Piling Delivery. Feeder moved back.

Cords: Albion Sewing Cotton Co., Ltd.

For over twenty-five years the Albion silky cords made by the Albion Sewing Cotton Co., Ltd., Fawley Mills, Tottenham, N.17, have been used all over the world. From time to time it has been found necessary to extend the premises in order to cope with the ever-increasing demand. In the printing, stationery and allied trades, there are a thousand and one uses for these cords, which can be supplied in a wide range of sizes in all colours. Practically any kind of cord can be supplied from stock or specially made in a few days. A matter of special interest to bookbinders is the "Amir" thread. Introduced a few months ago, this new thread has met with immediate success. Being of superlative strength and much cheaper than linen thread, its advantages can readily be understood. Other outstanding products of this company are tassels for greeting cards, booklets, etc.; ribbons, twines, tapes and web straps, etc., whilst many other lines in stationers' sundries can be supplied from stock or made to order. New lines are constantly being added. Enquiries are invited, and we are informed that samples with price list will gladly be sent to our readers on application.

Bookbinding Apparatus: Oscar Friedheim Limited.

For bookbinders, Messrs. Oscar Friedheim, Ltd., offer a wide range of new and up-to-date machinery, including their latest design simplified book-sewing machines, "Martini," without needle heads, which have found a very ready market owing to their simplicity, high class work and competitive price; also new and improved guillotines and folding machines. With regard to the latter, Messrs. Friedheim have without doubt met with success, repeat orders proving that every satisfaction has been given. Their entirely new jiggering and making-up machine is worthy of special note, as this is indeed a labour-saver in the finishing department and of great advantage in the forwarding shop. It is a compact and simple machine—complete mounted on a wooden table and fully equipped with a ½ h.p. motor, etc. Friedheim's new flat bronzing machine, "Kohma" patent, is proving its capabilities, having successfully dealt with some very difficult tests. Many of the largest users of bronze have this machine installed, and express themselves as absolutely satisfied with results. Repeat orders are being received and a large number of these machines have been supplied. With regard to envelope and bag-making machinery, Messrs. Friedheim are in a position to supply the very latest and most up-to-date machines, which combine exceptionally large output with the finest quality production. We understand that they have a number of big orders on hand from many of the leading firms. A visit to the showrooms of Oscar Friedheim, Ltd., at 25, Water-lane, would be time well spent for all who are interested or in the market for any class of machinery for the printing, bookbinding, box-making and stationery trades.

Machinery: Smyth-Horne, Ltd.

These well-known London machinery dealers advise us that the trade generally, not only in Great Britain but on the Continent, is showing great interest in their new specialities, such as the Smyth new No. 10 book sewing machine. This is an entirely new Smyth sewer, and is of the four feed arm type, rotary fed, designed and built to run at the high speed of 75 sections per minute. Messrs. Smyth-Horne tell us of important improvements and alterations in this new sewer (which we are able to illustrate herewith) and claim that for publishers' and printers' work it is the fastest and most up-to-date sewer on the world's market. During the last few years great improvements have been made in the well-known case-making machines, in the direction of increased efficiency. The Smyth glueing machine, which continues to give satisfaction to users, claims to be the only machine on the world's market which has the glue cylinder made of porcelain and ground dead true, and this material is found to be the best medium for distributing the film of adhesive on to any material. Further, the porcelain surface is practically unwearable and the excellent glueing distribution is maintained indefinitely. The Christensen wire stitcher feeder, which continues to be very popular, has had new and original features added, and these big, labour-saving wire stitchers are now being installed very successfully in Germany, Scandinavia, France, Italy, etc. They are of enormous help in the forwarding of journals, magazines, pamphlets, etc. The new G.R.S. continuous press feeder attracted enormous attention at the recent London Printers' Exhibition, and it continues to meet with great success. The Seybold Machine Co., Dayton, Ohio, are still making improvements in their paper and label cutter and book and magazine trimming machines. The special Seybold label cutter shown at the recent Exhibition is a most finished and useful

PRINTING INKS
MADE TO SUIT YOUR
SPECIAL LOCAL CONDITIONS

WE have for many years specialised in the manufacture of inks to suit the varying climatical conditions obtaining in colonial and foreign countries, and this exceptional knowledge of local requirements enables us to supply you with inks that can be relied upon to work perfectly on *your* machines.

All inks are carefully tested before despatch, and are specially packed to ensure perfect condition on arrival.

For whatever process printing ink may be required, we have the right inks, in the right colours, and of the right working qualities—*and at the right price.*

The Amalgamated Press.

Its Story in a Monumental Volume.

The phenomenal success of the series of Harmsworth publications and their popularity with the public is one of the outstanding features of the journalistic world, and the story of the rise of the Harmsworth concern from the issue of its first publication thirty-seven years ago, when *Answers* was founded by the late Lord Northcliffe (then plain Alfred Harmsworth), is the record of an epoch in journalism. Beginning in a very small way, and then launching the Amalgamated Press with a handful of periodicals, Alfred Harmsworth found his venture gaining special prominence as the years went by, until to-day the Press issues over a hundred separate publications, each with an enormous circle of readers and with a combined circulation running into many millions each week.

Many stories and legends are afloat in journalistic circles as to the extraordinary success of the publications of the firm, and of the enterprise of its founder, and many mythical tales are told of the methods adopted to ensure progress. It is, therefore, fitting that an authoritative history of the progress of the Amalgamated Press should be issued, and in "The Romance of the Amalgamated Press" (London: The Amalgamated Press (1922), Ltd.) Mr. George Dilnot has compiled what may be termed a monumental volume in which the whole history of the Harmsworth enterprises is set forth in detail, and an insight given into the ways and methods of the late Lord Northcliffe in the building up of the great business that he founded.

Some astounding figures are given relating to the present-day work of the firm. Of paper alone it uses some thirty-five thousand tons a year, and uses enough printers' ink to float several warships. In the Fleetway House in Farringdon Street are eight hundred people who form a headquarters staff on which hinges the activities of the firm as a whole; and besides these there are over 5,000 workers employed in the various sections of the concern, the total wages bill for the year amounting to well over a million pounds.

Quite apart from the activities of the London establishments of the firm, it sways the interests of the Gulf Pulp and Paper Company, of Clarke City, Quebec, of which, through its interest in the Imperial Paper Mills, it is the principal owner, and there it can draw upon a thousand square miles of timber for paper-making purposes; this is shipped to the Gravesend Mills in the form of mechanical pulp, and thus over two thousand tons of paper per week can be produced.

The book also describes the vast printeries, engraving works, machine rooms, etc., and it is interesting to note that the output of the process department is stated to be upwards of 15,000 blocks per month, whilst for the rotary photogravure machines many engraved cylinders are required.

Mr. Dilnot in his compilation has given full particulars of the personnel of the Amalgamated Press, the directors, the heads of departments, editorial staffs, etc.; and portraits of the leading men are provided.

The volume is a large quarto, 13 by 10½in., and is got up in *de luxe* style—bound in art canvas with black leather back and corners, gold tooled, and having on the front cover the monogram of the Amalgamated Press in gold on a black circular panel, the same device also appearing on the small panels of the back. The end papers are of a striking pattern in marbling, relieved with a touch of bronze, and the top edge is gilt, while the front and bottom edges are uncut. The letterpress shows excellent composition, and each page is relieved by a red line at the top. The paper is of good quality and pure white, the appearance of the pages being enhanced by the ample margins. The illustrations are specially noteworthy, the pages on which they appear being a deep cream tint heavy-weight paper that shows up the brown colour of the pictures and the tints on which they are superimposed in a remarkably rich manner. These illustrations are very profuse throughout the book, and include portraits of the late Lord Northcliffe, Lord Rothermere, Sir George A. Sutton, Mr. A. E. Linforth, and the many members of the managing and editorial staffs. A number of the illustrations are of the buildings occupied by the Amalgamated Press, and include the original premises in Paternoster Square, E.C., in a single room of which young Alfred Harmsworth began his successful career. Particularly interesting are the many views of the interiors of the printing offices and machine rooms in the occupancy of the firm. These have been reproduced from excellent photographs, and give a clear idea of the efficient manner in which the printing plants have been arranged, and of the many and varied machines used in the production of the firm's publications. A double-page picture of one of the main rooms at the Gravesend printing works is particularly worth a study as showing the lay-out of the plant in a large machine room. Quite interesting, too, are the pictures of the Canadian mills of the firm at Clarke City, some of them illustrating the conditions during the winter months when the ground is covered by snow. The pictures, of which there are many, also give a good idea of the extensive works and dock and rail systems of the Gravesend Paper Mills, one of the illustrations being in colours.

This history of the Amalgamated Press is well written and well produced, and its production, which has called for the use of almost every device known to the printers craft, has been entirely carried through by the Amalgamated Press (1922), Ltd. It forms a great tribute to the astonishing achievements of Lord Northcliffe, who was by general consent the greatest newspaper proprietor of his time.

Going Out for Business.

IF business will not come to the manufacturer or trader, he must go out and fetch the business. This has proved a very profitable step in many instances. In some cases it has meant travelling to the other ends of the earth. But the enterprise has been worth the trouble. A while ago, there was quite a stream of British master printers flowing across to America. Their object, however, was to study methods and equipment. Nowadays the tendency is to go abroad in search of orders. What can be done in this way is illustrated by the experience of Mr. Henry J. Pratt, a Birmingham art metal manufacturer whose firm was seriously affected by the trade slump. Mr. Pratt, however, felt that there was someone in the world who wanted his goods, and he decided to put that belief to the test. Accordingly he set off for Australia. The result was surprising even to himself. Orders were cabled home to the factory in Birmingham, and within two months of his departure the works were again in full swing. Next Mr. Pratt turned his attention to New Zealand. Buyers in Wellington, Christchurch, Auckland and Dunedin welcomed him, and gave him orders. The success he met with spurred Mr. Pratt to further efforts, and he set out for home by way of Vancouver, calling at the South Sea Islands on the way, and afterwards at Winnipeg, Toronto and Montreal. There is no question that British commercial men and British goods are welcomed in the Colonies, and a personal visitation such as Mr. Pratt made, does wonders in opening up new accounts. Naturally, it is not possible for all business men to make the Grand Tour. The next best thing, therefore, is to address prospective buyers abroad through the medium of print. English papers are simply devoured by our Colonial friends, and the trade journal is no exception in this respect. Thus information we are able to convey in the Special Export Numbers of the *British and Colonial Printer and Stationer* is eagerly awaited by a wide circle of readers. It might be asked whether the printing supply houses at home take full advantage of the facilities offered for reaching potential customers overseas.

* * *

Science and Industry

A GOOD deal of attention has been given by the British Association and in other quarters recently to the important problems surrounding industrial production. In this connection the methods of the British Engineering Standards Association have been widely discussed. The secretary of this organisation (Mr. Charles le Maistre) enlightened members of the British Association and others on the subject of "Standardisation and Simplification, with special reference to the saving of waste in industry." Doubtless vital economies might be effected, not only by the adoption of new and improved methods of manufacture, but also by the exercise of thought and care on the part of employees. The fact is that our industrial machine is far from perfect, and while national waste can, of course, be attributed to many causes, such as unemployment, over-production, labour conflicts and faulty transport services, there is no doubt that a considerable proportion of that waste and inefficiency is due to the lack of national simplification and standardisation in our industries. That tremendous waste is nowhere denied, and it is interesting to note that in the United States of America, from a general survey among a number of typical industries to ascertain the extent of such waste, it appears that on a conservative estimate there is an aggregate waste among the industries investigated amounting to from 29 per cent. to 64 per cent., and that some 10 billions of dollars could be saved annually through standardisation and simplification alone.

* * *

Simplification and Standardisation.

IN its broadest aspect, Mr. le Maistre urges, industrial simplification and standardisation implies the introduction through collective effort of economic methods in manufacture, thus tending towards national economy. It means also reducing the number of varieties for one and the same article, and so reducing the stocks which the manufacturers as well as the merchants have to keep in order to supply the national requirements. Rapidity and economy in production might be claimed as one of the leading benefits of the work, for it not only assists the maker, but also the consumer in the rapidity with which his orders can be fulfilled from stock.

* * *

The Example of Paper.

STANDARDISATION of paper is a case in point, and it is interesting to note that this achievement is being quoted as an example of what is required in industry generally. A correspondent of *The Times* (Trade Supplement) describes paper standardisation as "the only complete trade simplification plan as yet adopted," apart from certain achievements in the hardware trades. The writer goes on to show how the initiative in this case came, not from the paper manufacturers or the wholesalers, but from the printers. In the course of the negotiations, it is stated, a memorandum was signed by over 1,200 master printers, pointing out their belief in the advantages to be secured by simplification. With such convincing proof from their own consumers, the case for simplification was greatly strengthened in the eyes of the paper dealers. Latterly, the National Association of Wholesale Stationers and Paper Merchants has worked in fullest accord with the Federation of Master Printers in the simplification programme. This is an instance of the many interests that have to be convinced of the advisability and economic justification for a simplification programme before satisfactory results can be obtained.

Printing Ink for India.

The Increase of Tariff Duty and the Principles Involved.

(From Our Own Correspondent).

The Indian Tariff Board have now submitted their report on the question of protection to the Indian ink industry, and after considering all the questions involved, recommend an increase of Customs duty on imported ink from 2½ per cent. to 5 per cent. The original application for protection was presented by the Hooghly Ink Company, Limited, who are the only firm in India at present manufacturing printer's ink on a large scale. Small Indian factories are believed to exist in Lahore, Cawnpore, Poona and Calcutta, but none of them approached the Board. In order to elucidate the manufacturers' claim a detailed questionnaire was drawn up by the Board, and answers were sent in by the Hooghly Ink Company, on whose behalf oral evidence was also given by Mr. Richardson, the managing director. The Hooghly Ink Company complained that, while imported printer's ink was subect to a duty of only 2½ per cent. *ad valorem*, the Indian manufacturer has to pay 15 per cent. *ad valorem* on the raw materials he imports from abroad. For this reason they contended that the manufacturer of printer's ink in India is handicapped to the extent of 12½ per cent., and they asked that either they might be exempted from the payment of the duty on imported materials, or, if that concession were inadmissible, the duty on imported ink might be raised to 15 per cent. It is to be observed that the claim made was rather for equality of tariff treatment than for protection in the full sense.

Indian Conditions for Manufacture.

It was frankly admitted by Mr. Richardson in his oral evidence that no considerable natural advantages for the manufacture of printer's ink in India could justly be claimed. The industry is suited to Indian conditions in this respect that the machines are simple and easy to handle, so that little expenditure need be incurred on skilled labour. The expenditure incurred on materials is more than twice what is spent on wages and salaries; and it is the former factor, therefore, which chiefly affects the cost of production. Apart from that, the Indian consumption of printer's ink is still small, and the market is therefore limited. It seems to be a case in which the industry should be left to fight its own battle, and hold its own against competition if it can. In substance, the manufacturer contends that in the struggle against foreign competition he is unfairly handicapped. Not merely does he derive no benefit from the Customs tariff, but it is actually injurious to him, and he is worse off than he would be if there were no tariff at all. This contention appears to the Board to be reasonable. Tariff anomalies cannot always be avoided, but when they operate to the disadvantage of Indian industries, they should be rectified whenever possible. It could not fairly be claimed that, if the manufacture of printer's ink were to cease, it would seriously affect any important national interest. But existence of the industry has obvious advantages and it can fairly ask for equality of tariff treatment.

The tariff also operates indirectly, however, to increase the cost of manufacture. The company uses considerable quantities of mineral oil and of linseed oil, and purchases them in India, but in both cases the market price is regulated by the cost of importation. In 1923 the cost of the ink manufactured was Rs. 1,706 a ton and the average price realised was Rs. 1,917, the difference being Rs. 211. Had there been no Customs tariff at all the cost of manufacture would have been lower by Rs. 80 (Rs. 62 plus Rs. 18), if no allowance is made for miscellaneous stores. The abolition of the 2½ per cent. duty on imported ink would reduce the average price realised by about Rs. 47. The difference between the cost of manufacture and the average price realised would then be Rs. 244 (Rs. 1,870 minus Rs. 1,626). It appears, therefore, that the net results of the Customs duties is to leave the manufacturer worse off by about Rs. 33 per ton of printer's ink produced than he would be under a system of absolute free trade. In this calculation no allowance has been made for the duty on tins and miscellaneous stores.

Question of Exemption from Duty.

The primary request made by the Hooghly Ink Company was that they might be exempted from the payments of Customs duties on imported materials. Arrangements of this kind are not uncommon in other countries, and a few similar concessions have already been given in India. The remission of duty on materials may sometimes be the best way of assisting an industry, provided that adequate administrative arrangements can be made to guard against fraud. But printer's ink is very far from being a single commodity with a definite and ascertainable composition. Endless varieties of ink are in ordinary use. In these circumstances it is quite impossible to provide any automatic safeguard. In order to ascertain whether the consumption of materials in a given period was reasonable in proportion to the output, it would be necessary to employ an expert in the manufacture who would scrutinise the output in detail and verify separately the consumption of each kind of material in each kind of ink. Such an arrangement is wholly impracticable.

On the basis of equality of tariff treatment the only relief to which the manufacturer is fairly entitled is such an adjustment of the duties as will remove the handicap under which he suffers. He cannot claim to be put in a better position than he would hold under a system of absolute free trade. If the duty on printer's ink were raised to 15 per cent. the result would be to raise the average selling price by about Rs. 235 a ton, and it is obvious that the industry would then receive a substantial amount of protection. This proposal is clearly inadmissible. If, however, the duty were raised from 2½ to 5 per cent. the average price realised might be expected to increase by Rs. 47 a ton, and the difference between this sum and Rs. 33 a ton would suffice to cover the duties on machinery and miscellaneous stores, and any increase in the Customs duties paid which might result from a larger production of coloured inks. On an output of 150 tons the manufacturer would benefit to the extent of Rs. 7,000 annually.

Duty on Imported Materials.

In a case of this kind, where the Customs tariff operates to the disadvantage of the Indian manufacturer, and no question of protection is involved, the relief required should, in the Board's opinion, be given by reducing or remitting the duties on imported materials, if that be possible, rather than by raising the duty on the finished product. Any proposals ought to provide not only for a firm with an output of 150 tons a year manufacturing a wide variety of inks, but also for the small firm with an output of 20 to 30 tons and probably making only the cheapest qualities. If the works were situated up-country, the administrative arrangements connected with the payment of rebates would become much more difficult, and if the firm did not import its materials direct, but purchased them form dealers in India, the whole system of rebates might be unworkable. There is, moreover, a further difficulty. A firm making only the cheapest qualities of black ink would use a far smaller proportion of the expensive dyes and pigments, and the Customs duties paid on imported materials would be much less than Rs. 62 per ton of ink produced. The limitation of the rebate to Rs. 47 per ton of ink manufactured would then cease to operate as a safeguard, for it might easily exceed the duties actually paid. It would probably be necessary to make a detailed enquiry in the case of each firm and calculate separately a suitable limit for each. A plan involving such consequences cannot be regarded as satisfactory.

For these reasons the Board dismiss the idea of removing the tariff anomaly by a system of rebates of the duties paid on imported materials, and fall back, therefore, on the alternative plan. They recommend that the Customs duty on imported printer's ink be raised from 2½ to 5 per cent. *ad valorem*. This is by far the simplest and most direct method of dealing with the case, and places all firms who may engage in the manufacture on an equal footing. If the higher duty had meant a substantial increase in the cost of printing, there might have been room for hesitation, but it has already been shown that the effect is negligible. The 5 per cent. duty will not amount to more than one-seventh of one per cent. of the cost of printing, and the additional burden imposed on the consumer by the increase of duty will not exceed Rs. 20,000 a year.

"GOLDFILM" BLOCKING FOIL

(IN ORANGE, LEMON AND SILVER SHADES)

Made by an entirely New and Patented Process. A boon to all users of Gold Leaf, Foils, &c.

GOLD LEAF in all shades & sizes.

RIBBON GOLD LEAF from ¼in to 3¼in. wide, WHITE TRANSFER BLOCKING FOIL in two qualities. "FEST" specially prepared for fine work.

METAL LEAF, ALUMINIUM LEAF in Schlag or Book Form

OSO-ESI GOLD FOIL.

"GOLDFILM" is the finest Foil on the market. It gives better results than any Foil hitherto made. Is most economical . . . **Made in size, 16 in. x 10 in.,** used without preparation. Will work on any material with splendid results. Be convinced as to its advantages, by ordering a sample box containing 250 sheets for 30/, carriage paid. Small samples will be gladly sent gratis. Special quotations for quantities.

ONCE USED, ALWAYS USED.

We hold stocks of all kinds of Gold and Coloured Foils,&c.

BRONZE POWDERS 60 different shades & qualities in stock.

BLOCKING POWDERS.

EGG ALBUMEN in Flake and Powder.

GLUE (Best Scotch) and other brands in stock.

CELLULOID GOLD.

SILVER LEAF. &c., &c.

NEW COMPANIES.

STOCKPORT CARDBOARD BOX CO., LTD.—Capital £1,000 in £1 shares; to acquire the business of a cardboard box manufacturer carried on by A. Einbinder at 33, John-street, Stockport, as the Stockport Cardboard Box Co. Private company. Permanent directors: W. Jackson and A. Einbinder. Registered office: Bridge Chambers, 16, Market-place, Stockport.

NORMAN WARD, LTD.—Capital £4,000 in £1 shares; to acquire the business of a printer and stationer now carried on by Norman Ward as the "Birtley Press," at 14 and 15, Durham-road, and 3A, Elisabethville, Birtley, Durham. Private company. Permanent directors: N. Ward and G. Bamborough. Registered office: 3A, Elisabethville, Birtley, Co. Durham.

TOWN CRIER, LTD.—Capital £1,000 in £1 shares; to acquire the publication known as the *Town Crier* and other assets in connection therewith, and to carry on the business of proprietors and publishers of newspapers, booksellers, etc. Private company. Subscribers: H. G. Clark and F. N. R. Long. Solicitor: S. D. Woolmer, Temple-chambers, E.C.4.

FRY'S METAL FOUNDRIES, LTD.—Capital £100,000, in £1 shares (55,000 A and 45,000 B); objects—to acquire the business of Fry's Metal Foundry carried on by J. H. Fry at Holland-street, Blackfriars, S.E., and elsewhere, and to carry on the business of manufacturers, sellers or disposers of any metals and metallic substances, compounds, implements and articles, metallurgists, smelters, refiners, founders, engineers, fitters, die makers, distillers, chemical manufacturers, manufacturers of, and dealers in tar products and driers for printers' inks, etc. Private company. Directors: J. H. Fry, A. H. Mundey and P. H. Parish. Registered office: 42, Holland-street, Blackfriars, S.E.1.

PHILIP ALLAN AND CO., LTD.—Capital £16,000 in £1 shares (10,000 5 per cent. cum. pref. and 6,000 ordinary); to acquire the business and all or any of the property, assets and liabilities of Philip Allan and Co., carrying on business at 5, Quality-court, Chancery-lane, W.C., as publishers. Private company. Directors: P. B. M. Allan and J. G. Lockhart. Registered office: 5, Quality-court, Chancery-lane, W.C.2.

SALESCRAFT, LTD.—Capital £1,000, in £1 shares; organisers and agents for advertising and publicity schemes of all kinds, advertising and publicity experts, consultants, agents and contractors, advertisement writers and artists, designers of pictorial and display advertisements, etc. Private company. Subscribers: J. P. Jackson and H. W. Lawrence. First directors: H. W. Lawrence and such other person as shall be appointed by the company. Solicitors: Freer and Co, 10, New-street, Leicester.

PHOEBUS SOCIETY, LTD.—Capital £100, in £1 shares; to carry on business as new and secondhand booksellers, retailers of gramophones and recorded music, etc,, printers, publishers, bookbinders, stationers, news-agents, dealers in music, etc., prints and reproductions and art goods generally, etc. Private company. Subscribers: A. J. Lansdell and R. G. Townend. First directors: R. G. Townend and D. W. Stuttle, A.C.I.S. Registered office: 21, Grummant-road, S.E.15.

MILLBROOK PAINTS, LTD.—Capital £2,000, in £1 shares; exporters and importers of, and dealers in and traders with, aniline, alizarine mineral and other colours, for the trading requirements of or use by the company, and for wall-paper and printing ink manufacturers, papermakers, leather dyers and wood stainers, etc. Private company. Directors: A. Bjerche, E. Wettre, E. M. C. Dahne, R. P. Thomas and A. T. Harries. Registered office: Millbrook Paint Works, Neath-road, Landore, Swansea.

SIMPSON, WRIGHT, AND LOWE, LTD.—Capital £100,000, in £1 shares; to acquire the business of hosiery manufacturers carried on by J. J. S. Simpson, H. C. Wright and E. H. Lowe at Huthwaite road, Sutton in Ashfield, Notts, as "Simpson, Wright and Lowe," and to carry on the said business and that of lace manufacturers and merchants, cardboard and cardboard box manufacturers, paper merchants, etc. Private company. Directors: J. J. S. Simpson, H. C. Wright and E. H. Lowe. Registered office: Huthwaite-road, Sutton in Ashfield, Notts.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

MAGNET PRINTING CO., LTD. (London).—Particulars filed of £1,000 debentures authorised July 21st, 1925, charged on the company's undertaking and property, present and future, including uncalled capital (ranking *pari passu* with £1,600 debentures but subject to Land Registry Charge securing £700), the whole amount being now issued.

ZINKOLAC, LTD. (printers, etc., London).—Issue on August 28th, 1925, of £300 debentures, part of a series already registered.

BASTED PAPER MILLS CO., LTD.—Particulars filed of £35,000 debenture stock (£25,000 "A" and £10,000 "B"), authorised August 17th, and covered by trust deed dated August 26th, 1925, charged on certain freehold land and premises in Wrotham, Kent, and the company's undertaking and property, present and future, including uncalled capital (subject to trust deed dated May 14th, 1907), the whole amount being now issued. Trustees: A. D. Hough and J. H. G. Smith.

HENDERSON, CRAIG AND CO., LTD. (importers of wood pulp and paper, etc., London).—Debenture charged on the company's undertaking and property, present and future, including uncalled capital, dated August 20th, 1925, to secure all moneys due or to become due from the company to Lloyds' Bank Ltd, not exceeding £15,000.

E. AND C. UNDERWOOD, LTD. (printers and manufacturing stationers, etc, London).—Debenture dated August 14th, 1925, to secure £500, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: Miss P. M. George, 16, Nelson-Terrace, N.1.

J. W. MARSHALL AND CO., LTD. (paper manufacturers, etc., Bolton).—(A) Second mortgage debenture dated August 21st, 1925, to secure £3,000, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: F. Marshall, Ridgmont, Horwich, near Bolton. (B) Second mortgage debenture of even date, to secure £2,000, charged on above property. Holders: R. Dobson and R. T. Hendley, both of 38, Mosley-street, Manchester.

PAYZU, LTD. (advertising contractors, etc., London).—Issue on August 26th, 1925, of £1,000 debentures, part of a series already registered.

AUTOCHROME SIGNS, LTD.—Mortgage debenture dated August 18th, 1925, to secure £250, charged on the company's property, present and future, including uncalled capital. Holder: J. A. Parkes, Effingham House, Arundel-street, Strand, W.C.2.

RECEIVER APPOINTED OR RELEASED

PERRIS BOX CO., LTD.—T. H. Hargreaves, of Bank-chambers, 42, St. James-street, Burnley, ceased to act as receiver or manager on August 22nd, 1925.

DIRECTORY COVERS, LTD.—A. L. Passmore, of 168, Regent-street, W.1, was appointed receiver and manager on August 25th, 1925, under powers contained in debenture dated June 12th, 1924.

LONDON COUNTY PRESS, LTD. — J. A. G. Anderson, accountant and estate practitioner, of 32, White Hart-lane, Tottenham, N.17, was appointed receiver and manager on August 28th, 1925, under powers contained in debentures dated November 27th, 1923, and July 30th, 1924.

H. A. MACLAREN AND CO., LTD. — J. A. G. Anderson, accountant and estate practitioner, of 42, White Hart-lane, Tottenham, N.17, was appointed receiver on September 1st, 1925, under powers contained in debenture dated September 20th, 1924.

Eastern Markets.

Interview with Mr. E. J. J. Randall.

Messrs. Gordon and Gotch, Ltd. (a description of whose new premises is given in another part of this journal) are well known as holding a premier position as exporters of paper to Australia and New Zealand. The ten Gordon and Gotch houses in the principal cities throughout the Commonwealth and the Dominions provide an outlet for an enormous tonnage. In addition they have now established agencies in the Eastern markets.

Mr. E. J. J. Randall, who has had a wide experience in selling paper throughout India, Ceylon, Burma, Straits Settlements and China, as well as in South America and the West Indies, represents Messrs. Gordon and Gotch in the market. Mr. Randall's area includes India, Ceylon, the Straits, Bangkok, China and Japan. He has, of course, a unique knowledge of these countries, having been engaged in cultivating Eastern markets since 1910.

In a chat with Mr. Randall, a representative of this journal was informed that the position of the market in India has considerably improved. A feeling of optimism has taken the place of that nervous tension which previously existed. It is true that in regard to paper there is fairly severe competition, particularly from Continental houses, but the esteem in which some British watermarked papers are held in India and elsewhere is quite unique.

Mr. Randall's association with the dealers in the Eastern markets will, of course, stand him in good stead, and he has many friends who will wish him every success in the new venture which he is undertaking on behalf of Messrs. Gordon and Gotch. He will not only handle paper, but will also see to the development of the sale of books and periodicals, also other lines which his firm handle.

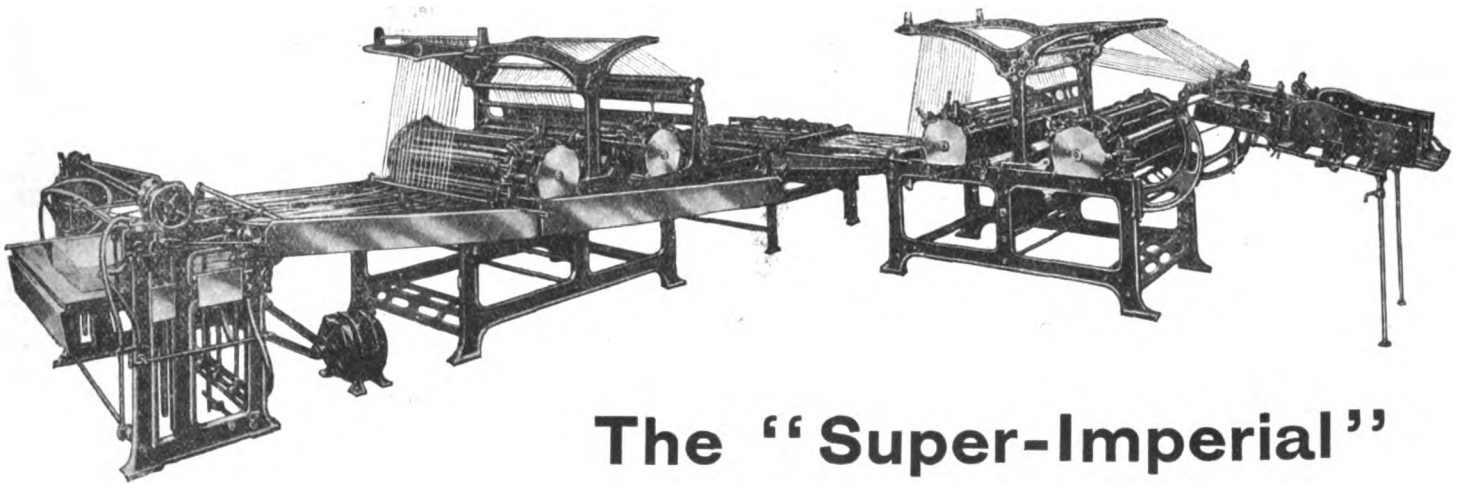
"THE BEST EQUIPPED PRINTING INK PLANT IN THE BRITISH EMPIRE."

EMPIRE INKS

The Best that Experience and Science have yet Produced



Manufactured Solely by:

THE EMPIRE PRINTING INK CO. LTD
INCORPORATING
MASON & MASON LTD

6, TUDOR STREET LONDON, E.C.4.

EMPIRE INKS with the "QUALITY KICK"
in every Can
as used on the London Leading Daily Newspapers.

NO ORDERS TOO LARGE AND NONE TOO SMALL.

The "Super-Imperial"

Four-sider Disc Ruling Machine.

For Feint Lining only or Feint Lining and Striking 2, 3 or 4 Colours on both sides of Sheets, both ways, at one operation.

With Latest Model Ream Feeder attached, Patent Pile Feeder, or Patent Pile Suction Feeder, with Single or Duplicate Tables.

This Machine will rule both sides, both ways, at one operation, at the rate of 10 to 15 reams per hour, according to size of sheets.

Improved Patent Turn Table and Latest Style Layboy with Back and Side Joggers, included with machine. The "Bailey" Patent Rotary Perforator Attachment, and Shaw's Patent Sheet Cutter can be attached.

A large supply of Discs and Spaces and Disc Rods, and full compliment of Accessories supplied with each machine.

Two Horse Power only required to drive Machine and Feeder, either from Shaft or direct from separate motor. **One Drive** only necessary.

This Machine is very fast, and saves time and labour in handling paper. A very good class of work can be obtained.

We can add Patent Turn Table to our Single Sider Disc Machines and well-known Striker Pen Ruling Machines, for Feint Lining only or Feint Lining and Striking, on one side of the paper **both ways at one operation.**

For Hand Feeding only or with any of our different classes of Feeders attached. We can supply machines both for Hand Feeding and with Feeder combined.

JOHN SHAW & SONS, Ruling and Perforating Machine Works,

Cable & Telegraphic Address: "Ruling, Honley."
Code Used: A.B.C. 5th Edition and Private.
Telephone: No. 22 Honley.

Printing and Allied Products Sent Overseas.

A Statistical Account of the Resources of the Mother Country as a Supplier of the Needs of Colonial Printers.

A satisfactory improvement is revealed in the exports of British paper and cardboard during the first six months of the year, when they amounted to 2,398,704 cwts., a figure which shows advances respectively of 202,025 cwts. (9.1 per cent.) and 315,611 cwts. (10.3 per cent.) compared with January to June of the two preceding years. In value the total shipments overseas during the first half of the year were £4,765,768, representing increases of £438,059 (10.1 per cent.) and £522,071 (13 per cent.) against the similar periods of the two preceding years. The following statistics, which deal separately with many of the most important classes of goods handled by the Colonial printer are selected from the Board of Trade Returns for the half year ended June.

Printing Paper.

Printings continue to occupy the most prominent position in the paper and cardboard export list, and during the first half of the year reached a total of 1,738,314 cwts., representing an advance of 367,169 cwts. compared with the corresponding period last year. The importance of this class of manufacture to the British exporter can be readily understood when it is realised that shipments under the heading of printings during the first half of the year amounted to approximately 70 per cent. of the total quantity of paper and cardboard shipments.

Australia is easily the best market for British printings, absorbing during January to June no less than 1,151,112 cwts. This figure not only registers a proportion of 66.2 per cent. of the total quantity of this class of manufacture sent abroad during the period mentioned, but shows advances respectively of 390,722 cwts., and 386,624 cwts. contrasted with the purchases in the corresponding period of the two preceding years. The value of the deliveries of printings during January to June amounted to no less than £1,267,441, or 57.1 per cent. of the total value of the shipments under the category of printings.

New Zealand was a large purchaser of printings during the first half of the year, consuming no less than 119,540 cwts. (of the value of £155,287), as against 111,388 cwts. (£137,221) in the corresponding period last year, and 111,021 cwts. in January to June of the preceding year.

British India, though a considerable buyer of printings, bought less during the first half of the year than was the case in either the corresponding period of last year or of the year before, the actual shipments for the three six-monthly periods being as follows: 85,591 cwts. (£140,215), 1925; 91,489 cwts. (£145,083), 1924; 118,896 cwts. (£196,835), 1923.

British South Africa purchased to the extent of 61,186 cwts. (£104,221) during the current half-year, against 52,432 cwts. (£93,866) in the corresponding period last year, and 72,107 cwts. (£125,851) in January to June of the preceding year.

Ceylon is shown as an improved market, with 15,092 cwts. (£22,119), against 10,194 cwts. (£15,237) in the similar period last year, and 8,361 cwts. (£16,387) in the 1923 six months.

Canada is also shown as a bigger buyer of this product, consuming in January to June shipments amounting to 14,819 cwts. (£29,740), contrasted with 9,438 cwts. (£21,481) and 9,294 cwts. (£19,143) in the two preceding corresponding periods.

The Straits Settlements and Malay States bought to the extent of 7,268 cwts. (£14,347) during the first half of the year, contrasted with 5,540 cwts. (£11,057) and 4,238 cwts. (£8,274) in the corresponding six months of last year and the year before.

Writing Papers.

Statistics relating to the oversea demand for British writing paper during January to June indicate a satisfactory improvement compared with the similar period last year, but show a falling-off against the same six months of 1923. The figures for the three respective periods were: 106,682 cwts. (£316,883), 1925; 102,366 cwts. (£296,759), 1924; 120,664 cwts. (£332,573), 1923.

With regard to the markets for British writing paper, the most important purchaser was again Australia, shipments to the Commonwealth during the first six months of the year representing 42,081 cwts. (£104,513), contrasted with 33,803 cwts. (£93,262), and 50,044 cwts. (£122,287) in the two preceding corresponding six-monthly periods. British India is shown as a declining market, taking only 18,873 cwts. (£56,302), as compared with 20,531 cwts. (£56,632) and 25,964 cwts. (£72,456). The purchases of the other enumerated British markets during the first half of the year were as follows, the shipments for the corresponding six months last year being in parenthesis: New Zealand, 12,946 cwts., £31,930 (16,561 cwts., £35,004); British South Africa 6,051 cwts., £21,222 (5,769 cwts., £19,507); Canada, 2,105 cwts., £6,959 (1,454 cwts., £4,446); Ceylon, 2,577 cwts., £7,698 (1,882 cwts., £5,505); Straits Settlements, 1,177 cwts., £4,081 (647 cwts., £2,736).

Coated Papers.

Coated paper exports, which comprise printed and embossed paper hangings indicated a better demand during January to June than was experienced in the similar period of the two preceding years. During the last completed six months, shipments under this heading reached a total of 77,427 cwts. (£351,288), compared with 75,424 cwts. (£349,916) last year, and 61,092 cwts. (£287,557) in the corresponding period of the preceding year.

Statistics concerning "all other" sorts of coated papers, which classification does not include waterproof wrappings and roofing paper, reveal a considerably increased demand. Exports during January to June were 47,350 cwts. (£232,282), against 23,543 cwts. (£155,180) in the 1924 period and 22,254 cwts. (£147,905) in the six months of the year before.

Tissues.

Tissue paper exports appear to have met with a steady demand from abroad, shipments during the first half of the year amounting to 7,530 cwts. (£80,240), against 7,497 cwts. (£67,227) in the corresponding period last year, and 7,149 cwts. (£70,462) in the six months of the preceding year.

Packings and Wrappings.

Whilst a steady expansion has been made in the imports of packings and wrappings into the United Kingdom from foreign sources, it is regrettable to note the consistent decline experienced during recent years in the quantity sent abroad from this country. Exports under this heading during January to June registered 112,126 cwts. (£195,718), as against the much larger figures of 320,473 cwts. (£269,396) and 272,417 cwts. (£220,745) in the six months of 1923.

Stationery Exports.

In every item of this important group of exports British manufacturers have maintained their hold on oversea buyers. Shipments of envelopes (not including boxed stationery goods) reached a total of 26,288 cwts. £108,812), compared with 24,321 cwts. (£97,115) and 21,614 cwts (£91,039) in the corresponding periods of the two preceding years. "Other sorts" of stationery were considerably higher, amounting to 96,245 cwts. (£654,372), figures which compare with 79,209 cwts. (£562,055) and 73,323 cwts. (£614,650) in the two preceding corresponding periods.

Deliveries abroad of stationery (other than paper) during January to June steadily increased compared with the similar periods of the last two years. Exports under this heading reached a value of £741,309, compared with £720,346 and £678,966 respectively in the two preceding six-monthly periods. Of the enumerated British Possessions British India stands out as the largest buyer of this class of material during the period under review receiving shipments to the value of £96,402, as against £93,904 last year, and £101,433 in the corresponding period of the preceding year. Australia occupies the second place with £87,865, against £85,151 last year (six months), and £81,413. Consignments to the other British markets during January to June were as follows, the figures in parenthesis representing the value of the shipments for the six months of last year: New Zealand, £26,683 (£24,438); Canada, £25,742 (£24,630); Straits Settlements, £15,984 (£14,497); Ceylon, £11,556 (£9,989). Exports of this category to the United States amounted to £65,157, whilst those under the classification of "other countries" reached the big figure of £374,280.

Boards.

The export statistics relating to shipments of British boards reveal evidences of the effects of competition from foreign sources. Whilst imports continue to grow, exports show a decline. During the first half of the year, deliveries of boards sent overseas totalled 65,781 cwts. (£107,458), against 82,702 cwts. (£130,697) last year, and 53,291 cwts. (£103,569) in the 1923 period.

Printed Books.

Exports of printed books form a very important item in the returns relating to the goods handled by the oversea printer and allied trader. This is realised when it is remembered that in total value they form something like the second highest figure amongst the various classes of goods dealt with in these statistics. In spite of severe competition from abroad, especially from America, printers at home are maintaining a satisfactory position in supplying oversea requirements. Exports of printed books during the half-year represented 228,297 cwts. (£1,975,058), contrasted with 227,793 cwts. (£1,873,412) last year, and 151,713 cwts. (£1,513,564) in the corresponding period of the preceding year.

Printing Type.

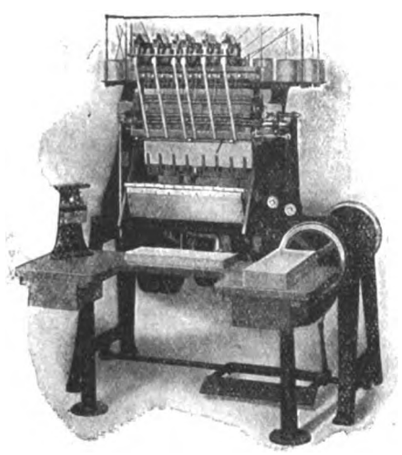
Printing type exports during the first half of the year present a more healthy aspect than has been recorded during recent months. Printers overseas do not need to be reminded of the ability of the British manufacturer to supply fully their printing requirements. Shipments of printing type during the three six-monthly periods were: 115 tons (£34,354), 1925; 97 tons (£32,180), 1924; 99 tons (£33,349).

Boxes and Cartons.

In keeping with the majority of the various classes of goods included in the paper and cardboard returns, it is satisfactory to note that deliveries of boxes and cartons indicate an expansion in trade. Shipments during the first half of the year reached a total of 31,733 cwts. (£105,641), as compared with 24,698 cwts. (£96,497) in the corresponding period last year, and 15,819 cwts. (£69,961) in the 1923 six months.

Paper Bags.

The returns relating to the exports of paper bags show every indication of enterprise being displayed by manufacturers of paper bag-making machinery to supply the needs of a growing oversea demand. Evidence of this is shown by the increased volume of paper bags sent abroad during the six months under review. Shipments, which were 15,266 cwts. (£41,818) in the first six months of 1923, and 26,232 cwts. (£53,313) in the similar period last year, rose to 30,752 cwts. (£59,993) during January to June.



Playing Cards.

In spite of much competition from foreign sources, deliveries abroad of playing cards of British manufacture are well maintained. The slightly larger purchases made by Colonial consumers of playing cards of British make is all the more noteworthy in view of the consistently lessened demand that was recently manifested in the statistics. Exports during January to June represented 1,720 cwts. (£31,174), contrasted respectively with 1,683 cwts. (£32,884) and 1,037 cwts. (£19,185) in the preceding corresponding periods.

The Australian Market.

Statistics concerning Imports into the Commonwealth during Latest Fiscal Year show the Important Position of the United Kingdom.

The following figures, which deal with the shipments of nine important classes of goods entering Australia during the fiscal year ended June, last year—the latest period for which complete returns are available, and which have recently been published—give a clear idea of the demands of the Commonwealth market. The returns again show the United Kingdom to be by far the largest contributor to Australian requirements connected with the printing and allied trades. In value, the nine classes of goods mentioned in the following statistics represented a total of £7,240,945, of which no less than £4,261,273 was the share of the United Kingdom.

Statistics under the classification of paper and stationery show that the imports under this heading amounted to £6,443,226 during the twelve months ended June last year, as against £6,275,837 in the corresponding period of the preceding year. The value of the consignments of paper and stationery to the various States of the Commonwealth were as follows, the figures in parentheses representing the values for the preceding 12 months: New South Wales £2,728,491 (£2,839,798), Victoria £2,296,150 (£2,180,524) Queensland £536,067 (£468,871), South Australia £493,717 (£465,154), Western Australia £275,016 (£229,220), Tasmania £113,186 (£92,051), and Northern Territory £599 (£219).

Newsprint.

News-print in rolls (not less than 10 in. width) forms a very important item in the paper and stationery imports, and during the year ended June amounted to 84,715 tons, of the value of £1,773,699, as compared with 76,163 tons, of the value of £1,669,749 in the preceding twelve months. The United Kingdom was by far the largest contributor of this class of manufacture during the twelve months, with supplies amounting to 59,140 tons (£1,285,813), against 36,853 tons (£850,342). Canada occupied the second place, with 1,967 tons (£42,842), contrasted with 21,666 tons (£446,455) in the preceding twelve months. The shipments of the other countries were as follows, the totals for the preceding twelve months being shown in parentheses: Sweden, 14,744 tons, £274,395 (7,546 tons, £158,151); Norway, 8,821 tons, £169,856 (9,729 tons, £207,552); Finland, 29 tons, £524 (55 tons, £1,102); Netherlands, 9 tons, £183 (56 tons, £1,083); Germany, 5 tons, £81 (nil); Czecho-Slovakia, nil (6 tons, £179).

Regarding the purchases of the various States, New South Wales is shown as the largest buyer of news-print, absorbing 35,176 tons (£726,964). Victoria came next with 20,693 tons (£666,982), followed by Queensland 8,169 tons (£163,222), South Australia 7,914 tons (£154,467), Western Australia 1,534 tons (£32,716), and Tasmania 1,229 tons (£26,348).

Printed Books.

The Commonwealth relies to a fairly large extent on outside sources for its supplies of printed books, comprising music, periodicals, and newspapers. Imports coming under this classification during the last completed fiscal year were again a very substantial figure, representing a total value of £1,110,120, as compared with £1,107,358 in the preceding twelve months. The United Kingdom maintains her satisfactory position as the most prominent contributor of this class of product to the Australian market, with supplies valued at £962,423, a figure, however, which shows a decline compared with the £975,919 recorded in the twelve months of the preceding year. The United States, the second largest supplying country on the list, has slightly improved her position, having increased her consignments from £110,566 to £121,937 recorded during the last completed twelve months. Supplies of printed books from the other principal countries during the year were as follows, the value of the shipments for the preceding twelve months being given in parentheses: New Zealand, £7,478 (£6,088); Germany, £3,183 (£2,860); Greece, £2,784 (nil). New South Wales and Victoria were responsible between them for absorbing by far the biggest proportion of this class of material, the former State receiving shipments to the extent of £508,813 and the latter £342,336.

Printing Machinery.

Statistics relating to the imports of printing machinery clearly indicate the importance of the Australian market, and show to what a large extent the field is open to the enterprise of British manufacturers. Imports of printing machines and presses, which were of the value of £177,385 in the twelve months ended June, 1923, rose to no less than £404,429 the year following. In this branch of manufacture the United States holds the leading position, and has actually increased her shipments from £94,025 to £245,633. The United Kingdom has also made considerable headway, shipments from this country having advanced from £79,387 in the twelve months ended June, 1923, to £133,384 during the last completed fiscal year. The supplies of other principal countries during the twelve months ended June last year were as follows, the figures in parentheses representing the shipments of the preceding year: Canada, £484 (£243); Denmark, £417 (£66); France, £7,685 (£42); Germany, £5,178 (£782); Switzerland, £6,378 (£2,674).

Box Making and Bookbinding Machinery, etc.

Deliveries under the heading of paper-making and paper-box making machinery, bookbinding and bag-making machinery, reveal that an increasing demand is being experienced in Australia for these classes of goods. During the twelve months ended June last year imports under this classification reached a value of £82,826, a big figure which shows a fairly substantial advance on the £58,281 recorded in the preceding year. With regard to the countries of supply, the United Kingdom occupies the leading position with shipments amounting to £41,481, against £28,825 the year before. The United States came next with £29,503, against £26,499 in the preceding year, and then Germany (£10,295, against £2,348), and Canada (£859, against £167).

Composing Machines.

Shipments of "Linotype, Monotype, Monoline, and other type composing machines" during the last completed twelve months were less in value than in the preceding year, the figures being £240,078, as against £382,309. In this category of imports the United Kingdom and the United States held practically this market to themselves. The contributions of the United Kingdom during the year ended June last amounted to £30,465 compared with £33,640 in the preceding twelve months, whilst those of the United States were £209,405, compared with £346,889 the year before.

Electrotyping and Stereotyping Machinery.

Under the classification of "machines used exclusively for, and in the actual process of electrotyping and stereotyping," the United Kingdom has again secured a large proportion of trade. The total value of the imports covering this section of manufacture amounted to £46,943 in the twelve months ended June last year, as contrasted with £36,847 in the preceding year. Supplies from the United Kingdom during the last completed twelve months represented £26,390, compared with £24,090 in the preceding year. Those from the United States registered £17,849, against £12,757 in the previous year, whilst Switzerland was responsible for shipments of the value of £2,671, against nil the year before.

Aluminium Rotary Graining Machines.

Imports under this heading reached a value of £2,421 in the year ended June last year, and £2,577 the year before. Three countries only are engaged in supplying the bulk of this class of manufacture to the Australian market. Shipments from the United Kingdom reached a value of £1,865 in the last statistical year, against £438 in the preceding twelve months, whilst contributions from the United States were £353, against £15. Those from Germany were £203, against nil the year before.

Printing Type.

"Printing type, including spaces and quads, lino. and other slugs; metal furniture and quotations" imported during the year ended June last year reached a total value of £12,331, against £13,687 in the previous year. The two chief countries of supply were the United States with £7,793, against £9,724, and the United Kingdom £4,392, against £4,007.

Roller Composition.

Statistics relating to the imports of "printing roller composition" evidence the firm hold this country has in Australia in supplying this product. Total imports into the Commonwealth during the last completed year reached £1,850 compared with £1,759 in the preceding twelve months. Of the total value the share of the United Kingdom represented £1,813, against £1,757 the year before. Receipts from the United States amounted to only £37 compared with £2.

Miscellaneous Printers' Supplies.

Imports under the heading of "printers' materials, comprising circles, clumps, curves, paring knives, leads and rules" represented a value of £6,378 during the twelve months ended June last year, compared with £6,907 in the preceding year. Consignments covering this class of manufacture from the United Kingdom during the last completed fiscal year were of the value of £5,871, contrasted with £6,334 the year before, whilst those from the United States registered £507, against £573 in the preceding year.

A Quarter's Paper and Stationery Imports.

Additional evidence of the very important position occupied by the United Kingdom as a supplier of paper and stationery to the Commonwealth is provided in the statistics of Australian imports for the March quarter. These returns show that there has been a larger total consumption of paper than in the corresponding quarter of last year. A very satisfactory feature of the increase is that practically the whole of it goes to the credit of the Mother Country. The total value of Australia's imports of paper and stationery during the quarter ended March was £1,779,906, an advance of £121,639 over the shipments of the corresponding three months of 1924.

Paper imports alone during the March quarter were of the value of £1,219,149, the United Kingdom being responsible for £817,852. In the same three months last year paper imports from this country were valued at £653,653.

The contributions of the other importing countries during January-March, in the order of importance, were as follows, the figures for the corresponding quarter last year being given in parenthesis: United States, £39,403 (£57,341); Canada, £31,816 (£56,246); Germany, £19,711 (£5,554); Japan, £691 (£566).

The total value of stationery imports into Australia during January to March amounted to £560,757, compared with £550,101 in the corresponding period last year. The shares of the Mother country were respectively £419,348 and £363,869. Stationery shipments of the other supplying countries during January to March were as under, the contributions for the same period last year being shown in parenthesis: United States, £104,935 (£116,285); Canada, £9,455 (£11,596); Germany, £8,015 (£4,862); Japan, £2,331 (£11,103).

The Czecho-Slovak Press Bureau reports an improvement in the demand for paper made in that country. The value of exports during the first half-year are estimated at between 140 and 150 million crowns, compared with 120 millions in the corresponding period last year. Exports of paper pulp to the United States during the first five months of the current year attained a value of 30 million crowns, compared with 8 millions last year. Increased sales are likewise being made to Germany and France.

Australian Notes.

Printers and National Insurance—State of Employment—Enforcing Minimum Wage—New Company Registrations—Dissolution of Partnership, etc.

(From Our Sydney Correspondent.)

The Royal Commission on National Insurance has been sitting at Federal Parliament House, Melbourne, and among the industries inquired into has been that of printing. The secretary of the Printing Trades' Union, Mr. Robert Elliott, stated that there were 2,900 male and 1,500 female employes in the union. The average unemployment was 2 per cent., but at present, which is a slack period, it had increased to 4⅓ per cent. Generally speaking, the last six months of the year was the busiest period. From a union benefit fund for unemployment married men received 25s. a week for ten weeks, and single men 15s. a week for the same period. There was no provision for female employees. There were approximately 90 per cent. of skilled workers employed in the trade. Tradesmen served an apprenticeship of six years, and in Victoria at the present time there were over 600 apprentices. There had been unemployment in this State constantly for the past 40 years to his knowledge. Witness was in favour of a scheme of national insurance, and was of the opinion that there should be no direct contribution.

Asked if he were aware that if the unemployed were paid the basic wage it would cost the country £15,000,000 a year. Mr. Elliott said he was not surprised at that, but still thought that the Government should provide the money from consolidated revenue. There was a tremendous amount of printed matter brought to the country from abroad. Asked if he would be in favour of imposing a duty sufficiently high to make it unprofitable to import publications, Mr. Elliott replied that he was in favour of such an imposition, but that it should be applied judiciously. The introduction of linotype and monotype had have the effect of increasing employment.

A Sydney printing firm, despite a plea of ignorance of the law, has been fined 10s. and costs in respect of each of two cases of employing female labour at wages under the award rate. The same firm was also fined 20s. and costs for failing to keep proper time and pay sheets, and the same amount for failing to exhibit a copy of the award.

Amongst new companies recently registered is the Sydney company of Spence Wride, Ltd., which has a capital of £50,000, divided into 45,000 ordinary and 5,000 employees' shares. It is formed to take over the business of printers, stationers and booksellers now carried on by Pocklington and Wride.

Another new Sydney company is Edgar Kemp (Engravers), Ltd., which has been formed with a capital of £10,000 to carry on business as engravers, die sinkers, stencil cutters, etc.

A new Sydney printing and publishing company is Motor Life Publications, Ltd., with a capital of £10,000 in £1 shares.

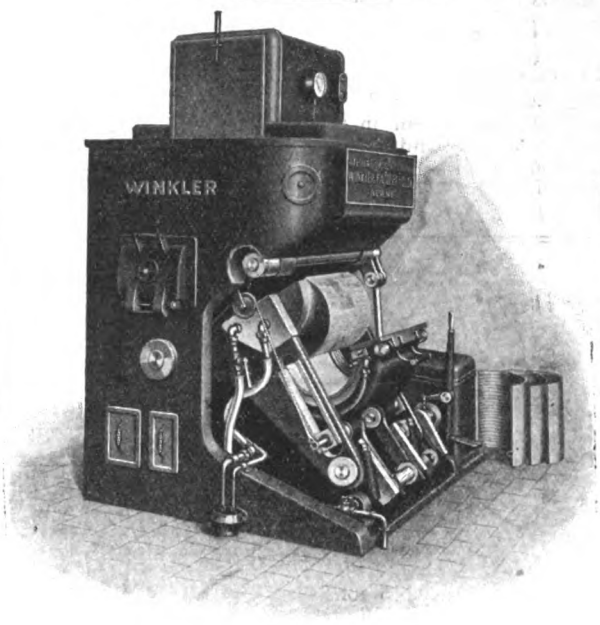
The partnership previously subsisting between Charles Lander, Walter Leslie Lander, George Leslie Beard, Leslie Grumitt, Herbert Ayres, George Gordon Butterworth, and Henry William Bradbury, carrying on business as photo process engravers at 109, Bathurst-street, Sydney, under the name and style of "The British-Australian Photo Process Co.," has been dissolved by mutual consent as from July 13th.

In the Banco Court £300 damages has been awarded against the Sydney and Melbourne Publishing Co., Ltd., in respect of an alleged libel. The plaintiff was Thomas W. G. Hadaway, a baker, carrying on business near Sydney, who claimed £1,000 damages. It was mentioned during the hearing that the report had been copiedin good faith from a Newcastle newspaper, also that £400 had been obtained from another newspaper in connection with a similar report.

Long Life and Low Upkeep Cost

THE truth about the Winkler is too revolutionary to be adequately described—it is best appreciated by personal experience.

By combining totally different engineering principles with marvellously accurate machining the makers have arrived at a totally different standard of casting machine value—priceless quality.



Winkler engineers were the first who ever deliberately set out to build a casting machine that theoretically could never wear out. How well they have succeeded, time alone will prove.

No amount of ordinary usage can ever materially affect the Winkler. In fact, a million plates will have no more effect on the machine than the output for a single edition.

The Winkler has no fast-running parts except the flywheel and the driving worm-shaft, and all the motions are positive. It consists of about four times less moving parts than the next fastest automatic caster. Parts which do not exist cannot wear out and cannot cause trouble.

Here then at last is a casting machine which can be regarded as an intrinsic part of its owner's estate—a permanent piece of property that does not run a losing race with time.

W. J. LIGHT & Co LIMITED

Sole Agents for U.K & Colonies for WINKLER, FALLERT & Co., Ltd., BERNE (Switzerland).

Edwards, Dunlop and Co., Ltd., report a net profit of £65,122 for the year ended April 30th, compared with £62,047 for 1923-24. The usual 10 per cent. dividend on ordinary shares takes £10,166; the preference shareholders receive £4,325; £18,000 is added to the reserve fund, raising it to £190,000; and £19,754 is carried forward.

The company has completed the purchase of a warehouse at Lonsdale-street, Melbourne, and the Victorian branch is now installed. A block of land at the rear of the Brisbane warehouse has also been purchased.

The directors of Gordon and Gotch (Australasia), Ltd., have decided to make a new issue of 100,000 ordinary shares of £1 each, to be offered at par to ordinary and preference shareholders alike in the proportion of one new share for every five shares held. The present paid-up capital is £500,000 in 400,000 ordinary shares and 100,000 8 per cent. cumulative preference shares.

From the date of the coming into force of the International Postal Union Convention of Stockholm, and regulations thereunder, namely, October 1st, 1925, the requirements applicable to the use of transparent panel envelopes within the Commonwealth are to be amended to agree with the conditions laid down by the Stockholm Congress in regard to the use of such envelopes in the international service.

The new conditions differ from those now in force in that the requirement as to the panel forming an integral part of the envelope has been removed, as regards envelopes to be used for the enclosure of ordinary correspondence, but that stipulation has been retained in the case of envelopes covering registered articles. It will also be observed that any envelope, the transparent panel of which reflects artificial light, will not be accepted for transmission through the post.

Gordon and Gotch, Ltd.

Concentrating Headquarter Activities in Fine New London Offices.

Messrs. Gordon and Gotch, who, apart from their activities as general merchants and advertising agents, are described as the world's largest firm of export merchants of British periodicals, books, etc., have now

GORDON HOUSE, FARRINGDON STREET, LONDON.

acquired possession of the handsome new building which they have had erected at 75–79, Farringdon-street, London. Previously the business was conducted from three separate premises in the neighbourhood, obviously an unsatisfactory arrangement. These are now all to be given up, with the exception of No 10, St. Bride-street, which will be retained for the purpose of house printing, and also as a warehouse for stationery and finished goods. All the other activities will be concentrated at "Gordon House."

The New Building.

The new building has been planned to meet all the exigencies of this large undertaking, which has had a record of continuous progress since it was established in 1853. It has a frontage to Farringdon-street of 92 feet 2 inches and the return frontage to Stonecutter-street is 62 feet 3 inches. The building, as will be seen from the photograph reproduced herewith, comprises 8 floors in all, including the ground floor and basement.

Within the new structure are planned all the facilities for the efficient and speedy handling of goods. The best and most up-to-date methods for securing economy, strength in packing, efficiency and promptness in dispatch are employed, including hydraulic presses, electric transporters, spiral chutes from the upper floors to the lower, gravity runways, etc.

The building itself is one of the most modern type of steel and concrete with tubular flooring, and is stated by the City authorities to be one of the lightest buildings, if not the lightest, within the City boundaries. This handsome edifice is now a striking feature in modern London architecture.

The fitting up of the new building has been done with taste and effect, the furnishing being comfortable and substantial. The Board-room, managing director's office and general manager's office, on the second floor, for example, are panelled in oak, with chairs, table and cupboards *en suite*. Everywhere there is ample lighting and space, which is helpful, of course, to the health and comfort of the staff.

Dispatching goods to the farthest ends of the earth has been reduced to a very fine art. The new accommodation in Farringdon-street will enable Gordon and Gotch, Ltd., to improve even upon the very fine methods previously in existence, and will open the way to further extensions.

HE is a poor express man who is unable to deliver the goods.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

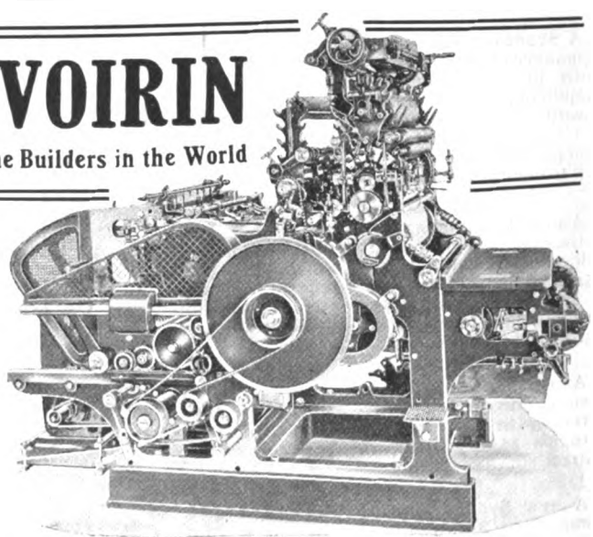
AUSTRIA.

An agent in Vienna desires to secure the representation, on a commission basis, of British manufacturers of paper, artificial resin, etc. (Reference No. 238.)

BRITISH INDIA.

A native firm of general merchants and commission agents in Bombay are desirous of obtaining the representation of firms interested in stationery, etc., suitable for the bazaar trade. The proprietors of the business, which has been recently established, have large business interests in Lahore, Mussooree and Nasirabad. One of the proprietors is at the present time in England for the purpose of arranging the desired agencies. (Reference No. 232.)

ROUMANIA.



The department of Overseas Trade has recently been notified that a firm in Czernowitz at present importing from Central European countries has expressed a desire to enter into business relations with British manufacturers of paper and writing materials, office equipment, etc., with a view to purchase on their own account. (Reference No. 257.)

ANOTHER PAPER MILL FOR WINNIPEG.—Assurances that they were prepared to go ahead immediately with the construction of a $5,000,000 paper mill of 250 tons capacity in the greater Winnipeg district, provided the Dominion Government entered into a contract providing pulp wood and water rights have been given by Mr. George M. Seaman, of the Seaman Paper Co., Chicago, and Mr. E. W. Backus, of the Backus-Brooks interests in Canada and the United States.

MARINONI-VOIRIN

The Oldest Firm of Lithographic Machine Builders in the World

No 1 (Medium) SINGLE-COLOUR ROTARY OFFSET MACHINE

with Automatic Pile Feeder and Piling Delivery.

For ALL Classes of Work.

Size of sheet : 23½ x 18½ (medium).

Speed : 4,000 impressions per hour.

PLATE, BLANKET and INK DUCT are EASILY ACCESSIBLE from the FLOOR at the DELIVERY END of the MACHINE.

MARINONI-VOIRIN OFFSETS are for BEAUTIFUL, ACCURATE and PERFECT PRINTING.

The Minder can inspect the plate and blanket and adjust the ink supply from the floor at the same time as he is watching the delivered sheets. This point is appreciated by practical men and saves much labour and trouble.

Send for our books (printed photo-offset on a medium machine) and see the high class of work done; then inspect the machines under working conditions—by arrangement with ourselves.

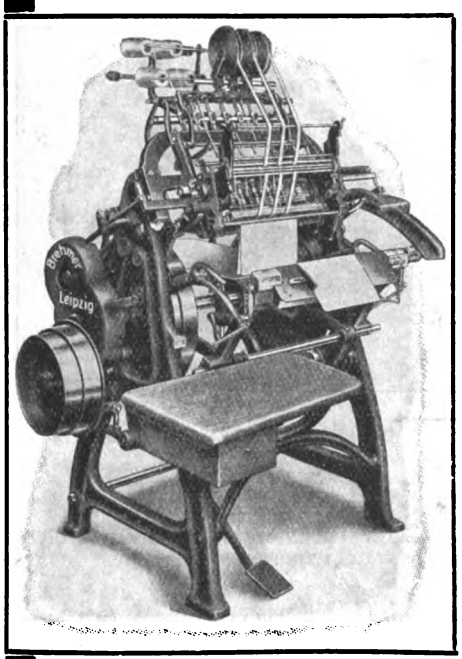
Brehmer Hand Stapler.

R. HURNER, LTD

The Official Agents to

GEBR. BREHMER, LEIPZIG,



Sole Manufacturers of the Brehmer Machine.

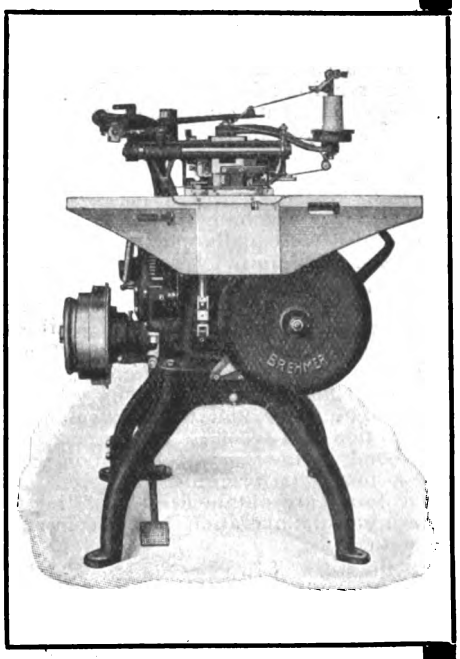
No. 17½
Brehmer Wire Stitcher,
capable of stitching up to 2¼ inches.

121-123, ROSEBERY AVENUE, LONDON, E.C.1

'Phone: Clerkenwell 1568. 'Grams: "Agentbrehm, London."

No. 38¼
BREHMER SIMPLIFIED THREAD BOOK SEWER.

This Machine is eminently suitable for Letterpress Work and where frequent resetting is required for different sizes of books. The alteration on this machine is effected in a very few moments as there are NO NEEDLE BODIES TO ALTER, and Books can be sewn on TAPE, CANVAS; or FRENCH SEWING can also be performed on this most simplified machine on the market. Up to 70 sections per minute can be sewn on this model.



Let us send you further particulars and samples of this most economical machine.

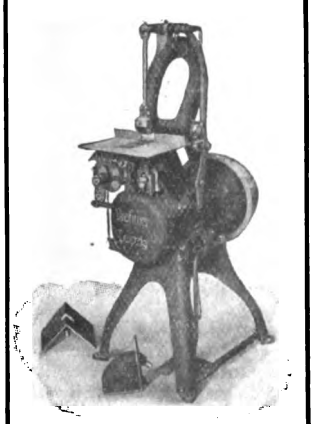
No. 37.
BREHMER THREAD BOOK STITCHING, CORDING & LOOPING MACHINE.

This machine is invaluable for stitching Exercise, Note and Memo Books, and all Sectional Work. This Machine is also arranged for CORDING and STRINGING Calendars Showcards, etc., and can be supplied to stitch 5 different sizes of stitches and will operate at the rate of 2,400 stitches per hour and produce a PERFECT KNOT.

This machine is the
Most Silent—
Easily Operated
and
Cheapest to Run.

This Machine is a great Labour Saving Device.

Let us give you a demonstration to convince you of the machines' capabilites, or send us samples and allow us to stitch same on the machines for your inspection.

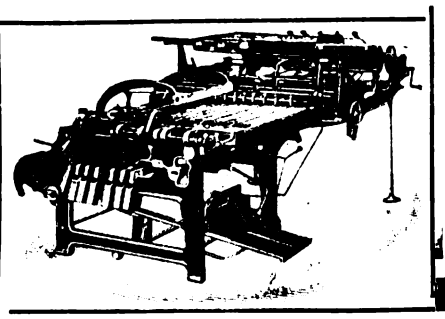


We are also SOLE AGENTS for the FORTUNA LEATHER SKIVING MACHINE.

We supply the Genuine BREHMER SPARE PART .

Let us quote you for WIRE, TAPE, GLUE, STAPLES, &c.

WE CAN DELIVER FROM STOCK.

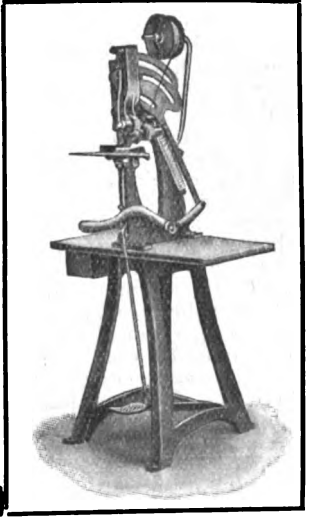


No. 4a
Brehmer Wire Stitcher.

Capable of stitching up to ⅞ in., and is fitted with a Flat Table Trough and Saddle, enabling up to 129 stitches per minute to be stitched

We can also supply this machine for Treadle Power.

BREHMER FOLDING MACHINES
for
HAND, HALF & FULL AUTOMATIC FEEDING, enabling up to 4,000 sheets per hour to be folded. Perfect register guaranteed and no creasing of Art Paper



For Hand or Treadle fitted with a Flat or Saddle Table and having a stitching capacity of 3-16ths of an inch.

We can supply the No. 8 model to stitch up to half-an-inch.

Let us send you further particulars.

No. 7
Brehmer Wire Stitcher.

Photographic Typesetting.

The August-Hunter Machine.

Reference has been made from time to time in our columns to the progress of the August-Hunter photo-typesetting machine, which for some years the inventors have been gradually bringing to perfection in London. Whilst we are not yet in a position to state that we have seen the machine actually producing copy for photo-litho, we understand that all the problems that have hindered the perfecting of the machine have now been overcome, and we are able herewith to illustrate the machine in its present form.

The Inventors' Story.

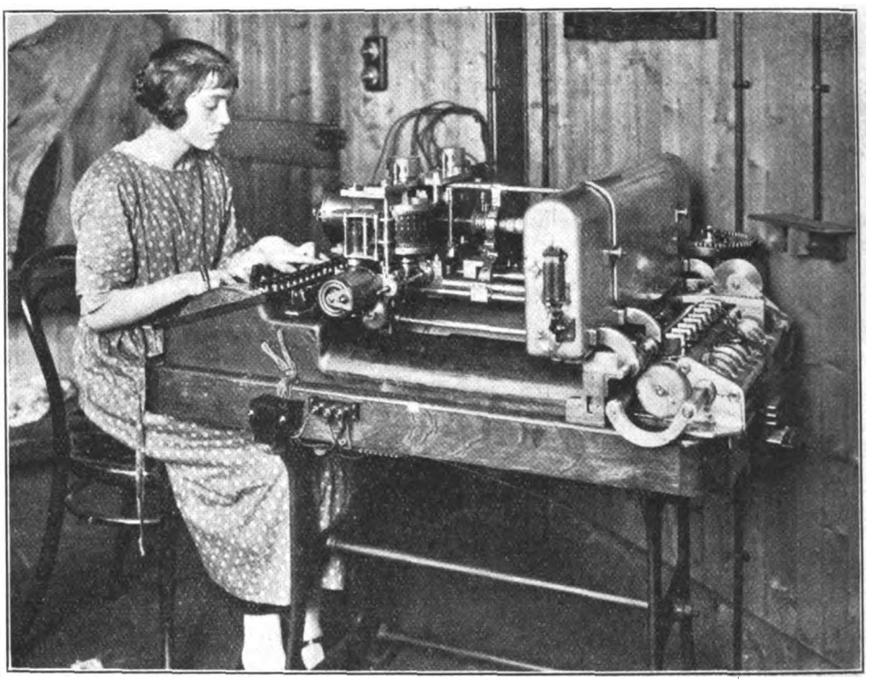
An able résumé of the story of the August-Hunter machine—the big problem which the inventors set themselves to solve, and the methods they have adopted of solving it—appears in the "British Journal of Photography," from the pen of Mr. Mervyn Thompson. We take the liberty of reproducing part of this article, as follows:—:

Put briefly, the new invention does everything that the compositor requires. In response to the manipulation of a keyboard, it chooses the fount; selects the size of type; produces a capital, "lower case," or fancy letter as required; decides the body space for each letter in all its differences of size, and "justifies" the spacing according to the width of the line or column. Whilst other composing machines in general use are practically restricted to letterpress "setting-up," the new machine has a much wider range and deals equally efficiently with display work as required for pages of advertisement, much of which is still composed by hand.

The invention centralises in a camera that is focussed automatically. Characters printed on a "master film" are projected in rapid sequence on to another sensitised photographic base and the exposure made in a fraction of a second. The exposed film corresponds to the "set-up" type on a linotype or monotype machine. Different sizes in one fount are obtained by adjusting the focussing; this operation being completely automatic.

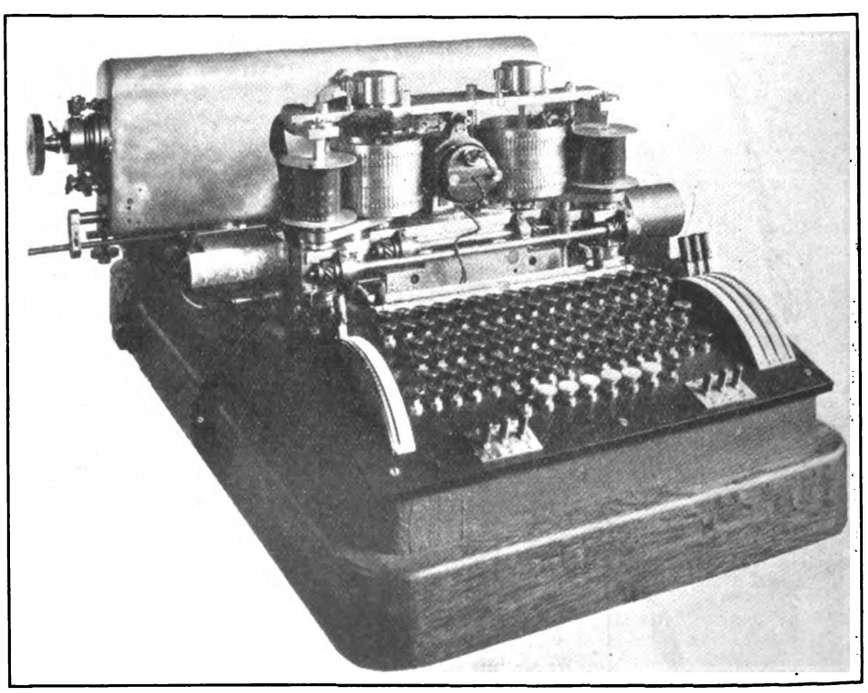
It is the work of two Londoners, Mr. J. R. C. August and Mr. E. K. Hunter, and has taken over four years of painstaking attention to detail to bring to commercial perfection. The machine has been inspected by a number of prominent engineers, master printers and scientists, and there is little doubt that the claims made for this new mechanical marvel are fully justified.

The Problem.



The problem which the inventors set out to solve was an exceedingly difficult one. Taking the typewriter as a base, the object was to photograph the shape of characters (letters) in rapid sequence by the mere striking of a key and resolve them into completed words and sentences. But whereas the typewriter is restricted to some sixty differences in the shape of characters, and has only one measurement of space to be occupied by each, in printing there are thousands of differences, besides differences of fount. Each style means an alteration in the body width of a character, and each size alters that body width again. In addition, there are variations in height. Furthermore, typewritten lines finish with uneven lengths, whereas in printing they must be dead parallel.

It was found, therefore, that it was necessary to design a machine capable of selecting any particular measure within some half million differences, correct to all the factors of style, size and character, instantly, and without possibility of inaccuracy. In addition the machine must automatically adjust the line to be composed, according to the width of column, style, size and character.



As the operations of any machine, whatever it has to do, express certain values in movement, it was necessary to bring all these differences down to numbers and resolve arithmetical combinations into terms of movement. This meant that the machine must be responsive to operations (adjusting space between letters, words, etc.), which, on an ordinary composing machine are made before striking the keyboard. It required, too, a camera which could be automatically focussed and sized.

The first essential was to find an apparatus capable of being controlled by arithmetical combinations as defined by coded perforations on a tape. In a calculating machine it is possible to produce answers to various sums, but the result has only a visual value and must be interpreted by human intelligence. Something more than this was required, and ultimately a machine was evolved that could be controlled instantaneously by punches in a coded ribbon by pneumatic, hydraulic, or electric power, and made to add up values of figures and resolve them into one movement true to the total. The next important point for consideration was the question of durable accuracy. This called for a machine designed so that inaccurate measurements were rendered impossible, once accuracy had been established. In the August-Hunter machine accuracy depends rather upon system than construction, with the result that bad work through wear and tear of mechanical parts is rendered almost impossible.

The August-Hunter machine has evolved through four experimental or test stages and the final result is a machine up to the highest standards of commercial perfection. Before it is possible to appreciate fully the commercial application it would be as well

General View of Machine in Operation.

A Close-up Front View.

Digitized by Google

to make a brief study of the various printing processes and methods in use to-day.

Application to the Printing Trade.

Although the existing composing machines are adequate for the purposes of straightforward book printing or newspaper printing, when it comes to magazine printing or display work a very great deal has still to be "set up" by hand. Furthermore, in "setting up" comparatively large type the rate at which composing is possible is governed by the length of time fluid metal takes to solidify, which even in the case of small type is very much slower than the speed at which an expert worker can operate finger-keys. In the August-Hunter machine all the operations are interpreted photographically and composing is at the uniform rate of three characters per second.

As distinct from letterpress printing, a new development of litho printing is making very rapid strides in the form of what is called "offset printing." It was because it is necessary to photograph "set up" type for offset printing that the inventors of the August-Hunter machine got their first "clue" to the camera composer. They argued that if, by the offset litho process, it is possible to print from a photograph, why should one bother to photograph type: why not photograph the drawn design of the character, and thus eliminate the metal type entirely?

That is exactly what they have done; but instead of just photographing a column of drawn characters, they have invented and brought to commercial perfection an apparatus, which is partly a camera, partly a typewriter, and partly an automatic calculating machine, which photographs characters separately and continuously at a greater speed than is obtainable on a typewriter, and which is a much more speedy instrument with a much greater range than the monotype or linotype machines now in general use for printing.

One of the most marvellous features of the August-Hunter machine is that it can, within a fraction of a second, select and bring before the camera the character struck on the keyboard from a range of thirty styles of "type" with ninety characters and ninety sizes of each style—243,000 variations in all!

The inventors claim that with their machine it would be possible for an operator at a keyboard in London to "set up" his matter, say, in Manchester or Paris by telegraph or wireless.

The finished product of the machine is a photographic film bearing an image of the subject-matter to be printed. This is equivalent to the stage reached by the process engraver, who, in his studio, obtains a negative by photographing an original. Having reached this stage, printing may be done in a dozen different ways. By line-block for letterpress printing, by direct litho, by photographic processes from plate or stone, or by the offset photo-litho throughout.

Press Club Rifle Shooting.

Eighty journalists of the London and Suburban Press competed on Saturday and Sunday in a Bisley shoot. The conditions for those who fired on Saturday were extremely uncomfortable, heavy rain and a strong wind making visibility bad and shooting difficult. Although Sunday's competitors numbered only half of Saturday's, they carried off the first five prizes, shooting under conditions which were almost perfect. The principal trophy will be presented to the winner at the Press Club Sports Night Dinner on Saturday, when Jack Hobbs will be the principal guest. The prize-winners in the shoot were as follows:—

1.—Lord Riddell's Trophy (copy of a Charles II. porringer weighing 54 oz. troy, value £37): A. P. Perry, Reuter's, Ltd., 86.

2.—M. Paderewski's Prize (gold half hunter watch, value £35): Flying Officer Charles Knight, 84.

3.—Sir Charles Wakefield's Prize (travelling clock): A. P. G. Vivian, *Daily Mirror*, 78.

4.—B.S.A. Prize (air rifle): K. P. Moss, *Daily Mail*, 77.

5.—Major Astor's Prize (silver spoons): H. Cave-Chinn, *Chicago Tribune*, 76.

6.—Sir George Sutton's Prize (silver spoons): D. R. Spendlove, Press Association, 71.

7.—Duke of Northumberland's Prize (silver spoons): C. H. Parnall, *Daily Mail*, 70.

Press Club Prizes (open to members of Press Club).—1, Lord Riddell's silver tankard (Queen Anne, value £12), K. P. Moss, *Daily Mail*, 77; 2, Mr. W. J. Edwards's Prize (silver spoons), D. R. Spendlove, Press Association, 71.

Printing, Bookbinding and Kindred Trades

OVERSEERS' ASSOCIATION.

There was a good muster of members of the above Association at the September meeting on Tuesday of last week at St. Bride Institute, Bride-lane, E.C.4. The chair was occupied by Mr. J. Fleming (president) supported by Mr. A. G. Aves (vice-president).

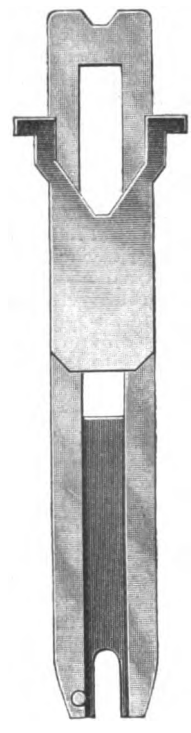
Following the reading of the minutes—which were duly passed—several interesting items of correspondence were submitted.

A letter from Mr. F. C. Peacock acknowledged a donation of three guineas from the Association towards the expenses entailed in the annual outing of the aged members of the Vellum Binders' and Machine Rulers' Pension Society, and also gave an account of the outing itself.

A letter from one of the members brought forth a useful and interesting discussion regarding the attitude of the Association on the question of trade unionism and of the holding by the members of trade cards. In the discussion a strong line was taken, the various speakers emphasising the point that the aims and objects of the Association itself had nothing whatever to do with one side or the other on the question, but that the matter was one for the members' own individual consideration.

The following candidates were next elected to membership: Messrs. H. E. Fairbrother (overseer—warehouse department—Hogarth Press); D. Ogilvie (works manager—Ship Binding Works).

After their election the chairman conveyed the congratulations of the Association to the new members, and hoped they would find within their midst many new friends.



In considering "future events" the secretary announced that the members' annual smoking concert and supper, to take place at the Talbot Restaurant, London-wall, on October 20th, and also that the annual bohemian concert and ladies' night, on November 28th, had been finally fixed to take place at the same hotel.

The president at this point made an earnest appeal to the members to support the 21st birthday celebrations of the Association at the dinner, concert and carnival dance at the King's Hall, Holborn Restaurant on September 26th. Most elaborate preparations, he assured the members, were being made for this event, and he asked them to make the occasion as widely known as possible throughout the trade in order that the function would meet with all the success it deserved.

The remainder of the evening was devoted to an enjoyable little talk by the general secretary, who took as his subject: "Holiday Reminiscences." Mr. Cox first related some very amusing experiences of a ship's printer, who, instead of being called upon to devote most of his time to "print," as he had expected, had to spend most of it scrubbing the deck and cleaning the silver. Mr. Cox then gave some of his own experiences as a musician many years ago on board ship. While engaged in this capacity he had the opportunity of visiting many of the famous places in both the eastern and western hemispheres. His description of some of these was most interesting.

A very cordial vote of thanks, moved by Mr. Fleming and seconded by Mr. J. Lee, was accorded to Mr. Cox for his lecture.

TECHNICAL SECTION.—Part 2, Volume 5 of the Proceedings of the Technical Section of the Papermakers' Association, is now issued, price 10s. 6d. The contents include the papers read by Mr. A. G. Rendall, Major R. Marx and Mr. A. I. Macnaughton, at the Tenth General Conference held at Wembley last September. The papers by Mr. Rendall and Major Marx are usefully illustrated by diagrams. There also appear reports of the divisional meetings in Aberdeen, London and Manchester. The publication, in its usual size, is another valuable contribution to technological literature.

Trade Notes.

UNDER the arrangement which, as previously reported, has been come to between the *Western Morning News* Co., Plymouth, owned by Sir Leicester Harmsworth and Mr. Harold Harmsworth, and the *Western Times* Co., Exeter, involving the abandonment of the plans of the former for a new evening paper at Exeter, a new company is to be formed for dealing with the position at Exeter, with Sir James G. Owen as managing director and Mr. W. Gatey as manager.

THE *Newcastle Journal and North Star* has installed a new process printing plant, and a half-page of pictures produced within the office is now a daily feature. Hitherto such pictures have had to be obtained from outside sources.

THE *Derby Daily Express* has opened new publishing offices at Derby, in which much new plant has been installed, including two Foster three-reel rotary machines, with Witton-James electrical drive and push-botton control.

THE ownership of the *Sunday Worker*, a Labour Sunday newspaper of the extreme Left wing, which began publication six months ago, is being transferred from Workers Publications, Ltd., to "the whole of the Labour movement through a system of five-shilling shares."

RATING OF MACHINERY.—Sir Kingsley Wood, Parliamentary Secretary to the Ministry of Health, speaking at a luncheon at the Birmingham Chamber of Commerce on Monday, said the answer to the criticisms levelled at the Rating and Valuation Bill was that at the present moment the position of the rating of machinery throughout the country was an impossible one

"DRY" LITHOGRAPHY.—An advertisement which appears on page 196 of this issue is of real trade interest. Many must have wondered why Mr. W. P. Price's "dry" lithographic process, which has attracted very favourable attention from experts, has not by this time come more prominently before the trade. It would appear from this notice that the plans made for the exploitation of the process have broken down and that the inventor is open to further negotiation in the matter.

THE Association of Master Printers of E. and N.-E. London is offering a prize of £2 2s. for best "copy" for wording of a letterpress circular or poster, which will, in the opinion of the majority of the members, induce the trading community to use more print. The winning "copy" to become the property of the Association, and serve as "copy" for a £5 Prize for Letterpress Job Competition to be opened shortly for master printers in the E. and N.-E. London district and their employees.

THE Association of Master Printers of E. and N.-E. London has arranged a concert and whist drive to constitute the opening meeting of the autumn and winter sessions. The event takes place at Stratford on Wednesday evening next, the 16th inst.

ELECTROTYPERS AND STEREOTYPERS OVERSEERS' ASSOCIATION.—The monthly meetings of the Electrotypers and Steretypers Managers and Overseers' Association will be resumed on Tuesday next, when the committee hope to see a large attendance of the members.

BY the death on Saturday of Mr. Alfred Peter Thomson (34), of Todmorden, the *Manchester Guardian* loses a valued member of its staff. Mr. Thomson's first newspaper work was done on the *Aberdeen Free Press*. In 1919 he joined the sub-editorial staff of the *Manchester Guardian*, and shortly after passed from that to the staff of the *Manchester Guardian Weekly*. He succeeded Mr. Con O'Leary in the editorship of that paper a year ago.

THE *Yorkshire Post* Sports Club competition for the Sykes Bowling Bowl, presented to the bowling section by Mr. James Sykes, formerly assistant editor of that journal, has been won by Mr. F. Lucas, of the composing room staff, who defeated Mr. F. Smith, of the reading department, in the final stage.

ALTHOUGH meetings were held on Monday at the Belgian Ministry of Labour with the view to the settlement of the printers' strike, little progress was made. The strike has now lasted six weeks.

THE Canton strikers on Thursday night assaulted two English journalists, Mr. Cox and Mr. Oliver, who had travelled from Hongkong to Canton.

Personal.

MR. F. G. HAWDON, export managing director of John Dickinson and Co., Ltd., London, along with Mr. J. W. Timberlake, managing director for South Africa, paid a visit to Johannesburg recently. He was to proceed to Australia, where the activities of his firm are considerable.

MR. ARTHUR HERBERT, South African manager Spicers (S.A.), Ltd., has, as the result of special treatment in London, completely recovered from the malady which necessitated the very severe, and almost fatal, operations in Johannesburg. He has just returned to South Africa.

MR. E. R. ALEXANDER, the veteran founder of the Era Press, Leyton, is, we regret to learn, in a nursing home where he has undergone an operation for internal trouble. Inquiry on Wednesday elicited the reassuring news that Mr. Alexander has stood the operation well and is making favourable progress.

MR. ALEXANDER, who is 82, was for many years president of the E. and N.E. London Master Printers' Association, and still takes a keen interest in trade affairs. He was the respected teacher of the old printing classes at the Polytechnic.

MR. WALTER WARREN, the general secretary of the National Society of Electrotypers and Stereotypers, has been elected vice-chairman of the Joint Industrial Council of the Printing Industry. This appointment means in all probability that Mr. Warren will next year pass to the chair at present occupied by General W. Wright Bemrose.

MR. GEORGE A. ISAACS, who has been general secretary of the National Society of Operative Printers and Assistants for over 16 years, is to receive from the Society a national testimonial bearing witness of the great services he has so long rendered to the members.

MRS. A. BRIDGES, of the Printing and Paper Workers' Union, was a member of the British trades union delegation which has just returned from Soviet Russia and has published a report which has created some sensation.

AT a meeting of the council of the Newspaper Society last week, Mr. Edward W. Davies was appointed general secretary. He thus succeeds the late Mr. F. L. Armstrong, whose assistant he had been almost during the whole time Mr. Armstrong had been associated with the Society.

MR. THOMAS J. STOBART, of 316, Ivydale-road, London, S.E.15, has resigned the chief sub editorship of the *Timber Trades Journal*, after 26 year' service in that capacity, to start in business on his own account as a writer on the timber and correlative trades, of which he has a very wide knowledge. Mr. Stobart has already among his clients a few of the leading trade, financial, and other daily and weekly newspapers.

BEFORE leaving the *Timber Trades Journal*, Mr. Stobart received from his principals their very best wishes for his future success, accompanied by a cheque, a handsome smoking cabinet from members of the staff, and a fountain pen from his printing trade friends who send the *T.T.J.* to press week by week.

THE REV. T. WALTON, Vicar of St. Andrew's, Lambeth, has figured in the pictorial pages of several London newspapers during the course of the week in the act of repainting the outside of his church. The reverend gentleman, it will be remembered, is the inventor of a composing machine for lithographers upon which he has lectured at the Stationers' Hall. His voice has also frequently been heard on printing topics at the historic building.

MR. A. COMRIE COWAN (Alex. Cowan and Sons, Ltd.), has been paying a lengthy visit to Australia and New Zealand this summer. He expects to sail for home in the ss. "Carthage" early in October.

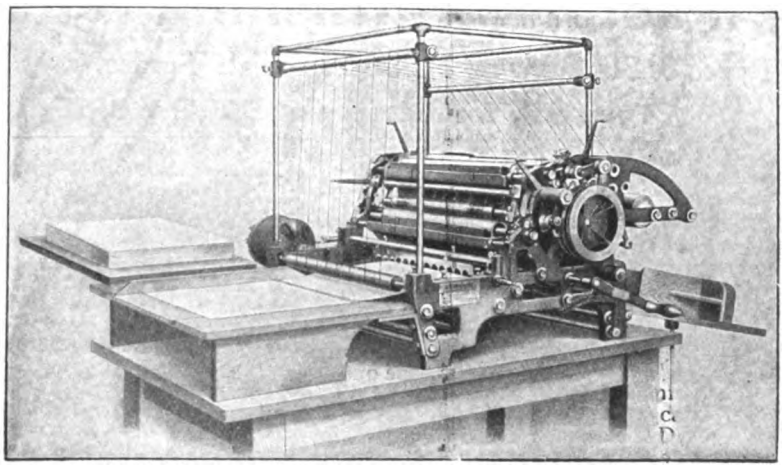
Trades Union Congress.

What has been described as the most important resolution before the Trades Union Congress was discussed at Scarborough on Tuesday. The resolution, moved by Mr Floyd (representing the Vehicle Builders), was drafted to give the General Council power to levy all affiliated members and to call for a stoppage of work by an affiliated organisation in order to assist a union defending a vital trade union principle. Mr. T. E. Naylor, J.P., M.P. (secretary of the London Society of Compositors), in moving an amendment to the resolution, said that if the General Council of the Trades Union Congress was to have the power to call upon any union to down tools, without that union being directly concerned in the issue, it would mark the first step towards the destruction of the trade union movement. The amendment was seconded by Mr. T. Timberlake (chairman of the L.S.C.), and after some heated discussion a motion was carried to refer the resolution and the amendment to the General Council to examine the question further in all its bearings.

Trade Union Matters.

OVERTIME POINT.—The secretary of the Manchester branch of the Typographical Association has forwarded to the Executive Council a letter from a 'chapel" in his branch asking whether the ruling of the Council that time and a-half was the lowest overtime rate for time worked previous to the usual hours of starting in the case of evening newspapers applies also to work on morning newspapers. The Council have replied that in their opinion the same minimum rate of time and a-half applies to morning newspapers.

QUESTION OF NOTICE.—The secretary of the Manchester branch has reported to the Executive Council that two members recently received a fortnight's notice to terminate their employment at an office in that branch. Owing to a ballot decision of the "chapel," the office closed down on the Friday for a week's holiday, and the men received no payment for the Saturday morning. The branch had requested the firm to recognise the principle of a full fortnight's notice, but the firm contended that the position was governed by the men's decision to cease work on the Friday. The firm suggested that the matter should go to the Hours and Holidays Committee, and the branch were agreeable, but the Executive Council did not agree to such a course of action, and instructed the branch to press the claim for a full fortnight's notice or wages in lieu of notice.



MR. E. G. YATES has reported to the Executive Council of the Typographical Association that a firm at Hastings has discharged eleven linotype operators after the discharge of a night shift. The Council decided that a meeting of the branch should be convened, at which Mr. Yates and Mr. French, the general president of the Association, would be present, and that the matter should be reported to the Controller of H.M. Stationery Office with regard to the firm's printing contracts.

TECHNICAL TRAINING FOR THE PRINTING TRADE.—A public meeting for the purpose of furthering interest in the technical training of those engaged in the printing trades, will be held at Stationers' Hall on Thursday, September 17th. At this meeting, the medals, prizes and certificates gained by the students attending printing technical schools last session will be presented by Dr. James MacLehose, of the University Press, Anniesland, Glasgow, who will be supported by representatives from the Worshipful Company of Stationers and the various printing trade organisations.

A Jobbing Disc Ruling Machine of Merit

AND

WHAT A USER SAYS OF IT:-

"We can say with all confidence that we are obtaining all results specified by Messrs. Soldans on this machine. From the moment of its installation we can safely say that we have been running continually without complaint both for straight running through and stop work to our entire satisfaction. The handling and working of the machine is simplicity itself and in no way have the makers flattered its production."

WHAT WE CLAIM:-

The 'BABY' will rule two colours, with dead accurate striking, will cut, crease, and perforate in one operation, and in any desired combination. It will do a Double Cap Sheet, feint lining at 3,000/3,500 per hour. Compact and simple to operate, it is a money-making acquisition which increases the scope of every business. An "F & T" proposition.

Best references can be had from actual users.

Immediate delivery from stock. Satisfaction guaranteed.

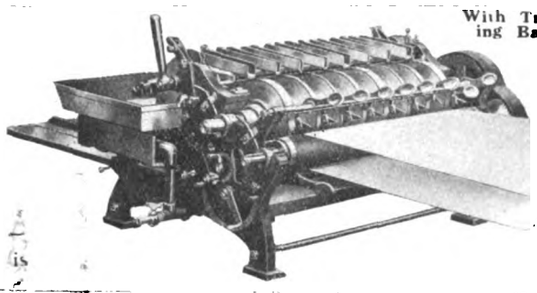
THE "ST. GEORGE" MACHINES

(TRADE MARK) (ALL BRITISH MAKE).

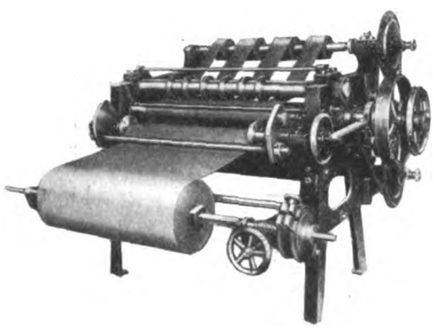
For Glueing, Gumming, Pasting, Varnishing, etc.



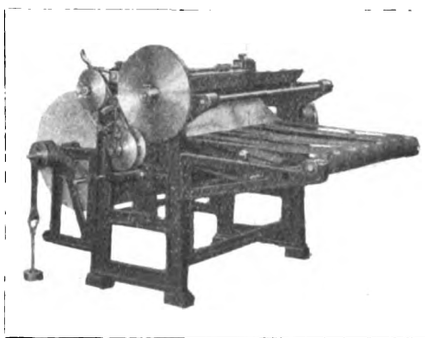
We Manufacture the Largest Range of Types & Sizes, for all Purposes, for all Trades.

Type A for WHOLE SURFACE WORK.

Supplied for strip work as Type C.



Type A4, for Strip and EDGE WORK

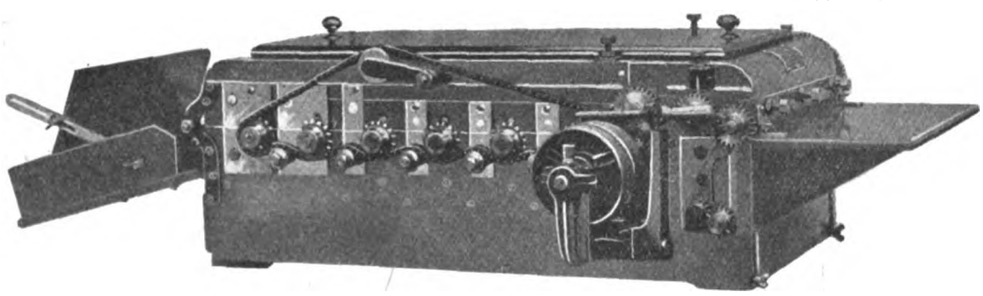


Supplied for Whole Surface Work as Type A1.

SOME USEFUL MACHINES for BOX MAKERS, PAPER MAKERS and the TEXTILE TRADE

Slitting and Rewinding Machines as Shown, also Surface Rewinding

Sheet Cutting Machines from the Reel, also as Combined Slitter and Sheet Cutter



The most Original and Adaptable Bronzer yet produced.

Made in Six Sizes: 7 ins., 15 ins., 16 ins., 24 ins., 32 ins., and 40 ins. wide; will take any length.

NEW AND IMPORTANT IMPROVEMENTS *(Patent Applied for).*

COMPACT. The illustration *proves* it. It will Bronze, Burnish & Dust most work in one operation and takes such little space and power.

ADAPTABLE. Can be placed in the centre of a group of machines; with a girl to feed it, it will often keep all machines going. Can be moved from one department to another.

These Machines (formerly called **The Silverlock**) have been designed with just the required amount of mechanism to produce work unsurpassed by any other make. WHY pay for unnecessary machinery to do the same job? Consider the advantages offered. Saves POWER, SPACE and CAPITAL. Costs little for upkeep. Tackles any Job from Thin Paper to Thick Card.

We are manufacturers in addition of a fairly wide range of machinery suitable for all the various branches of the Trade, including :—

Rotary Cutting Machines.
Rotary Cutting and Scoring Machines.
Rotary Scoring for hand or power.
Vertical Bending Machine.
Millboard Cutting 24 inches to 56 inches.
Small Card Cutters from 6 inches to 24 inches.
Bevel Card Cutter.
Tube Making Machine.
Sheet Cutting Machines.
Rule Cutting and Bending Machines.
Treadle Perforating Machines.
Relief Stamp Presses.
Nipping Presses.
Hole Punching Machines.
Round and Square Corner Cutting.
Showcard Edging Machine.
Slitting and Rewinding Machine.
All Steel Waste Paper Balers.

Seen and Heard in the States.

Some Printing Craft Observations by Mr. Frank Colebrook.

A wax puffery was one of the most interesting things I noticed in printing works, during my July-August visit to the United States. I should like to hear our printers of fine journals "pass" upon it as Americans say. "*Pass*" is their elliptical phrasing for "pass judgment."

"Wax Puffery."

Curtis's, the great journal publishing house of Philadelphia, showed me the method. It was devised by one of their machining staff. His aim, I think was to do away with the labour and the cost of interleaving, or of the "smut roll." It would be interesting to learn what prompted the particular notion of using wax. What happens in this new wax process is that when the sheet has received its impress and is lying printed side up, close to the impression cylinder but just clear of it, the printed face is blown upon at both ends of the impression cylinder by tube-like specially adapted holders containing fine globules of a certain waxy powder. Apparently these globules or powder grains, whatever one should call them, spread evenly over the whole surface of the printed work. They stand up (so to say) upon the print, enough to interpose an appreciable protective film between it and the back of the next sheet.

Nor have you to brush off these wax globules. Like tactful guests, they understand the gentle art of disappearing. You look for them—at least the tyro in his ignorance looks for them—and lo, they are not. What is it then that has happened to them? Apparently they have been absorbed into the paper.

Just as litho stone has a wonderful affinity for grease, so paper—at any rate the paper Curtis's use—exhibits a like affinity. Nor is there apparently any degradation of the printing quality. I half expected to hear my guide claim that the wax even improved the print. He did not say so; but he quite probably may have thought so, and if he did I don't say he was wrong.

An Analogy.

Let me remind you of an experience in one way resembling this. In rotary gravure the doctor blade does not absolutely clear everything from the copper cylinder at every revolution. It certainly clears off absolutely all the coloured ink pigment. But it leaves a thin, impalpable, oily film all over the copper cylinder. This film is not a regrettable, unavoidable nuisance. It may not originally have been desired, but now at any rate it is recognised as helpful. The knife and the copper cylinder would both wear away more quickly if it were not for this film of lubricating easement. I suppose, too, that the quicker wearing away of the cylinder would involve a speedier impairment of the quality of the gravure print. Whatever advantages the film carries with it, are net gains. The prints absorb the thin oil without degradation of quality. So with this waxy covering.

The delivery board on the Curtis machine showed plentiful grains or globules of the wax—or, should I say, the waxy grain. Because of this it was the one rather untidy looking machine which I saw in the eight cities I visited. But that was a small unavoidable accompaniment of the process.

The deviser of the process was rewarded.

"Make for Yourself"—"Don't Make for Yourself."

It is curious to note how successful men have sometimes reached quite opposite conclusions on certain points. Henry Ford, to quote him on this point, has deliberately set himself to supply himself as far as possible with all essentials of his manufacture. He has his own coal mine, and has made his own small railroad. After that it is a trifle that he makes his own glass. He is successful. Cyrus Curtis is undoubtedly a millionaire, probably a multi-millionaire, owning, as he does, the *Ladies' Home Journal*, with its three million or so circulation, and the *Saturday Evening Post*, with about a like sale, and the Philadelphian daily paper, the *Public Ledger*. But though he produces weekly many millions of finely-printed sheets, he will not for the moment consider making his own ink, nor concern himself practically with the making of his own paper. His policy in these respects is the opposite of Henry Ford's, and he is successful.

When I call on the Government Printing Bureau at Washington, I find that a conference of "executives"—that is the heads of departments or of sections—is being held. Apparently these "executive" conferences are held regularly and frequently. The smooth working which seems to characterise American works establishments in general is, I think, large attributable to such regular meetings, with their opportunities for timely dealing with small troubles, or elements of possible trouble.

But here, as in so many matters, I must guard against seeming to generalise very confidently, for in the case of Henry Ford's great motor works at Detroit (which I also inspected) it is to be noted that when he felt himself obliged to do a great deal of what he called "spring cleaning"—in other words, when he, in 1920, felt called upon to raise by a certain time a sum of about £18,000,000 over and above what could safely be anticipated as pretty sure to come in, he raised the money by various improvements in internal working and in quickened sales, and also—this being the point I want particularly to note just here—he says he saved money by reducing the time and cost of gathering statistics. They had been collecting tons of statistics, he says, because these statistics were interesting. In the urgency of special economy they ruthlessly reduced that expenditure on statistics.

Don't Tell Howard Hazell.

Ford, by the way, won't allow that any percentage on your invested capital is properly to be considered an element of cost. Money earns nothing, he says, it produces nothing. I think he's wrong in this particular costing advice, though I do think it may be wise sometimes to write down for your own costing the amount of your invested capital, if, through folly or mishap, its amount is greater than the circumstances reasonably called for.

Stereotyping More Popular.

Although the *Chicago Tribune* people tell me "We use some dry flongs for our picture pages," I do not gather that dry flongs are very popular in the States. But stereotyping on the whole seems to be more favoured in the States than it was a few years ago; I mean that some things are stereo'd by the best stereo methods which a few years ago were electrotyped. None the less, electrotying is surely to be preferred where both fine screens are to be reproduced and long runs made. Besides, the electrotyper can improve on his original at times; as, for instance, in imperfect border angles.

(To be Continued).

Far Eastern Exports Decline.

Exports of all paper and paper products from the United States to the Far East, during the first six months of this year, as compared with the corresponding period of last year, declined 36 per cent., dropping in value from $3,494,362 to $2,245,780. The biggest decrease was in shipments to China with a drop of 60 per cent. in that period. Australia was the only country in the Far East which took additional amounts of American paper during the period mentioned.

The American Miehle Company's Presses

Life is Action.

BECAUSE of its versatility and ease of operation the American Miehle Company's Vertical Job Press is always in action—it lives a full life—it will produce many more well printed impressions over a long period than any other press covering the same field.

To investigate the merits of this Press costs nothing.

Call at our Showroom and examine it in detail.

What Manufacturers are Doing.

machine. Since the new Model No. 2A of the Brackett stripping and binding machine was demonstrated at the recent Exhibition many of these machines have been ordered and a number very successfully installed. The Berry pneumatic standing press, combined with the Berry platform trucks, with upper press boards and tie rods, have proved very attractive indeed, from the point of view not only of efficiency in the tieing up of stacks of books, etc., but also of the great economy in floor space. The trucks can be brought alongside the Smyth casing-in machine, or where the books are being forwarded, and then the pile of books on the truck are run into position on the standing press and any desired pressure can be obtained, as indicated by the overhead gauge. The books are then tied, the air pressure released, and the pile of pressed books can be run on to the platform in any corner of the floor, out of the way.

"Brehmer" Automatic Folding Machine (R. Hurner, Ltd.).

Folding Machines: R. Hurner, Ltd,

Messrs. R. Hurner, Ltd., of Rosebery avenue, E.C.1, are drawing special attention just now to the latest "Brehmer" automatic folding machines, which are supplied in styles to suit every manner of folding. These folders have the advantage of being simple in design and carefully constructed in every part, whilst all parts are interchangeable and spares can be supplied quickly. Starting and stopping are instantaneously effected by means of treadles actuating a friction clutch. The sheets are automatically fed in, and perfectly straight, ensuring very accurate folding. In cases where the sheet is obstructed or otherwise crumpled while travelling through, the machine is brought to a standstill automatically until the obstruction is removed. The machines can be quickly adjusted from one size to another and will fold any paper, thick or thin, rough or smooth. The output of these machines is from 25,000 to 30,000 sheets per day. Attachments for the prevention of creasing when folding thick art paper can also be fitted to the machines if desired. In the case of the flat pile feeder, the renewal of the stack of paper is done in a very few minutes, whereas the rotary feeder can be left running while small stacks of paper are placed on the table Another advantage the automatic folding machines have is that one person can attend to two or three machines, thereby saving considerably in wages. The growing demand for the "Brehmer" folders proves that they are fully appreciated by the trade.

WHEN a man is long on schemes he is usually short financially.

LITHOGRAPHY WITHOUT DAMPING ROLLERS.

W. P. Price the sole inventor of above, owing to lack of financial support in the development of same, is open to make arrangements with any firm desirous of adapting the process to either Letterpress or Litho machines.

17/19, Butler St. Spitalfields, E.1.

Williams, Lea and Co., Ltd.

A Presentation.

An interesting gathering of the employees of Messrs. Williams, Lea and Co., Ltd., took place on Tuesday, September 1st, for the purpose of presenting a wedding gift to Mr. J. Graham Williams, one of the directors, in celebration of his marriage on September 5th.

The gift consisted of a silver tea tray, suitably inscribed, and a smoking cabinet, and Mr. Andrews, in opening the proceedings, said he had much pleasure in asking Mr. C. D. Dalziel to make the presentation.

Mr. Dalziel said he esteemed it a great privilege to be asked to present this gift from the employees to Mr. Graham Williams. He (Mr. Dalziel) was convinced that the genial and straightforward qualities that had marked Mr. Williams' successful business career would also ensure the success of his forthcoming marriage.

Mr. Graham Williams said he thanked one and all very sincerely for their gift, which he greatly prized, and which would always be one of his most cherished possessions. He also very much appreciated the kindly thought that prompted them to make the gift.

Mr. C. Smith brought the proceedings to a close by proposing a vote of thanks to Mr. Dalziel for making the presentation, which was carried by acclamation.

Machine Compositors' Vigilance ASSOCIATION.

Mr. J. F. D. Dixon (chairman) presided at the quarterly meeting of the Machine Compositors' Vigilance Association, on Friday, at the Essex Hall, London. The report for the quarter, read by the secretary (Mr. A. Henwood) stated that sixteen machine compositors had joined the Association during the three months. These admissions brought the total to 785 Linotype and Intertype members, 251 Monotype, with 50 Linotype and 19 Monotype hon. members, an aggregate of 1,105. Three members had died during the period of the report, and one member had retired on superannuation. Receipts for the three months amounted to £179 (subscriptions £147 10s.), and expenditure to £115, including sick pay £30, death benefit £22 10s., and incapacity grant to retired member £30.

The proposition of the Committee to increase the sick benefit from a total of £4 10s. (10s. for six weeks and 5s. for six weeks) to £6 (12s. for ten weeks) per annum, was adopted after a short discussion. It was announced that the annual dinner of the Association, inaugurating Machine Compositors' Pension No. 2 (in connection with the Printers' Pension Corporation), would be held at the Hotel Russell on March 27th next. Further details will be announced in due course.

MR. EDWARD GRAY, paper agent, of 4, Grangethorpe-drive, Levenshulme, Manchester, has recently acquired an additional agency, viz., that of Messrs. M. Relph, Ltd., 212, Upper Thames-street, London, E.C.4.

Indian Paper Industry.

Tariff Board's Recommendations Following Demand for Protection.

(From an Indian Correspondent).

The Indian Tariff Board, to which the question of protection for the Indian paper industry had been referred for consideration and inquiry, has now submitted a long but unanimous report, which recommends protection only for all writing paper, and for printing paper other than news print containing 65 per cent. or more of mechanical pulp. The protection is to take the form of the specific duty of one anna a pound in place of the existing 15 per cent. duty and is to continue for five years.

News-Print Excluded.

The original proposal of papermaking firms was that all kinds of paper without discrimination should be subjected to a duty of 25 per cent. The Board examined this claim closely and found that it could not stand. For instance, news-print, which is the paper used by the important Indian newspapers, could not be made available in India at the same price as imported paper, even if a 25 per cent. protection duty was imposed. The firms admitted this difficulty, and were in favour of issuing licenses to newspapers to import news print at a lower duty; but as this would have hit those who bought from dealers in India, the Board has decided to exclude newsprint from protection.

On examination, the Board found that the imports of paper that might compete with Indian paper according to the 1924-25 figures were as follows:—Printing paper, other than news print, 11,700 tons; writing paper and envelopes, 8,300 tons; packing paper, 7,000 tons; other kinds of paper, 2,000 tons; Government stores, 1,000 tons. The total imported paper which competed with Indian paper was thus 30,000 tons. Imported paper, pasteboard, etc., which did not compete with Indian paper amounted in 1924-25 to 56,200 tons, divided as follows:—Newsprint, 17,800; old, 25,700; paper manufacture, 1,600; pasteboard, millboard, etc., 10,800; Government stores, 300 tons. The Board further opines that out of 30,000 imported tons which competes, Indian paper might conceivably, under the scheme of the protection proposed, hope to capture 20,000 tons. The Board saw no ground to support the contention that dumping was proving injurious. In fact, dumping so far as it existed, was proving ineffective.

Bearing of Costs of Production.

As regards the cost of production, the Board is of opinion that the lowest works cost at which paper has been made in India since the war by mills using grass as their staple material is Rs.490 a ton. The high costs are due in part to the fact that the mills have been working only to five-sixths of their capacity and if a full output could be attained the works costs could be brought down to Rs 480 a ton. Further economies are possible, and in the course of time the works costs in a reasonably equipped mill near Calcutta or in the coalfields might be reduced to some figure below Rs 420, but not below Rs.400 a ton.

The manufacture of paper from bamboo is a novelty in India and the lowest works cost attained by the pioneer firm is Rs 440 per ton. It does not appear likely that the works costs can be brought much lower, so long as the mill, though designed for two machines, possesses only one; but if a second machine were added, it is probable that in the course of four or five years the costs could be brought down to Rs 360 per ton. Any mill established after the war must be prepared to meet overhead charges amounting to Rs.85 per ton, while the return of capital will require Rs.64 a ton, so that the total addition to the works costs is Rs.150 a ton in round numbers. These are the figures which must be borne in mind when the ability of the industry to dispense with protection eventually is considered.

Bamboo and Wood Pulp.

The Board rejects the claim for a protective duty on imported pulp. It believes that as the world's supplies of timber diminish, a continuous increase in the cost of wood pulp is inevitable and that bamboo is likely to become a very important material to the papermaker, but though the development of an export trade in bamboo pulp in future is probable, the prospects of its coming about at an early date are not assured. It is not possible to forecast with any certainty the date when the price of wood pulp will advance materially and a premature investment of capital in pulp mills might entail heavy losses to investors. The imposition of a protective duty on imported pulp might compel Indian paper mills which use grass as their staple material to substitute bamboo pulp for wood pulp, though it is not yet clear that they could do so completely, but it is not likely that a separate bamboo pulp industry would come into existence, for the grass mills would almost certainly make their own arrangements to supply themselves. The proposed duty, therefore, would not achieve the object sought to be attained and it cannot be recommended.

What is essential at present is that the manufacture of bamboo paper should be continued and exploratory work be completed, so that when the opportunity comes it will not be necessary to spend years on investigation before the development of the industry can begin. It is on this basis that the proposals have been drawn up. The Board emphasises strongly the necessity for training Indians in paper manufacture and urges the formulation of an organised scheme of training if necessary. The training should preferably be given in Europe and America through a system of state scholarships.

Summarised Proposals.

The Board's proposals have been summarised as follows:—

(1) In order that the possibilities of the manufacture of paper in India from bamboo may be fully explored the Government of India should provide the capital required, about Rs.10 lakhs, in order to enable the India Paper Pulp Co. to increase the output of its mill at Naihati from 2,500 to 5,000 tons a year. This might be done either by an advance of capital secured by mortgage on the fixed assets of the company or by the guarantee in respect both of the principal and interest of a public issue of debenture. The latter alternative is preferable because it would permit the immediate participation of Indian capital in the enterprise.

(2) The payment of interest should be waived during the first two years if the capital is advanced by the Government of India or in the alternative if the capital is guaranteed, and interest due to debenture holders should actually be paid by the Government of India, irrespective of the ability of the company to meet these charges.

(3) The India Paper Pulp Co. uses the sulphite process for the manufacture of paper. There is an alternative process which has not yet been applied to bamboo on a commercial scale, viz., the soda process, and it is desirable that its possibilities also should be fully investigated. The Carnatic Paper Mills, Ltd., apparently intend to make paper from bamboo by the soda process, but at present their equipment is incomplete, and they are not in a position to commence manufacture. At the stage which this project has reached it is not possible to make a definite recommendation, but it is desirable that this scheme should be examined by the technical advisers of the Government of India, and that if the company are able to show reasonable prospects of success they should be assisted to raise the additional capital required in the same manner as the India Paper Pulp Co.

(4) The total capital in respect of which Government of India will incur liabilities may reasonably be restricted to Rs.20 lakhs in all.

(5) In place of the existing 15 per cent. *ad valorem* duties on printing paper and writing paper, a specific duty of one anna a lb. should be imposed on all writing paper and on all printing paper other than news-print containing 65 per cent. or more of mechanical pulp. No change is proposed in the duties on other kinds of paper.

MR. CHAS. T. CORKE, who is back in London again, states that when he left Norway, Messrs. Peterson and Sons, of Moss Mill, were just about to start up their third machine, which had been out of action for some months, owing to the fire which took place earlier in the year. The upper portion of the premises over the machine room was completely burnt out by the fire, but this is being rebuilt. The two machines that were attacked by the fire have had to be thoroughly overhauled and in certain respects entirely rebuilt. This has given Messrs. Peterson the opportunity of effecting certain improvements in the production of their kraft paper.

Colonial and Foreign Paper Notes.

South Africa.

A complete list is published of the rebates of Customs duties now accorded in the Union to certain classes of goods the produce or manufacture of the United Kingdom, Australia, Canada and New Zealand. The list includes news-print (in respect of the United Kingdom and Canada) in reels or in the flat, the rebate being the whole of the duty of 5 per cent. *ad valorem*.

Canada.

The recent announcement by the president of the Belgo Canadian Paper Co., that from the commencement of next year the company's contract price for news-print would be reduced to $65 per ton, occasioned considerable surprise. The lead in announcing price changes has hitherto been taken by the International Paper Co.; also, the announcement was made unusually far in advance of the date when the change would come into effect, and not all news-print manufacturers are convinced that the decrease in price would prove necessary. It is, therefore, of interest to note that in some quarters the announcement is attributed to a desire on the part of the president of the company to attest the sincerity of the attitude he has recently taken in urging the necessity of conservation of timber, rather than to the actual situation in the news-print industry. It is recalled that the president's advocacy of a plan to restrict the export of wood pulp from Quebec aroused suggestions that he desired to increase the price of news print to publishers in the U.S., and it is now suggested that his announcement that his company will contract on the basis of $65 a ton may be intended as a refutation of this.

Conditional on a pulp and paper plant with a daily capacity of 150 tons output being erected upon the property within the next five years, the Provisional Government of Quebec have leased to a Canadian company 1,900 square miles of timber limits in the Chicoutimi district. The deal will bring to the Province £200,000 down, and a large annual revenue in royalties.

France.

Action has been taken by the London Chamber of Commerce during the past year in order to obtain a modification of the French turnover tax, in view of its serious effect on British indirect and transhipment trade with France in general colonial produce. Representatives of the Chamber met the Technical Advisers to the French Board of Trade, and the serious view taken of the matter in this country was placed before influential men in French commercial circles. The Chamber has also been working in close co-operation with the French Chamber of Commerce in London and has made representations through the Board of Trade. Article 12 of the French Finance Law, of July 31st, 1920, which made provision for the additional 1·3 per cent. tax in the case of shipments by firms not established in the country of origin of the goods, seriously hampered British trade with France. Further, it necessitated, if the tax was to be avoided, the disclosure of the name of the overseas suppliers and of other information, which resulted in the diversion of trade from British hands and in direct transactions between producers and the consumers in France. The Chamber has just been advised by the secretary of the French Chamber of Commerce in London that in the Finance Law for 1925, published in the *Journal Officiel* for July 14th, a clause had been inserted abolishing the additional tax. This means that the import tax will no longer be levied at the double rate of 2·60 per cent., when the seller is not established in the country of origin of the goods, but will be levied at a flat rate of 1·30 per cent. on all goods entering France.

Germany.

The *Deutscher Reichsanzeiger* for August 1st contains an Order, dated July 29th, in virtue of which the following goods may be imported into Germany without licence as from August 14th:—Multi-coloured papers, even if produced by lithographic process, including paper coated with chalk, white lead or zinc white, baryta (also for photographic purposes), or similar materials or with metal impressions, chromo paper and board and art paper in sheets or endless rolls, lacquered paper, paper covered with mica or glass scales, pounce, wool dust, etc.; paper with painted, applied or galvanoplastic metallic coating in sheets or endless rolls, except cigarette paper with metal impressions and paper with gold or silver edges (other than picture paper), Letter paper, letter cards and envelopes in paper, cardboard or wooden boxes.

A review of the commercial and industrial situation in Germany during July, by the British Commercial Secretary at Berlin, based on reports of the Prussian Chambers of Commerce, says: The cost of production in the paper industry increased as a result of a 6 per cent. advance in wages. Both inland and foreign business was bad and orders fell off, particularly in the last half of the month. Complaint is made that large firms are reducing their expenditure on advertising. Nearly all factories have given notice of restrictions of operations in the immediate future.

The prices of news-print have been increased, from August 1st to the end of September, by 0·50 marks per 100 kilos., and there will be a further increase to one mark from October 1st to the end of December.

Belgium.

The Belgian paper market is very weak, except in the case of news-print, for which there are numerous orders. Packing, especially kraft, meets with keen competition from Scandinavian imports.

Italy.

The Ambrogio Binda paper mills of Milan are paying a dividend of 72 lire per fully paid share and 18 for the new shares, the net profits for the past year being 2,700,000 lire.

The Cartiera Pirola of Milan, now the property of the Verzuolo Co., is paying a net dividend of 10 per cent. with net profits of 300,000 lire.

Jugo-Slavia.

An interesting report on the economic and industrial conditions in the Serb-Croat-Slovene Kingdom (Jugo-Slavia), dated April, 1925, has been prepared by Captain Murray Harvey, Commercial Secretary to H.M. Legation, Belgrade, and published by the Department of Overseas Trade (1s. 7d. post free).

With regard to paper and cellulose, the report states: Jugo Slavia possesses a well developed cardboard and papermaking industry. There is only one paper factory which has its own cellulose plant. There is another in Bosnia, but owing to its situation the cellulose produced must be exported, while nearly all the cellulose used in the country's paper factories must be brought from abroad. The production of certain kinds of paper, such as writing paper, if the factories were working at full capacity, would be sufficient to cover the local demand; and in favourable circumstances cardboard could be exported. Austria, it is said, can send paper into Jugo-Slavia owing to the low tariff, but, on the other hand, forbids the importation of paper into her own territory. Complaints are heard that some of the Jugo-Slav factories must import their cellulose from Austrian concerns which are their competitors in finished paper.

Sweden.

The Karlstad Mekaniske Verkstad, Sweden, has received an order for the main mechanical equipment for a sulphate cellulose works and two papermaking machines for the works of the Fiskeby A.B. The same company has secured an order from France for the delivery of complete machinery for a cellulose works and paper mill, the former being intended to be operated according to the method of Dr. L. Rinman. Under former orders deliveries of complete machinery are being made for the Amotfors new sulphate works, together with equipment for a paper and carton works in Greece.

Japan.

A company has been formed in Japan for sale of news-print, with a capital of 5,000,000 yen. Thus competition between the various mills will, it is expected, be checked.

BUYERS' GUIDE TO SOURCES OF SUPPLY.

Rates per Insertion: 3/- Minimum (not exceeding three lines)—each additional line, 1/- extra.

Discounts on Weekly Insertions: 13 times, 10 per cent.; 26 times, 15 per cent.; 52 times, 20 per cent.

BOOKBINDERS' MACHINERY AND SUPPLIES.

ALBION SEWING COTTON CO. LTD., Fawley Mills, Tottenham Hale, N.17.—Bookbinders' Threads, Linen and Cotton on cones, reels and in skeins.

FRIEDHEIM, LTD., OSCAR, 25, Water-lane, Ludgate, London, E.C.4. "Martini," "Simplified," Book-Sewing Machines; Thread-Stitching and Knotting Machines; Cloth-Slitting and Cross-Cutting Machines from the Reel; Guillotines and Trimming Machines; Folding Machines fitted with "Camco" Continuous Rotary Feeder, "Spiess" Patent; Book Rounding and Backing Machines; Wire Stitching Machines.

BOXMAKING MACHINERY.

FRIEDHEIM, LTD., OSCAR, 25, Water-lane, Ludgate, London, E.C.4. Combined Rotary Cutting, Scoring and Creasing Machines; Rotary Cutting Machines; Corner Cutting and Slotting Machines; Bending Machines (Flat); Corner Staying Machines; Wire-Stitching Machines, etc., etc.

BRONZING MACHINES.

FRIEDHEIM, LTD., OSCAR, 25, Water-lane, Ludgate, London, E.C.4. Flat Bronzing Machines.

COMPOSING AND TYPE-SETTING MACHINES.

INTERTYPE LTD., 15, Britannia-street, London, W.C. 1. Text and Display Machine, flexible, and economical. Send for descriptive literature.

ENVELOPE MACHINES.

CARLAW, DAVID & SONS, LTD., 31, Finnieston Street, Glasgow. High Speed Adjustable Envelope-making Machines for all sizes and shapes; Blank Cutting Machines; Cutters; Embossing Machines, etc.

ENVELOPE MACHINE MANUFACTURERS.

FRIEDHEIM, LTD., OSCAR, 25, Water-lane, Ludgate, London, E.C.4. Envelope-Making Machinery of every description; Punching Machines; Paper-Bag Making Machines.

FOLDING MACHINES.

CANADIAN-AMERICAN MACHINERY CO., LTD., 63, Farringdon Street, E.C.4. ('Phone Cent, 1165). The "Cleveland" and "Camco" series. A Folder for every need, from Eight Crown down to Demy Folio.

GUILLOTINES, Etc.

ALBION SEWING COTTON CO., LTD., Fawley Mills, Tottenham Hale, N.17.—Hand Cutting Machines from 27/-; Bevel Edge Cutters from 60/-. Ask for Illustrated Price List.

OFFSET MACHINES.

CRABTREE, R. W., & SONS, LTD., Water Lane, Leeds, makers of "Ensign" Super-Offsets in all sizes for Sheet or Reel feed, in One, Two or Three Colours, or for Perfecting.

PAPER BAGS AND CARRIER BAGS.

ALBION SEWING COTTON CO., LTD., Fawley Mills, Tottenham Hale, N.17.—Cords for stringing. Plain colours, mixtures, etc., in balls or cut lengths.

STONEHOUSE PAPER AND BAG MILLS, Stonehouse, Glos., for all classes of Paper Bags, printed and plain. Keenest Trade Prices.

PAPER FEEDERS.

CANADIAN-AMERICAN MACHINERY CO., LTD., 63, Farringdon Street, E.C.4. ('Phone Cent, 1165). The "Camco" (Spiess Patents) Automatic Feeder.

CROSS PAPER FEEDER CO., LTD., 92, Fleet Street, E.C.4. Manufacturers and Sellers of the Cross Patent Automatic Feeder.

PRESS BLANKETS.

LIGHT & CO., LTD., W. J., 36-38, Whitefriars Street, London, E.C.4. 'Phone; Central 3839. "LIGHT'S-EVERWEAR" Press Rubbers. Oil and Ink-Proof and Reversible.

PRINTING METAL MANUFACTURERS.

FRY'S METAL FOUNDRY, Holland Street, Blackfriars, London, S.E.1. Branches at Manchester, Bristol, Glasgow, Dublin. "Tryotype" SERVICE, *ie.*, Prompt Dispatch, Superlative Quality, Competitive Prices in Printing Metals, Spacing Materials and Melting Equipment.

PRINTING PRESSES, ETC.

CANADIAN-AMERICAN MACHINERY CO., LTD., 63, Farringdon Street, E.C.4. ('Phone Cent, 1165). The "Kelly" High Speed two rev. presses.

ROTARY WEB PRESSES.

CRABTREE, R. W., & SONS, LTD., Water Lane, Leeds, and 7, Farringdon Road, London. NEWSPAPER (Speciality) & MAGAZINE ROTARIES.

HOE & CO., LTD., R., 109-112, Borough Road, London, S.E.1. Telephone: Hop 4028-9. Telegrams: Expugnator Sedist, London. Cables: Hoe, London.
LARGEST MANUFACTURERS OF HIGH SPEED ROTARY NEWSPAPER AND MAGAZINE PRESSES. Patentees and Suppliers of Automatic Ink Pumps.

STEREO.

DIXON & CO., LTD., L. S. 38, Cable Street, Liverpool. DRY FLONG "DIXOTYPE" All British. Wet process; Tissue, Blotting & Backing.

STEREO AND ELECTRO PLANTS.

HOE, & CO., LTD., R., 109-112, Borough Road, London, S.E.1. Tel.: Hop 4028-9. Telegrams: Expugnator-sedist, London. Cables: Hoe, London. Complete lines of Rotary and Flat Stereo and Electro Plants.

STEREO DRY FLONG.

LIGHT & CO., LTD., W.J., 36-38, Whitefriars Street, London, E.C.4. 'Phone: Central 3839. "IDEAL" Hand-casting Dry Flong and "CLEARTYPE" Autoplate Dry Flong.

STEREOTYPING MACHINERY, ETC.

CRABTREE, R. W., & SONS, LTD., Water Lane, Leeds, and 7, Farringdon Road, London. ROTAPLATE (Reg. Trade Mark) and ROTASHAVER Casting and Finishing Machines.

LIGHT & CO., LTD., W.J., 36.38, Whitefriars Street, London, E.C.4. Sole Agents for the "WINKLER" Automatic Moulding Press, Automatic Plate Casting Machine, etc.

TRADE PUBLICATIONS.

BRITISH AND COLONIAL PRINTER AND STATIONER, THE. Publishers: Stonhill and Gillis, 58, Shoe-lane, London, E.C.4. Founded in 1878, this weekly journal is the recognised medium for Printers, Stationers, Box Makers, Envelope Makers, Bookbinders, etc. Its pages contain the latest improvements in machinery, descriptions of new processes, and commercial intelligence and current news. Subscribers get the paper for 52 weeks for 13s.

BOOKBINDER, THE, forms a Monthly Section of the *British and Colonial Printer and Stationer*, and subscriptions are booked for these issues at the rate of 3s. 3d. per annum, including postage. Special contributions appear from the pen of leading authorities. Publishers: Stonhill & Gillis, 58, Shoe-lane, London, E.C.4.

DICTIONARY OF PAPER TERMS.—Definitions of the Terms as used in the Manufacture and Merchandising of Paper. Published in book form by the Lockwood Trade Journal Co., Inc., New York. Bound in cloth, 6 × 9, 87 pp. Price 7s. 6d. Copies may be had of Stonhill & Gillis, 58, Shoe Lane, London, E.C.4.

LITHOGRAPHIC TRADE REVIEW, THE. This forms the subject of a monthly section of the *British and Colonial Printer and Stationer*, and these issues are obtainable at an annual subscription of 3s. 3d. Publishers: Stonhill and Gillis, 58, Shoe-lane, London, E.C.4.

PAPER TRADE REVIEW, THE WORLD'S. Publishers: Stonhill and Gillis, 58, Shoe-lane, London, E.C.4. This weekly journal established in 1879, gives particulars of Papermaking Machinery and Processes, Current Prices of Raw Materials, Market Reports, Interviews with Leading Men associated with the industry, Commercial Intelligence, etc. Annual subscription: 26s. plus postage (Inland, 30s. 4d.; Foreign and Colonial, 32s. 6d.)

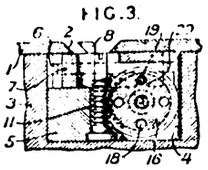
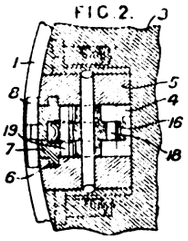
New Inventions

Printing Plate Clamps.

Messrs. R. Hoe and Co. have patented a clamp for securing printing plates on a support, which comprises a jaw-carrying member slidably mounted in a recess in the support and actuated through a gear wheel engaging a threaded rod vertically mounted in the recess, the connections between the gear wheel and jaw being such that the gear wheel may be adjusted to bring a different portion of its periphery into engagement with the rod. A centrally-slotted block 5 fits in the recess 4 in the plate support 3, and is provided with side recesses 6 with which engage side projections on the jaw-carrying member 7. The member 7 is moved, so as to bring the jaw 8 into engagement with the

FIG. 3.





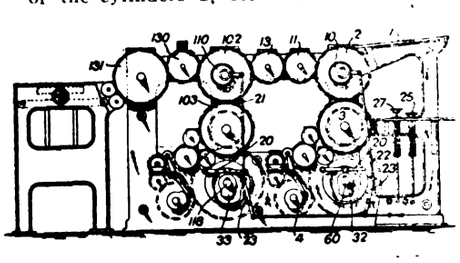


FIG. 2.

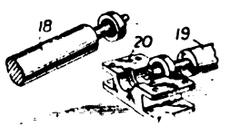
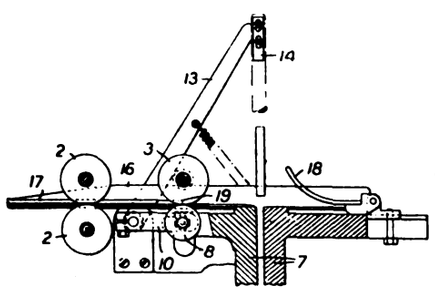
edge 2 of the printing plate 1, by turning a vertical worm 11 clamped at its lower end in the recess and gearing with a toothed wheel 16 carrying a pin 19 engaging with a recess 20 in the lower side of the block 7. If the teeth in engagement with the worm 11 become worn, the pin 19 may be placed in another hole 18 in the wheel 16, so that another set of teeth come into action. The recesses 6 in the block 5 may be inclined toward the bed of the support, so that the jaw exerts a downward pressure on the plate when brought into clamping position.

Tripping Arrangements for Rotaries.



A printing machine, patented by Mr. H. G. Rogers, comprises, in combination stereo-carrying cylinders 3, 103, impression cylinders 2, 102, transferring and reversing cylinders 11, 13 and eccentrics 10, 110 adapted to move the impression cylinders towards and away from the stero cylinders. This mechanism is under the control of trip gear. The cylinders are geared together and driven from a main shaft 4, the gearing being such that cam shafts 60, 118 are driven at half the speed of the shaft 4 and the shafts of the cylinders. The eccentrics 10, 110 are arranged at each end of the cylinders 2, 102 and are connected

to rods 21 formed with forks 22 adapted to engage tappet levers 20 operated by cams 32, 33 arranged at each end of the shafts 60, 118 and designed to move the impression cylinders towards and away from the stereo-cylinders before and on the completion of each printing operation. The rods 21 are adapted to be moved out of engagement with the levers 20, to render the latter in operative when the impression cylinders are out of contact with the stereo cylinders, by foot pedals 25, 27 operating through a link 23. Sheets to be printed are fed from the table 1, and pass from the second impression cylinder to cutting and folding cylinders 130, 131.

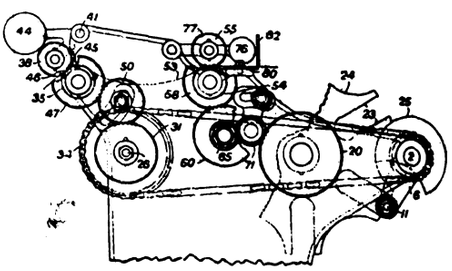


Feeding Sheets to Presses.

In an invention patented by Mr. H. T. Backhouse, sheets are fed to the registering devices of printing or like machines by constantly driven tapes which are made endless in the course of manufacture, being either woven endless or built up of a length of material, the two ends of which are joined during manufacture so as to present a substantially flush outer surface. Sheets when registered by such tapes will remain in correct registered position without danger of the registration being upset by projections on the moving tapes. The rollers over which such tapes pass are formed in two parts as 18, 19, with their inner ends carried in a central bearing block 20 provided with a detachable cap for holding the two ends of the shaft in driving-engagement, the ends being formed with half-lap joints. Or the tape rollers may be formed with detachable end-bearings which permit of detachment of the roller to enable the tapes to be inserted.

Feeding and Registering Devices.

In this invention blanks are fed to packet-forming machines, such as are described in Specification 1116/11, by mechanism comprising feed rollers which grip the blanks and feed them to mechanism adapted to give the blanks a sudden sharp impulse towards the end of its travel into the desired position. The blanks are fed by uniformly



rotating rollers 2 and beneath a roller 3 rotating at high speed. A following roller 8 is raised into contact with the roller 3 through the action of a striking piece 14 on a plunger which moves levers 13, 10 and elevates the roller when the plunger is clear of the jaws 7. The blank is guided by a channel 16 fitted with narrow strips 17, and is fed against a stop 18, rebound being checked by the ends 19 of the strips 17. The patent is in the name of W. E. Molins.

Making Inking Rollers.

Inking rollers for printing-machines, stated to be applicable for other purposes, as patented by V. M. Dulphy, comprise a body of rubber, printers' roller composition, or other elastic material, and a thin covering layer of leather, "special rubber," or other material, which is unaffected by ink entirely enclosing the body. The body may be cast upon the metal roller spindle and a rubber covering layer cast upon the body, the body and layer being then vulcanised together, or the covering layer may be formed as a sleeve of slightly smaller diameter than the body and be forced over the body which has previously been vulcanised. The sleeve is reinforced with fabric to prevent longitudinal stretch.

Web Cutting Apparatus.

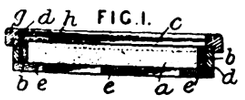
In an invention patented by W. Rose and Rose Bros. (Gainsborough), Ltd., a pair of rolls 35, 38 are continuously and positively driven through gearing 34, 26, 31, 50, 47, 45, 46, from a power shaft 2. The upper roll 38 is carried in a frame pivoted on a shaft 41 and pressed towards the roll 35 by a heavy mass 44. A second pair of rolls 54, 55 are intermittently rotated from the shaft 2 through a Geneva stop mechanism 11, 6, 25, 23, 24 and gearing 20, 71, 65, 60, 58, 77. The upper roll 55 is held in a pivoted frame and is pressed towards the roll 54 by a light mass 76. The web 53 is fed continuously through the rolls 35, 38 and intermittently through the rolls 54, 55, so that the material between the rolls becomes looped. The feed of the rolls 54, 55 is slightly greater than that of the rolls 35,

38, the rolls 54, 55 slipping over the web when the latter is taut. A movable cutting blade 82 co-operates with a blade 80 to sever the web. The length of web cut is varied by change-wheels in the roller gearing. Specification 4481/03 is referred to.

Drying Paper.

A device for drying photographs, lengths of paper or fabric, etc., suggested by Mr. M. Ermes, comprises a porous mass consisting of shredded absorbent matter such as comminuted paper mixed with a binding agent such as plaster of paris or cement. The mass may be prepared by softening shredded paper or paper waste in hot water and comminuting it by stirring to form a thin paste; or paper pulp may be employed. Finely screened pine or other sawdust may be added thereto. Plaster of paris is then added until the paste becomes thick. The paste is cast into suitable moulds, and after solidification is dried in an oven. An acid,

FIG. 1.



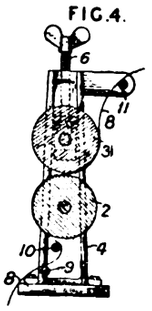


FIG. 4.

such as hydrochloric or nitric acid, may be added to the paste before moulding.

For drying photographs or sheets of paper, etc., a block a of the material is inserted in a frame b, Fig. 1, surrounded by a frame d, across which is stretched a piece of pervious fabric c to prevent fouling of the surface of the block. When not in use, the frame d is closed by a cover g, the plate h of which, as well as the base e of the frame d, is perforated to facilitate drying of the block. The sheets to be dried are placed on the fabric c covering the block, and pressed thereon as by a roller made preferably from the absorbent composition. For drying long lengths of material, rollers 2, 3, Fig. 4, of the absorbent material are mounted in a frame 4 and pressed together by screws 6. The material 8 is fed in through rails 9, 10, and passes round the rollers and over a take-off rail 11. The lower roller 2 is driven by hand or mechanically.

AMONG the entertaining articles in the September number of *Pearson's Magazine* is one on "A Famous *Punch* Artist at Home," which consists of a delightful "Studio Talk" with Miss Gladys Beattie Crozier, and is illustrated by many of Mr. Lewis Baumer's most amusing *Punch* sketches.

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

THERE is still no considerable improvement in the paper industry, although the tone is certainly improving, and some good inquiries are moving. Wood-free mills are short of orders, but in certain quarters there is a good volume of business for export. Esparto mills are still on the quiet side, though there is a satisfactory demand for body paper for coating mills. Home requests for esparto papers have fallen off, but will almost certainly revive towards the end of next month. Holidays are still interfering with the recovery of trade and will continue to retard progress for another month, after which it is to be hoped that there will be an earnest endeavour to stir up a brisker flow of orders. With the exception of news print mills, every section of the papermaking industry is badly in need of increased output.

* * *

THE hand-made mills are experiencing a prolonged shortage of orders and there are fears in some quarters that the demand is falling away permanently. In particular this applies to ledger and writing papers. For drawing and loan papers, filters, antique printings, cards and specialities there should be a steadily developing market, and it will be very largely the fault of the mills if such does not prove to be the case. It can well be imagined that users of ledger and writing papers will continue to study economy. The difference in quality between the finest machine-made papers and hand-made is so negligible in a commercial sense that it can scarcely be wondered at that large users of account books have studied the question of price very closely. The very considerable difference in the prices of machine-made and hand-made papers is a matter of importance in these days of high overhead costs. Just as the original user of hand-made paper turns his attention to high-class machine mades, so the earlier user of first-class tub-sized papers reduces his costs by seeking lower grade stock. Probably there is a greater proportion of engine-sized azure laid paper being used today in comparison with tub sized than there was in the pre-war period.

* * *

REVERTING to hand-made ledger paper, there is another field for its use which has been developed and which might offer opportunities for exploitation. This is in the loose-leaf direction, where extreme durability and long resistance to hard wear are very essential in the case of the better-class books. It is well understood that the life of sheets and the amount of wear they are subjected to is greater by far where loose-leaf books are concerned than in ordinary account books. Even in loose leaf books, however, there is always the deteriorating influence of competition to be taken into account, and manufacturing stationers are as potent a factor in this as the users themselves. Very rarely is quality the keynote of competition; in ninety-nine times out of a hundred, price is the deciding factor.

* * *

FRESH paper substitutes for leather and bookcloth continue to find their way upon the market, and there must be a correspondingly increased consumption of paper in the making of books, pattern cases, boxes, etc. Publishers of cheap popular editions are devoting more attention to paper bindings got up to look like leather or cloth, and it must be conceded that the modern type of substitute looks very much like the real thing. There may not be the same strength; but it is not always necessary, especially in the case of obviously short-lived books, cases or boxes. There is no reason why an attempt should not be made to produce a paper substitute with much greater tenacity than some at present on the market. It would cost more, but it would have a wider scope and make a stronger appeal. In pre-war days there were Japanese imitation leather papers which were produced with wonderful effects and with a strength of tear little inferior to some sorts of leather.

* * *

TALKING of the strength of Japanese papers, we are reminded that less is seen nowadays of Japanese copying paper, which was a familiar feature in the manufacturing stationer's paper warehouse before the war. It is still used and is imported by two or three paper houses; but the demand has fallen to negligible proportions. Chiefly employed in the manufacture of letter-copying books, it has suffered in common with other types of copying paper from the general adoption of typewriter and loose-leaf filing methods. Apart from this, the price of English copying papers is so much more favourable that the use of the imported product is limited to those who have not to regard cost as a first consideration.

* * *

IN many respects this Japanese copying is a unique sort of paper. Among the thinnest of papers made, for a ream of double-crown averages about 7–10 lbs., it has a prodigious strength in relation to its bulk and possesses a silken texture peculiar to itself alone. The fibre employed is from the mulberry plant and its length in the finished sheet of paper is abnormal as paper fibres go. The method of manufacture is conducive to strength and character, being carried out in the manner which has survived for centuries in the various papermaking villages scattered over Japan. Very little equipment is used and there is no artificial treatment. What bleaching there is is done by mere exposure. In appearance the finished paper is unbleached. The bark of the plant is first boiled in wood ash lye, then put into bags and left in a running stream to remove all traces of alkali, following which it is beaten on a block with sticks until it is reduced to pulp. After stiffening with rice paste, water is added to reduce the pulp to papermaking consistency Subsequent treatment follows closely the methods employed in our own hand-made papermaking, except that it is much more crude. The mould is made from bamboo strips and silk threads and no felts are used, while drying is performed by exposing separated sheets to the sun.

Address for service in the United Kingdom is, c/o W. P. Thompson and Co., 12, Church-street, Liverpool.

FACSIMO.

460,111. Paper (except paper hangings), stationery and bookbinding. William Lewis (printers), Ltd., 43, Penarth-road, Cardiff, Glamorganshire; printers and stationers.—June 27th, 1925.

PAPIERFABRIK OBERURSEL G.M.B.H., FRANKFURT A/M, for whom Messrs. Arthur Heath and Co., Ltd., 91, Queen Victoria-street, London, are sole agents for home and export, have, during the last few months, been altering the whole of their machinery so as to make vegetable parchment. They have now started making this paper and samples of the first making reveal a nice clean sheet. Prices are very competitive.

Review of Paper Publicity & Samples.

TINTED S.C. PRINTINGS are embodied in a set of samples to hand from Messrs. Chas. Briscoe and Co., Ltd., of London, E.C.4. Comprising ten striking and clear colours, the set is very plainly and simply devised, and dimensions are given in inches as well as names. Considering that double-crown is 20 by 30, we should say that 21 by 31 cannot legitimately be termed double crown. Evidently there is an endeavour to fall in with the new standardisation because the basis of price and substance is 1,008 sheets, packed in 504 sheets. Why not adhere to the 1,000 sheet basis, which has a subtle selling value to the paper merchant?

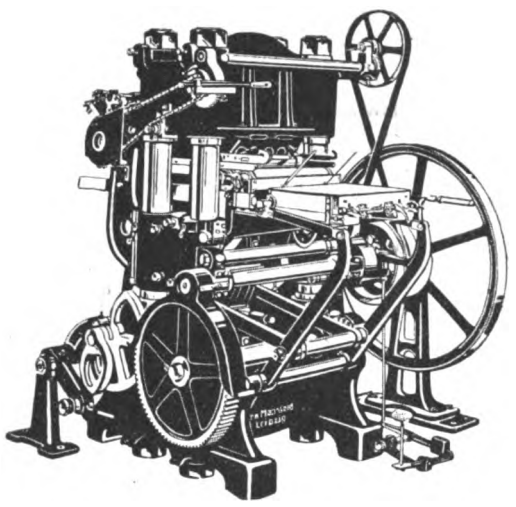
COATED PAPERS are shown in a neat little folio from Messrs. H. and L. Slater, Ltd., of London, Bollington and Manchester. As such they would be better presented in a coated art board cover, which would have been fitting, as well as making another selling point if the specification had been appended. Better use could have been made of the printer's coloured inks without spending more money and a nicer treatment could have been devised. The papers shown are one-side art, chromo enamel and proofing chromo and on each a demonstration of tri-colour printing is given, which justifies the claims made for the paper. Better use should be made of opportuities to introduce brief but well-written text on these samples. It is not enough now to dispose of the selling proposition by such abbreviated comments as "made specially for half-tone and colour work." This will not make any appeal to the printer where a clever but short feature-talk would increase sales.

CONQUEROR PAPER AND ENVELOPES, as advertised in *Punch*, is the title of a specially-compiled set of these papers arranged in book form by F. C. Thacker of Birmingham. This is an example of initiative, for obviously Mr. Thacker is out to reap the fullest benefit he can from Messrs. Wiggins, Teape's big advertising campaign. All the samples shown in the book are numbered and priced per ream for retail. As a direct selling and sales creating proposition, the sample book arranged and produced by Mr. Thacker should repay him for his keen enterprise. Half the value of a costly advertising campaign goes west because it is not followed up in every conceivable way. Messrs. Wiggins, Teape and Co., Ltd., have sown a lot of seed, and it is for houses like Thacker's to reap some of the fruits.

Yorkshire Paper Mills, Ltd.

A 240-in. Machine.

This company, which recently acquired the Dearne Paper Mills, Barnsley, is showing a progressive policy, as we understand it is the intention to instal a Walmsley machine of the latest type. The new machine, 240-in. wide, with a capacity of 850 ft. per minute, will, when in operation, enormously increase the news-print output of the mills.



"THE QUICKEST BOOK-KEEPING CHART," published by Mr. Robert Scott, 23, Barrington Drive, Glasgow, is a neat piece of work which will be appreciated by business people. It contains a set of books fully worked out and explained on the double-entry system. Simplicity is a feature of the chart, which is published at 2s. 2d. post free. Mr. Scott was for some years in the office at Springfield Paper Mills, Polton, Midlothian.

THE paper industry of Czecho-Slovakia is in a period of great prosperity. All the mills are in full work and orders from other countries are arriving continually it is stated.

How Printers Create Advertising.

Actual Examples and Practical Advice from an Experienced American Printer.

British printers are rapidly awaking to the fact that a big field of possible business is open to the printer who is able and willing to go out with practical suggestions to traders who are not yet fully aware of the power of printed publicity, or who are unable themselves to prepare effective advertising matter. Useful indications of American enterprise in this direction will be found in the following address delivered by Mr. Fred Johnston, of Dallas, Texas, at the recent Houston convention of the Associated Advertising Clubs of the World.

Ad Lewis, of the Southern Press, of Toronto, declared at the Pittsburgh Convention of the Direct Mail Advertising Association last year, that his concern had just about got to the point where it could and would refuse to print anything for a customer unless the job submitted conformed to modern standards of advertising. He maintains an organisation of advertising builders and repairers, and, if the idea is faulty, he will change it and whip it into shape for the customer. If the idea is too faulty to justify repair work, he will discard it entirely and submit a new one to take its place. He hasn't said so, but I venture the assertion that 99 per cent. of his customers appreciate this service and come back for more. I know of no better proof of the effectiveness of Mr. Lewis' policy than that he was awarded the prize at the Pittsburgh convention last year for having the most constructive mail advertising campaign.

Three men in a well-known manufacturing city took over a large and bankrupt printing plant ten years ago and put in a complete service organisation, devoted to the building of good printed advertising. To-day the company is in fine shape, doing a volume business, making money, and recently moved out of one large building into a larger building, especially planned and erected, in order to take care of its growing business. Twenty years ago certain printers were regarded as the leading printers in that city. They may be in business there still, but we never hear of them. They failed to mark the flight of time and the readjustment of modern business left them beyond the pale. Benjamin Franklin is held up to us as a model. He is reputed to have got rich in the printing business. When we recall this fact someone usually reminds us that Benjamin Franklin lived in the days before the advent of the Government Printing Office and that he had great political influence. This is all very true. Yet Franklin was the most modern printer of his day. If he had lived in this age he, no doubt, would have achieved the same degree of success, but he wouldn't have arrived at his goal with the same methods and the same equipment that he used in the eighteenth century.

The trouble with a great many of us printers is that we are trying to use the same kind of equipment and the same cost system that Franklin used, and we haven't got the Government printing contract.

The Industry has Changed.

The printing industry isn't what it was in Franklin's day, nor is it what it was twenty-five years ago. There are a few large shops that specialise on this kind of printing and that kind of printing—forms, tariffs, tickets and the like—and when the average printer, specialising in the paper and ink kind of printing, go into competition with these fellows, a comparison of prices and services makes him look foolish. This printer is limited in his sales talk to "Let Me Figure," and the big fellow outfigures him because he specialises on one particular kind of work, and he has every modern device for the economical production of a definite class of work. The average printer is at a great disadvantage bucking this class of competition, because he is trying to do everything in the way of printing and is thereby in competition not with one large printer, but with a dozen, each specialising in one particular class of printing.

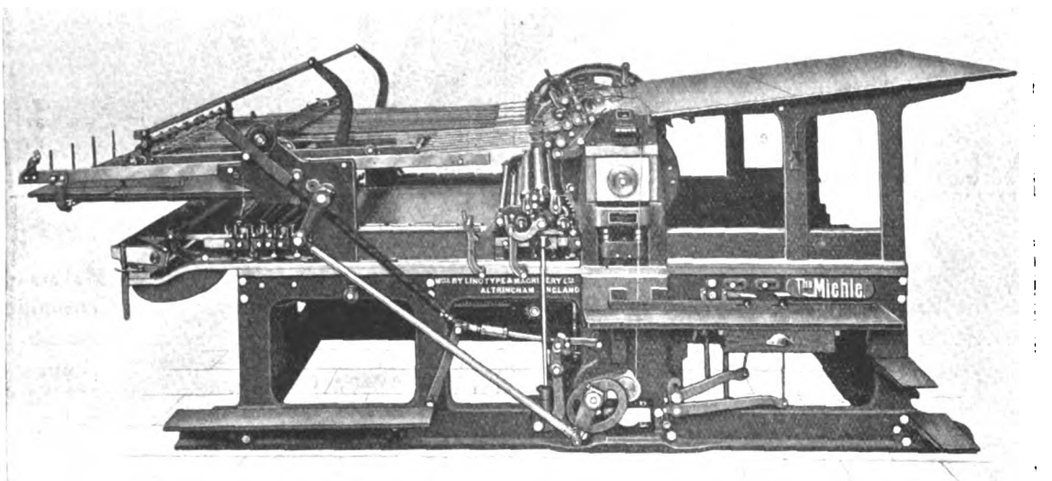
The printer that we are interested in is the average printer. His business is located in the average growing city. In his territory are a number of factories, wholesale houses, banks, retail stores, service agencies and the general run of business. There are two ways for the printer to regard his trade area: First, he can say to himself, "All these people have to have printing and I will get out and get my share of the business." Second, he can say, "All these concerns are interested in getting more business, and I will get all I can do by helping them attain their goals."

Unfortunately most printers belong to the former class. They take what comes their way—if they can outfigure the other fellow. If they do get hold of a concern who wants to leave the beaten trail and do something with printed salesmanship, the printer "yesses" him, agrees with him, and humours him under the misguided assumption that "The customer is always right." By and by the efforts of this star customer attract the attention of some concern that knows how to advertise and has the courage to tell the customer that his stuff is rotten, and the printer loses another customer.

There are a few printers who belong to the latter class. They look at the customer's requirements from the standpoint of advertising and selling, and insist that whatever he sends out must conform to the highest standards of modern merchandising. I say there are a few such printers, and it is encouraging to note that their ranks are being augmented by new members each year.

I think, as printers, we owe a great deal to advertising agencies. As a general rule they have exhibited a fine brand of industry and intelligence in putting character into advertising produced by them. Agencies make mistakes just like everybody else, but a comparison of magazine advertising today and twenty years ago proves conclusively that a great distance has been travelled in the right direction. The advertising agencies are taking the same sized space and making it yield a greater return by more intensive and intelligent cultivation.

That is what the printers must do. They must become more proficient in making the same area of paper yield a greater crop of attention, reader-interest and returns. We can do this by disabusing our minds of the erroneous impression that the customer isn't amenable to suggestion. If the customer wants a sixteen-page booklet, and turns in the copy and gives you his idea of the matter, analyse the booklet in the light of what he wants to accomplish. If you decide that he has done a good job of planning and writing, go ahead and execute his idea. If you see improvements that might be made, suggest them to the customer and tell him why. Usually you'll find that he appreciates your co-operation and will continue to favour you with his business.



Value of Co-operation with Customer.

I want to cite a few examples of how this works. You'll pardon the personal reference, but after twenty years in this business of creative printing, I naturally know more about my own business than the other fellow's, though he may be doing a better job of it than I am.

A wholesaler had been in the habit of shopping around for his advertising literature. He asked us to bid on a large booklet he planned to have made. He was prepared to use expensive art work, good paper and good ink, but his idea was fundamentally wrong and his copy weak. We looked the

Superiority

We make the Miehle which printers have made famous. That is why the Miehle—always in the highest class—remains the best. It has been made superior by the manufacturers and by the users jointly—

By the manufacturers through the extreme care taken in every stage of its manufacture ;

By the printers through their constant orders, whereby it was possible for us to maintain the high standard of its manufacture at a reasonable price.

As the best printing is the most profitable, it may pay you to write for particulars of this British-made press for perfect printing—The Miehle - the two-revolution machine which raised the standard of press work throughout the United Kingdom.

proposition over, and when we went back to quote him a price, we told him that we felt that we could render him a valuable service in the way of revising his copy and changing his lay-out. It occurred to us that he might resent this, but we didn't believe he would put personal feelings above business success. He was delighted with the proposal, and told us to go ahead. The next time he planned a piece of mail advertising he called us in and asked for a suggestion. It wasn't long until he turned over his entire mail advertising appropriation to us and it runs into several thousand dollars a year.

I also recall an experience that we had with a public utility operating throughout the country. A matter of rate adjustment was up and the company prepared a piece of mail matter setting forth its side of the question. When we were asked to bid on the job we read the copy and realised that it lacked the intimate touch essential. We re-wrote the copy and took it back to the executive of this company. He read our copy and then said to our representative: "Why did you change our copy?" "Because," said our representative, "we were convinced that your copy was too technical to be understood by the public and too cold to be appreciated. We suggest this copy because we feel that it stands a better chance to do what you want the piece to accomplish for you."

"Fine," said the utility man. "In all my twenty years of dealing with printers this is the first time that a constructive suggestion has ever been offered. I appreciate it." Incidentally we got the job without further competition, and have been favoured with this company's business ever since.

It's Up to the Printer.

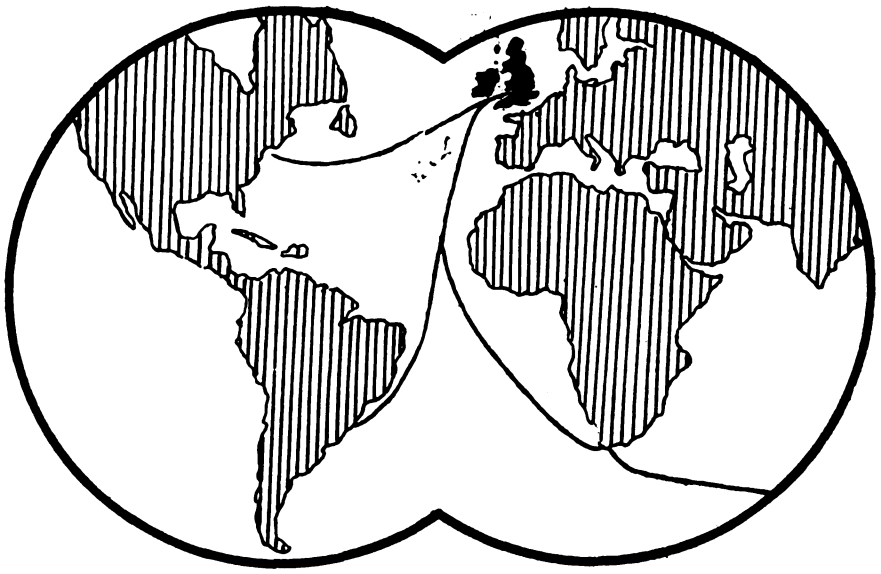
In this modern age the printer has no one but himself to blame if he fails to make a success of his business. The paper manufacturers have standardised papers to such an extent there is no occasion to keep capital tied up in the stock room. They also have worked out a system of distribution equivalent to carrying the printer's stock for him. He doesn't have to buy the paper until the job has been sold. The machinery manufacturers have in like manner done a fine job. Modern labour-saving machinery is available to every printer alike to assist him in doing good work at a minimum of operating cost.

The United Typothetae has turned the searchlight on printing costs, and every printer can know what it costs him to do business. If he loses money on the work that he does, he has no one to blame but himself. The figuring printer that does not specialise, as a rule, never makes any profit. He never builds a business; he does not know his costs. If he does, he pays no attention to them. He is one of the "have you anything to figure on to-day?" printers, and they are the ones who are demoralising the business. But, like the poor, they will be with us always. If printers would adopt the Standard Cost System, and live by it religiously, they would be better business men and make more profits.

With all modern machinery and supplies, with a definite cost-finding system, the printer's problem resolves itself down to the personal equation. If he has the brains, the foresight and the energy, he will have comparatively easy sailing. Advertising is no longer an experiment. We know pretty definitely the reaction of business under a known set of circumstances with certain treatment. The ranks of consistent advertisers are being augmented constantly, as new concerns come on the scene, and as old concerns wake up to the possibilities.

We know that publication advertising is not self-sufficient. It takes mail advertising to bridge the gap, to bring about the all-important intimate contact, to complete the chain of modern merchandising. Direct mail advertising must come from the printer. The manner in which it comes from the printer, and the continued and increasing use of it, depends upon the printer himself. If he has caught the vision of modern business, he will put advertising sense into the printing that he produces and thereby will keep going and growing. He will learn how to keep the machinery of his customers busy, and will thereby get all the work he can do.

S. Wales Master Printers.



Organisational Efforts.

During the past fortnight, Mr. A. E. Baker, the secretary of the South Wales and Monmouthshire Master Printers' Alliance, has been visiting the master printers of Newport and the rest of Monmouthshire, and in his travels he has been accompanied by Mr. L. J. Cumner, organising official of the Federation of Master Printers. A visit was also made to Brecon, where an informal meeting of the printers took place. A further meeting was fixed for a later date, when it is hoped that the Brecon Association will be re-formed in accordance with the model rules.

At a luncheon gathering in Newport, to which all the printers in the county were invited, Mr. H. Pegler (Abergavenny), president of the South Wales Alliance, presided. An address on the work of the Federation was given by Mr. Cumner, and among others who took part were Mr. R. S. Johns (Newport), Mr. G. T. Wright (Newport) and Mr. A. E. Baker. Reference was made to the depressed state of industry in South Wales, and the view was expressed that while the tendency to cut prices below cost was entirely mischievous and useless, the work done by a large national body in seeking to improve trade had a large measure of effectiveness.

On Tuesday of last week Mr. A. Williamson, secretary of the Federation Costing Committee, addressed a luncheon meeting of the Cardiff Master Printers' Association, at which Mr. A. E. Harrison, chairman of the Association, presided. Mr. Williamson's subject was "Why Estimate?" and he gave some illuminating statistics which filled some of his hearers with incredulity until cold reason proved to them the correctness of the statements made. He claimed that the average number of estimates prepared per week by an estimator was 20, and as only about 10 per cent. of estimates resulted in orders, the cost of each estimate in salary was about £2. Further, 75 per cent. of the estimates that secured orders did so because there was a mistake in them.

EVERY PRINTER HANDLING LITHO AND OFFSET WORK SHOULD USE

TYPON

PAPER NEGATIVES

TYPON gives perfect results from any black-white original, whether printed on one or both sides, or maps, plans, line drawings, etc. The blacks are of uniform density, the whites sharp and clear cut. Streaks, pinholes, or any of the usual troubles are absent.

TYPON negatives are indestructible; they can be used again and again, and are filed like correspondence in a fraction of the space required for glass plates.

TYPON requires no oiling, or special treatment in developing; highly skilled labour is therefore not required.

TYPON adds to the resources of the Printer engaged on Litho, Offset and Planographic work, Photogravure and Rotogravure and reduces his working costs.

TYPON processes are much quicker than wet plate methods, and more than 50 per cent. cheaper. There is no heavy initial outlay — no special and expensive plant to purchase.

TYPON eliminates re-setting, electrotypes, make-ready, and the use of glass—think of the saving by cutting out breakage losses alone! There is no silver bath needed.

TYPON material can be obtained as required, in sheets or rolls. The cost works out at about sixpence a sq. foot, and there are no licence fees or royalties.

TYPON Paper is used in any contact printing frame for exact size work; or in the camera for enlarged or reduced reproductions.

The Typon Catalogue, fully illustrating and describing the process, will be sent on request.

Trade Notes.

GEORGE NEWNES.—The directors announce that it is proposed to capitalise £100,000 of the £160,000 standing to reserve. For this purpose it is intended to issue 200,000 ordinary shares of 10s. each, to be allotted as a bonus to the existing shareholders as fully paid in the proportion of one for every two existing ordinary shares. This will involve increasing the ordinary share capital by £100,000. To carry out the proposed arrangements, the Articles of Association will require alteration, and necessary resolutions will be submitted at a meeting convened for September 23rd next.

MESSRS. MCCORQUODALE AND CO., LTD., have closed their offices at 24, Coleman-street, E.C.2, and have removed to 15, King-street, E.C.2.

TWO NEW high-speed Foster printing presses which have been installed at the offices of the *Derby Daily Express* were started last week by Mr. J. A. Acton, C.B.E., chairman of the directors. Subsequently the staff of the paper was entertained at dinner by the proprietors.

THIS week there is taking place the interesting conference for master printers' sons and young master printers which, by the enterprise of the Home Counties Master Printers' Association, is being held at Old Jordan's Hostel, near Beaconsfield. Various prominent men in the printing trade are visiting the conference to address the members, and a particularly interesting item is on the programme for to-morrow (Thursday), when Mr. A. E. Goodwin and Mr. George Isaacs will debate the question of a 44-hour week for the printing trade. A report of the week's events will appear in our next issue.

THE North London Master Printers' Association will, at the invitation of Messrs. John Dickinson and Co., Ltd., visit Croxley Paper Mills, Herts, on Tuesday next, September 22nd. Ladies will be included in the party, and the journey will be made by charabanc.

THE Edinburgh Printers' Bowling League results for the season leave Messrs Miller and Richard and Messrs. Tanfield at the bottom of the table, and these clubs will have to play off to decide which team will be relegated to a lower division. A match between the League and representatives of the employers will be played on Saturday, September 26th.

PRINTING TRADES SWIMMING GALA.—The annual swimming gala held in connection with the Printing and Allied Trades' Charity Sports Association, is to take place on Saturday, October 10th, at the Shoreditch Baths, Pitfield-street, Hoxton. The principal events in an interesting programme, include a 67 yards gents' and a 67 yards ladies' open handicap, a 200 yards team championship for the John Fry Cup, a 33 yards trade team handicap, and a 33 yards ladies' invitation team handicap. Other features of the evening will be a water polo match and a display of high and fancy diving by the Amateur Diving Association. The president of the Association, Sir Herbert Morgan, will distribute the prizes. Further particulars can be obtained from the Swimming Secretary, Mr. W. H. Marshall, 116, Hermitage-road, N.4.

THE death is announced of Priscilla Lady Newnes, mother of Sir Frank Newnes, and widow of Sir George Newnes. She died at Bournemouth after little more than one day's illness.

THE death is announced of Mr. W. H. Denstone, *The Times* correspondent at Montevideo since 1897. Single-handed he edited and published the *Montevideo Times*, the only English daily newspaper published there, for some 35 years without interruption.

MR. EDWARD FREDERICK KNIGHT, of Hotham-road, Putney, S.W., a well-known war correspondent left £7,819.

THE Executive Committee of the Institute of Journalists have been instructed seriously to consider the question of prosecuting some newspaper which publishes articles under the name of a person by whom they were not written, on the charge of obtaining money by false pretences.

MESSRS. SPICERS, LTD., have given a donation of 50 guineas to the Rockefeller Foundation, London, whose activities are devoted to the study and practice of obstetrics. By request the donation is to be set apart for the benefit of the printing and stationery trades.

THE *Anglers' News*, which is published from Elms road, Clapham, London, this month celebrates its 25th anniversary.

"WIRELESS" is the title of the latest addition to the growing number of publications devoted to that subject. It is published weekly by the Radio Press, Ltd., under the editorship of Mr. Percy Harris, with Mr. John-Scott Taggart as technical director and Major James Robinson as research editor.

IN defending the *Daily Herald* against criticisms brought at the Trades Union Congress last week, Mr. B. Turner (General Council), repudiated that the circulation was declining. From July 15th to the present time the circulation had not varied by more than 700 or 800 daily on a printing of 400,000. This showed stability, and there was evidence that the great bulk of their buyers were buyers because of their faith and belief in a Labour paper. With regard to policy it was impossible to serve every interest or to meet every objection or requirement. The *Daily Herald* did not belong solely to the trade union movement, but was the property of the Trade Union Congress and the Labour party.

THE London Master Printers' Association has just issued a new edition—1925-6—of its neat and convenient List of Members. Member-firms are listed in alphabetic order, and the name of the district association to which each belongs is given, together with the telephone number.

AT the fifth ordinary general meeting of the shareholders of British Glues and Chemicals, Ltd., held in London last week, Mr. T. Walton, F.C.A. (chairman of the company), said: "Our trading profit of £42,540 4s. 4d., compares with £6,293 8s. 1d. in the previous year, and comparison of balance sheets shows that during the year our surplus of liquid assets over all liabilities has grown from £227,822 to £296,531 16s. 8d., notwithstanding that during the year we have actually paid to the Crown over £45,000 in respect of taxation. Expenditure on capital account has amounted to £7,347 10s. 5d.; our factories have been maintained in a thoroughly efficient condition out of revenue, and we have also provided out of revenue over £30,000 for depreciation." In reference to the paying of one half-year's arrears of preference dividend, he said: "Our profit has been sufficient to have allowed the payment of a full year's dividend on the preference shares, but because your directors are of opinion that there will still be fluctuations they have decided to proceed with caution."

Trade Union Matters.

HOLIDAY PAYMENTS AT LEEDS.—Mr. A. E. Holmes, the secretary of the Printing and Kindred Trades Federation, has written to the Executive Council of the Typographical Association acknowledging their communication regarding a dispute over payment for holidays at a Leeds office, and stating that if no satisfactory explanation is forthcoming he will bring the matter before the Hours and Holidays Committee.

T.A. AND YEOVIL BRANCH.—The secretary of the Yeovil branch of the Typographical Association has reported to the Executive Council that following upon the visit of Mr. H. F. Carss, T.A. organiser, nine non members at an office at Sherborne had made application for re-admission to membership of the Association.

SHORT TIME AT WIGAN.—At a recent meeting of the Executive Council of the Typographical Association a report was read from the secretary of the Wigan branch on the question of an overseer member working full time and doing productive work whilst members in the same office were working short time. The chapel had interviewed the firm, but they refused to take any action in the matter until the Executive Council gave a ruling. The Council have informed the branch that members cannot be allowed to work systematic short time.

THE secretary of the Letchworth branch of the Typographical Association has asked the Executive Council for a ruling concerning unemployment pay in the case of a member who completed an engagement, received a week's holiday pay, and after the lapse of one week, commenced work at another office, but claimed unemployment pay for the week he had not worked. The Council have informed the secretary that he cannot receive unemployment pay for that week in view of the week's holiday pay.

Printed Books, etc.

Imports and Exports of Various Countries.

GERMANY.—Books exported from Germany amounted, in 100 kilos., to 20,767 (13,148,000 gold marks) during the first four months of the year, compared with 19,155 (9,540,000 gold marks) in the corresponding period last year. Inports of a similar class of merchandise, also in 100 kilos., in the same periods were: 7,597 (3,977,000 gold marks), 1925; 4,014 (1,606,000 gold marks), 1924.

FRANCE.—Exports from France of books, pictures, etc., in 100 kilos., reached 50,582 (148,436,000 francs) during the four months ended April, compared with 50,450 (178,205,000 francs) last year (four months), and 42,036 (172,656,000 francs) in the 19 3 period.

SWITZERLAND.—Printed books imported into Switzerland, in 100 kilos., during January-April represented 8,207 (2,480,000 francs), contrasted with 8,699 (2,309,000 francs) in the similar period last year. Exports from Switzerland of a similar class of goods, also in 100 kilos., in the same periods were: 4,703 (1,585,000 francs), 1925; 2,986 (978,000 francs), 1924.

SPAIN.—Shipments from Spain, in 100 kilos., during the first six months last year amounted to 1,645, compared with 1,984 in the corresponding period of the preceding year, and 2,939 in the similar six months of 1922.

BRITISH INDIA.—The value of the shipments of stationery (excluding paper) imported into British India by sea during the year ended March was 81,58,000 rupees, compared with 89,06,000 rupees in the preceding year, and 91,74,000 rupees in the twelve months of 1923. In April imports of this same class of merchandise were valued at 6,73,000 rupees, against 6,95,000 rupees last year, and 8,04,000 rupees in the corresponding month of 1923.

CEYLON.—Shipments of books into Ceylon during the three months ended March were of the value of 1,15,000 rupees, compared with 1,06,000 rupees in the corresponding period last year, and 1,65,000 rupees in the 1923 three months.

AUSTRALIA.—Imports of printed books, directories, etc., into Australia during the nine months ended March represented a value of £930,000 against £881,000 in the previous year, and £872,000 in the similar period of 1923.

NEW ZEALAND.—Printed books, papers, and music entering New Zealand during the whole of last year reached a value of £496,000, contrasted with £479,000 in the preceding year, and £421,000 the year before. The value of this class of goods during February was £68,000, compared with £57,000 in February last year, and £52,000 in the corresponding month of 1923.

BRITISH SOUTH AFRICA.—The value of the shipments of printed books and music imported into British South Africa last year (twelve months) amounted to £392,000, against £360,000 the year before, and £351,000 in the 1922 twelve months. Imports of stationery (including paper stationery) in the three respective years were: £611,000, 1924; £742,000, 1923; £683,000, 1922.

CANADA.—The value of books and printed matter imported into the Dominion of Canada during the four months ended April represented 3,667,000 dols., compared with 3,57.,000 dols. in the four months last year, and 3,160,000 dols. in the 1923 period.

IRISH FREE STATE.—Books and printed matter imported into the Irish Free State during January-February reached 21,370 cwts. (£83,000), against 19,874 cwts. (£69,000) in the similar period last year.

THE *Catholic Times*, which was founded under the title of the *Northern Press* in 1867 by the late Father James Nugent, is being reorganised, and a new board of directors has been appointed.

Seen and Heard in the States.

Some Printing Craft Observations by Mr. Frank Colebrook.

(*Continued from page 195*).

The Miehles are made in Chicago at 14th and Robey-streets. I believe that about 15,000 Miehle 2 revs. have been made since their 1887 start. A works laboratory makes constant metallurgical tests. The surface grinding for the machines is to one ten-thousandth of the inch. I learn from Mr. Gress that the recent earthquake in Japan was indicated by "a unique test gauge" in these Miehle works. That gauge will also register the pressure of one's hand against the machine. The steel fountain rollers are made to one ten-thousandth of an inch, and "should never be stepped upon," as occasionally they are.

Miehle cutters and creasers with piling delivery recently became an important addition to the output of these works.

Like the Government Printing Bureau at Washington the Miehle works have an emergency hospital, with, of course, lesser things like shower baths and recreation rooms. When shower baths and the abundant drinking of iced-water in the States are noted it is to be remembered that most of the great American cities are somewhere near to latitude 39—*i.e.*, a latitude six or seven degrees nearer the equator than London. It would be more helpful to think of Lisbon or Rome than of London in comparing their temperature conditions with ours. The latitude too which our U.S. friends allow themselves in speaking of what they do and can do and what other people ought to do—that latitude also is pretty hot at times.

"Efficiency engineering" has more chance of adoption and of persistent pursuit in the States than with us. The wage worker complies—even, I dare say, without much expectation that a particular new rule or new idea will prove to be of value. His compliance, I can quite believe, reflects a conscious or subconscious idea that he too will be a "boss" in a few years; and his present boss may as well bear the cost of trying out a notion, which, if good, shall be adopted in that wage worker's own future works.

In the Miehle works in Chicago each worker has a chance of receiving extra pay every two months based upon hours saved through special efforts or special diligence. Miehle pensions ranging from £6 to £25 per month are assured to old workers, graduated according to length of service; and the Miehle Co. also give free life insurance from £100 to £200, again according to length of service. I find the like insurance practice in some other works in the States. Besides what a firm does as a firm in this way there appear to be in various works in the States some sort of slate clubs or more permanent benefit societies formed among the staff; so that altogether a worker meeting with accident or sickness may secure a pretty hefty payment.

Donelley's, the famous Chicago printers, work out maximum time allowances for jobs. They call that 100; and calculate percentages of time-saving and pay extra bonuses on such saving. Some men, I am told, take home about 20 per cent. over the minimum wages because of the extent to which they have improved on the scheduled time allowance for respective jobs.

The Challenge Co. have a fine printing machinery and printing equipment works on Lake Michigan. They make all sorts of things for the printer. In one place they are shearing out steel shapes—like cutting cardboard, and sending the cut-out piece along a room, to find itself at the end of the row transformed into a completed pressed steel galley. In another place they make diamond cutters; in another the Lee and Stonemetz two revolution presses; in another mercantile addressing machines; and elsewhere type-high gauges and printing utilities various. There is a Challenge Machinery Club formed of about 40 departmental heads or "executives"; it meets frequently to discuss manufacturing and salesmanship problems. As happens often—perhaps I might say happens generally—in the States, the members manage to combine a good deal of social enjoyment with their business procedure.

In the Challenge Works and I should say in pretty well all American printing engineering works—there seems to be a most thorough trying out of all machines under actual printing conditions, and under the operation not of ordinary engineers, but of men experienced in earning their living in printing shops by printing operations.

The usage seems to be growing in the States of erecting a large building to be a printing crafts centre, *i.e.*, to be tenanted in the main, or perhaps exclusively, by firms connected with the craft. In the restricted island of Manhattan, on which New York City stands, one can understand this; elsewhere, where space is not river bound in the same way, it is less to be looked for. Yet one encounters the practice.

Philadelphia has quite recently seen many millions of dollars spent on new premises for printing firms—mainly letterpress printers or publishers.

Curtis's *Philadelphia Public Ledger* twelve-storey building has been notable among these, and covers an entire and a large "block." Besides this there is another *Ledger* building, its "manufacturing" premises housing among other plant 36 units of Hoe super-speed presses, able to deliver 360,000 twenty-four-page papers per hour; together with a Hoe twenty-cylinder colour press. Rotagravure plant has been installed on the second floor. The composing, engraving and stereo departments in this building are in rooms 29 feet high. The building first named as covering an entire block is largely rented out to all sorts of business firms.

The style of this main Curtis building is what we should call Georgian. Americans call it "Colonial"; *i.e.*, reminiscent of the days when the States were Colonies ruled by a King George.

In 1921 the *Philadelphia Evening Bulletin* installed six Hoe super-speed Decuples; twelve months later it put in three more; and it proceeded to add eight more Hoe super-speed Sextuples.

The *Philadelphia Inquirer* has planned a pyramid building; such as one sees in New York; the storeys become smaller as the building gets nearer to scraping the sky. Quite beautiful effects can be thus attained, especially when at night the receding and small seeming topmost portion of the building is so illuminated that it looks like a castle of pearl hung up in the air; the underlying part being left unilluminated and therefore unseen.

The *Inquirer* lately ordered an equipment of Hoe super-speed rotaries, consisting of twenty four 16pp. units and a 24 cylinder Hoe multi-colour; at the time of ordering, it was the largest newspaper press in the world.

I could name several large letterpress firms who have been very enterprising of late in the way of entering upon new and great premises in Philadelphia; indicating strong confidence that letterpress production has still a vast amount of work to do in the world whatever competing methods may establish themselves.

And now since space is short—and the readers' time—suppose I string together a very few paragraphs, also short; which may have some bits of information or suggestion.

Zeese Wilkinsons, the famous Long Island litho firm, show remarkable aquatone incidentally. In aquatone you coat zinc with gelatine; you can work with any half-tone screen you like, and a 400 line screen is often employed and very successfully. Or you can work without any half-tone screen, relying simply on the natural reticulation of the surface of the gelatine.

You are availing of the lithographic printing quality not of grained zinc but of gelatine. One benefit of this substitution is that you can cut out about seventy-five per cent. of the water ordinarily used. You have advantages of lessened water, and of the fact that a stiffer ink is practicable, and that you are printing from a smoother surface than the lithographer using a zinc plate encounters and that you can produce series of prints of, extraordinary fineness of detail with identity between the prints. The dissimilarity of its prints in the same run is ordinarily the drawback to collotype. This Aquatone process, though related to collotype, is, as will be seen, quite distinct from collotype.

Aquatone has been slightly known to the British craft for a year or two, but has perhaps had less attention than it deserves.

American photo engraving on the whole did not seem to me to have very much to teach the old country. For their sensitive photographic plates American engravers are indeed very much indebted to Dr. Mees, Dr. Shephard and Mr. A. J. Newton, all leading men in the immense Eastman Kodak works at Rochester. (The Eastman staff is 18,000). Dr. Mees is an Eastman director. All three are Englishmen.

Dr. Mees told me that there was still trouble with green filters. Theoretically a green filter should not absorb any green light in the original; but in practice it does absorb some green.

Mr. T. J. Eamer of the Marshall Engraving Co., of Farringdon-avenue, E.C., roamed the States just three years ago, and I have had an opportunity of comparing some of my notes with his notes. I see that he became an admirer of a new panchromatic plate, an American one; and I daresay that is giving very good service.

Mr. T. J. Eamer, by the way, is a man to mark. I never knew anyone who showed a greater power of observation, and of shrewd judgment to distinguish between important and unimportant things. He has already made good, and I feel quite confident will go very far, and be very helpful to all of us. He has a Marshal's baton in his knapsack.

Donnelley's, the famous printers and engravers of Chicago, is a large house in which no trade unionist can get employment. I do not know what troubles have led to that drastic decision; but Donnelley's, I suppose, were involved in the photo-engravers' dispute in January, 1922, which dispute resulted in a great turnover of shops from being unionist to being either what are called open shops, *i.e.*, shops in which unionists or non-unionists are engaged; or being shops in which no trade unionist would be engaged. Donnelley's print telephone directories for all over the States, also the American edition of the "Encyclopædia Brittanica," and a vast amount of catalogue matter for the Sears-Roebuck Store. This last is possibly the biggest catalogue in the world.

Donnelley's have always about 100 to 120 lads in a secondary and technical school of their own in their works, and they apprentice about twenty of these every year. Some lads are of matriculation standard and are trained to become foremen and, as the American phrase runs "executives." Mr. Sheldon is the zealous and very able head of the school. He has an enthusiastic assistant. There are managers in the building who were pupils in this works school trained by Mr. Sheldon. At fourteen years of age, the lads get £1 a week for the first six months. That increases as they become more proficient. At sixteen years of age they are apprenticed to the department for which it is considered they are most suitable. During the first two and a-half years of their apprenticeship they spend six months in each of five different departments that they may become familiar with different processes. In the last two and a-half years they have intensive training in the department for which it is thought they are most suited. I gave a short talk to these lads in the Donnelley School.

The "efficiency engineer" was more in evidence in Donnelley's than in any house I visited.

In the States large publishers apparently do not make their own blocks. The block-making departments of the Amalgamated Press, Newnes-Pearson, Hultons and others do not seem to find exact counterparts on the other side of the Atlantic. It is argued that it doesn't pay the publisher to produce his own plates.

Everyone was friendly; but I give first prize to Mr. Hopkins, of the American Litho Co., Mr. Joseph Knapp's great concern, who didn't tell me till the end of his twelve minutes' talk that he had violent toothache, and was just off to the dentist.

There certainly are some fine printers in the States, and there is a fine comradely and competent appreciation of their work among other printers. You should hear my good and gifted editor friend and long-time printer, Mr. Gress, speaking as to that. You should go with him, as I was glad to go, to some places where exquisite work is being done, and to other quiet sanctuaries of the craft, clubs or society headquarters, where fine prints are carefully preserved and filed and indexed and treasured.

I saw no hustling by individuals. Not even in Ford's. No one seemed to be fearful of the

Lithography Without Damping Rollers.

Sir,—In your issue of the 10th inst, on page 196, an advertisement under the above heading appears in the name of a Mr. W. P. Price, and under "Trade Notes," on page 192, appears a paragraph headed "Dry Lithography," dealing with the same matter. In the advertisement Mr. Price states that owing to lack of financial support he is open to make arrangements with any firm desirous of adapting the process to either letterpress or litho machines, and in the Trade Note you comment on this.

We are writing, under instructions from a client of ours, to inform you that the patent process referred to by Mr. Price was in February, 1924 sold and assigned to our clients, "to the intent that our clients should be the sole persons entitled to manufacture, sell and otherwise deal with the invention throughout the world". They have been developing the process, and are continuing to do so.

Mr. Price is under covenant not to disclose the process to any third party, and not to interfere with our clients in any way in their method of dealing with the invention, it being specifically provided that Mr. Price's rights should be limited to the receipt of royalties or a percentage of any capital sum payable in respect of the invention.

In the circumstance, we shall be glad if you will take the necessary steps to counteract the erroneous impression given by Mr. Price's advertisement and by the paragraph under "Trade Notes" referred to above, that Mr. Price is at liberty to deal with the invention.

Beaumont, Son and Rigden,
Solicitors.
33, Chancery-lane, London, W.C.2.
September 15th, 1925.

[We regret any erroneous impression created by the advertisement and paragraph to which our correspondents refer.—Editor, *British and Colonial Printer and Stationer.*]

—o—

Stereotyping v. Electrotyping.

Sirs,—From the paragraph "Stereotyping More Popular" on page 195 of your last issue, it is interesting to learn that stereotyping and the use of dry flong is at least progressing in the U.S.A.

Why, however, it should be suggested that "electrotyping is surely to be preferred" because "the electrotyper can improve on his original at times" we do not quite appreciate. The electro can hardly be better than the original; if any electro "goes west" on the machine it takes quite a time to replace it and the machine is idle meantime, whereas, with good stereos—"Photo tone" for instance—equal print can be obtained and if the stereo is spoilt by any accident it can be replaced in a few minutes.

Stereotyping here has now reached a stage which makes it unjustifiable to even try and afford electrotyping for anything other than quite exceptional purposes.

W. J. Light.
W. J. Light and Co., Ltd.
36–38, Whitefriars-street, E.C.4.

[Whilst we are glad to have attention drawn to the excellent quality of the best present-day stereotyping, we think that our contributor's statements, in the form in which he made them, are not open to considered objection. That "electrotyping is surely to be preferred where both fine screens are to be reproduced and long runs made" remains a fact even after we have admitted that stereotyping can be almost as good, and perhaps for commercial reasons advisable. And as to improving on the original, there was of course no suggestion that an electro can reproduce actual half-tone dots better than the original. Our contributor's meaning was doubtless that the electrotyper can, more easily than the stereotyper, correct faulty parts of the original, such as "imperfect border angles," before he proceeds to duplicate it.—Editor, *British and Colonial Printer and Stationer.*

Mr. Richard Robert Williams (77), of Llangollen, Denbigh, printer and publisher, for half a century Welsh secretary to the Bible Society, left £2,190 (net personalty £640).

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,
Partnerships and Investments,
Miscellaneous.

One Insertion 3/0
Three Insertions 6/0

***For every line exceeding three lines* 6d.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion 1/6
Three Insertions 3/0

***For every line exceeding three lines* 6d**

Sales by Auction, Tenders,
Patents for Sale,
Legal and Financial Announcements.

Situations Wanted.

COMP. (young, N.S.), General Jobbing and Stone, seeks situation,—J. T., 6, Frederick-street, Gray's Inn-road, W.C.1. 14676

LETTERPRESS MACHINE MINDER (stood off through trade depression) seeks progressive post; Wharfes (1 and 2-colour) and Platens; good class Half-Tone, Colour, Catalogue and Commercial Work, Box Numberers, etc.; Non-Society; distance no object.—Reply to C. E. M., 16, Gainsborough-road, Chadwell Heath, Essex. 14687

PLATEN MINDER, Half-Tone, Colour and General Work; 10 years' experience; 2 years in charge.—Daniels, 163, Sellincourt-road, Tooting, S.W 14684

PROCESS MANAGER seeks situation where organising ability would be appreciated; can get the best out of men; could start a photo-engraving plant; knows how to produce a deep, good printing block; colour expert.—Box 14688.

RAILWAY TICKET PRINTER, 22 (Soc.), seeks London sit.; used to Stone and slight knowledge of Case.—W. Brett, 128, Lefevre-road, Bow, E.3. 14686

WAREHOUSE or WORKS MANAGER, sit. wanted by experienced man; News, Periodical, Commercial, Book, etc.—Apply, Box 14671.

YOUNG MAN (29) seeks perm. sit.; Platen, Comping, Cutting; small office; London district; refs.—W. Warren, 11, Sydenham-place, Broadway, Maidenhead. 14685

Partnerships and Financial.

YOUNG MAN wanted to relieve elderly Printer; £500 secures Half Partnership; very old-established business.—Box 14681.

Machinery for Sale.

SECOND-HAND MACHINERY.—If you are wishing to dispose of Second-Hand Machinery relating to the Printing, Bookbinding, Box-making, Envelope and Bag-making Trades, etc., secure prompt and effective service by advertising in the *British and Colonial Printer and Stationer.*—Apply for special rates to the Publishers, Stonhill and Gillis, 58, Shoe-lane, London, E.C.4.

SMYTH-HORNE, LTD.,
1-3, Baldwin's-place,
Gray's Inn-road, London, E.C.1.

Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

Machinery Wanted.

SECOND-HAND MACHINERY.—If you are in the market for Second-Hand Machinery relating to the Printing, Bookbinding, Box-making, Envelope and Bag-making Trades, etc., secure prompt and effective service by advertising in the *British and Colonial Printer and Stationer.*—Apply for special rates to the Publishers, Stonhill and Gillis, 58, Shoe-lane, London, E.C.4.

Miscellaneous.

BOX CARRIER TRICYCLES, new £18, carry 2 cwt.; guaranteed throughout. May we send you one on appro.?—Kenton, 16, Briscoe-road, Merton, S.W.19. 14689

(*Concluded from previous page.*)

Seen and Heard in the States.

managerial eye. I can understand what I hear of a proprietor's pride in going round and seeing men who had just slogged in and got a rush job out in fine time and obliged a customer, pausing now, and smoking or reading. They had no job in hand at that moment, and didn't think it necessary to pretend they had for fear of being regarded as supernumeraries.

Offset, of course, is a great power in the States. Even three years ago there were well over five hundred users of offset presses in the States, operating between them a good 1,500 offset presses. New York led with 250 presses, Chicago had nearly 200. Often 100,000 prints were obtained satisfactorily from a plate worked by offset method. Occasionally a heat of 90 degs. develops and stops working. But there is a good deal of artificial air conditioning in the States. Screens of 133 to 140 lines are commonly used for colour offset.

A Chicago newspaper tried offset printing and did eight pages at about 1,100 copies per hour; but concluded that gravure was more satisfactory.

2,250 per hour, offset, for an 8-hour day is a figure on which one firm bases its quotations; it can attain 2,750 by giving bonuses.

There seems to be more use of linoleum (the sort of material we use in Baskertype) in the States than here.

* * *

I could have seen more, but a great part of my time had to be given to attending a hearing upon Wall street of an important case involving the ownership of plant.

I may perhaps just be allowed to say that I took over and was examined and cross-examined upon an appraisal I had made of a well known and prosperous house in our craft in Great Britain—its plant, its premises and its goodwill—and with the help of this appraisal a settlement which appeared to be satisfactory to all parties was soon reached in what had been a rather protracted and rather vexatious litigation. Until that was settled I was not free to make the visits and the observations I gladly would have made.

Being released from Court attendance through this prompt settlement I visited and inspected works in New York, Boston, Rochester, Toronto (Canada), Detroit, Chicago, and (on the return journey) Washing and Philadephia.

If any "British and Colonial Printer" reader would tell me through the editor of a point on which he wished to have some information as to American practice I would gladly see if there was anything in my recollection or notes that I could serviceably put before him.

Caxton Home, Limpsfield.

On Saturday afternoon last, between seventy and eighty members and friends of the Amalgamated Press Athletic and Swimming Club motored to Limpsfield, the occasion being the naming of two beds subscribed for by the Club.

The party were welcomed by Mr. W. F. France, J.P., and the secretary (Mr. S. J. White), on behalf of the committee, and conducted over the building. Special interest was shown in the War Memorial Screen and the Book of Remembrance, with its records of men in the trade who fell in the Great War.

Brigadier General W. F. Mildren, C.B., C.M.G., D.S.O., on behalf of the Club, unveiled the tablets, and expressed his pleasure at being present and associating himself with the Club's charitable effort. It was the first occasion he had been to the Home, which he thought was beautifully situated and well planned to carry out its convalescent work.

Certificates entitling the holders to nominate patients to occupy the beds were handed by the secretary to Brigadier-General Mildren and Mr. Walter Mould, and suitably acknowledged.

Enforcing J.I.C. Agreements.

THAT the agreements reached between the two panels of the Joint Industrial Council of the Printing and Allied Trades carry only a moral or "advisory" weight, and are not legally enforceable, has more than once caused regret in the printing trade—we think to trade union leaders as well as to the employers' organisation. The trade must therefore have noted with much interest that last week's Trades Union Congress took a step that points the way to a big strengthening of the J.I.C. principle—a principle which the printing trade can claim to have put into practice in notable and exemplary fashion. At the Scarborough congress the Boot and Shoe Operatives' Union secured the adoption, by 2,790,000 to 942,000, of its resolution instructing the General Council "to urge upon the Government the desirability of giving to national agreements voluntarily entered into and approved by Joint Industrial Councils, or other similar bodies, the same validity as awards under the Trade Board Acts, 1909 and 1918, with the object of ensuring the observance of fair conditions of labour by all engaged in the industry, whenever requested by the parties to the agreement."

* * *

Books: Temporary and Permanent.

NOT for the first time we have the suggestion from a librarian that books of importance should be printed on good paper and that where possible two editions should be run off, one on permanent paper and the other on ordinary stock. A short time ago a provincial librarian jestingly advocated the invention of a paper which would vanish entirely after a given period, such paper being used for the modern light literature which provides librarians with perplexing problems affecting storage and accommodation. There is no practical proposition to put before the papermaker, however, for he cannot invent a method of making paper like that printer's ink which is made (not always of set purpose) to vanish from the hoarding within a given space of time. Publishers and librarians would appreciate an exceedingly cheap paper, lower in price than news-print, but with all the attributes of a fine book-printing paper. Unfortunately, quality and character control, or are controlled by, cost. Wonderful things can be done with wood pulp and there are many grades to go at, but the only great thing that wood pulp has done to paper has been to increase the output capacity of the papermaking industry and reduce the price of paper. The best paper is still from rag materials, and always will be. If we can imitate rag paper character with wood pulp stock, it is still only an imitation which will not survive the test of time. The publisher can have books printed on sawdust paper, but the public taste will rebel against it. With classic editions in cloth-cased bindings selling at sixpence each and India paper volumes at one shilling, it would appear that the limit of cheapness has been reached.

* * *

Books and Their Paper.

AS TO the other point, that double editions should be published, there is first the consideration that the paper for a book should be fitting to the book. There are sufficient grades of paper for any publisher to choose from; and the difference between a moderate paper and a reliable grade is not so marked as to present an insuperable obstacle. Rather it would be for publishers more judiciously to select their papers; in fact, to scheme a classification among themselves according to the grading of their editions in order of importance or ephemeral interest. After that, there is no reason why every book worth while should not have a select edition with rag paper and special binding to sell at a higher price.

* * *

Taxation Burdens.

QUITE apart from political hindrances, British industry is sadly handicapped by burdens of taxation. To an extent the manner in which we are meeting our war debts must maintain our credit. But the burden of so doing is very heavy. There is great need, therefore, for the exercise of economy, both imperial and local. In this connection a useful effort has been initiated in the appeal from the President of the Association of British Chambers of Commerce (Mr. Stanley Machin) to the affiliated chambers throughout the country urging them to undertake a campaign for greater economy in local expenditure. As an outcome of Mr. Machin's initiative, several suggestions have been forthcoming for remedying industrial depression and for developing export trade. Included is a scheme for promoting the trade of the Empire. The central idea is that the Mother Country should offer to every country within the Empire an award of, say, 10 per cent. on the total increase in the value of British goods imported into that part of the Empire during each year following the introduction of the scheme. The Government of the Dominion or Colony receiving the award would, it is proposed, distribute it for the benefit of the general community of the Dominion or Colony in various directions, including the construction of public works for development, but it would be a condition that all materials of construction should be British. Whatever might come of such suggestions for promoting trade, the problem meantime is one for the individual manufacturer or group of manufacturers. Markets must be studied more closely and the quality of British goods made more generally known.

Printers' Managers and Overseers (PARENT) ASSOCIATION.

September Meeting and Concert.

No doubt the holiday season—now nearing its close—accounted for the fact that there was not quite so good an attendance as usual at the September meeting of this Association held at the Old Bell, Holborn, on Tuesday of last week. The chair was occupied by the president, Mr. R. H. Berry, who was supported by the vice-president, the general secretary and others.

In the course of the meeting the president drew attention to the presence of Mr. G. W. Davis, of the Bengal Press, Calcutta, and bade him a hearty welcome in the name of the Association. Mr. L. T. Travill, a London member residing in the provinces, was also welcomed by the meeting. Both gentlemen made suitable response

As usual there were several applicants for membership, and the following were elected into the Association: Mr. H. C. Hopkins (Field Press, Ltd., works manager), Mr. H. J. Jarvis (Messrs. W. Hobbs and Son, Ltd., Maidstone, overseer, letterpress machine department), and Mr. G. Wilshire (Messrs. Crescens, Robinson and Co., overseer letterpress machine department). Messrs. Hopkins and Wilshire were present to receive a personal welcome from the president.

The Association once more had occasion to show the generous attitude it takes towards members fallen upon evil days. The general secretary told of applications for assistance from the Benevolent Fund, and brought forward particularly one very distressing case in respect of which the Council recommended a further grant in addition to the five guineas which, as allowed by rule, they had already given. Messrs. L. C. Mennell and G. H. T. Freeman spoke in favour of a generous response to this member's needs, the former speaker giving personal testimony of the member's past services to the Association and telling something of his present sad circumstances. A proposition having been made and seconded, the meeting approved the granting of a further £15—the largest amount which the rules allow without notice previously being given to the membership.

The president and vice-president detailed the arrangements made for an afternoon visit by members and friends to King's Oak Hotel, High Beach (near Loughton), on Saturday next, September 19th. The whole of the large grounds adjoining the hotel have been reserved for the day, and a preliminary programme of sports and music has been drawn up for the occasion. Members were urged to make immediate application for tickets.

The arrangements for re-starting the whist drives were also brought to members' attention.

The meeting now resolved itself into a smoking concert, and members settled down to enjoy a varied programme, contributed by the following: Miss May Willis (contralto), Miss Suzette Tarri (comedienne), Mr. Frank Jennings (baritone), and Mr. G. Watler (comedian), with Mr. John Green at the piano. All the artistes were very cordially received, and were given frequent encores. One noticed that, as often happens, the most spontaneous and united applause was evoked by the more serious songs expressing something of the higher human emotions in conjunction with beautiful music. Songs of this character by Miss Willis aroused great enthusiasm, a double encore being given her on her last appearance.

A hearty vote of thanks was passed to the artistes on the proposition of Mr. C. H. Blenkins, seconded by Mr. S. A. Dawson, and the chairman intimated that although the concert was nominally under the direction of the Lecture and Entertainment Committee, the members were actually indebted for their evening's entertainment to Mr. Arthur Paul, who had himself made all the arrangements.

After Mr. Paul and Mr. Green had responded to the vote of thanks, the meeting closed with the singing of "God Save the King."

The first Dawson Payne two-revolution press introduced into South Africa has been erected in Johannesburg, we understand, and is an admired piece of mechanism for smooth and efficient running. The South African agents are John Dickinson and Co., Ltd.

Technical Institutes Reopen.

The autumn term at the London County Council Central School of Arts and Crafts, Southampton-row, will open on September 28th, and a prospectus and time-table for the coming session, 1925-26, is now available. The school is provided with facilities for teaching many of the arts and crafts connected with book production.

In an ornate brochure attention is drawn to the opening of the classes in artistic typography at the L.C.C. Camberwell School of Arts and Crafts, Peckham road, London, S.E., the classes, which are for compositors and machine-minders, commence on Monday, September 28th, and are held in the afternoons for apprentices and in the evenings for senior apprentices and journeymen. Special instruction is given in Linotype and Monotype composition (apprentices and journeymen), a separate drawing course being provided on Wednesdays, when attention is given to the "lay-out" of copy.

A forty-page pamphlet issued by the Manchester Municipal College of Technology gives full details of the courses in the Department of Printing and Photography Technology for the session 1925-26. The finely produced prospectus was produced in the Department itself and is itself an eloquent tribute to the character of the work done by the students. Commencing on Monday, October 5th, the classes are very comprehensive, covering every phase of the craft. There is also published from the same source an elegant brochure entitled "The Printing Press and the Camera — 1925-26," being an outline of the vocational day courses in printing and photographic technology at the College.

The printing trade classes at the Birmingham Central School of Arts and Crafts this season have been much extended. There are day classes for apprentices, compositors and machine printers, lithographic artists and draughtsmen. The day classes include: Full-time pre-apprenticeship classes, covering three years (13 to 16); part-time courses for the sons of master printers and printers' managers; and part-time courses for apprentices. In addition there are evening classes (6.30 to 8.30) for compositors, the curriculum including printing theory, letterpress machine work, monotype composition and casting linotype composition and lithographic artists' work; for bookbinders, wood engravers, etc., and lithographic artists.

The department of Printing of the Leeds Technical School, which is conducted under the auspices of the Leeds Education Authority, will open its winter session on Monday next, September 21st. Day and evening classes will be given in letterpress printing, linotype and monotype composition, three-colour printing, lithography, lithographic artists' work, offset printing, photo-mechanical processes, photography, photo-lithography, commercial bookbinding, and costing and estimating. All the instruction is planned to meet the requirements of students already possessing practical shop experience of the branch of trade concerned, and only such students will be admitted to the classes as are sufficiently qualified to benefit by the instruction without hindrance to the class as a whole. Day courses, for either full or part time students, have been arranged in every department, and employers in the district have been requested to assist the scheme by allowing apprentices to attend. Special courses of art instruction have been arranged in the Leeds School of Arts for all sections of the Printing Department given on the work of various sections of the school. Various scholarships awarded by the Leeds City Council and the West Riding County Council are tenable at the school.

Mr. E. N. Somers, secretary of the Industrial Development Association in Dublin, is anxious that the supplies of printing and stationery likely to be required in the forthcoming Senate election should be exclusively of Irish origin. He suggests that two recent instances of the use of imported letter paper printed abroad by existing senators or by business firms of which senators were the head, renders it desirable to sound this note of warning.

Personal.

Sir Herbert Morgan will preside on November 17th at the 98th anniversary festival of the Printers' Pension, Almshouse, and Orphan Asylum Corporation, at the Connaught Rooms.

The wedding took place at Gainsborough Parish Church, of Mr. George W. Belton, manager of Messrs. Belton and Co., printers and stationers, Gainsborough, to Miss Hetty W. Curtis, elder daughter of Mr. and Mrs. J. Curtis, of Gainsborough.

Mr. H. Cook, a member of the printing staff of the *Reading Standard*, has been presented by the staff with a case of pipes on the occasion of his marriage.

Mr. James A. Walker, the publisher of the *Border Telegraph* (Galashields) and associated papers, has been married at Blairgowrie to Miss Arabella Mary Arnott.

The marriage was solemnised at Bury Parish Church last week of Mr George M. Hunter (son of Major and Mrs. T. Hunter, of Leigh), who is on the editorial staff of the *Lancashire Daily Post*, stationed at Blackpool, and Miss Marion Barnes, daughter of Mr. and Mrs. Thomas Barnes, of Ainsdale, Ainsworth-road, Bury.

Mr. Archibald Ireland, of Messrs. William Grieve and Sons, printers, Dumfries, has been presented with a silver cigarette case on leaving for Australia.

Mr. E. J. J. Randall (Gordon and Gotch, Ltd.), sails for India on September, 18th.

Mr. H. Skinner, as representing the printing industry, was elected a member of the General Council of the Trades Union Congress for the forthcoming year.

Mr. Delves, a superannuated member of the Salford branch of the Typographical Association, has been selected, by a vote of 35 to 4, as the first Labour Mayor of Salford, and will be elected to the position in November next.

Mr Josiah Gordon, who for more than a quarter of a century has been associated with the *County Express* at Stourbridge, has been appointed a Justice of the Peace for Staffordshire.

Mr. J. L. Garvin, the editor of the *Observer*, has been appointed editor of the "Encyclopædia Britannia," and will take control of the supplementary volumes now in course of preparation.

Mr. Aneurin M. Davies, of *The Times* circulation department, has been appointed to the important position of circulation manager of the *Daily Graphic* and a group of the Allied News publications.

Mr. J. R. Watson, a London journalist, has been entertained at a farewell luncheon at the Hotel Cecil on leaving England to take up an appointment on the *Melbourne Age*.

Mr. Jack Hobbs, the cricketer, was the guest of the evening at the first house dinner of the season at the London Press Club on Saturday.

It has been decided to hold the autumn dinner of the Stationers' Social Society on Friday, October 30th, at the Holborn Restaurant, and Mr. A. E. Mist (the general secretary) has booked the necessary accommodation.

Miss Ivy Hilda Jesty, the only child of Mr. E. J. Jesty, assistant secretary of the Stationers' Social Society, and Mrs. Jesty, was married on Saturday at Dulwich to Mr. Edric P. Fletcher, of Dulwich. The bridegroom i the eldest son of Mr. E. W. Fletcher, of Fletcher and Sons, paper merchants, Borough

The Bookbinder

Present-Day Bookbinding Design.

Can the General Standard be Improved?

It will be remembered that in the recent exhibition of designs submitted in this year's Royal Society of Arts Competition, the section devoted to the design of bookbindings called forth a very poor response. Only one design submitted was deemed worthy of being shown in the exhibition, and the judges—who in this section were Major Robert Leighton (Leighton, Son & Hodge), Mr. C. J. Le Strange (Oxford University Press), and Mr. F. V. Burridge (principal, L.C.C. Central School of Arts and Crafts)—issued the following report: "The judges regret that the designs submitted are very weak. None were specially appropriate for the book specified in the conditions, several were even designed for other books. The only design accepted is not considered worthy of any award. The design in not definitely appropriate either to the subject of the book or its period; the lettering on the side is weak and badly placed, and the design of the back is without sufficient recognition of technique."

This would seem to indicate that bookbinding design is not receiving as much attention in the field of technical education as are other branches of the printing and allied trades. The same conclusion is to be drawn from a survey of the covers of books issued by the principal publishing houses. Whilst the books of a few publishers show that care and money are expended in an effort to make the bindings pleasing in themselves and appropriate to the volumes which they clothe, nevertheless the vast majority of covers put upon the market to-day bear the impress of being chosen mainly with a view to a minimum of trouble and expense.

News reached us the other day that Major Robert Leighton had reported to the Bookbinding Section of the London Chamber of Commerce on the subject of the Royal Society of Arts competition, and that as a result of his emphasis upon the poor quality of bookbinding design shown by the competitors, the Bookbinding Section had appointed a committee to consider the question of arousing increased interest in the bookbinding items of the Society of Arts competitions—the committee to consist of Messrs. Joseph Brown, Ernest Judd, and R. G. Longman. In this connection a representative of the "British and Colonial Printer and Stationer" sought out Mr. Joseph Brown, who, besides being named for the new committee, is known to us as an outstanding example of the artist cover-designer. Although the matter of the committee is as yet in its initial stage and nothing could be said of the committee's probable activities, Mr. Brown was good enough to discuss briefly with us the general subject of bookbinding design and the need for its improvement.

Mr. Brown can claim the distinction of having been a designer of bookbindings for forty years and being still engaged in the art. He began his career in Edinburgh. In the course of his conversation with us he referred to the time when enthusiastic Scottish students used to supplement the workshop hours of 8 a.m. to 7 p.m. by a little sketching before breakfast, a visit to a museum in the lunch interval, and then evening classes to finish the day. It appears that the profession of bookbinding designer was one worth working hard to qualify for in those days—when books were made not only to sell but also to be beautiful, and when binders were prepared to pay £5 to £15 for a good cover design. But somewhere about a quarter of a century ago the price-cutter got to work in the bookbinding trade, and the demand for cheap bindings spread from London to Edinburgh; and the golden age of cover design was largely at an end. London bookbinders, too, can remember that, 20 to 25 years ago, when publishers generally took pride in the bindings of their books, it was common for artists to call week by week with samples of their work in search of commissions for designing bindings—there being evidently a living to be made then at this work. To-day such a thing is practically unknown. It is a notable tribute to the high quality of the work aimed at by Messrs. Leighton, Son & Hodge that Mr. Brown, who was engaged by them as designer in 1912, is still regularly occupied in the art for the benefit of this firm's customers.

The root of the whole problem of the decadence of design lies, according to Mr. Brown, in the question of the price of books. It is the book binder price-cutter who is responsible for the poor general level of the book covers produced to-day; and not until the value of artistic design is reflected in the prices obtained for binding, will it be possible for the art of the designer to become an attractive field for the student and craftsman.

And the true artist designer has a right to demand, and must demand, considerably more than the petty half-guinea or guinea which some binders think sufficient to offer for a cover design. To be a really good bookbinding designer means not only being a trained artist and designer, able to do abstract decorative work suitable for, say, wall-paper or linoleum; it means also being able to creat decorative work that is specially applicable to the tools and methods of the bookbinder, and suitable moreover to the particular book to be bound—and here comes in the need for a knowledge of bookbinding craftsmanship and of the history of art in general and the history of book binding art in particular; for without knowledge of the artistic associations of the period to which the book relates, the binding may easily be made inappropriate. Here is a field for research almost as wide and as old as the world itself. Lettering, too, on both its artistic and historical sides, is itself a big field for study. Thus the years of training and research that go to produce a thoroughly qualified designer of bookbindings must, if they are to be undertaken by artists of to-day, carry with them the promise of sure and remunerative employment. And at present that is notoriously not the case.

Thus to Mr. Brown—and his view seems pretty obviously a true one—the main question at issue is an economic one. What can be done in the face of the price-cutting of the present day to make book cover designing attractive as a career? This is the question which Mr. Brown and his two colleagues on the new committee will have to hammer out with the bookbinders of London if any headway is to be made in encouraging the art of bookbinding design, either in connection with the Society of Arts competitions or in the trade as a whole. The effort is a commendable one, which we shall follow with interest and upon which we hope to be able to write further at a later date.

We believe there is increasing favour for book covers that are really designed, and not just "knocked-up." There is to-day among certain publishers a marked revival of the demand for tastefully bound books. Doubtless the demand is growing and will eventually compel the attention of publishers everywhere. It is to the interest of the whole bookbinding industry that the factors which hinder this growth should be held in check and that everything possible should be done to encourage and to satisfy the demand for book covers that are not only sound in construction but are also fitting and beautiful in appearance.

The Use of Glues in the Bindery.

The four principal classes of glue used are: (1) Animal glue, (2) bone glue, (3) liquid glue, (4) vegetable glue.

Animal glue of the highest grade is obtained from the trimmings of hides, and the process of manufacturing is quite complicated. Fleshings, which are the fatty tissues taken from the inside of the hides, also yield high-grade animal glue. Following the manufacturing processes, the glue obtained from the hide trimmings and fleshings forms a jelly which subsequently is cut into slabs. These slabs are placed on nets to be conveyed into drying alleys, and here the drying process is completed, first by cold air and then by means of warm air. Afterwards, the dry slabs are put through a mechanical "breaker" and are broken into small pieces. In this state the animal glue is called "flake glue," or "broken sheet."

Bone glue is manufactured from bones obtained from slaughter houses, butchers, etc.

In these days, the vast majority of glue users prefer ground glue to "flake" or "broken sheet," for the simple reason that ground glue is far more convenient to prepare in the workrooms than the old-fashioned forms mentioned. However, there is still some prejudice against ground glue, because it offers an opportunity for adulteration, but it is a comparatively easy matter to make scientific tests to prove the quality of any kind of ground glue.

Liquid glue is made principally from fish offal, skins, fish heads, bladders, and so forth, and because of the kinds of raw material used, it is commonly known as "fish glue." Because of the extremely bad odour of liquid glue in its light brown liquid state, it is necessary to add a perfuming agent to it. Certain kinds of liquid glue are made from starch, resin, rubber or bitumen base, but the term liquid glue generally means that which is manufactured from fish material, and this is always of better quality than the other kinds made from starch, resin, etc.

Vegetable glue is manufactured from a vegetable base such as dextrine, cassava,

Digitized by Google

or other similar starches. The highest grades of vegetable glues are those made from cassava. The dextrine glues have for many years been satisfactory in the printing trades, especially for such work as end-gumming printed sheets, sheet-gumming, and "tip-on" jobs.

During the last few years a considerable number of different makes of "cold water glue" have been placed on the market, and from all that I can learn about these patent glues, they are excellent for such work as labelling, pasting wrappers on paper boxes, mounting printed sheets on pasteboard, and other work of this class. These so-called "cold water glues" are usually vegetable glues of special compound. For example, one well-known make consists of a white, dry powder which is quickly soluble in cold water, and without the use of an agitator or glue-kettle. The solution is transparent, thin-flowing and odourless. It should be understood that cold water glues are now being manufactured both in liquid and dry powder form, and that different grades are made to provide for practically all kinds of pasting and sheet mounting work.

In the printing and publishing industry, glues are used more extensively in the book binding departments of plants than in other departments. In this connection it is safe to say that hot animal glues are more generally used in the bindery or finishing department of a printing establishment than liquid or vegetable glues, and it is a fact that hot animal glue of good quality is more serviceable in bindery work than liquid, vegetable or cold water glue of any kind.

Preparing and Mixing.

The preparation of material for hot animal glue is always a most important consideration. The mixing and heating should be done only by one who is experienced in this work, for it often happens that the adhesive quality of glue is impaired by careless mixing or over-heating. The scientific method of mixing is to weigh both the glue and the water in the proper portions for the class of gluing work to be handled. The experienced bindery worker will prefer a thin hot glue for certain jobs, a medium-body glue for other work, and a thick glue for still other jobs. These different bodies of glue may be obtained by measuring the proper amount of water essential for each body. The water may be measured in a graduated vessel of the kind used in a chemical laboratory. The glue, in either powder or flake form, may be weighed on an accurate scale of any type. The amount of glue and the amount of water for each "batch" or mixing can be determined by exact tests, and the figures for each mixing can be written in a memorandum book as standard data for all future mixings.

As already stated, ground glue is more convenient for mixing than flake glue. When flake glue is used it should be soaked in water until it becomes soft enough for the glue pot. This can be done at night in preparation for the next morning's use. The great advantage of ground glue is that it can be poured directly into the water, and while the water is being stirred. The heat may be immediately applied to the ground glue and water, quickly bringing the mass to a solution.

Glue pots of different styles and sizes are in regular use, the three principal methods of heating being steam, gas and electricity. Of course, it is possible to heat a glue pot on a coal stove, over a wood fire, or over a charcoal fire, but in modern workrooms such methods are not in use. The most convenient and efficient method of heating a glue pot is with electricity. With electricity it is a simple proposition to maintain a uniform degree of heat, and to regulate the heat to higher or lower degrees as may be desired. There are a number of new-style electric glue pots now on the market, each one of these makes being so equipped as to give various standard degrees of heat by means of very simple adjustments.

When hot animal glue is being used continually in the workrooms, care should be taken to keep the temperature of the glue at from 120 to 150 degrees F. No glue should ever be heated above 150 degrees F., as scientific tests have proven the fact that the body of the glue will have less adhesive strength if heated above the point mentioned. The ideal temperature for hot glue is said by experts to be about 130 degrees F.

Importance of Cleanliness.

The question of cleanliness in connection with animal glue is exceedingly important in view of the fact that any animal product is subject to bacteria, which when present in the glue will cause decomposition. Even during the summer season, and when a pot of animal glue is left to stand uncovered over night, the glue is apt to be attacked by bacteria, especially during a very hot night. In most cases of bacteria in glue, however, the decomposition so caused is the result of using unclean brushes, vessels and the glue pot itself. In not a few binderies and printers' finishing departments the glue pot and glue brushes are the most unsanitary things in the place. The users of animal glue will save time and material by keeping the glue pot, brushes, etc., reasonably clean.

Under no circumstances should a glue with a repelling odour be used. The unpleasant smell is a sure indication that the glue is decomposed, and when in that condition the solution cannot be improved by adding to it a portion of fresh glue. When glue goes bad, the utensils should at once be thoroughly cleaned, first by washing them with hot water, then by again washing them with a weak solution of carbolic acid.

It is a good plan to keep the dissolvers and glue pots covered when they are not in use. The covers not only prevent dust and dirt from entering the glue utensils, but they also lessen the tendency of a "skin" forming on the surface of the glue.

Temperature of Workrooms.

The temperature of the workrooms in which gluing of any kind is done should be from 70 to 80 degrees, and at the same time the rooms should be well ventilated. The stock to be glued should be kept warm rather than cold; in fact, stock that is decidedly cold will not glue up as easily as that which has a temperature of from 75 to 90 degrees. Another important aid to good gluing is proper humidification of the rooms in which the work is performed. Scientists know that air at 15 degrees, when saturated, containing all the moisture it will carry, can retain but one-sixth as much as it will carry if warmed to 70 degrees. If a closed room is therefore warmed without adding moisture, the air becomes dry and "thirsty," and will draw the moisture from anything in the room exposed to it. This dry atmosphere may seem to be an aid to drying glued up work, but in truth it is not. The drying should be done slowly, and this is only possible by having an air containing plenty of moisture. During the winter season, when the doors and windows of the plant are closed tight, the air in the rooms will become extremely dry. This trouble can now be overcome to a considerable extent by means of patent humidification apparatus installed in the workrooms. The old-fashioned method of humidification is to frequently sprinkle the floors with water, and to place pails filled with water in corners of the room. During the warm weather months, when the doors and windows of a plant are kept open (or at least partly open), there is not the same trouble with "thirsty" air in the workrooms.—Robert F. Salade in the "American Printer."

DERMATOID.—Messrs E. A. Bristow and Co., 23-8, Fleet-street, London, E.C.4, advise us that they are now carrying stocks of Dermatoid leather cloths and leatherettes solely for the wholesale trade. Wholesalers who have been unable to obtain supplies are asked to apply to Messrs. Bristow when all enquiries will receive immediate attention.

LEIPZIG FAIR.—A report by the special correspondent of S.A.S., Ltd., publicity agents in the United Kingdom for the Leipzig Fair, states that although the number of visitors at the Autumn Fair was not nearly so high as that of the last Spring Fair, it is confidently expected that the volume of business transacted will be quite satisfactory. The demand for paperworking machinery has been quite good, and a fair amount of export trade has been reported.

THE Board of Trade have appointed a Committee consisting of Sir J. B. Brunyate (chairman), Mr. Douglas Wenham and Mr. J. Rowan to inquire into and report upon an application made by the Union of Wrapping Paper Makers in accordance with the terms of the White Paper relating to procedure and inquiries in connection with the safeguarding of industries, presented to Parliament on February 3rd, 1925, for the imposition of a duty upon packing and wrapping paper. The secretary to the Committee is Mr. H. W. Acres, Board of Trade, Great George-street, London, S.W.1,

Notes and News

Greetings from the bookbinders of this country to their colleagues in the United States will be carried by Mr. John L. Mercer (James Burn and Co., Ltd.), chairman of the Bookbinding Section of the London Chamber of Commerce, who leaves England at the end of this week for New York.

Books in Paper Boards.

In a note that appeared in our issue of August 20th, mention was made of the big purchases being made of ephemeral literature in book form, and a plea was put in for the cheapest possible form of case binding. We remarked: "Why not paper-covered cases with modern pictorial or decorative treatment and no wrapper? There is room for something of the kind and it would cheapen the cost of production considerably."

The Idea Approved.

That remark has brought us a letter from a well-known Yorkshire firm of wholesale bookbinders, who express pleasure at our advocacy of this policy and say that they believe such productions would prove of considerable benefit to their class of business. We know, of course, that there is a body of trade opinion holding that the idea is not a good one. It is argued that if a book is really ephemeral a paper wrapper is good enough; whilst if it is not really ephemeral the volume deserves a cloth cover. Another point made is that the difference of price would not be great between the cloth cover of the good paper boards. It must be remembered, however, that small differences of price may make big differences in sales achieved, and in the matter of durability we hold that there is a real place for the semi-ephemeral, or semi-durable cover, which has not been sufficiently realised by publishers in this country. The success of tasteful paper board issues on the Continent, notably Germany, lends weight to this opinion.

Bookbinders' Flag Day.

The Bookbinders' Cottage Homes and Pension Society is instituting a Flag Day in honour of the Society's inception which took place 96 years ago. At the present time there are 80 pensioners to support in addition to many deserving candidates waiting for election. Funds are urgently required to enable the Society effectively to carry on its work of providing pensions and rooms for aged and incapacitated men and women bookbinders. It is for this reason that it is hoped that the Flag Day, which is expected to be held on Friday, October 30th, will receive the hearty support of the whole industry. On the evening of October 30th a free concert is being arranged to take place at the Leysian Hall, City-road to augment the funds. We understand amongst the organisations who will co-operate in the Flag Day effort are the Master Bookbinders' Association, the London Society of Compositors, the London Central Branch and the Womens' Section of the N.U.P.B and Paper Workers.

Classes for Bookbinders.

Courses in commercial binding are to commence at the London School of Printing, 61, Stamford street, Blackfriars road, S.E.1, on September 21st. These courses cover day and evening classes, and the subjects are for a wide range of theoretical and bookbinding practice. Special day and evening classes for women workers will also commence on September 21st, the subjects chosen being such as to supplement the training acquired in the ordinary workshop.

Bookbinding Slogan Wanted.

The bookbinders of the United States are seeking a slogan that will properly describe their industry. The committee to whom has been assigned the selection of a slogan submitted ten slogans to the executive committee of the Employing Bookbinders of America from a list of 500 that had been submitted for their consideration. The executive committee gave the matter very careful consideration and finally decided it was not able to pick a slogan which met the views of the committee, who wanted one such as the printing industry has adopted, namely, "Printing, The Mother of Progress." It was felt that a mere play on words, of which approximately half of the slogans submitted consisted, was not of the desired kind.

The Bookbinder

Present-Day Bookbinding Design.

Can the General Standard be Improved?

It will be remembered that in the recent exhibition of designs submitted in this year's Royal Society of Arts Competition, the section devoted to the design of bookbindings called forth a very poor response. Only one design submitted was deemed worthy of being shown in the exhibition, and the judges—who in this section were Major Robert Leighton (Leighton, Son & Hodge), Mr. C. J. Le Strange (Oxford University Press), and Mr. F. V. Burridge (principal, L.C.C. Central School of Arts and Crafts)—issued the following report: "The judges regret that the designs submitted are very weak. None were specially appropriate for the book specified in the conditions, several were even designed for other books. The only design accepted is not considered worthy of any award. The design in not definitely appropriate either to the subject of the book or its period; the lettering on the side is weak and badly placed, and the design of the back is without sufficient recognition of technique."

This would seem to indicate that bookbinding design is not receiving as much attention in the field of technical education as are other branches of the printing and allied trades. The same conclusion is to be drawn from a survey of the covers of books issued by the principal publishing houses. Whilst the books of a few publishers show that care and money are expended in an effort to make the bindings pleasing in themselves and appropriate to the volumes which they clothe, nevertheless the vast majority of covers put upon the market to-day bear the impress of being chosen mainly with a view to a minimum of trouble and expense.

News reached us the other day that Major Robert Leighton had reported to the Bookbinding Section of the London Chamber of Commerce on the subject of the Royal Society of Arts competition, and that as a result of his emphasis upon the poor quality of bookbinding design shown by the competitors, the Bookbinding Section had appointed a committee to consider the question of arousing increased interest in the bookbinding items of the Society of Arts competitions—the committee to consist of Messrs. Joseph Brown, Ernest Judd, and R. G. Longman. In this connection a representative of the "British and Colonial Printer and Stationer" sought out Mr. Joseph Brown, who, besides being named for the new committee, is known to us as an outstanding example of the artist cover-designer. Although the matter of the committee is as yet in its initial stage and nothing could be said of the committee's probable activities, Mr. Brown was good enough to discuss briefly with us the general subject of bookbinding design and the need for its improvement.

Mr. Brown can claim the distinction of having been a designer of bookbindings for forty years and being still engaged in the art. He began his career in Edinburgh. In the course of his conversation with us he referred to the time when enthusiastic Scottish students used to supplement the workshop hours of 8 a.m. to 7 p.m. by a little sketching before breakfast, a visit to a museum in the lunch interval, and then evening classes to finish the day. It appears that the profession of bookbinding designer was one worth working hard to qualify for in those days—when books were made not only to sell but also to be beautiful, and when binders were prepared to pay £5 to £15 for a good cover design. But somewhere about a quarter of a century ago the price-cutter got to work in the bookbinding trade, and the demand for cheap bindings spread from London to Edinburgh; and the golden age of cover design was largely at an end. London bookbinders, too, can remember that, 20 to 25 years ago, when publishers generally took pride in the bindings of their books, it was common for artists to call week by week with samples of their work in search of commissions for designing bindings—there being evidently a living to be made then at this work. To-day such a thing is practically unknown. It is a notable tribute to the high quality of the work aimed at by Messrs. Leighton, Son & Hodge that Mr. Brown, who was engaged by them as designer in 1912, is still regularly occupied in the art for the benefit of this firm's customers.

The root of the whole problem of the decadence of design lies, according to Mr. Brown, in the question of the price of books. It is the book binder price-cutter who is responsible for the poor general level of the book covers produced to-day; and not until the value of artistic design is reflected in the prices obtained for binding, will it be possible for the art of the designer to become an attractive field for the student and craftsman.

And the true artist designer has a right to demand, and must demand, considerably more than the petty half-guinea or guinea which some binders think sufficient to offer for a cover design. To be a really good bookbinding designer means not only being a trained artist and designer, able to do abstract decorative work suitable for, say, wall-paper or linoleum; it means also being able to creat decorative work that is specially applicable to the tools and methods of the bookbinder, and suitable moreover to the particular book to be bound—and here comes in the need for a knowledge of bookbinding craftsmanship and of the history of art in general and the history of book binding art in particular; for without knowledge of the artistic associations of the period to which the book relates, the binding may easily be made inappropriate. Here is a field for research almost as wide and as old as the world itself. Lettering, too, on both its artistic and historical sides, is itself a big field for study. Thus the years of training and research that go to produce a thoroughly qualified designer of bookbindings must, if they are to be undertaken by artists of to-day, carry with them the promise of sure and remunerative employment. And at present that is notoriously not the case.

Thus to Mr. Brown—and his view seems pretty obviously a true one—the main question at issue is an economic one. What can be done in the face of the price-cutting of the present day to make book cover designing attractive as a career? This is the question which Mr. Brown and his two colleagues on the new committee will have to hammer out with the bookbinders of London if any headway is to be made in encouraging the art of bookbinding design, either in connection with the Society of Arts competitions or in the trade as a whole. The effort is a commendable one, which we shall follow with interest and upon which we hope to be able to write further at a later date.

We believe there is increasing favour for book covers that are really designed, and not just "knocked-up." There is to-day among certain publishers a marked revival of the demand for tastefully bound books. Doubtless the demand is growing and will eventually compel the attention of publishers everywhere. It is to the interest of the whole bookbinding industry that the factors which hinder this growth should be held in check and that everything possible should be done to encourage and to satisfy the demand for book covers that are not only sound in construction but are also fitting and beautiful in appearance.

The Use of Glues in the Bindery.

The four principal classes of glue used are: (1) Animal glue, (2) bone glue, (3) liquid glue, (4) vegetable glue.

Animal glue of the highest grade is obtained from the trimmings of hides, and the process of manufacturing is quite complicated. Fleshings, which are the fatty tissues taken from the inside of the hides, also yield high-grade animal glue. Following the manufacturing processes, the glue obtained from the hide trimmings and fleshings forms a jelly which subsequently is cut into slabs. These slabs are placed on nets to be conveyed into drying alleys, and here the drying process is completed, first by cold air and then by means of warm air. Afterwards, the dry slabs are put through a mechanical "breaker" and are broken into small pieces. In this state the animal glue is called "flake glue," or "broken sheet."

Bone glue is manufactured from bones obtained from slaughter houses, butchers, etc.

In these days, the vast majority of glue users prefer ground glue to "flake" or "broken sheet," for the simple reason that ground glue is far more convenient to prepare in the workrooms than the old-fashioned forms mentioned. However, there is still some prejudice against ground glue, because it offers an opportunity for adulteration, but it is a comparatively easy matter to make scientific tests to prove the quality of any kind of ground glue.

Liquid glue is made principally from fish offal, skins, fish heads, bladders, and so forth, and because of the kinds of raw material used, it is commonly known as "fish glue." Because of the extremely bad odour of liquid glue in its light brown liquid state, it is necessary to add a perfuming agent to it. Certain kinds of liquid glue are made from starch, resin, rubber or bitumen base, but the term liquid glue generally means that which is manufactured from fish material, and this is always of better quality than the other kinds made from starch, resin, etc.

Vegetable glue is manufactured from a vegetable base such as dextrine, cassava,

Digitized by Google

or other similar starches. The highest grades of vegetable glues are those made from cassava. The dextrine glues have for many years been satisfactory in the printing trades, especially for such work as end-gumming printed sheets, sheet-gumming, and "tip-on" jobs.

During the last few years a considerable number of different makes of "cold water glue" have been placed on the market, and from all that I can learn about these patent glues, they are excellent for such work as labelling, pasting wrappers on paper boxes, mounting printed sheets on pasteboard, and other work of this class. These so-called "cold water glues" are usually vegetable glues of special compound. For example, one well-known make consists of a white, dry powder which is quickly soluble in cold water, and without the use of an agitator or glue-kettle. The solution is transparent, thin-flowing and odourless. It should be understood that cold water glues are now being manufactured both in liquid and dry powder form, and that different grades are made to provide for practically all kinds of pasting and sheet mounting work.

In the printing and publishing industry, glues are used more extensively in the book binding departments of plants than in other departments. In this connection it is safe to say that hot animal glues are more generally used in the bindery or finishing department of a printing establishment than liquid or vegetable glues, and it is a fact that hot animal glue of good quality is more serviceable in bindery work than liquid, vegetable or cold water glue of any kind.

Preparing and Mixing.

The preparation of material for hot animal glue is always a most important consideration. The mixing and heating should be done only by one who is experienced in this work, for it often happens that the adhesive quality of glue is impaired by careless mixing or over-heating. The scientific method of mixing is to weigh both the glue and the water in the proper portions for the class of gluing work to be handled. The experienced bindery worker will prefer a thin hot glue for certain jobs, a medium-body glue for other work, and a thick glue for still other jobs. These different bodies of glue may be obtained by measuring the proper amount of water essential for each body. The water may be measured in a graduated vessel of the kind used in a chemical laboratory. The glue, in either powder or flake form, may be weighed on an accurate scale of any type. The amount of glue and the amount of water for each "batch" or mixing can be determined by exact tests, and the figures for each mixing can be written in a memorandum book as standard data for all future mixings.

As already stated, ground glue is more convenient for mixing than flake glue. When flake glue is used it should be soaked in water until it becomes soft enough for the glue pot. This can be done at night in preparation for the next morning's use. The great advantage of ground glue is that it can be poured directly into the water, and while the water is being stirred. The heat may be immediately applied to the ground glue and water, quickly bringing the mass to a solution.

Glue pots of different styles and sizes are in regular use, the three principal methods of heating being steam, gas and electricity. Of course, it is possible to heat a glue pot on a coal stove, over a wood fire, or over a charcoal fire, but in modern workrooms such methods are not in use. The most convenient and efficient method of heating a glue pot is with electricity. With electricity it is a simple proposition to maintain a uniform degree of heat, and to regulate the heat to higher or lower degrees as may be desired. There are a number of new-style electric glue pots now on the market, each one of these makes being so equipped as to give various standard degrees of heat by means of very simple adjustments.

When hot animal glue is being used continually in the workrooms, care should be taken to keep the temperature of the glue at from 120 to 150 degrees F. No glue should ever be heated above 150 degrees F., as scientific tests have proven the fact that the body of the glue will have less adhesive strength if heated above the point mentioned. The ideal temperature for hot glue is said by experts to be about 130 degrees F.

Importance of Cleanliness.

The question of cleanliness in connection with animal glue is exceedingly important in view of the fact that any animal product is subject to bacteria, which when present in the glue will cause decomposition. Even during the summer season, and when a pot of animal glue is left to stand uncovered over night, the glue is apt to be attacked by bacteria, especially during a very hot night. In most cases of bacteria in glue, however, the decomposition so caused is the result of using unclean brushes, vessels and the glue pot itself. In not a few binderies and printers' finishing departments the glue pot and glue brushes are the most unsanitary things in the place. The users of animal glue will save time and material by keeping the glue pot, brushes, etc., reasonably clean.

Under no circumstances should a glue with a repelling odour be used. The unpleasant smell is a sure indication that the glue is decomposed, and when in that condition the solution cannot be improved by adding to it a portion of fresh glue. When glue goes bad, the utensils should at once be thoroughly cleaned, first by washing them with hot water, then by again washing them with a weak solution of carbolic acid.

It is a good plan to keep the dissolvers and glue pots covered when they are not in use. The covers not only prevent dust and dirt from entering the glue utensils, but they also lessen the tendency of a "skin" forming on the surface of the glue.

Temperature of Workrooms.

The temperature of the workrooms in which gluing of any kind is done should be from 70 to 80 degrees, and at the same time the rooms should be well ventilated. The stock to be glued should be kept warm rather than cold; in fact, stock that is decidedly cold will not glue up as easily as that which has a temperature of from 75 to 90 degrees. Another important aid to good gluing is proper humidification of the rooms in which the work is performed. Scientists know that air at 15 degrees, when saturated, containing all the moisture it will carry, can retain but one-sixth as much as it will carry if warmed to 70 degrees. If a closed room is therefore warmed without adding moisture, the air becomes dry and "thirsty," and will draw the moisture from anything in the room exposed to it. This dry atmosphere may seem to be an aid to drying glued up work, but in truth it is not. The drying should be done slowly, and this is only possible by having an air containing plenty of moisture. During the winter season, when the doors and windows of the plant are closed tight, the air in the rooms will become extremely dry. This trouble can now be overcome to a considerable extent by means of patent humidification apparatus installed in the workrooms. The old-fashioned method of humidification is to frequently sprinkle the floors with water, and to place pails filled with water in corners of the room. During the warm weather months, when the doors and windows of a plant are kept open (or at least partly open), there is not the same trouble with "thirsty" air in the workrooms.—Robert F. Salade in the "American Printer."

DERMATOID.—Messrs E. A. Bristow and Co., 23-8, Fleet-street, London, E.C.4, advise us that they are now carrying stocks of Dermatoid leather cloths and leatherettes solely for the wholesale trade. Wholesalers who have been unable to obtain supplies are asked to apply to Messrs. Bristow when all enquiries will receive immediate attention.

LEIPZIG FAIR.—A report by the special correspondent of S.A.S., Ltd., publicity agents in the United Kingdom for the Leipzig Fair, states that although the number of visitors at the Autumn Fair was not nearly so high as that of the last Spring Fair, it is confidently expected that the volume of business transacted will be quite satisfactory. The demand for paperworking machinery has been quite good, and a fair amount of export trade has been reported.

THE Board of Trade have appointed a Committee consisting of Sir J. B. Brunyate (chairman), Mr. Douglas Wenham and Mr. J. Rowan to inquire into and report upon an application made by the Union of Wrapping Paper Makers in accordance with the terms of the White Paper relating to procedure and inquiries in connection with the safeguarding of industries, presented to Parliament on February 3rd, 1925, for the imposition of a duty upon packing and wrapping paper. Notes and News

Greetings from the bookbinders of this country to their colleagues in the United States will be carried by Mr. John L. Mercer (James Burn and Co., Ltd.), chairman of the Bookbinding Section of the London Chamber of Commerce, who leaves England at the end of this week for New York.

Books in Paper Boards.

In a note that appeared in our issue of August 20th, mention was made of the big purchases being made of ephemeral literature in book form, and a plea was put in for the cheapest possible form of case binding. We remarked: "Why not paper-covered cases with modern pictorial or decorative treatment and no wrapper? There is room for something of the kind and it would cheapen the cost of production considerably."

The Idea Approved.

That remark has brought us a letter from a well-known Yorkshire firm of wholesale bookbinders, who express pleasure at our advocacy of this policy and say that they believe such productions would prove of considerable benefit to their class of business. We know, of course, that there is a body of trade opinion holding that the idea is not a good one. It is argued that if a book is really ephemeral a paper wrapper is good enough; whilst if it is not really ephemeral the volume deserves a cloth cover. Another point made is that the difference of price would not be great between the cloth cover of the good paper boards. It must be remembered, however, that small differences of price may make big differences in sales achieved, and in the matter of durability we hold that there is a real place for the semi-ephemeral, or semi-durable cover, which has not been sufficiently realised by publishers in this country. The success of tasteful paper board issues on the Continent, notably Germany, lends weight to this opinion.

Bookbinders' Flag Day.

The Bookbinders' Cottage Homes and Pension Society is instituting a Flag Day in honour of the Society's inception which took place 96 years ago. At the present time there are 80 pensioners to support in addition to many deserving candidates waiting for election. Funds are urgently required to enable the Society effectively to carry on its work of providing pensions and rooms for aged and incapacitated men and women bookbinders. It is for this reason that it is hoped that the Flag Day, which is expected to be held on Friday, October 30th, will receive the hearty support of the whole industry. On the evening of October 30th a free concert is being arranged to take place at the Leysian Hall, City-road to augment the funds. We understand amongst the organisations who will co-operate in the Flag Day effort are the Master Bookbinders' Association, the London Society of Compositors, the London Central Branch and the Womens' Section of the N.U.P.B and Paper Workers.

Classes for Bookbinders.

Courses in commercial binding are to commence at the London School of Printing, 61, Stamford street, Blackfriars road, S.E.1, on September 21st. These courses cover day and evening classes, and the subjects are for a wide range of theoretical and bookbinding practice. Special day and evening classes for women workers will also commence on September 21st, the subjects chosen being such as to supplement the training acquired in the ordinary workshop.

Bookbinding Slogan Wanted.

The bookbinders of the United States are seeking a slogan that will properly describe their industry. The committee to whom has been assigned the selection of a slogan submitted ten slogans to the executive committee of the Employing Bookbinders of America from a list of 500 that had been submitted for their consideration. The executive committee gave the matter very careful consideration and finally decided it was not able to pick a slogan which met the views of the committee, who wanted one such as the printing industry has adopted, namely, "Printing, The Mother of Progress." It was felt that a mere play on words, of which approximately half of the slogans submitted consisted, was not of the desired kind.

DIVIDENDS AND REPORTS.

EDWARD LLOYD, LTD.—Interim dividend on ordinary shares of 9d. per share, free of tax, payable October 1st. (Last year's interim same)

NEW COMPANIES.

YORKDALE PRESS, LTD.—Capital £5,000, in £1 shares (1,500 6 per cent cum pref. and 3,500 ordinary); to acquire the business of a printer and stationer carried on by A. Treweek at 26, Church Bank, Bradford, and elsewhere as Treweek and Woodhead. Private company. Directors: A. Treweek, W. Treweek, J. E. Treweek and R. Treweek. Registered office: 26, Church Bank, Bradford.

MAULE, LORD AND BLANDY, LTD. Capital £4,000, in £1 shares (3,000 7½ per cent. cum. pref. and 1,000 ordinary); to acquire (1) the business of printers, publishers and bookbinders carried on by Agnes E. Lord and J. Blandy at Kingston-on-Thames as "Lord and Blandy" and (2) the similar businesses carried on by A. Maule and P. A. Land, also at Kingston-on-Thames, as the "Kingstone Press" and "Shadows Before Company" respectively. Public company. Directors: D. T. Atkins, J. Blandy, W. Holly, P. A. Land, A. Maule and T. C. Smith. Solicitor: J. E. M. Crowther, 23, Abingdon-street, Westminster.

BUTTERLY AND WOOD, LTD.—Capital £3,000, in 1,000 6 per cent. pref. and 2,000 ordinary shares of £1 each; to acquire the business of a printer and manufacturing stationer carried on by G. H. Butterly at 12, Marble-street, Manchester, as "Butterly and Wood." Private company. Directors: G. H. Butterly and W. Butterly.

G. D. ERNEST AND CO., LTD.—Capital £3,500, in 2,000 16 per cent, non-cumulative preference and 5,000 ordinary shares of 10s. each; to start, acquire, print, publish and circulate or deal with any newspaper or newspapers, trade paper or other publications, and to carry on the business of newspaper and magazine proprietors, general publishers, bookbinders, newsagents, journalists, literature agents, stationers, etc. Private company. Directors: Mrs. H. C. O'Brien and A. G. M. Hesilrige. Registered office: 5, Duke street, Adelphi, W.C.2

WILLIAM POPPER AND CO., LTD.—Capital £2,000, in £1 shares; to acquire the business carried on as William Popper and Co. at 12-15, Underwood street, N., and to carry on the business of printers, lithographers, publishers, stationers, artists' colourmen, photographers, etc. Private company. Directors: W. I. Popper and D. H. Popper. Registered office: 12, Underwood street, N.1.

WARBOUR PRESS, LTD.—Capital £500, in £1 shares; to acquire the business of a printer, account bookmaker, stationer and rubber stamp manufacturer carried on by H. Rock at 33, D'Arblay-street, Oxford street, W. Private company. Directors: Mrs. Kate Rock and Harry Rock. Registered office: 33, D'Arblay street, Oxford street, W.1.

PRACTICAL BUILDING PUBLISHING CO., LTD.—Capital £1,000, in £1 shares; Papermakers and dealers, importers and exporters of paper, printers, stationers, publishers, bookbinders, newspaper and magazine proprietors, advertising agents, etc. Private company. Directors: G. I. C. Marchand and J. G. Dixon. Registered office: 412-413, Stafford House, Norfolk street, Strand, W.C.2.

MANN PUBLISHING CO., LTD.—Capital £100, in £1 shares; to carry on the business of publishers, printers, bookbinders, stationers, etc. Private company. First directors: L. M. Mann and W. M. Bennett. Registered office: 183, West George-street, Glasgow.

GRANTLEY AND CO., LTD.—Capital £100, in £1 shares; advertising agents and contractors, printers, publishers and publicity agents; to acquire, develop and exploit advertising concessions of all kinds in London and elsewhere, and to form and open branch agencies for that purpose, etc. Private company. Subscribers: W. A. Zabell and Marie A. Meen. Solicitor: W. A. Zabell, 11, Queen Victoria-street, E.C.4.

A. BOURNE AND CO., LTD.—Capital £7,500, in £1 shares; to acquire the business of a process engraver, commercial artist and wood engraver, carried on by A. Dix at 73, Ludgate-hill, E.C., as "A. Bourne and Co." and the assets thereof. Private company. Directors: A. Dix, Caroline E. Dix, W. G. Vokes and Constance C. Strode. Registered office: 73, Ludgate-hill, E.C.4.

EXCIES, LTD.—Capital £100, in £1 shares; to carry on the business of import and export merchants, general manufacturers and manufacturers' agents, publishers, printers, stationers, fancy goods dealers, etc. Private company. Subscribers: G. E. Binsted and S. Hackman. Registered office: 317, High Holborn, W.C.1.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 47 of the same Act. (The registration of Satisfactions is not compulsory).

MAYPEN, LTD (East Twickenham).—Particulars filed of £3,000 debentures authorised July 23rd, 1925, charged on the company's undertaking and property, present and future, including unpaid capital, the amount of the present issue being £2,500.

WILFORD, LTD. (printers, etc., London).—Particulars filed of £300 debentures authorised October 31st, 1924, charged on the company's property, including uncalled capital, the whole being issued on the said date. (The above particulars were not available for inspection until September 10th, 1925.)

DE GRUCHY AND CO., LTD. (stationers, printers, etc., London).—Satisfaction in full on September 9th, 1922, of debenture dated August 7th, 1920, securing £500. (Notice filed September 2nd, 1925.)

J. R. CASH AND CO., LTD. (printers, stationers, bookbinders, etc.).—Further charge on land with buildings and erections thereon in Chapel-hill, Huddersfield, dated August 18th, 1925, to secure £250. Holders: Huddersfield Building Society.

NATION, LTD. (London).—(1) Mortgage and Land Registry Charge on 38, Great James-street, Bedford row, W.C., dated August 11th, 1925, to secure £2,650. Holder: Mrs. F. M. Moul, 98, Bedford Court Mansions, Bedford-square, W.C.1. (2) Mortgage and Land Registry Charge of even date on above property, to secure £850. Holder: C. G. Syrett and H. S. Syrett, both of 115, Moorgate, E.C. (3) Land Registry Charge on above property, dated August 20th, 1925, to secure £850. Holders: J. M. Keynes, 46, Gordon-square, W.C., and the Joseph Rowntree Social Service Trust, Ltd., The Cocoa Works, York.

RECEIVER APPOINTED OR RELEASED

FRANK HODGE, LTD. (stationer, etc., Cardiff).—C. M. Ayliffe, of 10, Commercial street, Newport, Mon., incorporated accountant, ceased to act as receiver or manager on July 31st, 1925. (Notice filed September 5th.)

From the London Gazette.

THE BANKRUPTCY ACT, 1914.

RECEIVING ORDERS.

Relph, Darwen, and Pearce, 76, Finsbury-pavement, paper agents. Public examination, November 3rd, at Bankruptcy buildings, Carey-street.

W. F. Priest, "The Old Cottage," Upper Green-road, St. Helens, I.W., stationer.

T. Hill, 15, Thames street, Oxford, and carrying on business under the style of T. Hill and Son, at Circus-yard, Oxford, waste-paper merchant and general carrier.

Merton Board Mill, Ltd.

Under the compulsory liquidation of the Merton Board Mill, Ltd, Merton Abbey Mill, High-street, Merton, the report of Mr. G. Digby Pepys, official receiver and liquidator, has been issued to the creditors and shareholders. The accounts, showing the position as at the date of the appointment of the debenture holders' receiver, disclose unsecured creditors £46,440; preferential claims £4,191, and loans on debenture bonds £123,683. The assets valued at £107,632 are entirely absorbed by the preferential and debenture claims, leaving a deficiency of £66,730 in assets to meet the liabilities, and a total deficiency of £267,780 with regard to contributories, the issued capital being 201,450 ordinary shares of £1 each.

The winding-up order was made on March 3rd, 1925, upon the petition of a creditor.

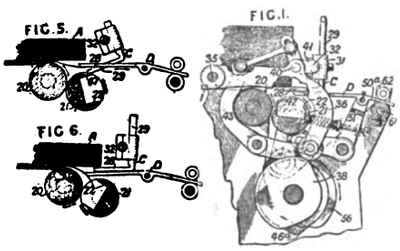
New Inventions

Book Signatures.

An apparatus for gumming and pasting book signatures is patented by Mr. J. Murray, and consists of a machine for applying continuous or discontinuous narrow strips of adhesive between the folds of a book signature, etc., for the purpose of fixing the leaves together and comprises a hollow rotating cylinder with longitudinal slots, rubber or other adhesive applying strips carried on bars guided in radial slots in the cylinder and capable of protruding through the slots, and means for protruding and



withdrawing the strips so as to miss those lines of subsequent folding which do not need to be gummed. The bars C1, carrying the rubber strips C, are mounted in blocks C2, C3, sliding in radial guides in end plates D, D1 of a cylinder mounted on a fixed spindle E and rotated by a driving pinion E2 adjustably secured by bolts E5 to the end of plate D1. The blocks C2, C3 are connected together in pairs by longitudinal spindles D2, and the two spindles D2 of the two sets of strips C are urged in-

wards by connecting springs D3, D4. The spindles D2 are fitted with rollers F supported against cams F2, F3, the former fixed to the stationary shaft E and the latter carried on a sleeve F4 secured to the central pinion G of an epicyclic gear train comprising also a gear G1 fast on the shaft E and pinions G2, G3 fast on spindles G4 mounted in apertures on the driving pinion E2. The gears G, G1 are of slightly different diameters, so that the planetary motion of the pinions G2, G3 imparts a slow movement to the cam F3. Shallow dips are cut in the surfaces of the cams F2, F3, and when the relative movement of the cams brings the dips into alignment, the roller F is drawn inward by the springs D3, D4 and the set of strips C withdrawn. The gear train is proportioned, and the cams adapted, to the particular type of signature dealt with. Fig. 3 shows the gumming cylinder K4 receiving adhesive from a roller L dipping in a trough L1 and applying it to a printed web K passing from a cylinder K1, and over rollers K2, K3 to the folding appliances.

Feeding Sheets.

In this invention sheets are fed from a pile A to envelope-making or other machines by means of a pneumatic or other picker C which is moved into engagement with the bottom sheet of the pile and then lowered to separate the bottom sheet, which is fed into the bite of feed rollers 20, 21 by a deflector D. The deflector D is reciprocated in a horizontal plane slightly lower than the plane of the bottom sheet in the pile, and guides the end of the sheet into a recess 22 in the rollers 21 as shown in Fig. 6, after the picker C has commenced its return movement to the pile. The pile A is supported on a pivoted table 1, the inclination of which is adjustable by set-screws resting on fixed ledges, and the table is fitted with adjustable vertical rods engaging re-entrant angles of the blanks. The picker C is in the form of a suction nozzle 28 on a tube 29 carried by a block 31 clamped to a rod 32 mounted on bell-cranks 41 on pivots 40 carried by levers 36 pivoted about pivots 35. The levers 35 are oscillated by cams 38 to give the nozzle a vertically reciprocating movement, and as the nozzle returns towards the pile it is tilted, as shown in Fig. 5, by cams 46a acting on levers 43 connected by adjustable link-connection to the bell-cranks 41. The roller 21 is recessed at 47 to permit of this tilting motion. The de-

flector D is formed as a bifurcated member through which the nozzle can pass, and it is pivoted to a bell-crank 51 oscillated by a cam 56. The deflector is guided to move in a substantially horizontal plane by rollers 61, 62 engaging its tail end 50a. The front end of the pile is supported by an adjustable rod which prevents more than one sheet being separated by the nozzle 28. The inventors are the Smithe Machine Co., Inc.

Printing on Celluloid.

An invention patented by the Geigy Soc. Anon. relates to the printing of cellulose acetate goods, aromatic sulphonic or carboxylic acids or their salts being added to the printing ink, or the goods are impregnated with a solution of these acids prior to printing. The sulphonic acids of benzene, naphthalene, or anthraquinone, or salicylic acid, or oxy, alkyl, chlor, or nitro derivatives of these, are suitable. Protective colloids may be added. According to examples: the material is printed with a paste containing Setoglausine, 2-naphthol-7-sulphonic acid, acetic acid, and gum thickening; the material is padded with a solution of sodium 1-chlornaphthalene-4-sulphonate, and then printed with a paste containing malachite green, acetic acid, and gum thickening.

The Late Mr. F. L. Armstrong.

Tribute by Sir James Owen.

An eloquent tribute to the personal and business qualities of the late Mr. Frederick Law Armstrong has been contributed to the August monthly circular of the Newspaper Society by Sir James Owen, a recent president of the Society.

After referring to his earlier career, Sir James comes to Mr. Armstrong's association with the Newspaper Society. He began his duties as general secretary on October 1st, 1921, and immediately concentrated upon the reorganisation of the office, which he accomplished in remarkable fashion.

"Before he was well in the saddle, however, he had to prepare for the struggle with the Typographical Association which culminated in the strike of June-July, 1922. His conduct during those anxious months was beyond praise. A new man, dealing with an industry of which he knew little at the time, acting for and with a Council whom he had not proved, and who had not proved him, the prospect might well have daunted the stoutest heart, but Armstrong kept a stiff upper lip, and as his President during the strain of the actual strike, I can say what a tower of strength he was—appealing, arguing, reasoning: a cheery optimist when the outlook was black, hanging on grimly when it seemed as if the whole structure of our defence was falling to pieces. Somehow we won through, and to Frederick Law Armstrong belongs the credit. It was a veritable triumph for the untried man.

"When the strike was over, Mr. Armstrong did not rest upon his oars. He had very definite ideas of what the Newspaper Society should be, and he bent his energies to the consolidation of our industry. His ambition was to bring every provincial newspaper into the Society. He had not succeeded when death touched him, but he had made remarkable progress, and had attained to enviable prestige. I believe that if he had been spared he would ultimately have secured the solid adhesion of the Provinces. Part of his plan was the organisation of strong local associations in every part of the country. To this end he travelled with successive presidents up and down the land, meeting little groups of newspaper men, explaining, counselling, warning, stimulating; and so persuasive was he, that whilst he might meet members as an official, he invariably left them as a friend. He had a fund of humour, and the gift of saying unpalatable things so that they sounded like compliments. Above all, he inspired confidence. We felt that his judgment was sound and his conclusions right.

Relations with the Trade Unions.

"Not the least remarkable of his achievements was his success with 'the other side of the table.' Without sacrificing or in the least degree compromising the interests of his own side, he managed to establish cordial relations with trades union officials, and was able to have quiet talks with them which facilitated the formal official conferences that followed. The trades unions trusted him because they felt that he was always out for the square deal. He could be subtle. On occasion, indeed, one had to be quick to follow the processes of his thought. But he was straight. He could see the other man's point of view, and, having been through the mill himself, had sympathy with the aspirations of labour. In this respect not the least of his anxieties was the persuasion of some of his own Newspaper Society members to realise that conditions to-day are different from those of twenty years ago.

"Armstrong was a perfect committee man. His agenda was prepared with care, and he supplied his President with adequate notes of the business to be done. He amazed successive Presidents by his grasp of the business. He passed from one matter to the next apparently without effort, and was armed at all points with facts, statistics, deductions. He was a master of first principles, and a master of detail, too. He saw his problems in the round, but he studied every aspect of them also, so that he was never at a loss. Armstrong never supposed, or assumed; he knew. Thus he was a tower of strength to his Executive. He had no shorthand, but he had his own method of taking notes of a Conference, from which he would construct a report which gave all the essential points of controversy often more reliable, because more expert, than the official note. This may sound incredible, but it is true.

"From time to time Mr. Armstrong intervened at the request of a member to straighten out local troubles. At one time he interviewed advertisers to prove to them that a member's rates could not equitably be reduced. At another time it would be some trades union knot to be unravelled. The last piece of work of this character was the avoidance of a strike in the office of a South-country member. The Joint Industrial Council paid Mr. Armstrong the compliment of making grateful reference to his efforts to compose the misunderstanding. He heard of this whilst in hospital and it gave him much pleasure. Armstrong never sought praise, but a word of thanks was always helpful to one who was his own and his severest critic."

Sir James Owen goes on to quote a letter which Mr. Armstrong wrote from the hospital just before his operation. It is a letter full of his characteristic courage.

Finally, Sir James writes: "The tragedy of it will not bear thinking about or talking about. He was only 51 years old. His opportunity to express himself and to exercise his great ability came late, but he contrived to build a monument which I believe will endure. And whilst I mourn him—London without him will be a strange city to me—I rejoice that it was granted to him to achieve so much and to enjoy some of the fruits of his labour."

New Composing Machines Bring New Business

¶ One of our customers tells us that the **extra** work he has been able to handle since he replaced his old, out-of-date machine with an Intertype has paid for the installation.

¶ It is a demonstrable fact that keeping a machine too long—failing to take advantage of new inventions successfully applied in the trade—is a definite source of loss.

¶ There are many British printers to whom we should like the opportunity of proving that an up-to-date Intertype—the Better Machine—will quickly pay for itself out of the **extra** work its installation makes possible. If you have an old composing machine, let us discuss this matter with you. Send a card to-day—there is no obligation.

INTERTYPE LIMITED

Britannia Street, King's Cross, London, W.C.1

Set in Intertype Cheltonian Series. Border Slide No. 654.

MR. ARTHUR WARDILL (Wardill and Gilbert) has been very busy lately disposing of the greaseproof paper produced by Billeruds Akt. The demand has been particularly brisk both for the well-known unbleached grade, "Record," and the newer bleached paper, "Candor." Both qualities are greatly appreciated by consumers, and Mr. Wardill has been fully occupied in meeting requirements in various parts of the country.

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

THE paper industry should now be able to look ahead to a period of more active interest in trade. Already there is a much better tone in the printing trade and some of the paper mills report an improvement in the looks of their order books. News-print mills may be viewing the probability of Canadian competition in their Australian market with a great amount of misgiving, but in the meantime they are exceptionally well furnished with orders and can look forward to at least a few months of full output. Had prices been more favourable or raw material quotations lower, it could have been said that the news-print section was enjoying the full fruits of prosperity. Unfortunately, nothing but absolute efficiency in equipment and organisation has enabled our news-print mills to turn their business to even moderately good account.

* * *

THERE has been no material alteration in paper prices for a year or two. Certain classes of paper, more particularly wrappings of foreign extraction, are an exception to the general rule for they are always in a liquid state, regulating their flow according to the exigencies of the market. Their price is dictated more directly by the laws of demand and supply than is the case with our ordinary English grades of paper. Esparto, wood free's, fine writings and the like base their selling price primarily on their cost. A low demand does not by any means imply a low price. English wrappings are sold much on the same principle, but they stand to suffer so much from foreign methods of competition that sacrifices are frequently entailed in an effort to successfully cope with it. Foreign wrapping papers alter their quotations more on account of the ebb and flow of request and counter-demand than because of bad seasons, dry weather and prospects of ice or labour trouble. When business falls away or shows signs of it, the mills consult their order books and consider a more favourable form of quotations. English mills consult their costs and endeavour to maintain their selling level, until the trade comes round again in fuller volume.

* * *

OUR wrapping mills cannot cope with foreign competition in the way that white paper mills can. Fundamentally we can make any sort of white paper equally as well as, and perhaps better than, the foreigner. Certain classes of white paper we can make better than any foreign mill. The English user prefers home manufactured printing and writing to any other. No foreign papermaker can produce a paper the equal of our best esparto makings. Against our esparto papers and fine writings there is no serious imported rival. There is quite enough competition among home makers to keep prices steady, and on the other hand there is too much lowering of quality and price standards among home users to warrant any intrusion from foreign sources where these papers are concerned. Perhaps it is for these reasons that esparto and fine paper prices are reasonably good in proportion to their cost. If there were the volume of business about that would normally accompany average industrial progress, the sections of the paper industry responsible for the production of these papers would be in a happy and satisfactory condition. Some time ahead such may be the case, but the great anxiety at the moment is to find more work for machinery that is lying idle.

* * *

WITH wrapping mills there is no such hopeful augury as that constituted by an ability to make papers for which home users have a distinctive preference. They may make greaseproofs, krafts and sulphites as well as the foreigner, but they do not invest their papers with any essentially English character that embodies an advantage from the user's point of view. Some mills certainly do make wrappings equal to anything that is imported, but it is costing them more to make them. Other mills, less well equipped, are not making wrappings anything like so good as those they have to compete against. The fact that some of our best equipped wrapping mills cannot make profits is no inducement to spend money on equipment. On the other hand, nothing but modern plant and large scale production will help the poorer mills to survive. Salvation may be found in amalgamation of interests, concentration and elimination. Wrappings can best be made and marketed on a large scale, and that may suggest the best means of meeting foreign competition. Centralised effort may enable the section to allocate output and aim at the infusion of special character in British wrappings. It would certainly offer the best means of combating foreign import and provide ample opportunity for utilising publicity to greatest advantage.

* * *

AMONG the esparto mills the practice of selling direct to users is growing apace. Mills that would not entertain business from the printer two or three years ago are catering now to his ordinary requirements. Agents are appointed whose business it is to cover their ground thoroughly, selling wherever a sale can be made. Anything over 3½ cwts. is held to be legitimate business. For ton orders merchants' terms can be secured. This is all strictly in order, failing agreements to the contrary, and merchants are losing a lot of business, partly through their own lack of organisation a year or two back. But it is all going the wrong way so far as the welfare of the industry is concerned.

Testing the Mullen Tester.

A general study has been made of the Mullen tester and of the test itself, to establish the effect of variables entering into the operation of this equipment. Following are the conclusions derived from this study by Mr. Allen Abram :—

HUMIDITY.—Results obtained by previous workers have shown that the Mullen test reaches a maximum at about 35 to 45 per cent. relative humidity (or about 4 to 8 per cent. moisture content, depending on the type of sheet) and falls off on either side of this humidity.

NUMBER OF TESTS.—Indications are that on a sheet of uniform formation (size 12 by 12 inches) at least three tests from each side of the sheet and in different portions of the sheet are required to give results within two points of the correct average.

TYPE OF PRESSURE AND TESTER.—A wide variation in test (up to 14 per cent.) may be obtained on the regular and jumbo testers due largely to the difference in the method of clamping the sheet.

DIFFERENT OPERATORS. — Provided two operators use the same tester, clamp the sheet the same and distribute the tests evenly over the sheet, a difference of not over two points should exist between their averages on six tests.

RATE OF TURNING WHEEL.—With a given operator, varying the uniform motion of the hand wheel from two to ten revolutions per second, an increase of about two points may be expected in the test.

BURSTING AREA.—Starting with a small opening (0·6 sq. in.) the relatively high test drops off rapidly as the area of opening increases and then more gradually as the area approaches that found in the Mullen tester.

DIAPHRAGM.—When a new diaphragm is substituted for one which has been in use long enough to have lost its elasticity an increase up to 14 per cent. may be expected in the test.

These factors indicate that uniformity in Mullen tests on paper, as between two operators, require a sheet with the same moisture content; at least six tests on each sheet; use of the same or equal testers having calibrated gauges, relatively new diaphragms and properly filled with glycerine. It is essential to use equal pressures of clamping and to turn the wheel with a slow, uniform motion. Unless these conditions are observed with reasonable care it is hopeless to expect check readings and as a result controversy will arise over the paper in question.

Paper Standardisation.

Aids to Progress.

With a view to showing how simply calculations can be made under the new scheme of paper standardisation, the members' *Circular* of the Federation of Master Printers gives a number of examples. It introduces them by saying that "every printer would be well advised to convert the prices of his existing stocks into the price per 1,000 sheets immediately. Many firms have done this and are already finding it advantageous. The working out of only one or two jobs will be sufficient to prove its value to the most sceptical."

The following examples will illustrate the simplicity of the method and the ease with which the calculations are made :—

(1) Q.—If 1,000 sheets cost £1 6s., what is the price of 1,000 16mo. leaflets?

A.—Divide the amount by 16: £1 6s. = 312 pence—

16)312

19½ = 1/7½

(2) Q.—What is the price of paper for 1,000 8-pp. booklets?

A.—Each booklet will take a quarter-sheet of paper = 250 sheets. Divide 1,000-sheet price by 4.

The number of overs required must vary according to the number of runs and the variety of the operations to be worked. A simple job in black ink would require the fewest overs, whilst a three-colour catalogue which had to be folded and bound would require proportionately more according to the length of the run. This is a matter which can only be decided by experience, but it is possible to arrive at percentage figures for every class of work and a table could be built up to answer every requirement. This table should be in the hands of each individual who estimates, prices, or gives out paper.

Percentages are not understood by everybody and it would be well to show that

1 per cent. = 10 sheets per 1,000
2 per cent. = 20 „ „
3 per cent. = 30 „ „

and so on.

This percentage figure in calculating the price of overs is most useful when the price per 1,000 sheets is known. It is not necessary to find the price of the paper at 1,030 sheets when 3 per cent. overs are required, but by taking the price per 1,000 and adding 3 per cent. to that price :—

Q.—What is the price of 1,000 sheets at 20s. with 3 per cent. overs?

A.—As 3 per cent. of £1 is approximately 7½d., the price would be £1 0s. 7½d.

LONDON COUNTY COUNCIL

LONDON SCHOOL OF PRINTING

AND KINDRED TRADES

Day & Evening Classes

Courses of Instruction arranged to suit those desirous of improving their position in the Printing and Kindred Trades, including :

MECHANICAL COMPOSITION : LINOTYPE AND MONOTYPE COMPOSING . READING . LETTERPRESS MACHINE PRINTING INKS . LITHOGRAPHY . PHOTO-LITHOGRAPHY . STEREOTYPING AND ELECTROTYPING TYPECASTING . METALLURGY . Amalgamated Society of Papermakers

Quarterly Report Appears in a New Form.

With its latest issue, the quarterly report of the Amalgamated Society of Papermakers appears in a new form. It is now an octavo booklet, and in addition to the minutes and the report of the secretary, there are sections dealing with National Health Insurance (Approved Section) and a report from the Southern Organiser (Mr. J. Goddard), together, of course, with the usual balance-sheet, obituary notices and compensation cases.

Good Progress.

The report proceeds to state that since the beginning of the year good progress has been made, but it goes on to say that even yet many members in the trade do not hold a union card and therefore every effort should be made to get them to join. Mr. Fowler believes that the membership ought to be doubled during the next twelve months if all the members assist to that end. Many mills are now organised 100 per cent., and it is suggested that an effort should be made to bring other mills into line.

"In this way," says the report, "we shall strengthen our position both numerically and financially and when the whole of the members are enrolled everybody will feel a greater sense of security."

State of the Trade.

Under this heading, the report states: The trade, generally, does not show any improvement, and whilst we hear of some mills being busy, many others are still suffering from shortage of orders, and wondering what effect the extending of the Preference to Canada by Australia will have upon the trade of this country. Whilst we cannot shut our eyes to the fact that it may make a difference, I do not share the very pessimistic view that some people hold regarding the matter, for, if this should happen, it will do much to awaken those people who are not yet convinced that there is the need to put some curb on the importation of paper into this country from foreign countries, and when we realise that we are at present importing three times as much as we are exporting, one must at once admit that here lies a solution of much of our trouble."

Safeguarding.

The report goes on to quote figures of imports and exports for the first six months of the year, and points out that while imports increased 19·3 per cent., exports show an increase of only 9·1 per cent. The brown and wrapping mills, it is remarked, again show the largest increase in imports.

This leads Mr. Fowler to express regret that he is unable to report any further progress regarding the application of this section to be brought under the Safeguarding of Industries Act.

Mr. Fowler proceeds to advise members to pass resolutions on the subject and submit them to their Parliamentary representatives with a view to pressing this matter forward. The subject affected all members, whether they were employed in the wrapping section or not, because bad trade made it more difficult for the negotiating committee to obtain a satisfactory agreement with the employers.

Holidays with Pay.

On the question of a new agreement, the report traces the course of recent negotiations, and with regard to payment for holidays it is stated that the negotiators had not been able to get an agreement for payment of six consecutive days' pay. Accordingly both sides referred the matter back to their respective executive committees for further consideration.

Later on in the report it is stated that certain mills in the North had secured three days' holiday with pay, which is described as a step in the right direction.

Amalgamation.

On the subject of amalgamation, the following paragraph appears in the report: "From the minutes you will note that a committee has been formed to meet the representatives of the National Union in order to draw up a scheme of amalgamation which could be submitted to the members of the Society. This question has been to the fore many times in the past and your executive feel that it is time that the members should be consulted and be able to express their opinion on the matter. It would not be much use to merely put before the members an abstract question such as 'Are you in favour of amalgamation?' but if a scheme was submitted and fully explained they would then be able to decide whether it would be advantageous to amalgamate or not."

Organisation.

Referring to the letter from the Southern organiser which appears in the report, Mr. Fowler mentions that the results of Mr. Goddard's work so far have proved the wisdom of the executive committee in making the appointment. Members in the South in the past had often felt they were out of touch with the officials, but this has now been altered, because Mr. Goddard had already dealt with many local problems which could not have received the same prompt attention from head office. Now members in the South felt that their interests were being guarded, and as time went on the Society was bound to reap more and more benefit.

Organiser's Report.

Mr. J. Goddard, Southern Organiser, in the course of his report, expresses his approval of the new form which has been adopted for the report. He proceeds to say that with regard to the work of organisation, steady progress is being made. He feels confident that the membership can be doubled if all will use their best endeavours and work together. He is led to this opinion by the number of new members enrolled during the past few months.

The organiser proceeds to refer to the successful efforts which he has been able to make on behalf of individual members, and congratulates such members of the Society as have been able to secure a week's holiday with pay this year. This is one of the objects which they are aiming at and which they hope to get adopted throughout the whole of the papermaking industry."

"I am hoping," says the organiser, "that before long the holiday clause will once again be in our National Agreement, so that all may enjoy what, in these days of speed, is a necessity—a complete week's rest in a year."

The balance sheet shows assets amounting to £4,400, while the income and expenditure accounts show an expenditure of £3,567, the income being short of this amount by £75, which is transferred to accumulated funds. Contributions brought in £3,229.

THE TRIUMPH OF Modern Offset Lithography

By JOSEPH GOODMAN, F.R.P.S.,

City and Guilds of London Honours Silver and Bronze Medallist, Lithography and Photo-Mechanical Processes. Author of "Practical Modern Metalithography," etc.

Printing lithographically from the uncut reel of paper, or roll of textile fabric, from the flat bed litho machine has been attempted on many occasions, but without commercial success – according to modern standards and competition with rival printing processes.

Tubular Offset Metalithography.

Stone cylinders were tried by the inventor of lithography (Senefelder) in conjunction with an English calico printer, of the name of Thornton; but this was all in the distant past when less exacting and competitive methods assailed each other. Later a Frenchman and an Englishman (a Mr. John Jefferson Hayes) made most exhaustive experiments to print from the reel by means of the ordinary flat bed reciprocating litho machine, by direct printing methods from flat stone. This was in the nineties of the last century. Whilst they were rewarded with a certain measure of success, as far as one colour calico prints were concerned, they could not devise satisfactory means of securing good register for multi-colour work, nor could they succeed with the colour method of printing by reciprocating stages, which made the process more costly than existing methods, although yielding a more satisfactory result and varied attainment of production.

This sectional method was eventually abandoned, to be later on replaced with a wonderfully ingenious and economic invention of printing by lithography from a continuous and unbroken cylindrical surface consisting of a tube of aluminium, or one of zinc, fixed upon a steel mandril or spindle, which was in turn geared up to counterparts of a newly devised lithographic and offset rotary machine. Fuller details of this machine and method follow. This briefly is the historical synopsis of "tubular" metalithography or "all rotary lithographic offset printing" from complete metallic cylinders upon continuous rolls of textile fabric, or rolls of paper by the modern, patented English process, which will form the subject matter of this article.

Hitherto in the preceding article we have necessarily confined ourselves to metalithographic offset printing from cut sheets of metal, either zinc or aluminium plates, where only single, separate sheets of paper could be employed for the printing, and not uncut paper in the roll. This applied equally to rotary machines, one, two, or three colour, as well as to the older types of power machines, such as the reciprocating flat bed litho machines of earlier date.

Preventing Waste Motion.

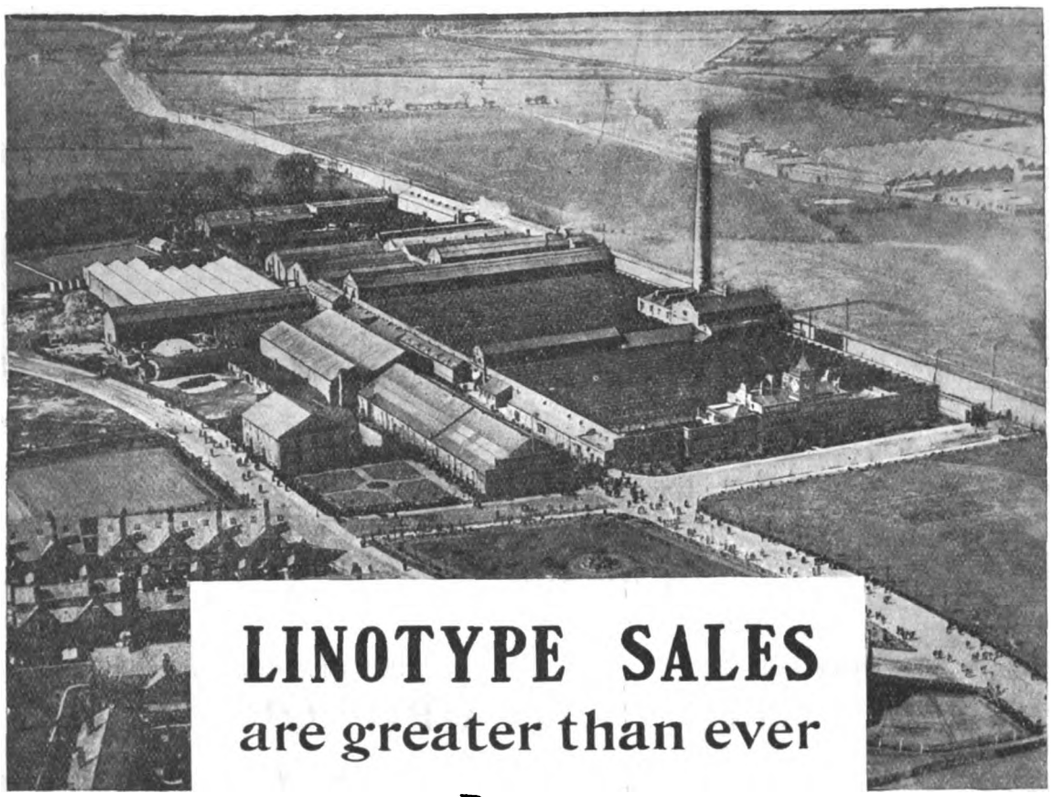
Therefore it will be at once recognised that only a segment or portion of the printing cylinder can be employed at each of its revolutions for actual printing purposes, leaving, as a matter of fact, at least one-half of this printing cylinder unengaged in actual printing capacity; and consequently there is, to that specified extent, a definite loss of utility in that type of press.

It naturally follows, then, that if a lithographic printing machine could be so devised as to enable an undivided metallic tube of either zinc or aluminium to be employed for printing from, then the entire periphery of it could be unrestrictedly utilised for continuous, pauseless, printing purposes, instead of being limited to a mere third, or half of the cylinder periphery, as in the older orthodox methods. From this it is at once apparent that the printing capacity of such a machine is at least doubled, or in some cases trebled, compared with the ordinary rotary.

Another revolutionary feature in connection with this "all-rotary machine" is its duplicated attachment fittings, which enable change of colours and of job to be made ready in a few minutes, and the printing proceeded with for the next order in that expeditious manner. This itself is a vast improvement on the existing order of things, as it utilises a detachable "trolley" arrangement, operated away from the machine for the purpose of making ready the next succeeding job and colours, while the previous job is still being printed in the machine.

When ready, this duplicate mechanism with job attached is slid into position in the machine as soon as the other duplication containing the old job is withdrawn.

A Machine in Operation.



It will no doubt be of absorbing interest to all branches of the litho craft to know that such a result has actually been obtained, after a long chain of evolutionary developments, and the expenditure of over fifty thousand pounds to accomplish; and that the result is a practical working method now having been in constant productive operation for over two years in the printing of textile fabrics.

The printing surface is a zinc or aluminium tube. The design to be printed is transferred upon this by means of a special transfer press so that the whole surface circumference of it is utilised, and thus the image is reproduced at definitely continuous repeats, all along the roll of material, no matter how long it may be. And particularly in the case of fabrics, and what is of the utmost significance is, that the printing is done with lithographic oil colours, permanent to light and durable to washing. This is an immense advantage over the fugitive aniline gum colours of the orthodox calico printer.

The ink feed, distribution and supply to the printing roller is done in a direct manner, the distributors feeding the inker and this in its turn the printing cylinder.

In order to admit of the most varied and articulate flow of colour to suit all classes of work, the ink ductor box is constructed upon the novel plan of sectional partitions. This idea is covered by a special patent. The inking roller, ductor and printing tube are all attached upon a combined sliding tray device, so that they all can be brought into simultaneous printing operation instantly.

LINOTYPE SALES
are greater than ever

Because:

Nearly forty years of experience is behind every part of a Linotype—*that is why it is a fully efficient machine.*

It is a sound investment - *it stands up to its work year after year: it is dependable: it is built to last.*

Real service is with the machine from the time it is installed and onward—*our depots, our staff of experts, and our Works at Altrincham combine in maintaining that service.*

There are many more reasons: but the vote of the printing trade as represented by actual sales affords the best evidence of its superiority.

The pressure is regulated by a graduated lever attachment, and contact can be instantly made or broken whilst the press continues running, or it may be stopped just as quickly. The "cloth" or "paper" is fed into the machine from a convenient position, and passes over the machine after printing on to the winding spindle, being adequately protected with an interleaving blanket to prevent set-off or smearing. In the case of paper an automatic cutting device severs sheets of the pre-arranged size. The speed of the press is easily eight times as fast as that of the flat-bed type.

The Achievements of Photography.

Two Important Exhibitions.

At the seventieth annual exhibition of the Royal Photographic Society, at its rooms in Russell-square, W.C., there is an extensive show of all classes of photographic work, and although pictorial photography is the leading feature of the display there is much that appeals to the technical and scientific worker, and the exhibition also possesses an interest for the printer in several of its exhibits, notably in the examples of photographs that have been transmitted by wireless and over telephone wires. Some of these examples have been transmitted from San Francisco to New York, a circuit of 3,305 miles, the transmission of the picture taking only 7½ minutes. These photographs are really wonderful in their clearness, and if, in every-day practice, they can be transmitted from great distances it will be an immense boon to the illustrated newspapers, which at present have to depend on getting their pictures from a distance through the medium of the post. The transmitted photographs embrace all sorts of subjects—interiors, landscapes, buildings, and portraits, and there are also examples of black-and-white subjects such as advertisements, weather charts, finger prints, etc., as well as reproductions of letters and signatures. The method of sending these pictures has been developed and the pictures made by the American Telephone and Telegraph Co., and the Bell Laboratories Co., both of New York. In the collection there is also the reproduction of a coloured picture, the three negatives of which were transmitted by the telephone system. The French are this year celebrating the centenary of Nicephore Niépce, whom they claim to be the inventor of photography, ignoring the fact that an Englishman, Thos. Wedgwood, of pottery fame, was the real inventor and pioneer of the art 20 years before Niépce. Still it is interesting to know that Niépce was the first to produce a photo-mechanical plate that could be printed from, and was thus the pioneer of process work. At the Royal Exhibition three of these early plates are shown, and an inspection of them is well worth while, especially as there is a black-and-white print from one of them shown side by with the plate. This plate, known as "The Cardinal," is interesting as it has been etched and printed from, and is thus an example of the first successful attempt to apply the art of photography to the production of pictures that might be reproduced by mechanical means. The dates when these plates were made was 1826 and 1827, and a long hiatus occurred before the idea of Niépce was taken up and process engraving became the popular art as known to-day. All interested in printing and in illustrative work should make a point of visiting the exhibition which is open, free, daily, from 11 a.m. to 9 p.m., except on Tuesdays and Fridays, the lecture evenings, when it closes at 6 p.m. The exhibition will remain open until October 24th.

Another important show is that of the International Exhibition of the London Salon of Photography, which is now open at 5A, Pall Mall East, at which many excellent pictures are to be seen, the merits of which place them on an artistic plane, and demonstrate that in clever hands photography can become an artistic and expressive medium. The pictures hung this year show more "straight" photography than usual, although some "cranky" examples have got in with the others. The exhibition is well worth seeing from the illustrator's point of view, as many instructive lessons in light and shade may be had by the black-and-white artist who too often pooh-poohs the possibilities of photography rising to the height of an art. One of the most outstanding pictures is "The Life-Boat Man," a strong silhouette by Mr. F. G. Mortimer; and another by the same worker, "Stand Fast," showing a windjammer shipping heavy seas, is well worth a study. In "Ruins Old and Hoary" we see a pleasing picture of an old castle on a cliff, with a remarkably fine cloud effect, Mr. J. M. Whitehead is responsible for this. "One of the Old School" is a good shipping picture, by Mr. John H. Anderson; and in "I spy" the head of a black cat makes a striking subject by J. Challoner. Many of the portrait studies are very fine, notably the large portrait of Dr. Hay Fleming, the historian, by Mr. Swan Watson. Some of the exhibitors have been trying their hands at the attempt to make pictures out of very unpromising subjects. In "A Corner of the Garden" Mr. H. Onishi has managed to make a pleasing study with a watering can, a garden hose, and two fluffy chickens, while Mr. C. Wormald has utilised three common bottles for his picture, and with good effect too. Nude studies are numerous, but they are of a pleasing character and not at all objectionable as so many photographs of the nude are, and one exhibitor has secured a most novel effect by oiling the skin of his models, with the result that the high lights are thereby much emphasised, almost securing the effect of marble statuary. There is much to attract in the exhibition; and in these days, when photography is so nearly allied to printing in the matter of illustrative work, it will well repay a visit by those interested in reproductive work. The show remains open until October 10th, from 10 a.m. to 6 p.m. daily.

Printers!

SUGGESTED INQUIRY INTO STATE OF INDUSTRY.—Taking a very pessimistic view of the state of British industry generally Sir G. B. Hunter, shipbuilder, of Wallsend-on-Tyne, urges upon the Prime Minister the necessity of appointing a Royal Commission to inquire into and report upon the economic position of our industries and the conditions affecting them, and "to make any recommendation for the improvement thereof. The need," he says, "is urgent. We are not on the road to improvement. We appear to be on the road to ruin."

'TYPARY'
TEXT TYPING MACHINE

represents the perfect medium for black-white photo-reproduction work.

The blacks are of uniform density : the whites sharp and clear-cut. There is an entire absence of streaks, pin-holes, or any of the usual troubles.

The Typon Process does not call for exceptional treatment or highly skilled labour. No special equipment is required.

Typon material is inexpensive, sold in convenient quantities, and adds to the resourses of the Litho and Planographic Printer while greatly reducing his working costs.

The Typon Catalogue, fully illustrating and describing the process, will be sent on request.

Lithographic Book Printing.

MORE ABOUT PHOTOTYPE.

Debate is often heard amongst printers as to the pros and cons of the practicability of photo-typesetting and the possibility that typographical book printing may be gradually displaced by lithographic methods. Some of the arguments brought against lithographic book printing indicate that not all printers are aware of the excellence with which type matter can at the present day be printed lithographically, even under ordinary workshop conditions, nor do they realise to what a considerable extent letterpress publications are already being lithographically reproduced.

Invasion of Letterpress Field.

Not only in the realm of periodical printing is this the case—as witness the *Passing Show* and the *Picturegoer* amongst London periodicals—but in the field of book printing also big outputs have for some time been coming from lithographic machines, either direct or offset. To-day when one picks up a book of an ordinary kind, there is always a possibility that the type matter has been lithographically printed. One has to look twice—or more times—at a novel or a work of heavier literature before one can say with confidence whether the printing is letterpress or lithographic. Indeed, in many instances, even the expert is at a loss to speak dogmatically upon the method of production, until he gets assurance by noting some indication of the presence of impression, or by examining outlines under a magnifying glass.

In connection with the advent of this method of book production we have previously drawn attention to the recent setting up at West End-lane, Barnet, of an establishment devoted to a most interesting new line of specialisation, viz., the production of books by lithography. We have been wishing to make a pilgrimage to Barnet to inspect the plant of this firm, Phototype, Ltd., and the other day we found an opportunity of doing so and were much interested in having the purposes and resources of the concern explained to us by the manager. Our visit impresses us afresh with the possibilities of this new field of printing, and we cannot forbear to give in our columns a few further particulars of a house making a speciality of what will, undoubtedly, prove a growing section of the many-sided printing industry.

Rigid Specialisation.

An outstanding feature of the Phototype establishment is the fact that it is essentially a specialised house. It provides one more example of the modern tendency to depart from the old practice of doing innumerable things more or less well, and to concentrate instead upon getting as near as possible to perfection in one severely circumscribed sphere. The particular sphere in this case is the reproduction, by means of the photo-litho plate, of anything black-and-white—especially letterpress text and line drawings. Despite requests of customers for assistance in colour lithography, this firm keeps rigidly to the black-and-white field, maintaining that by this restriction it can attain greater efficiency and lower costs than are possible where black-and-white and colour lithography are worked in conjunction one with the other. Type matter, black-and-white paintings, pencil drawings, steel engravings, MSS., music — anything black-and-white in not too large a size—this is the class of work in which the effort is being made to attain the highest possible efficiency by means of the adoption of the most up-to-date scientific apparatus and standardised methods.

Specially planned workshops and plant have been put down, on a modest scale to start with, but with an eye to future expansion. The principle that has guided those who planned the whole is the belief that the best work is the cheapest in the end, and is to be obtained by methods which give the utmost possible uniformity of results—mass production methods, in fact. The possession of any secret or unique process is frankly disclaimed, and the aim throughout has been to adopt the best known apparatus and methods for the production of lithographic printing plates, and to reduce all use of materials, formulæ, processes, etc., to a cut-and-dried uniform system, to be, as far as possible, beyond the risk of interference by the personal equation.

Automatic Control.

Thus we noted in the photographic studio that there are two fine cameras fitted with electric time control for the regulating of exposures, together with the Douthitt diaphragm control for regulating the stop. Though these additions mean considerable extra expenditure, we were assured that they very quickly pay for themselves in the facility they give in respect of the vital matter of the uniformity of prints obtained. Plates and paper for negative making are another feature in regard to which Messrs. Phototype, Ltd., are endeavouring to attain perfect uniformity; and we fancy that their scrupulous insistence upon the quality of their photographic supplies cannot but tend to help in the standardisation of these, to the benefit of the trade generally. We were interested to learn, by the way, that this firm is getting just as good results with paper negatives as with wet plates, and at a reduced cost.

Some Details of Equipment.

Space does not permit of a detailed description of all the apparatus and methods employed—many of them familiar to the trade, but here worked under something like ideal conditions. A most notable fact is that the building is rendered almost air-tight by the sealing up of all windows, the circulation of air being secured by a most modern ventilating plant, incoming air being filtered. Every effort is also made within the building to minimise the creation of dust. The up-to-date developing methods and the dark rooms, which are specially well designed and lighted, deserve mention; and, above all, the whirler (for the coating, etc., of plates), which greatly impressed us, being of the size of a small room, capable of being completely enclosed (with the provision of an observation window), equipped with very close control of the speed of the motor-driven table and most convenient arrangements for the spraying of water upon the plate, the admission of coating solution and the electric drying of the plate. The factory is thoroughly equipped for the production of photo-litho plates in zinc or aluminium, these being supplied to lithographers in any size up to 60 by 40, and being used also in the reprint work which the company undertakes for publishers.

We are told that the motto of Phototype, Ltd., is: "There is always room at the top," and this seems to us, after a personal inspection of their works, no inappropriate slogan. We have no doubt that there is going to be an increasing place in the printing world for work such as this, and the thoroughness of the methods used by Phototype, Ltd., leaves us in the expectation of seeing the firm maintain and increase its initial success.

The winner of the national poster competition of the "Safety First" Association is F. Packer, 17B, Alma-road, Roxeth, South Harrow. His design, which will be used throughout the country in connection with the Safety campaign, shows two interlocked red triangles with an eye and ear pierced by an arrow, and underneath the words "Use these."

A conference is being arranged at Balliol College, Oxford, during the week-end September 25th-28th, under the auspices of the Association of Special Libraries and Information Bureaux. Sessions are to be held dealing with the present position of the Special Library movement, with informational work in the spheres of politics, business, science, engineering, transport, medicine, and patents, with public and university libraries, and so forth.

A writer to the *Daily Express* asserts that while granulated sugar retails in most districts at 3½d. per lb., a good class paper bag costs 4½d. per lb. He asserts that "the grocery trade is so highly competitive, and, therefore, the margin of profit is so small, that the trader cannot afford to give his customers the bag or paper in which their purchases are wrapped."

Lithographic Trade Review.

NOTES AND NEWS.

Reports relating to the condition of trade in the lithographic side of the industry are very optimistic, and business at the present time is described as very good. As evidence of this it may be mentioned that the sum required to meet the payment of unemployed lithographic workers in London last week represented the lowest figure for the past five years.

So far as litho artists are concerned business appears to be in a satisfactory condition, a state of things which applies to the whole of the United Kingdom. In the provinces there are one or two spots in which there are a few workers declaring on the books, but generally speaking conditions prevailing at the present time are much in advance of pre-war days.

One continues to hear it urged in responsible quarters that journeymen as well as apprentices should avail themselves of the unique opportunities afforded at the London School of Printing for gaining a fuller knowledge of the craft. At the School in Stamford-street there are at the present time two offset machines of an up-to-date character, besides a considerable quantity of other useful appliances.

Apprentices and journeymen connected with the lithographic artist section of the industry desiring to obtain further knowledge regarding the latest advances in photo process engraving and photogravure, etc., are well catered for both at the London School of Printing and the Bolt-court School of Engraving. At the former institution very interesting classes are being arranged under Mr. R. R. Tyrer and Mr. E. C. Harrington.

So far as new type-setting appliances are concerned we learn that there is no indication as yet of these affecting the normal course of lithographic practice. Lithographers, generally speaking, are keen to note any fresh developments in these new processes, and would welcome their practical adaptation to every-day printing methods.

The first meeting of the newly-formed committee of the Lithographers' Auxiliary to the Printers' Pension Corporation is being held to-day (Thursday), when the programme for the winter will be discussed.

A lithographic printer figures as an example of thrift in the report of the Chief Registrar of Friendly Societies. He is a Liverpool man, named Honeyman, with a family of twelve children and is reported to have saved £2,000 out of wages which did not exceed £4 a week, except during the war period when they were between £7 and £10 weekly. Mr. Honeyman, whose wife died last February, is 70 years old, and was married when 20.

At the time of going to press no definite conclusions have been arrived at on the Continent on the question of the control of the offset machine, to which lithographic workers lay claim. It may be remembered that at the international conference on the question recently held in Cologne a discussion took place on Typary and Typon developments, and these processes will be watched with interest.

Under a new German tariff law lithographic stones, without drawings, engraving or writing thereon, are admitted free into Germany.

As will be seen from a notice in our commercial intelligence this week, Mr. Joseph Goodman, of 12, Crane-court, Fleet-street, has formed his business into a limited liability company. We understand that his business in printing inks and in printing machinery has been steadily expanding, and it is hoped that with the additional assistance now acquired, the firm will be able to keep in closer touch with its customers, carry larger stocks, and generally increase its capacity for service to the trade.

Technical Education Rally.

Prize-Giving at Stationers' Hall.

The spacious Stationers' Hall was, on Thursday evening, crowded out by a record attendance of students and representatives of the printing and allied trades on the occasion of the giving of the prizes and certificates gained at the last examination held by the Stationers' Company and Printing Industry Technical Board, and as a result of work at the London School of Printing. These were presented by Mr. James MacLehose, LL.D., past president of the Federation of Master Printers.

At the opening of the meeting the chair was occupied by Mr. F. H. Miles (Master of the Worshipful Company of Stationers), and others on the platform included Mr. W. Howard Hazell, J.P., Mr. T. E. Naylor, J.P., M.P., Mr. Edward Unwin, Mr. Maurice Clowes (president of the L.M.P.A.), Mr. T. W. McAra, J.P. (Newspaper Proprietors' Association), Mr. Basil Cahusac, Captain G. C. Rivington and Mr. Gerald Duckworth (Publishers' Association), Mr. E. H. Berryman, Mr. J. A. Esler, Mr. Wilson Howes, Mr. Woodgate Stevens, Dr. F. H. Spencer (Chief L.C.C. Inspector), Mr. A. M. Shand (L.C.C.), Rev. A. Taylor, M.A., and Mr. J. R. Riddell (Principal, London School of Printing).

The Master of the Stationers' Company, in opening the meeting, gave all present a welcome in the name of the Company, and also congratulated those who had worked up the London School of Printing to the proud position it now occupied. The Master then vacated the chair to Mr. W. Howard Hazell.

Mr. Hazell, intimating that the London School of Printing was looking forward to a year of unprecedented success, stated that the number of students last year was so great that the London County Council had built an additional floor on part of the building, so that they would be able to arrange increased facilities for instruction in composing and various branches of photographic work. They had to thank the trade for generous support in the matter of equipment. Messrs. Linotype and Machinery Limited had given three new Linotype machines; the *Daily News* had given a complete rotary newspaper machine, which will be shortly installed; and in addition there had been gifts of foundry equipment and bindery machinery. They had also received considerable donations from the Newspaper Proprietors' Association and other employers, for the purchase of further plant. The School was now the largest printing school in the world, with the greatest number of students. Last year over 2,300 individual students attended one or more series of classes, and up till that evening 1,600 had enrolled for the new session—400 more than at the same time last year. As indicating the high quality of the work attained, Mr. Hazell recalled that as a result of last year's tuition over 700 students had secured prizes and certificates in the examinations for which they sat; the School had also gained all the ten medals and special prizes of the Stationers' Company and Printing Industry Technical Board, three of the City and Guilds of London prizes and medals, also first class in the United Kingdom for their respective grades; and two students received most of the prizes of the Royal Society of Arts competition in the section for book work.

The chairman, introducing Mr. MacLehose, mentioned that he was known to master printers throughout the country and that in his term of office as president of the Federation of Master Printers, about two years ago, he had done most excellent service to the industry.

Mr. MacLehose, in the course of his remarks, recalled that the district in which the Stationers' Hall stands is holy ground to the printer. It was exactly four and a quarter centuries ago that Wynkyn de Worde, Caxton's apprentice, leaving distant Westminster, came and opened his premises in Fleet-street, where the present Press Association building stands; and all around St. Paul's churchyard there were houses and booths where the early books and manuscripts were sold. There was no doubt, he said, that the work of some of the early printers was of surpassing merit. They had often been told that it was marvellous that printing should have risen to such excellence almost in the days of its birth. People were apt to forget, however, that when printing was first invented the art of writing manuscripts had attained a very high level of perfection. These manuscripts, the speaker said, were extremely beautiful models, and he proceeded to mention some of the indications which showed that the earlier printers were not trying to make printed books but were trying to copy the manuscripts as closely as possible. What was now wanted was to try to get back to that high level. Mr. MacLehose proceeded to point out the many facilities existing to-day for technical education, and he concluded by appealing to students to aim high in their work and to remember that they belonged to a great craft with great traditions.

At this point the three gold medallists, Messrs. S. P. Brand, G. W. Smith and T. A. Miller were invited on the platform to receive their medals at the hand of Mr. MacLehose, who afterwards proceeded to hand the other awards to the very large number of successful students.

This ceremony being at an end, Mr. T. E. Naylor, M.P., in a short speech which aroused both laughter and applause, moved a vote of thanks to Mr. MacLehose, the Wardens of the Stationers' Company and to the chairman, Mr. W. Howard Hazell.

Mr. Shand, in seconding the vote of thanks, mentioned that he had himself passed through Mr. MacLehose's Glasgow works as a journeyman compositor, and he testified to the high esteem in which the name of MacLehose is held by Scottish printers.

The motion having been carried with enthusiasm, Mr. MacLehose briefly responded, and in doing so testified to the hard work which Mr. Howard Hazell has contributed to the cause of technical education.

L.S.C. Jobbing Guild.

Efficiency in the Composing Room.

The monthly meetings of the L.S.C. Jobbing Guild were resumed on Wednesday of last week in the Reading Room of the London Society of Compositors, St. Bride-street, when Mr. Ernest Pheby opened the session with an interesting lecture entitled "Industrial Efficiency: with Special Reference to the Composing Room." Mr. Pheby, who is the possessor of nine first class diplomas gained in the last five years, including a senior diploma with distinctions from the London Chamber of Commerce, proved a capable lecturer, and one with a wide knowledge of his subject. The chair was occupied by Mr. J. F. Francis (Athenæum Press), and there was a moderately good muster of Guild members.

Mr. Pheby, at the outset of his address, said they had all heard of industrial efficiency, or scientific management as it was called in America, and often wondered exactly what it was intended to convey. Though a recasting and overhauling of methods of working would temporarily upset the ordered arrangement of their lives, he believed it would in the long run enable them to get through a much greater quantity of high quality work at a decreased expenditure of energy than at present. It was his task that evening to indicate to them briefly how the adoption of new methods would benefit both the composing department of the printing industry and the individual engaged in it. In any system of scientific management in the composing department, he proceeded, it was necessary that each man should have his own particular job, and so perform it in a standard manner.

Re-organisation in the composing department should consist of a lay-out room, a composing section, the make-up random, the imposers and the revisers. The work ticket will show what work is to be done. If the job has been previously printed and a reprint is ordered, the lay-out department will merely mark up the types and whites, and all the assembler will need to do will be to follow copy—the operation to be done being merely that of "building bricks." No job should be issued to the composing department until it has been dealt with in the lay-out room. In this department will be collected the smartest comps. on the staff. Each job as it is received should be marked up with the types and the white spaces to be used. Squared paper of definite standard ruling (12 point squares) should be used which will show how the job will appear when it is in type.

When the lay-out is approved, either by the sales department or by the head lay-out man, it is sent, together with the copy, to the assembly department. Here the job will be assembled by means of the Ludlow, Lino. or Mono. or lifted from the case, the men so engaged doing nothing else. The men making up will be at the random all day, those imposing will do this continuously, each one being a specialist in his own line. Although each man will do one operation exceptionally well, the speaker believed it was absolutely necessary that every man should have a practical knowledge of the other operations which go to make up the whole work of the department.

After the job has been dealt with by the assembler it goes to the maker-up who spaces the lines out as directed on the instruction sheet. It then passes to the reviser, who corrects and sends the forme to the machine. The whole of the times taken in these various operations will show where the placing of the workers' materials may be improved so as to secure the smoothest working, and the whole formed into a plan whereby the work can be done in the quickest time, and the burden of the employee lightened. The job must be dissected and each factor studied separately and in relation to the whole.

At the conclusion of the lecture, by means of the blackboard, Mr. Pheby gave several practical demonstrations of the waste of energy in hand type-setting, etc. In one of these he unwound a reel of cotton, going over the respective boxes covering the words "London Society of Compositors' Jobbing Guild," using the case at present in vogue in the large majority of printing houses. He then placed on the blackboard a drawing of a case of a "new lay," and with the cotton, traversed over the same set of wording. In the first example the length of cotton used amounted to 64 ft., whilst in the second it was 48 ft. In another demonstration Mr. Pheby compared the eighteen definite movements required to manipulate an Albion Press with the six needed with the "Lightning" press.

Discussion.

Mr. Francis, in opening a discussion, paid a tribute to Mr. Pheby for his illuminating lecture. However, he did not agree with the lecturer with regard to the question of the sub-division and specialisation of labour. These, he thought, meant the elimination of craftsmanship which would eventually make a man a mere piece of machinery. Personally he was in favour of industrial efficiency—and it was an important question—but not of the kind that meant any limitation of the power of a man being able to exercise his brains. He did not approve of the sub-division of labour, and he would go so far as to say that—in spite of the trade union—he was in favour of apprentices learning all branches of their trade. For the trade union or anybody else to say that an apprentice shall only be taught one branch of the trade was to atrophy his capabilities.

Mr. H. B. Naylor pointed out that they had an excellent example of the utility of co-operation in the Board of Management of the London School of Printing, which consisted of employers and employed.

Mr. W. Whyte (secretary, L.M.P.A.) in a speech marked by much characteristic humour, remarked that he did not suggest that a boy's training should be that of a "jack of all trades," but he was firmly of the opinion that a boy who was eventually to become a compositor should have some knowledge of the machine department, the warehouse and the foundry. It was only by co-operation that they would be able to bring about any solution of their apprentice difficulties.

Useful contributions to the discussion were also made by Messrs. F. Harvey and J. F. Murphy amongst others.

On the proposition of Mr. D. Papworth, seconded by Mr. J. F. Murphy, a very cordial vote of thanks was accorded to Mr. Pheby. A similar expression of thanks to the chairman was proposed by Mr. C. A. Burridge, seconded by Mr. F. Harvey, and heartily carried.

Personal.

SIR GEORGE A. SUTTON, of the Amalgamated Press, Ltd., Associated Newspapers, and Imperial Paper Mills, Ltd., was 56 on Monday.

ALDERMAN JAMES MAY, J.P., has been selected Mayor of Aldershot. He has a record of forty years' public service, and founded the the Aldershot *Military Gazette* over half a century ago.

MR. MILTON CHAPPLE, printer, of Torrington, and Mayor of the town for four years, has been made a J.P. for the County of Devon.

MR. A. E. GOODWIN leaves England on Saturday for his visit to the United States *via* Canada. He will travel by the Cunarder "Ascania."

MR. E. R. ALEXANDER, founder of the printing firm of E. R. Alexander and Sons, Ltd., is, we are glad to hear, making excellent progress after his recent operation and is expected to leave the nursing home in the course of next week.

AT Eastbourne, on Saturday, September 12th, a very interesting presentation was made to Mr. and Mrs. A. le Pine Strange, on the occasion of their silver wedding, by the staff of Strange the Printer, Ltd. The gift was a very handsome cut-glass and silver-mounted biscuit box suitably engraved.

MR. JAMES P. SUTHERLAND, manager of the Aberdeen University Press, has been presented by his employees with a Crown Derby coffee set and tray on the occasion of his marriage.

MR. J. E. HOLLEY, who for 40 years has been on the composing-room staff of the St. Clement's Press, London, has been presented with two Berkeley armchairs on his retirement.

MR. E. WATERHOUSE, of the composing-room staff of the Leeds edition of the *Daily Chronicle*, has been presented by the companionship with a timepiece on the occasion of his marriage.

MR. CLARENCE HULL, a member of the general printing staff of the *Sheffield Telegraph*, was presented on behalf of his department colleagues with a case of stainless cutlery on the occasion of his marriage.

MR. T. G. NEWLAND, general secretary of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers, attended the meetings of the Trade Union Congress at Scarborough.

DOUBTLESS Mr. Newland took the opportunity of paying a visit to the Union's new convalescent home, Northcliffe, at Filey. He was, we believe, instrumental in selecting this admirable site on the East Coast.

A PHOTOGRAPHIC leaflet has been issued giving some very attractive views of the home and grounds.

A BALLOT has been taken recently for a new committee of the Filey Convalescent Home, the following being appointed: Mr. Geo. Harraway, Mr. S. Stubbings, Miss R. Stacey, Miss P. Sharp, Miss A. E. Hall, Mr. J. Stone, Mr. E. W. Spackman, Mr. G. F. Larcey and Mr. H. Chalk.

MR. J. J. O NEILL, who has been advertisement manager and a director of the *Manchester Guardian*, has resigned his connection with the paper.

MR. MAURICE MARSTON, until recently a director of the firm of Leonard Parsons, Ltd., has been appointed organising secretary of the National Book Council.

MR. M. RELPH, the highly respected ex-president of the Stationers' Social Society, is anticipating a trip to Norway and Sweden next month. He reports business as fairly good, especially in view of the general state of trade.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,
Partnerships and Investments,
Miscellaneous.

One Insertion 3/0
Three Insertions 6/0

***For every line exceeding three lines* 6d.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion 1/6
Three Insertions 3/0

***For every line exceeding three lines* 6d**

Sales by Auction, Tenders,
Patents for Sale,
Legal and Financial Announcements.

Per line 1/0

Replies may be addressed to Box Numbers, Office of the "British and Colonial Printer and Stationer," 58 Shoe-lane, London, E.C.4, for which a fee of 6d. is charged to cover Postage of Replies.

Telegrams: Stonhill, Lud, London.
Telephone: 2439 Holborn.

Situations Vacant.

TRAVELLERS, calling on Printers, wanted in all districts to CARRY SIDE LINE on generous commission; write, in confidence, stating ground covered and lines carried.—Write, "T.C.," Dixons, 195, Oxford-street, W 1. 14690

Situations Wanted.

LETTERPRESS MACHINE MINDER (stood off through trade depression) seeks progressive post; Wharfes (1 and 2-colour) and Platens; good class Half-Tone, Colour, Catalogue and Commercial Work, Box Numberers, etc.; Non-Society; distance no object.—Reply to C. E. M., 16, Gainsborough-road, Chadwell Heath, Essex. 14687

PLATEN MINDER, Half-Tone, Colour and General Work; 10 years' experience; 2 years in charge.—Daniels, 163, Sellincourt-road, Tooting, S.W. 14684

PROCESS MANAGER seeks situation where organising ability would be appreciated; can get the best out of men; could start a photo-engraving plant; knows how to produce a deep, good printing block; colour expert.—Box 14688.

WAREHOUSE or WORKS MANAGER, sit. wanted by experienced man; News, Periodical, Commercial, Book, etc.—Apply, Box 14671.

YOUNG MAN (29) seeks perm. sit.; Platen, Comping, Cutting; small office; London district; refs.—W. Warren, 11, Sydenham-place, Broadway, Maidenhead. 14085

Machinery for Sale.

SECOND-HAND MACHINERY.—If you are wishing to dispose of Second-Hand Machinery relating to the Printing, Bookbinding, Box-making, Envelope and Bag-making Trades, etc., secure prompt and effective service by advertising in the *British and Colonial Printer and Stationer*.—Apply for special rates to the Publishers, Stonhill and Gillis, 58, Shoe-lane, London, E.C.4.

SMYTH-HORNE, LTD.,
1-3, Baldwin's-place,
Gray's Inn-road, London, E.C.1.
Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

Machinery Wanted.

SECOND-HAND MACHINERY.—If you are in the market for Second-Hand Machinery relating to the Printing, Bookbinding, Box-making, Envelope and Bag-making Trades, etc., secure prompt and effective service by advertising in the *British and Colonial Printer and Stationer*.—Apply for special rates to the Publishers, Stonhill and Gillis, 58, Shoe-lane, London, E.C.4.

Miscellaneous.

WASTE PAPER: ITS RECOVERY AND RE-MANUFACTURE. By James Strachan. A Fund of Information; price 12s. 6d.—Stonhill and Gillis, Publishers, 58, Shoe-lane, London, E.C.

TENDER.

BOROUGH OF FULHAM.

PRINTING OF RATE BOOK.

THE Fulham Borough Council is prepared to receive Tenders for Printing the Borough Rate Book half yearly for a period of 5 years, the matter to be set up and kept standing throughout the period of the contract. Full particulars and form of tender can be obtained on application to the undersigned. Tenders must be delivered not later than 12 o'clock noon on Wednesday the 7th October, 1925.

Representatives also in Australia, India, South Africa, Canada, Norway, Sweden, Finland, etc.

THURSDAY, SEPTEMBER 24, 1925.

A Novel Conference.

EVENTS have justified our anticipation that a noteworthy contribution would be made to the history of the printing trade when the Home Counties Master Printers' Alliance held its conference or summer school for sons of master printers and young master printers. Last week's proceedings at Old Jordans Hostel fulfilled the highest hopes of the promoters—and those at the head of the H.C.M.P.A. are not backward in aiming at big successes. The brief résumé of the conference doings which will be found on another page conveys something of the spirit of the gatherings, but one had to be present to appreciate to the full the comradely feeling that prevailed, the educative and recreative value of the conference, and the joy with which both the young men and their older mentors made the most of the opportunities provided. We are not surprised that other Alliances are thinking of following the Home Counties lead. It will undoubtedly be to the benefit of the whole printing industry if they do so.

* * *

Printers' Paper Troubles.

IF one kept a record of the physical disabilities in paper with which the poor printer claims he has to contend from time to time, the net result would be to cast a very serious reflection on the degree of efficiency that has been reached in paper manufacture. Fortunately most of the matter that would be collected would emanate from technical talks and lectures reported in the trade journals. It is almost impossible to find a new complaint against paper, though some of the inventions of ill-trained craftsmen represent praiseworthy innovations. A printer of our acquaintance laid the blame for poor workmanship on paper that was "full of glass." After a course of lectures on paper more than one lithographer has contended with acids and electricity in the bulk of his work. Our own conviction is that there is much more said than seen of these particular malefactors. Electricity in paper is a potent enough influence where fast-running rotary and news presses are concerned; but it is on rare occasions that the jobbing printer, who uses flat reams of paper and comparatively slow-running machinery, meets difficulty of a similar nature. As for acid in paper, the nearest approach to common occurrence of any such thing is in the reaction of alum from clay-coated stock on the stone used by the lithographer. Ourselves, we have not known more than an odd case or two of the existence of free acid in paper.

* * *

Physical Disabilities.

IF we were asked to name the chief and the most frequently recurring of physical disabilities in paper, we would say that they comprised the following:—

1. Absence of label specifying composition of the ream.
2. Immaturity.
3. Inaccurate slitting.

These three faults are a common association with paper of all kinds, and they cause every printer to lose money, spoil work and waste paper. Acids, iron spots, electricity, fugitiveness, wire marks, fluff, uneven substance, loose and hard coating, all these may happen in paper some time, and when they do it is an event. Defects of the kind in our classification are very nearly a custom. The printer who accepts reams of printing paper as 500's is liable to waste 3 per cent. of his purchase. The rotary printer who sets his automatic feeder to pick up in single sheets paper direct from the mill will lose hours, and then put the paper to one side. The printer backing up and cutting sheets to register who relies upon paper from the mill being truthful in its angles will raise a store of trouble for himself and everyone who operates after him. And these are the everyday troubles of the paper user.

* * *

"Buy British Goods."

AUTO-SUGGESTION is a powerful factor, and buyers can be induced, as it were unconsciously, to purchase a particular line of goods if an advertisement is constantly placed within reach of their vision. Even such general advice as "Buy British Goods" serves its purpose if sufficiently employed. It is suggested that greater use of the Post Office should be made in this direction. For groups of trades, of course, there is the collective advertising scheme. This has proved highly effective in several individual cases, including that of the printing industry. In these days of slow business, the idea might well be adopted elsewhere. A tendency is also growing up of insisting on the consumption of Empire products. Here again the suggestion has only to be reiterated often enough for the effect to be readily felt. British papermakers who so often complain of poor demand might try publicity to good purpose. To many people it never occurs that there are different makes of paper. Enlightenment is what is required and there are ample means of providing this. In this connection it is useful to note a new exhibit which has been added to the display of the Association of British Advertising Agents at Wembley. This is designed to drive home the lesson that products must be made known to the public by means of newspaper advertising, the case of certain well-known proprietary articles being quoted.

PAPER FOR SOUTH AFRICA.—His Majesty's Senior Trade Commissioner in South Africa reports that the Union Tender Board invites tenders for the supply of printing paper and boards to the Government Printer at Pretoria. Tenders must be received in Pretoria by 3 p.m. on Wednesday, October 14th, 1925. Further particulars may be obtained by firms interested in the supply of goods manufactured in the United Kingdom, upon application to the Department of Overseas Trade (room 41), 35, Old Queen street, London, S.W.1.

Young Master Printers' Conference.

Unique Gatherings at Jordans Hostel.

The experiment of holding a conference for young master printers and master printers' sons, which was made last week at the Old Jordans Hostel, Beaconsfield, Bucks, under the auspices of the Home Counties Master Printers' Alliance, was successful beyond anticipation.

Reference was made to the fact that the *British and Colonial Printer and Stationer* had considered the subject worthy of a leading article, and that one of the foremost French trade papers had recognised that history was being made; and it is also known that this conference—believed to be unique in all industry—has been watched closely by the other Alliances of the Federation of Master Printers, and that the South-Western Alliance has already given consideration to the possibility of arranging a similar gathering in their own area.

Spirit of Camaraderie.

Nearly forty young fellows, six of whom were from Alliances other than the Home Counties, arrived on Monday afternoon at the old-world farmhouse, and were welcomed by Mr. H. H. Potts, president of the Alliance. Very few of them were known to one another, but a splendid spirit of camaraderie was soon established and maintained throughout the week. The programme consisted mainly of a number of sessions when addresses were given by representative speakers and of three visits to places of trade interest. The few remaining periods were occupied in such recreations as football and tennis, and useful fireside discussions in the evenings.

On Monday evening Mr. Potts outlined the main objects of the conference, and a visitor was Mr. J. A. Stembridge, vice-president of the Federation, who gave a short address.

Printing Trade Organisation.

The first address on Tuesday morning was by Mr. P. D. Michael, secretary of the Alliance and of the conference, who with the aid of some specially prepared charts, explained the organisation of master printers in the Federation, Alliances and Associations, and of the workers in branches, groups and national unions; how national agreements were negotiated between the two sides; and how both sides found common meeting in the Joint Industrial Council.

Mr. Oscar V. Viney, vice-president of the Alliance, followed with an address on "Printing Works," in which he outlined the ideals that should be aimed at in the building and equipment of a printing factory, and touched upon questions of lighting, ventilation and space. Having dealt with the special requirements of each department, he emphasised the importance of the careful selection and the welfare of the workers.

The members of the conference entered keenly into discussions on both addresses.

In the afternoon a visit was paid to the Croxley Mills of Messrs. John Dickinson and Co., Ltd., and in the evening, at Jordans, Mr. L. B. Mackay, vice-president of the Alliance, gave a brief address and congratulated the members of the conference on having in their young days come to know their fellow printers, whereas until only a few years ago it was usually the practice for their fathers to pass their trade competitors when they met them in the street.

Costing and Salesmanship.

Mr. W. Howard Hazell, president of the Federation, addressed the morning session on Wednesday, speaking informally but informatively on "Costing and Success in Business." The Federation of Master Printers, he claimed, had been largely responsible for bringing a new word — "costing" — into the English language, although recent discoveries at Ur of the Chaldees revealed the fact that costing methods were employed four thousand years ago.

Mr. S. R. Smale, of Ashton-under-Lyne, who arrived in the company of his friend, Mr. A. Williamson, Federation costing secretary, next gave an address on "Selling the Goods." He emphasised the need for a salesman to create an atmosphere favourable to himself and stated that the psychological re-actions of the "prospect" which the salesman had to endeavour to take advantage of were, love of gain, usefulness, wisdom, pride of possession, and uncertainty as to what he did want.

In the afternoon the party journeyed to Aylesbury where they were received by Mr. Oscar V. Viney and Mr. Ralph Hazell and shown over Messrs. Hazell, Watson and Viney's factory, afterwards being entertained at tea by Mr. and Mrs. Viney. Mr. and Mrs. Williamson were both present at the Jordans Hostel in the evening, and as it was the anniversary of their wedding day, their health was drunk. Questions were then put to Mr. Smale on his address at the morning session, and Mr. Williamson told of a customer who, having had a specially designed memo. heading printed, for which he paid an unusually high price, always carried a copy of it in his pocket to show his friends, and boasted of the price he had paid.

The Trade Union Movement.

"The Trade Union Movement" was the subject of discussion on Thursday morning. Mr. A. E. Goodwin, the Federation secretary, dealt with the subject from the employers' point of view. Briefly tracing the history of trade union development, he said it was difficult to see how present-day conditions in industry could have been reached without collective bargaining. A friendly attitude had always existed between employers and the workers in the printing industry, which had helped to make the success of the Joint Industrial Council possible. In the best interests of the country it was desirable that employers' organisations and trade unions should be kept in efficient order, and that demanded the intelligent interest of the rank and file of both organisations in the questions that came before them.

The next speaker was Mr. G. A. Isaacs, general secretary of the N.S.O.P. and A., who spoke on the trade union movement from the employees' point of view, and he gave the members of the conference a most useful insight into the aims and workings of trade unions. He claimed that the main objective of trade unions to-day was not so much to obtain higher wages and shorter working hours as to become a true partner in industry. Craft pride existed to a very high degree in the printing industry, and he claimed for the employers that they compared very favourably with employers in other industries in desiring that their workers should have the full advantage of the Workmen's Compensation Act. He asked the conference to judge the trade union movement not so much by extremist utterances at the recent Trade Union Congress but by the fact that the Congress had adopted a resolution approving of the principle of voluntary agreements entered into between workers and employers being made legally enforceable. He claimed that to abolish the right to strike and lock-out would produce chaos, but the strike weapon should nevertheless be used with discrimination, and the Joint Industrial Council fulfilled an invaluable function in enabling disputing parties to gain greater understanding and knowledge of each other's points of view which frequently made a stoppage unnecessary.

At the close of the session the members of the conference proceeded to the grave of William Penn, the founder of Pennsylvania, by the old Meeting House at Jordans. Here a resolution of greeting to the sons of master printers in America was adopted, and Mr. Goodwin was asked to convey this through the U.T.A. when he visits America in October.

Goodwin v. Isaacs Debate.

In the afternoon a most interesting "labour conference" took place, and half of the party, led by Mr. Isaacs, met the other half, led by Mr. Goodwin, and stated a case for a reduction of working hours in the printing industry. The object of the meeting was to initiate the young men into the arts of negotiation, and after Mr. Isaacs had opened and Mr. Goodwin had replied they showed considerable ability in raising pertinent questions and rebutting their opponents' arguments.

The events of the evening included some humorous side-lights on labour conferences from Mr. Goodwin, an address from Mr. A. Langley, past president of the London Alliance, who urged that consideration should be given to the views of older men who had become craft masters by years of experience, and an expression of thanks to Mr. Potts and Mr. Michael, voiced by two members of the conference, Mr. R. R. H. Hazell and Mr. E. Wood.

Jordans was left behind early on Friday morning, when the company set off for Oxford. A wreath was placed on the grave of Mr. F. J. Hall, the late Controller of the Oxford University Press, who had made the preliminary arrangements for the visit to Oxford. After visiting Magdalen College, Dr. Cowley, the Librarian, conducted the party over the Bodleian Library. Mr. F. F. Vincent and Mr. Duncan Cross, president and secretary of the Oxford Master Printers' Association, joined the party at lunch, when opportunity was taken to present a silver cigarette box to Mr. Potts and a pipe to Mr. Michael. The Jordans conference, undoubtedly destined to become historic in the printing industry, came to a fitting conclusion with a visit to the Oxford University Press.

P.M. AND O.A. OUTING.—Despite very unfavourable weather on Saturday, the Printers' Managers and Overseers (Parent) Association successfully carried out the entire programme of their outing to High Beach, near Loughton, about 120 ladies and gentlemen taking part. Thanks to the forethought of the organisers of the outing, there was available the Grand Saloon, and this gave space for the carrying out of the sports, which were great fun, items included being a tug of war, novelty races (kicking the football, cigarette race, etc.), and even bowls. Clock golf was played out of doors. A concert and musical evening, with dancing, came after tea, the prizes being presented by Mrs. Berry, wife of the president. When the party broke up about 9.30, re-entering the motor coaches for home, doubt was expressed as to whether the outing had not been actually enhanced in enjoyment by the rain, as the participants came more closely into touch with each other indoors than would have been the case outside. At any rate, the whole event was voted a most pleasant and successful item on the social side of the Association's activities.

Representatives also in Australia, India, South Africa, Canada, Norway, Sweden, Finland, etc.

THURSDAY, SEPTEMBER 24, 1925.

A Novel Conference.

EVENTS have justified our anticipation that a noteworthy contribution would be made to the history of the printing trade when the Home Counties Master Printers' Alliance held its conference or summer school for sons of master printers and young master printers. Last week's proceedings at Old Jordans Hostel fulfilled the highest hopes of the promoters—and those at the head of the H.C.M.P.A. are not backward in aiming at big successes. The brief résumé of the conference doings which will be found on another page conveys something of the spirit of the gatherings, but one had to be present to appreciate to the full the comradely feeling that prevailed, the educative and recreative value of the conference, and the joy with which both the young men and their older mentors made the most of the opportunities provided. We are not surprised that other Alliances are thinking of following the Home Counties lead. It will undoubtedly be to the benefit of the whole printing industry if they do so.

* * *

Printers' Paper Troubles.

IF one kept a record of the physical disabilities in paper with which the poor printer claims he has to contend from time to time, the net result would be to cast a very serious reflection on the degree of efficiency that has been reached in paper manufacture. Fortunately most of the matter that would be collected would emanate from technical talks and lectures reported in the trade journals. It is almost impossible to find a new complaint against paper, though some of the inventions of ill-trained craftsmen represent praiseworthy innovations. A printer of our acquaintance laid the blame for poor workmanship on paper that was "full of glass." After a course of lectures on paper more than one lithographer has contended with acids and electricity in the bulk of his work. Our own conviction is that there is much more said than seen of these particular malefactors. Electricity in paper is a potent enough influence where fast-running rotary and news presses are concerned; but it is on rare occasions that the jobbing printer, who uses flat reams of paper and comparatively slow-running machinery, meets difficulty of a similar nature. As for acid in paper, the nearest approach to common occurrence of any such thing is in the reaction of alum from clay-coated stock on the stone used by the lithographer. Ourselves, we have not known more than an odd case or two of the existence of free acid in paper.

* * *

Physical Disabilities.

IF we were asked to name the chief and the most frequently recurring of physical disabilities in paper, we would say that they comprised the following:—

1. Absence of label specifying composition of the ream.
2. Immaturity.
3. Inaccurate slitting.

These three faults are a common association with paper of all kinds, and they cause every printer to lose money, spoil work and waste paper. Acids, iron spots, electricity, fugitiveness, wire marks, fluff, uneven substance, loose and hard coating, all these may happen in paper some time, and when they do it is an event. Defects of the kind in our classification are very nearly a custom. The printer who accepts reams of printing paper as 500's is liable to waste 3 per cent. of his purchase. The rotary printer who sets his automatic feeder to pick up in single sheets paper direct from the mill will lose hours, and then put the paper to one side. The printer backing up and cutting sheets to register who relies upon paper from the mill being truthful in its angles will raise a store of trouble for himself and everyone who operates after him. And these are the everyday troubles of the paper user.

* * *

"Buy British Goods."

AUTO-SUGGESTION is a powerful factor, and buyers can be induced, as it were unconsciously, to purchase a particular line of goods if an advertisement is constantly placed within reach of their vision. Even such general advice as "Buy British Goods" serves its purpose if sufficiently employed. It is suggested that greater use of the Post Office should be made in this direction. For groups of trades, of course, there is the collective advertising scheme. This has proved highly effective in several individual cases, including that of the printing industry. In these days of slow business, the idea might well be adopted elsewhere. A tendency is also growing up of insisting on the consumption of Empire products. Here again the suggestion has only to be reiterated often enough for the effect to be readily felt. British papermakers who so often complain of poor demand might try publicity to good purpose. To many people it never occurs that there are different makes of paper. Enlightenment is what is required and there are ample means of providing this. In this connection it is useful to note a new exhibit which has been added to the display of the Association of British Advertising Agents at Wembley. This is designed to drive home the lesson that products must be made known to the public by means of newspaper advertising, the case of certain well-known proprietary articles being quoted.

PAPER FOR SOUTH AFRICA.—His Majesty's Senior Trade Commissioner in South Africa reports that the Union Tender Board invites tenders for the supply of printing paper and boards to the Government Printer at Pretoria. Tenders must be received in Pretoria by 3 p.m. on Wednesday, October 14th, 1925. Further particulars may be obtained by firms interested in the supply of goods manufactured in the United Kingdom, upon application to the Department of Overseas Trade (room 41), 35, Old Queen street, London, S.W.1.

Young Master Printers' Conference.

Unique Gatherings at Jordans Hostel.

The experiment of holding a conference for young master printers and master printers' sons, which was made last week at the Old Jordans Hostel, Beaconsfield, Bucks, under the auspices of the Home Counties Master Printers' Alliance, was successful beyond anticipation.

Reference was made to the fact that the *British and Colonial Printer and Stationer* had considered the subject worthy of a leading article, and that one of the foremost French trade papers had recognised that history was being made; and it is also known that this conference—believed to be unique in all industry—has been watched closely by the other Alliances of the Federation of Master Printers, and that the South-Western Alliance has already given consideration to the possibility of arranging a similar gathering in their own area.

Spirit of Camaraderie.

Nearly forty young fellows, six of whom were from Alliances other than the Home Counties, arrived on Monday afternoon at the old-world farmhouse, and were welcomed by Mr. H. H. Potts, president of the Alliance. Very few of them were known to one another, but a splendid spirit of camaraderie was soon established and maintained throughout the week. The programme consisted mainly of a number of sessions when addresses were given by representative speakers and of three visits to places of trade interest. The few remaining periods were occupied in such recreations as football and tennis, and useful fireside discussions in the evenings.

On Monday evening Mr. Potts outlined the main objects of the conference, and a visitor was Mr. J. A. Stembridge, vice-president of the Federation, who gave a short address.

Printing Trade Organisation.

The first address on Tuesday morning was by Mr. P. D. Michael, secretary of the Alliance and of the conference, who with the aid of some specially prepared charts, explained the organisation of master printers in the Federation, Alliances and Associations, and of the workers in branches, groups and national unions; how national agreements were negotiated between the two sides; and how both sides found common meeting in the Joint Industrial Council.

Mr. Oscar V. Viney, vice-president of the Alliance, followed with an address on "Printing Works," in which he outlined the ideals that should be aimed at in the building and equipment of a printing factory, and touched upon questions of lighting, ventilation and space. Having dealt with the special requirements of each department, he emphasised the importance of the careful selection and the welfare of the workers.

The members of the conference entered keenly into discussions on both addresses.

In the afternoon a visit was paid to the Croxley Mills of Messrs. John Dickinson and Co., Ltd., and in the evening, at Jordans, Mr. L. B. Mackay, vice-president of the Alliance, gave a brief address and congratulated the members of the conference on having in their young days come to know their fellow printers, whereas until only a few years ago it was usually the practice for their fathers to pass their trade competitors when they met them in the street.

Costing and Salesmanship.

Mr. W. Howard Hazell, president of the Federation, addressed the morning session on Wednesday, speaking informally but informatively on "Costing and Success in Business." The Federation of Master Printers, he claimed, had been largely responsible for bringing a new word — "costing" — into the English language, although recent discoveries at Ur of the Chaldees revealed the fact that costing methods were employed four thousand years ago.

Mr. S. R. Smale, of Ashton-under-Lyne, who arrived in the company of his friend, Mr. A. Williamson, Federation costing secretary, next gave an address on "Selling the Goods." He emphasised the need for a salesman to create an atmosphere favourable to himself and stated that the psychological re-actions of the "prospect" which the salesman had to endeavour to take advantage of were, love of gain, usefulness, wisdom, pride of possession, and uncertainty as to what he did want.

In the afternoon the party journeyed to Aylesbury where they were received by Mr. Oscar V. Viney and Mr. Ralph Hazell and shown over Messrs. Hazell, Watson and Viney's factory, afterwards being entertained at tea by Mr. and Mrs. Viney. Mr. and Mrs. Williamson were both present at the Jordans Hostel in the evening, and as it was the anniversary of their wedding day, their health was drunk. Questions were then put to Mr. Smale on his address at the morning session, and Mr. Williamson told of a customer who, having had a specially designed memo. heading printed, for which he paid an unusually high price, always carried a copy of it in his pocket to show his friends, and boasted of the price he had paid.

The Trade Union Movement.

"The Trade Union Movement" was the subject of discussion on Thursday morning. Mr. A. E. Goodwin, the Federation secretary, dealt with the subject from the employers' point of view. Briefly tracing the history of trade union development, he said it was difficult to see how present-day conditions in industry could have been reached without collective bargaining. A friendly attitude had always existed between employers and the workers in the printing industry, which had helped to make the success of the Joint Industrial Council possible. In the best interests of the country it was desirable that employers' organisations and trade unions should be kept in efficient order, and that demanded the intelligent interest of the rank and file of both organisations in the questions that came before them.

The next speaker was Mr. G. A. Isaacs, general secretary of the N.S.O.P. and A., who spoke on the trade union movement from the employees' point of view, and he gave the members of the conference a most useful insight into the aims and workings of trade unions. He claimed that the main objective of trade unions to-day was not so much to obtain higher wages and shorter working hours as to become a true partner in industry. Craft pride existed to a very high degree in the printing industry, and he claimed for the employers that they compared very favourably with employers in other industries in desiring that their workers should have the full advantage of the Workmen's Compensation Act. He asked the conference to judge the trade union movement not so much by extremist utterances at the recent Trade Union Congress but by the fact that the Congress had adopted a resolution approving of the principle of voluntary agreements entered into between workers and employers being made legally enforceable. He claimed that to abolish the right to strike and lock-out would produce chaos, but the strike weapon should nevertheless be used with discrimination, and the Joint Industrial Council fulfilled an invaluable function in enabling disputing parties to gain greater understanding and knowledge of each other's points of view which frequently made a stoppage unnecessary.

At the close of the session the members of the conference proceeded to the grave of William Penn, the founder of Pennsylvania, by the old Meeting House at Jordans. Here a resolution of greeting to the sons of master printers in America was adopted, and Mr. Goodwin was asked to convey this through the U.T.A. when he visits America in October.

Goodwin v. Isaacs Debate.

In the afternoon a most interesting "labour conference" took place, and half of the party, led by Mr. Isaacs, met the other half, led by Mr. Goodwin, and stated a case for a reduction of working hours in the printing industry. The object of the meeting was to initiate the young men into the arts of negotiation, and after Mr. Isaacs had opened and Mr. Goodwin had replied they showed considerable ability in raising pertinent questions and rebutting their opponents' arguments.

The events of the evening included some humorous side-lights on labour conferences from Mr. Goodwin, an address from Mr. A. Langley, past president of the London Alliance, who urged that consideration should be given to the views of older men who had become craft masters by years of experience, and an expression of thanks to Mr. Potts and Mr. Michael, voiced by two members of the conference, Mr. R. R. H. Hazell and Mr. E. Wood.

Jordans was left behind early on Friday morning, when the company set off for Oxford. A wreath was placed on the grave of Mr. F. J. Hall, the late Controller of the Oxford University Press, who had made the preliminary arrangements for the visit to Oxford. After visiting Magdalen College, Dr. Cowley, the Librarian, conducted the party over the Bodleian Library. Mr. F. F. Vincent and Mr. Duncan Cross, president and secretary of the Oxford Master Printers' Association, joined the party at lunch, when opportunity was taken to present a silver cigarette box to Mr. Potts and a pipe to Mr. Michael. The Jordans conference, undoubtedly destined to become historic in the printing industry, came to a fitting conclusion with a visit to the Oxford University Press.

P.M. AND O.A. OUTING.—Despite very unfavourable weather on Saturday, the Printers' Managers and Overseers (Parent) Association successfully carried out the entire programme of their outing to High Beach, near Loughton, about 120 ladies and gentlemen taking part. Thanks to the forethought of the organisers of the outing, there was available the Grand Saloon, and this gave space for the carrying out of the sports, which were great fun, items included being a tug of war, novelty races (kicking the football, cigarette race, etc.), and even bowls. Clock golf was played out of doors. A concert and musical evening, with dancing, came after tea, the prizes being presented by Mrs. Berry, wife of the president. When the party broke up about 9.30, re-entering the motor coaches for home, doubt was expressed as to whether the outing had not been actually enhanced in enjoyment by the rain, as the participants came more closely into touch with each other indoors than would have been the case outside. At any rate, the whole event was voted a most pleasant and successful item on the social side of the Association's activities.

E. T. W. DENNIS AND SONS, LTD. (art publishers and printers, etc., Scarborough).—Mortgage on printing works and other buildings in Melrose-street, Scarborough, dated May 2nd, 1925, to secure £5,500. Holders: E. Jackson, Morley, Yorks; and Sir Wm. Middlebrook, Kt., Leeds. (Registered September 9th, 1925, by permission of the Court).

CASTELL BROTHERS, LTD. (manufacturing stationers, etc., London).—Mortgage and land registry charge on freehold premises Nos. 8 and 9, Red Lion street, Clerkenwell, dated September 8th, 1925, to secure £12,000. Holders: Phœnix Assurance Co., Ltd., Phœnix House, King William-street, E.C.3.

LINCOLNSHIRE GUARDIAN PRINTING AND PUBLISHING CO., LTD.—Particulars filed of £5,000 debentures authorised July 3rd, 1925, charged on the company's undertaking and property, present and future; the whole amount being now issued.

RECEIVER APPOINTED OR RELEASED

ZINCOLAC, LTD. (London).—W. D. Baxter, of 44, Tottenham-street, W.1, was appointed receiver and manager on August 28th, under powers contained in debentures dated May 12, 1925.

KAMRA PRESS STUDIOS, LTD. (Westminster).—A. G. Deacon, C.A., of 4, South-place, E.C.2. was appointed receiver and manager on September 11th, 1925, under powers contained in debenture dated October 29th, 1924.

TECHNICAL SPECIALITIES CO., LTD. (Mathematical instrument makers, stationers, etc., London).—J. A. Robertson, of 2-3, West-street, Finsbury-circus, E.C., ceased to act as receiver or manager on August 12th, 1925.

Trade Notes.

RE-GRADING.—The second meeting of the joint committee of the Federation of Master Printers and the Typographical Association inquiring into the question of re-grading met at Penryth on Tuesday.

MESSRS. WOOLGAR AND ROBERTS, the press-cutting and advertising agents, are this week removing from Red Lion-court and 169, Fleet-street, to new quarters in 1, Dorset-buildings, Salisbury-square, E.C.4.

THE Printing and Allied Trades' Charity Sports Association informs us that, owing to serious misunderstanding with their patrons and friends, they find it imperative to announce that the club known as the Printing and Allied Trades Boxing Club has absolutely no connection with the Printing and Allied Trades' Charity Sports Association. Mr. Harry Chalk is the hon. secretary of the P. and A.T.C.S.A. Boxing Section, to whom all correspondence must be addressed.

THE Association of Master Printers of East and North-East London held a successful social gathering at the Church Institute, Romford-road, Stratford, on Wednesday last, between 40 and 50 ladies and gentlemen being present. A whist drive and a good concert were the principal features of the evening's entertainment, which continued to a late hour.

NORTH LONDON M.P.A.—Despite inclement weather, the North London Master Printers' Association had a most enjoyable and instructive outing on Tuesday. At the invitation of Messrs. John Dickinson and Co., Ltd., a party of 32 ladies and gentlemen journeyed from London by charabanc and visited the firm's Home Park Mills in the morning and their Croxley Mills in the afternoon. The visitors were given a very thorough introduction to the processes of papermaking, all departments being inspected right from the power house to the handling of the finished article. There were general expressions of satisfaction at the excellent arrangements made; and after tea had been enjoyed at the invitation of Messrs. Dickinson, the thanks of the visitors were suitably expressed by Mr. W. Wilson (chairman, N.L.M.P.A.) and Mr. W. J. Mizen (hon. sec.).

THE Readers' Pensions Committee is to hold its annual dinner on behalf of the funds at the Holborn Restaurant, on Saturday, October 17th, when the chair will be occupied by Col. E. F. Lawson, D.S.O., M.C. All communications should be addressed to Mr. A. C. Sealey (hon. treasurer) at St. Bride Institute, Bride-lane, E.C.4, to whom cheques should be made payable.

A WELL-KNOWN figure in the Aberdeen printing trade has passed away in the person of Mr. Edward Tait, who died last week in his 74th year. The deceased was apprenticed with Messrs. John Avery and Co., printers, in 1865, and was afterwards in the employment of Messrs. Cornwall and Sons, Messrs. Lewis Smith and Sons, and the Rosemount Press.

MR. B. F. COCKRAM, a prominent employee of the *Evening Post*, Jersey, has passed away with painful suddenness.

MR. JOHN WILLIAM LOGAN, of East Langton, Market Harborough, former M.P. for South Leicestershire, who died on May 25th, aged 79, left estate of the gross value of £167,159, with net personalty £151,025. Among his many bequests, the testator left the option of the purchase at par of the whole of his holding in the Racing Pigeon Publishing Co., Ltd., to Alfred Henry Osman, journalist, of Doughty-street, W.C.

MR. THOMAS BRADY MERRITT, Greenwich, and of Inverness-terrace, W., printer and publisher, managing director of Messrs. Merritt and Hatcher, Ltd., proprietors of the *Kentish Mercury*, left £15,119 (net personalty £14,746).

A BRONZE memorial tablet to Sir Algernon Methuen, founder of the well known publishing firm, was unveiled privately at the firm's premises on Tuesday.

THE L.C.C. Central School of Arts and Crafts opens its new session on Monday next. A comprehensive course of compositors' work is a strong feature, and we learn that in the section for machine work—which covers three-colour, half-tone, line process and letterpress printing; the methods of preparing packing and overlays; and the details of machine management and method of work—a new Miehle two-revolution machine has been added to the equipment.

The Provinces.

Portsmouth.

The Portsmouth District Committee of the Joint Industrial Council has arranged with the Borough of Portsmouth Higher Education Committee, in conjunction with the Board of Education, Whitehall, and the City and Guilds of London Institute, to resume organised courses in Typography at the Municipal School of Art. The courses are for senior and junior apprentices, the latter taking their practical lessons on two afternoons of the week, and seniors two evenings; whilst other evening classes are being provided for subsidiary subjects. The first class was held on Monday, September 14th. An able typographical instructor has been found in Mr. M. W. Millican. The principal of the Municipal School of Art has promised to give a series of lectures and is also making arrangements with the head of the Arts Department of the College with regard to artistic training.

Birkenhead.

Councillor Robert Pilling Fletcher, of Birkenhead, who has been invited, and who has accepted the invitation, to be the Mayor of that borough for the next municipal year, is the third son of the late Alderman Lambert Fletcher, who is the founder and head of the old-established firm of Messrs. Fletcher and Speight, printers and publishers, Bury, Lancashire, and who died September 19th, 1921, aged 86 years. Alderman Fletcher was Mayor of Bury from 1905 to 1907, and his son, Councillor Thomas Pilling Fletcher, is the present Mayor of Blackpool. Thus when Councillor Robert P. Fletcher is elected Mayor of Birkenhead, he will be the third member of one family—a printer and his two sons—to have held a Mayoralty.

Bristol.

Drawing attention to the principal industries of Bristol, the *Financial Times* points out that the printing trade is a large employer of labour. The largest factories are those of Messrs. Mardon, Son and Hall, Ltd.; the firm is associated with the Imperial Tobacco Co., whose colour and other printing is of an extensive kind. The firm had previously done much of the printing for the local tobacco firms, and had established a sound and extensive business, but it has since developed enormously, and is one of the largest, if not the largest, printing businesses in the kingdom, employing over 4,000 hands. Another large printing concern is that of E. S. and A. Robinson, Ltd., which has several factories. There are several other printing businesses, making collectively a substantial addition to employment.

Manchester.

The Manchester Associated News Guild (sec., W. E. Timms) have issued an invitation to over 250 North Country printers' readers to attend a meeting at Caxton Hall to discuss their position in relation to the T.A. and the wages question.

Leeds.

The annual supper and entertainment of the staff of the *Yorkshire Evening News* was held at the Griffin Hotel, Leeds. About 150 employees of the company attended, and the guests included several members of the board of directors.

Colchester.

Printing classes at the Colchester Technical College are doing excellent work. At a meeting last week of an advisory committee in connection with these classes it was decided to appeal to the local Master Printers' Association and the Typographical Association to formulate an agreement that in all cases of apprenticeship preference should be given to lads who have been trained at the Junior Trade School of the Technical College.

Tiptree, Essex.

Mr. W. Staines has been presented with a handsome oak 14-day striking clock from the employees of the Anchor Press, Tiptree, Essex, and a cheque from the firm on leaving to take over the business of Mr. Belsham in Station-road, Tiptree. Mr. J. D. Beaven, manager, made the presentation and wished Mr. Staines success in his new venture.

Worcester.

The death occurred at 3, Lark hill, Worcester, last week, of Mr. George Augustus Theodore Littlebury, at the age of 57. He was a partner in the firm of Littlebury and Co., the Worcester Press, Worcester, and a partner in Littlebury Brothers, printers and publishers, Liverpool. He was managing director of the Bristol Printing and Publishing Co., Ltd., Bristol, and also of Russell and Co. (Southern Counties), Ltd., printers and publishers, Southampton.

Yeovil.

Long Service Presentations at Yeovil.—Mr. George Johns, news composing-room (60 years' service), Mr. W. Boad, general printing department (50 years' service), and Mr. J. Hann, formerly chief of the printing department (40 years' service), of the staff of the *Western Gazette* at Yeovil, have been presented with clocks by the proprietors on the occasion of their retirement.

Plymouth.

The employees of Messrs. William Brendon and Sons, Ltd., Plymouth, revived their annual wayzgoose, holding it at Newquay, to which the party proceeded in a special train. Sports were brought off on the beach in the afternoon, and the prizes were distributed by the wife of the managing director, Mr. Charles E. Brendon, at the high tea which took place in the Victoria Hall.

South Wales.

The autumn golf meeting of the South Wales Master Printers Alliance is to be held on Tuesday, September 29th, on the links of the Royal Porthcawl Golf Club. The programme includes handicaps in the morning for seniors and juniors, and a handicap for ladies, each under "medal play," and in the afternoon there is to be a mixed foursomes. New cups are being presented for each of these competitions, and special souvenir programmes will be issued to all competitors and visitors.

Newport, Mon.

Last week, Messrs. Lovell and Co., of Newport, Mon., manufacturing confectioners, were prosecuted by a Home Office Inspector for failing to have machinery securely fenced. It was said that the offence came under Section 136 of the Factory Act and concerned a printing machine. This machine had "jaws like a crocodile between which paper was placed to be printed." With this machine was a guard, but on this occasion it had been left off, and recently a boy who worked this machine had his hand caught between the jaws. Fortunately he had the presence of mind to switch off the machine with his other hand. Defendants pleaded guilty, saying that they did not know the guard had been taken off. There were three printing machines on their premises, all under the care of a qualified printer, and this employee said he found he could work the machine more easily by taking off the guard. Messrs. Lovells' were fined £10.

Cardiff.

Action is being taken by the Cardiff Joint Industrial Council of the Printing and Allied Trades to encourage Cardiff buyers of printing to place their orders with Cardiff printers. Over the signatures of the joint secretaries of the local J.I.C. there has been published in the Cardiff newspapers an appeal which states: "The yearly wage bill of the printing trade of Cardiff is over £250,000. The wage-earners spend their money in Cardiff, and we ask the cinema proprietors and Cardiff tradesmen to reciprocate and support Cardiff industries by getting their printing done in their own city."

From the London Gazette.

PARTNERSHIPS DISSOLVED.

W. W. Ball, W. F. Walsby, E. S. Wilde and F. W. Good, engravers, die-sinkers and designers, 23, Gloucester-street, London, E.C.1, under the style of the Larence Engraving Co.

W. Brassfield and F. W. H. Green, printers and publishers, at the Albion Press, Tunnel-road, Tunbridge Wells, Kent, under the style of Brassfield and Co.

Printers' Managers and Overseers' ASSOCIATION.

MANCHESTER AND DISTRICT CENTRE.

"Make your own enjoyment" appeared to be the edict of the Weather Clerk, on Saturday last, at the Bull's Head Hotel, Hale Barnes, where the bowling handicap of members and friends was fixed to take place. The green on September 19th was in a state of flood as a result of the incessant downpour. As no bowling was possible, the wise men of the Centre, who are empowered to organise events, decided to hold a whist drive until tea time, and after the appetising meal, to hold an impromptu concert and distribute the prizes. In the whist competition, when Mrs. Geo. H. Rider and Mrs. Harry Walton scored 59 each, Mr. Harold Nuttall, M.C, requested them to cut their luck, and Mrs. Walton secured a silver-plated cake stand. Mr. Arthur Gavin, with a score of 59, became the possessor of a solid brass flower vase. The other prizes distributed after tea fell to Mrs. Chas N. Knowles (salad bowl), Mrs. A. E. Cox (lady's leather handbag), Mrs. H. T. Griffiths (timepiece), Mr. Jas. E. Mayo (attache case), Mr. J. W. Philbin (timepiece), Mrs. Helen Kirkwood, Mr. A. E. Cox, Mr. Tom Beach, Mr. Harold Nuttall, a boot and shoe outfit each. Other ladies and gentlemen who formed the happy gathering were president and Mrs. Frank Scouler, vice-president and Mrs. A. Hellewell, Mr. Ernest Garrett (officiating officer), Mr. and Mrs. J. Ball, Mr. and Mrs. E. C. Balls, Mr. Wm. Bardsley, Mrs. A. Gavin. Mrs. Chas. Goat, Mr. H. T. Griffiths, Mr. and Mrs. R. W. Hughes, Mr. J. H. Nuttall, Miss Parsley, Mr. Geo. H. Rider, Miss Sage, Mr. W. Smith, Mrs. Fred E. Robinson, Mrs. Alfred Young, and Mr. F. J. Hughes (secretary). Eventually the private motor coach drew up at the hotel entrance, the party seated themselves comfortably inside, and before the hour of eleven all had returned home, having enjoyed themselves and feeling ready to meet again under similar or more sunny conditions.

WEE MAC.

Printers' Rifle League.

Results of Summer Competitions.

The following are the results of the summer competitions of the Printers' Rifle League:—

First Division—Paper Workers' Challenge Cup.

1. W. H. Smith and Son A Team
2. John Dickinson
3. Bradbank
4. Amalgamated Press
5. F. Steel and Co.
6. W. H. Smith and Son B Team

Second Division—Chas. Roud Challenge Cup.

1. Britannia
2. John Dickinson B Team
3. Post Office Savings Bank (Printing Branch)
4. John Dickinson C Team
5. Bradbank B Team
6. W. H. Smith and Son C Team
7. Amalgamated Press B Team
8. F. Steel and Co. B Team.

The trophies and medals won during the past year will be presented at the Printers' Rifle League concert on Saturday, November 7th, at the New Falcon Hotel, Gough-square. The chair will be taken at 7 p.m. by Mr. C. W. Kimpton (W. H. Smith and Son).

THE death has occurred at Manchester, after a very brief illness, of Mr. D. A. Muir, a well-known journalist, for several years resident in Newcastle-on-Tyne as the local representative of the *Co Operative News* and associated publications.

A COLOSSAL A.B.C. of Trade Marks—the first of its kind to be compiled in this country—has just been completed by the skeleton staff of the Monomark Co. Although purely pictorial designs have been ignored, and the matter restricted to combinations of letters and numerals, more than 120,000 registrations have been recorded.

Trade Union Matters.

THE secretary of the Cambridge branch of the Typographical Association has asked the Executive Council if a boy could be allowed to be taken on as an apprentice at a tuberculosis colony in that branch where the patients (who are members of the Typographical Association) executed printing work under trade union conditions. The Council, after consideration of the points at issue, have intimated that they cannot agree to the boy being apprenticed.

PROPAGANDA AT NEWCASTLE.—The secretary of the Newcastle branch of the Typographical Association has reported to the Executive Council that he had accompanied Mr. T. Roberts on visits to several printing firms in the branch and surrounding district. He gave details of the organising work that had been accomplished, and expressed confidence that the visit of Mr. Roberts would have beneficial results.

T A. AND "DILUTEES."—The members of the companionship of the *Newcastle Daily Chronicle* and the *Evening Chronicle* have forwarded a strong protest, to be sent through the branch to the Executive Council condemning the action of the Council in admitting dilutees at Hastings and other areas as members of the Association. The protest states these men, who formerly worked at Newcastle, served only two and a-half years as linotype operators, and that it is a gross infringement of the apprentice rule and most unfair to lads who are struggling through their seven years before admission to full membership.

Trade Fair Train.

Fuller details are now available of the London Midland and Scottish travelling exhibition train which is to undertake a year's tour of 77 towns to promote the sale of British goods. It is stated at Euston that the train will probably be ready to start on its expedition in about a month.

Three 50-foot brake vans are now being specially converted at the L.M.S. Carriage and Wagon Works at Wolverton. They are being painted in a red, white and blue design, and will be fitted with elaborate electric light installations, electric fans and louvres for ventilation. Later they will go to Willesden for the internal fittings required by the various exhibitors.

This argosy on wheels will probably start from St. Pancras, work through the Midlands as far North as Dumfries and Stranraer, and return in about a year's time to Euston. Very big towns like Manchester and Liverpool will be avoided, so as not to impede the ordinary traffic, and particular attention will be paid to country districts, where special train services will be run by the L.M.S. railway from the surrounding districts to the chosen centres. Admission to the train will everywhere be free, and its arrival in each district will be made a gala occasion.

RUSH WORK WITHOUT SET-OFF.—A most interesting appliance shown at the recent printing Exhibition was the electric drying apparatus for drying printed work exhibited by Messrs. Hudson and Stracey, Ltd. Designed by a practical printer for printers, it would seem to have fully justified the claims made by the inventor, inasmuch as many firms have given repeat orders, and in some cases have ordered two or more complete sets at once. The apparatus is suitable for all classes of platen machines, Vertica! Miehle and Kelly type presses, and all styles of cylinder machines with printed-side-up delivery. It can be used for rotary, gumming and varnishing machines. The units are easily adjustable and can be controlled either singly or as a whole set, or further radiators can be added as required; the whole equipment can be easily elevated out of the way when not in use. Every printer knows the worry and trouble of rush work, especially when it has to be folded directly after printing and when the job consists of half-tone or solid blocks. The Watford Drying Apparatus, designed to meet this difficulty, can be supplied on one month's trial to *bona fide* members of the M.P.A. by arrangement. Further particulars can be had from Messrs. Hudson and Stracey, Ltd., Charles street, Watford, Herts.

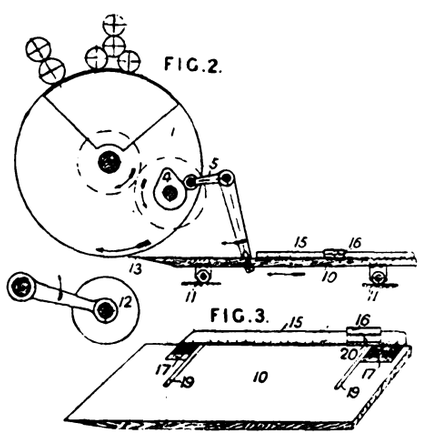
New Inventions

Grinding Metal Printing Plates.



A machine for brushing and grinding metal printing-plates, as patented by Mr. W. Ohle, comprises three frames a, b, c, hinged together on vertical axes, the frame

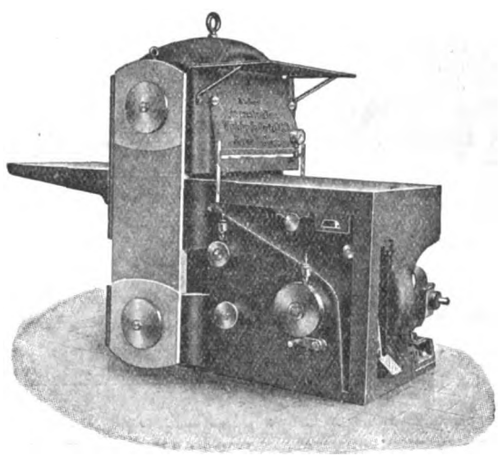
a being hinged to a bracket d, and the frame c carrying a shaft i movable up and down by a lever l and carrying at its lower end a socket k to receive a brush m or a grinding or polishing tool. The shaft i is driven by means of belts and pulleys.

Sheet Registering Devices.

In this invention a sheet 13 is placed on a table 10 with its edge slightly overlapping the end of the table. The table is mounted on rollers 11 and is reciprocated to feed the sheet into the bite of printing and impression rollers 1 and 12 by means of a bell-crank 5 connected to the table and actuated by a cam 4. The sheet is laid against a

side gauge 15 adjustably fixed by bolts passing through slots 19 in the table. To facilitate correct positioning of the sheet, the gauge 15 is graduated and a cursor 16 bearing a datum line 20 is mounted thereon. Graduations 17 are also provided on the table. The invention is in the name of the Schwarzpresse Akt. Ges.

Treating Paper with Rubber Latex.



According to an invention by Mr. S. G. S. Dicker (Rubber Latex Research Corporation, U.S.A.), paper, pulp board, and pulp articles are treated with a solution of latex stabilised in known manner as by the use of ammonia or other alkali and then dried in such manner as to solidify the latex solids into a dried irreversible gel. A caoutchouc product is formed which is structureless and practically homogeneous, quite distinct from tough and short coagulation rubber.

Unsized or slightly sized paper from the rolls of the paper machine is passed through a bath of diluted latex, the excess is preferably removed by squeezing rolls and the paper dried by hot rolls. If thick paper is used, drying under vacuum or reduced pressure is desirable, in which case too early extraction of the ammonia, and the resultant acidity and coagulation of the latex must be avoided.

A surface impregnation or a graded impregnation may be obtained on one or both sides by using paper more or less moist. Duplex wrapping paper may be produced by using a latex gel bond for two sheets. Where a clinging film of latex is left on the paper, the film, whilst tacky, may be used to secure a facing of finely divided material such as china clay, soapstone, talc, "agalmatolite," &c. The tackiness may be produced by a slight raising of the temperature of the paper. The void spaces left in the treated paper may be reduced either by repeated impregnation or by hot pressing to cause the rubber film to bond.

Latex may be used with most alkaline sizing materials and also with some of a neutral character. A vulcanised product may be obtained by incorporating colloid sulphur with the latex mixture, or, better, by using ammonium sulphide or polysulphide as the stabilising agent. Paper treated as above may be subsequently frictioned with rubber in the production of paper-covered fabrics. To facilitate impregnation, the paper may be moistened with either water, alcohol, ether or other volatile liquids. Rubber produced in paper according to this process contains somewhat more proteid or nitrogenous matter than ordinary rubber.

Winkler AUTOMATIC MOULDING & DRYING PRESS

With Electric or Steam Heating Temperature Control, Pressure Release, Suction Device.

"Winkler"

The Standard of the World.

DESIGNED primarily to replace pneumatically or hand operated stereo hot presses and matrix rolling machines where conditions demand a more rapid production of matrices than is possible by these systems, the Winkler Press also produces a greatly improved quality of matrix, viz., deeper, sharper, and firmer than is possible by the slower processes.

A perfect mould should get right down into the cup of the letter and into the fine grain of the half-tone, and retain dead sharpness of face and shape of dot with continued casting.

This result can be consistently obtained with the Winkler Press.

You will hear comparisons with the Winkler—indeed, its inherent capacities are such that comparison with Winkler performance must be the rule; but the engineering features which make possible these capacities are protected by patent and therefore exclusive.

It is impossible to escape the facts - advanced engineering has produced in the Winkler Moulding Press a new Standard of the World. By standing up to severest service the Winkler is living up to a reputation—a reputation earned by all products of the Winkler Company.

Electrotypers and Stereotypers' MANAGERS & OVERSEERS' ASSOCIATION

The monthly meetings of the above Association were resumed on Tuesday of last week at St. Bride Institute, Bride lane, E.C.4, the chair being occupied by Mr. A. Chadwell (president) Though the business before the meeting was not very important or extensive, the attendance of members was well maintained.

Following the reading of the June minutes, which were formally carried, several items of correspondence were dealt with. Amongst these was an invitation to any of the members to attend the 21st celebration dinner and dance of the Bookbinders' Overseers Association on Saturday next.

In reference to their own particular branch of the industry, Mr. Chadwell appealed to the members to support the Stereotypers' Auxiliary concert to be held at Anderton's Hotel on Monday, October 5th. This concert, he stated, was a specially important event, as it marked the 21st year since the inauguration of the Auxiliary. Another reason why they should give it support was because of the fact that Mr. W. H. Crosby (one of their own respected members) and Mr. F. E. Shillam were taking the chair. These two gentlemen had been joint secretaries since the inception of the Auxiliary, and their efforts during all these years deserved the utmost appreciation from the trade.

On the proposition of Mr. W. M. Forsyth, seconded by Mr. H. Filkins, a sum of five guineas was granted from the Association's funds to the concert plate.

Mr. Crosby briefly returned thanks for the generous contribution.

Mr. Chadwell then announced that the 21st birthday of the Auxiliary was to be further celebrated by a dinner and ladies' night at the London Tavern, Fenchurch-street, on October 17th. Out of respect to Mr. G. W. Sharvell, who has been the Auxiliary treasurer since its inception, he hoped the members would endeavour to be present at the dinner.

With regard to the annual dinner of the Association on November 14th, Mr. Forsyth stated that the arrangements were well in hand.

Mr. J. S. Sunderland (stereotyping and electrotyping instructor at the London School of Printing), then directed the members' attention to the opening of the new session, and in doing so asked the members to do all in their power to encourage their apprentices to attend regularly their technical classes. Mr. Sunderland went on to mention that the examiners at the end of last season's work expressed the opinion that the students did not appear to have had much attention paid to corrections and the insertion of accents. He agreed that the criticism made was fully justified, but he could assure them more attention would be given to this aspect of the work of the students in the future.

Mr. Chadwell (one of the adjudicators of the students' work) spoke of the general improvement in the quality of the work done by the students under Mr. Sunderland last year compared with the year before.

The remainder of the evening was devoted to a somewhat free and desultory—but none the less useful—discussion on the effect new printing processes might have on the future of stereotyping and electrotyping. Amongst the processes mentioned were photogravure, photo litho offset and photo typesetting. Although most of the speakers agreed that some of these processes were making wonderful strides, it was the general opinion that their application would principally be for special kinds of printing, and also that it would be a long time, if ever, before stereotyping and electrotyping would be seriously affected.

Whilst it was pointed out that offset printing had in several instances meant the displacement of labour in the foundry, instances were given of firms being dissatisfied with their offset printed catalogues, reverting to letterpress productions.

Before bringing the meeting to a close the chairman announced that Mr. Glen Steel (Jubbs) was to give a lecture at the October meeting, and that Mr. A. H. Mundey (Fry's) would address them in November. He earnestly appealed to the members for a large attendance on both these occasions.

The meeting was then brought to a close.

British Industries Fair Revived.

All British Goods Campaign.

The British Industries Fair is to be revived next year, and will be held in London and Birmingham from February 15th to 26th.

With a view to assisting British trade, the Government have decided to grant the sum of £20,000, to be expended in assisting the Fair. This assistance will enable the Department of Overseas Trade to advertise the Fair more extensively, both at home and overseas, and will reduce the cost of space to exhibitors to 2s. 6d. per square foot, instead of 3s., as in 1924, owing to the fact that 6d. per foot was added to exhibitors' costs for advertising purposes.

The success of these Fairs depends entirely on the number of the exhibitors, and every effort is being put forward to induce manufacturers in all the trades included in the British Industries Fair to take part in greater numbers.

The projected help of the Government should make it possible to build up a Fair for British goods equal to the great continental fairs, but it must not be forgotten that many years of steady work, under normal and prosperous conditions, have put these continental fairs in the position they now enjoy.

Good results should be expected from overseas as the result of the publicity given to British goods in the Empire Exhibition and other recent efforts, together with the gradual return to normal conditions.

The fact that only goods of British manufacture are allowed to be shown makes the Fair of much more value than ordinary trade exhibitions, and the cost is less.

The catalogue published by the Department, which contains a note of each exhibitor's productions without extra cost, is circulated to all important buyers throughout the world, either directly or through the British consuls and other agencies, and is in itself a good medium for advertising "All British Goods."

The interest that home trade buyers take in the Fair also makes it of importance to those manufacturers who are chiefly engaged in the home market.

Indian Duty on Paper.

A *Times* message from Simla states that the Legislative Assembly has passed a Bill substituting a specific duty of one anna (1d) per lb. on certain kinds of paper for the *ad valorem* duty of 15 per cent, in accordance with the recommendation of the Tariff Board. The debate has occupied nearly two days, and several members have condemned the protective policy of the Government

MR. JAMES CRONE, for many years joiner at the Culter Paper Mills, has passed away at the age of 70 years.

New British Patents.

For the benefit of our readers we have arranged for any inquiries relating to Patents, Designs and Trade Marks to be answered, free of all charge, by a Fellow of the Chartered Institute of Patent Agents. Inquiries should be addressed, in the first instance, to the Editor.

PROGRESS SERIES: No. 3.

The Earth is one of the smallest of a thousand million worlds travelling at a terrific speed around the Sun. The Earth goes round the Sun once a year (1,000 miles a minute), but Neptune, the planet farthest removed from the Sun, makes its circuit only six times in 1,000 years.

WE are told that one thousand million years ago the world in which we live was a ball of flaming fire hurtling through space. It is left to the caprices of our imagination to say what happened to this belching furnace of lava until life came.

We do know, however, that since the beginning of time every living organism has contributed something to the progress of life. In the world we know to-day—in commerce, in our own little world of printing—every unit contributes to the harmonious working of the whole.

The House of Winstone have played no small part in the world of printing. They have worked faithfully in the interests of their craft, producing better printing Inks, Rollers, Sundries, and time-labour-and-cost-saving specialities during their four-score years of life.

Present Tendencies in Book Printing.

Reviewed by Mr. William A. Kittridge, Director of Design and Typography, R. R. Donnelley and Sons, Chicago.

Ideas of suggestive value, and interesting comparisons between the methods of this country and the United States, will be found in the following article which we quote from the New York "Publishers' Weekly."

It is a hopeful sign that even the conservative and successfully entrenched older publishing houses are showing evidences of a typographic and design consciousness in the production of their recent books. Forced into animation through the popularity of the more brilliant publications of the "younger set" of publishers, they show a *naiveté* in the use of Batik covers and type flowers that is always entertaining. Thus to leaven the lump of their general publishing along the traditional line!

The Jazz Spirit.

At a time in which one of the most original art expressions is that of jazz music, could book design remain fixed at any cold and colourless standard? Mr. Knopf is credited with stirring things up and the making of jolly, gay books, invitingly fresh in paper, typography, jackets and bindings. And before his time Way and Williams, Copeland and Day, Stone and Kimball, R H. Russell and others made books of varied design, sound typography, well printed and bound.

Bruce Rogers and D. B. Updike always were classic and treasured specimens. We thank God for them and hope they may long continue to set such glorious standards and examples.

Yes, the present tendencies of design in the typography of books are decidedly hopeful. An immense improvement is to be noted in the publications of this year over those of last. A very good barometer of this is the Exhibition of the American Institute of Graphic Arts entitled "Fifty Books of 1925." Comprising, for the most part, trade editions of current publications, the quality of style and craftsmanship shown in the books this year exhibited greatly exceeds that of former years.

The fact that a three dollar book, "Anchors of Tradition" from the Yale University Press, won the prize for greatest excellence, is significant in proving that limitations of time, expense and materials do not prevent fine accomplishment in the art of book production. Throughout the publications of the University presses at Harvard, Yale, Princeton and Chicago is to be observed a conscious and usually successful effort at the making of good books enconomically—books appropriate and lasting.

English Influence.

Some of the impetus towards finer things has unquestionably come from a pressure without the country. The presses of England and France have been exceedingly busy since the war in turning out beautiful works. Books illustrated in black and white, and colours; wood-engraved books; books on exotic and hand-made papers; special editions of classic works; all have found ready and eager purchasers over here.

The investment in imported books might prove astonishing. At any rate, the flood has been increasing and to an extent, because we have had little of a similar nature to offer—too few æsthetic expressions of the work of great artists in book form. An occasional "Wilderness" or "Voyaging" by a Rockwell Kent; an "Iron Men and Wooden Ships" or a "Full and By" by a Wilson—quickly bought by an admiring public.

The private presses of England are turning out large works at large prices and books at forty to one hundred dollars seem to have a ready sale. Stanley Morison's "Four Centuries of Fine Printing" and "Modern Fine Printing" at about seventy-five dollars each were quickly out of print. A three-volume Blake at forty dollars, not to mention too numerous others, causes one to wonder at the lack of an American source of supply for this quite apparent demand. Splendid material exists and awaits a publisher of æsthetic appreciation and discriminating taste. Edward Penfield, recognised abroad as one of our greatest artists, long ago completed a set of coach and carriage drawings, the most authentic study of the subject ever attempted. They have never been published. Guernsey Moore's work in Philadelphia deserves a book and would long ago have had one abroad—Jules Guerin—Maxfield Parrish—George Bellows—Arthur I. Keller. Who will publish them for a long standing audience?

Improving Book Design.

In spite of this lament, introduced here as an interlude and shadow against the higher lights of this article, the prospect for continually improved book design is splendid. When we find a publisher interesting himself in better paper and the manufacture of special papers at a good mill watermarked alone for the works of one author, then we know something is brewing. A book designer interests another mill in bringing out a one hundred per cent. rag book paper in order that his books can endure. The owner of one paper mill turns from the making of commercial bond paper to the making of superior fine book papers as near as possible in colour, strength and texture rivalling hand made models. Materials will not be lacking for the ambitious bookmaker.

A pressure from the publisher on his printer, in turn passed on to the manufacturer of composing machines, results in some admirable types for the composition of books Bodoni, Garamont, Italian Old Style, Poliphilus, authentic Caslons and Baskervilles await the typographer now. The breed of types is improving so that it is even becoming fashionable for the publisher to make a statement of the race horse type he is employing in his book as well as the pedigree of paper and place of production. In one recent instance a publisher's enthusiasm persuaded him to devote a whole page at the end of his book to "A Note on the Type in Which This Book is Set."

Type-Consciousness.

Quite obviously an improvement of taste will come to people type-conscious and the work of this publisher deserves approval. Bad books and trashy printing have cluttered too many book store tables. Only moron intelligences should tolerate them. They insult and offend thoughtful people.

The infrequent publications of the private presses bring much of life and hope to the scene. Directed usually by ardent amateurs with feeling and sentiment for their work, they bring out books of original and interesting formats. Such books as come from Rudge; George Santayana's "Lucifer" published by the Dunster House Bookshop and printed at the Southworth Press, Portland, Maine; the books of Robert Ballou, Will Ransom, The Fleuron Press, Pascal Covici, Aventuros, and the Dial Press all have an originality and virility, however much we may not agree about their design.

Book Jackets.

The riot of colour in book jackets shows no let-up. The Chicago University Press issues a "Manual of Style" in a tangerine orange wrapper! "Segelfors Town" by Knut Hamsun and "Sea Horses" by Francis Brett Young both sport poster pictorial jackets of no mean quality. The book jacket to-day is the bobbed hair, rolled hose and short skirt expression of the publishing venture.

Sometimes a stunning jacket wraps a dull book and at other times a splendid book comes in a plain manilla or tissue wrapper. Too often the book jacket design bears no relation to the *tout ensemble* while it is a favourite contention of the writer that it should very definitely do so. How often have we hurried up to a counter and picked up a

Why it PAYS to set Display Work on the LINOTYPE

When the Linotype first supplanted a number of men for the composition of solid matter, it was immediately found to be the most economical means of producing set type. *Yet the case hands had not to move away from their single pair of type cases.*

The composition of display work at case, particularly large display, necessitates a deal of walking about from case rack to case rack—once for the setting and again for distribution.

But the All-Display Linotype here illustrated reduces large display work to the level of solid type matter, because—

The machine compositor has all the display faces he requires immediately at hand.

He sets all the lines of type he requires up to 36-point straight from the keyboard, just as he would set a "take" of solid 6-point.

There is no limit to the amount of display type he can set.

There are no "non-productive" hours—no "picking," no "turning," no heavy and frequent bills for new type.

And type distribution is entirely eliminated.

Is it not at least worth your while to think it over and send us your enquiries?

book prettily encased to be dashed by the drab insides.

One of the most fortunate book-jacket enterprises has been that of the Michael Arlen books. Black and gold and silver and black wrappers, exactly suited to the idea and contents of these popular volumes, give them an individual, distinguished, snobbish appearance in any window or shop. They look so rich as to be received by any one as a compliment.

A very critical taste for fine books will be rewarded by a few volumes. "Joseph Conrad: The Man" designed by Bruce Rogers and published by William Edwin Rudge is such a one; Updike's "In The Day's Work"; the new Aventuros Cassanova in twelve volumes with illustrations by Rockwell Kent; "Chinese Painting" printed by Updike, these are some outstanding.

Craftsmanship in book production is encouraged and stimulated by journals and reviews concerning themselves with printing. The *Printing Art* was once an influence and we are now to welcome the revival of two others in quarterly form—*Ars Typographica* under the editorship of Douglas McMurtrie in New York and the *Graphic Arts* published by Henry Lewis Johnson Boston. The *American Printer* under the editorship of Oswald and Gress has always been a good influence, and many who now direct the destinies of American presses have been helped by its example and counsel.

Altogether the prospect for increasingly better book production seems assured. Decent type, permanent paper, suitable illustration, combined with skill and care, bring the publisher confidence and good will from the public he serves.

Mr. James Thomson Edwards, papermaker, late of Chirnside, Strathendry and Culter Paper Mills, died on 4th inst. at 65, Victoria terrace, Haydon Bridge.

The steamship "Corner Brook," the vessel built by Sir W. G. Armstrong, Whitworth and Co., Ltd., to the order of the Newfoundland Power and Paper Utilities Corporation, Ltd., for the carriage of paper in bulk, completed her official full-speed trials last week.

Government Contracts.

Contracts were placed with the following firms during August :—

H.M. Stationery Office.

"When the future of British industry is considered, the potential value of the overseas Commonwealth becomes of transcending importance, and the most vital policy for any British Government to pursue is one of Empire development." This is the conclusion of Mr. F. L. McDougall, in his book on "Sheltered Markets," a study of the value of Empire Trade.

Good Inks mean Better Production

LETTERPRESS
TRICHROME
PHOTOGRAVURE
LITHO
OFFSET-LITHO
Etc., Etc.

MAXIMUM Production—the secret of running machine-rooms **profitably**—depends largely on the use of inks that will enable the presses to run at their highest possible speeds without sacrificing the quality of the product.

L & B Inks are made to **help** production.

No matter how difficult the subject, they will print it cleanly, easily and with full density of colour **at the maximum speed.**

EVERY PRINTER HANDLING LITHO AND OFFSET WORK SHOULD USE

TYPON

PAPER NEGATIVES

TYPON gives perfect results from any black-white original, whether printed on one or both sides, or maps, plans, line drawings, etc. The blacks are of uniform density, the whites sharp and clear cut. Streaks, pinholes, or any of the usual troubles are absent.

TYPON negatives are indestructible; they can be used again and again, and are filed like correspondence in a fraction of the space required for glass plates.

TYPON requires no oiling, or special treatment in developing; highly skilled labour is therefore not required.

TYPON adds to the resources of the Printer engaged on Litho, Offset and Planographic work, Photogravure and Rotogravure and reduces his working costs.

TYPON processes are much quicker than wet plate methods, and more than 50 per cent. cheaper. There is no heavy initial outlay — no special and expensive plant to purchase.

TYPON eliminates re-setting, electrotypes, make-ready, and the use of glass—think of the saving by cutting out breakage losses alone! There is no silver bath needed.

TYPON material can be obtained as required, in sheets or rolls. The cost works out at about sixpence a sq. foot, and there are no licence fees or royalties.

TYPON Paper is used in any contact printing frame for exact size work; or in the camera for enlarged or reduced reproductions.

The Typon Catalogue, fully illustrating and describing the process, will be sent on request.

Trade Notes.

Owing to the growth of Monotype business in Scotland the Lanston Monotype Corporation Limited has opened a branch office at 55, West Regent-street, Glasgow, C.2. We feel certain this will be much appreciated by Scottish Monotype users, amongst whom are some of the most important printers in Great Britain. Spare parts and general accessories will be kept in stock, and Mr. T. Wilson will be in charge.

George Newnes, Ltd.—An extraordinary general meeting of George Newnes, Ltd., was held last week at 8-11, Southampton-street, Strand, W.C., to consider a resolution altering the articles of association preparatory to the adoption of resolutions at a later meeting convened to increase the capital of the company from £700,000 to £800,000 by the creation of 200,000 new ordinary shares of 10s. each, to be allotted to existing shareholders as fully paid in the proportion of one for every two existing ordinary shares. The Right Hon. the Lord Riddell, who presided, moved the resolution for the alteration of the articles of association as set out in the notice convening the meeting, and this was eventually carried.

Printers' Pension Festinal.—As president of the London Master Printers' Association, Mr. Maurice Clowes (of Messrs. Wm. Clowes and Son, Ltd.), has consented to act as a steward at the festival dinner of the Printers' Pension Corporation, to be held at the Connaught Rooms on November 17th. It is hoped that to this appeal, as to previous similar appeals, members of the L.M.P.A. will respond generously in support of the good work the Corporation is doing on behalf of deserving members of the printing and allied trades.

Imported Wrapping Papers, etc.—Members of the London Master Printers' Association are having their attention drawn to the fact that under the Safeguarding of Industries Act a committee has been appointed at the request of the British makers of wrapping papers to consider whether it is advisable for restrictions, such as protective duties, to be placed on the import of wrapping papers, which in this case will probably be extended to include not only browns and kratts, but duplexes, pressings, cartridges, manillas, and even papers used as covers for books, pamphlets, etc. Inquiry is being made as to the extent to which members' businesses would be affected by such restrictions.

At a meeting in London on Monday of the executive of the Home Counties Master Printers' Alliance, Mr. A. J. H. Penny (Southampton) expressed to the executive the thanks of those who participated in the Alliance's recent conference of young master printers—the conference having, by resolution, requested Mr. Penny to carry out this duty. On behalf of the participants Mr. Penny also presented the executive and Mr. H. H. Potts (president) with a copy each of an enlargement of a group photograph taken at Jordans Hostel.

At the Guildhall Police Court, George Armitage, 58, printer's assistant, was remanded on the charge of stealing 15 ingots of type-metal, value 8s., the property of the proprietors of the *Daily Telegraph*, Fleet-street.

The Governor-General of Australia opened the Imperial Press Conference on Tuesday at Melbourne.

Stereotypers' Auxiliary Concert.—The opening concert of the season to be held under the auspices of the Stereotypers' Auxiliary is to take place on Monday, October 5th, at Anderton's Hotel, Fleet street. The chair is to be occupied by Messrs. F. E. Shillam and W. H. Crosby; and the concert programme, arranged by Mr. George Harrison, promises to be of the customary good quality.

Lithographers' Auxiliary.—At a meeting on Thursday of this enterprising Auxiliary Mr. Sidney Lamert, chairman of Messrs. Thos. de la Rue and Co., Ltd., was unanimously elected president for the ensuing year in succession to Mr. Andrew Spottiswoode. The first concert of the season is to be held in the Grand Hall of the Cannon-street Hotel on Monday, November 16th, when the chair will be occupied by Mr. Lamert. As a result of the success attained by last season's concerts, the committee of the Auxiliary decided to found a tenth pension to be named the "Endecott A. Lowe Pension," as a tribute to Mr. E. A. Lowe, who has held with much acceptance the position of chairman of the Auxiliary since its inception fifteen years ago.

The Council of the Federation of Master Printers meets on October 13th.

The Joint Industrial Council of the Printing and Allied Trades holds its quarterly meeting on the 14th instant.

Letchworth District Committee of the Joint Industrial Council is to meet on the 5th inst. at the offices of the Garden City Press.

Manchester District Committee has arranged a whist drive and dance for the 10th instant.

Trade Union Matters.

The Executive Council of the Typographical Association have approved the proposal of the Harrogate branch, carried on a ballot vote, to strengthen the local funds by the imposition of a special levy of 1d. per week for six months on all fully employed members for the purpose of strengthening the branch funds.

The Executive Committee of the National Union of Journalists, in accordance with the resolution passed at the annual delegate meeting, has started the work of compiling a history of the Union. The task has been entrusted to Mr. H. M. Richardson, the general secretary, who asks for material bearing on the early history of the Union to be forwarded to him.

Stationers' Hall Lectures.

Under the auspices of the Stationers' Company and Printing Industry Technical Board, Mr. Geo. W. Jones, C.C., will lecture at Stationers' Hall on October 9th, his subject being "The Craft of the Printer."

Other lectures in this series are: November 13th, "How Maps are Produced," by Mr. Percy W. Ryde; December 11th, "Printing Paper," by Mr. Thos. H. Cunane; January 8th, "Bookbinding," by Mr. A. S. Colley; February 12th, "Advertising," by Sir Charles F. Higham; March 12th, "Books," by Mr. Michael Sadleir.

All the meetings commence at 6.30 p.m.

At the lecture by Mr. Geo. W. Jones on October 9th, there will be accessible before and after the lecture an exhibition of early printed work, including pages of a Gutenberg Bible, a Fust and Schœffer Bible and other rare specimens.

Larger Post Cards.

It is announced by the General Post Office that as from yesterday the maximum dimensions of post cards for both inland and international service are increased from 5½ ins. by 3½ to 5⅞ ins. by 4⅛ ins, though cards of any size between the minimum, 4 ins. by 2¾ ins., and the maximum, will be accepted by the postal authorities.

This is the result of an arrangement between the countries in the Postal Union—made, it is stated, with the main object of securing one convenient uniform size for British and Continental post cards.

It will be remembered that the picture post card trade has organised strong opposition against the adoption of the larger size.

"Verona" Type.—The opinion has already been expressed in our columns that the "Verona" old style Roman is a beautiful addition to the printer's resources in respect of classic type faces, and we are again favourably impressed by this type on receiving from Messrs. Stephenson, Blake and Co., Ltd., further specimens of printing showing its use. The range has been extended by the addition of a clear and beautiful italic, also a bold face which is very pleasing. The examples shown of book and jobbing work are worth having if only for their beauty and suggestive value to the designer of printing. Notable among them is a broadside after the old letter founders' style, the lines of which, in type ranging from 72-point to 6-point, read on consecutively and provide a synopsis of the history of English type founding, leading up to the present-day firm of Stephenson, Blake and Co.

Personal.

Sir Albert and Lady Stephenson, of Park Grange, Southport, celebrated their golden wedding on Monday.

Lady Newnes, who, with the other Empire Press delegates, paid a visit on Monday to the Hume reservoir near Melbourne, Australia, fell heavily while walking along a temporary structure and injured her ankle.

Mr. William J. Arthur, a director of the *Derry Journal*, has been appointed a Justice of the Peace for the City of Londonderry.

Mr. A. E. Goodwin (secretary, Federation of Master Printers), leaving England on Saturday for America, was seen off at Waterloo by Mr. R. A. Austen Leigh and other friends, and at Southampton he was met by Mr. S. Penney and Mr. L. de la Porte, representing the Southampton and District Master Printers' Association.

Mr. Langley Jones, managing director of the Cornwall Press, sailed for America on Saturday, his trip being undertaken, we understand, for the purpose of studying the latest methods and machinery in the States.

Mr. R. B. Simnett, president of the South-West London Master Printers' Association, and vice-president of the London Association, with Mrs. Simnett, is at present enjoying a trip along the Mediterranean.

Mr. W. R. Cummins, the hon. treasurer of the North London Master Printers' Association, has won 38 prizes this summer for flowers and fruit, including two for roses at the National Rose Show, Regent's Park, and the bronze medal at Alexandra Palace for the most points in the flower sections.

Mr. H. Kessler, the Swiss director of Messrs. Typary and Typon Co., Ltd., is now in this country. His visit has special reference to the manufacture of type-bars for the Typary Text Typing Machine, and we understand there may be other important developments.

Mr. Thomas G. Gray, overseer of the composing room of the *Yorkshire Evening Post*, on Monday afternoon was presented by the editorial staff and the companionship with a mahogany clock with chimes, on the occasion of his marriage. The presentation was made by the editor, Mr. R. R. Whittaker, and other speakers were Mr. J. W. Miller, overseer of the *Yorkshire Post*, and Mr. W. Calvert, father of the chapel.

On the occasion of her leaving the Guernsey Star Printing Co., Ltd., to be married, Miss G. Bang, who has been forewomen of the binding department, was presented by her fellow employees with a dinner service as a mark of their esteem.

A dinner party has been arranged for October 5th to celebrate Mr. T. P. O'Connor's 77th birthday by some of Mr. O'Connor's contemporaries in Galway.

Dr. John A. Hutton, of the Westminster Congregational Church, has received an invitation to become editor of the *British Weekly* in succession to the late Rev. J. M. E. Ross.

Mr. Clifford Allen is to become editor of the *Socialist Review*, the monthly organ of the Party, which, for many years, was edited by Mr. Ramsay MacDonald.

Mr. E. Roberts, foreman, on leaving the Donside Paper Mills to take up a similar position at Aylesford Paper Mills, has been presented with a gold filled Waltham watch. Although he had spent only eighteen months in Scotland, he carries with him the best thanks of his colleagues.

Mr. Joseph L. Fearing, sales manager of the International Paper Co., who was recently on a visit to Europe, has been appointed vice-president of the company.

Bookbinders Overseers' Association.

Coming-of-Age Celebrations takes the form of a Banquet, Concert and Carnival Dance.

The 21st birthday of the Printing, Bookbinding and Kindred Trades Overseers' Association was worthily celebrated on Saturday, when a dinner, concert, and carnival dance programme was successfully carried through at the King's Hall, Holborn Restaurant. Since its foundation in 1904 the Association has been fortunate in that it has had men of ability guiding its destinies. Its activities have also exerted a beneficial influence, not only on the industry in general, but on the overseers of the various branches of the trade included within its scope. These aspects connected with the work of the Association formed the principal theme of the speeches during the evening. The gathering included many representatives from kindred associations, as well as members of the Association who had travelled a considerable distance in order to be present. Among the company were the following: Messrs. J. Fleming (president), A. G. Aves (vice president), W. Alleston, T. Goodall, J. A. Esler, J. Dixon, F. C. Peacock, Chris. Atkins, Rodney Gibbs and Alf. England (Printing Machine Managers' Benevolent Association), R. H. Berry and E. W. Whittle (president and secretary, Printers' Managers and Overseers Association), J. A. Gouldbourne, A. W. Sandilands, A. C. Ware, F. E. T. Fox, J. J. Rawlings, A. M. Taylor, G. J. Hellery, A. W. Hunt, T. Hunt, E. Cornwall and W. J. Whale (Gravesend), B. J. Sansom, F. J. Hess and Arthur Cox (general secretary).

With a programme that consisted of nearly six hours' continuous and diversified entertainment the enormous amount of work entailed on the stewards can well be imagined, but, thanks to the untiring energies of Messrs. A. J. Jones, A. H. Smith and A. E. Walters, the arrangements were carried through in excellent fashion.

After the proceedings in the reception room a move was made to the King's Hall, where the dining tables were elaborately decorated in appropriate festival manner, the colour effects being enhanced by a novel form of serviette rings made up of bookcloth and presented by Messrs. Bentley, Smith and Co., Ltd.

The Speeches.

Following the loyal toast, Mr. Fleming, in submitting that of "The Association," said he felt proud to occupy his present position on such an important occasion. In briefly reviewing the uninterrupted progress of the Association since its foundation, Mr. Fleming referred eulogistically to the wonderful part played by Mr. G. A. Eden (their late secretary) who had occupied that position for a period of fourteen years. Fortunately for them Mr. Eden had been succeeded by another remarkable man in Mr. Arthur Cox, who, he felt confident, was capable of guiding the Association to still further prosperity and usefulness. (Applause.)

Mr. Fleming then read a letter from Mr. Eden, who is located in Manchester, conveying greetings to the Association on its coming of age. Mr. Eden wrote: "Much as I should like to join you at your festive dinner I shall have to forgo that pleasure. During fourteen years of its existence I had the honour and the privilege of materially assisting the upbringing of the Overseers' Association. Now that the lusty youth has come of age, its vigorous manhood gives evidence of a sound constitution capable of standing the storms which gave us so much anxiety during its earliest years, and I shall watch its continued progress with a certain paternal pride."

Continuing, Mr. Fleming touched on the benevolent and social side of the Association, and then went on to say that he had every reason to believe that their standing in the industry to-day was a very enviable one. The Association had within its power means of giving legal protection to its members, but he was glad to say that since its formation that power had never been used, their little difficulties having been settled in a more satisfactory way. (Hear, hear.) They were on the friendliest terms with both the master printers and the trade unions. With regard to the technical aspect of their activities, they had emphasised the value of visits to paper mills, millboard plants and factories, in order that the overseer should become better acquainted with up-to-date production and plant. This desire on their part to see the latest developments in the industry, he was confident, resulted in better work in their own departments, and also reflected beneficially on both employers and men. In conclusion, Mr. Fleming spoke of the value of the Association to the members individually, who were now able to co operate with one another in cases of rush work. (Cheers.)

The toast was very enthusiastically received, the company joining in the singing of the old-time melody "I'm Twenty-one To-day," to the accompaniment of the band. This was also the signal for a shower of paper streamers

Mr. J. Fleming (*President*).

and balloons from the balcony, each balloon having printed upon it the words: "Twenty-one to-day."

The President and Vice-President.

Mr. J. Dixon was entrusted with this toast, which he considered the most important one of the evening. With regard to their president, they could look back with pride on the quality of his work for the Association. In addition to the enthusiasm displayed by Mr. Fleming in the matter of visits to paper and millboard mills and other educational pursuits, he gave a considerable amount of time and energy in organising concerts on behalf of the Printers' Pension Corporation, and, lastly, their president, who was an excellent swimmer, sacrificed a lot of his time on Friday evenings in training the younger generation in this branch of sport. Mr. Dixon then made eulogistic references to Mr. Aves (vice-president), and said he was sure that when his time came to occupy the position of president he would prove himself a worthy successor to Mr. Fleming.

The Past Presidents.

Mr. J. A. Esler, in proposing the toast of "The Past Presidents," spoke of the Association as a very efficient organisation at the present time, a state of things which had been brought about by the quality of their past presidents. The fact that the Association had met with such success during its existence he thought also proved the soundness of their choice in electing such men to represent them.

Mr. F. C. Peacock responded as one of the pioneers of the Association, and said his interest in its future welfare was as keen as in its earliest days. In bringing it into existence, its founders had the social and mutual development of overseers in view, and he hoped that would be its main outlook for the future.

The Ladies.

Mr. A. G. Aves offered the toast of "The Ladies" in a happy little speech, and concluded by saying that but for their presence the function would have been a catastrophe.

Mrs. Alfred England responded on behalf of the ladies in a very effective and humorous speech.

"The Visitors."

In proposing this toast, Mr. Arthur Cox alluded warmly to the presence, amongst others, of Mr. R. H. Berry and Mr. E. W. Whittle, the president and secretary of their sister Association—the P.M. and O.A. He then referred to some of the items recorded in the earliest minutes of the Association in which mention was made of the appointment of the *British and Colonial Printer and Stationer* as their official organ, at the very commencement of the Association. Mr. Cox added that the journal's representative had been very closely allied with them in their work. Amongst others who were warmly welcomed were Mr. Rodney Gibbs and Mr. Alfred England (the president and secretary of the Printers' Managers Benevolent Association).

Mr. Berry, in responding, said he was very pleased to be present, and he thought it an honour to be called upon to respond for the visitors. After referring to the excellent relations that existed between his own Association (the P.M. and O.A.) and the Bookbinders' Overseers' Association, he extended to the latter hearty congratulations on their having reached their 21st birthday. The aims and objects of the two Associations were somewhat similar, but he was prepared to say that in some things the Bookbinders' Overseers were in advance of his own.

Mr. Rodney Gibbs, who also responded, conveyed birthday greetings to the Association from the Printers' Managers Benevolent Association.

The last toast of the evening, that of "The Stewards," was ably proposed by Mr. A. W. Hunt. Mr. Hunt, speaking as one of the founders of the Association, said that the way the arrangements for the festival celebrations had been carried through reflected great credit upon the stewards, whose duties in connection with the occasion had been of a very arduous nature.

A suitable reply on behalf of the stewards was made by Mr. A. H. Smith.

The Dancing.

The remainder of the evening was devoted to dancing and other gala attractions, which were carried on until a very late hour. Interspersed between the dancing were a number of songs by Miss Janet Miles, Mr. Sidney Creasey and Mr. Wilfred Stracy, whilst the musical selections of Harper's Imperial Orchestra, under the direction of Mr. P. W. Harper, gave complete satisfaction.

The memorable celebrations were brought to a close by the singing of the National Anthem.

The Printing Crafts Guild.

Although the weather was stormy on Saturday last, there was an attendance of nearly four hundred members and friends at the opening concert in the College of Technology, Manchester, when a splendid entertainment was given by Mr. Sutcliffe Halliwell's Concert Party, consisting of Miss May Catterall (soprano), Madame Bradbury (mezzo-soprano), Miss L. Millward (mezzo-soprano), Miss Ethel Radcliffe (contralto), Mr. H. Robinson (tenor), Mr. George Bond (basso cantante), Miss Alice Daysh (solo pianist), Miss Fitz Hugh (solo pianist), Miss Mary Wright (entertainer), Madame L. M. Lockett (accompanist).

During the evening, Mr. John Taylor (president) informed the audience of some of the work of the Guild on behalf of the printing and allied trades, and also referred to the printing and photographic section of the College of Technology, the director of which is Mr. Charles W. Gamble, O.B.E., M.Sc.Tech. He said the Section is one of the most efficient in the country for appliances and teaching staff.

WEE MAC.

A BETTER turn in the tide of paper business is said to have shown itself at last, and the hope is entertained that this is more than a momentary phase.

Necrology

Mr. G. W. Mascord.

We much regret to record the death, which occurred on Friday, of Mr. G. W. Mascord, well known to the London printing trade as the general works superintendent of the *Daily Chronicle* and *Sunday News* and a director of United Newspapers (1918) Ltd. On Tuesday of last week Mr. Mascord underwent a severe operation at a nursing home, and though he was afterwards reported to be progressing as well as could be expected, he died three days later. Mr. Mascord came to this country 26 years ago from the *New Age*, Melbourne, and at the London *Daily Chronicle* works proved himself a man of quite exceptional ability on the mechanical side of the printing trade. Among engineers in Fleet-street he was regarded as an engineer of remarkable resource. His calibre was proved in notable fashion during the period of the reorganisation of the *Daily Chronicle* office, when buildings were

The late Mr. G. W. Mascord.

being rearranged and new machinery was being erected. Whilst directing this work with wonderful ability, he contrived also to keep smoothly running the production of his firm's newspapers. Many inventions bear further witness to his ingenuity, whilst the attractiveness of his personality endeared him to his associates. The high esteem in which he was held found expression five years ago, when he was the guest of honour at two staff reunions. Mr. Mascord lost a son in the war, and recently suffered a second great bereavement in the death of his wife. He was 66 years of age. We may fittingly quote here a tribute which the *Daily Chronicle* published on Saturday in the form of a leading article: "Mr. Mascord . . . was an engineer of remarkable vision and foresight, who in days when scarcely anyone had dreamed of circulations on their present scale looked ahead to the problems of large production and quick production, and laid his plans accordingly. Thanks to him it is, that mechanical arrangements made when our circulation was but a small fraction of what it is now, still admirably meet our needs. The twenty-six years of his association with the *Daily Chronicle* were years of tireless effort culminating twelve months ago in a wonderful display of resource and skill, after the decision had been taken to arrange for printing in Leeds. Scarcely less remarkable than Mr. Mascord's energy and capacity were his high sense of honour and absolute integrity in business—qualities so outstanding that they compelled the confidence of all who dealt with him, high or low, and converted even opponents into admirers."

Exports of paper from Esthonia in the first half of the present year were of the value of 515·4 million E. marks, as against 266·6 million E. marks in the corresponding period of 1924. There was a notable increase in paper exports to Russia.

Australian Notes.

Printing Machinery Manufacture—Legal Proceedings—Ships' Printers Entertained—New Company.

(From Our Sydney Correspondent.)

The Sydney firm of John Close, printers' engineers, was established more than 40 years ago. Last year it changed hands, and is now conducted as John Close, Ltd. A large staff is busily engaged in the manufacture of folding machines, automatic feeders of the continuous type, and ruling machine feeders. The machines produced in the Sydney factory are claimed to be equal in finish and efficiency to the finest produced anywhere in the world. Another very important branch of this firm's activities is the reconditioning of worn machinery.

Mr. W. C. Moseley, solicitor, Sydney, issued out of the Supreme Court of New South Wales a writ for £5,000 damages in respect of alleged libel, on behalf of William James Allen, of Manning-road, Woollahra, engineer, against Smith's Newspapers, Ltd. The article complained of appeared in *Smith's Weekly* on July 18th. Leading counsel has been retained on behalf of plaintiff.

The Full Court has sent down for a fresh trial the case which came up on an appeal by the defendants in an action tried in April last, in which Roy Neville Connolly, formerly editor of the *Labour Daily*, a Sydney newspaper, sued the proprietors of the paper, claiming £2,000 compensation for an alleged wrongful dismissal based on a written contract. The defendants denied that they promised as alleged, and also set up that the plaintiff had not rendered satisfactory service, for which he was discharged. The jury returned a verdict for the plaintiff for £442. A fresh trial having now been ordered, plaintiff is directed to pay the costs of the motion.

An unusual event occurred recently on the occasion of the visit of the United States Fleet to Melbourne. The ships' printers—who number 25 and are kept busy on the big output of printed Fleet orders, etc., used by the various ships—were invited by the Australian Printers' Guilds to special functions arranged in their honour.

Amongst new companies recently registered in New South Wales is the Oceanic Publishing Co., Ltd., which has a capital of £30,000 in £1 shares. The firm is to carry on business as printers, publishers, engravers, etc.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

Australia.

A Sydney firm of manufacturers' agents desire the representation of British manufacturers of boxed stationery and general stationery sundries. They claim to have a good connection in Australia in those lines. (Repetition of Reference No. 157). (Reference No. 309).

British India.

A gentleman with ten years' commercial experience in India is returning to that country as a manufacturer's resident agent, and is prepared to negotiate for agencies for paper (all types), on a commission basis plus a small payment towards either travelling or office expenses. (Reference No. 313).

Netherlands.

A firm established at Amsterdam is desirous of obtaining the representation in the Netherlands of British manufacturers of advertising novelties (in cardboard, etc.). The intention is to buy on own account. (Repetition of Reference No. 193.) (Reference No. 329).

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies, Machinery for Sale and Wanted, Businesses for Sale and Wanted, Partnerships and Investments, Miscellaneous.

One Insertion 3/0
Three Insertions 6/0

For every line exceeding three lines 6d.

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion 1/6
Three Insertions 3/0

For every line exceeding three lines 6d

Sales by Auction, Tenders, Patents for Sale, Legal and Financial Announcements.

Per line 1/0

Replies may be addressed to Box Numbers, Office of the "British and Colonial Printer and Stationer," 58 Shoe-lane, London, E.C.4, for which a fee of 6d. is charged to cover Postage of Replies.

Telegrams: Stonhill, Lud, London.
Telephone: 2439 Holborn.

Situations Vacant.

GENERAL OVERSEER or MANAGER required for Local Newspaper Printing and Stationery Business, about 50 miles from London; state terms, qualifications, etc.—Box 14693.

THURSDAY, OCTOBER 1, 1925.

A Twenty-First Birthday.

WE extend to the Printing, Bookbinding and Kindred Trades Overseers' Association congratulations on the attainment of its twenty-first birthday, coupled with the wish that the future may bring still greater usefulness to its members. Though not so long in being as its sister overseer organisations, it has risen to a position of importance in the trade, and now fully justifies its existence in representing a large section of those holding executive positions in the printing, bookbinding and allied trades. The course of its earliest experiences did not run altogether smooth. During its early days it had occasion to cross swords with the Printers' Managers and Overseers Association; it has, moreover, had meetings of a disputatious character with both the master printers and the trade unions; but it has succeeded in winning the friendship and confidence of every section of the trade. As was emphasised at the coming-of-age celebrations—reported elsewhere in this issue—the progress made by the Association has in large measure been due to the suitability of the men chosen to guide its affairs. Happily its leaders have always shown a readiness to sacrifice their own inclinations to the general good of the members. Whatever else the future may hold in store for it, there is no doubt that so long as this principle subsists still further success will follow. Well done the Bookbinders' Overseers Association!

Unemployment in Allied Trades.

WHILE the latest statistics concerning unemployment in allied trades afford some ground for pessimism when they are compared with those for a month earlier, the position is actually better than it was twelve months and two years ago. This is true of the whole group of allied trades, which have suffered less from the prevailing disease than most of the other industries. Indeed, taking all trades together, unemployment has increased both upon what it was in July this year and in the two preceding Augusts, whereas in paper and printing the figures are less than in 1924 and 1923. In the official report to the Ministry of Labour as to the state of the allied industry it is intimated that employment in the paper trade, although still slack in the brown paper and wrapping sections, was again fair generally, and was rather better than a year ago. In the letterpress printing trade employment was, on the whole, fairly good; it showed little change as compared with July, but was slightly better than a year ago. It was rather better at Birmingham, Bristol, Leeds and Bradford, but at Glasgow, Edinburgh and Newcastle there was a slight decline. With electrotypers and stereotypers employment was very good in London, Edinburgh, Manchester, and the Midland District, and good elsewhere. Employment in the lithographic trade was fairly good generally, and slightly better than a year ago; at Manchester and Edinburgh it was reported as slightly worse than in July, but in London and at Glasgow it showed an improvement. Lithographic artists in London continued to be well employed, but at Manchester employment was slack and worse than in July. With bookbinders employment was good at Edinburgh, fair at Leeds, moderate in London and bad at Manchester and Newcastle.

Percentages.

As already indicated the percentage figures of unemployment are rather better than they were last year, and they continue considerably below those for other industries. The percentage of unemployed among workpeople covered by the Unemployment Insurance Acts in the printing and bookbinding trades was 4·5 at August 24th, compared with 4·6 at July 27th and 5·1 at August 25th, 1924. In the paper and paper board industry, the percentage was 7·2 at August 24th, compared with 6·9 at July 27th and 7·8 at August 25th, 1924. In the cardboard box, paper-bag and stationery trades the percentage was 5·7 at August 24th, compared with 5·8 at July 27th and 6·5 at August 25th, 1924. Although the rate of unemployment here is bad enough, the highest is well below the general average of 12·5, which is something to be thankful for.

Trade Union Growth.

IT is interesting to note the growth in the membership of trade unions connected with the paper and printing group of industries during the past year. Figures collected by the Ministry of Labour compare the position at the time of the recent Trades Union Congress at Scarborough with that of August, 1924. The number of organisations is the same, namely 13, but the membership has increased from 159,835 in 1924 to 167,665 this year. There do not appear to have been any fresh amalgations during the past year. The increase, therefore, must be attributed in part to normal growth, but possibly in a greater measure to intensive propaganda. Evidence has not been lacking that continued pressure has been brought to bear upon non-unionists and the result is seen in the figures quoted.

Paper for India.

IN view of the constant pressure from Indian paper mills for tariff protection, it is interesting to hear from a large paper user, home on holiday, that although the Indian mills have considerably improved their quality standards, they are still very unreliable. The makings are irregular and very frequently turn out dirty, according to this authority. In price there is not much between home-made and imported papers; but what advantage there is is on the side of the imported product. From what we have ourselves seen of recent makings of Indian papers, we conclude that there is a marked advance on previous standards. In many cases the quality compares with our own; and in cases where native grasses have been used there is a distinctive strength and character.

Sir Ernest Benn's "Confessions."

"Capitalist" Industrial System Discussed, with Special Reference to Printing Trade Unions.

Sir Ernest J. P. Benn, Bt., possesses a name that is well known in the printing trade, as indeed it is to the general public. And behind the name there is a most virile and versatile personality, a personality whose qualities are indicated by the outstanding success with which as a publisher he has built up a huge business. Nor do his duties as chairman of the firms of Benn Brothers, Ltd., and Ernest Benn, Ltd., give his energies sufficient outlet, for he adds to these the duties of editor of the *Hardware Trade Journal*, and then finds time to write upon industrial subjects—in regard to which he takes an attitude strongly opposed to Socialism, and strongly favourable to the maintenance and betterment of our present industrial system based upon competitive private enterprise.

Sir Ernest's views in this connection are given most challenging expression in a striking and extremely interesting volume which has just been published under the title "The Confessions of a Capitalist" (London: Hutchinson and Co., 18s. net), a book which it is the purpose of this article to bring to the notice of the printing industry.

An Unrepentant Capitalist.

With engaging frankness Sir Ernest sets forth his position as an unrepentant capitalist and believer in private enterprise. He begins: "I am a business man, making and enjoying a very substantial income. I own two motor cars. I live amidst surroundings that to many people would seem luxurious . . . I am, in fact, the sort of person against whom the whole of the Socialist propaganda seems to be launched, and . . . I find myself regarded not only as a superfluity but as a bar to progress, as one of the causes of poverty, want, and distress."

Before he reaches the end of the book Sir Ernest has turned his apologia into a very forceful polemic against the Socialistic theories of economics. The concrete way in which he puts his case gives unique interest to a chapter "Whom do I Rob?" Pointing to his income of £10,000, derived from a turnover of £400,000, he says: "Of this money I pay away to workers and to others £390,000, and retain for my trouble the £10,000 which is the cause of all this discussion. I take 2½ per cent., or 6d. in the £. To be fair and exact it should be pointed out that I really take 1¼ per cent., or 3d. in the £, for my personal use, and another 3d. in the £ for the benefit of the Chancellor of the Exchequer."

Return for "Handing Out Wages."

Proceeding to discuss the economics of the providing of "the thing called 'work'," he writes: "I am providing work at a cost to the wage earner of 3d. in the sovereign. I distribute wages on a far lower expense ratio than that on which old age pensions are distributed. Unemployment pay costs much more to hand out over the counter of the Labour Exchange than I charge for handing out wages to the large number of persons who have become involved in the enterprise which I have built up."

Thus we come at the vital question of the right way towards improving the position of the wage earner. "Many of the wage earners who work for me," says the author, "could secure a very great deal more than they now have if they would direct their attention not to my income, but to my £400,000 turnover. It is beyond dispute that in taking the whole of my income my workers could only add 3d. to every £1 they now receive. Whereas many of them could, without trouble, take twice as much as they now take out of the turnover. . . . The most obvious way in which this can be done is by realising the effects of trade union practices and restrictive regulations."

Trade Union Obstruction.

"Most printing works," he proceeds, "have to carry on their business at the dictation of at least 15 trade unions, each union having its own rules and regulations, and each concerned with its own rights and privileges.

"Idleness by rule, enforced with all the powers of the union, may appear to produce wages, but it cannot produce any wealth. It does not even distribute wealth. It merely keeps back the progress of the race.

"The destruction of wealth, brought about by arrangements of this kind, is not confined to the many absurd objections to machinery and speed. A circular was recently issued to a number of my employees by a printing trade union in the following terms:

> Dear Comrade,—I am writing to let you know that we are in dispute with Messrs. X., and you are to use every effort to see that supplies are not handled for this firm. —Yours fraternally, ——, General Secretary.'

"I do no business with Messrs. X so far as I know, but the circular in question, sent to every member of the trade union concerned, will undoubtedly have reached many houses

Sir E. J. P. Benn, Bt.

which are in business connection with Messrs. X. The members of the union are not informed what is the nature of the dispute. They are not invited to exercise any discretion in the matter. They are given no opportunity of expressing a view with regard to it. They are not allowed to discuss the matter with other employees; but an arbitrary power, working in the background, more far-reaching and destructive in its operations than any power which was ever known in the days of slavery or feudalism, is able not only to punish Messrs. X, but cause thousands of workers in hundreds of other firms to delay and destroy wealth-production at the expense of the whole community."

Prohibitive Price of Printing.

"In case it should be thought that I am guilty of some exaggeration, it may be well to mention some of the most obvious effects of this kind of thing upon my business. I have handled in my time some scores of publications, mostly weekly trade papers. The following is a list of papers which I have discontinued, enterprises which have been killed, and several of which would have been running to-day if printing prices had remained at the 1914 figure. That figure is, of course, an impossibility, and the real economic price of printing should probably be somewhere between the present extortionate figure and its 1914 equivalent. Among the many papers which I have been obliged to stop are: The *Goldsmiths' Review*, *Farm and Home*, the *Argentine Trader*, the *China Clay Trade Review*, *Kelly's Monthly Trade Review*, *Tools*, the *Retail Trader*, the *Order Book*, the *Japan Trade Review*, the *Leather Goods Review*, *Commercial Intelligence*, *Ways and Means* the *Egyptian Trade Journal*, *Australian Markets*, *Indian Markets*, *South American Markets*, the *Transport World*.

"This little list could be enlarged indefinitely if an examination were to be made into the position of the trade paper business before the war and to-day. My turnover might be double what it is, my income might be double, and there might be another £400,000 available in wages, if only the printing trade would allow the machinery which is at its disposal to work. To a large extent these people still look upon the machine as did the Luddites. There is many a small trade paper and many more small papers, concerned with small subjects and small causes, which could be rendering useful service to their own particular little circles, if they could be produced for a matter of £50 or £100 a week.

"The printers to-day have only left room for the big things, and the big things are not always the best things. While, therefore, there is, I claim, nothing to be got for the workers out of my £10,000 a year, there is a great deal they might have if they would direct their attention to the £400,000 a year which I handle. The abolition of my £10,000 would necessitate the discovery of some agency to take my place, an agency sufficiently solid and reliable to be able to provide regular wages and the security which I cannot offer for less than the 3d. in the £ which I take."

To printing trade union leaders these points would seem to offer subject matter calling for what might well prove profitable discussion.

A Fascinating Book.

Considerations of space prevent our referring, as we might wish, to other interesting sections of the book. The story of the *Hardware Trade Journal*, told as illustrating the principles of business, is illuminating. Incidentally we note a reference to Messrs. Hazell, Watson and Viney as "one of the soundest concerns in the country, guided by some of the shrewdest and kindest heads I have ever met." Then, too, the volume is well sprinkled with wise and witty *obiter scripta* upon such subjects as thrift, co-partnership, taxation, the ideal of service, and the charm of the business life. Whilst the suspicion might perhaps be left that the writer is too exclusively immersed in the science and practice of commerce, one has yet to admit that his conception of business in the light of its power for good and its opportunities for public service, is a redeeming feature that shuts out any sordid atmosphere.

As to the literary form of the book, we like it. A preface tells us that "the book aspires to no literary merit," and this is happily borne out by the absence of any straining after "style." Yet many parts of it are most pleasing by virtue of the simple clearness and straightforwardness of the writing; and, surely, this is of the very essence of good literary style rightly understood.

P.M.A. Annual Meeting.

At the 17th annual meeting of the Printers' Medical Aid Assocition, held at the London Society of Compositors, Mr. Arthur O'Connor, the secretary, presented a report showing that the Society was now over 45,000 strong, and during the year it had disbursed some 17,000 benefits, consisting of letters for surgical appliances, spectacles, special hospitals, convalescent homes, sanatoria, massage, and electrical treatment. The income of £9,751 showed an increase of £759 on the previous year.

The Association has decided to purchase the Hermitage Convalescent Home at Hastings, which has accommodation for over 100 patients. A 26-seater saloon 'bus to convey patients to and from London twice a week goes with it.

BANKRUPTCIES.

Re G. T. FOULIS AND CO., LTD.—At the offices of the Board of Trade, Carey street, W.C., on September 25th, statutory first meetings of the creditors and shareholders were held in the compulsory liquidation of G. T. Foulis and Co., Ltd., 91, Great Russell-street, Bloomsbury, W.C. The winding-up order was made on the petition of Messrs. Dow and Lester, bookbinders, who are creditors for £159. Mr. H. E. Burgess (senior official receiver) reported that the promoters of the company were Mrs. M. G. Taylor, Mr. T. N. Foulis and Mr. A. C. Hyatt. Mr. Foulis, a connoisseur in book production, had carried on a publishing business since 1904, but in October, 1923, he severed his connection with a limited company which had acquired it. He was then without substantial means, but Mrs. Taylor, the landlord of the Great Russell-street premises agreed to finance him in a new venture in London. This company was floated in February, 1924, with a capital of £3,000, of which £2,500 had been issued, the object being to carry on business as printers, publishers, bookbinders, etc. Mrs. Taylor took up 1,300 £1 shares and 10,000 1s. shares. Mr. Foulis's intention was to publish books in accordance with old traditions of elegance and good craftsmanship, built up by the Foulis Press which had been in existence since 1741, but after the formation of the company Mr. Hyatt appeared to have dominated the position and, with the consent of Mrs. Taylor, to have assumed control of the business. After the formation of the company thirteen books only were published, five being novels of no particular merit. Subsequently debentures were issued and £750 was now due in respect of them, £500 of the amount being due to Mr. W. F. D. Liston, a director, and £250 to Mrs. Taylor. Creditors pressed in July last and shortly afterwards Mr. Hyatt was appointed receiver and had since been endeavouring to arrange a reconstruction, but his efforts have been ineffectual. The failure of the company appeared to be due to the fact that Mr. Hyatt had not sufficient experience of this line of business, and consequently had not always followed the best possible policy in regard to the company's affairs. No statement of affairs had been produced, but the liabilities were estimated at £2,750, and the assets (which were very difficult to value) were estimated by the directors as likely to produce £1,000. In any event it did not appear that there was any prospect of a dividend for the unsecured creditors, because the amount realised from the assets would be absorbed by the debenture claims. The liquidation was left in the hands of the official receiver.

Re E. H. GOLLOP—"Loss incurred in a woollen business of which I had not the necessary experience, and law costs," were the causes of failure alleged by Ernest Paulet Gollop, described as a journalist, 151, Hamstead-road, Handsworth, whose first meeting of creditors was held at the offices of the official receiver, Birmingham. Gross liabilities were set down as £188, and the deficiency £184.

Irish Master Printers' Conference.

A Unique Gathering.

A conference of the three associations which represent the master printers in Ireland was held in the rooms of the Dublin Master Printers' Association on the afternoon of Monday of last week. The occasion was especially interesting, as it was the first time the master printers of all Ireland had met together in friendly conference, and it indicated, as one of the speakers said, that the master printers in Ireland recognise no boundary question, but both north and south are one in the unity of interests of the printing trade.

Mr. John Warren, of the Dublin Master Printers' Association, presided at the meeting, when three very able papers were read by Mr. J. F. O'Hanlon, of the Irish Master Printers' Association, Mr. A. H. Muir, secretary of the Belfast Association, and Mr. E. T. Godkin, of the Dublin Association.

Problems of the Industry.

Mr. O'Hanlon's paper dealt with the problem of co-operation between the three associations, pointing out the need for a loyal spirit of co-operation and not mere obedience to the letter of written rules of an association.

Mr. Godkin's paper considered how unfair competition between printers could be prevented, and he pointed out how great was the injury done to the trade when, in order to obtain business, a firm quoted a price which was below the real cost at which the job should be done.

Mr. Muir, who is a well known authority on costing, pointed out how vital it was that a firm should have an efficient costing system. He indicated many cases where firms were taking work at a loss, or some of whose jobs were paying and others were done at a loss. Under a good costing system such a thing would be impossible and would also tend to avoid the absurd differences in quotations which existed in every printing centre.

A very interesting discussion of much practical use followed, and the meeting terminated with a resolution appointing a committee to consider how a closer working could be arranged between the three associations in Ireland.

Later in the evening the delegates from Belfast were entertained to dinner by the Dublin and Irish Master Printers' Association.

Visit to Paper Mills.

On the Tuesday the delegates paid a visit to the Swiftbrook Paper Mills at Saggart, which is about ten miles from Dublin, on the invitation of the manager of the company, Captain E. M. Drury, and the various processes in the manufacture of high grade writing paper were demonstrated, after which the guests were entertained by Capt. Drury, and there was also present Mr. R. Baird, Dublin, one of the directors.

Subsequently Sir Robert Baird proposed a vote of thanks to Capt. Drury, for having given the members of the first conference of the Irish Master Printers' Association an opportunity of visiting the old-established Swiftbrook Mills at Saggart. It was a pleasant thing, he said, for Irishmen to know that there was in the country a well-equipped mill which turned out the highest class of paper for stationery, account books and envelopes. It was especially gratifying to him to see the up-to-date machinery which the mill contained, and to have witnessed the process of papermaking from beginning to end as it was carried on here.

It was interesting to recall that the well-known name "Swiftbrook" derived its name from the famous Irishman, Dean Swift, the ruins of whose residence was close by. The brook which runs adjacent to these mills was called Swift's Brook—hence the name of the mills and its products. He (Sir Robert) and his father before him had been customers of these mills since 1861—they were, by the way more patriotic then than they were now. He knew that the paper many years ago was the only make used for the stationery and account books of the Belfast Corporation and of many public Boards in the North and in other parts of the country.

Capt. Drury, in acknowledging the compliment, said that the presence of so many master printers would give the proprietors and managers of the mills courage to tackle the difficulties which arose from time to time in a business like theirs. There was no doubt that co-operation between makers and users would be mutually beneficial.

Printers Participating.

The Belfast Association was represented at the conference by Sir Robert Baird, Messrs. J. M'Quitty, J. A. Cleland, James Boyd, Robert Carswell, William Sweeney, John M'Bride, A. H. Muir (secretary).

Those representing Irish Master Printers were:—Messrs. J. F. O'Hanlon, Cavan; T. J. W. Kenny, Galway; P. O'Gorman, Galway; H. G. Tempest, Dundalk; T. Gillespie, Castlebar; J. Ross, Derry; F. M. Doogan, Monaghan; J. Pike, Birr; M. Griffin, Tralee; M. C. Carey, Maryborough; E. T. Keane, Kilkenny; A. Shannon, Coleraine; Miss M. A. Lavery, secretary.

The Dublin Master Printers' Association:—Messrs. John Warren, A. D. Brewster, W. P. Robertson, J. C. M. Eason, W. Nolan, T. Brindley, W. Smalldridge, E. T. Godkin, M. O'Reilly, W. Fitzsimmons, P. J. Brennan, J. J. O'Leary, —. Browne, B.L.; J. Corrigan, R. T. White, J. T. F. Herrick, secretary.

Some of the delegates also visited the Woodbrook Golf Club where the golf and scenery are of the best.

It was the hope of all the delegates that this First Conference would be succeeded by many others as it was felt that such meetings were of great value and help to the printing trade in Ireland.

Country News.

Liverpool.

The awards in the examinations held at the Liverpool School of Art on May 13th, 14th, and 15th last, arranged by the Printing and Allied Trades Advisory Committee of the Liverpool Education Committee have just been announced, and give the following results: *Typography* (Composition, theoretical and practical).—Arthur Cross and R. H. Shenton, one guinea each; J. E. Jones, free studentship; Ronald Edmond and T. T. M'Coll, half-guinea each. *Typography* (Machine Work, theoretical and practical). — Percy Mitchell and N. D. Cook, one guinea each; Frank Saxton, free studentship; Thos Forrester, L. Gaskell, and Joseph Hughes, half-guinea each. *Lithography* (theoretical and practical).—Wm. Bradley, free studentship; Philip Fanning, half guinea. *Bookbinding.*—Forwarding: R. H. Sloane, free studentship; J. Perry, one guinea; W. J. Dawson, 10s. 6d. Finishing: S. Gabriel, free studentship; R. H. Sloane, one guinea; J. Perry and G. O'Gorman, 10s. 6d. each. *Photo-Process Work.*—Henry Hughes, free studentship. Messrs. L. S. Dixon contributed 36s. 6d. for prizes for letterpress display composition, which were awarded to R. H. Shenton, 21s.; R. Fullerton, 10s. 6d.; and R. H. Gornall, 5s.

The money prizes were contributed by the Liverpool Master Printers' and Allied Trades Association (£6 6s.), Alderman Ellis, J.P. (31s. 6d.), and the Liverpool Typographical Society, the Bookbinders' Union, and Messrs. Wood and Sloane (one guinea each). The six studentships, each of the value of one guinea, were granted by the Liverpool Education Committee.

Glasgow.

Classes in printing and kindred trades have commenced at Stow College, 121, Cowcaddens-street, Glasgow. These classes are conducted by the Education Authority of Glasgow with the assistance of an advisory committee consisting of representatives from the employers and employees in the printing and kindred trades of Glasgow, this committee being divided into sub committees for each of the crafts represented at the College. A neat booklet issued by the Glasgow branch of the Scottish Alliance of Employers in the Printing and Kindred Trades indicates that comprehensive instruction is given. In hand composing, the course consists of practical, technical, and general craft instruction to suit workshop needs; and special attention is given to advertisement display and lay-out work. For teaching machine composition, the School has two Linotype machines of the latest make—one a No. 4 model three-magazine machine, and the other a No. 1 model—both fully equipped, and each driven by a separate electric motor. For the Monotype classes, the installation consists of two D D Monotype keyboards and two casting machines, with air compressor, tank, and matrices. Dummy keyboards and other auxiliary apparatus are available for both Linotype and Monotype instruction. A good and varied equipment of presses provides for instruction in letterpress machining and in lithography, whilst in connection with the latter subject up-to-date plant is available for instruction in litho reproduction, process retouching and photo-litho. Lectures on typography and classes in bookbinding and paper-ruling are further items of the syllabus.

Cardiff.

Following up the public appeal, mentioned in these columns last week, when the Cardiff Joint Industrial Council of the Printing and Allied Trades appealed to Cardiff firms to have their printing done by Cardiff printers, the secretary of the Cardiff Typographical Society has issued an appeal to the same end. In the course of this he states:—"The printing trade of this city is suffering at the present moment from a considerable amount of unemployment, and our members are naturally very much concerned when they inspect the imprints of the various forms of printed advertisement to find that some other town quite remote from Cardiff has been chosen as the most appropriate spot from which the printer may display his talent. May I, on behalf of the members of the Typographical Society, therefore, join in the appeal made that business people and amusement caterers requiring printing of any character should have this work executed in the city. There are over 40 firms whose names appear on the list of recognised printing offices issued by the Typographical Society where every kind of work can be executed, so that there is ample scope for free choice of firms, and the work executed is of a character to suit all classes and taste."

Halifax.

Recognition was made, the other day, of good service rendered by a Halifax printer. The printing staff of the *Halifax Courier*, Ltd., along with friends, met at the "Old Cock" Hotel, Halifax, to make a presentation of a leather travelling bag and a case of notes to Mr. George Tiffany, an old colleague, on his retirement. Mr. J. S. Waring, the overseer, made the presentation, and Mr. H. Lee, who had been asked to represent the directors, spoke a few words wishing Mr. Tiffany long life and good health, and reading letters of regret at not being able to be present from Mr. W. E. Denison, Mr. C. Ramsden, and Mr. S. R. Crapnell. Mr. T. Hardaker, who acted as chairman throughout the proceedings, spoke very highly of Mr. Tiffany, in connection with the "chapel," Mr. Tiffany having been "Father of the Chapel" for more than eight years. Others who spoke were Messrs. E. Smith, C. Thomas, F. Foster, J. A. Eccles, A. Miller, T. G. Moores and J. A. Fairbridge, Mr. Tiffany making a suitable response.

Douglas, I.O.M.

The Lancashire and Cheshire Alliance of Master Printers held their autumn week-end gathering at Douglas, Isle of Man, as guests of the master printers of the island. A very interesting programme had been arranged, the most important being a presentation to Mr. W. K. Mackay for very valued services to the printing trade. The ceremony took place at the dinner which was attended by the Mayor and Mayoress of Douglas, the town clerk and four members of the House of Keys, and over 120 printers and their ladies. The presentation, which was made by Mr. J. Brunton, president of the Lancashire and Cheshire Alliance, took the form of a beautifully illuminated album and a gold and enamel badge. In the course of his remarks the president referred to the valuable services Mr. Mackay had rendered to the craft, particularly in regard to labour matters. The toast was received with musical honours, after which Mr. Mackay suitably responded.

Burton-on-Trent.

Following upon the recent installation of a 3-reel Hoe newspaper press and Linotype machines of the latest model, as additions to its plant, the *Burton Daily Mail* has just completed the installation of a private telegraph wire from London, and a Creed high speed printing telegraph. This progressive newspaper office, which publishes also the *Burton Observer* and the *Burton Football Mail*, now claims to be in the front rank for the swift dissemination of news.

Darlington.

The annual outing of the circulation staff of the *Northern Echo* took the form of a motor coach trip to Ripon. After lunch the Cathedral and Fountains Abbey were visited, after which the journey was continued to Harrogate. Tea was taken at Harrogate, and a short stay was made at Knaresborough on the return journey.

Medway Joint Industrial Council.

District Committee Meets at Chatham.

The steady advance being made in the extension of the organisation of the Joint Industrial Council of the Printing and Allied Trades is brought to notice once more by the news that what will be known as the Medway District Committee of the Joint Industrial Council has been formed. The inaugural meeting was held at Navy House, Chatham, on September 18th, when there were present Mr. A. E. Goodwin (secretary, Master Printers' Federation), and Mr. A. E. Holmes (secretary, Printing and Kindred Trades' Federation), the joint secretaries of the Council, also Messrs. F. A. Clements and J. Jarrett, acting hon. secretaries of the local committee, Mr. A. Hudson, Mr. Leslie B. Mackay and others.

The draft of the Council was read and adopted, and the following committee was elected: Messrs. A. Hudson, F. A. Clements, P. G. Heselden, L. B. Mackay and J. Jarman as an employers' panel, and Messrs. H. G. Brooks, W. J. Cable, W. Cozens, J. Jarrett and D. E. Ellis as the empioyees' panel. Mr. Hudson was elected as the committee's first chairman, Mr. Brooks being appointed as his deputy, and Messrs. Clements and Jarrett were elected as joint hon. secretaries.

Following the business meeting the company was augmented by the arrival of lady friends of the members present, and refreshments were served by Mr. A. W. Silverton. Songs by Mr. J. Stewart and Mr. Stanley Briggs, a recitation by Mr. F. A. Clements, and a musical selection by Mr. Christopher provided pleasing interludes.

Messrs. Goodwin and Holmes delivered stimulating speeches explaining the function and value of the Joint Industrial Council, and at the conclusion a vote of thanks to the speakers was moved by Mr. F. A. Clements and seconded by Mr. J. Jarrett, who remarked that the mixture of wit and wisdom they had heard that evening would remain in their minds for a long time.

L.M.P.A. October Meetings.

Open to all members of the L.M.P.A., the following meetings have been arranged for October by the various District Associations:

Tuesday, 6th at 6.30 p.m., Arding and Hobbs' Restaurant, Clapham Junction, S.W. Address: "Printers (Various); Their Respective Opportunities," by Mr. Frank Colebrook.

Wednesday, 7th, at 6 p.m., Stationers' Hall, Ludgate hill. Address: "Brains, Pride and the Printer's Craft," by Mr. J. Crowlesmith, J.P.

Monday, 19th, at 7 p.m., Wortley Hall, Finsbury Park Station. Whist drive. Admission by ticket.

Tuesday, 20th, at 6.30 p.m., Bridge House Hotel, London Bridge. Whist drive and dance. Admission by ticket.

Wednesday, 21st, at 6.30 p.m., Langthorne Restaurant, Stratford-broadway. Address on Costing by Mr. A. D. Hull, F.C.W.A., Federation Costing Accountant.

Thursday, 29th, at 7 p.m, Westbourne Park Institute (opposite Royal Oak Station, Met. Railway). Exhibition and Craftsmen's Competition.

UNDER the new South African tariff, stationery, in the nature of guide books, directories, account books, etc, which previously paid 25 per cent., now pay duties ranging from 30 to 40 per cent.

COMPENSATION CASE.—At the Bury County Court last week William Chadwick, Radcliffe, fire beater and engine attendant, made an application under the Workmen's Compensation Act against Messrs. Bibby and Baron, Ltd., New Bridge Mills, Dumers-lane, Radcliffe Mr. Butcher, for respondents, said the only question was incapacity or not. They had paid compensation up to date, but they now said the man was completely recovered from the accident. Medical evidence having been called, His Honour said he was bound to come to the conclusion that any incapacity which existed, if any did exist, was not, on the evidence put before him, caused by the accident, and therefore the liability of the respondents to pay compensation ceased. There would be an award for the respondents with costs.

The Becker Group of Companies.

Sale of the Tamworth Mill.

Sir Basil Mayhew, the receiver and manager of Charles Marsden and Sons, Ltd., informs us that he has entered into a contract for the sale of the Alders Mill, Tamworth, to Mr. E. B. Montesole, who is largely interested in other paper mills, and the business will be carried on without interruption.

With the exception of one plot of land, the receiver has now disposed of all the properties of the Marsden Co., which at the date of his appointment included the paper mills at Lintzford, Newcastle; Calder Grove, Wakefield; Dearne Mill, Barnsley; and Alders Mill, Tamworth. The two first-mentioned mills were not operating and were subsequently sold under the hammer. The Dearne and Alders Mills have been carried on by the receiver and manager and have been disposed of as going concerns.

A dividend of 10s. in the £ has already been paid to the first debenture holders of the Marsden Co., whose claims amount to nearly £300,000, and the receiver hopes to obtain the consent of the Court to pay a further substantial dividend before Christmas.

The receiver also hopes to pay a first dividend to the Marsden 2nd debenture holders out of the assets of the Chadwick and Taylor security, as soon as the Court re assembles after the Long Vacation.

So far as the Irish Paper Mills is concerned, a contract for sale has been entered into, but the purchase has not yet been completed.

The dividends so far paid in the Becker and Co. receivership are 3s. in the £ to the note holders and 5s. in the £ to the debenture holders.

World's Paper Production.

Since the end of the war the production of paper has enormously increased. In only a few countries has there been a reduction, as in Belgium, Hungary and in Russia. In the U.S.A. production has increased from 33 million cwts. to 70 million cwts. In Great Britain, Germany and France the increased production is equal to 85 per cent.

The statistics of the average consumption of paper in the various countries is illuminating. Thus in the U.S.A. each inhabitant uses 64 lbs. per annum, in Germany 59½, in Noway 48½, in Great Britain and in Poland 46½, in Holland 44, in France 37½, in Austria 35¼, in Italy 15¼, in Spain 9, and in Russia 4½ lbs.—*Kartonnagen Zeitung.*

"Typary" Text Typing Machine.

Our readers will now, we trust, be familiar with the nature of the "Typary" Text Typing Machine — the interesting new machine for producing typographic copy for reproduction by planographic methods — to which there have lately been frequent references in our pages. The purpose of this machine, it will be understood, is to dispense with the need for the setting, either by hand or by machine, of text matter required for lithographic or photogravure printing. The suppliers of this machine—The Typary and Typon Co., Ltd., of 1-4, Red Lion-passage, London, E.C.4.—are at the same time the suppliers of another interesting novelty, to which also we have referred, viz.: "Typon" paper negatives, which enable wet plates to be dispensed with in the photographing of originals for reproduction. This having been made clear, we can proceed to express our great regret that an error occurred in the composition of the page advertisement which the Typary and Typon Co. inserted in our issue of last week, page 232. The display lines in the middle of the page reading "'Typary' Text Typing Machine" were inadvertently substituted for two other display lines reading "'Typon' Paper Negatives." The resulting statements might suggest, to one ignorant of the nature of the "Typary" machine, that this apparatus was a negative-maker of some sort. This, of course, it is not, its sole function being, as mentioned above, to produce copy to be afterwards used for reproduction, either through the medium of "Typon" Paper Negatives or by other means.

German Printing & Paper Activities.

Special Conference Publications.

We have received a copy of the Journal of the German Book Printers and Related Industries, being the special issue made on the occasion of the general meeting of the German Book Printers' Association held at Kessingen. This is a handsomely got up volume, bound in a rough white cover called Baskerville Antique. Besides the very numerous and well-displayed advertisements forming a large part of the volume, the book contains many loose enclosures advertising and illustrating the various methods of illustration, including fine examples of autotype, photogravure, offset and three-colour work. The articles deal with such matters as the social crisis, labour conditions and difficulties, type founts, suggestions for simplifying making-ready and other relative subjects, the urgency of which is evidently by no means confined to German industry.

In March this year the German Society of Pulp and Paper Chemists and Engineers held its 1924 general meeting in Berlin, and we now have a copy of the proceedings before us. This is issued in book form by the Otto Elsner Verlagsgesellschaft m.b.H., Berlin S42, at the price of M5.

The 265 pages contain the verbatim report of the meeting, and the lectures and discussions are well illustrated. These are devoted to subjects of importance to the industry and include "The Colloidal Chemistry of the Formation and Destruction of the Cellulosic Framework of Plants, of Lignine and of Wood Fibre" by Professor Wislicenus; "New Researches in the Province of Paper Sizing" by Dr. R. Lorenz; "The Influence of Increased Steam Pressures on the Steam Generating Plants in the Pulp Industry" by Professor Eberle; "Works Bookkeeping and Costing in the Paper Industry" by R. Eichmann.

The numerous reports and papers presented by the departmental committee and analytical commissions are by no means the least valuable contributions. The book is completed by a copy of the rules of the Society and a list of its members, followed by a list of the publications which it has issued.

Newspapers in the Argentine.

In honour of the visit of the Prince of Wales *The Times* published on Monday a special supplement on Argentina. The many interesting articles well cover trade and finance. We still rank as the largest exporter, but the United States run us hard, and ruined Germany is already showing that she will presently prove a formidable competitor.

The great daily newspapers—an independent Press—form the subject of an article by Angel Bohigas. *La Nacion* and *La Prensa* exercise a great influence, and there is scarcely a town which has not one local paper or more.

Under the heading of British journals it is mentioned that the first English newspaper published in Buenos Aires was the *British Packet*, founded in 1826, and carried on until 1858. Its files are lodged in the National Library, and form one of the most valuable sources of reference for the history of those years.

The present dailies are the *Standard*, the first English daily in South America, founded in 1861 by M. G. Mulhall; and the *Buenos Aires Herald*, founded in 1875 by D. W. Lowe. Commerce and shipping are well served by the *Review of the River Plate* and the *Times of Argentina*, both British weeklies of long standing.

There are also two or three publications devoted to social news and light literature; and two illustrated Spanish weeklies are published under British management and with British capital. The *British Magazine* is the organ of the British society; and several of the railways publish monthly magazines.

New Inventions

Cylinder Machine Inking.

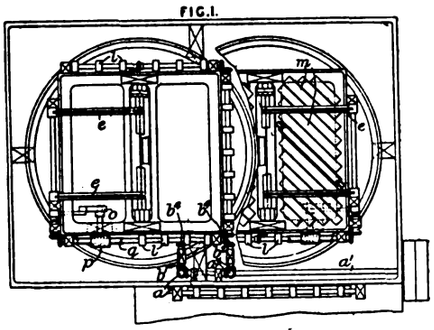
A patent in the name of Bohn & Herber and O. Finkhaus, relates to a continuous-revolution printing-machine, in which the take-off device d and delivery table a are arranged in front of the impression cylinder b, and is constructed with a shallow inking-apparatus arranged under the parts a, d, the ink-duct f being arranged directly under the table a, so that an operator standing at the front of the machine can operate the regulating screws f1 of the duct while standing in a position to watch the printed sheets

readily. The bed is constructed without an ink-distributing table, and the forme l is inked by rollers x supplied from the duct-roller f by intermediate rollers and a travelling roller v moving over a fixed distributing table t, the roller v being operated by a fork g actuated by the reciprocating bed. In a modification, the rollers x are supplied by intermediate distributing rollers, the table t being dispensed with. The construction is adapted to produce a machine as short as possible for the length of printing-forme.

A Paper Folding Machine.

A folding machine for folding paper sheets along a number of parallel or transverse lines, patented by Messrs. G. N. Wilford, A. G. Day and C. H. Darnell, comprises a plurality of folding tables, each having feed rollers and a folding device, and each rotatable about a vertical axis and adapted to be fixed in one of a number of operative positions. The arrangement shown comprises five folders supported one

FIG.1.



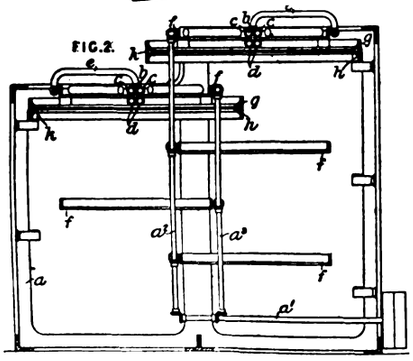


FIG.2.

above another in staggered relationship on a framework a. Each folder, consisting of two pairs of folding rollers c, d, and a co-operating blade b carried by oscillating arms e, is supported on a table f, secured to a member g rotatable on a fixed member h, balls k being interposed between the members g, h. Feed rollers l are provided along the sides of the tables f, and are adapted to be driven in whichever of the operative positions the tables are fixed by bevel pinions b4 on a pair of horizontal shafts b1, b2, receiving motion from upright shafts a2, a3, rotated from a main shaft a1. The oscillating arms e are actuated by a cam o on the shaft of a worm wheel q driven by a worm p on a feed roller shaft. The tables f are also provided with inclined rollers m suitably driven from the feed roller shafts to position the sheets against adjustable gauges. The sheets may be transferred to the successive folders by shoots.

Pulp Boards.

An invention communicated to Mr. G. M. Clark by the Agasote Millboard Co., relates to pulp board and comprises, broadly speaking, pulp board provided with a binder of montan wax. It has been proposed already to employ montan wax as a sizing for paper, but the proportion to the quantity of fibre is small; moreover it is in a colloidal condition.

The best results have been obtained with pulp board which is made by running paper pulp, wood pulp, or the like into a mould and, by means of pressure, removing the majority of the water (see for instance, British Letters Patent No. 7301 of 1908) and subsequently drying out the remainder of the water by the application of heat. The wax may be added to the fibre either before or after the latter has been shaped into a board.

It has been found that by far the best results are obtained by adding the montan wax in comminuted form to the beater while the pulp is being beaten therein. For this purpose it is advisable to grind the montan wax dry in a ball mill, as fine as possible and then to moisten it with water and thereafter to complete the grinding in the same mill. The wet ground montan wax will more readily mix with pulp in the beater, as it does not tend to rise to, and float upon, the surface of the water as it would do if added in the form of a dry powder. By adding the montan wax to the fibre in comminuted form, a more equal distribution throughout the entire sheet is obtained, and all the spaces between the fibres are filled up more readily, thus obtaining a more compact and waterproof board, having a better surface, and absorbing less paint when the surface is painted. Moreover, by this specific method, more montan wax can be mixed with the fibre without having the same squeezed out during the compressing process, and thus a board of greater tensile strength may be obtained. The comminuted montan wax seems to give results far superior to those obtained by the use of the emulsified wax, probably because the former is unchanged (unemulsified).

The proportion of montan wax, by weight, to the weight of fibre in the final product is preferably from 30 per cent. to 50 per cent., the exact percentage depending upon the use to which the board is to be put.

A board made as above described has high tensile and transverse strength and a high degree of hardness. It is also substantially waterproof and highly dielectric and may readily be bent to any suitable form, or embossed, after it has been rendered plastic by heating it slightly above the fusion point of the wax. On the other hand, it will not be injured by exposure to the sun when used as roofing or siding for buildings. In spite of its high tensile and transverse strength the material may be easily tooled.

A 200-TON paper mill, to cost £900,000, and to provide work all the year round for 500 men and for 1,200 men in the height of the lumbering season lasting seven months, is to be built at Port Alexander, Manitoba, by Canadian capital.

IN connection with the Irish Free State election, 1,315,000 ballot papers were distributed. The ballot paper was 22 inches by 16 inches and contained the names of 76 candidates. In Dublin there will be 117,000 ballot papers.

MESSRS. T. H. DAVIES AND SON, paper agents, have removed from Fleet street to 19, Ludgate hill, E.C.4.

New British Patents.

For the benefit of our readers we have arranged for any inquiries relating to Patents, Designs and Trade Marks to be answered, free of all charge, by a Fellow of the Chartered Institute of Patent Agents. Inquiries should be addressed, in the first instance, to the Editor.

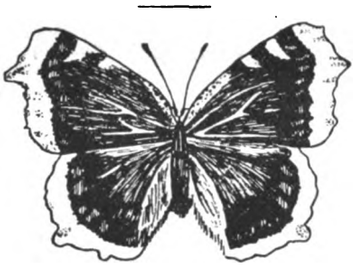
The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

AFTER adopting the Standardisation Agreement, which definitely fixed the 1,000 sheet basis, several leading houses appear to have decided that they are going to work on a different standard of their own choosing. At least half a dozen merchants are announcing that they can supply their papers in parcels of 504 sheets. Quite recently new sample books have appeared, in which all specifications and prices follow the old practice, stating reams of 480 up to 516 sheets. It is unfortunate that these should have been in progress while the standardisation scheme was hastening to its final acceptation. The compilers may have become tired of waiting for the standardisation issue, or they may have preferred to ignore the decisions arrived at by their representatives. Most likely the sample books of recent date have been on the stocks for a year or two, their compilation being undoubtedly a very long and tedious operation when many patterns have to be dealt with. Whatever the cause, there is now the proposition to be faced, how best to bring the specifications into line with the new standards. Much can be done through the medium of the price list, which is usually a separate item from the sample book itself.



* * *

IT is not easy, of course, to get a new scheme into effective working order immediately. Papermakers have a number of interests to study and not a few difficulties to overcome. Wholesale stationers and paper merchants, again, have to be brought into line. The Master Printers' *Circular* for September endeavours to infuse some courage and interest into paper dealers. The progressive paper merchant, it is urged, is preparing his plans to meet the requirements of the progressive printer, and since the agreement was signed is putting up his new stock and is ready to sell on the 1,000-sheet basis. Naturally, he is not desirous of having to handle general stock lines made up in two ways, but he will invoice on the 1,000 sheet basis, if requested, until present stock is exhausted and new stock ready on standard lines. It will naturally take time before the "change over" is complete, and there are probably a number of people who do not regard the new methods with favour. According to the *Circular*, "one or two paper firms are holding back in the belief that the printing industry is not sufficiently enlightened to see the advantages of the standard size and the 1,000-sheet basis, but we have confidence that if they persist in opposing the scheme they will find themselves wanting orders. Our members are urged to order in accordance with the scheme, and if there is indifference to supply on the part of any firm we suggest the order should be cancelled and placed elsewhere."

* * *

WHILE papermakers and merchants are gradually working their way toward standardisation, it may reasonably be asked "what are printers and paper users doing to shorten the period of transition?" The pioneers in the movement have certainly put their houses in order for the reception of paper on the new basis. The progressive paper users are with the pioneers, but together they are easily outnumbered by the non-progressive printers who care very little about altered methods of any sort. Somewhere in the region of thirty years ago printing type was standardised by the adoption of what is known as the point system. This was not a printer's movement, although it conferred the greatest benefit that the trade has known since the introduction of machinery. The cost to the typefounders was enormous, new punches and equipment being necessary. Notwithstanding the extreme folly of endeavouring to work with mixed bodies of types, some on the old system and some on the new, it is an almost indisputable fact that the majority of printing offices continue to do so. Typefounders still supply old-body type to some extent and some printers still buy it. We cite this as demonstrative of the non-progressive printer's attitude toward standardisation of any kind. To some extent paper is different from type standardisation; but if it does not involve the manufacturer in heavy initial outlay, it may very easily cause the paper merchant additional expense and difficulty with his stocks.

New Trade Marks.

452,822. Adhesive paper labels, adhesive binding and repairing tape (paper), price tickets (paper or cardboard), weight tickets (paper or cardboard), cloak-room tickets (paper or cardboard), admission tickets (paper or cardboard), wafers and seals, luggage and merchandise tags (paper or cardboard), index tabs, reinforcing tabs, receipt tickets, auctioneers' lot tickets, show cards, club cards, card blanks, score cards, score books, receipt books, check books, paper fasteners, pen clips, paper clips, letter clips, stringed barbs, ticket fasteners, erasers, pens, pencils, crayons, india-rubber bands, india-rubber stamps, stamp pads, artists' brushes, sealing wax, perforating presses, stapling presses, all being articles of stationery included in Class 39.—James Edward Brunton, trading as Brunton and Williams, 148 and 150, Peckham rye, London, S.E.22; printer and stationers' sundriesman.—May 11th, 1925. (By consent.)

A Paper Trade Directory.

Some new features are introduced into the 1925 edition of "Phillips' Paper Trade Directory of the World." The entire volume comprises 1,014 pages. There are, of course, the old and necessary features, such as an index to British, Colonial and foreign paper mills. The home section also sets out the mills in alphabetical and numerical order and as to counties. Makers of paper and millboard are classified according to the goods produced Equally useful are the sections dealing with bag and box-makers, paper stainers and wall-paper manufacturers, tinfoil and waxed paper manufacturers, enamellers, surfacers, etc., and a variety of other paper manufacturers. The lists of paper buyers, merchants and wholesale stationers, of British agents and mill representatives, pulp agents and representatives, British paper stock merchants and export shippers appear to be very complete. Some idea of the task of producing such a volume may be gathered from the fact that no fewer than 10,000 corrections, new countries, deletions, etc., have been made. Among the new features may be mentioned a number of Scandinavian shipping and trade marks, the new general trade rules agreed to between British, Scandinavian and Finnish paper associations, and the recent agreement as to the standardisation of paper and boards. These new features, added to those which are already familiar, including the watermarks and trade names which have been extended, render this book very valuable to all who require a quick and ready reference to the paper trade of the world in all its ramifications.

THE Beda paper mill at Wuzen (Saxony) is reported to have been completely destroyed by fire. The damage is estimated at 750,000 marks.

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES:

1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.
2.—It occupies a space of only six feet on the run, and is quite noiseless.
3.—The power required is such a small amount that it can be driven from any existing shafting
4.—Centres of any kind or width can be worked on the machine.
5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.
6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.

THE FUTURE OF SOUTH AFRICA

THE strong development and progress shown by South Africa, even during the recent depression, indicates in no uncertain fashion the measure of prosperity that country will enjoy in more normal times.

The trade outlook for the Union of South Africa in 1925 is extremely encouraging at the present moment, and the attitude of all in that wonderful country—from the Premier down to the smallest Printer—is one of well-founded optimism.

Supply houses catering to the Allied Trades anxious to develop the South African market will be sent a post-free copy of

THE SOUTH AFRICAN PRINTER AND STATIONER

the only Journal printed in South Africa catering to the Printing Trade. Issued monthly.

THE BRITISH & COLONIAL PRINTER

FOUNDED 1878. AND STATIONER PUBLISHED WEEKLY.

WITH MONTHLY SECTION FOR THE BOOKBINDER.

The Recognised Organ for Printers, Printers' Engineers, Wholesale and Manufacturing Stationers, and Makers of Machinery and Appliances for the Paper Bag, Envelope, Box-making, Bookbinding and all Paper and Board Consuming Industries.

VOLUME 97. NUMBER 15. [REGISTERED AS A NEWSPAPER.] LONDON: OCTOBER 8, 1925. EVERY THURSDAY. PRICE TWOPENCE

Standardisation for Box-Makers.

IMPORTANT REFORMS INTRODUCED.

An important movement has been carried through in the direction of simplification in the box-board industry of the United States. It began with a general conference held under the auspices of the Division of Simplified Practice of the Department of Commerce. This conference was attended by manufacturers of box board, box-makers, shipper organisations, and others, and resulted in the adoption of a series of material reductions in the thickness of box-board. Though constituting one of the younger industries, in about twenty years box-board has risen from an unknown product to a point where it now supplies fully 60 per cent. of the packaging trade of America.

Excessive Variety of Thicknesses.

As is frequently the case, such rapid development has been attended by a mushroom growth of hybrid practices and customs which bade fair to limit the further growth of the industry, and for the past few years had been actually reducing profits. One of the most objectionable features of this condition was the excessive variety of thicknesses in which the product had been made. Realising that this condition arose mainly from lack of proper analysis of the customers' needs, coupled with severe competitive demands and over-zealous salesmanship, the manufacturers of the box-board and makers of the boxes called upon Mr. Hoover in May, 1924, for assistance in eliminating this undesirable and excessive variety. Acting at his suggestion, a simplification committee of the industry was appointed to uncover the real facts in the situation through the medium of the survey, and, on the basis of the facts, to bring forth a set of recommendations for submission to the industry at large.

As a result of the survey it was found that box-board in all its forms was being made in some 250 different thicknesses, not a few of which varied from one another by as little as one-thousandth of an inch.

Of the 250 thicknesses it appeared that 190 meant practically nothing from the standpoint of utility, strength, durability and appearance. Hence, they were unnecessary and undesirable and could well be done away with to the mutual advantage of producer and consumer.

The gist of the recommendation as submitted by the committee to representatives of all branches of the industry at a general conference called in New York on July 29th was that: Non-bending boards be reduced from 85 thicknesses to 16: bending boards from 80 to 16; pasted chip board from 25 to 9; container board from 14 to 4; folding box board from 20 to 10; solid manillas from 20 to 5.

The conference unanimously endorsed these recommendations and voted that they should become effective October 1st, 1925. A standing committee of the industry was also authorised.

Standing Committee.

This committee is to supervise the application of the simplified list of thicknesses, to receive such objections to the present recommendations as may develop in the course of the year's tryout, and to bring forth such other recommendations as may be deemed constructive at the annual revision conference.

It is estimated that when the present recommended list of thicknesses is fully in use throughout the industry, it will mean a saving of five million dollars a year to manufacturers, distributors and consumers. On the basis of the industry's present annual business of something over a hundred million dollars, this is a splendid return on a year's investment of time, and a few thousands in money.

To Study Colour Question.

In canvassing the present situation, the committee also determined that the excessive number of colours and shades in which box board was made was causing losses, and hence recommended that action be taken on this phase.

So the standing committee was authorised to study this question in conjunction with the Textile Colour Card Association, and to present a recommendation for six standard shades of box board colours, acceptable to the folding box group, with the understanding that any desired shade may be had on an order of 20 tons, or over. Work will be started on this shortly, and it is hoped to have the recommendations ready for action by the first of next year.

Attached is the list of the simplified thicknesses of the box board:—

GAUGE LIST NO. 1.

For Non-Bending Boards—Plain Straw and Plain Chip Boards—Solid Jute, dry finish; Filled Wood Pulp, Filled News Board, Single News Vat Lined Chip and Single White Vat Lined Chip.

Basis 25 x 40	No. 1 Finish Thick to No. and Rough.	No. 2 Finish Medium.	No. 3 Finish Thin to No. and Smooth.	No. 4 Finish Extra Smooth.
No. 35	·064	·060	·057	·051

Superiority

We make the Miehle which printers have made famous. That is why the Miehle—always in the highest class—remains the best. It has been made superior by the manufacturers and by the users jointly—

By the manufacturers through the extreme care taken in every stage of its manufacture ;

By the printers through their constant orders, whereby it was possible for us to maintain the high standard of its manufacture at a reasonable price.

As the best printing is the most profitable, it may pay you to write for particulars of this British-made press for perfect printing—The Miehle - the two-revolution machine which raised the standard of press work throughout the United Kingdom.

BUILT IN 4 SIZES.

THE "TIP TOP" PLATEN

is the finest and largest selling jobbing Platen on the market.

Low Price, without disappointment in efficiency or looks.

Economy without sacrifice of performance.

Great impressional strength without unnecessary weight.

High speed and utter simplicity in design.

The lowest upkeep cost, we believe, of any platen in the world.

A Good Investment

The man who owns a Tip-Top Platen has the pleasing assurance that it will continue to serve him efficiently long after another platen would have to be replaced.

Even though he should use it twice as long as an ordinary platen, he knows he would still take pride in its performance and appearance.

His Tip-Top is an INVESTMENT that will yield from 50% to 100% dividends on the original cost.

And when he does dispose of it, its resale value will appeal to him as a further sound reason for purchasing another Tip-Top.

Delivery from London Stock.

Rules for Figuring Weight of Odd Sizes.

Grades under gauge lists 6, 7 and 8.

Upon referring to the gauge list on grade in question.

Use the decimal table, which is on the basis of 1,000 sq. ins. and is accurate. First find the sq. ins. in the sheet wanted and multiply same by the decimal in 25 by 40 table above, then point off decimals and you will have the correct weight of odd size per ream.

EXAMPLE: 22 x 34, ·018 Patent Coated. (See gauge list 6.)

22 x 34 = 748 sq. in. x 266·20 = 199 lbs. per ream.

Messrs. Dawson and Willis, Sentinel House, Southampton-row, W.C.1, have secured the following additional agencies:—Ferd. Konwallin, Vienna, maker of non-curling gummed papers, in sheets, rolls and coils, and the "Klebfest" framing strips; Rusconi Fraschini and Co., Milan, makers of tin and lead-foils, embossed bottle capsules and tubes. Both these mills are well known for the quality of the goods they make and give special attention to orders from England.

Coateds of Character.—A comprehensive collection of coated papers and boards, the product of Messrs. F. E. Weidenmüller A.-G., Dreiwerden, Germany, for whom Messrs. Davies and Royle, Ltd., of 7, Old Swan-lane, E.C 4, are sole agents, has been sent to us for comment. The German method of sampling is typified by this set and there are many points in its favour. Each grade or series is represented by single or fly sheets of octavo size of each colour and substance carried in a very neatly machine-made folio or wallet, bearing the necessary specification. The set of folios is issued in a strongly made box with hinged fall-front, label to view. Each single sample has a printed specification, and to demonstrate printing quality several very well-executed specimens of monochrome or colour work are enclosed in the folios. The papers themselves comprise three grades—wood free, partly mechanical body, and mechanical—and among the series are matt, half-matt, and glossy finishes, while there are also some very artistic colour ranges. The coating is as perfect as the discriminating printer could wish and the choice of three finishes gives him an option which he can turn to good account.

Free from defects!

TYPON
PAPER NEGATIVES

represent the perfect medium for black-white photo-reproduction work.

The blacks are of uniform density : the whites sharp and clear-cut. There is an entire absence of streaks, pin-holes, or any of the usual troubles.

The Typon Process does not call for exceptional treatment or highly skilled labour. No special equipment is required.

Typon material is inexpensive, sold in convenient quantities, and adds to the resourses of the Litho and Planographic Printer while greatly reducing his working costs.

The Typon Catalogue, fully illustrating and describing the process, will be sent on request.

Trade Notes.

Messrs. Millington and Sons, Ltd., whose long connection with Budge-row will soon cease, have taken the premises so long occupied by Messrs. Pitman and Sons at No. 1, Amen-corner, Paternoster-row, to which address they hope to remove early in the New Year.

The Press Association is authorised by Sir Charles Starmer to state that there is no truth whatever in the suggestion that the *Westminster Gazette* is about to change hands.

The *Yorkshire Evening News* says its directors have no knowledge of the contemplated developments referred to in a rumour concerning the coming flotation of a combination of Liberal newspaper interests in the North of England, which was to include the *Yorkshire Evening News*.

The chairman of the "Independent" Newspapers, Ltd., Dublin, authorises the statement that so far as the *Irish Independent* is concerned there is no truth in the report that an interest in the *Irish Independent* has been, or is about to be, acquired by a London newspaper magnate.

Revision is to be made of the lists of firms eligible to tender for the requirements of the Egyptian State Railways, Telegraphs and Telephones Administration. Printing machines are among the classes of goods comprised. All manufacturers who wish to be registered must apply to the General Manager of the Egyptian State Railways, Telegraphs and Telephones, in Cairo, quoting reference number 129.45/7. All such applications must be made before October 15th, 1925.

Wrapping Paper and "Protection."—"To inquire into and report upon an application made by the Union of Wrapping Papermakers in accordance with the terms of the White Paper relating to procedure and inquiries in connection with the Safeguarding of Industries, presented to Parliament on February 3rd, 1924, for the imposition of a duty upon packing and wrapping paper." This was the object for which the Board of Trade appointed a committee consisting of Sir J. B. Brunyate, K.C.S.I., C.I.E. (chairman), Mr. Douglas Wenham, and Mr. J. Rowan, J.P., and the committee held their first sitting at the offices of the Board of Trade on Monday. The inquiry was continued on Tuesday and yesterday. A report will appear in next week's issue.

At the quarterly meeting of the Council of the Federation of Master Printers to be held in London next Tuesday, the agenda will include, we understand, preliminary arrangements for the Federation annual meeting in 1926, whilst details of the next phase of the collective advertising scheme will be reported for approval.

Production Records.—The Costing Committee of the Federation of Master Printers are endeavouring to obtain a representative selection of production records relating to the printing trade in this country. Members of the Federation are being requested to supply data which will make possible the working out of average figures which should be of value to the industry generally.

Mr. Arthur Cade Bemrose, the fourth son of Mr. William Bemrose, of Derby, and brother of Brigadier-General W. W. Bemrose, the chairman of Messrs. Bemrose and Sons, Ltd., Derby, has died at Yarmouth, Isle of Wight, at the age of 58 years.

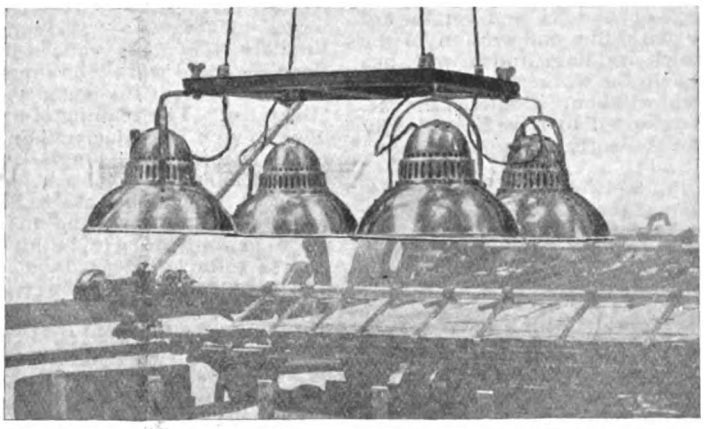
At the funeral of Mr. George Samuel Hall, which took place at Plymouth Old Cemetery on Sunday, there was a large attendance, among those present at the graveside being Messrs. F. E. Northey (chief overseer), S. Hunn (night overseer), H. Doble (chief reader), J. Salter and W. J. Elliott (father and clerk respectively of the chapel), all of the *Western Morning News* staff. The floral tributes included one from the *Western Morning News* "chapel" and another from the St. Budeaux Working Mens' Constitutional Club.

Mr. Hugh Nicol Livingstone (77), of Glasgow, leader writer of the *Glasgow Evening Times*, and before that editor and manager of the *Greenock Advertiser*, left (personal estate) £11,331.

Striking examples of commercial art are to be seen at the fourth annual exhibition of posters and publicity designs at the Faculty of Arts Gallery, Upper John-street, W. The exhibition will remain open till October 31st.

DRYING THAT RUSH JOB

Showing single unit, suitable for Platens, Vertical Miehle and Kelly Machines.



THE WATFORD SYSTEM

Patent No. 177232.

A simple apparatus for Printers, to assist the drying of illustrated work so that earlier delivery may be made without set-off.

By the use of this system interleaving can be avoided with all classes of commercial printing, and the work handled in the folding department with safety in half the time usually allowed.

Write for booklet showing various models for all purposes and Special Offer to Members of the F.M.P.

Showing apparatus attached to Quad-Crown Miehle Machine.

HUDSON & STRACEY, LIMITED

CHARLES STREET, WATFORD, HERTS.

London Office: Sentinel House, Southampton Row, W.C. 1.

Telephones: Watford 619; Museum 8340.

Re-Grading.—The next meeting of the Re-Grading Joint Committee will be held at Halifax on October 27th.

The new postal regulations which came into force last week as a result of the Postal Union Convention concluded at Stockholm in August, 1924, involve several alterations of note with regard to postings to and from places abroad. Not only is the maximum size for post cards increased to $5\frac{7}{8}$ in. by $4\frac{1}{8}$ in., but the postage on literature impressed in relief for the use of the blind is reduced; the minimum postage on insured boxes is increased to 10d.; some concessions have been made as regards the manuscript additions permitted on printed papers—formulas of courtesy expressed in not more than five words or five conventional initials may be added by hand to pictorial cards; sample packets may be as much as 18 in. in length; valuable documents such as plans, estimates, contracts, etc., may be sent in insured letters. The revised regulations are printed in full in the October supplement to the Post Office Guide, a copy of which may be consulted free of charge at any post office.

Readers and Authors' MS.—The following resolution was unanimously passed at the October quarterly meeting of members of the East Anglia District, Provincial Guild of Printers' Readers:—"This meeting considers that a reader is justified in departing from the author to correct spelling, punctuation and grammatical errors when this involves little or no trouble, but in other cases he should communicate with or refer back to the author." A paper entitled "How Far are Readers Justified in Departing from the Author?" had previously been debated upon.

A beautiful photogravure reproduction of a photograph of the Printing Machine Managers' War Memorial at Printers' Hall, Blackfriars-road, London, together with a copy of the Dedication Address is being sent to each donor to the subscription list which Mr. H. Wilson Howes is compiling in connection with his acting as steward for the forthcoming Printers' Pension Festival. This is the fourth occasion on which Mr. Howes has accepted duty as a steward for the Festival.

Beginning with the October 3rd issue, *Pitman's Journal* will be known as *Pitman's Journal of Commercial Education*. It will contain 48 pages instead of 32, and will enlarge the range of its contents. The price, 2d., will remain unaltered.

Printers and the Industrial System.

IMPORTANT MATTERS DISCUSSED.

A good deal of discussion has, we believe, been caused in printing trade circles by the article entitled "Sir Ernest Benn's 'Confessions,'" which appeared in our columns last week. The opinions there expressed give an opening for some earnest and profitable thinking on the part of the printing trade, and we are glad that two prominent printers have already let us have some comments for publication in our columns. The matter is further dealt with in a leaderette which will be found on page 268.

Brig.-General W. W. Bemrose's Views.

Brigadier-General W. Wright Bemrose, of the famous Derby printing house, and chairman of the Joint Industrial Council, writes:—

Sir Ernest J. P. Benn's expression of opinion comes at an opportune time, and calls for the closest consideration by both the trade union leaders and employers of labour. Sir Ernest's position, as he states it, is typical of that of thousands of others, with this exception, that in many cases the proprietor or employer does not do so well for himself, but in spite of that is still finding employment and wages.

Take the coal industry, where many mine owners and colliery companies have exhausted their money reserves, in some cases to the extent of becoming bankrupt, and have, for considerable periods, had to forgo any interest on their capital. All these capitalists, whether making a profit for themselves or not, have nevertheless found employment and wages for vast numbers of workers, and yet the cry is to do away with the one section of the community which is doing, and always has done, most to help the workers.

At the recent Labour Conference, Mr. MacDonald is reported to have been deeply impressed with "its sanity and quiet business-like methods," and so have a vast majority of those interested in the welfare of this country. The action taken at the Conference of repudiating Communism has come as a great relief to most thinking men and women. But mere repudiation will not be enough to secure our safety as a nation; we must act.

Employers Should Point the Way.

The results of the Conference give us both the opportunity and the time to act; the immediate question being, how?

Writing as an employer, I do not hesitate to say it is up to us employers to take the first step, to at least indicate our desire to confer and reason together, before Labour takes what many of us consider would be, even as regards its own interests, a fatal step; and we admit its own interests are what it must look after. Can we then show Labour that, after all, it may be making a big mistake in not co-operating with Capital, *i.e.*, using what it has to offer, rather than treating it as its worst enemy?

In our (printing) industry our Joint Industrial Council has done much to bring about a better and fuller understanding, and I believe it will go much further in this most desirable direction. But, to me, it seems too slow and cautious on both sides. We must have more plain speaking, closer consideration, greater confidence and co-operation—all most necessary, but admittedly difficult to attain.

Supposing that the employers are really anxious for closer co-operation, and are willing to bring their employees more into their businesses in some way—and we have had many signs of this—how is it to be done?

Co partnership, profit sharing, aad similar methods have been tried, and generally failed. Why? I think because there has not been the necessary confidence on the part of the worker, and frequently because of the non-approval of such methods by the trade unions.

Trade Unions' Policy.

If, then, there is to be a "coming together" in the interests of the workers as well as the employers, the trade unions must first (of course, after due discussion and arrangement) alter their policy as regards their members taking up some interest (beyond that of wages) in the businesses in which they are working. And, secondly, there must be an adjustment which will remove some of the present restrictions on output, which add nothing to the welfare of the worker, but keep up prices, and frequently prevent extension of business.

Further, the workers will themselves have to attain to a new status, as interested parties, and work and pull together, as partners have to do; for they will have to do their part towards achieving the additional success in which they are to participate.

I may be told that I have merely reiterated a string of well known platitudes. That is possibly the best evidence that there is something behind them.

The question, all the time, is, are the workers, through their unions, going to quietly and seriously investigate the position of working with the capitalist and his capital, rather than throw over—in favour of untried and largely imaginary methods—a system which in the past was responsible for the wonderful advances made by the industry of this country, and are they going to overlook the gradual and steady improvement of the workers during the same period?

It surely is a question of either co-operation and success on the one hand, or, on the other hand, a widening breach between the various sections of the producers, with the inevitable result of failure, and an all-round lowering of the status of living.

Which is it to be?

Queries from Mr. J. E. Francis.

Mr. J. Edward Francis, proprietor of the Athenæum Press, invited to express an opinion, writes as follows:—"Without knowing intimately the facts concerning Sir Ernest Benn's life and work it is impossible to agree or disagree with his being 'An Unrepentant Capitalist.' The reading of the article on his book in your last issue, and one in last week's *Public Opinion*, have suggested the following. Here is a man who is earnestly desirous of being of all possible use to his fellows. His forte is organisation, and his bent towards trade journalism. He builds up a business with a turnover of £400,000. He gives employment, under conditions which we assume are up to the average, to a great many people. For himself he takes £10,000 a year from the business. He is an ardent anti-Socialist. Is he a good representative of Capitalism?

"He expresses regret that owing to the high costs of printing he has been obliged to discontinue the issue of over a dozen publications. His remedy for such high costs is more and better work from employees. Could he do anything to be more effective as an advocate for his remedy? With what incentive is he attempting to inspire the said employees so as to cause them to act as he wishes? Because of the confessed ignorance it is only possible to ask questions, Sir Ernest Benn's replies to which, if he gave them, would help to answer the first question—as to his effectiveness. Would any part of the £10,000 he presumably spends apart from his business have been better employed in keeping going one of the numerous journals which have had to cease publication? £10,000 is a comparatively large income. Is any of it being spent on what is superfluous (or what should be superfluous) to the enablement of Sir Ernest's carrying on his work effectively? He tells us of one duplication—two motor cars. One is no doubt a necessity of which he is making the fullest possible use. Is the second one in the same category? Has Sir Ernest carefully considered all the items of his expenditure and decided that each one is more wisely disbursed than the money would have been in paying wages, let us say, for work done in connection with one of the abandoned journals? If so, either we have to congratulate Sir Ernest on the most consistent economy in the sense of putting all he possesses himself of to the best possible use—or we have to commiserate with him on his comparatively small belief in the utility of the journals which he issued."

East Anglia Printers' Readers.

The October quarterly meeting of the East Anglia District, Provincial Guild of Printers' Readers, was held at Beccles on Saturday, with Mr. H. Edwards in the chair. Members were present in good numbers from Norwich, Bungay, and Beccles printing houses.

The secretary (Mr. W. E. Cooper) presented the quarterly report and statement. Three new members had joined, and one had transferred to another district. The procedure with regard to the Lowestoft resolution was detailed, and preparation made with regard to future receipt of ballot papers. Information with reference to formation of two new branches of the Provincial Guild of Printers' Readers, with headquarters at Manchester and Oxford, was received with approval. This implied an increase of 37.

The report of the district treasurer (Mr. A. A. Oliver) showed a satisfactory financial balance in hand.

Mr. F. T. Peachey (Beccles) read a paper dealing with the position of readers with regard to authors' manuscript, which was followed by a general discussion.

Trade Union Matters.

T.A. AND TIME DOCKET.—The Executive Council of the Typographical Association have recently had under consideration a time docket which has been introduced by a firm in the Bolton (Lancashire) Branch. The T.A. members employed at the office had strongly objected to use it, and had only accepted it under protest. The Executive Council decided to inform the firm that they could not agree to the particular docket introduced, but that there would be no objection to that approved by the Federation of Master Printers and the Printing and Kindred Trades Federation.

T.A. ORGANISATION IN THE WEST.—Mr. H. E. Carss, of London, organiser to the Typographical Association, has reported to the Executive Council on his visit to the Exeter district for the purpose of improving the organisation of the Association. Visits had been paid to Truro, Bodmin and St. Austell, and useful work had been accomplished at each town. He has also reported on similar visits to Chelmsford and Guildford.

Stereotypers' Auxiliary Concert.

Good Work for Printers' Pensions.

The Stereotypers' Auxiliary, which attains its twenty-first birthday this year, held its opening concert of the season on Monday at Anderton's Hotel, Fleet-street, E.C. Both from the point of view of the quality of the programme and the sum secured on behalf of so excellent a cause, the efforts of the committee deserve every congratulation. The chair was occupied by Mr. W. H. Crosby and Mr. F. E. Shillam (joint auxiliary secretaries) and amongst those present were: Messrs. W. C. Warren (general secretary, National Society of Electrotypers' and Stereotypers), A. Chadwell, T. Middleton, G. W. Sharvell, W. Bullett, J. Parker, W. E. Condy, W. H. Combs and J. Garner.

The plate realised £85.

During the course of the evening Mr. W. C. Warren, in proposing a vote of thanks to the chairmen, congratulated Mr. George Harrison on the excellence of the musical programme. Mr. Warren then went on to say that the concert that evening was a very important one because it not only represented the beginning of the season's work, but was the first one to be held in the year that marked the Auxiliary's coming-of-age. It was also important because of the fact that they had their two joint secretaries in the chair. With regard to these two gentlemen he claimed that no Auxiliary possessed men with more enthusiasm for the splendid work of the Printers' Pension Corporation. After directing attention to the twenty-first celebration dinner the Auxiliary was holding on the 17th inst. at the "London Tavern," Fenchurch-street, Mr. Warren emphasised the urgent need that existed for increased support to secure the success of their candidates at the election of 1926. Amongst the candidates mentioned was one employed at a small office in Cambridge. This candidate, he thought, gave to the members of the Auxiliary the opportunity of showing to their provincial friends their willingness to help them. Concluding, Mr. Warren, on behalf of the committee, extended to the chairmen thanks and congratulations on the magnificent result of their efforts.

Mr. Chadwell, seconding, spoke highly of the many years of painstaking and consistent service rendered by Mr. Crosby and Mr. Shillam on behalf of the Auxiliary.

Mr. Crosby, replying, expressed thanks for the hearty manner in which the vote of thanks had been accorded, and also spoke of the time when their Auxiliary was of much less importance than it was to-day and the many men who had brought it to its present prosperous condition.

Mr. Shillam, who also responded, referred to the assistance they had received from the various chapels, and especially mentioned the generosity displayed by many of the smaller ones.

The concert arrangements were again in the capable hands of Mr. George Harrison. Notable amongst the artistes in a lengthy and diversified entertainment were Miss Beatrice Telegar, a lady baritone who has recently arrived in this country from New Zealand; Miss Florence Weatherley, a soprano who met with much appreciation, and Miss Edith Price (comedienne). Mr. Albert Edgar (tenor) sang "On with the Motley" with very pleasing effect. Amongst the humorous turns Mr. Harry Speller, Mr. Gordon Marsh and Mr. Louis Hertel (entertainer and conjurer) were perhaps the leading representatives. Amongst other prominent artistes were Miss Alice Morrell (contralto), Miss Nancie Hanton and Mr. Leslie Ross (comedy entertainers), Miss Peggy Rolfe (monologist), the Hope Havart Duo, Miss Lilian Brion (violin and concertina soloist).

Mr. Chas. Hardy as the accompanist was quite equal to all the demands made upon his skill.

A successful evening was brought to a close by the singing of the National Anthem.

CALENDARS, particularly the extensive "Boldefigger Family" of calendars, together with monthly pads and daily pads, diaries, etc., figure in advertising literature sent us by Messrs. Geo. W. Lockwood, Ltd., of City-road, Manchester. The full illustrated particulars given, together with prices, suggest that many a printer could find a remunerative side line in the pushing of some of the items shown.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies, Machinery for Sale and Wanted, Businesses for Sale and Wanted, Partnerships and Investments, Miscellaneous.

One Insertion 3/0
Three Insertions 6/0

For every line exceeding three lines **6d.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion 1/6
Three Insertions 3/0

For every line exceeding three lines **6d**

Sales by Auction, Tenders, Patents for Sale, Legal and Financial Announcements.

Towards Industrial Betterment.

THERE will be found on page 266 of this issue some discussion, worthy of general consideration, arising out of the article which we published last week by way of a review of Sir Ernest Benn's new book "The Confessions of a Capitalist." This discussion serves to indicate once more that the responsibility for the imperfection of our present industrial system does not rest wholly with the employers or with the employed. Both parties have often erred, and do still err, in conceiving of their respective functions in the work of the world. Equally inimical to progress are, on the one hand, the ambition of giving the minimum of labour for an enforced maximum of reward, and, on the other hand, the ambition of giving the minimum of reward for an enforced maximum of labour. A prosperous and contented industry must be sought in another direction. For the employer there will be increased security and lasting satisfaction in the recognition of co-responsibility and the fairer sharing of both the risks and the rewards of industry; whilst the employee who enlarges his outlook to make the achievements and fortunes of the firm his own will find a new incentive to effort and to personal efficiency. The fact is that the nearer we approach towards the ideal of work as communal service, the nearer we approach a peaceful and beneficent reconciliation of the Socialist and Capitalist ideals—incentive and opportunity for private enterprise being combined with the co-operative principle of "each for all and all for each." Happily the printing industry, through its Joint Industrial Council, has made a notable start towards this consummation, but it is highly desirable that progress be hastened. We believe there already exists sufficient good will and good sense on both sides of the J.I.C. table to make possible the requisite speeding-up. The first step now is a mental one—a frank facing, both by employers and trade unions of the ideal which is ahead of the industry and also of the obstacles on both sides that hinder the approach to that ideal. If this inner mental step is taken, there cannot fail to be an outer beneficial result in the betterment of relations and conditions throughout the trade.

Personal.

THE RT. HON. F. O. ROBERTS, J.P., was elected to the Executive Committee of the Labour Party at the Party's Conference at Liverpool last week. He is the representative of the Typographical Association.

ALDERMAN CEDRIC CHIVERS, the well-known bookbinder of Bath, is being invited to accept nomination for a further term as Mayor of that city.

MR. A. CUTHBERTSON, lately deputy manager, binding department, Messrs. de la Rue, has resigned, having joined the staff of Schools and Services Supplies, Ltd., as manager of their stationery department. His late staff have presented him with a massive clock suitably inscribed with their good wishes.

MR. A. CHADWELL (United Newspapers), the esteemed president of the Electrotypers' and Stereotypers' Managers' and Overseers' Association, was last week unanimously re-elected president of the Electrotypers' and Stereotypers Auxiliary to the Printers' Pension Corporation.

MR. A. E. HOLMES (secretary of the Printing and Kindred Trades Federation) is a member of a small committee appointed by the Board of Trade under the Safeguarding of Industries Act to enquire into and report upon an application made by the British Brush Manufacturers' Association for the imposition of a duty upon brooms and brushes.

MR. WYNNE WILLIAMS, advertising manager of *The Times* since 1922, has joined the board of Messrs. Eyre and Spottiswoode, Ltd. (Publications), and will take over the control of the advertising policy.

MR. H. HUDSON, of the composing room staff of the *Oxford Times*, has been presented with an oak chiming clock on the occasion of his marriage.

MR. T. P. O'CONNOR, M.P., celebrated his 77th birthday on Monday, and received messages of congratulation and goodwill from all parts of the world.

A DINNER in Mr. O'Connor's honour was given on Monday evening at the Trocadero Restaurant by the Old Galwegians' Association.

MR. C. A. MCCURDY, K.C., addressed a large gathering of members of the Publicity Club of London at the Hotel Cecil on Monday, the occasion being the first meeting of the winter session. His subject was the future prospects of British trade.

COUNCILLOR E. S. BARDSLEY, the editor of the *Rotherham Express*, has been presented by the staff with a case of silver teaspoons on the occasion of his silver wedding.

MR. D. R. LAMB, the editor of *Modern Transport*, will give the first of a series of lectures on Transport at the London School of Economics.

AN interesting ceremony took place in the reporters' room of the *Bury Times* office on Monday afternoon, when Mr. William Bowker, a member of the reporting staff was made the recipient of presents on the occasion of his recent marriage to Miss Florence M. Dyson. Mr. J. W. Wild, editor of the *Bury Times*, presided. Mr. Thos. L. Whitehead, managing director, on behalf of the *Bury Times* Printing and Publishing Co., presented Mr. Bowker with a cheque, and recalled that Mr. Bowker had been in the employ of the firm for 27 years, and his services were much appreciated. The gift from the staff consisted of a water colour drawing by a local artist (Mr. Joseph Knight), in beautiful English gilt frame.

Printing Conditions in Russia.

British Trade Unionist Describes Impressions of a Personal Visit.

It will be remembered that Mrs. A. Bridge, an official of the National Union of Printing and Paper Workers, was a member of the women trade unionist delegation which recently visited Soviet Russia, she being appointed to represent the Printing and Kindred Trades Federation. That Mrs. Bridge was very favourably impressed by much that she saw is evident from an account which she contributes to the Federation *Bulletin*.

After intimating that the visitors were given every facility to study the trades in which they were specially interested, Mrs. Bridge refers to the need for the promotion of a better understanding between the printing industries of this country and Russia. She writes:—

Without exception, in every printing works we visited, kindly expressions of goodwill were extended to the printing trade in England, and I was asked personally to use all my influence, as a member of the Executive Committee of the Printing and Kindred Trades Federation, to bring about a regular communication on policy and progress between the two countries.

Workers Well Cared For.

It is considered in Russia that the printing trade in England is exceptionally advanced, and frequent communication and interchange of ideas might be beneficial to both countries without pledging either to depart from their agreed policy. After seeing the devastations which are a heritage from the Tsarist regime, and the splendid manner in which the workers have set themselves out to rebuild their country, provide decent houses for themselves, educate their children and stamp out illiteracy among those who are no longer young, give every apprentice a chance of learning his or her trade throughout, pay equal wages to either men or women for the same work, I believe the printing trade in England will accede to their earnest request and give them the benefit of our long experience. That is all they ask.

Every worker in the printing trade in Russia is entitled to a month's holiday with pay, and the apprenticeship system is a model for other countries to follow. . . . If any workers break down in health they are sent to the rest homes or sanatoria, which are not simply for tubercular subjects as in England, but cater for all ailments. Here they receive free treatment for six weeks with an extension of time if the doctors consider same necessary, and they are paid full wages. Amongst the women the greatest features of the Soviet system are that they are receiving equal payment to the men, for similar work, and the two months' rest before and after confinement, with full pay.

Printing Equipment.

We noticed in several places that only very antiquated machinery was in use. For instance, at Tyver there was only one feeding machine in the place, yet the production had increased from 250,000 to 800,000 copies locally. There were 600 peasant correspondents subscribing to this paper.

In the first State Printing Works in Moscow we saw a self-binder being installed. Here we counted 14 new linotype machines. In another department there were new machines stopped for the lack of skilled operators. The most modern and up-to-date works was the workers' *Gazette* in Moscow. This place has been constructed recently and is a model for light, air and space. Hot and cold baths are provided for the workers, and overalls supplied and washed by the management. The floors consist of a special wood and rubber mixture, and all the walls and ceilings are painted pale grey to ease the eyestrain. The wage for compositors and other skilled workers ranges from 90 to 120 roubles per month, this representing an increase of 50 per cent. over pre-revolution rates. Other workers average 77 to 85 roubles per month.

In the papermaking trade there was always more than one skilled man on the machine in addition to the apprentices. The same applies to the beating house. The Zenovieff Paper Mill employs 1,000 workers, and there are four machines varying from 70 to 100 inches in width. There were two machinemen and two assistants on each. The wages of machine men and beater men vary from 120 to 130 roubles per month. There were also two men on the calenders, which had ten bowls on each. The largest machine was built on a specially constructed floor, the reel end of the machine and part of the calenders appearing on a higher floor instead of, as is usually the case in this country, the whole of the machine being built on a ground floor.

Sorters and finishers wear long peaked caps to prevent eye strain, and every worker has a separate locker for clothes, etc. Sixty per cent. of the output was sheets and 40 per cent. reels. The average wage of women workers was 60 roubles per month. Baths are provided for the workers after 5 p.m. each day.

There was a factory school attached to the works, where 28 girls and 72 boys were in training. At the age of 14 years, four hours are spent in the school and four in the mill; at the age of 16, two hours are spent in the school and six in the mill, and at the age of 18 years they start to work eight hours in the mill. All workers in Russia have a week of 48 hours or less. All apprentices get two months' holiday per year with full pay, and receive full pay all the time whilst in training. They have an opportunity of learning the trade throughout, and can continue their studies after the age of 18 years through the Workers' Club.

We were informed that the Soviet Government have decided to make a grant to the papermaking industry for the purpose of building a new paper mill, as the combined output from the mills is nowhere near to the demand. The grant was for 2,000,000 roubles.

Although the wages may seem small in comparison with those in England, when the cost of living is taken into consideration and the many advantages the Russian workers have in the direction of small rents, rates, full wages whilst sick, and reductions in many other directions, they are comparatively much better off than workers in this country. There is great enthusiasm amongst all workers for the Soviet system, as they are all assured that as production increases their standard is increased accordingly. The profits are being used for the benefit of the whole community instead of going in the pockets of a few.

If any worker considers that he or she is entitled to be placed in a higher category for wages, the case is put before the works committee, upon which only trade unionists are entitled to serve, and they are the deciding factors as to whether the increase is granted or not.

When a worker in Russia has given 35 years of service to any industry in any capacity, he or she is guaranteed sufficient to live upon for the rest of their lives. They are termed "Heros of Labour." What an example for other countries to follow.

The annual dinner of the Newsvendors' Benevolent and Provident Institution will be held at the Hotel Cecil on November 3rd. The Institution, which was founded in 1839, makes provision for aged and infirm members, their widows and orphans who may be in temporary difficulties. Sick parents are sent to convalescent homes, orphan childen are cared for in selected institutions, and financial help is given in cases of need. There are at present 68 pensioners.

The American Miehle Company's Presses

Automatic.

NO machine can ever be completely automatic.

The American Miehle Company's Vertical Job Press more nearly approaches automatic operation than any other sheet-fed press, because it requires so few adjustments between jobs, because it is easy of operation and because its simple mechanism enables it to run almost uninterruptedly.

Come and see it at our Showroom—any time—any day.

THE AMERICAN MIEHLE COMPANY'S PRESSES ARE MANUFACTURED BY THE MIEHLE PRINTING PRESS AND MANUFACTURING CO. AT CHICAGO AND ARE SOLD IN GREAT BRITAIN AND IN BRITISH OVERSEAS TERRITORY BY THE

MIEHLE PRINTING PRESS AND MFG. Co LTD.,

RECEIVER APPOINTED OR RELEASED

WATKINS PRINTING AND STATIONERY CO., LTD. (Swansea).—C. H. Harvey of Central Buildings, Fisher-street, Swansea, was appointed receiver on September 22nd, 1925, under powers contained in debentures dated December 20th, 1898.

BANKRUPTCIES.

SUTLIFFS, LTD., printers, stationers, etc., 11, Albion place, Clerkenwell, E.C. Under a compulsory winding up order made against this company last April accounts have been lodged showing liabilities £1,399; assets valued at £398; and a deficiency of £2,077, with regard to contributories, the issued capital being 1,752 ordinary shares of £1 each. Mr. E. T. A. Phillips, official receiver and liquidator, reports that the company was registered as a private company on October 8th, 1924, with a nominal capital of £1,800, divided into 1,800 ordinary shares of £1 each, and was formed to carry on business as bookbinders, stationers, printers and manufacturers of account books and all kinds of fancy articles. The directors of the company have been George William Sutliff and Henry Edgelow, both of whom were appointed by the signatories to the Memorandum of Association. Edgelow was appointed secretary under the Articles of Association; neither he nor Sutliff have received any remuneration, and there is no record of their remuneration having been fixed. The registered office was situated at 11, Albion-place, Clerkenwell, E.C.1, where also the business was carried on. Although it is not stated in the Memorandum of Association there is no doubt that the company was formed to acquire the business of account book manufacturers, etc., formerly carried on by G. W. C. Sutliff (G. W. Sutliff's father) and others under the style of Sutliff Hopper and Co. As soon as the company was formed a board meeting was held at which was produced an application for 1,750 shares of the company by G. W. C. Sutliff; his cheque for £1,750 is stated to have been produced also. At the same meeting a letter from him, addressed to the company, was produced in which he offered to sell to the company for the sum of £1,750 the goodwill and other assets of the business of Sutliff Hopper and Co., provided the company assumed the liabilities of the business and issued to Mrs. Edgelow a 5 per cent. debenture, constituting a floating charge on the company's undertaking and assets, in consideration for her having advanced the sum of £400 for the purposes of the business prior to the formation of the company. This offer was accepted and the transfer duly carried out. The 1,750 shares were allotted to G. W. C. Sutliff on October 9th, 1924, and two days later he transferred the whole of them to other persons. There is no trace in the company's books of G. W. C. Sutliff's cheque having been paid to the company, nor of the company having paid him the amount of the purchase price of the business. Edgelow states that Sutliff's cheque for £1,750, having been tendered to the company with his application for 1,750 shares, was endorsed by the company and returned to him as representing the vendors. On October 14th, 1924, a debenture for £1,150 was issued to Mrs. Edgelow for the consideration stated, and for further advances to be made. Ultimately a sum of £546 was advanced by Mrs. Edgelow, and payments on her behalf, amounting to £212 12s., were made, leaving the sum of £733 8s. due on the debenture. During the six months of the company's existence a gross loss on trading, amounting to £330 4s. 1d., was incurred. On March 16th, 1925, Mrs. Edgelow appointed Henry Edgelow as receiver and manager in respect of her debenture, and the business is being carried on by him with a view to its disposal as a going concern.

THAT the United States have an attraction for workers in the printing and allied trades seems to be indicated by statistics made public by the U.S. Bureau of Immigration, Department of Labour. During May, 66 immigrant printers entered the United States, while only one left. During the period July, 1924, to May, 1925, 625 immigrant printers entered the country, whilst during the same time 28 left. The Bureau's figures show also that during May 7 immigrant bookbinders entered the United States and one left. During the July to May period 90 bookbinders entered the United States and 55 left.

NO ORDERS TOO LARGE AND NONE TOO SMALL.

The Late Mr. G. W. Mascord.

Funeral and Memorial Services.

The respect and affection with which the late Mr. G. W. Mascord was regarded by his large circle of friends and acquaintances in the printing and allied trades were very evident when, on Wednesday of last week, his funeral took place at Barnes, Surrey, and at the same time a memorial service was held at St. Bride, Fleet street.

The funeral service was held at St. Mary's Parish Church, and conducted by the Vicar of Barnes, the Rev. W. P. Dott. At the close of the service the coffin was borne from the church, followed by the chief mourners, during the playing of Chopin's Funeral March on the organ.

Many Mourners and Wreaths.

The interment was at the cemetery on Barnes Common, in the grave where Mr. Mascord's wife was buried only six months before. The chief mourners were Miss Mascord and Miss Betty Mascord (daughters), Mr. and Mrs. T. Cruwys (son-in-law and daughter), Mr. Charles Fisher, Mr. and Mrs. W. Fisher, Miss Fisher, Mr. Will Fisher, jun., Mrs. Craddock, and Mr. W. Moore.

A great number of friends and fellow workers of the deceased were present in the church and at the graveside, including: The Right Hon. C. A. McCurdy (chairman and managing director, United Newspapers (1918), Ltd.), Mr. H. S. Imber, Mr. J. H. Parham, Mr. Ernest A. Perris, Mr. A. Richardson, and Sir Howard Spicer, K.B.E. (directors), Mr. Frank Lloyd, Mr. Percy Denson and Mr. W. Raynham (directors, Edward Lloyd, Ltd.), and Mr. Herbert Clarke (secretary, Edward Lloyd, Ltd.). Representatives of the Federated House Chapel and the departmental chapels of the *Daily Chronicle* and the *Sunday News*, a great number of the staffs from all departments of both newspapers, and Mr. G. W. Davis and Mr. B. Goulding (Linotype and Machinery Limited), Mr. Frank Colebrook, Mr. A. O. Shepherd (*Daily Mirror*), Mr. Glen Steel (T. G. and J. Jubb), H. Guthrie (Parsons, Fletcher and Co., Ltd.), Mr. E. E. May (Blackwell and Co), Mr. R. B. Jackson (E. Hulton and Co., Ltd.), Mr. J. S. Plumtree, Mr. W. J. Hollidge (Argus Engineering Co., Ltd.), Mr. W. Gamble (A. W. Penrose and Co., Ltd.), Mr. F. Bold (Usher and Co.), Mr. Charles Crabtree and Mr. Arthur Crabtree (R. W. Crabtree and Sons, Ltd.), Mr. Robert Crabtree (*Yorkshire Evening News*, Leeds), Mr. C. Bugg, Mr. J. H. Butler (R. W. Crabtree and Sons, London), Mr. C. Hollis and Mr. Keep (N.S.O P.A.), Mr. G. Wilson Howes (Printing Machine Managers' Trade Society), Mr. W. C. Warren (National Society of Electrotypers and Stereotypers), representatives of R. Hoe and Co., Ltd., Mr. Lindsay (Intertype, Ltd.), Mr. F. Corey (Eyre and Spottiswoode), Mr. F. R. Palmer (Slater and Palmer), Mr. Grey (the *People*), Mr. Carson, and representatives of the *Daily Chronicle* mechanical department, Leeds, etc.

There were a very large number of wreaths, sent by the relations of the deceased, by his business colleagues and by numerous representatives of the printing and allied trades.

Service at St. Bride.

At the church of St. Bride, Fleet-street, the parish church of the *Daily Chronicle* and the *Sunday News*, a memorial service was held at the time the funeral was taking place at Barnes. There was a large congregation, which included members of the staff of United Newspapers (1918), Ltd., and amongst others: Sir Robert Baird, K.B.E. (*Belfast Telegraph*), Mr. J. Hall Richardson (*Daily Telegraph*), Mr. T. W. McAra (Newspaper Proprietors' Association), Mr. G. Holme Bower, Mr. R. A. Austen Leigh, M.A., Mr. J. R. Riddell (London School of Printing), Mr. W. T. Day (*Pioneer Press of India*), Mr. W. Raftery (Blackfriars Club), Mr. A. J. Fraser (*Melbourne Argus*), Mr. A. L. Andrew, Mr. J. Trowbridge, Miss Jane Doe, and Mr. H. J. Strugnell (secretary, Federated House Chapels, the *Daily Chronicle* and *Sunday News*).

The order of service—which was printed by the students of the London School of Printing as a mark of esteem for a friend of the school—was that used at Barnes, and was read by the Rev. Arthur Taylor, the vicar of St. Bride, who also delivered an address. A beautiful and impressive service ended with the playing of Chopin's Funeral March.

Caxton Home, Limpsfield.

The Federated Chapel of Messrs. Harrison and Sons paid a visit to the Home on Saturday last, the occasion being the naming of a bed, subscribed for by the firm and employees. The directors were represented by Mr. R. H. Major, who was accompanied by the Rev. Wm. Gowans, of Bromley. Opportunity was taken of their early arrival to inspect the Home and grounds; and, the afternoon being exceptionally fine and warm, the delightful view to be obtained was much admired.

In inviting Mr. Major to unveil the tablet, Mr. C. Terry (father of the Federated Chapel) mentioned that his members had raised by contributions of one farthing per week about £70, and the firm had generously made up the balance to £100. Mr. Major expressed his pleasure at being present to join with the employees in their charitable effort. He had had an opportunity of going over the Home, which was admirably adapted for its purpose and a credit to the printing trade.

Votes of thanks were heartily accorded to Mr. Major and the Federated Chapel for associating themselves with the Home's convalescent work.

An illuminated certificate was presented to the Federated Chapel, entitling them to nominate patients to occupy the bed, by the secretary (Mr. S. J. White), who, with Mr. W. F. France, J.P., represented the committee of the Home.

After partaking of tea, a game of bowls on the lawn and an impromptu concert brought the visit to a close.

The eighth annual concert, in aid of the Building Fund, has been arranged for Saturday afternoon, October 17th, at the Central Hall, Westminster, S.W., when a fine programme of music and song will be presented. Tickets can be obtained from the hon. secretaries, Messrs. G. F. Chapman and W. F. France, at the London office, 3, Cursitor-street, E.C.4.

An advertisement is always working.

Country News.

Aberdeen.

IN connection with the evening classes for printers in Aberdeen, a lecture on "Books, from a Printer's Point of View," was delivered in the Central School on Friday evening by Mr. Robert Wilson, of Messrs. Pillans and Wilson, Edinburgh. There was a fairly large attendance, presided over by Mr. Theodore Watt. Mr. Wilson said there were as good books coming from the presses to-day as ever came from them before, and paid a high tribute to the craftsmanship of Aberdeen printers. Among the great boons which the printed book had conferred upon the world, he mentioned Boswell's "Life of Dr. Johnson," and the works of Scott, Carlyle, Meredith, Conrad, Walpole, Bennett, and Galsworthy. He gave numerous instances of humorous errors in print, arising out of bad handwriting or mistakes in punctuation. He made an appeal to all connected with the printing trade to disseminate a love for good literature, and advised the younger members each to build up their own library.

MR. E. R. R. LINKLATER, M.A., who leaves to take up an appointment on the staff of the *Times of India* this month, was entertained at a farewell dinner in the Palace Hotel by those who had been associated with him in various spheres of University activity. Mr. J. B. Rennett, advocate, treasurer of the Students' Union, was chairman, and the toast of the evening was proposed by Mr. J. R. Sutherland, M.A., Merton College, Oxford. During the evening Mr. Rennett presented Mr. Linklater with an appropriate souvenir of the occasion.

Glasgow.

MESSRS. SAMUEL STRAKER AND SON, 36, Fenchurch-street, London, E.C., have recently taken over the business of Messrs. Duncan Campbell and Son, 96, St. Vincent-street, Glasgow, the well-known publishers of diaries and manufacturers of stationery. The firm is still carrying on under the old name, although Mr. Campbell has retired from active duty.

Bradford.

"YORKSHIRE OBSERVER" NEW PREMISES.—Sir James Hill, chairman of the directors of the *Yorkshire Observer*, presided at a public dinner given by the proprietors of that paper in celebration of the opening of new premises at Bradford. Lord Leverhulme was one of the guests, and proposed the toast of the firm, which was responded to by Sir James Hill. Those present included Sir Arthur Marshall (a director), Mr. Arthur Woodhead (president of the Newspaper Society), Mr. Arthur Pickering (chairman of the Press Association), and Mr. W. S. Crawford.

Rochdale.

DURING last week the Rochdale and District Printers' Guild held their annual meeting at the Clock Face Hotel, Rochdale. Mr. R. Leach, of the local Master Printers' Federation, took the chair. Mr. W. A. Ashworth, secretary, in submitting the annual report, said that the bowling league winners were Ormerods, Ltd. (B team), who hold the cup for twelve months. The finances were in a sound condition, and the membership was stable, with an increase of apprentice members. After the meeting a smoking concert was held.

Norwich.

THE Norwich printing trade looks forward with interest to October 24th, when the Duke and Duchess of York are to open the new Bridewell Industrial Museum, near St. Andrew's Church, Norwich, given by Mr. H. N. Holmes to house permanent exhibits relating to local industries. A printing section is well under way, and printing specimens are being received for exhibition, but Col. H. Rivers Fletcher, of Castle Works, Norwich, is inviting further exhibits and is particularly desirous of hearing of ancient or notable printing presses or tools that might be made available.

Plymouth.

A WELL KNOWN Plymouth press worker passed away at his residence, 4, West Hamterrace, Camelshead, on Sunday in the person of Mr. George Samuel Hall. Mr. Hall, who was 62 years of age, had been associated with Plymouth newspapers for the whole of his working life. Apprenticed to the late Mr. Isaac Latimer in the case room of the *Western Daily Mercury* a quarter of a century ago, he was promoted to the position of reader. He remained a member of the reading staff when the amalgamation of the Plymouth papers took place, and continued in that capacity until he was seized with illness a fortnight ago. He was looked upon by his employers, whose full confidence he shared, as an excellent compositor and reliable reader, and his fellow workmen held him in high esteem.

Newcastle-on-Tyne.

THE death has taken place of Mr. James Hewitt, of Cullercoats, Newcastle-on-Tyne, at the age of 82. The deceased was well known in the printing trade, and had charge of the juvenile printing department at the Industrial School, City-road, Newcastle, for 44 years. He retired in 1915.

South Wales.

TO CELEBRATE the fact that Wednesday of last week marked the completion of a third of a century of existence of the *South Wales Argus*, this journal published a special issue on that day with articles recalling the history of the newspaper, and illustrations showing the personnel and various departments. An editorial states: "It was not weeks or months—it was years—before the paper paid its way; and it only survived because a few men on the directorate proved their faith by finding the money to carry on. That the *Argus* was able to tide over the years of financial difficulty was due to three men, of whom only one—Sir Garrod Thomas—survives to share this Third-of-a-Century celebration. Sir Garrod, one of the original directors, never lost his faith in the paper—he believed in it when others doubted and despaired; he stuck to it when other shareholders were glad to part with their holdings; he found money when it was most needed; and now, as Chairman of the Directors, he has the joy of seeing the paper firmly established in the affections of the public—a county institution, respected, influential, and prosperous."

Bucks and East Berks M.P.A.

Luncheon at Aylesbury.

Presiding at a luncheon meeting of the Bucks and East Berks Master Printers' Association at Aylesbury on Wednesday of last week, Mr. E. Luff (Slough), the chairman of the Association, said that although it was usually found most convenient to hold the meetings in London, the practice had been adopted of making the meeting place once a year in another part of the area. Gatherings had already been held at Maidenhead and High Wycombe, and now for the first time they were meeting at Aylesbury. He extended a welcome to a number of non-members and to members of administrative staffs, who were present, in addition to a large number of members of the Association. It was a mistaken notion, he said, that the organisation existed merely for the big printers. In those who were frequently elected to occupy the chair of the Associations and of the Alliance was ample evidence that the smaller men were equally considered.

Mr. P. D. Michael, secretary of the Home Counties Master Printers' Alliance, explained the method that was being adopted in connection with the re-grading of towns throughout the country, and he dealt especially with the application of the subject to the Bucks and East Berks Association.

Mr. Ralph Hazell (Aylesbury) explained the staff pensions scheme which was under the consideration of the Federation and which had been prepared for the guidance of firms who desired to put such a scheme into operation.

Mr. A. Langley (London) then gave an address on "The Letterpress Poster," in the course of which he urged the jobbing printer to study the methods of the advertising man and to see that each production was a real contribution to advertising. Mr. Langley had some trenchant remarks concerning the paper used. Expensively set type was frequently printed on cheap paper, and printers seemed habitually to use the poorest class of paper for posters. A vastly better effect was obtained by using a better paper, and there was no reason why the job should not be shown at its best, even in proof. In the course of his remarks Mr. Langley showed some excellent poster specimens and contrasted the effectiveness of various kinds of poster type. A useful discussion ensued.

New Inventions

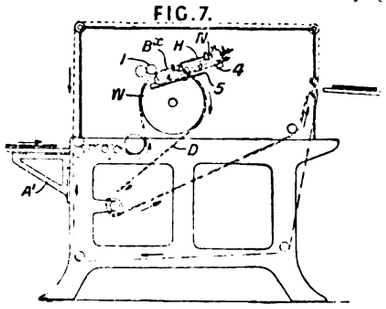
Ruling Machines.

Messrs. F. Hinterdorfer and J. Rona have patented a sheet-ruling machine, comprising a ruling roller 1 and an impression cylinder W, provided with means for preventing portions of the sheet from being ruled consisting of two strips H, N, reciprocated tangentially to the impression cylinder, one strip H covering a heading

FIG. 1.

space on the sheet, and the other strip N having projecting tongues 3, so that lines of different lengths are ruled on the sheet. The strip H is attached to a rod 13 mounted in brackets 7 on a cross-piece 6a carried by angle parts 6 adjustably mounted on carriages 4 reciprocated in guides 5 of the machine frame. Brackets 11a, fixed to the cross-piece 6a, carry jaws 9 holding the

FIG. 7.



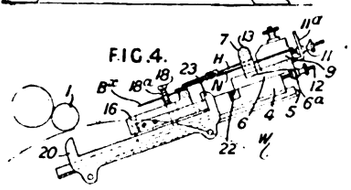


FIG. 4.

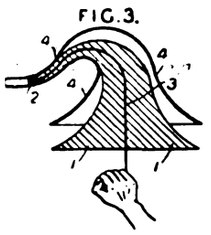
strip N, to which are glued strips of paper to form the projecting tongues 3. The ends of the strips H, N are supported by a plate Bx on a slide 16 which is reciprocated to and from the ruling roller by devices on the carriage 4. A spring 18a, on the bolt 18 fixed to the carriage, causes the slide 16 to move forward until its front end engages a stop 20, whereupon the carriage 4 continues its movement until a spring pawl 19 on the slide snaps into a notch 22 on the carriage. Engagement of the pawl 19 with the notch 22 causes the slide 16 to move back with the carriage 4 until the pawl is disengaged by a stop 23. As the strips H, N approach the ruling devices, the roller 1 lifts to allow the strips to pass between it and the impression cylinder. When the strips reach the forward end of their travel, the roller 1 drops and the strips begin to move backward. Meanwhile, a sheet is carried by endless bands D from a table A1 to the ruling devices, means, such as are described in Specification 174,619, being provided to ensure that the sheet reaches the ruling position at the requisite time for the desired blanks in the ruling to be obtained. The strips H, N may be adjusted relatively to the ruling roller by devices comprising a bolt and nut 12 for adjusting the angle piece 6 on the carriage 4, nuts 13a for adjusting the strips H in the brackets 7, and a bolt and nut 11 for adjusting the jaws 9 on the bracket 11a, these devices being accessible for operation during the running of the machine.

Hollow Paper Articles.

An invention by Mr. A. G. Wright relates to the production of hollow articles, particularly gramophone, etc., horns, by pasting paper, etc., over the surface of a wax, etc., core adapted to be withdrawn after softening by heat and consists in the provision of means whereby the core may be withdrawn intact from the moulded article. As shown in Fig. 3, the wax core 1 is formed by casting in a straight mould having the desired section, the core being withdrawn from the mould while still soft and bent to

FIG. 3.



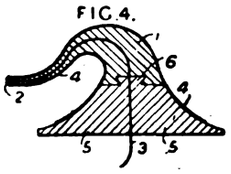


FIG. 4.

the desired sinuous form. The core is provided with a central cord 3 attached to a block 2 at its smaller end and projecting at the other and constituting means whereby the core 1 may be withdrawn from the moulded horn, etc., 4. Straight terminal portions of the article may be formed by a rigid core 5, Fig. 4, of wood or plaster united to the wax 1 by a dovetail projection 6; or such rigid portion may be formed hollow of plaster, etc., adapted to be broken away from the finished article.

THE total net revenue collected from paper and stationery in the Australian Commonwealth during the financial year 1923-24 was £737,101. In the preceding year the amount was £764,268.

New British Patents.

For the benefit of our readers we have arranged for any inquiries relating to Patents, Designs and Trade Marks to be answered, free of all charge, by a Fellow of the Chartered Institute of Patent Agents. Inquiries should be addressed, in the first instance, to the Editor.

CROPPER AND CO., LTD.—Presiding at the annual general meeting last week, Sir Stephen Killik said the small profit for the year indicated that they had turned the corner, after showing a loss on working for the past three years. The cost of the factory at Thatcham was the same. The Colthrop Co. had resumed payment of dividends, and Containers was still making profits. The freehold property at Southwark had been sold for £29,000. Dealing with the profit and loss account, the chairman said they had been able to increase the sales without adding materially to the cost of the factory, so that the gross profit showed a satisfactory increase. The board believed that the business was again established on a remunerative basis, and the prospects were encouraging. Reference was also made to an important contract which had been obtained in competition with other firms in this country. Mr. Horace J. Cropper and Mr. Shirley W. Cropper were re-elected directors.

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

THE winter season is fast approaching, and in some quarters there are hopeful signs of better business. Automatically there should be an improvement in almost every section of the paper trade, excepting those certain classes of imported wrapping paper for which the demand is greatest in the summer months. Outside this natural increase of winter over summer trade, there is a need for still more business if papermakers are to be kept busy. Unfortunately, there is no evidence of a return to normal conditions of prosperity, whatever they may be. There are no standards for comparison when we refer to the "normal" unless we go back to 1913; and under totally changed conditions the facts and figures of of pre-war years do not help us a great deal. Even if they did, the first difficulty would be to find the data relating to paper production and consumption. It would be interesting to know the number of people employed in papermaking throughout the British Isles in 1913 and the last five years, the sections they were employed in, and the output for each section.

EXPORTS and imports are always ready for reference and are among the most valuable records we have access to. If they were supported by corresponding figures giving the monthly output of similar papers and boards from British mills we should have by us a very convincing argument to use in favour of the home product for the home market. In other ways, too, the data would be helpful to manufacturers in gauging the state of the market and observing the trend of development. The difficulty is to obtain reports from the makers, who are in many cases quite averse to furnishing records of their output to any outside agency, even if it is their own association.

New Trade Marks.

CLARINE.

458,010. Tracing cloths, bookbinding cloths (specially prepared). British Leather Cloth Manufacturing Co, Ltd., Cartwright-street Hyde, near Manchester, Lancashire; manufacturers.—April 14th, 1925.

461,036. Paper (except paper-hangings), stationery and bookbinding. Allan Cooper, trading as The Alannia Co., 115, Hill-lane, Southampton; commercial traveller, photographer and post card publisher.—July 29th, 1925. (To be Associated. Sect. 24.)

IN addition to the mills he already represents, Mr. William C. Hamilton has now been appointed sole agent for the United Kingdom and export for the Papierfabriek Wernshausen G.m.b.H., Wernshausen. This is one of the largest mills in Germany, manufacturing such specialities as cellulose wadding, damask table cloths, krepp wrappings, etc. Including branch mills there are 15 paper machines.

GERMANY'S paper exports to India are making steady headway.

Imported Paper and "Protection."

GOVERNMENT INQUIRY: PRINTERS' INTEREST.

The question of the application of "safeguarding" or "protective" duties to imported paper is naturally a matter of great importance to printers, and representatives of the printing trade are watching with interest the proceedings of the Board of Trade Committee which began its wrapping paper inquiry on Monday of last week, and after three days' sittings is being continued this week. We have previously mentioned that members of the London Master Printers' Association have had their attention drawn to the matter, and we understand that a large number of members have written to headquarters indicating what they think would be the effect on their business of restrictions, such as protective duties, on the import of wrapping papers, which in this case will probably be extended to include not only browns and krafts, but duplexes, pressings, cartridges, manillas, and even papers used as covers for books, pamphlets, etc. We understand that the matter was on the agenda at Tuesday's meeting of the Council of the Federation of Master Printers, and that intimation has been given to the Government that the printing trade expects to be heard.

Opening the Inquiry.

Mr. Kenneth R. Swan appeared as counsel for the applicants, and Mr. C. F. Entwistle (instructed by Messrs. Stikeman and Co), on the opposite side, appeared for a group of paper importers, who were supported by a considerable number of British manufacturers who rely upon imported papers as raw material. Mr. Herbert Oppenheimer (Herbert Oppenheimer, Nathan and Vandyke), was present for the Federation of Paper Bag Manufacturers. With Mr. Swan was Captain W. E. Nuttall (chairman of the Union of Wrapping Papermakers), Mr. A. W. Foster, Mr. Parker Smith, and Mr. J. L. Merchant. On the side occupied by the opposing counsel were Mr. J. Mutimer, Mr. Burt, Mr. G. Foster Robinson, and Mr. T. J. Thorne (secretary of the Federation of Paper Bag Manufacturers).

There were present in the public seats many others interested in the proceedings, including Mr. A. Baker (president of the Employers Federation of Papermakers), Mr. H. G. Bradly (president of the National Association of Wholesale Stationers and Paper Merchants), Mr. H. G. Spicer, etc.

Clearing the Ground.

Mr. Swan having intimated whom he represented, Mr. Entwistle said he attended for a group of importers of the London Chamber of Commerce and also certain manufacturers who were users of wrapping papers.

The chairman said he understood that the opponents were a number of members of the London Chamber of Commerce.

Mr. Entwistle: That is right.

The Chairman: If you represent importers, that raises a serious question.

Mr. Entwistle added that he also represented a great number of British manufacturers who were affected by the proposal of the wrapping papermakers.

Mr. Oppenheimer said he appeared for the Federation of British Paper Bag Manufacturers, for whom wrapping paper was their raw material. He added that he approached the matter with an entirely open mind at the present time and his attitude would be guided by the proposals put forward on behalf of applicants. Counsel intimated that his members employed more people in this country than the applicants.

Applicants' Case.

Opening the case for the applicants, Mr. Swan referred to the difficulty of getting absolutely reliable figures. Here was an industry which was not organised in a single unit, so that everybody else knew what the others were doing. But they had an industry represented by some 81 distinct firms, all competing with one another, and it was very difficult for any particular manufacturer to get information about what his competitors were doing which was absolutely accurate. The Union of Wrapping Paper Makers represented some 56 per cent. of the total number of paper machines designed for the production of this class of paper in the United Kingdom. Their figures, therefore, were approximate as to the number of workers and total production of wrapping papers. There were certain figures which were exact, such as importation statistics, and a good many figures which would be beyond question. Again there were certain facts which would not be controverted. One such fact was that the industry which he represented was in a depressed condition, and the general trend of the industry was in the direction of further depression and further unemployment. He thought it would not be disputed by his learned friend opposite that foreign-made paper coming into the country came in at a price very materially below the price at which the paper could be manufactured here. His (Mr. Swan's) case was that it was in the neighbourhood of £5 to £10 a ton below the price at which similar paper was being made in this country.

Mr. Entwistle intimated that the papers were not in the same category.

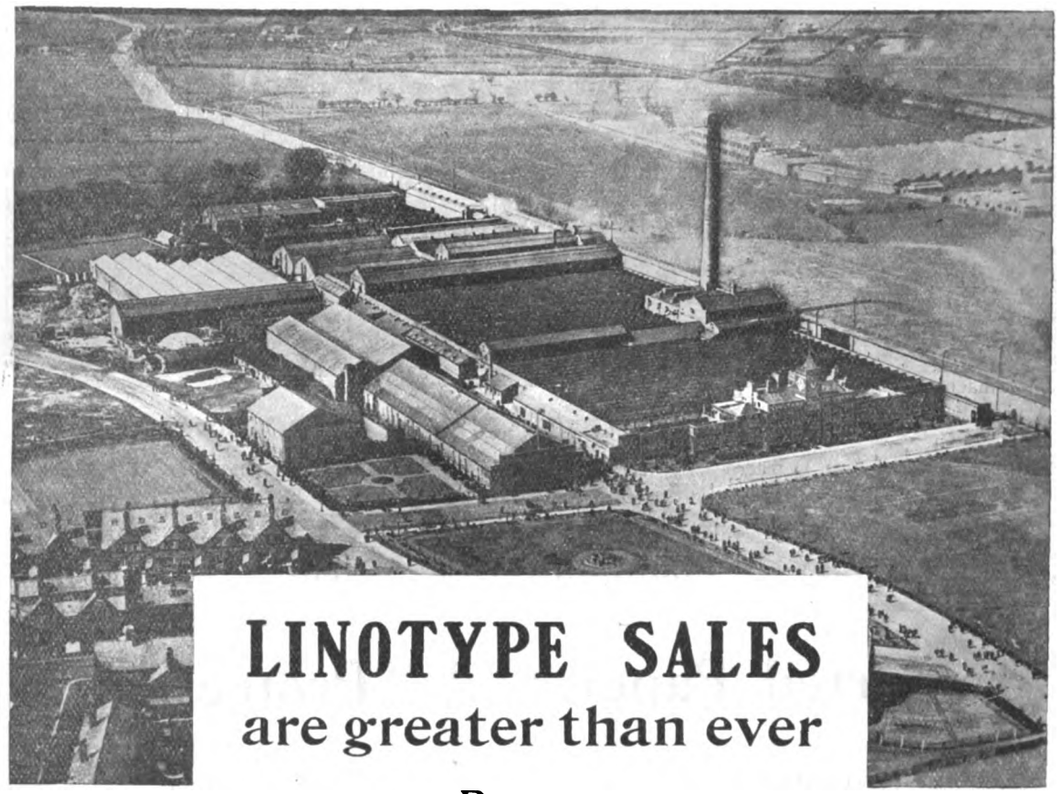
Classes of Paper Affected.

Mr. Swan went on to say that the term wrapping and packing paper covered a very large variety of papers; but there were six denominations which represented the principal categories. All were made in the same way. The raw material of one half of them was wood pulp, and the raw material for the other half was home-produced.

In the applicants' case there were six different classes of paper—kraft (unglazed and machine glazed), caps and sulphites (machine glazed); glazed casing; brown wrapping; Royal hands, tubes and sugar papers; and common caps. Besides these six categories, there were a number of other wrapping papers which were partly of the nature of one and partly of the nature of the others, the result of some hybrid treatment.

Mr. Swan handed in samples of the papers he had mentioned, and said there were 93 different kinds, all of which were priced in the first three categories. He then proceeded to indicate the characteristics as to glazing and thickness.

Mr. Swan gave a list of 37 British firms and the classes of wrapping paper they made, 13 of them turning out kraft. The cost of a paper-making machine was about £30,000 and there were 164 machines in the industry in this country. The amount of capital represented merely in machinery was therefore in the neighbourhood of five or six millions.



Uses of Wrapping Paper.

Dealing with the uses of the paper, Mr. Swan said these were very various. There was one outstanding fact, however—in a large number of cases the consumer did not care very much what kind of wrapping paper he used so long as it was good wrapping paper and cheap. He thought the committee would find that papers were used largely indiscriminately, in the sense as to whether it was home-made paper or not.

Figures of the British Industry.

Mr. Swan then called attention to the list of firms and machines available for operation in this country. The total firms were 81; total mills, 90; total machines, 164. Of the classes of labour employed, 57 per cent. were men employed in manufacture, and 30 per cent. were women. As to the total number employed, they had to make a calculation from the number of workers employed by those firms which were members of the Union, namely 4,352 in 1924. Taking the 92 machines represented by the Union of Wrapping Papermakers and the 72 outside, they got a total of 7,739 employed in the industry. The total output of British manufacture was 308,600 tons of wrapping paper in 1920. During the period 1920-24 there was a closing down of 13 machines, and in 1924 the output was 198,561 tons.

LINOTYPE SALES
are greater than ever

Because:

Nearly forty years of experience is behind every part of a Linotype—*that is why it is a fully efficient machine.*

It is a sound investment - *it stands up to its work year after year: it is dependable: it is built to last.*

Real service is with the machine from the time it is installed and onward—*our depots, our staff of experts, and our Works at Altrincham combine in maintaining that service.*

There are many more reasons: but the vote of the printing trade as represented by actual sales affords the best evidence of its superiority.

Exports of British-made wrappings were as follows:—1922, 15,694 tons; 1923, 28,715; 1924, 34,372. In 1913 the figure was 45,272.

Abnormal Conditions.

Comparing the figures of the importation and the figures of the home manufacture, Mr. Swan submitted that the importation would appear to be abnormal in several ways. In 1913 imports were 204,502 tons, and in 1924, 211,337 tons. The latest returns indicated an increase. During the war the British manufacturer undertook the manufacture of various grades he did not make before.

Whereas the foreign importation had gradually grown from 1921 onwards, the home manufacture had been stationary. A third abnormality was that the present-day production of paper by British mills was only about 70 per cent. of the pre-war figure. Another indication of the abnormal state of things was that they had mills and machines in this country adapted to turn out at least 100,000 tons more than they were actually producing to-day, and yet the foreign importation was growing.

The decline in employment was also a matter of concern. Eleven mills which were in operation in 1920 had been closed, representing 21 machines and evidence would be submitted of the financially distressed conditions. A further sign of the times was lost time owing to short working hours.

A light was thrown on the condition of the industry by the amount of unemployment benefit paid out, and so impressed were the representatives of the labour unions by facts disclosed by the employers that they recommended to their members certain reductions in wages.

Compared with the 7,739 persons at present employed, there was potential employment, if the machines were in full work, for something like 9,000 persons.

Wages and Hours.

With regard to wages, those paid in this country were 21s. per day of eight hours for skilled workers, and 9s. for unskilled. Abroad the wages were on a lower scale. In Germany the employer was paying his workpeople about half the wages that the British employer was paying. Thus the German employer had a 100 per cent. advantage; the Norwegian had a 75 per cent. advantage, and the Swedish employer an appreciable advantage, though it was not so great in that case because there had not been the same depreciation.

According to the figures he had worked out, it appeared that the wages were responsible for 25 per cent. of the cost of production—for wood pulp 28 per cent. and for home produced material 21·4 per cent.

Besides that the foreign manufacturer had a distinct advantage in regard to hours. The British shift worker worked 44 hours. Abroad the eight-hour day was the regular day, but in Germany it was 10 hours in 300 factories. The German shift workers worked 54 hours, as compared with the British 44 hours a week. The German shift week was 144 hours, as compared with the British shift week of 132 hours.

A Duty and Prices.

Mr. Swan then dealt with the effect of the imposition of a duty on other industries.

With the imposition of a duty the probability was that no increase in price would occur. There were 81 competing firms and that would tend to depress the price. There would be just as healthy a condition of competition as they had before, the only difference being that in the case of paper from abroad the competition was unfair and checked and strangled British industry. If the foreign competition was put on a fairer basis it would create a healthy atmosphere, which would not tend to increase the price. Working costs would be reduced, and the tendency would be not to increase but to reduce the price at which paper was sold.

Paper Bags and Envelopes.

Mr. Kingsley Griffith at the resumed sitting on Tuesday, said he appeared on behalf of the Employers' Federation of Envelope Makers and Manufacturing Stationers, whose point of view was roughly that indicated the previous day on behalf of the Federation of Paper Bag Manufacturers.

Viscount Erleigh had been instructed by Messrs. Oppenheimer, Nathan and Vandyk to appear for the Federation of Paper Bag Manufacturers, and said his attitude would be largely affected by what Mr. Swan said regarding the papers to be eliminated from the application.

Mr. Swan stated that the papers to be excluded from the application were vegetable parchment, glazed transparents, greaseproofs and tissues of 10 lbs. and under. He understood that bags and envelopes made of foreign paper would come under the category of wrapping paper and be treated in the same way as other articles that were subject to duty.

Mr. Entwistle thought this was outside the scope of the Committee.

Mr. Swan rejoined that it stood to reason that if a duty was imposed upon wrapping paper, which was the raw material of manufacturers in this country, a consequential duty must be placed on foreign bags and envelopes made of that material.

Scope of the Inquiry.

On resuming in the afternoon, the chairman gave the views of the committee concerning their attitude towards cardboard boxes, envelopes and paper bags. They did not propose to treat it as a substantive part of the inquiry whether there should be a duty on paper bags and envelopes. They would confine themselves primarily to the question whether there should be a duty on wrapping paper. When they came to consider whether to recommend a duty or not, the question of the effect on such goods as envelopes and paper bags naturally would be one they would have to consider; and if the facts seemed to justify such a course, the committee would not feel themselves precluded from framing a recommendation in this sense, namely, that there shall be such and such a duty on wrapping paper, and in order that it might work properly they recommend that there also be such and such a duty on envelopes or paper bags, as the case might be. Therefore the committee would be willing to hear evidence which might be relevant to the formation of opinion on that point.

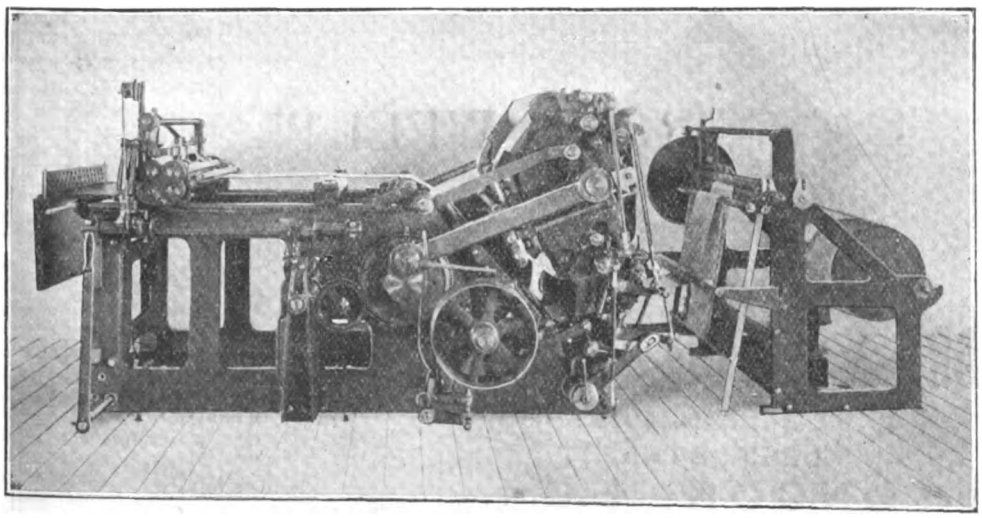
Adjourned.

An Interesting Souvenir.

Century-Old Wood Engravings.

At a meeting of the Court of Assistants of the Worshipful Company of Stationers held at Stationers' Hall on Tuesday of last week, Mr. Herbert Fitch (Master of the Company, 1922-23), presented to the Company a bound volume of India proofs from wood blocks engraved by James Lee (father of Mr. Turle Lee, the well-known musician). These blocks have been most admirably and skilfully engraved and consist principally of portraits of past and eminent printers, but they also include some most interesting representations of the interior and exterior of Stationers' Hall, etc.

But the value of the book is not confined to the proofs; full details have been supplied of these eminent men, completing a volume of exceptional interest to all students and practisers of the art of printing. This information was supplied at the cost of considerable labour wisely directed by the knowledge and experience of Mr. Chas. T. Jacobi, one of our leading experts in printing lore and technical details.



The Court unanimously passed a cordial vote of thanks for the gift to Mr. Herbert Fitch and Mr. Chas. T. Jacobi.

The volume is a handsome one, quarto in size, bound in full morocco with the decoration and lettering in gold. The work is embellished with a portrait of Mr. Herbert Fitch in his robes, this having been produced at the London School of Printing during his year of office as Master, 1922-3.

In a foreword to the book, Mr. Jacobi mentions that the engravings forming this collection all appear in Hansard's "Typographia" of 1825, still an interesting technical work for printers. This was written by Thomas Curson Hansard (1776-1833), a member of the Company, whose portrait appears at the end of the collection. Some of these same illustrations were reproduced in the "History of Old English Letter Foundries," by the late Talbot Baines Reed, published in 1887, shortly before his death.

The following are the engravings included: —John Gutenberg, c. 1400-1468; Laurens Janszoon Coster (sometimes Koster), c. 1370-1440; Seal (original) of the Company, pre 1634; The Hall (ancient and modern exteriors), 1671-1800; The Screen (by Stephen College), c. 1675; William Bowyer (the father), 1663-1737; William Bowyer (the son), 1699-1777; William Caslon (the first), 1692-1766; William Caslon (the third), grandson, 1754-1833; John Baskerville, 1706-1775; Dr. Alexander Wilson, 1714-——; John Nichols, 1744-1826; Millar Ritchie, 1751-1828; William Bulmer, 1756-1830; Thomas Curson Hansard, 1776-1833.

EVERY PRINTER HANDLING LITHO AND OFFSET WORK SHOULD USE

TYPON

PAPER NEGATIVES

TYPON gives perfect results from any black-white original, whether printed on one or both sides, or maps, plans, line drawings, etc. The blacks are of uniform density, the whites sharp and clear cut. Streaks, pinholes, or any of the usual troubles are absent.

TYPON negatives are indestructible; they can be used again and again, and are filed like correspondence in a fraction of the space required for glass plates.

TYPON requires no oiling, or special treatment in developing; highly skilled labour is therefore not required.

TYPON adds to the resources of the Printer engaged on Litho, Offset and Planographic work, Photogravure and Rotogravure and reduces his working costs.

TYPON processes are much quicker than wet plate methods, and more than 50 per cent. cheaper. There is no heavy initial outlay — no special and expensive plant to purchase.

TYPON eliminates re-setting, electrotypes, make-ready, and the use of glass—think of the saving by cutting out breakage losses alone! There is no silver bath needed.

TYPON material can be obtained as required, in sheets or rolls. The cost works out at about sixpence a sq. foot, and there are no licence fees or royalties.

TYPON Paper is used in any contact printing frame for exact size work; or in the camera for enlarged or reduced reproductions.

The Typon Catalogue, fully illustrating and describing the process, will be sent on request.

Trade Notes.

George Newnes, Ltd.—A second extraordinary general meeting of George Newnes, Ltd., was held on Monday, when resolutions were unanimously passed capitalising part of the accumulated profits, and authorising the distribution of 200,000 ordinary shares of 10s. each to the existing shareholders as fully paid in the proportion of one for every two existing ordinary shares.

Wyman Share Bonus.—The directors of Wyman and Sons, printers and publishers, are capitalising £14,671 from the reserve and issuing it in fully paid ordinary shares to present holders in the proportion of one new share in respect of each five now held. It has also been decided by the directors to offer the balance of the authorised but unissued £1 ordinary shares to shareholders at a premium of 10s. per share. The premium will be added to the reserve fund. The notice to shareholders states that the additional capital is required for the building and equipment of the new premises for the distributing department and garage, a further fleet of motor vans and other pending developments of the business An island site for the new building has been secured, on a 99 years' building lease, at the back of Fleet-street, belonging to the Goldsmiths' Company.

Stereotypers' Auxiliary Dinner.—The dinner and concert to be held on Saturday at the "London Tavern," Fenchurch-street, in celebration of the coming of age of the Electrotypers and Stereotypers Auxiliary to the Printers' Pension Corporation, promises to be an important functiou. The chair during the evening is to be occupied by Mr. A. Chadwell (the Auxiliary president), whilst the musical programme is under the capable direction of Mr. George Harrison. The gathering will include many well known representatives connected with the electrotyping and stereotyping section of the trade.

The North London Master Printers' Association is to hold a whist drive on Monday next, October 19th. The drive, which will be held at Wortley Hall, Seven Sisters road, N., will commence at 7 p.m. The North London Association, by the way, is offering a prize of two guineas for the best suggestion towards increasing trade and making the Association more helpful.

Mr. William Patterson, in charge of the Manchester office of the *Catholic Times* for over 35 years, has died suddenly from heart failure at his home at Longsight, Manchester.

The late Mr Joseph Hall, Swansea, a director of the *South Wales Daily Post*, and associated with other concerns, left £25,327.

The late Mr. Thomas Scott (70), of Newcastle on-Tyne, master printer, left £15,085, net personalty, £13,403.

Mr. John Shannon, J P., of Coleraine, Londonderry, editor of the *Coleraine Chronicle*, formerly working on the staffs of the *Londonderry Sentinel* and the *Northern Whig*, Belfast, chairman of the Ulster District of the Institute of Journalists left (personal estate in Great Britain and Northern Ireland), £3,150.

Mr. Harold Fraser Wyatt, of Wandsworth, S.W., lately assistant editor of the *English Review*, who died on May 28th, aged 67, left estate of the gross value of £761, with net personalty £65.

The first international gathering of the Trade and the Technical Press has just been held in Paris under the patronage of the President of the Republic. Twenty three nations with over 4,000 periodicals were represented. It was resolved to form an International Federation of the Technical Press of the world to co-operate with the daily Press. Next year's meeting will be held in Italy. Mr. L. Caster, of London, was elected one of the three vice-presidents.

The Imperial Press Conference at Melbourne took place on Tuesday, Wednesday and Thursday of last week. Viscount Burnham was elected president by acclamation, and important speeches were made upon inter-Empire trade, etc., by Lord Forster, the outgoing Governor-General, Mr. Bruce, the Federal Premier, and the Earl of Stradbroke (Governor of Victoria). The deliberations included discussions of newspaper copyright, protection of newsprint supplies in Canada, restriction of the liberty of the Press, broadcasting of news, and Empire trade and migration.

Country News.

Leicester.

The important Leicester printing and stationery works of Messrs. Hemming and Capey, Charles-street, was the scene of a disastrous fire on Friday morning last, the damage done being estimated at £40,000 to £50,000. The building, a large and imposing one, was completely gutted, and the presses, typesetting machines, etc., fell through the various floors to form a mixed and mangled heap which was flooded by the water used by the firemen. The fire was well established by the time the firemen arrived and their efforts had to be directed mainly to isolating the conflagration from the many close-adjoining buildings. Several firemen had a narrow escape from death through falling masonry, but the brigade, which had seven engines at work, succeeded in preventing a spread of the fire. The origin of the fire is unknown, but it is thought to have originated near one of the boilers. About 80 workpeople are thrown out of employment by the disaster.

Portsmouth.

At the annual general meeting of the Portsmouth and District Master Printers' Association held last week, the president gave a resumé of the past year's work and spoke of the good that should accrue to the trade locally by the forming of a local branch of the J.I.C. Mr. P. D. Michael (secretary, Home Counties M P.A.) dealt with the trade as a whole in a very interesting address. The election of officers for the ensuing year resulted in Councillor G. J. Winn again occupying the presidential chair, whilst others chosen to office were: Mr. A. J. Liscombe (vice-president), Mr. C. E Petty (hon. secretary and treasurer), and Messrs. Coasby, Murdock, Hewitt and Atkins as committeemen.

Manchester.

The Bishop of Manchester (Dr. Temple) was on Thursday the guest at luncheon of the Manchester and Salford Master Printers' Association at the Midland Hotel, Mr. R. G. Evans presiding. The Bishop in the course of an address attempted to view the printers' great industry and occupation in its relation to the whole general movement of mankind. He traced the rise of the social principle, remarking that the Renaissance never could have come with the force it did unless there had been printing presses to help it. The whole possibility of the fellowship of mankind upon the higher level depended upon the work that printers were doing, and was only made possible by the diffusion of ideas and sentiments and aspirations.

South Wales.

The autumn golf meeting of the South Wales Master Printers, held at Porthcawl, brought an entry of over forty. The weather was very misty, and the fact that the course is a seaside one did not help in this respect. The weather, however, did not interfere with play, and four competitions were played off. In the morning there was singles (medal play) for men, both senior and junior handicaps, for two new cups, one presented by Mr. Fred Waite (of Messrs. Waite and Saville, Ltd.), for the seniors, and the other presented by Mr. Fred B. Charley (of the United Paper Mills, Ltd.), for the juniors. In the morning there was also a nine holes medal round for ladies. In the afternoon there was held a mixed foursomes medal play, under handicap, for a new cup presented by Mr Herbert H. Merrett, of the colliery owners, Messrs Llewellyn Merrett and Price, cup to be held by the winning lady partner and another prize for the gentleman. For those not playing in the foursomes there was a game against Bogey, with a prize for the winner. Altogether a very enjoyable day was spent in spite of the weather, and the prize-winners were: Mr. David Evans, winner of the Waite Cup in the seniors handicap, and Mr. V. H. Stanbury, the winner of the United Paper Mills Cup in the juniors. The Ladies Handicap prize went to Mrs. Tucker. In the afternoon the prizes went to Mrs. I. Mackenzie Thomas and Mr. F. W. Glossop for the mixed foursomes, and to Mr. Edward de la Praudiere for the Bogey competition.

East Anglia.

Mr. C. E. Benham, of Colchester, is giving his illustrated lantern lecture on "Some Old Customs of the Printing Trade," under the auspices of three of the local associations of the East Anglian Alliance—Norwich, Cambridge and Ipswich. The Ipswich lecture will be given on October 28th, and the dates for Cambridge and Norwich remain to be fixed.

Manchester.

Mr. Harry Beswick, who has been for some years a prominent figure in Manchester journalism, died recently at Higher Crumpsall. He had been in ill health for some time. Mr. Beswick had a wide and intimate knowledge of the theatre and for over 40 years had a big public for his theatrical writings in the old *Clarion*, the *Manchester Weekly Times*, the *Courier*, and more recently as "Prompter" of the *Empire News*. His column in the *Manchester Weekly News*, under the pen name of "Busy Bee," was a very popular feature. In his writings for the *Clarion*, Mr. Beswick will be remembered by many as "Bezique."

Leeds.

Mr. Frederick Grange, of the firm of Messrs. Frederick Grange and Sons, printers, Meadow-lane, Leeds, has died in the Leeds General Infirmary as the result of being knocked down by a motor bus at Leeds. He suffered a fracture of the base of the skull, and died within an hour after admission to the infirmary.

A New Type Face.

From Messrs. P. M. Shanks and Sons, Ltd., 31, Red Lion-square, London, W.C.1, we have received the accompanying specimen of a new

Made in Ten well Graded Bodies

Bloomsbury

Unique and Attractive Face for Advertisers

face of type which has been a long time in hand but is now just completed. This new face is produced in ten sizes, all cast on British-American point bodies, and is primarily designed to be attractive to advertisers.

The Printing and Allied Trades Boxing Club are holding their amateur competitions at the Stadium Club on Thursday, November 5th.

Reading Football Club have again sent a cheque out of their practice "gates" to the Berks, Oxon, and Bucks District of the Institute of Journalists for the Orphan Fund of the Institute

The Judicial Proceedings Bill was discussed at a meeting of the National Executive Council of the National Union of Journalists in London on Saturday, and a resolution was unanimously carried stating that the council deprecated the publication of indecent matter in the Press, but believing that the present law was sufficiently stringent to maintain a clean Press if administered with courage, strongly opposed the Judicial Proceedings (Regulation of Reports) Bill.

Barton's Cover Papers.—Barton's of Birmingham have drawn good words from us before because of their finely organised service department. In very great measure they are the pioneers in promoting British made cover papers and they have helped some of our home mills to stake out a big claim in a new field. Along with two or three merchants they have built a market for a specialised class of British product which was hitherto held almost entirely by Germany and U.S.A. So far so good; the field will go on growing until all our cover papers are British. Just now we have before us five sets of cover samples: Maroquin, an elegant leathery range in exquisite colourings; Baronic, very similar with some striking colour character; Mirvana in delicate creams, greys and browns, with a price advantage; Delysia, with twelve delicious and delicate tints and a crashed fabric finish; and finally, Tintora, a board series, repoussé finished and gloriously tinted.

The FINAL PLATE MOUNT
(WESEL PATENT)
Provides absolute security to every user throughout every press run.
Particulars describing and illustrating the principle and operation of the Final Plate Mount and Hook from Sole Distributors—

London Central Districts M.P.A.

Mr. J. Crowlesmith on "Brains, Pride and the Printers' Craft."

The opening meeting of the season of the above Association was held on Wednesday of last week at Stationers' Hall, under the chairmanship of Mr. R. A. Austen-Leigh (President). A moderately good attendance of the members included Mr. M. Clowes (President of the L.M.P.A.), and Messrs. P. W. Ryde, O. G. Poulson, F. W. White, A. Shield, J. Griffiths, W. J. Boyle (Secretary, Central Districts Association), A. Spring, W Charles, R. F. Hunger, W. Whyte (Secretary, L.M.P.A.), and J. Johnson (Organiser, L.M.P.A.). An address by Mr. Crowlesmith very appropriately opened the season's work, being of quite an inspirational character.

Mr. Crowlesmith dealt first with the subject of "Brains." Most people would say, he remarked, that the greatest gift the Creator ever bestowed on mankind was life. While that was a great gift it was certainly not such a great one as brains He was firmly convinced that the desire amongst men for improved status and better wages was a divinely implanted impulse in the human heart, and they must realise it. They in the printing industry, or any other, had got to recognise that as the workers became more educated they would ask for a greater share in profits and a greater share in the comforts of life. Was it unreasonable, he continued, that the working man should want to improve his status?

Coming to the subject of "Pride," Mr. Crowlesmith said he wanted to press upon the printing trade, employers and workpeople alike, that if they had a proper feeling of pride in their craft half their difficulties would be solved. A man without just pride in both himself and his job would do very little to improve the world in which he lived or the craft to which he belonged. They were entitled to be proud of their craft.

After tracing the progress made by the printing trade from its very earliest inception, Mr. Crowlesmith spoke of his having seen the 136 huge rotaries in operation at Curtiss' factory at Philadelphia. That latter sight was striking evidence of the stupendous amount of brains put into the printing trade. Further reasons for feeling proud of the industry were: £110,000,000 were invested in the craft of printing; the annual turnover in printing work in this country every year represented £130,000,000; £45,000,000 were being paid in wages every year, and there were 200,000 skilled and 60,000 semi-skilled workers in the craft.

Price-cutting.

Considering the vast amount of capital and brains that had been put into the business, was there any reason, he asked, why they should allow the customer to bully them? He believed they should stand on their feet and say to their customers and the public, that they represented a trade of which they were proud, and that they were not going to be brow-beaten or treated in any way, but in a duly respectful fashion.

In this connection Mr. Crowlesmith related some very pointed stories of personal experiences in the selling of print.

Responsibilities of the Craft.

Coming to their responsibility as leaders, Mr. Crowlesmith said, firstly, they were entitled to get a fair return for their capital and their labour. Secondly, they should see that all employed in their craft were fairly paid. Could they do this, he asked. He was sure they could if they stopped running their works at a loss. There were printers who were running their businesses at such low rates that they did not have enough money to pay their workers' wages. Such practices only proved that the brains God had given them had been doped and were not fitted to the task of controlling and administering a great craft. They could not be just to those who work for them when they sold work below cost.

As a means of abolishing the practice of selling below cost he advocated greater efficiency in their work and administration. After instancing the efficient way in which many leading American printing offices were managed, the speaker emphasised the importance of master printers—as competitors—having more confidence in one another in order to eliminate the contemptible practice of price-cutting.

The Value of Co-operation.

With regard to wages, Mr. Crowlesmith was of the opinion that these were dependent on production. With the greater production that would result from greater co-operation between employer and worker he suggested a possible increase of 25 per cent. in output, with consequent cheapening of the product and increasing of the demand.

Concluding, Mr. Crowlesmith dealt with the time when they had to leave their businesses for others to carry on. It was their job to see that the trade they were leaving was more noble and the workpeople engaged in it more happy, contented and comfortable.

Following the lecture a few remarks were offered by various speakers.

Mr. A. Spring thought the dominating theme of Mr. Crowlesmith's interesting lecture could be summed up in one word—Harmony.

Mr. J. Griffiths spoke of his own visit to America and the larger opportunities that existed there compared with this country for the development of brains and enterprise.

Mr. Austen-Leigh, in proposing a vote of thanks to Mr. Crowlesmith for his address, agreed that they should have more pride in their craft and more confidence when facing their customers.

Mr. Maurice Clowes, in seconding, paid a tribute to the lecturer, referring to him as a very worthy exponent of printing salesmanship.

The vote of thanks was very cordially received, Mr. Crowlesmith briefly replying.

F.M.P. Council Meeting.

A meeting of the Council of the Federation of Master Printers was held on Tuesday in London, and a number of important decisions were reached.

In regard to the application for inclusion of wrapping papers under the Safeguarding of Industries Act, the Council decided to oppose the application.

Consideration was given to a proposal submitted for the scheme of pensions and endowment assurance for members of printing staffs, and it was agreed to recommend the scheme for the use of members of the Federation.

The Council approved the second campaign in connection with the Collective Advertising Scheme. This will be very much upon the lines of the last campaign. Members will submit names of prospective customers and pay 1s per name, and there will be sent out three pieces of literature, a folder, a mailing card in colour, and a blotter. A further development is that a series of poster stamps will be issued to all members of the Federation. The slogan of the whole campaign will be "Print more, sell more."

As regards the Federation's annual meeting next year, either Eastbourne or Folkestone will be the town chosen, and the time will be one of the last two weeks in May.

Another step forward was made in regard to paper standardisation. The Council approved the issue of a handy table providing equivalent weights per 1,000 for sheets now sold in 480's and 504's. The adoption of these equivalents is subject to confirmation by the National Association of Wholesale Stationers and Paper Merchants.

The Council approved the addition to the recent agreement made with the Wholesale Stationers on paper standardisation of a subsidiary agreement providing for the setting up of a special Court of Arbitration to be used in case of any disputes arising in respect of the standardisation agreement. The adoption of this is subject to approval by the Federation's solicitors and to approval by the Wholesale Stationers.

THE Postmaster-General, in a letter to a correspondent, refers to the charge that the Post Office employs foreign electrical date-stamping machines to impress the words "British goods are best," and says it is quite true that the machines are made abroad, though the dies are British cut, but he points out that no such machines are made by any British firm.

South-West London M.P.A.

Address by Mr. Frank Colebrook.

The first meeting of the autumn session of this Association was held on Tuesday, October 6th, at Messrs. Arding and Hobbs Restaurant, Clapham Junction, under the chairmanship of the vice-president, Mr. F. E. Tacey. There was a splendid attendance, and all who made the effort to be present were amply rewarded by the privilege of listening to an old friend of London printers, Mr. Frank Colebrook, who addressed the meeting on "Printers, Various : Their Respective Opportunities."

The formal business, including the admission of two new members, was quickly disposed of, and the members settled down in pleasurable anticipation of Mr. Colebrook's talk.

In his inimitable manner Mr. Colebrook at once captured the interest of his audience and retained it throughout his address, which was, as usual, brimful of helpful information and suggestion.

Mr. Colebrook began with the printer possessing only some simple platen, and he indicated what he called this man's "Croppertunity" in the doing of business building work. Any particular printer's special chance—his "propertunity"—was discussed, the execution of specially high quality work being touched on here. Then came some information about the possibilities of up-to-date machinery and processes, in which connection the Typary and Typon methods were mentioned as providing an opportunity to the litho man to do letterpress work without letterpress plant. Other matters dealt with were the possibilities lying before improved salesmanship, the printer's opportunities for self-expression and self-development in his art, also the opportunity of leadership and encouragement in respect of one's fellows in the craft. The lecture included references to Mr. Colebrook's recent tour in the United States, and it had a flavouring of fun throughout.

At the conclusion of the address the meeting was declared open for discussion and several members took advantage of the opportunity thus afforded to supplement the speaker's remarks from their own experience and also to elicit further information from him on various points of general interest. Questions put included some touching depreciation and plant accounts; and plant value in relation to income tax.

The chairman then proposed a hearty vote of thanks to Mr. Colebrook for his inspiring address, and it was observed that several members were eager to have the privilege of seconding the vote. This was done by Mr. W. J. Boyle, secretary of the Central Districts Association, and unanimously passed with acclamation.

An excellent programme for the session has been arranged and it is hoped that all members who can possibly attend these very helpful meetings will do so.

Members of other district associations are always welcome.

The November meeting which is to be held on Tuesday, November 3rd, will take the form of a joint gathering of members and their employees and will be addressed by Mr. H. B. Naylor, who is well known by all connected with the trade. Full details of this and other fixtures will be circulated in due course, and it is earnestly hoped that the session thus happily commenced will continue in the same spirit of mutual service and good fellowship.

Printers' Managers and Overseers

(PARENT) ASSOCIATION.

Lantern Lecture on "Authors."

The October meeting of the Printers' Managers and Overseers (Parent) Association, held at the Old Bell, Holborn, on Tuesday of last week, had as its main feature a lantern lecture on "Authors of To day." The lecturer was Mr. William H. Steer, a gentleman who has on several previous occasions lectured to the Association; and once again he proved his ability to hold, instruct and amuse his audience. The meeting was well attended, and was presided over by Mr. R. H. Berry (president), supported by the vice-president, secretary and others.

The minutes of the September meeting having been read and approved, the meeting next elected no less than six candidates to membership of the Association. These were Mr. J. R. Donovan (Graphic Arts Press, Ltd., Red Lion-square, W.C.), works manager; Mr. E. E. Farr (Messrs. J. Lyons and Co., Hogarth Press, Willesden), overseer, letterpress; Mr. F. E. Honour (Messrs. Newnes and Pearson, Ltd., Exmoor-street, N. Kensington), overseer, letterpress); Mr. R. C. Irvin (United Newspapers, Ltd., E.C.), printer, *Daily Chronicle*; Mr. G. Pond (Messrs. Dudley, Hill and Culross, Upper Thames-street, E.C.), works manager; Mr. F. W. Uppington (Messrs. W. P. Griffiths and Sons, Great New street, E.C.), overseer, letterpress. All of these were present to receive a personal welcome from the president.

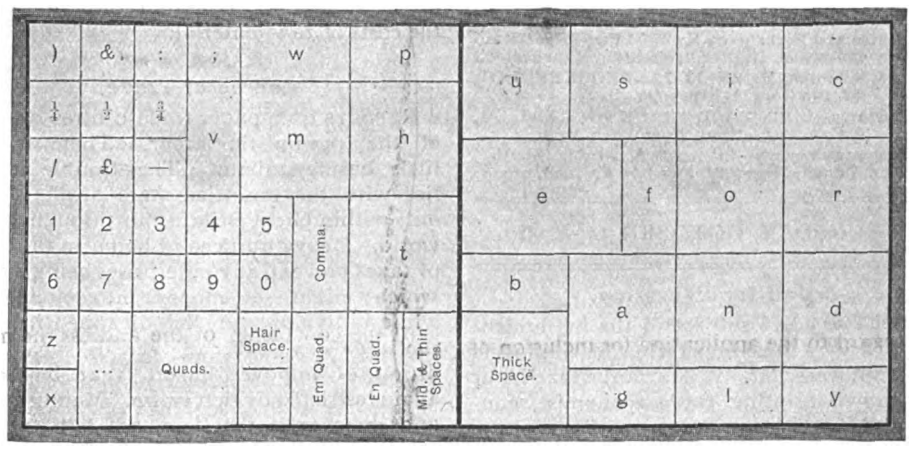
The meeting unanimously approved a recommendation by the Council, "That the sum of £20 be granted the London Centre towards expenditure incurred at recent United Gathering." In formally moving this, the general secretary pointed out that the principle had been approved by delegate meeting. Mr. E. H. Berryman seconded the proposition.

The president commented upon the great success which attended the Association's recent outing to High Beach, where all who attended had a most enjoyable time despite the unfavourable weather. Mr. Berry also drew attention to the series of six whist drives arranged to take place on the second Wednesday in each month during the autumn and winter, commencing October 14th, at the Empire Restaurant, Ave Maria-lane, Ludgate-hill. Emphasis was laid upon the change of time to 6 45.

The president announced with regret the sudden death, at the age of 59, of Mr. G. W. R. Greig, one of the earlier London members of the Parent Association, a regular attendant at the meetings, and one who had also served on the Council.

Mr. Steer was then called upon for his lecture, the president mentioning Mr. Steer's having entertained them very admirably on several previous occasions.

The lecture proved to be a remarkable series of personal recollections and impressions of famous writers, chiefly authors of fiction. Mr. Steer's personal acquaintance with eminent writers is evidently extensive, and he is able to utilise it very effectively, conveying intimate glimpses of character and telling stories of authors' idiosyncrasies, ways of life and literary achievements, which make up a narrative full of human interest as well as of instruction. The lecture was greatly enhanced by the showing of a large number of lantern slides, many of them unique, providing portraits of the authors referred to, their autographs, specimens of their MSS., corrected proofs, and so on, the whole making a most interesting and informative collection. Dickens, Gaskell, Stead, Stevenson, Wells, May Sinclair, Sheila Kaye-Smith, Thomas Hardy, Alfred Noyes, W. B. Yeats, Conrad, Gosse, Kipling, Barrie, Conan Doyle, G. K. Chesterton, Belloc, Hall Caine, A. S. M. Hutchinson—these were some of the writers dealt with in the course of an hour and a half's chatty exposition, which was followed throughout with close attention.



After the chairman had warmly commended the lecture, and remarked on the lecturer's wonderful memory, Mr. Berryman proposed, and Mr. J. A. Reed seconded, a cordial vote of thanks, which was carried with enthusiasm.

Reform of Lower Case Lay.

Labour-Saving Rearrangement.

A report appeared in our issue of September 24th of a meeting of the London Society of Compositors' Jobbing Guild at which Mr. Ernest Pheby spoke on efficiency in the composing-room. An example of "motion study" was given in respect of the compositor's hand as it moves over his case from boxes to stick Mr. Pheby unwound a reel of cotton, going over a diagram of the respective boxes covering the words "london society of compositors' jobbing guild," using first the case at present in vogue in the large majority of printing houses. He then placed on the blackboard a diagram of a case of a modified lay, and with the cotton, traversed over the same set of wording. In the first example the length of cotton used amounted to 64 ft., whilst in the second it was 48 ft.

We are able, by courtesy of the makers, Messrs. H. W Caslon and Co, Ltd., to illustrate herewith the modified lay of lower case to which Mr. Pheby drew attention. Notable features are the p'acing towards the right hand—the hand that lifts the "stamps"—the boxes for letters in most frequent use, also the grouping of the space boxes along the front of the case.

Revised Lay of Lower Case.

From the London Gazette.

PARTNERSHIP DISSOLVED.

W. Ogden and J. H. Hanford, printers, at Market-place, Harrogate, under the style of the Electric Press.

THE BANKRUPTCY ACT, 1914.

RECEIVING ORDER.

W. A. Campbell, residing at 17, Glen-avenue, Blackley, Manchester, and carrying on business at 14, Mulberry-street, Deansgate, Manchester, paper merchant.

THE erection of new paper mills and the installation of new machines in the United States are taken to represent indications of good business. The American Writing Paper Co., of Albany, New York, are adding their tenth machine.

THURSDAY, OCTOBER 15, 1925.

A Call for Education.

ON the very live subject of the betterment of industry by the co-operation of employers and employees, Mr. W. Howard Hazell, our well-known printing trade economist, contributes an article to the current issue of the *Spectator*. Under the heading "What is wrong with England?" Mr. Hazell considers the difficulties under which British industry is labouring, and he suggests a remedy for our troubles. Whilst he finds the main causes, but not the only ones, of our present abnormal trade depression in the impoverishment of our European customers as a result of the war, and their increased capacity to supply their own needs, he points out also that the activities of the extreme political elements in this country are undoubtedly increasing, stirring up amongst the workers class antagonism and discontent. "If," he writes, "the present unrest be caused by the reiteration of unsound economic statements, is not the remedy to supply, in as many places and in as many ways as possible, reasoned arguments to controvert these fallacies? A few newspaper articles and some public speeches are not enough. The facts and arguments should be carefully prepared, in simple language, and should be used in the Press, in speeches and by other methods, to bring them repeatedly before the people. Ignorance of economic facts is not restricted to the working classes, and many employers would be benefited by this suggested campaign, and would learn something about the causes of the present depression and the ramifications and interlocking of our various industries." As to a reconcilation between the employers' pressure to reduce wages and the employees' demands for wage increases, he says: "If only employers and their employees would realise the benefits that higher efficiency would bring to them, they would co operate wholeheartedly to improve the methods and organisation. The rate of wages is of minor importance, the cost of the finished article is all important. In spite of high wages in America, the United States can successfully compete with countries with lower wages, because their efficiency is high. If our efficiency were increased to the maximum, there would be a wonderful revival of trade." He concludes by summing up his suggestions in the one word—education. "Education in the rudiments of economics to allay dissatisfaction caused by false teaching; education to realise the need for the co operation of employers and employees."

* * *

Leipzig Prices.

NEWS concerning the Leipzig Fair goes to show that Germany and those countries whose buyers usually attend this exhibition are suffering from trade depression just as we are in this country. Certain it is that the business placed was very disappointing. Foreign buyers largely absented themselves altogether. The reason is said to be that they realised that German prices were too high. As to those buyers who did attend the Fair, any possible custom from them is said to have been checked by an attempt to get them to pay big sums in advance. This problem reveals the difficulty which prevails everywhere regarding costs and prices. Just before the Fair the German Government announced its intention to make strenuous endeavours to force prices down. Sellers, however, felt they were justified not only in resisting a reduction but in demanding a better return in view of the costs of raw material.

* * *

Course of Trade.

REPORTS from paper trade centres are still of the pessimistic order. There is very little business about. The trouble largely lies with the unsettled state of affairs, not only within Great Britain, but throughout the world. Heavy burdens at home in the shape of taxes prevent any enterprises being started which might set money into circulation, while individuals are handicapped in much the same way. Abroad there is such a condition of impoverishment that buying is again restricted by that cause. Manufacturers and merchants, therefore, are left to their own resources to stimulate business as best they can. Fortunately paper is so essential a commodity that a certain quantity must always go into use. Accordingly some sections of the trade are kept going. On the other hand, prices are so reduced that profits are also limited. The position generally leaves plenty of room for improvement, and only a forward movement along the whole industrial front will help the situation. So far autumn activity has scarcely shown itself; but with preparations for Christmas and the winter season may come relief to the long period of depression.

* * *

Australian News-Print.

JUST before the adjournment of the Australian Parliament prior to the elections, Mr Bruce made an important announcement concerning the manufacture of news print in Australia. He made the statement that assistance would be afforded similar to that granted to other industries under the recognised policy of the country. Mr. Bruce added that he would announce the measure of protection later. Such assistance as is here foreshadowed will have a direct bearing upon the news-print situation in the Commonwealth. The position there has already been complicated by the concession of the same measure of preference to Canadian paper as is enjoyed by the product from this country. However, even if the protection suggested is given eventually, it must take some time before Australia can produce news print at all and still longer before the quantity can have any effect on the market there.

NORTH OF IRELAND PAPER MILL.—Directors report a small profit for half-year ended June 30th, 1925, but regret that state of trade still continues very unsatisfactory.

"The Craft of the Printer."

Lecture by Mr. Geo. W. Jones.

A large audience was attracted to Stationers' Hall on Friday evening, when Mr. Geo. W. Jones, C.C., lectured under the auspices of the Stationers' Company and the Printing Industry Technical Board on "The Craft of the Printer." The chair was taken by the Master of the Stationers' Company, Mr. F. H. Miles, others on the platform being Mr. Edward Unwin, Mr. Henry Hill, Mr. A. W. Rivington, Mr. Alfred Langley, Mr. H. Wilson Howes, Mr. L. A. Wilson (U.S.A.), and Mr. J. R. Riddell.

Before and after the lecture there were on exhibition examples of early printed work, including pages of the Gutenberg Bible and the first dated Bible of 1462 printed by Fust and Schœffer; frisket sheets and proof sheets of the early part of the 16th Century, and other interesting items, as well as some beautiful specimens, in both letterpress and colour, from the Sign of the Dolphin.

Introduced by the Master as one of the foremost and best known men in the printing industry, Mr. Jones proceeded to deliver what he called a talk by a printer to printers, his discourse proving to be a very inspiring and instructive consideration of some of the early printers and the beauty of their work.

After a tribute to the unknown helpers who doubtless contributed largely to the success of the printers whose names have become famous, Mr. Jones laid stress upon the practical study of the work of these famous printers, and he proceeded to indicate the many advantages which the student of to-day possesses in his efforts towards craft mastery. Incidentally he threw out a suggestion of a travelling exhibition, in which might be collected examples of the work of the early printers and also of the best printers of to-day.

The speaker then turned to Gutenberg and his work, remarking that Gutenberg's 42 line Bible (1450–1455 6) was the most perfect book ever printed, and that from its completion the history of the printing craft begins. Referring to the beautiful manuscripts and the block books which preceded Gutenberg, he suggested that Gutenberg must have owed something to the block books of his time; there was a strong likeness between the lettering of the earliest block printing—the St. Christopher drawing—and Gutenberg's type.

The lecturer proceeded to tell something of the sad story of Gutenberg's financial difficulties which came so heavily upon him as the result of his great achievement, and he then went on to discuss, with the enthusiasm of an artist craftsman, the details of Gutenberg's work which make a page of his printing a thing of beauty. Mr. Jones drew special attention to the perfect composition that runs through the whole of the work, and in order to help students to appreciate the extreme care of Gutenberg's composition and the beauty of the effect, he distributed to the audience copies of a fine reproduction, printed by himself, of a page of the 42 line Bible. Special attention was drawn to the fact that no less than 237 lower-case letters were used in the composition of this Bible, many letters being provided in a multiplicity of different widths so as to get the spacing perfectly uniform throughout. The excellent press work, really marvellous in view of the crude machinery employed, was also commented upon, and the speaker affirmed that William Morris was right when he said that the first printed book was the best book ever printed.

Time sped so rapidly that Mr. Jones had to curtail his lecture considerably and touch but very briefly on the spread of the art of printing and its exemplification in the beautiful work of Jenson, Peter Schœffer, Ulric Zell, Caxton, Wynkyn de Worde, etc.

In concluding, the speaker recalled the days of the old specimen exchange of 40 years ago, and the enthusiasm and ungrudging labour which craftsmen of that time, masters and men, used to bestow upon their work. He urged that something similar should be set going to-day as one of the means whereby present-day printers might get into their hearts and into their work the spirit of the great masters of the past.

The vote of thanks to the lecturer was proposed by Mr. Alfred Langley who, referred to Mr. Jones as one of the few "master printers" of London really entitled to that name, he being truly a master of his craft.

The seconder was Mr. Wilson, described as Director of Education, New York, who spoke appreciatively of his introduction to the London printing trade and testified that Mr. Jones was as well known in America as in England.

Mr. Riddell also spoke, expressing his satisfaction at the success of the lecture and his great respect for Mr. Jones as a craftsman.

Mr. Wilson Howes then added a few words of appreciation and exhortation.

The vote of thanks being carried with enthusiasm, Mr. Jones briefly replied, and at his call the meeting expressed its thanks to the Master for presiding.

Personal.

Sir George Wyatt Truscott, Bt., was 68 on Friday.

At the christening on Thursday of the infant son of the Hon. Esmond Harmsworth, M.P., and Mrs. Harmsworth in the crypt of the Palace of Westminster, Viscount Rothermere was one of the god-parents.

The Federation of Master Printers received on Tuesday a cablegram from the Detroit Master Printers' Association expressing their appreciation of an address given by Mr. A. E. Goodwin (the Federation secretary, who is now visiting the States) and conveying greetings to the British Federation.

Mr. E. C. Austen-Leigh, chairman of Messrs. Spottiswoode, Ballantyne and Co., Ltd., and past-president of the L.M.P.A., was elected by the Council at their October meeting as treasurer of the London Master Printers' Association on the retirement of Mr. J. H. Williams after eight years' service.

Mr. Frank Colebrook, F.A.I., was one of the speakers on Friday at a lunch at Holborn Restaurant at which Mr. Henry Butcher, F.A.I., read a paper upon "Plant and Machinery Valuation." The lunch was arranged by the West-London branch of the Auctioneers' and Estate Agents' Institute.

Mr. James Edgell, the "father" of the Court of the Worshipful Company of Makers of Playing Cards, has been elected Master of the Company for the third year in succession.

The new Wardens are Mr. J. J. Meagher and Mr. H. L. Wettern.

Mr. Walter Feather, of the firm of Messrs. Feather Bros., printers, Keighley, has been chosen as Liberal candidate at a municipal by-election in the Central Ward at Keighley.

Councillor Charles Harker, a Ripon printer and stationer, has accepted the mayoralty of the city of Ripon for next year.

The Stourbridge Town Council have presented a resolution of thanks, engrossed upon vellum, to Alderman Lieut.-Col. A. H. Moody, of the *County Express*, in appreciation of his services as Mayor of the borough from 1921 to 1924.

Mr. Glen Steel (London representative of Messrs. Jubbs) is to give a lecture entitled "Some Leading Provincial Newspapers," before the Electrotypers' and Stereotypers Managers and Overseers Association on Tuesday, at St. Bride Institute, Bride-lane, E.C.4.

Mr. T. Winsley, of Evans, Gadd and Co., Ltd., Exeter, well known in trade circles, who has been ill for some considerable time, is making a good recovery from his recent operation and hopes to return to business in a few days.

Mr. Matthew Blythe, who for twelve years has been the London manager of the *Eastern Morning News*, has been appointed a member of the board of directors.

Mr. T. Heritage, the managing editor of the *Mineral Water Trade Review*, has retired from that position after 40 years' association with that journal.

Mr. Fred King, of the composing room staff of the *Doncaster Chronicle*, has been presented with a clock on completing 50 years' service.

Mr. A. Smith, head of the reading department of the *Yorkshire Post*, has retired after 40 years' service on that journal.

Mr. Aneurin M. Davies, of *The Times*, has been presented with a gold cigarette case on leaving to become circulation manager of the *Daily Graphic*.

Mr. A. E. Mist, the hon. secretary of the Stationers' Social Society, has sent out the notices for the 14th annual autumn dinner, which is to take place in the King's Hall, Holborn Restaurant, on Friday, October 30th.

Mr. Chas. Newell, C.C., the president, will occupy the chair, and Mr. G. E. Oswick is again providing excellent musical entertainment for the large company which is expected to attend.

Dr. John A. Hutton, pastor of Westminster Congregational Church, has accepted the editorship of the *British Weekly*.

Dr. J. C. Carlile has been appointed editor of the *Baptist Times*.

Mr. Jack L. Walton, of Port Elizabeth, is returning to South Africa on the "Gloucester Castle" after a six-months visit to this country. During his stay he closely studied the latest machinery associated with paper and print, boxmaking, etc., and placed some good orders with British firms.

Mr. Matt. Henry, who proved a good ambassador in the interests of British firms when he visited South Africa, must feel elated to know that business eventuates even "after many days."

Mr. Harry Becker engaged in a public debate with Mr. Fenner Brockway (Independent Labour Party) on Capitalism *v.* Socialism at Richmond recently.

P.M. and O.A., Manchester.

The gathering of Manchester and District members of the Printers' Managers and Overseers Association, on Saturday last, at the Mitre Hotel, was so great that an adjournment had to be made to the largest room so that business could be transacted in a comfortable manner.

President Frank Scouler called upon the secretary to read the minutes which were afterwards duly confirmed.

Two auditors, Messrs. A. E. Cox and R. F. Singleton were elected.

The Association's annual report and balance-sheet were passed after one or two minor inquiries.

The reports of President Scouler and the secretary, both of whom attended the last delegate meeting, were given with much detail.

Both members were accorded a vote of thanks for their attendance and reports, everything done being agreeable to the members.

Wee Mac.

Trade Union Matters.

The Executive Committee of the Typographical Association have been increased in number by one, the additional member to be elected in Wales. The Executive Committee have hitherto been elected annually. As the result of the triennial meeting three years will have to elapse before re election is sought. Steps are to be taken to provide for a second candidate to Parliament.

T.A. Levies.—For the ensuing half-year a levy will be called of 1s. per member towards the General Fund and of 6d. per member towards the Superannuation Fund. The Executive Committee have power to impose the levies if the finances of either fund are below a certain fixed sum per member.

The Bookbinder

Improved British Bindings.

A Problem and an Opportunity.

In writing last month of the need for improving the quality of the binding design exemplified in the covers of books issued by British publishers, we mentioned that the Bookbinding Section of the London Chamber of Commerce is showing a practical interest in this important subject. On the initiative of Major Robert Leighton, the Section appointed a committee, consisting of Messrs. Joseph Brown, Ernest Judd and R. G. Longman, to inquire into the problem of stimulating interest and activity in the direction of bettering the standard of design in the production of bookbindings.

Towards Better Design.

It is too early yet to expect very definite news of the doings of this committee, but we understand that it has had one meeting at any rate, and is seriously considering the problem before it, in the hope of evolving some suggestions that may be of practical value to the trade.

It cannot be doubted that there is room for a forward movement in this direction. We have previously written with gratification of the fact that certain British publishers are already experiencing a marked revival of the demand for books bound in tasteful and attractive fashion, books whose cover-designing embodies something more than the mere hasty knocking together of stock materials to compose lettering and ornamentation that will just pass muster. This is only a beginning; we prophesy that publishers and binders who are able to read the signs of the times aright and who set themselves to supply the newest demand will gain fitting reward.

The Call for Colour.

The main trend of design at the moment is undoubtedly towards gayer colourings. It is not surprising that the new age of Jazz and Batik should want something more lively than the average book cover of the last decade. The designers of book jackets, indeed, have already gone out to meet the demand, and with great success; but, with few exceptions, book covers do not share the new baptism of cheerful hues. There is much more to be seen in France, Germany, and America in the way of the new gay note in bindings than has yet made its appearance in this country, but this note has already begun to sound amongst us, and it will doubtless grow steadily in volume.

The Problem of Cost.

It would seem that the binding trade is up against a somewhat difficult proposition in this effort after better binding design. From whatever angle one looks at the problem, one sees eventually the need for increased cost if better quality is to be produced. As previously stated, the root of the whole problem of the decadence of design lies in the question of the price of books. It is the bookbinder price-cutter who is responsible for the poor general level of the book covers produced to-day; and not until the value of artistic design is reflected in the prices obtained for binding, will it be possible for the art of the designer to become an attractive field for the student and craftsman.

In the matter of lettering, for example, why is it that it is so difficult nowadays to find an engraver who can turn out really first-class work to the bookbinder's requirements. Is it not because the binder has not made it worth while for engravers to study the binder's needs, and that engravers have accordingly turned from the very exacting and comparatively unremunerative field of book covers to that of fancy boxes and other branches where the engraver's work offers more attractive conditions?

The Printers' Example.

Yet although better bindings may involve increased cost, this need not mean that better bindings are outside the realm of practical politics. The provision of more attractive covers will stimulate the demand which is already with us, and the public will eventually be willing to pay something more—and it need not be much more—for bindings that give an added pleasure to book possession. The printing trade has set a good example in this direction. Without doubt the general quality of printing—and its price—has markedly increased since pre-war years. A higher standard has been set by enthusiastic craftsmen. Fine craftsmanship has pulled increased orders and better prices; the response of demand to supply has been evident to onlookers, and the trade as a whole has followed the trend towards better things. Much has been done, too, by the Master Printers' Associations with their technical lectures, conferences, etc., which have been a live factor in the forward movement. Surely here lies much encouragement and suggestion for those bookbinders who wish to see the binder's craft raised to a higher status.

Permanence in Books.

From time to time the problem of the permanence of books is discussed, and it is one, no doubt, of great importance. Mr. Albert Hignton raises the subject again in the course of an article in *The Inland Printer*.

The illuminated manuscripts of Arab literati and medieval monks, he says, arouse interest not only for their beauty but for their quality of permanence. The material on which the lettering is so lavishly and colourfully expended was apparently intended to last for all time. Vellums and parchments written upon more than a thousand years ago are in a condition as perfect as when they were first inscribed.

Vellums and parchments can be made as durable as those of the past, but it is inexpedient, certainly economically prohibitive, to re-adopt them for common printing use. True, the higher grade papers of to-day, particularly those made by hand, as well as the bonds, ledgers, and a few other varieties which are manufactured with great care, are of a texture that will endure through decades.

Ephemeral Papers.

Unfortunately, the largest number of papers now manufactured, namely newsprint and book papers (classed as the cheaper grades) do not have endurance as an inherent quality.

Imparting this quality in paper, it would seem, should merit greater attention from paper manufacturers; more of their effort might profitably be devoted to finding a solution of the problem.

One important manufacturer has already put his mind to a study of this subject and is conducting experiments through the inverse method of artificially ageing paper. He subjects various papers to this test, thus determining their respective enduring qualities. By such means he forces, within a short period, a result that in a natural course would be measured by years. Thus working back he ascertains which of the basic materials employed are responsible for the deterioration, and his experiments are guided according to his finding and chemical analyses.

At least two Government laboratories have shown interest in the question, the durability of a paper for documents and records being their special concern. Their efforts, however, have not been nearly so constructive in character as those to which we have just referred. The German Government, for instance, in 1893, after certain experimental tests, merely determined the specifications of durability which the paper for important documents was to meet. Similarly, the United States Government, after some investigation, passed a law in 1911 that papers to be used for the Government comply with certain standards of endurance.

Anxiety of Librarians.

Newspapers are generally considered ephemeral in nature, to be tossed aside when read, yet as running records of history they are of immeasurable worth and, as such, are carefully treasured in our libraries and other institutions of learning. Librarians for many years have been much concerned over the impermanence of the paper on which are printed the daily records of the world, and have attempted to overcome the difficulty of preservation by various expedients. After seven years of experimental work the New York Public Library found a means of preserving its newspapers by carefully pasting each sheet within two sheets of very fine transparent tissue paper. "This method," it claims, "shuts the original sheets from the air, reduces the legibility but slightly, strengthens the page, and permits its free handling without danger of disintegration." But the method is costly and is subversive of the principle that prevention is better than a remedy. Moreover, it still remains to be demonstrated whether or not in the course of years the newspapers thus treated will succumb to the fate of disintegration.

Here is a recommendation which may prove less impracticable than it sounds; possibly it may already have been tried: Let every newspaper proprietor, after the regular editions are printed, run off a certain number of copies of each day's edition on paper of enduring character. These special copies could then be mailed to libraries or other institutions to file for future generations of readers.

Since no satisfactory method of imparting a permanent durability in the cheaper papers has yet been developed, it still remains for publishers or others who would have their works remain readable by future generations to select for their purpose only papers containing a large proportion of rag.

Notes and News

Dutch Strawboards.

Dutch strawboards have commenced to turn back in price after a period of marked easiness coinciding with the summer season. As usual, the higher levels are attained with the approach of winter, and the present advance marks the first stage of the process. To-day's quotations from agents are in the region of £8 2s. 6d. per ton, delivered from dock, with the usual extras for under 8 oz. and over 18 oz. boards. Prices are based on ton lots. The extra charge for substances over 1½ lb. is £1 2s. 6d. per ton. As against £8 2s. 6d. per ton, the quotations about six weeks ago were £7 15s. per ton; and of course very much more favourable terms could be secured by direct buying. As a matter of fact there is an importing agency in the Midlands at present offering Dutch strawboards at a figure well below £6 per ton direct from mill. Time for delivery is not stated, nor is minimum requirement, but the quotation is calculated to make users of Dutch boards reflect a little.

Leather and Wood Pulp Boards.

Glazed leather boards (Scandinavian) are listed at £16 10s. per ton for first quality, and £16 per ton for seconds, for minimum ton lots. White wood pulp board prices are fairly firm on a low level compared against the figures ruling earlier in the year. To day's quotations from agents' store are £16 10s. per ton for 30 to 350 substance, £17 10s. per ton for 400 to 450, £18 per ton 500 to 600, ton lots. Stocks are on the low side and later in the year the possibilities of an advance must be taken into consideration.

English Boards.

English box and book board prices are unaltered and compare very favourable against the figures for foreign boards, especially when bulk and finish is allowed for; in other words, the count is in favour of the home board.

Cutting Boards in Binderies.

While dealing with boards, it has sometimes occurred to the writer that bookbinders do not all appreciate the advantage to be gained by cutting boards on the rotary slitting machine instead of on the guillotine. Mostly the slitter is encountered in establishments where box making or casing in binding is performed. For case-making the first essential in board-cutting is accuracy and uniformity, and it is in this direction that the slitter is to be preferred to the guillotine. Apart from this, it can scarcely be disputed that the slitter will yield the greatest production. Other considerations are the first cost of machine, power consumption, space occupied and cost of operating. In each case the advantage is definitely with the slitter, which again, can be operated by a young apprentice. Naturally a great deal depends upon the amount of work which can be found for the machine.

Advantages of Machinery.

The average bookbinder, principally the better class stationery bookbinder, appears to fight shy of machinery. Leather paring, indexing, cloth cutting, back-rounding and glueing backs are a few of the many operations that are still being performed by hand where often enough they would constitute machinery processes if the equipment was available. All this and a great deal more of bookbinding machinery is, of course, available to the progressive bookbinder who realises that machine-work is quicker, cheaper and often better than hand-work.

Government Printer, Pretoria, invites tenders for the supply of stationery requisites (Tender No. 28). Tenders, to the Secretary of the Union Tender Board, Union buildings, Pretoria, must be in his hands by 3 p.m. on December 9th, 1925. A copy of the schedule of requirements (comprising 178 items) is available for inspection by firms desirous of offering stationery requisites of United Kingdom manufacture upon application at the offices of the Department of Overseas Trade (Room 41), 35, Old Queen-street, London, S.W.1.

One of our readers has received the following amusing request from India:—"Could you obliged us by supplying us a double crown printing machine with gladiators and automatic inking and delivery arrangements? If so kindly let us know what one will cost us with perfection and without perfection."

British Gold Leaf.

In a gallery of the new building just completed at the Museum of Science, South Kensington, is an exhibit of interest to bookbinders and others, showing the process of goldbeating in all its stages. The exhibit has been arranged by Mr. G. M. Whiley, of the old-established West-end firm bearing his name.

"It is a matter of pride," said Mr. Whiley to an *Evening Standard* representative, "to feel that, despite the keen efforts of foreign goldbeaters, English gold leaf still stands supreme in quality throughout the world.

"Next in quality to English gold leaf comes that of Italy and France, the Italian quality being slightly superior to the French. Germany stands at the bottom of the list for quality, and finds a fairly profitable market in the United States. She has specialised in a cheap quality of leaf which answers fairly well for the lettering of bookbindings, and for indoor glass signs where there is no risk of exposure.

"On the other hand, pure gold leaf is practically everlasting. When, for instance, I visited Cairo some time ago I saw some of the wonderful Tutankhamen relics. On these the old Egyptian gold leaf shone as fresh and beautiful as if it had just left the gilder's hands; while the goldsmith's work was more or less oxidised, owing to the quantity of alloy used.

"So far as we can identify the gold leaf provided by our firm to various public and other institutions during the past century and a-half, the result looks as durable and beautiful as ever. Perhaps the most striking examples are those of the Houses of Parliament, the Albert Memorial, and the Victoria Memorial, including the fine Canadian gates.

"There are about thirty shades of gold, ranging from silver-white to the incomparable yellow of pure gold itself, which has no counterpart in nature or art. Among the other shades are green, orange, lemon, and citron, all dependent on the alloys used. There is no real substitute for gold leaf.

"The white gold, for instance, serves a purpose for which silver could not be used. Even the thinnest silver leaf is ten times thicker than gold leaf; so where the silver effect is imperative it is attained by mixing a small quantity of silver with the gold during the melting process. This makes possible a quality of thinness to be obtained so that an article can be silvered, whereas, pure silver leaf would be unworkable owing to its relative stoutness.

"Modern economic conditions have, of course, affected the classes who formerly required gold leaf for interior gilding and picture frames. There is still, however, an important demand for the finest English gold leaf, some of our best overseas markets being in India and Siam, where the native princes and grandees make considerable purchases."

Caxton Home, Limpsfield.

Lord Riddell visited the Caxton Home on Monday afternoon last, and unveiled a tablet placed over a bed in the women's corridor, endowed by the staff and employees of the *News of the World*. Between 40 and 50 were present.

In inviting his Lordship to open the bed, Mr. J. Boyd referred to the record subscription list of the *News of the World*, extending over a number of years.

Lord Riddell thanked the staff for inviting him to be present, and for honouring Lady Riddell by placing her name on the tablet. He had recently visited other Homes connected with the printing trade, and had noted the excellent provision made for the sick and aged members. He was especially impressed with the excellent way in which these Homes were managed, and wished the Caxton Home Committee success in their labours.

The thanks of the committee were conveyed to his Lordship and the staff of the *News of the World* on the motion of the secretary (Mr. S. J. White), seconded by Councillor Mason, J.P. (Mayor of Battersea), who, as chairman of the Finance Committee, especially referred to the financial support accorded. Lord Riddell accepted a framed certificate on behalf of the *News of the World*, Ltd., giving the right to nominate patients to occupy the bed.

Book Costs and Prices.

The price of books to-day—especially "serious" books as opposed to "popular"—is a thorn in the flesh of the reading public; indeed, it is often laid at the door of the publishers that they have taken advantage of the high prices ruling during the war to maintain an inflated standard.

Actually the facts are these. The average wage in the printing and binding trades, allowing for recent prerogatives such as the annual holiday, is two and a-half times its pre-war figure; of the materials used in book production paper alone is in sight of its pre-war cost, and even it is up by fully 50 per cent.; authors' royalties are assessed on the pre-war percentage basis of to-day's inflated published prices; and costs of publishing and distribution have risen in proportion to the wage advances throughout the trade. Thus cost over all has increased by more than 100 per cent., and to meet these increases Everyman's Library, for example, is sold to the public at 2s. a copy as compared with 1s. in 1914, while a novel which sold at 6s. discounted to 4s. 6d. before the war now costs the public 7s. 6d. net. This, on the face of it, is a fair proposition, and as far as popular books are concerned—books which are printed in large numbers with the cost cut to a minimum—these conditions of labour and material impose a basic economic published price below which, given a certain standard of quality, it would be uneconomic to sell, *however large the demand*.

With less popular books the problem is more complicated, for here the smallness of the editions printed vitally affects the cost per copy. In these days of huge and fast-running printing machines, a long run is essential to a bed-rock cost, and small demand means high prices. Conversely, high prices mean small demand, especially as the serious book-reading class is, as a body, anything but wealthy; here is a vicious circle, within the limits of which a large percentage of important and valuable books fail to reach their public, through no fault of either author or publisher or public, but through the operation of an economic law. Books on serious subjects such as literature, art, politics, music and philosophy—a class of book which is strongly represented in our catalogue—are typical examples of the victims of this system, and it is one of the saddest aspects of publishing that so many good books must fail while their less worthy kindred succeed; but fortunately, the really great book will eventually create its demand, sometimes many years after publication, and by the simple operation of soliciting a large edition will produce itself at a price which places it within the reach of Everyman.—From the *Bookmark* (Messrs. J. M. Dent and Co.).

Printing Ink for Australia.

According to the latest returns available regarding the imports of printing and stencilling inks into the Australian Commonwealth, shipments under this category into that market during the twelve months ended June last year represented 319,093 lbs., of the value of £25,792. The United States was the largest supplier of this class of manufacture during the last completed twelve months, with shipments amounting to 160,852 lbs. (£9,142), compared with 67,561 lbs. (£4,806) in the preceding year. Consignments from the United Kingdom reached 155,394 lbs. (£16,276), against 149,267 (£13,040) in the previous year.

In "black printing ink, the home consumption value of which does not exceed 6d. per lb., in packages containing not less than 1 cwt.," the United States has a good lead, shipments from that source in the last completed twelve months reaching the very high figure of 2,155,879 lbs. (£31,555). In the preceding year shipments from the United States were 2,000,515 lbs. (£27,035). The contribution of the United Kingdom during the twelve months ended June last year represented 72,469 lbs. (£1,627), figures which show a decrease compared with the 166,174 lbs. (£3,568) recorded the year before. Increased deliveries are shown on the part of Canada, from which source there were 4,270 lbs. (£64), against only 463 lbs. (£7) in the preceding year.

An advertisement is always working.

DIVIDENDS AND REPORTS.

RAPHAEL TUCK AND SONS.—The preliminary statement for the year ended April 30th, 1925, shows profits, after providing for directors' and management remuneration, amounting to £37,613. Balance dividend of 10 per cent. per annum for six months ended April 30th, 1925, making 8 per cent. for the year. £1,287 transferred to special dividend reserve, leaving £7,194 to be carried forward. (The dividend is the same as for the previous year.)

EYRE AND SPOTTISWOODE.—Recommended Dividend of 1½ per cent., less tax, on preference shares ; £13 470 for depreciation ; £11,602 forward. (Last year no dividend.)

THE TIMES PUBLISHING CO.—Profit for year ended June 30th, 1925, £176,270 18s. 8d. ; £30,134 16s. 10d. brought forward from previous year, making total balance of £206,405 15s. 6d. The directors propose appropriating to reserve against contingencies, £50,000 ; paying dividend on the preference shares at the rate of 5 per cent. per annum for the year to June 30th, 1925 (paid on September 30th, 1925), £16,000 ; paying a further dividend on the preference shares under clause 116 of the articles of association (5 per cent. of the surplus profits for the year ended June 30th, 1925), £8,013 ; paying a dividend at the rate of 12½ per cent. per annum to the holders of the ordinary shares of the company, £80,625 ; leaving a balance to carry forward of £51,767. Profits for the previous year amounted to £123,153, and £9,018 was brought in, making available £132,171. The preference shares received 5 per cent., plus 5 per cent. of the surplus profits for the two years ended June 30th, 1924, £5,411, and the ordinary dividend was 12½ per cent., leaving to carry forward £30,135.

NEW COMPANIES.

TIMBEY AND CO., LTD.—Capital £20,000, in 3,000 pref. and 17,000 ord. shares of £1 each ; to acquire the business of printers, fancy box manufacturers and manufacturing stationers, carried on by J. Timbey at 3, Franklin street, Belfast, as Timbey and Co. Private company. Directors : J. Timbey and J. C. Timbey. Registered office : 3, Franklin-street, Belfast.

BROWN AND ROWLEY, LTD.—Capital £16,500, in £1 shares ; to acquire the business of printers and stationers carried on at 328A, City-road, and 18A, Watling-street, E.C., and elsewhere as Brown and Rowley. Private company. Directors : J. Rowley and B. Baddeley. Registered office : 328A, City-road, E.C.1.

SOUTHERN MIRRORS, LTD.—Capital £5,000, in £1 shares ; to acquire the undertaking and all or any of the assets or liabilities of the *Eastbourne Mirror* and the *Services National Journal*, owned and carried on by F. E. Clothier, and to carry on the business of newspaper proprietors, advertising contractors, agents, experts and advisers, press agents publishers, printers, etc. Private company. First directors : F. E Clothier and B. H. King. Registered office : 172, Bishopsgate, E.C 2.

COMPTON PRINTING WORKS (LONDON), LTD.—Capital £2 000, in £1 shares ; to acquire the business of printers carried on at Compton-place, Compton street, W.C.1, as the Compton Printing Works, and to carry on the same and the business of etchers, electrotypers, gold blockers, engravers, theatrical printers, manufacturing stationers, etc. Private company. First directors : R. H. Swadling and A. H. Cook. Registered office : Compton-place, Compton-street, W.C.1.

ASPINALL'S TICKET MACHINES, LTD.—Capital £12,000, in £1 shares (6,000 ord. "A" and 6,000 ord. "B" ; to adopt an agreement with A. C. Aspinall, the Kingsway Investment Co., Ltd., and the Walbrook Trust, Ltd., and to carry on the business of agents for and dealers in all forms of machines, apparatus and appliances for the issue and supply of tickets for use on trains, tramways, omnibuses and other kinds of transport, general printers, advertising contractors, engineers, etc. Private company. Subscribers : A. C. Warwick and H. Newington. First directors : A. C. Aspinall, H. Green, A. H. Johnson, L Nicholas and J. C. Robertson. Solicitors : Warwick and Gilbert, 14, Queen Victoria-street, E.C.4.

NEWART, LTD.—Capital £100 in £1 shares ; proprietors, printers and publishers of newspapers, periodicals, magazines, journals, books and other literary works and undertakings, photographic and colour printers, advertising specialists, publicity agents, designers of pictorial and display advertisements, etc. Private company. Subscribers : F. A. Tilley and C. J. Black. Registered office : 29A, Charing Cross-road, W.C.2.

KILLEEN PAPER MILLS, LTD.—Capital £1,500 in 1,400 ordinary shares and 100 preference shares of £1 each ; to acquire the business of paper and paper board manufacturers carried on by the Killeen Mills at Killeen, Inchicore, Dublin. Private company. Subscribers : R. I. C. S. Hayward and Miss Isabella Hales.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

SUTTLEY AND SILVERLOCK, LTD (stationers, printers, etc., London).—Satisfaction in full on September 10th, 1922, of debentures dated December 19th, 1907, and April 12th, 1917, securing £8,500.

UNITED KINGDOM ADVERTISING CO., LTD.—Sub mortgage dated September 1st, 1925, to secure £8,500, charged on St. George's Hall, and 3 and 4, Langham place, Marylebone, policy of insurance on the life of Clive Maskelyne, the undertaking of Maskelynes, Ltd., and all its property and assets, present and future, and their uncalled capital. Holders : National Provincial Bank, Ltd. (Registered October 1st, by permission of the Court.)

"HERALD" PRINTING AND PUBLISHING CO, LTD. (Ashton-under-Lyne). — Debenture charged on the company's undertaking and property, present and future, including uncalled capital, dated September 22nd, 1925, to secure all moneys due or to become due from the company to Union Bank of Manchester, Ltd.

USK PAPER MILLS CO., LTD. (Cardiff).—Mortgage on the Usk Paper Works, Crickhowell, with machinery, etc., dated September 28th, 1925, to secure all moneys due or to become due from the company to the Midland Bank, Ltd.

E. MASH (1925), LTD. (importers and exporters of and dealers in timber, wood pulp, paper, etc., London).—Satisfaction to the extent of £500 on June 30th, of debenture dated January 27th, 1925, securing £4,000. (Notice filed October 1st.)

RECEIVER APPOINTED OR RELEASED

GRANVILLE PUBLISHING CO., LTD. (London). —A. H. P. Howard, of 46, Peartree street, Goswell road, E.C., incorporated secretary, was appointed receiver and manager on September 24th, under powers contained in debenture dated May 22nd, 1925.

BANKRUPTCIES.

Re WEST'S, LTD, Music Publishers, 12, Moor street, Charing-cross road, W.—Under the compulsory liquidation of this company accounts have been issued showing liabilities £9 361 against assets valued at £5,003, and a total deficiency of £27,785 with regard to contributories, the issued capital being 13,777 ordinary and 9,650 preference shares of £1 each. The company was incorporated as a private company in January, 1920, with a nominal capital of £25,000, for the purpose of acquiring the business of music publishers carried on by Claude Blakesley Yearsley and Geoffrey Clayton as "West and Co.," and of carrying on business as music printers, publishers, etc. The purchase consideration was £13,000, paid in shares. The failure of the company was attributed *inter alia* to depression in the music business generally and heavy overhead charges. Mr. A. G. White, C A., 14, Old Jewry-chambers, E.C., has been appointed liquidator, with a committee of inspection.

Re LOUIS GEORGE ALEXANDER LEWIS, stationer, lately trading as Lewis and Co. —The public examination of this debtor was held last week before Mr. Registrar Francke at the London Bankruptcy Court, the accounts showing liabilities £255. against assets valued at £22. The debtor stated that in November, 1914, he commenced business as a merchant and stationer at 17, Shaftesbury-avenue, W , under the style of Lewis and Co. In June, 1919, the assets and liabilities were taken over by a limited company, which he formed for that purpose and of which he had since acted as managing director. Witness attributed his insolvency to the decline of the company's business and its consequent inability to pay salary due to him. The examination was concluded.

Re WILLIAM STANLEY ROBSON. — William Stanley Robson, of Fitzarthur street, Armley, Leeds, described as a paper merchant, underwent his first public examination in the Leeds Bankruptcy Court on September 30th. The liabilities expected to rank amounted to £1,162 10s. 9d., with assessed assets £374 1s. 6d , leaving an estimated deficiency of £788 9s. 3d. Debtor, aged 29, began business on his own account in January, 1924, with £25 capital, part of £50 borrowed money which was still owing. The household expenses of himself, wife and child since July, 1924, had been £350. In January last, owing to pressure of creditors, he closed down, and since April had been engaged as a commercial traveller. He now owed £1,108 15s. 7d. to ten creditors for paper. In reply to Mr. Sandelson (for the trustee), debtor admitted that though there were over half a dozen writs in the County Court against him in January this year when he had closed down, he accepted delivery of £319 worth of paper from a London firm. Mr. Sandelson : Would it not have been an honest thing to have told the firm that you were in difficulties and have cancelled the order ?—Debtor : If I could have sold the paper I would have made a profit of £100. Did you sell any ?—A little. The examination was adjoured to October 27th for debtor to furnish full particulars of his trading.

British Industries Fair.

Big Publicity Campaign.

Special efforts are being made to render the next British Industries Fair of such importance that it will become a definite annual fixture which manufacturers will feel themselves compelled to support and buyers will regard as a necessary engagement. There is no reason why this country should not have trade fairs as successful as any on the Continent. Only a little well-directed stimulus, we believe, is required to achieve this purpose, and Sir Charles Higham, who has been appointed director of publicity, is the person to provide it.

As we have already announced, the Fair is to be held in London and Birmingham from February 15th to 26th next year, and the Government have granted £20,000 to assist it. The venue of the Fair is again to be the White City, and the money is to be devoted to an intensive publicity campaign.

There are two main factors. One is to get exhibitors to take space, and the other is to attract likely buyers. It is highly essential that British manufacturers should support the scheme. With the British Empire Exhibition no longer in existence the B.I.F. ought to fill the gap and serve a very valuable purpose. Nothing will be lacking on the part of the Department of Overseas Trade to make it so, and a scheme of publicity has been prepared by Sir Charles Higham in this connection. He has, of course, at hand very direct means of approaching overseas buyers, for the D.O.T. has an index list of 50,000 names of foreign buyers to whom notices of the Fair will be sent. These buyers are located all over the world preponderating in countries most likely to be interested. The overseas officers of the Department will also help in distributing literature and in notifying the authorities at home of business visitors to this country. These officers include 13 trade commissioners and 56 Imperial trade correspondents, surely a valuable force for the purpose.

Sir Charles Higham, in addressing an assembly of trade journal representatives recently, emphasised the point that a trade fair is essentially the business of the Government. While blame is given in that direction when trade is bad and unemployment rampant, it is obviously the concern of the Government to take steps to mend such conditions; and a trade fair is one of the practical schemes for bringing in orders for British goods. There is much force in the remark of Sir Charles that if manufacturers fail to take their part in such an effort they ought not to complain if they fail to make profits.

There are signs that manufacturers are coming forward in support of the 1926 Fair in quite a promising manner, and substantial space is already being taken. Before the Fair is open the maximum amount of space available, it is believed, will have been sold at a profit, so that the country will not be involved in any expense on this score.

Sir Charles Higham is convinced that there is no reason why this country cannot pay high wages and get men to work if there are plenty of orders coming in. A means of providing those orders lies in the British Industries Fair. If the display at the White City next February does not set a high standard of success it will not be for want of effort on the part of one of the greatest publicity experts in the country.

Messrs. Edward Lloyd, Ltd., have given notice of appeal at the East Kent Quarter Sessions against the assessment of Kemsley Mill, the Assessment Committee of the Milton Regis Council having declined to reduce it.

The "Welcome" Photographic Exposure Calculator and Diary for the current year is a most useful pocket guide for the amateur photographer, as it contains a mine of information concerning the various photographic manipulations of plates, papers, etc., and has also formulæ for toning by various methods. Hints on selection of views, focussing, development and such like add to its usefulness, while a simple exposure calculator gives the time necessary with any plate or stop, and under varying lighting conditions. There is also a series of light tables, pages for recording particulars of exposures, and space for diary notes. The book is well bound in green canvas, and is of a handy size for the pocket. It is published by Messrs. Burroughs, Wellcome and Co., and may be purchased at all photographic dealers.

New Composing Machines Bring New Business

¶ One of our customers tells us that the **extra** work he has been able to handle since he replaced his old, out-of-date machine with an Intertype has paid for the installation.

¶ It is a demonstrable fact that keeping a machine too long—failing to take advantage of new inventions successfully applied in the trade—is a definite source of loss.

¶ There are many British printers to whom we should like the opportunity of proving that an up-to-date Intertype—the Better Machine—will quickly pay for itself out of the **extra** work its installation makes possible. If you have an old composing machine, let us discuss this matter with you. Send a card to-day—there is no obligation.

INTERTYPE LIMITED

Britannia Street, King's Cross, London, W.C.1

Set in Intertype Cheltonian Series. Border Slide No. 654.

Papermaking Education.

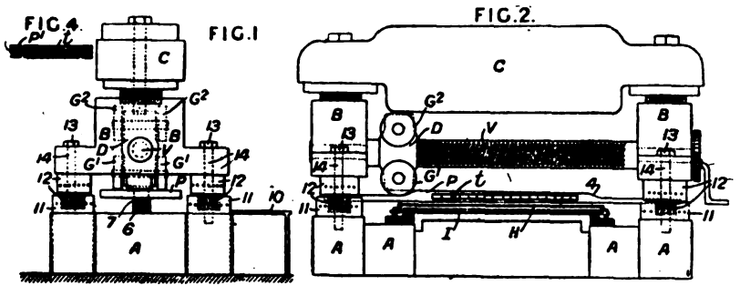
Classes Started at Croxley Mills.

In connection with the Dickinson Institute Technical School a papermaking class has been formed which was the outcome of a desire on the part of a number of keen papermakers to further supplement their knowledge of the craft. The class is affiliated to the City and Guilds of London Institute, and their syllabus has been adopted.

Through the good offices of Mr. Skeins (general manager) much sympathy and practical help has been forthcoming and, further, the scheme has received the support of the chief papermaker (Mr. J. Wilson) and the departmental chiefs. The class has been exceedingly fortunate in securing the services of Mr. F. Heckford (chief chemist) as director of instruction who is giving his services voluntarily.

On Tuesday evening, September 29th, in the Science Room of the Dickinson Institute 35 students representing all parts of the mill listened with keen attention to Mr. Heckford's lesson on "Fibre-yielding Materials." He dealt with his subject in such a manner as to make it perfectly clear to the whole class, an important feature which only the initiated can appreciate. To the promoters it was a matter of gratification that so many availed themselves of this opportunity to further their knowledge.

This brief report would be incomplete without reference to the honorary secretary (Mr. F. Craig), who by his energy and painstaking has contributed in great measure to the successful launching of the class.



Messrs. Edward Lloyd, Ltd, are erecting a new club and institute in the Avenue of Remembrance at Sittingbourne. A little difficulty arose with the local council owing to the plans not having been deposited before the work was commenced. It was with a view to preventing unemployment that the work on the new institute was hurried forward. Having considered all the circumstances, however, the Sittingbourne Council have now approved the plans.

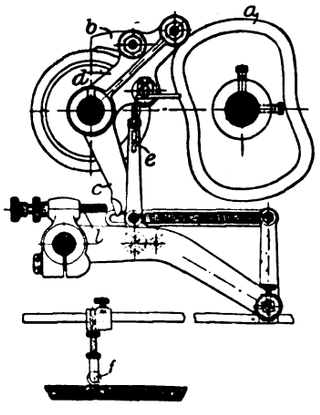
New Inventions

Cutter-crush Work.



A French firm, Messrs. Caudrelier, Levecque et Cie, have taken a British patent in a machine for making embossed tickets by the use of type which cut out characters from coloured paper and impress them into pasteboard, the stamping being effected by the successive descent upon the type of a series of keys *t*, Fig. 2, arranged in a spring-supported frame P so as to be capable of

vertical and lateral movement therein. The frame P, which is supported above the machine bed by springs 7 and guided by rods 6, Fig. 1, has slotted sides P', Fig. 4, in which engage end tongues 3 on the keys *t*, clearance being provided to allow of slight movement of the keys. Pressure is applied to the frame and keys by means of a pair of rollers G' on a carriage D traversed across the frame by a screwed spindle V journalled in end members B mounted on the machine base A. The rollers G' first engage an inclined face 4 to tilt the frame P, and then pass over the keys *t* and depress them successively so as to cause the type to emboss the ticket. A second pair of rollers G² on the carriage D engage a cross-head C attached to the members B so as to prevent bending of the spindle V. Each member B can be adjusted above the base A by means of a bolt 12 screwing into a block 11, and a locking bolt 14 and nut 13, the bolt 14 passing through the parts B, 11, 12. A similar arrangement is used for adjusting the cross-head C above the members B. The bed of the machine is provided with an extension 10 on which are arranged a plate I for carrying the paper, and the type-holder H, before they are moved into position beneath the frame P.

Pile-raising Mechanism.

Mr. C. Winkler has patented a pile-raising mechanism for sheet-feeds of the kind wherein the pile is raised automatically by a cam-operated pawl-bearing lever *d*, *c*, movement of which is prevented by a stop *e*

controlled by a feeler *f* resting on the pile, a hand-operated screw stop *l* is provided for limiting the movement of the lever arm *d*, so that the device can be set for dealing with piles of sheets of different thicknesses.

Printers' Blankets.

In this invention, which is patented by Mr. A. F. Decker, a printer's blanket comprises a flexible base formed of ground cork and a binder consisting, for example, of rosin, linseed oil and a gum, which is coated on one or both sides with a layer or layers of coating-material comprising a cellulose ester such as nitro-cellulose and a solvent. The coating-composition may also include vegetable oil such as castor oil, animal oil such as lard oil or lanolin and pigments such as zinc oxide or metallic powders. It is preferred to omit oil from the layer next the base.

Stereotype Plates.

This invention refers to a method in which a typographic plate is pressed on to a softened heated mass of a plastic organic composition material, such as acetyl-cellulose composition, to form a matrix from which stereotype plates of a similar organic composition are prepared. The composition used for the preparation of the stereotype plate is such that it softens at a lower temperature than the matrix material. A metallic trellis or other skeleton may be embedded in the stereotype plate during manufacture. The patentees are the Actualite Illustree Soc. Anon.

New British Patents.

For the benefit of our readers we have arranged for any inquiries relating to Patents, Designs and Trade Marks to be answered, free of all charge, by a Fellow of the Chartered Institute of Patent Agents. Inquiries should be addressed, in the first instance, to the Editor.

Applications.

Bergmann-Elektricitats-Werke Akt. Ges. Printing presses, etc. 24,167.
Bullock, C. A. H. Typesetting apparatus. 24,171.
Chalmers, J., and Wilson, J. K. Machines for assembling sheets of paper in register. 24,477.
Chalmers, J., and Wilson, J. K. Machines for gumming and perforating paper. 24,478.
Chemical Treatment Co., Inc. Printing formes. 24,150.
Cleland, Ltd., W. W., and Luce, R. C. Paper wrappers, etc. 24,581.
Fallot, M. Printing machines. 24,638.
Gilbert, A. Calendars. 24,144, 24,533.
Hovil, F. A. Device for holding printed matter. 24,697.
Thomas and Co., A. R., and Young, P. E. Account books. 24,352.
Toronto Type Foundry Co, Ltd. Sheet-feeding machines. 24,292, 24,293, 24,294.

Specifications Published.

1924.

Jones, W. E. Calculating device for the use of printers. 240,206.
Mond, A. (Smithe Machine Co., Inc.). Gumming and creasing mechanisms. 240,210.

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

THERE is no material change in the condition of the paper market. Trade is improving very slowly, and there is still a long way to go before either mills or merchants can claim to be busy. Printers are not yet entertaining their normal volume of winter trade, and in the main they are very chary of placing paper orders except for immediate requirement. There is still the almost excessive zeal for economy, and quality is sacrificed all along the line in pursuit of it. Wherever there is a farthing per lb. to be gained by dropping the paper quality a few degrees, the step is taken without compunction. On large contract work in particular there is always the tendency in quoting to make a saving in the paper. Sometimes it is due to the policy of a buyer who desires to demonstate his ability, and sometimes it is brought about by the printer who schemes to secure the work by taking risks with the paper. He perhaps would not dare to take similar risks with a contract in which paper qualities were rigidly specified; but there are plenty of desirable contracts sent out in which it is left to printers to match approximately the grade of paper previously used. In such cases the tenderer submits a sample of the paper he proposes to use and everything depends upon the good or bad judgment of the individual who decides the contract at the other end.

IT is a nice question to debate whether increased consumption leads to decreased quality, referring, of course, to paper. Take the case of literary books, the vast majority of which come under the classification of light fiction. The aim in the publishing world is to produce as cheaply as possible in order to sell as many as possible. To out-rival the 2s. 6d. edition, a 2s. edition is created, and to make a new market the 1s. standard volume is turned out *en masse*. Then, to sweep the field, a 6d. volume appears by real mass production methods. Each succeeding achievement is a more wonderful example of industrial efficiency and each enterprise is the product of infinite care in economising cost of production. Naturally quality standards are levelled to the price line, and every factor in the cost of production is subjected to the closest scrutiny. Twenty years ago the papers mainly used in the production of novels were good-class antiques, fine printings, and for light-weight pocket volumes a very fine grade of bible printing. To-day the consumption of paper is greatest in the low-priced mass production books, and the quality of paper is many degrees below the earlier standards. What is lost to the paper industry in quality is more than compensated for in tonnage, and without question it must be agreed that volume of output is much more vital to the welfare of the papermaking industry as a whole than maintenance of a quality standard. Educationally and æsthetically there is another argument, but industrially the example of news-print efficiently demonstrates the influence of cheapness upon demand and consumption.

JUST in passing, one wonders whether paper people realise just to what extent paper is used in the production of these cheap books we have been writing about. It may be taken too readily for granted that what looks like very attractive cloth or leather covering is actually the material which it so closely resembles. A more careful examination will satisfy the observer that paper can be treated and embossed to look like the real thing.

Paper Box Making.

Resumed Inquiry into Draft Special Order.

The inquiry was resumed on Oct 1 at the Industrial Court, Old Palace-yard, Westminster, into the Trade Board (Paper Box) draft special order by which the Minister of Labour is giving a revised definition of paper box making.

Mr. W. Culross (representing the employers) submitted reasons why the soap trade should not be excepted from the application of the order.

It was pointed out to the Commissioner (Mr. C. E. Dyer, K.C.) that especially a firm like Messrs. Lever Brothers, the only one having a separate box department, did not want circumstances to operate under the order which might place box makers' wages above the rate of wages payable to soap makers. If there were competition by supply to other traders that would be, he submitted, inequitable if such competition were upon any lines other than those upon which applicants had to conduct their business.

Mr. J. J. Mallon, secretary of the workers' side on the Trade Board, said that with reference to the matchbox-making trade's exclusion the workers made no objection because they were being amply protected under the Joint Industrial Council and were satisfied with the wages. If there were friction it would not be by the percolation of paper box makers into the body of the soap and candle trade, or because the Trade Board existed, but because a great many trades existed, each with its own rules.

Mr. W. H. Dyer said if the application were granted he did not see how other applications could be refused, and the result would be to take away from the jurisdiction of the Board many important concerns. They would create a precarious position if large sections of the workers were detached from the operations of the Board.

Mr. W. Robinson, representing the National Union of Distributive and Allied Workers, opposed the application of the new order.

Mr. A. Ross Mitchell (for the Soap and Candle Trades Federation) said that out of a total number of 20,000 hands employed in the soap industry there were roughly 200 males to 600 females. Of 17,000 hands employed in seven firms engaged in box-making which were in the federation there were 50 males to 572 females. The workers were adequately protected under the Joint Council, and to have one portion under the Trade Board and another under the council would lead to confusion and discontent.

Mr. Gossage said it would be entirely wrong to represent that Messrs. Lever's organisation compelled associated concerns to take boxes from it.

Mr. Walton, of Messrs. Lever Brothers, submitted the scheme would prove unworkable, prevent mobility of labour, increase the labour turnover enormously, and prevent labour stability.

Mr. Mallon, in reply to Mr. Robinson, said that he spoke for five trade unions on the Industrial Council in the box-making trade in saying that the exclusion of this kind of box-making would be very detrimental to the workers as a whole.

Mr. Culross told Mr. Robinson he was not prepared to admit that the employers and workers, meeting amicably together in the Trades Council, would result in the employees getting better conditions than the Trade Board was likely to give them.

The inquiry was concluded and the Commissioner will subsequently issue his report.

IN the new Australian tariff, which is subject to revision, however, pending final assent, bronzing and metal powders are admitted into Australia free, whether British or otherwise. Under the old rates, while British material was free, there was a general tariff of 10 per cent.

Revival of the Valentine.

New Business for Retail Stationers.

A considerable business was lost to the retail stationer some quarter-of-a-century or so ago when the practice of sending valentines fell into disfavour. Of late years, however, there has been some revival of the

demand for valentines, and this has led to a big enterprising effort on the part of Messrs. Raphael Tuck and Sons, Ltd., who appear to be now well on the way towards stimulating this demand into a revival of the vogue for valentine cards. We had the pleasure, the other day, of looking through a large new collection of Tuck valentines, and our inspection left us with the impression that there cannot fail to be a big market for cards produced with such good taste and in such excellent artistic form. If anything could serve to restore St. Valentine's Day to the important place it used to hold in the lover's calendar, cards such as this should do it.

The valentine cards in this collection range in price from 6d. to 5s. and are in a large variety of styles including many most handsome and delicate in design. Much use is made of a dainty border or fringe, as shown in the illustration herewith, this being executed in silks, real lace, metal lace, etc., whilst many of the cards have also attached to them imitation roses or forget-me-nots, or little devices such as cupid's bows. Wording has

been carefully chosen with a view to making the cards appropiate for the use of "both timid admirers and ardent lovers," to use the publishers' expression. A point to note is that not all the cards introduce the word "valentine," so that the lover who seeks a missive for any season of the year can be accommodated from this selection.

We show, too, an illustration of an Easter card from a new collection prepared by Messrs. Raphael Tuck and Sons, Ltd., a collection of Easter cards at prices ranging from 1d. to 6d. and containing many very beautiful examples.

Swiss Imports.

General Licence for Cardboard, Printed Paper, etc.

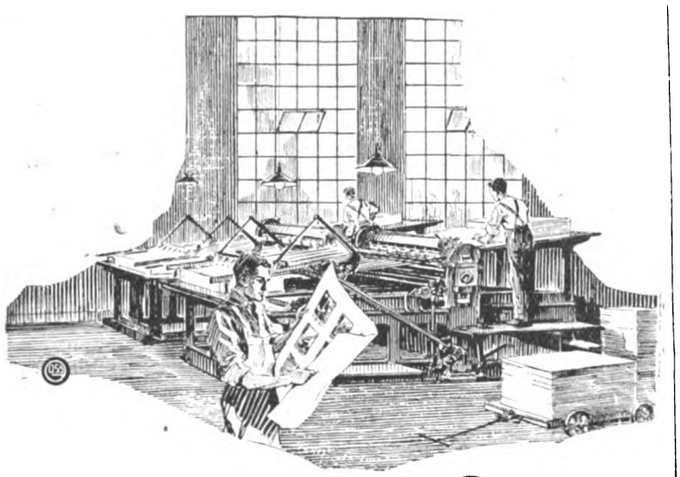
The *Feuille Officielle Suisse du Commerce* for September 1st contained a Decision of the same date, effective as from September 7th, which grants a general licence for the importation into Switzerland of the goods shown below:—

Cardboard weighing 200 grs. or more per square metre, not having been worked after manufacture.

Paper and cardboard, chalked on one side only, not worked; chalked on both sides or covered with chalked paper; crinkled, perforated; gummed paper; unsensitised photographic paper.

Paper and cardboard cut into strips less than 25 cm. wide.

Printed paper and cardboard, in loose sheets or pamphlet form.



Paper and cardboard printed by processes other than typography or lithography, in loose sheets or pamphlet form.

Cardboard boxes and cardboard for wrappings, cardboard tubes, not coated, also those printed; cardboard cut up for boxes, even if folded or notched.

Commercial books, agendas, etc.

Bookbinders' wares and cardboard wares, not specified in the Tariff, except albums for pictures and post cards, and bobbins for spinning and weaving.

ADVERTISING.—Lt.-Col. E. F. Lawson presided recently at the 13th trade dinner of the Old Colony Club in London, when Sir Charles Higham gave an address on the subject: "Should the British Government Spend £1,000,000 on Advertising." The business firms and trade groups of manufacturers must follow the Government's lead, and get after orders, said Sir Charles. "Advertise scientifically in the newspapers," he added, "and you can sell more goods—reduce your overhead costs—pay high wages, and make more profits. Dozens of firms are doing it daily. Why don't the others follow suit? They should, or they should not grumble."

SUCCESS

"There is nothing that succeeds like success"—*runs an old saw.*

THE SPECIAL EXPORT ISSUES of the "British and Colonial Printer and Stationer" have been increasingly successful since they were started some 37 years ago That this success has been shared by our advertisers is shown by the following testimonials which have reached us :—

"We, ourselves, have taken your journal in for a great number of years and have always found it interesting and have frequently referred to the advertisements for any special requirement that we were looking for."—R. R. & Co., Ltd.

"We take advantage of this opportunity to express our great satisfaction as to the efficiency of your paper as an advt. medium both in the U.K. and abroad. It is gratifying to note that enquiries from the remotest parts abroad are the direct results of our advertisements in the "British & Colonial Printer."-T.&T. Co., Ld.

However successful a firm may be, it is always on the look-out for new worlds to conquer and in suggesting that your advertising should appear in our Next Export Issue, we are presenting you with an economical method of obtaining forceful overseas representation.

"The British and Colonial Printer and Stationer" specially circulates in the following countries:—

Australasia.	**East Indies.**	**Canada.**
India.	**West Indies.**	**United States.**
South Africa.	**China.**	**South America.**
	Japan.	

The next Special Export Issue will be published on

DECEMBER 3rd, 1925.

Space is now rapidly being booked.

THE TRIUMPH OF Modern Offset Lithography

By JOSEPH GOODMAN, F.R.P.S.,

City and Guilds of London Honours Silver and Bronze Medallist, Lithography and Photo-Mechanical Processes. Author of "Practical Modern Metalithography," etc.

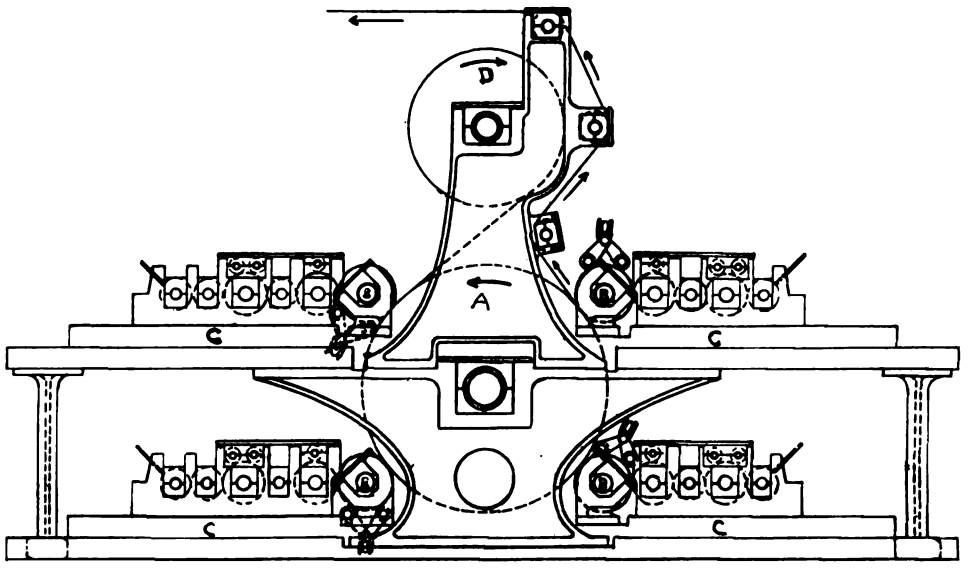
In our last article we introduced the remarkable and prolific process of tubular offset lithography which was confined in our preliminary reference to single-colour work: these machines, however, are constructed to print two, three or four colours simultaneously.

Tubular Offset Lithography.

This capacity of multi-colour printing is ingeniously provided for by the detachable, self-composed trays, each of which contain ductor box, distributors and inking rollers. These trays are arranged two on the front side of the large printing cylinder and two on the opposite side of it, and are in series so that each prints in succession the separate particular colour assigned to it for the job in hand.

The material thus enters the press at one side in a virgin state and emerges at the other side a completed design, printed in four different colours, offset or direct, affording an infinite variety of hues in accordance with the superposition and juxtaposition of these four colours.

By using the "Photo-tri-colour Selection" process in the preparation of the printing image, the ordinary reproduction of a multi-colour picture in three workings can be obtained, or a fourth colour can be included to enhance effects.



Machine Explained.

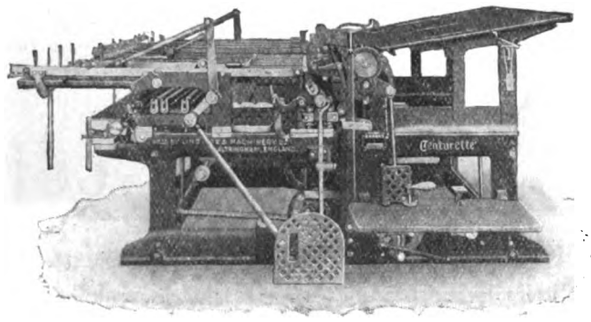
The accompanying outline diagram shows the exact location and position of these colour trays, and their relation, first, to the printing tubes which they are to serve; and, second, their relation to the large impression cylinder upon which all four of the printing image cylinders depend for making the several colour impressions upon either the reel of paper or the reel of textile fabric material.

It will thus be observed that each tray, though detachable, and a separate entity, nevertheless works in synchronism with the other trays, and with the whole of the remainder of the mechanism, including of course the material upon which the printing has to be done, whether paper or textile.

It can be further readily understood that two or even three of these trays can be disconnected from the machine to permit of the solitary one remaining to be worked alone, thus printing mono-colour work instead of multi-colour; whilst, on the other hand, two additional trays could be added to the four already provided for in the machine (by providing a larger impression cylinder, and the necessary slide support and gearing), thus making the machine a six-colour one.

These machines were originally used for textile fabric printing purposes by the direct planographic method, this class of work being generally known as calico printing, a very large English industry. This all-rotary tubular machine has however been subsequently adapted to print lithographically both upon paper and upon every other form of textile fabric both coarse and fine, such as bed ticking canvas, felting, velvet, silk, satin, linen, chiffon, cheesecloth, nainsook, tulle, etc.; many being materials of such difficult surface as to baffle the old-time calico printer.

Hayes Machine for Tubular Offset Lithography.



Important Extension of Lithography.

Thus lithography has extended its boundaries, and by the aid of this new invention has ushered itself right into the domain of another industry, extending its sphere into new realms of employment, enlarging its capacity for wider industrial service, besides enriching the fabric printing process right up to the high artistic level of lithographic attainment.

The point, however, that concerns us most, is that this new "all rotary" lithographic method has proved its capacity for high-class paper printing, cloth paper, celluloid and gelatinous material from the reel, and at a printing speed that equals some of the typographic "reel fed" machines. This is one of the most striking and revolutionary advances yet made since the introduction of the offset method into lithography.

Already variations of this machine are constructed in both America and Germany, which are printing illustrated journals from the reel by the offset method in letterpress text and coloured illustrations.

Digitized by Google

It was not an easy matter to design a printing press to give both high speed and good quality, but it was achieved by the designers and builders of the Centurette—the two-revolution press which prints up to 3,000 impressions per hour and delivers its sheets either with printed-side-up or fly delivery, whichever the printer orders. It is made in the same works, and by the same skilled engineers, as the Miehle, at Altrincham in Cheshire.

Size for size,
the fastest two-revolution press is the

Centurette

LINOTYPE AND MACHINERY LTD.
9 KINGSWAY, LONDON

These machines are adaptable for an infinitely wider application of work than already referred to, as they are capable of producing a higher grade of wall paper than by the older methods. With offset lithography, insoluble oil colours would be employed, which are more hygienic and permanent, and permit of richer colour schemes and of designs much more complicated and detailed.

Four-colour Illustrated Journals.

Then, again, four coloured illustrated journals, magazines and newspapers are yet another lucrative sphere for exploitation by this process, which has already passed the initial experimental stage and thus affords the attractive prospect of a continuous and ever-expanding field for development. Linoleum printing, oil cloth work, fancy leather, slipper felting, and a shoal of other decorated commodities can be negotiated by these reel-fed lithographic all-rotary machines, both of the direct and the offset types.

A powerful battery of lithographic offset machines of this class is working successfully in England at the Elm Press, London, printing high-class periodicals, and illustrated magazines which cater for the manufacturing trades, and general public illustrated journals. On the Continent there are several similar plants working upon a very diversified range of production, which includes an illustrated Labour newspaper; humorous illustrated public magazines, and mammoth illustrated trading catalogue work.

We shall deal with these in detail in a subsequent issue of the *British and Colonial Printer and Stationer*.

L.S.C. Jobbing Guild.

Design and Layout.

At a meeting of the L.S.C. Jobbing Guild held on Wednesday of last week in the L.S.C. Board Room, the principal feature was a lecture by Mr. C. W. Clarke on "Design and Layout." The chair was taken by Mr. Alfred Langley (past president of the London Master Printers' Association), who found opportunity during the meeting to put forward some helpful suggestions on the subject of the lecture.

Mr. Clarke endeavoured to make his lecture as simple as possible, with a view to making it specially interesting to the young printers present. After discussing the principles of typographic design in general, he gave particular attention to the construction of a page advertisement, and with the aid of charts and drawings he proceeded to show the various stages in its development. Explanations were given of such points as casting off the various sizes of type, both main lines and text, with suggestions as to the advantageous use of rule borders and other decorative matter. Special emphasis was placed upon the important matter of margin values.

Questions and discussion proved animated and instructive, carrying the meeting on to a late hour, when the proceedings ended with cordial votes of thanks to Mr. Clarke and the chairman.

As a memento of his visit to Cambridge, the Prince Regent of Japan has presented 666 volumes of Japanese classics to the University Library.

To Increase Use of Lithography.

Some Pertinent Suggestions.

Whilst the lithographic trade, both in this country and overseas, has much cause for satisfaction in the extent to which lithography is growing in popularity amongst buyers of print, there is nevertheless plenty of room for further expansion. Many in the trade are seeking to extend their order lists, and so are keenly interested in any suggestions that can be made toward a general stimulation of the consumption of lithographically-produced printing. Our esteemed New York contemporary, *Printing*, with this in mind, has persuaded several prominent American lithographers to express opinions on the subject.

Research and Quality.

F. J. Blaney, vice president of the Forbes Lithograph Manufacturing Co. of Boston, Mass., said :—

"In reply to your request for a short statement as to 'How Can Lithography Find a Better Market?'—we believe the research work that is now being done by some lithographers and that will be attempted in a larger way under the direction of the Lithographic Technical Foundation will do much to improve conditions by opening up a broader market for lithography.

"In the meantime, we feel that a determined effort should be made to hold to the highest quality—both in art work and lithographing, and that it is of no avail to cut prices—but that prices should be based on a proper cost knowledge and a fair profit maintained on every order.

"When business is dull it will be much better for the individual lithographer as well as the trade in general to try and develop new users of, and new uses for, lithography than to reduce prices."

The Colour Publicity Field.

Horace Reed, president of the Niagara Lithograph Co. of Buffalo, N Y., said :—

"Lithography already has an excellent market. It would be difficult to picture a market with greater facilities than that presented to the producer of colour publicity by lithographic media.

"There appears to be no limit, and the prospect challenges not only the mechanical facilities, the artistic qualities, but the imagination, which is a potential factor.

"The best contribution any member of the lithographic industry can make is the conscientious development of the best that he may possess."

Boost Offset.

W. H. Merten, vice-president and treasurer of the Strobridge Lithographing Co. of Cincinnati, Ohio, said :—

"Answering your inquiry, 'How Can Lithography Find a Better Market?' we assume that this applies particularly to offset work. This method of printing being comparatively new, is as yet in its experimental stage, with many of the large advertisers in the country. The delicacy of the tints, the softness and beautiful blending of the colours, makes it a very attractive medium for advertising and in fair sized runs it can be handled at a very moderate cost.

"To promote and increase sales, good sketches, plates and printing are absolutely essential and the lithographer must be thus particular as to the quality of his product. Customers are inclined to be conservative, and slow to adopt new methods, but we are confident that a good salesman with high-class samples to submit, has a wide field and great opportunity for building up the business so that it will, in a reasonable time, become as general as ordinary type printing is to day."

The Free-Sketch Handicap.

Charles P. Schmid, president of Trautmann, Bailey and Blampey, Inc., of No. 13, Laight-street New York City, said :

"Suppose—just suppose—that to-morrow a leading national advertiser should let it be known to half-a-dozen (often it is a dozen) leading lithographers that he is in the market for 'sketches and prices.'

"Suppose—just suppose—that these lithographers to a man should reply to the effect that sketches would be furnished at cost, said cost to be credited against the order, otherwise paid for in cash.

"Suppose—just suppose—that every other advertiser would hereafter receive from every lithographer a like response to a like 'invitation.'

"The result? The emancipation of lithography from its present supine position, the elimination of scandalous waste (and consequently cheaper lithography); an inevitably better market for lithography.

"The advertiser is not at fault: free sketches he appraises at the value which the lithographer himself by implication places upon them. Lithography among advertising media is inevitably ranked—well, just about where the practices of the lithographers themselves place it.

"Lithography has served and will continue to serve capably and efficiently as the handmaiden of merchandising. Certain penricious practices have crept into the marketing of lithography which every lithographer and every advertiser, moreover, knows at heart to be fundamentally and economically wrong. Reformation of these practices will be a long step in the direction of a better market.

"All of which is said with reservation of those lithographers—and there are some—whose backbones are made of solid ivory and whose heads are not."

Messrs. Spicers Limited are giving liberal support to a scheme approved by the Cambridgeshire Education Committee for an experimental village college for the rural area of Sawston and district. An offer has been made by Messrs. Spicers, who own the paper works situated in Sawston, to provide a site of two acres. This site is adjacent to a recreation ground of six acres provided by Messrs. Spicers for the use of their employees and of the village. They have offered the use to the village college, for use on school days by the pupils of the school, and at other times by adults. The recreation ground is already laid out with tennis courts, a bowling green, a cricket pitch and a football ground, with a commodious pavilion. Mr. H. G. Spicer has himself offered £500 to provide two rooms in the village college for the accommodation of the public health services of the district, particularly the school medical service and infant welfare work.

OFFSET WITHOUT SET-OFF

is guaranteed by using our One-Sided S/C Litho.

Accurate register in numerous printings is also obtained.

The ideal paper for Litho in Colours, Varnishing & Offset Litho.

It is a pure Esparto Litho Printing, with a semi-rough back, which prevents setting off and is an advantage if required for pasting.

It is stocked in D. Crown, D. Demy and Royal. Other sizes will be added as required.

It is now being used by litho houses of repute.

Write to us for sheets for testing. The results will give you firstly surprise and then the pleasure which is derived from the creation of fine work.

Lithographic Trade Review.

NOTES AND NEWS.

Though conditions of business in the lithographic section of the industry can be regarded as satisfactory, there seems to have been a slight setback observable during recent weeks. This, however, is believed to be only temporary, as the industry as a whole shows a most healthy tendency.

On the interesting subject, to which we recently referred, of the use of paper negatives to displace wet plates, Mr. James H. Graham, F.R.P.S., writes:—"It may be of interest to state that Messrs. Lowe and Brydone (Printers), Ltd., have been reproducing books and other printed matter by means of paper negatives, and offset presses, for over two years. It must be borne in mind by prospective users of this paper that as its chief commercial advantage is cheapness, success is only possible when a well-arranged system of labour saving methods is adopted. When properly worked, however, the printed results often surpass the original copy in quality. The effect in general of such photographic methods is that publishers no longer need to make moulds of their editions for subsequent stereotyping when a reprint is needed. All that is now necessary is to submit a copy of the printed work to the lithographer, who copies it in facsimile, after making such corrections as may be necessary. There is a wide field for the application of negative paper to other photo-mechanical processes. The base now used is so readily made translucent that it seriously rivals wet collodion and dry plates in some classes of work. The main drawback at present is the inability of the average process operator to deal with this, to him, strange new method."

The Joint Industrial Council of the Process Trade held their annual meeting at Bank Chambers, High Holborn, on the 9th inst., for the purpose of electing officers for the coming year. Mr. A. Dargavel was appointed chairman and Mr. F. Knight vice chairman. Amongst matters dealt with was that of technical education; and opinions were expressed in favour of consulting the principals of the technical colleges on the matter. Apprentice questions were also considered, and the workers' panel promised to submit a draft scheme of joint control for the consideration of the employers at a future meeting.

The "M.D.'s" (Metal Decorators)—the tin-printing section of the Amalgamated Society of Lithographic Printers—are holding a concert on Saturday at the "Rosemary Branch," Lewisham High road. The chair is to be occupied by Mr. J. Garner (Messrs. Winstone's).

There can be no doubt that photo-litho methods are extending their field with great rapidity in many parts of the world. This is strikingly indicated in the experience of Messrs. Pictorial Machinery Limited, who report the completion of another very successful year and the paying of a further substantial dividend. Mr. F. T Corkett, of this firm has been very busy of late superintending the installation of important equipments on the Continent and elsewhere. We understand that Shanghai, Barcelona and Bordeaux are amongst the places where "Pictorial" plant has been installed, and it is noteworthy that plant is also being supplied to Germany and Austria, as well as to countries knowing little of fine art printing. Mr. Corkett's company has now an established connection with a firm in Peidmont and are in association there with what is perhaps the largest firm of map printers on the Continent. The company has already put in a fine photo lithographic plant in Piedmont, and is now putting in a further plant for intaglio printing, not only for fine art work but for newspapers and magazines also. In view of the success of the "Printex" Negative Printer, publicly shown for the first time at the recent Printing Exhibition, it is interesting to learn that a similar, but smaller, machine is now under construction and will be ready in the New Year.

In view of the very beautiful results which have been obtained with the Aquatone process with which screens as fine at 400 can be used—it is interesting to learn that the business of making Aquatone plates is now being opened up to the photo-engraving trade. The Aquatone Corporation states that any photo-engraving establishment can be equipped to make Aquatone plates by the addition of two pieces of apparatus—one, a whirling stove with temperature control, and the other, a special washing pan. The two pieces of apparatus cost from $1,200 to $2,400, according to the size, and with these appliances the photo-engraver will find himself completely equipped to make finished Aquatone plates. His present camera and dark room equipment can be employed without any change, ordinary wet plate negatives being used in this process.

The big pull which offset printing offers to the advertiser is forcibly indicated in a booklet issued by the Harris Automatic Press Co., U.S.A.: "To-day is the day of 'something different in advertising,'" it is said. "Advertisers want new ideas. They want to present them in a different manner. They are striving for the unusual, the distinctive, the individual. In offset, advertisers have found the solution to their problems. Offset attracts attention because it is different. Offset holds attention because it is natural. Offset enables you to present your story convincingly. In brief, offset has all the fundamentals of good advertising; *i.e.*, attraction, interest and conviction."

The lithographs of Ludwig Jungnickel, of Vienna, form the subject of one of the many beautifully illustrated articles in the October number of the *Studio*. Animal life, depicted with sympathy and original treatment, is this artist's speciality.

Multicolour lithographic printing is used to very striking effect in posters sent to us advertising motor cars. The cars and their settings make very telling pictures, providing further evidence of the colour possibilities of lithographic processes. These posters—which are in a dozen or more colours, we should judge—are sent primarily as indicating the work that can be done on paper specially supplied for litho printing by Messrs. Allardyce and Co., Ltd., for which the excellent results speak eloquently. Incidentally we cannot fail to notice Morris Cowley cars—one of which, by the way, an 11·9 h.p. commercial travellers' van, made to carry 8 cwt. of samples or goods, seems particularly appropriate to many of the printer's requirements.

Litho Paper in India.

Protest Against the New Duties.

The Bombay lithographers, who have to depend entirely on oversea manufacturers for the paper used in their work, have represented to the Government of India that the proposed duties on paper will act greatly to their disadvantage. Most of the lithographic presses in Bombay are chiefly employed on mill labels, match and "bidi" labels, and pictures of Indian gods and goddesses. The duties will increase the cost of paper, says the Bombay correspondent of *The Times* (Trade Supplement), and make it impossible for them to compete with the foreign presses, especially those in Germany.

The printed labels imported into India pay 15 per cent. duty on invoice value, while the existing duty on lithographic paper imported into India works out at 22 per cent. on the invoice value. In addition to this disadvantage of 7 per cent., lithographers have to pay Customs duties on all their imported materials—2½ per cent. on printing ink, 15 per cent. on zinc plates, 15 per cent. on spirits, 15 per cent. on dry colours, 15 per cent. on damping cloth, 15 per cent. on pumice stones, and 2½ per cent. on lithographic stones.

The new protective duties on litho paper will put them at a still greater disadvantage, as they will amount to 33 per cent. on the present price of litho paper in Europe; the result will probably be the capture by the Germans of much of the work at present done in Bombay. Should it not be possible to exempt litho paper because it cannot readily be identified for Customs purposes, it is suggested that the Government should either provide lithographers with a licence to import enough paper for their needs or raise the Customs duties on all litho-printed matter imported into India, so as to meet competition from Germany.

City and Guilds Institute.

Litho Text Books Recommended.

The Department of Technology, City and Guilds of London Institute, has issued its Programme for the Session 1925-6. This substantial paper-wrappered volume (priced at 3s. 6d. net) sets forth the 80 odd subjects in which the Department organises examinations, and in regard to these subjects it provides detailed syllabuses with lists of books recommended and other information. The subjects dealt with include typography, lithography, bookbinding, paper manufacture and photography.

It may be of interest to give here the list of books recommended in lithography:—

Recommended for Students.—"Grammar of Lithography," by W. D. Richmond (Menken); "Colour and Colour Printing as Applied to Lithography," by W. D. Richmond (Menken); "Photo-lithography," by G. Fritz; "The Art of Lithography," by H. J. Rhodes (Scott, Greenwood. 2nd ed. 1924. 15s.).

Recommended for School Libraries.—Lithography.—"Zincography," by J. Bock (Menken); "Text Book of Metalography," by C. Harrap (Raithby, Lawrence). O.P.; "Collotype and Photo lithography," by J. Schnauss (Iliffe). O.P.; "Manufacture of Varnishes, Oil Crushing, Refining and Boiling," 3 vols., by Livache and McIntosh (Scott, Greenwood. Vol. I. 3rd ed. 1919. 17s. 6d. Vol. II. 2nd ed. 1908. 12s. 6d. Vol. III. 2nd ed. 1911. 14s. 6d.); "Treatise on Photo-gravure," by H. Denison (Iliffe). O.P.

Colour.—"Textile Colour Mixing," by D. Paterson (Scott, Greenwood. 2nd ed. 1915. 8s. 6d.); "Colour: A Hand book of the Theory of Colour," by G. H. Hurst (Scott, Greenwood. 2nd ed. 1916. 8s. 6d.); "Dictionary of Chemicals and Raw Products Used in the Manufacture of Paints, Colours, Varnishes, etc," by G. H. Hurst (Scott, Greenwood. 2nd ed. 1917. 12s. 6d.); "Field's Chromatography," by J. Scott Taylor, B.A. (Winsdor and Newton).

Paper.—"Papermaking," by G. Clapperton Crosby Lockwood. 3rd ed. 1917. 8s. 6d.).

Readers' Pensions Committee.

Distinguished Gathering at the Annual Dinner.

Eloquent tributes were again paid to the work of the printer's reader at the thirty-first annual dinner of the Readers' Pension Committee held on Saturday in the Venetian Chamber, Holborn Restaurant, under the chairmanship of Col. E. F. Lawson, D.S.O., M.C. The company was graced by the presence of many well known representatives of literature and journalism. Those present included Mrs. Lawson, the Rt. Hon. Lord Morris, K.C.M.G., and Lady Morris, Sir G. Wyatt Truscott, Bt., Lady Brittain, Mr. A. E. W. Mason, Mrs. P. Champion de Crespigny, Mr. Arthur Waugh, Mr. J. C. Van der Veer, Mr. and Mrs. Peaker, Prof. and Mrs. H. J. Spooner, Mr. R. A. Austen Leigh, Mr. Valentine Knapp, Mrs. C. S. Peel, O.B.E., Mr. Albert Visetti, F.R.C.M., Mrs. Carruthers, F.J.I., and Messrs. W. A. Perkins, P. J. Greene, E. W. Whittle, Arthur O'Connor, J. Randall, W. H. Shortell, Jas. Chandler, W. E. Hebditch, T. W. McAra, H. F. Parker, and Councillor A. A. Naar, M.B.E.

"Literature and the Press"

Following the loyal toasts, Lord Morris, in proposing "Literature and the Press," said that literature embraced the whole pageant of history and the whole question of the Press. We could hardly boast of any literature earlier than the fifth or sixth century, but although our work in literature commenced comparatively late, we very quickly pulled a good stroke, and for the last twelve or fifteen centuries England had more than done her share in contributing to the literature of the world. Was the responsibility attaching to those who wrote in the Press fully realised, he asked, particularly in a country like this, where we exercised the freedom of the Press to the fullest extent? There was no institution for which we should stand up more seriously than the liberty of the Press. We spoke of the supremacy of Parliament, but Parliament, after all, was only a committee of the people, and it was to the Press that the country looked to keep members up to the highest ideals of their predecessors.

Mr. A. E. W. Mason, replying to the toast, said it was a pleasure to acknowledge the debt that authors owed to the Press of this country, and in particular to the readers who looked after their grammar. (Laughter.) The "readers" were the watchdogs of the English language. (Hear, hear.) Their power was greater than the power of any woman, for a woman only had the last word, while they had the last semi colon. (Laughter.)

Mr. Arthur Waugh, who also replied, delighted his hearers with a description of the pilgrim's progress of the young Oxford man who came to Fleet-street most gorgeously attired in a girl's jumper and what appeared to be a divided skirt, to teach the Pressmen how to write. His first article usually had a head line with thirty-eight capital letters, and in the opening paragraph were two Greek quotations. After that young Mr. Oxford took his seat at a chartered accountant's desk and declared that there was no possible connection between literature and the Press. But they must remember that room where Greenwood and John Morley edited an evening paper "written by gentlemen for gentlemen." They must remember the gargantuan paradoxes of Chesterton; they must remember W. E. Henley, Andrew Lang, Robert Lynd, James Agate, J. C. Squire, J. B. Priestley, A. B. Walkley, and Sir Edmund Gosse. These were all witnesses of the association of literature and the Press. (Cheers.)

"Readers' Pensions Committee."

The chairman, in proposing the toast of the "Readers' Pensions Committee," said the readers of the Press performed a most admirable function, which was not always mechanical and was of inestimable importance. A letter which the secretary had received with a subscription from Lord Frederic Hamilton showed how careful was the "reader." Lord Frederic made the French word "entrecote" feminine, knowing that "cote," the word for rib, was feminine. The reader detected the fault, and made "entrecote" masculine, thereby correcting an error which many Frenchmen made. That, wrote Lord Frederic, was a tribute to an amazing profession, and, in enclosing his subscription, he could only hope that the "reader" who corrected the error would be so prosperous that he would never require to apply to the fund. (Hear, hear.) Continuing, the chairman said that the fund was initiated by a few members of the Association of Correctors of the Press in 1888, with the object of providing pensions for readers who, through sickness or old age, were unable to continue their work, and also to provide for their widows. The appeal which had been made each year to the literary world, publishers and kindred professions, had met with a uniform success, which was due largely to the unfailing generosity of literary men and women, and also because the fund had two great merits to recommend it. First, it was founded on the principle of helping those who helped themselves—(hear, hear)—and, secondly, there was no fund in existence that was more economically managed. The expenses were negligible practically every penny subscribed going to the pensions which the fund provided. (Cheers.)

Photo: Malcolm Arbuthnot.

Col. E. F. Lawson, D.S.O., M.C.

Mr. Perkins Replies for the Committee.

Mr. W. A. Perkins (chairman of the organisation), who replied, remarked that the Readers' Pensions Committee had been peculiarly fortunate in securing year after year the presence in the chair of distinguished ladies and gentlemen in the world of letters and other walks of life, to advocate the claims of the institution, in which they displayed an abiding interest, as shown that night by the presence of a former dinner chairman, Sir George Wyatt Truscott, whom they were glad to welcome once again. Proceeding, Mr. Perkins said their organisation could also be considered fortunate on account of the number of distinguished people who annually showed their interest in the work by their presence at that board or by allowing their names to figure on the list of donations. And, further, if he could say so without appearing to be egotistical, the institution was fortunate in the officers it had been able to secure throughout its career. He instanced two present that night—Messrs. Randall and Chandler—who were members of the original executive, who had served in various offices, and now, when age prevented their being more active, still maintained their interest in the position of trustees. It was their practice to commemorate the work of the officers by attaching their names to the various pensions as they were established, and the pension which would be completed as the result of that night's function would bear the name of Mr. J. H. Bedford (the hon. collector), who could be described as one of the younger officers, though his period of service ran into something like twenty years. Mr. Perkins mentioned that the subscriptions of the members of the committee more than covered the expenses connected with the dinner, so that every penny which was subscribed by their generous friends went to the object for which they appealed—the creation of pensions. Their work had been crowned with increasing success. The first seven pensions took nearly twenty years to complete; the seven more recent pensions exactly five years. Much as they were doing they were even now not doing enough. Personally he should not be satisfied until they were well able to meet all claims as they arose, instead of having to defer some each year. Having thanked all the kind friends who gave the committee such ready help, Mr. Perkins concluded by announcing donations totalling considerably over £600.

"The Guests."

Mr. Jas. Chandler, in submitting the toast of "The Guests" said, in looking back, he shuddered to think what would have happened to many aged readers had it not been for the great assistance they had received from those who supported the efforts of the committee at different times.

Lady Brittain, responding, paid a warm tribute to the work of the Printers' Pension Committee and wished it still further success.

Mr. R. A. Austen-Leigh, who also replied, said that surely no mortal could approach nearer to omniscience than the reader, for he must have all literature and science at his finger-ends, he must not only be lynx eyed but argus-eyed, able to detect a turned hyphen and determine between a full point roman and a full point italic. Readers were inclined to be a little autocratic, but it was due to them that we were allowed to put "ue" at the end of catalogue, and they had saved the country from many horrors, most of which came from a friendly Republic across the ocean. (Cheers and laughter.)

"The Chairman."

The health of the chairman was proposed by Mr. Frederick Peaker (president of the Institute of Journalists), and was very heartily accorded, musical honours being given.

Col. Lawson, in briefly replying, said he felt it a privilege to be identified in the smallest way in helping so excellent a cause.

The toasts were interspersed by several well selected musical items contributed by the following artistes: Miss Vera Florence, Miss Violet Stevens, Mr. Edward Beaumont, Mr. Jack Richards, and Mr. Emile Philippe (accompanist).

A very successful evening was brought to a close by the singing of the National Anthem.

Country News.

Bristol.

ON the evening of Wednesday of last week, Bristol printers had the rare treat of listening to Mr. Geo. W. Jones lecture upon "The Craft of the Printer." The lecture had been arranged by the Bristol Master Printers and Allied Trades Association, in connection with the technical classes at the Merchant Venturers' Technical College, and it was in the large hall of the College that the lecture was delivered. The chair was taken by Mr. J. A. Arrowsmith Brown and there was an attendance of about 250. For over an hour Mr. Jones held the attention of the audience whilst he discoursed upon the early printers and their work, and took the occasion to impart useful hints and suggestions as he proceeded. Very hearty applause, as well as words spoken by Mr. Theo. Jones and Professor Robertson, testified to the great appreciation felt for Mr. Jones's visit.

THE quarterly meeting of the Bristol Master Printers' Association was held at the Cadena Café on Thursday, Mr. G H. Holloway presided and the principal business was a resumed discussion upon the subject of "Profit and loss through increased turnover at reduced prices." Mr. J. Sydney Bennett had undertaken again to lead off, the matter arising out of his remarks at the previous meeting based on the paper Mr. Sessions gave at the Costing Congress at Buxton. There was a good discussion, and a critical examination of some fresh figures supplied by Mr. Sessions. There was a unanimous decision that when all things had been considered there was nothing to be gained by reducing prices to increase the turnover. The meeting practically gave endorsement to the principle laid down at Buxton that it was better to be satisfied with small business at a fair profit than to have big business at a small profit.

MR. J. A. ARROWSMITH-BROWN, head of the firm of J. W. Arrowsmith, Ltd., has accepted the chairmanship of the Anchor Society for the ensuing year. The Anchor Society is one of the old societies that perpetuate the work of the great Bristol philanthropist, Edward Colston.

MR. L. GOODENOUGH TAYLOR, chairman of directors of the *Bristol Times and Mirror*, Ltd., has consented to accept nomination for the office of Sheriff for the city of Bristol for the ensuing municipal year.

Coventry.

THE Coventry Master Printers' Association held a most successful gathering at the Queen's Hotel, Coventry, on Thursday, on the occasion of their annual dinner. Councillor W. B. Wykes (past president of the Federation) was the principal guest of the evening, and he gave a most instructive and illuminating address on the Federation's past, present and future activities. He showed conclusively that the Federation was a necessary part of the printer's existence, and that it had succeeded in great measure in overcoming the obstacles which prevented the progress of the trade. Tribute was paid by Mr. Wykes and Mr. A. E. Feltham (the president of the Coventry Association) to the work which General Bemrose had done, not only in the Midlands but for the Federation generally. Mr. D. R. King (secretary of the Midland Alliance) added his quota to the usefulness of the gathering by pointing out the value of the Federation especially to the small printer, emphasising the fact that a knowledge of scientific costing was most essential in order to obtain a fair selling price. Mr. J. S. Bold thanked the speakers for the clear and concise way in which they had outlined the various features of the work of the Federation.

Leeds.

THE death occurred last week, in a Leeds nursing home, of Mr. Edward James Tolson Ingle, at the age of 53 Mr. Ingle was the head of the firm of J. E. Ingle and Son, Call-lane, Leeds, a very old-established trade and general bookbinding house. His untimely and unexpected death has evoked considerable sympathy for his wife and son amongst his many friends in the printing trade in Leeds and district. He was on the executive of the Leeds Master Printers' Association, and will be greatly missed by his colleagues. He also was a representative on the J.I.C. (Printing) Local Committee, and had served on several panels in connection with the Ministries of Labour and Pensions. A man of wide sympathies and genial personality, he had also many interests outside his own craft. The funeral took place at Lawnswood Cemetery, Leeds, on Friday. There was a very large gathering of members of the Leeds Master Printers' Association at the service and graveside. Numerous beautiful floral tributes were sent by the many bodies Mr. Ingle had been connected with.

MR. A. SMITH, who has retired from the chief readership of the *Yorkshire Post* after nearly 40 years' service, was on Friday presented by the staffs of that paper with a gramophone and records and a leather suit case. The presentation was made by the editor, Mr. A. H. Mann, and other speakers included Mr. J. W. Miller, the overseer of the case-room, and Mr. T. A. Lamb, father of the compositors' "chapel."

MR. HERBERT DAWES, who recently retired from the position of head of the machine-room department of the *Yorkshire Post*, was on Friday the recipient of a gold watch subscribed for by all departments. The presentation was made by the general manager, Mr. A. Grime.

Colchester.

A LOST copy of Caxton's "Bœthius" belonging to Colchester Castle Library, owned by Colchester Town Council, has been discovered in a cellar at Birch Hall, Colchester, where it had apparently been carefully packed away by the former owner to escape air raids. The volume, one of a few still in existence, is not dated but is stated by experts to have been printed in 1477 or 1478 at Caxton's Westminster printing press. The book is still in good condition. It is bound in wooden boards, covered with a brown stamped leather, and originally there was a brass clasp, but only a small fragment of this remains. The covers measure 12¼ by 8½ inches. Originally there were 93 leaves, but the first, a blank leaf, has disappeared, leaving 92 printed leaves, or 184 pages. There is no title page nor catch lines, but the printing and the black Gothic letters are wonderfully clear and legible, and the many initial letters and rubric lines and marks added by hand in vermilion paint are still strong and distinct. It is understood that in due course the book will be placed on exhibition by the Colchester Corporation.

THE Colchester Board of Guardians have accepted the tender of the Essex Telegraph, Ltd, of Colchester, for printing, and of Messrs. E. N. Mason and Sons, Arclight Works, Colchester, for stationery for the next twelve months.

Hull.

THE *Eastern Morning and Hull News* Co, Ltd., announce that the control of the papers published by the company has once more passed back to the Liberal party. The new directorate is as follows: Lord Terrington (chairman), Mr. Sydney Walton (London), Mr. James Downs (Hull), Mr. Matt Blythe (London), and Mr. Mark Goulden (managing director). Another prominent local Liberal is expected to join the board next week. The papers in the group are the *Eastern Morning News*, the *Hull Evening News*, the *Hull Weekly News*, and sundry other publications.

Halifax.

THE Mayor of Halifax (Mr. J. H. Waddington), following the custom of recent years in the borough, on Thursday last entertained local journalists at a dinner at the "Old Cock" Hotel. During the proceedings his Worship was presented by his guests with an album sumptuously bound and containing 50 sepia enlargements of photographs of functions the Mayor had taken part in during his year of office.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,
Partnerships and Investments,
Miscellaneous.

One Insertion 3/0
Three Insertions 6/0

For every line exceeding three lines **6d.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion 1/6
Three Insertions 3/0

For every line exceeding three lines **6d**

Sales by Auction, Tenders,
Patents for Sale,
Legal and Financial Announcements.

Representatives also in Australia, India, South Africa, Canada, Norway, Sweden, Finland, etc.

THURSDAY, OCTOBER 22, 1925.

The State of Trade.

THE Board of Trade returns, made public last week, do not on the whole make cheerful reading, as they tend to show that Great Britain is importing more goods from abroad, and at the same time exporting less. For the nine months of this year imports show an advance over the corresponding period last year of £56,204,797, the total to the end of September being £965,477,025. With regard to British exports, the nine months' total is £579,258,406, which is less by £10,060,855 than the amount for the first nine months of last year. Happily the section that is the most substantial representative of the printing and allied trades, namely the importing and exporting of paper, shows to much better advantage than does the country's trade as a whole, this section maintaining a healthy tendency. As regards the printer's product, it is satisfactory to note that September's exports of "printed books, etc., amounted to 45,702 cwts., of a value of £430,616 as against the same month's 1924 quota of 39,481 cwts., valued at £407,540. The totals for the nine months ended September 30th show a similar upward movement, this year's figures being 367,589 cwts. at £3,225,653, against last year's 337,581 cwts. at £2,964,072.

* * *

Packings and Wrappings.

SWEDEN (1,226,924 cwts) takes the leading place as the largest supplier of packings and wrappings to this country during the first nine months of the year, consignments from that source surpassing those of the same period last year by 89,855 cwts. Deliveries from Germany (687,709 cwts) and Norway (655,112 cwts.) were very much on a par with each other. Consignments from the former country show a decline of 58,536 cwts, whereas those from Norway were larger by no less than 209,015 cwts. Finland's contribution (285,050 cwts.) during January to September indicated a slightly lessened market for packings and wrappings in this country compared with the 302,253 cwts. sent in the corresponding period last year.

Nine Months' Paper Exports

PAPER and cardboard exports during the month just completed—447,300 cwts., of the value of £808,561—record increases of 25,490 cwts. (6 per cent) in quantity and £31,086 (3·9 per cent.) in value compared with September last year. Exports during the first nine months of the year and the two preceding years were:—

1925	...	3,675,098 cwts.	£7,175,313
1924	...	3,516,350 ,,	6,771,315
1923	...	2,991,911 ,,	6,169,497

An analysis of the figures shows that, in quantity, British paper and cardboard exports for the nine months ended September advanced respectively by 158,718 cwts. (4·5 per cent.) and 683,187 cwts. (22·8 per cent.) contrasted with the two preceding corresponding periods. As regards value, the nine months' exports for the present year represent increases of £403,998 (5·9 per cent.) and £1,005,816 (16·3 per cent.) compared with the nine months of last year and the year before. Printings (2,702,856 cwts.) sent abroad during the first nine months of the year constituted the only real satisfactory item in the British paper and cardboard exports. They represented not only a proportion of over 70 per cent. of the total paper and cardboard shipments, but an advance of 449,960 cwts. compared with the corresponding nine months last year. Writings (168,481 cwts.) were in better demand amongst oversea buyers, exports under this heading increasing by 8,838 cwts. With regard to packings and wrappings, a substantial decline is recorded, shipments having dwindled from 497,441 cwts. during January-September last year to only 160,078 cwts. in the nine months of the current year. With the exception of "other sorts" of coated papers—which show an appreciable rise from 37,407 cwts. to 67,200 cwts.—the remaining varieties included in the exports were on a similar level to those of the same period last year.

* * *

Markets for British Printings.

PRINTINGS consigned to British Possessions during the first nine months of the year reached the substantial figure of 2,469,798 cwts., compared with only 233,058 cwts. to foreign markets. In the same period last year 1,862,602 cwts. were dispatched to the former markets and 399,294 cwts. to the latter. During January-September Australia alone absorbed British printings to the extent of 1,809,004 cwts. (£1,958,322), advances of 499,821 cwts. in quantity and £503,222 in value compared with the preceding corresponding period. Deliveries of printings to this important market during the nine months ended September amounted to over 70 per cent. of the total shipments to all parts of the world of this class of manufacture. With regard to other colonial markets, New Zealand (194,255 cwts.) bought more liberally, having increased her purchases to the extent of 22,179 cwts. The next largest Colonial buyer was British India, 138,601 cwts., a decline of 1,592 cwts., and then British South Africa, 93,465 cwts., an increase of 18,974 cwts. The returns for Canada, Ceylon, and the Straits Settlements were in each instance more satisfactory than was the case last year. As regards writing paper exports, all the enumerated British markets took more numerously than in January-September last year, the most noteworthy feature of these returns being the large shipments to Australia, which rose from 56,877 cwts. to 64,636 cwts

THE Hon. L. A. Taschereau, Prime Minister of Quebec, in a recent statement relative to the development of the Saguenay area by United States financiers, expressed the opinion that the pulp and paper industry would not have such easy access to the United States market if United States capital were not so largely interested in the development on the Canadian side of the international boundary

The Electrotypers & Stereotypers' AUXILIARY.

Celebrating the Twenty-First Birthday.

The twenty-first anniversary of the Electrotypers and Stereotypers' Auxiliary to the Printers' Pension Corporation was fittingly celebrated on Saturday by a dinner, which was held at the "London Tavern," Fenchurch-street, under the chairmanship of Mr. A. Chadwell (Auxiliary president). The function, which was supported by many well-known representatives of the electrotyping and stereotyping branch of the industry, proved in every

Mr. A. Chadwell.

way an unqualified success. The following were amongst those present: Messrs. W. C. Warren (general secretary, National Society of Electrotypers and Stereotypers), T. Middleton (assistant secretary of the Society), Rupert Kneale, W. J. Light, H. Williams, A. H. Mundey, A. F. Bell, C. S. Yeates, J. Shaw (H.M. Stationery Office, Harrow), J. Garner (works manager, Amalgamated Press), J. Mortimer, G. Sharvell, J. Parker, F. E. Shillam, W. H. Crosby, G. Maidment.

"The Auxiliary."

Following the loyal toast, Mr. W. C. Warren, in submitting the toast of "The Electrotypers and Stereotypers' Auxiliary," spoke very highly of the work of its pioneers, and then went on to recall especially the services rendered by the late members, Mr. B. Mouse, Mr. J. Nicol and Mr. J. Withers. He then went on to speak of the very satisfactory progress, financial and otherwise, made by the Auxiliary and expressed the hope of completing the eighth pension at the end of the present season. Touching on the splendid work performed by the Council of the Corporation, Mr. Warren quoted a case where a widow had received a pension, then remarried, and after a short period lost her husband, when the pension was reinstated to her by the Council. He then proceeded to make mention of the appreciation felt by the members of their trade when granted a pension upon their first application. In concluding, Mr. Warren expressed the hope that they would all be gathered together again in celebration of their 50th anniversary, when he hoped the Auxiliary would be able to show still further progress.

Mr. Chadwell, in reply, thanked all those connected with the trade for their efforts during the Auxiliary's twenty-one years of existence. He wished the Auxiliary God-speed in all its good work. Mr. Chadwell then, on behalf of the Auxiliary, spoke of the magnificent work done by Mr. George Sharvell, and presented to Mrs. Sharvell an umbrella as a mark of respect and appreciation of the services rendered by her husband to the Auxiliary as treasurer since its inception.

"Vice-Presidents and Officers."

In proposing this toast, Mr. J. Shaw paid a compliment to the chairman and to various members of the committee, making special allusion to his friend, Mr. J. Parker. Though their branch of the industry was numerically small, he considered it second to none in endeavouring to serve the best interests of the Corporation. This fact would always stand as a monument to the credit of those vice-presidents and officers who had made the Auxiliary what it was to-day. He hoped as the years went by they would continue to add to the progress that had already been so well established.

"The Visitors."

In proposing the toast of "The Visitors," Mr. Geo. Sharvell claimed that their visitors were not visitors in the strict sense of the word, because they had all been such good friends of the Auxiliary. In this connection he singled out for special mention Mr. J. Mortimer (secretary, Printers' Pension Corporation), Mr. J. Shaw and Mr. C. S. Yeates (members of the Corporation Council). Referring to the financial side of the work of the Auxiliary, he said a sum approaching £16,000 had been paid by the Auxiliary to the Corporation.

"The Chairman."

The health of the chairman was proposed by Mr. T. Middleton, who spoke of the enthusiasm and interest Mr. Chadwell always gave to everything connected with the Auxiliary. Mr. Middleton went on to refer appreciatively to the pioneers of the Auiliary and the responsibility connected with its maintenance in the future. He hoped that it would be the earnest endeavour of all journeymen in their branch of the trade to encourage apprentices to interest themselves in its work. In concluding, he expressed the wish that the chairman might continue as president for a very long time, and would also enjoy the confidence of the trade for many years to come.

Interspersed with the toasts were a number of musical items rendered by the following well-known artistes: Misses Mary Braithwaite and Edna Brett, and Messrs. Wilfred Gaylor, Victor Lodge, Harry Speller, Jack Treval, Harry Parr and Will Jennings, with Mr. Chas. Hardy as accompanist.

The dinner stewards were Messrs. T. H. Middleton and F. Mouse, whilst the musical director was Mr. Geo. J. Harrison, the three gentlemen fulfilling their respective capacities to the entire satisfaction of the company.

Monotype Users' Association.

Display Composition Discussed.

Mr. F. Waterhouse, chairman of the National Committee of Monotype Users, addressed a meeting of the Association at the Trocadero last week. He said that a good display compositor was almost worth his weight in gold, and a lad entering the industry could not do better than start in a small office. He remembered the days when display compositors took a greater interest in the craft, when apprentices had competitions amongst themselves as to who could set an advertisement page or print 250 business cards in the shortest time, and in their enthusiasm would sometimes go to the office half-an hour before starting time to put a machine right.

The display compositor in those days was an artist, but to day many establishments had to submit to lay-outs prepared by outside establishments where there was little practical knowledge of composition and where they did not really know what the job would look like until it was set. Those were the days of the International Specimen Exchange, but there had been many alterations and introductions since. The early typesetting machines were more or less unsatisfactory, but both the Linotype and the Monotype had created a partial revolution in the industry. He had had a prejudice against those innovations and had even advised a friend against taking up shares; but he had learned a lesson which he had never forgotten.

At about the same time half-tone blocks had come into general use, and more recent years had seen the introduction of photogravure, intaglio and similar processes, based on the process which was probably the finest in the world—the Rembrandt Process, invented by Carl Klic. With all these improvements and achievements he felt that the display compositor had not progressed much farther than his brother of a generation ago. There would be more changes and improvements in the future, but it was hard to say what direction they would take. Newspaper printing by photographic process was being tried, and whether such machines would ultimately displace machines already in existence was a moot point. There would certainly be very great improvements made in mechanical composition, and he thought the machines that served them mostly would be able to hold their own with any later machines that might be introduced.

He thought that if heads of firms let the display compositor feel that his efforts were appreciated and gave him scope to show what he really could no and merited him accordingly, they would create an incentive in his mind to give of his best

Mr. G. Reveirs, chairman of the London Monotype Users' Association, said he thought the display compositor of to day was as good as any in the past. If they did not take the same interest in their work, he thought it was because they did not think it worth while when extra rates were paid in newspaper offices. They did not always take the longer view and realise that an employer wanting a foreman would look for him, not in the machine composition-room, but in the display room.

MANSELL, HUNT, CATTY AND CO. have declared an interim dividend of 4 per cent.

NEW COMPANIES.

RIDOUTS, LTD. — Capital £3,000, in £1 shares ; to acquire the business of printers and stationers now carried on at Whitstable, Kent, as "Fred Ridout" and to adopt an agreement with W. F. Lennox and W. V. Phelps. Private company. First directors : W. F. Lennox and W. V. Phelps. Solicitors : Hatchett Jones and Co., 48, Mark-lane, E.C.3.

FENNEMORE HAYDON CO., LTD. — Capital £500, in £1 shares ; advertising agents, printers, stationers, etc. Private company. Directors : T. H. V. Haydon and T. A. Fennemore.

COMPANY OF BIOLOGISTS, LTD. — Capital £1,000, in £10 shares ; to acquire the copyright of the *British Journal of Experimental Biology* and the business relating to the publication and sale thereof and certain of the assets, to adopt an agreement between F. A. E. Crew, J. S. Huxley, L. T. Hogben, of the first part, Oliver and Boyd of the second part and this company of the third part. First directors : G. P. Bidder, D.Sc., L. T. Hogben, D.Sc., Prof. J. S. Huxley, J. T. Saunders and F. A. E. Crew, D.Sc. Registered office : Cavendish Corner, Cambridge.

J. B. TAYLOR AND CO , LTD. — Capital £20,000, in £1 shares ; to acquire the business of box and container manufacturers as formerly carried on by W. G. Taylor as "J. B. Taylor and Co." at York road, Leicester, and to carry on the business of manufacturers of and dealers in paper, cardboard, strawboard, millboards, wall and ceiling papers and all other kinds of paper and materials made from paper and pulp or used in the manufacture or treatment of boxes and paper, etc. Private company. First directors : W. G. Taylor, J. B. Taylor and E. F. Taylor. Registered office : 35, York road, Leicester.

LAURENCE A. CUTHBERTSON, LTD.—Capital £1,000, in £1 shares ; advertising agents as formerly carried on by L. A. Cuthbertson and F. S. Mayers at 7, Waterloo-street, Birmingham. Private company. Directors : L. A. Cuthbertson, G. E. S. Perkins and F. S. Mayers. Solicitor : B. S. Gorton, City Chambers, High-street, Coventry.

HULL AND GRIMSBY BILLPOSTING AND ADVERTISING CO., LTD — Capital £15,000, in £1 shares (5,000 10 per cent. cumulative preference and 10,000 ordinary) ; to acquire the business of a billposter, advertising agent and contractor carried on by Mary E. Walker in Hull, as the "Hull and Grimsby Bill Posting and Advertising Co." Private company. First directors : Mrs. Mary E. Walker and E. S. Walker. Solicitors : Walker and Colbeck, 9, Parliament-street, Hull.

THOMAS GREAVES, LTD.—Capital £500, in £1 shares ; general merchants, manufacturers of, agents for and dealers in leather, leather products and bookbinders' and manufacturing stationers' commodities, etc. Private company. Directors : Miss Maud B. Greaves, F. G. Kallmer, Mrs Clara Wilson and C. V. Greaves. Registered office : London Leather Works, Decima street, Tower Bridge-road, S.E.1.

DURABILITY, LTD.—Capital £1,000, in £1 shares ; to acquire the business of enamellers now carried on by A. J. Luscombe, F. W. Parsons and J. H. Williams at 93a, Falkland-road, Harringay, N.8, as "Durability," and to carry on the business of manufacturers, patentees, vendors, merchants and dealers in bronze, and other gilding, enamelling and lacquering, and in paper of all kinds and articles made from paper or pulp, and materials used in the manufacture of paper, etc. Private company. Directors : A. J. Luscombe, F. W. Parsons and J. H. Williams. Registered office : 93a, Falkland-road, Harringay, N.8.

MONTMARTRE GALLERY, LTD.—Capital £100 in £1 shares ; to acquire the business of a new and secondhand bookseller carried on by S. C. Potter at 39, Wardour-street, W., and to carry on the same and the business of printers, publishers, dealers in paintings, prints, etc. Private company. Directors : W. T. Searle and C. E. Balt. Solicitors : C. P. Fielder Le Riche and Co., 3, Lincoln's Inn-fields, W.C.2.

N. SALE AND CO., LTD.— Capital £600 in £1 shares ; cardboard box manufacturers, packing case makers and makers of all kinds of boxes, cases or cartons for use in the hat or any other trade, timber merchants, etc. Private company. First directors : Mrs Nellie Sale, R. Wells and Sarah Wells. Registered office : 15, Rothesay-road, Luton.

HAROLD DRABBLE, LTD.—Capital £1,100 in £1 shares ; advertisers' and advertising agents, contractors, etc. Private company. First directors : H. Drabble, E. Drabble and F. Drabble. Registered office : 2 and 3, Norfolk-street, Strand, W.C.2.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

NEWCASTLE CHRONICLE, LTD. (formerly Newcastle Newspapers, Ltd). — Particulars filed of £800,000 second debentures authorised September 16th, 1925, charged on the company's property, present and future, including uncalled capital ; the whole amount being now issued.

ELECTRIC LAW PRESS, LTD.—Issue on March 4th, 1914, of £600 debentures, part of a series already registered. (Notice filed October 6th, 1925)

MORGAN AND SCOTT, LTD. (printers, etc., London).—Issues on June 9th, 1921, of £5,000, on October 14th, 1921, of £2,000, and on September 18th, 1925, of £100 debentures, parts of a series already registered.

HERALD PRINTING AND PUBLISHING CO., LTD. (Ashton-under-Lyne).—Satisfaction in full on September 22nd, 1925, of debentures dated February 7th, 1905, securing £3,000.

ELECTRIC LAW PRESS, LTD. (London).— Satisfaction in full on September 30th, 1925, of debentures dated October 28th, 1913, and March 4th, 1914, securing £5,000.

CAMELOT PRESS, LTD. — Transfer of mortgage and mortgage dated September 29th, 1925, to secure £20,000 (including £15,500 transferred), subject to a discount of 10 per cent. on repayment by the company, charged on certain lands and premises in Southampton, and the company's undertaking and property, present and future, including uncalled capital. Holders : Friends Provident and Century Life Office, 42, Kingsway, W.C.2.

MILLS AND SONS, PRINTERS, LTD.—Mortgage on certain properties in Guildford, dated October 6th, 1925, to secure all moneys due or to become due from the company to Lloyds Bank, Ltd., not exceeding £2,500.

BRADSTREETS REGISTER, LTD.— Issue on October 8th, 1925, of £700 debentures, part of a series already registered.

BARNES AND SEAGER, LTD. (paper manufacturers, etc.).—Mortgage dated August 28th, 1925, to secure £2,000, charged on certain properties in Portsmouth. Holder : L. W. S. Porter, "Langhurst," London-road, Portsmouth.

F. C. BLACKWELL AND CO., LTD. (pencil and ink manufacturers, paper manufacturers, etc., Liverpool).—Satisfaction in full on September 1st. 1925, of mortgage dated June 16th, 1921, securing £2,500.

ELECTRIC LAW PRESS, LTD.—Mortgage and land registry charge on 5 and 6, Fulwood-place, E.C., both dated October 5th, 1925, to secure £5,000. Holders : National Provincial Bank, Ltd.

RECEIVER APPOINTED OR RELEASED

KARBOUAX, LTD.—C. D. Ross, of 32, Old Jewry, E.C., chartered accountant, was appointed receiver and manager on October 2nd, 1925, under powers contained in debentures dated January 1st, January 16th and March 6th, 1920.

Measuring Colours.

An instrument that measures colours by number and accurately records infinitesimal differences in shade is one of the latest marvels of science.

It is claimed that the invention, which is called a Colorimeter, will be of considerable value to the textile, printing and other industries in which the measurement, comparison, or standardisation of colours is required.

A Colorimeter is in appearance something like a machine gun with a telescope superimposed. It measures the primary colour constitution of every shade in the rainbow. This it does by means of gelatine "colour wedges," each of which represents one of the three primary colours—red, green or blue—which together make white light. These "colour wedges" are accurately graded throughout their length from full colour to the utmost saturation with white light.

To measure a colour, all that is necessary is to place a sample under one half of the lens of the telescope, and to manipulate the combination of "colour wedges" until a perfect match is obtained in the other half. The numerical value of the colour is shown on a graduated scale. Thus, for example, R56, G41, B3 might represent a mixture of red, green and blue in the proportions indicated. By re-setting the scale the same tint can be reproduced exactly at any time. The instrument is so designed that only one particular setting of the "colour wedges" is possible for any one shade.

The Colorimeter—an invention of the Kodak Research Laboratories—can also be used to determine the exact effect of one colour upon another. It is particularly adapted to the measurement of the colours of fabrics, paper, oils, paints, inks, dyes and dyed materials, coloured glass or celluloid, food or dairy products, interior decorations, etc.

The Printing Crafts Guild.

Annual Meeting.

The 18th annual general meeting was held in the College of Technology, Manchester, on Saturday last, Mr. Charles W. Gamble, O.B.E., M.Sc.Tech., being in the chair.

The minutes of the last annual meeting having been read, a suggested alteration to Rule 5, "The Executive Committee shall consist of twelve members, two, at least, of whom shall be ladies," was put forward by the hon. secretary on behalf of the committee.

Mr. A. Edwards moved, and Mr. A. Neate seconded, an amendment "that the alteration be referred back to the new committee for consideration."

The amendment was lost, and when the committee's recommendation was voted upon, the record for and against was equal, whereupon the chairman's vote was in favour of the *status quo*, which reads as follows: "Organisation.—The Guild shall be governed by a president, a chairman of committee (who shall be the head of the Printing Department in the College of Technology), an honorary secretary, an honorary treasurer, an honorary auditor, an executive committee of twelve (five of whom shall form a quorum), and one representative for each district in the Manchester province, to be appointed at the annual general meeting. The president, chairman of committee, secretary, and treasurer shall be *ex officio* members of all sub-committees. All officers shall retire annually, but shall be eligible for re-appointment."

The annual report was adopted.

This document, signed by Mr. John Taylor, president, and Mr. F. J. Hughes, hon. secretary, recalled the Guild's visit to the Printing Exhibition, and mentioned also donations to the Printers' Pension Corporation and to Ancoats Hospital as the result of successful whist drives and dances. An increase of junior members was reported. The membership is now 12 honorary, 270 adults, 85 juniors, making a total of 367—55 more than previous session. Balance sheet showed income (including £7 3s. 10d. brought forward from last session) £230 12s. 10d., expenditure £212 5s 9d., leaving a sum of £18 7s. 1d. to be carried forward. The committee tendered thanks to Mr. B. Mouat Jones, M.A., Principal, College of Technology, the House Committee, Mr. J. R. Scott, "The Sociables," Mr. Fred Eastwood, Mr. Frank Colebrook, F.A.I., Mr. and Mrs. R. J. Broughton, the proprietors of the *Manchester Guardian* and *Manchester Evening News*, Mr. W. W. F. Pullen, Mr. John Crolton (Assize Courts), Mr. J. B. Oldham, B.A., Mr. C. L. Stern, Messrs. Linotype and Machinery, Ltd., Rev. H. H. Johnson, B.A., Whitworth Institute Art Gallery, Messrs. Furnival and Co., Ltd., Wallpaper Manufacturers, Ltd. (Holmes Chapel), and others who had helped to make the session successful.

The treasurer's balance sheet and auditor's report being approved, the election of officers resulted as follows:—

Officers: President, John Taylor; chairman of committee, Charles W. Gamble, O.B.E., M.Sc.Tech; hon. treasurer, C. Doughty; hon. auditor, J. Begg; assistant hon. secretary, A. Edwards; hon. secretary, F. J. Hughes, 424, Moston lane, Manchester.

Committee: J. Crook, Miss E. R. Dust, E. Fisher, E. Garrett, F. Hewitt, Edward McVay, W. M. Menzies, J. T. Shelmerdine, Miss A. Tooms, A. Trickey, Miss L. Woolley, J. Worthington.

District Representatives: Altrincham, E. Ashton, the Broadheath Printing Co., Viaduct-road, Altrincham; Ashton-under-Lyne, H. Holme, 102, Kelvin-street, Ashton-under-Lyne; Bolton, E. Boardman, 142, Mornington-road, Bolton; Bury, F. Roscow, 15, Malvern-avenue, Seedfield, Bury; Hyde, H. W. Wallace, 22, Newtonhurst, Victoria-road, Newton, Hyde; Oldham, Geo. H. Rider, 2, Brompton-street, Oldham; Rochdale, Wm. Ingham, 31, Mackinnon-street, Rochdale; Stockport, R. F. Singleton, 113, Turncroft-lane, Stockport.

The general business being concluded,

Mr. Harold E. Johnson delivered a lantern lecture entitled, "Impressions of Northern Italy." The illustrated journey commenced by boat at Dover, and continued across country by train through the Rhone Valley and Simplon Tunnel into Italy, the chief centre being Orta, the lake and island of dreams. Further journeyings brought into view Forno and Valle Strona, among the Alps, Milan, Lake Garda, the Plains of Lombardy, Venice, with the famous Caffe Floriano and the romantic island in the Lagoons—San Francescano del Deserto. The journey passed away a pleasant ninety minutes, for which the lecturer received a hearty vote of thanks.

WEE MAC.

Joint Industrial Council.

The Joint Industrial Council of the Printing and Allied Trades met in London on Wednesday of last week.

The total amount raised by the recent Flag Day in support of the War Orphan Fund of the Printers' Pension Corporation was announced as £3,764 5s. 11d. This is irrespective of Scotland, which is to hold a Flag Day of its own next month.

The selection and training of apprentices was discussed, some useful points being brought forward for further consideration.

At the call of the chairman, Brig. Gen. W. Wright Bemrose, those present stood in silence as a tribute to the memory of the late Mr. F. L. Armstrong, general secretary of the Newspaper Society and secretary of the Employers' Federation of Envelope Makers and Manufacturing Stationers.

Trade Union Matters.

PIECE WORKERS AND HOLIDAY PAY.—At a recent meeting of the Executive Council of the Typographical Association, consideration was given to a question concerning the rate of holiday money to be paid to Linotype operators in the Redhill branch who were employed on piece work. The branch secretary supplied details of the earnings of these members, and the Committee decided that they were entitled to payment for annual holidays at the rate of their average weekly earnings for the six months preceding the holiday.

COMPENSATION CASE AT SHEFFIELD.—The secretary of the Sheffield Branch of the Typographical Association has supplied the Executive with particulars of a claim for compensation by a member of his branch who had been injured during the course of his employment by falling from a ladder. The insurance company had offered 30s. per week part wages, but the member concerned thought he was entitled to a larger sum. The Committee have advised the branch secretary to place the matter in the hands of a solicitor, and explained that the 30s. is the maximum amount that can be received under the Workmen's Compensation Act.

NATIONAL UNION OF JOURNALISTS.—The Finance Committee of the National Union of Journalists announce that from January 1st, 1925, the following grants have been made: From the Ordinary Benevolent Fund, £1,082 9s. 2d.; from the Special Unemployment Fund, £107 10s.; from the Benevolent Fund, £351 5s.; from the Widow and Orphan Fund, £622 19s.; and from the War Distress Fund, £432 10s. During this period the branches have raised over £2,000 by special efforts for the Widow and Orphan Fund.

C. DAVIDSON AND SONS, LTD.—Presiding at the fifty-first annual general meeting of the shareholders on Saturday at Aberdeen, Lieut.-Col. T. Davidson, D.S.O., said the loss incurred in the year's working was due to the low prices prevailing on account of the severe competition in all classes of wrapping papers imported from abroad. Production was thereby curtailed, and it was impossible, under present conditions, to manufacture at a profit the classes of paper for which the mills were laid out. On the decision of the Committee of Inquiry now sitting the policy of the board would depend, and he believed that if the Government decided in favour of applying the Safeguarding of Industries Act to the wrapping paper trade the future of the company was assured. If the decision of the committee was adverse, the directors had come to the conclusion they would have to give up the papermaking end of the business and concentrate on the bag making and selling end. It would be some weeks before the decision of the committee would be known, and till then nothing could be done except to continue running as at present so as to preserve the large connection of the company.

Trade Notes.

MR. JOSEPH ROBINSON, stationer and newsagent, Seaside-lane, Easington, had his premises burnt down last week-end owing to a firework which had been lighted for demonstration purposes setting fire to others in a box. The place was gutted.

MR. GEORGE KERR, printer, 50 and 52, Hedley-street, South Shields, was summoned this week for having printed coupons relative to a ready-money betting business, contrary to law. The defendant pleaded that the offence was unintentional and committed in ignorance, and was discharged.

PRINTERS AT LAW.—In the King's Bench Division, on Wednesday of last week, Mr. Justice Finlay reserved judgment in an action brought by Pryce and Son, Ltd., printers, of Woolwich, against the Pioneer Press, Ltd., also of Woolwich, in which damages were claimed for alleged libel contained in a print published bp the Pioneer Press, and purporting to bear the imprint of Pryce and Son. An injunction was also asked for. The document complained of was printed in black, setting out the Conservative view and with the plaintiffs' name, and then, printed over it in red, was the attack on the Conservative policy, with the defendants' name in red. The plaintiffs denied that they supplied the document in black to be overprinted.

A RULE NISI calling on the editor of the *Evening News* to show cause why he should not be committed for contempt of court in connection with comments in the paper on October 15th, dealing with the Home Secretary's action in causing the arrest of alleged prominent Communists, was granted by two judges on Tuesday in the High Court.

SUPPRESSION OF LONDON WEEKLY.—Following upon the arrest of Communist leaders on Thursday last, letters appeared in the Press on Friday from Mr. George Lansbury, M.P., who drew attention to the fact that "without any proper authority, and without any order issued on printer or publisher, the whole of the London edition of this week's *Workers' Weekly* has been confiscated and carted off. As this issue of the paper could not have been printed when the summonses were issued, I desire to ask what the Newspaper Proprietors' Association propose to do in the matter."

NEWSPAPER HOLD-UP.—About one o'clock on Saturday morning a daring hold up of a newspaper motor van by four armed men took place in Fleet-street. The van, which contained a load of copies of the *Daily Herald*, weighing about a ton and a-half, was slowing down to round the corner of Bouverie-street into Fleet-street when four men appeared. Two stood in front of the van, while the other two are stated to have pointed revolvers at the driver's head. The driver was ordered to leave his seat. He obeyed, and the four men immediately jumped into the van and drove off at a fast rate towards the Strand. Some time afterwards the van was found abandoned outside the church of St. Clement Danes.

THIS incident had a sequel on Tuesday, when before the Lord Mayor at the Mansion House, Cecil Ruben Margerison, 17, of Milton-road, West Hendon, described as a member of the National Fascisti, was charged with being concerned with three other men, not in custody, in stealing a Fiat motor car and 8,000 copies of the *Daily Herald* (recovered), the property of William Potter, contractor, High-street, Clapham. Margerison was remanded, bail in one surety of £500 being allowed. In applying for a remand, the police stated that, in their view, it was a case to which the attention of the Public Prosecutor should be called.

INSULATING PAPER.—It is the intention of the Post Office authorities to have all telegraph and telephone wires underground as time goes on. In connection with the London to Glasgow cable, the paper insulating the wires weighs 500 tons.

A MANUFACTURERS' agent who only holds British agencies, including a well known firm of publishers, and who travels Canada from coast to coast, is at present in this country, and desires to secure the representation on a commission basis for the whole of Canada of British manufacturers of stationers' sundries, stationery lines, appertaining to the bookselling and stationery trade and papers (bond, ledger, art, blotting, etc.). (D.O.T. reference No. 406.)

MR. FREDERICK WILLIAM BISHOP, overseer of the composing room of the *Birmingham Mail* and for more than forty years a member of the staff of that journal, has died at the age of 88 years.

MR. RICHARD JOHN SELLICK, of Archfield-road, Redland, Bristol, for 44 years a member of the staff of the *Bristol Times* and *Mirror*, who died on July 18th, aged 62, left estate of the gross value of £4,366, with net personalty £2,341. He left £50 to the Bristol and West of England Newspaper Press Fund and £50 to the Orphan Fund of the Institute of Journalists.

THE eighth annual concert in aid of the building fund of the Caxton Convalescent Home was held at the Central Hall, Westminster, on Saturday afternoon. Under the musical direction of Mr. Percy Newport, a fine array of artistes were enthusiastically received and their various items well rendered. Mr. Raymond Kirby, F.R.C.O., played several selections on the grand organ, which were much appreciated. In connection with the concert an appeal is being made for funds to complete the building by the erection of the West Wing. Over £1,000 has been subscribed, and it is hoped to augment this figure by a further £200 as a result of this effort. The hon. secretaries (Messrs G. F. Chapman and W. F. France) will welcome donations up to November 16th, at 3, Cursitor street, E.C.4.

Paper Trade Golfing Society.

Autumn Meeting.

The autumn meeting of the Paper Trade Golfing Society was held at Moor Park on Thursday, October 8th, when a large entry was secured, amongst those present being the following:—Mr. W. C. Powers, Captain Noel V. Bowater, Messrs. C. S. Downing, Edward Smith, J. W. S. Johnston, T. H. Groom, G. C. Robertson, W. Monkhouse, S. G. Saunders, W. A. Dewsnap, J. S. M. Stewart, Carl Eberstein, N. Duxbury, R A. Parkinson, S. Nicol, I. D, Berner, R. G. Harvey Greenham, N. H. Jones. A C. Jennings, E. C. Lait, Major H. S. Wescott, Messrs. F. C. Harding, B. J. Hall, A. S. Batchelor, A. C. Bodinnar, J. T. Chasney, F. G. Whitaker, G. Buchanan, T. T. Mackenzie, J. A. Holden, E. L. Brown, A. S. Duff and C. F. King.

The following are the results of the competitions:—

The Powers Cup.

This Cup, presented to the Society for handicaps of 11 and under, was won by Mr. S. G. Saunders with a net score of 77, Mr. A. S. Batchelor being second with a net score of 78. Captain Noel V. Bowater, Mr. E. L. Brown and Mr. C. S. Downing tied for third place with net scores of 80.

Mr. S. G. Saunders therefore becomes the second holder of the Cup.

The Cardiff Cup.

Major H. S. Wescott was successful in winning the Cardiff Cup (for handicaps of 12 and over) with a net score of 74; Mr. N. H. Jones being second with a net 75, and Mr. J. T. Chasney third with a net score of 79.

Major Wescott becomes the holder of this Cup for the current year.

Society Spoons.

Society Spoons for the best scratch score were won by Mr. A. S. Batchelor and Mr. C. S. Downing, who tied for first place.

The Foursomes Challenge Cup

A competition took place in the afternoon for the Foursomes Challenge Cup, which was won by Mr. A. S. Batchelor and Mr. A. C. Bodinnar with a score 1 down; Mr. J. T. Chasney and Mr. F. G. Whitaker being second with 3 down. Mr. S. G. Saunders and Mr. W. A. Dewsnap, and Mr. F. C. Harding and Mr. B. J. Hall tied for third place with 4 down.

PACKING paper and news print, it is said, could find a good market in Bulgaria. The three or four small works in the country are far from meeting demands. There is no news print mill in Bulgaria, the market being supplied by Germany and Czecho-Slovakia. There are more than 60 different kinds of packing paper in the Bulgarian markets, generally 18 to 100 grammes per sq. metre, coloured or white, made from wood, half-wood and cellulose. Only a coarse kind is made in the country.

Personal.

MR. GEORGE A. ISAACS (general secretary, National Society of Operative Printers and Assistants) and Mr. J. Keep (general organiser of the Society) are amongst the Labour candidates standing for the Christchurch Ward of Southwark at the forthcoming municipal elections.

MR. W. C. WARREN, vice president of the Joint Industrial Council, is to address the Salford Master Printers' Association at Manchester on November 4th.

MR. A. LE PINE STRANGE, hon secretary of the Eastbourne Master Printers' Association and a past president of the Home Counties Master Printers' Alliance, addressed the District Rotary Conference at Brighton on Friday of last week.

HE restated the objects of Rotary, with its ideal of service, and urged that "the development of acquaintance as an opportunity of service" should be applied not only to the customers but to the staff. They should drop a word of commendation as easily as a word of blame. The root cause of nearly all trade disputes was discontent, because the hopes and expectations of men to day were greater.

THE delegates of the Oxford University Press have appointed Mr. J. de M. Johnson, M.A., to be Printer to the University in place of the late Frederick Hall, who died in August of this year.

MR. J. J. BRAILY, secretary of the Leeds branch of the Printing and Kindred Trades Federation, has been appointed chairman of the Yorkshire Centre of the Industrial League and Council.

MR. J B. BROWNE, assistant overseer in the composing department of the *Northampton Herald*, has been presented with a silver engraved cigarette case and a box of cigars on retiring after more than fifty years' service on that paper.

MR. C. W. DAVIDSON was re elected a director of Messrs. C. Davidson and Sons, at the annual meeting.

MR. F. C. ARNOLD, who has been on the clerical staff of Messrs. Edward Lloyd, Ltd., for the past nine years, has severed his connection with the Sittingbourne Paper Mills in order to take up an appointment on the London staff of Messrs. C. Townsend Hook and Co., Ltd., paper manufacturers, of Snodland. At the hands of Mr. R. B. Miller (manager of the Sittingbourne Mills), Mr. Arnold has received from the staff a gold keyless lever watch suitably engraved.

"MODERN ADVERTISING," the issue of which in twelve fortnightly parts has been started by Messrs. Sir Isaac Pitman and Sons, Ltd., promises to be in fact what it aims at being, namely "an authoritative guide to every form of present-day publicity." With a foreword by Viscount Burnham, the first number contains articles on such live subjects as copy writing, advertisement lay-out, posters, illuminated signs, window dressing, and even sky writing and films, the contributors including some of the foremost men in the advertising field. Each number is priced at 2s.

SIR ISAAC PITMAN AND SONS, LTD., send us a new autumn list of books containing many of interest to printers and business people generally.

THE McGraw-Hill Co. is bringing an action against the former owners of the Newton Falls Paper Mills, N.Y., following the purchase of the mill. The plaintiffs allege that the property instead of being worth $2,400,000, which they paid for it, is worth only $1,400,000, because of the difference in timber values, and claim $1,000,000 damages on this account. They also ask $1,000,000 damages because of the money they spent in changing the machinery of the mill (from coarse to book papers) in the belief that the timber was sufficient to make it worth while to remodel the machinery. All the charges made by the plaintiffs are denied by defendants.

The Wrapping Paper Inquiry.

Points from the Evidence.

On the resumption of the sittings of the Board of Trade Committee into the state of the wrapping paper industry on Wednesday Oct. 7th, at the offices of the Board of Trade, Mr. H. G. Spicer, chairman and managing director of Spicers Ltd., was the first witness.

In reply to Mr Swan, he expressed the opinion that the wrapping paper industry of this country was in a depressed condition and deserved some reasonable support in view of the foreign competition. The application of a reasonable duty, say of 25 per cent., on the thicker papers would still leave a large amount of competition, and he did not therefore think there would be a very great advance in price on such papers. In a good many instances where thicker papers were concerned, substitutes which could be made in this country would be taken and there would be a considerable increase of people making krafts of the thicker substances.

Assuming a duty was granted on some wrapping papers, the manufactured articles made from such papers should be subject to an *ad valorem* duty, that was to say bags, envelopes and toilet rolls.

Mr. Spicer mentioned that the export of envelopes had gone down enormously in recent years. Most of the countries to which they used to send envelopes were either making them themselves or Messrs. Spicer manufactured the goods there. That applied to Australia and South Africa.

Paper Bag Making.

Mr. Harold Jackson, papermaker and paper bag manufacturer and chairman of the Wholesale Manufacturing Section of the British Paper Bag Federation, said 60,000 tons of paper were consumed by the paper bag trade in this country, and about a third or half of that quantity was bought from British mills. Price was the determining factor. Unless something was done to reinstate the wrapping paper industry here it would become extinct, and buyers would be at the mercy of foreign manufacturers. During the past two years mills were constantly going out of existence.

The Paper Bag Federation felt it was their duty to support the wrapping paper mills in their application.

The present 1 lb. bag was being sold at 1s. 6½ per 1,000, and two-thirds of that price represented the cost of the paper.

If the 15 lb. limit was taken, the duty would be evaded by making bags of double sheets, and in that case 70,000 tons of paper liable to duty would be so altered as to evade it. The 10 lb. limit was the natural boundary.

Because of lower wage conditions and lower taxation Scandinavian mills could make paper more cheaply than British mills and consequently the big orders went abroad.

Replying to Viscount Erleigh, witness said 250 firms were included in his Federation, of whom 40 or 50 were manufacturers. Some 6,000 people were employed as operatives and approximately 10,000 altogether. If a duty was put on the paper and not on paper bags it would ruin the paper bag industry here because the foreigner would send over the paper in the form of bags.

Witness added, in answer to the chairman, that the paper bag trade in this country had reached a high state of efficiency and they would not find one faulty bag in 50,000, whereas the foreigner failed in this department because he was inefficient.

Paper Box Representation.

Mr. Culross, on behalf of the British Paper Box Makers Federation, asked for similar opportunities at the Inquiry in respect of the paper used by his members as were to be afforded to the paper bag industry. The limitation of the weight to 10 lbs. became a serious matter for the paper box trade, who were large consumers of papers used for covering boxes.

Mr. H. G. Bradly, a director of Lepard and Smiths, Ltd., and president of the National Association of Wholesale Stationers and Paper Merchants, said before the war there was a considerable importation of foreign paper competing with British paper, and the difference in prices at that time on the average was about 5 per cent. There was now a much larger difference in the prices.

Witness agreed with the prices for foreign papers suggested in the applicants' case. With regard to British prices, in the majority of cases those he had been paying were a few pounds a ton lower, the possible explanation being that in a great many cases orders had been accepted at below cost in order to keep mills going.

On Thursday morning Mr. Bradly's attention was first directed by Mr. Swan to methods of marketing wrapping paper. Witness said it was not a general rule for merchants, when offering wrapping papers, to state whether they were British or foreign. In a great many cases the buyer knew it already, and in certain instances when negotiations were being conducted it was frequently stated. It was a common practice for merchants to supply British or foreign paper indiscriminately according to price and quality. The papers were not marked in any way.

With regard to the effect of a wrapping paper duty on other industries, witness said, leaving out paper bags and envelopes, he thought the effect would be so trivial as not to be worth speaking about. He went on to give a comparison of the price of the paper compared with the cost of the contents when the paper was used for wrapping up goods which had been sold. He took the case of a Swedish sulphite used to wrap up meat. In this instance the weight of paper as against the weight of the contents was under 1 per cent., and the value was a quarter of 1 per cent. Another instance was that of a 1 lb. M.G. sulphite bag used for wrapping biscuits, and in this case the cost of the paper as compared with the biscuits was one-third of 1 per cent.

In reply to Lord Erleigh, Mr. Bradly said it would be a fatal position if the paper bag industry of this country were dependent entirely upon foreign supplies of paper. He, as representing the National Association of Wholesale Stationers, was supporting the application entirely on the assumption that other imports which consisted wholly or mainly of wrapping paper should likewise be protected.

Mr. Entwistle put a series of questions to the witness to indicate the number of other industries which would be affected if a duty were imposed on wrapping paper. Witness was handed a sugar bag, which he described as of the thick old-fashioned sort, and added that grocers, however, liked thick bags. (Laughter).

Mr. Entwistle: I won't ask you why. (Renewed laughter).

Paper Bag Evidence.

Mr. A. Burt, who is associated with Messrs E. S. and A. Robinson, Ltd., a large paper bag-making firm, said he had bought the paper supplies of the firm for the last 25 or 30 years.

With regard to prices in Schedule 2 of the applicants' case, he thought these were rather too high. He gave a price of £21 for unglazed pure kraft (in reels) 19 lbs. and upwards, as against £22. As the substance of paper decreased, the price slightly increased. For M.G. pure kraft in reels, 16 lbs. and upwards, his price was £22, as against £22 10s. in the Schedule.

With regard to British paper, sulphites were and always had been obtainable in this country, and the best papers in the world were made here. So far as quality was concerned, the British bag-maker would have nothing to complain of in the imposition of a duty. Referring especially to thick substances of kraft paper, such paper made in England was equal in quality to the foreign product, except for a very few foreign makes.

Last week has seen the Inquiry into the wrapping paper industry carried well forward. On Tuesday Mr. Entwistle opened the case for the opposition in a speech approaching 2 hours duration. Before making his statement he mentioned that he had been instructed by the Manufacturing Confectioners' Alliance, who intended tendering evidence of the effect of a duty upon their industry. He had also been instructed to intimate that Lever Bros. were in opposition to the application, although apparently they were not tendering evidence.

Proceeding to state his case, Mr. Entwistle went through the points in the White Paper seriatim. He first of all dealt with the substantial importance of the industry. The contention with regard to abnormal imports was, however, a serious issue, and he claimed that applicants had not satisfied that condition. Exact percentages of the various classes of imports taken from actual figures would be put in. Mr. Entwistle had some comments to make in regard to the prices that had been mentioned on behalf of the applicants. Counsel argued that whatever the cause of the decreased production at home and unemployment might be, it was a cause that was operating more strongly before the war and was not some exceptional and abnormal competition such as had to be proved in order to satisfy the conditions of the White Paper. They were going to show causes for the lower prices of foreign paper that had nothing whatever to do with wages and hours. They would submit evidence with regard to the machines, a question which came also under the heading of efficiency and economy of production. Mr. Entwistle dealt at length with the calculations regarding wages in foreign countries and proceeded to refer to output per person.

The most important part of the Inquiry, he said, was the effect of the imposition of a duty on industries using the class of goods to be taxed, and he had never known an inquiry under that Act where so many trades had come forward on the ground that their interests would be affected.

Witnesses were then called by Mr. Entwistle, Mr. E. S. Jones (Samuel Jones and Co.) providing an amusing incident with a Mullen tester.

Thursday was occupied by a series of other users of wrapping papers who testified to the effect of a duty on their trades.

Finally Mr. J. Mutimer began his evidence, of which his precis ran to 18 typewritten pages.

MILL MANAGER ENTERTAINED. — A very pleasing incident marked the departure of Mr. MacDonald from the Wycombe Marsh Paper Mills, when he relinquished the management of these mills, to take up a better position at the Disley mill. Upon the kind invitation of Mr. Geo. H. Wilkinson (managing director), the staff—and representatives of employees of the three mills in the district—dined at the "Red Lion" Hotel, High Wycombe, the chief guest being Mr. MacDonald, whom all present addressed in complimentary terms, and wished him every success in his new undertaking. Mr. MacDonald made suitable response, and mentioned that he would carry away many pleasant memories of his associations with all at the Wycombe district mills.

Australian Notes.

The News-Print Scheme—Problem of the Tariff—A Political Dilemma—The Attitude of the Publishers—Cumberland Paper Board Mills' Profit—New Plant Justified—Australia Paper and Pulp Co.—Ordinary Dividend Reduced—F. T. Wimble and Co., Ltd.—New Company.

(*From Our Sydney Correspondent.*)

A GOOD deal of excitement, not to say amusement, is aroused over the proposed Government assistance to enable the Amalgamated Zinc Co. to proceed with the manufacture of news print in Tasmania. Mr. Bruce is declared to be in a difficult position over the matter. The recommendations of the Tariff Board which considered the application of the Amalgamated Zinc Co. were believed to be in favour of protecting the proposed industry, and when these recommendations leaked out the Tory newspapers were up in arms at the prospects at having to pay increased prices for their news-print. Accordingly, it is stated, representatives of the newspapers which supported the Government "interviewed" the Prime Minister, and, it is believed, asked that the decision of the board be rejected.

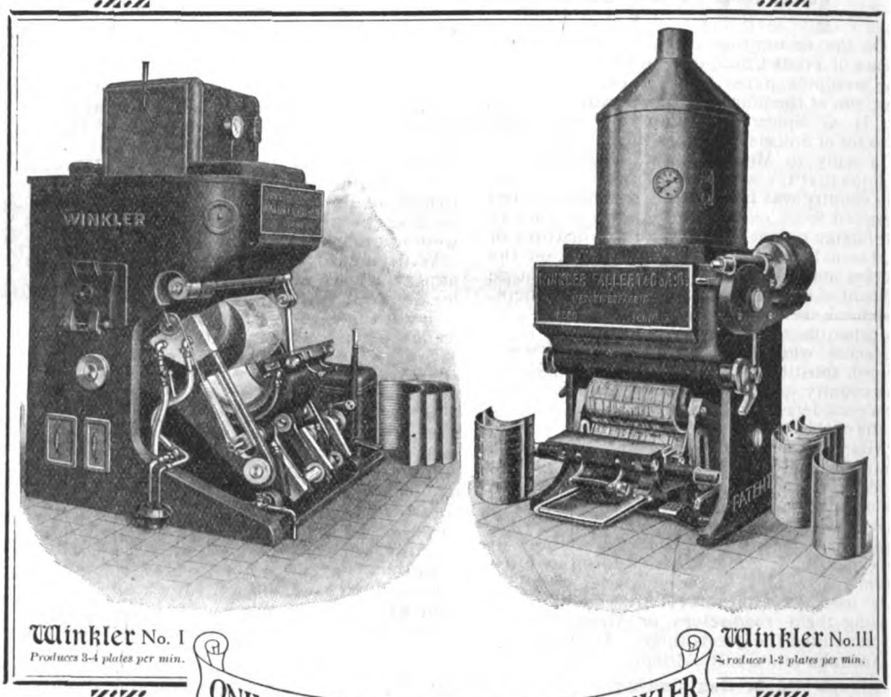
THE *Labour Daily* observes that it is most amusing to see representatives of so-called protectionist papers with those of avowed free trade journals, tongue in cheek, marching shoulder to shoulder into the Prime Minister's sanctum on a free trade mission. Although Mr. Bruce declined to comment on the matter, he is said to have signified his disapproval of the request of the newspaper proprietors.

IN the meantime the *Daily Guardian* of Sydney and *Smiths' Weekly* are going out wholeheartedly in support of the establishment of the news-print industry in Australia. Commenting on the situation, the *Guardian* says: "Every previous scheme of this kind has been defeated by the subterranean opposition of 'Australian' newspapers. In their mania for the cheapest imported article, they have even printed on paper from Japan—employing Japanese workmen to make the sheets on which they fervently advocated White Australia! Allegedly 'Protectionist' newspapers have secretly fought against Australian news-print as bitterly as the Free-trade journals." The *Guardian* goes on to say that, along with the *Smiths' Weekly*, it will welcome the new Australian industry, and whether it means higher production cost or not "it will help to fill Australia with men and with industry."

UNDER the slogan of courageous capital, the same paper mentions that the initial expenditure on its news-print enterprise by the Amalgamated Zinc Co., if Parliament will grant the desired encouragement, is estimated at £600,000, while over the succeeding three to five years a further capital of about £1,500,000 will be applied. "To a patriotic newspaper," it is observed, "the venture seems worthy of all-Australian support, but the majority of City newspapers will try privately to intimidate members of the Commonwealth Parliament into jettisoning the scheme. How sincere are the other newspapers in their alleged pro-Australian feelings will be judged by the amount of support they offer to the industry of Australian news-print."

CUMBERLAND Paper Board Mills, Ltd., in its annual report discloses a profit of £35,879. A sum of £6,011 makes provision for taxation. Dividend of 8 per cent. on first preference shares absorbs £3,200, of 8 per cent. on second preference shares for four years absorbs £20,636, and with £5,798 brought into the account, £11,829 is carried forward. If the financial position during the current half-year justifies it, the directors propose paying some of the arrears of the accrued dividend to holders of third preference shares.

THE directors state that the new plant mentioned in the previous report fully justified anticipations, and the success of the operations of the year is largely due to these installations. The outlook for the current year is stated to be satisfactory. The financial position in January last warranted the payment of all dividends accrued on first preference shares to June 30th, 1924, as recommended in the previous report. There has been a very substantial reduction in the bank overdraft.



A PRELIMINARY statement issued by the directors of the Australian Paper and Pulp Co., Ltd., indicates that during the year ended June 30th the company earned £88,469, against £79,553 for the previous twelve months. The board, however, transferred £26,000 to the depreciation reserve, raising it to £54,000, whereas in the preceding year only £8,000 of the published profit was utilised for that purpose. The customary 8 per cent. dividend on the preference shares took £8,000, but as 153,500 A preference 8 per cent. shares were issued in November, a sum of £4,941 was required to satisfy the dividend charge on that issue. The ordinary dividend had been reduced from 8 to 6 per cent., of which 4 per cent. has already been paid, and will take £44,790.

THE accounts of F. T. Wimble and Co., Ltd., for the year ended June 30th last show that, after provivding £4,000 for taxation and £500 as reserve for bonus to employees, the net profit was £13,235, which compares with £13,456 for the previous year. An unexplained addition of £644 was made to the reserve fund. Dividends at the rate of 8 per cent. per annum on preference and ordinary capital absorb £11,273, including interim payments. A sum of £3,000 is to be transferred to reserve, leaving £1,096 to be carried forward.

THE branch house opened in Brisbane is said to have proved of much benefit. Branches have been opened recently also in Adelaide and Perth, and good business is anticipated therefrom.

AMONG the new companies registered is *Bathurst Times*, Ltd., with a capital of £10,000, to carry on business as proprietors and publishers of newspapers, etc.

THE patent rights held by Kaye's Rubber Latex Process, Ltd., for the United States and Canada have been sold to the United States Rubber Co.

ONLY WINKLER CAN BUILD A WINKLER

Winkler Casting Machines

are made to suit the requirements of all Newspaper Offices—large and small—and can be purchased at a price within the reach of every Newspaper. The £ s. d. consideration for not universally adopting Mechanical Plate Casting is therefore removed.

¶ For Newspaper Offices where conditions do not demand the automatically sustained output of the Winkler Casting Machines Nos. I and II, we can supply a smaller model (No. III) of simplified construction, as shown in the illustration.

¶ While the Winkler No. III is not intended to do the heavy volume of work required of the bigger models by the larger daily papers, it is nevertheless capable of producing 1-2 finished plates per minute. To attain this rate of production with the most modern pump-fed hand boxes and their accompanying outfit of tail-cutters, shavers, etc., considerably more labour would be required.

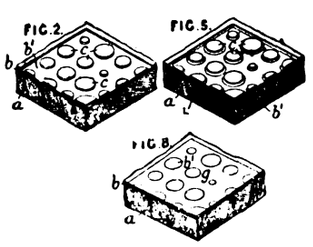
New Inventions

Rotary Offset Machines.

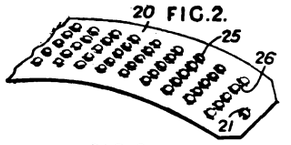


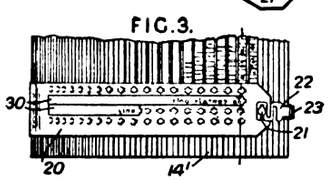
A rotary web offset printing-machine having two offset cylinders 12 between which the web is passed to receive offset impressions on opposite sides is constructed with eccentric bearings 14 for the shaft 13 of each offset cylinder, the bearings 14 being angularly adjustable in further eccentric bearings 38. The bearings 14 are angularly adjustable by arms 7 connected by turnbuckles 6*a* to links 6, and serve to move the cylinders 12 to and from the forme

cylinders 1. The bearings 38 are normally held fixed by bolts 44 passing through slots 43 in flanges on the bearings, and when the bolts are loosened, the bearings 38 are adjustable by toothed sectors 40 operable by handles 41, and serve to move the offset cylinders bodily about the axis of the corresponding forme cylinder. One of the offset cylinders may be replaced by an impression cylinder, or a direct printing cylinder. The patent is taken by Messrs. Linotype & Machinery, Ltd., and Mr. B. J. J. Gould.

Printing Plates.

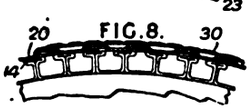
In this invention, which relates to printing-plates, of the kind comprising ink retaining areas and mercurial ink repelling areas, have the mercurised metal forming the ink repelling areas supported and maintained in place by a metal unaffected by mercury and suitable for forming the ink retaining areas. In one manner of preparing the plate, a layer of nickel *b*, Fig. 2, is deposited electrolytically on an iron plate *a* and coated with a medium sensitive to light such as bichromated fish glue, which





is then exposed through a negative, washed and baked in the usual manner to produce a pattern in resist, represented by the dots *c*. The surface b^1 is then etched between the dots *c* with perchloride of iron, &c., to a depth of about half the thickness of the nickel layer *b*, and the parts removed by etching are filled up more or less by very thin alternate layers of electrolytically deposited copper and silver, as shown in Fig. 5. The dotted pattern *c* is now removed by a suitable alkali, such as a solution of sodium or potassium cyanide, and the plate treated with metallic mercury, resulting in amalgamated ink repelling areas *g*, Fig. 8, supported and maintained in place by a floor and side walls formed in the nickel coating. The patentee is Mr. A. R. Trist.

Printing Surfaces.



In an invention patented by the American Multigraph Co., a printing-forme for a rotary printing drum comprises one or more printing strips with embossed printing characters, formed to engage rows of circumferential projections on a holder adapted to be secured to the drum. The projections 25, Fig. 2, are stamped up from a sheet metal base 20, and are cut away at the sides to form slits 26 adapted to be engaged by the inturned edges 33, Fig. 1, of the printing strips 30. Notches 34 may be formed in the edges 33 to facilitate bending of the strips and a stop lug 36 may be formed at one end. The forme may be clamped to a plain drum or to a drum

having type-holding rails 14^1, Fig. 4, formed integrally with the drum, or rails 14, Fig. 8, formed by bending a sheet metal plate. The clamping is effected at each end by a strap 22, Figs. 3 and 4, engaging a lug 21 on the base 20, and carrying a lever 23 adapted to engage one of the rails or a notch in the drum. Specification 215,040 is referred to.

New British Patents.

For the benefit of our readers we have arranged for any inquiries relating to Patents, Designs and Trade Marks to be answered, free of all charge, by a Fellow of the Chartered Institute of Patent Agents. Inquiries should be addressed, in the first instance, to the Editor.

TO STUDY THE MANY FACTORS CONNECTED WITH THE PURCHASE AND USE OF PAPER, OBTAIN
"What a Stationer and Printer should know about Paper" *by Harry A. Maddox.*
Obtainable, Price 2s. 9d. post free, from STONHILL & GILLIS, 58, Shoe Lane, LONDON, E.C.4.

Digitized by Google

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

TRADE appears to have been a bit more lively during the last few days. Merchants in certain quarters are receiving a better bulk of orders from their salesmen and post business is said to be improving. About this time of the year there are a fair number of substantial contracts placed by large users of commercial stationery to fill next year's requirements. Mostly, the class of paper specified for these orders is either esparto or tub-sized writing. Several such contracts have been fixed up during the last week or two, and to some extent the mills should benefit before the month is out. We gather that there is an improving volume of trade passing through to the esparto mills for writings, boards and coated art papers. Some of the makers who reported a slight falling away about a month or so ago, now claim to be as well placed as ever, and at least one or two mills are very busy. It can be confidently anticipated that if the shipment of esparto grass to U.S.A. continues, there will be a very quick demand for esparto papers at home before price begins to be affected.

* * *

CHIEF interest at the moment is centred round the Wrapping Paper Inquiry where a very stern fight is being waged for the preservation of at least one section of the paper-making industry. It is impossible as yet to form any idea of the outcome of these proceedings, and in any case there is still a labyrinth of official formulæ and routine to be gone through long after the present committee has completed its arduous task. So far as it has gone, the inquiry has proved one or two things and thrown an illuminating light on others. Firstly, the applicants' case would have been materially strengthened if accurate data of classified production and cost had been available for all mills. The mills that do not belong to the Association must at last begin to realise that individual interests are best served by organisation for common interests. On several occasions we have endeavoured to demonstrate that lack of co-operation between the various units and sections of the industry simply furnished and maintained an obstacle to progress. Until every mill in the country belongs to the Association, and plays its part in assisting the Association to compile the sort of data which is a fundamental factor in safeguarding and developing the whole industry, there can be no sound recovery of the industry.

* * *

THE British paper industry, as evidenced by the Board of Trade returns, appears to be holding its own in spite of the general state of depression, both imports and exports in September being on a similar level to those recorded during recent months. In view of the present Inquiry, special attention will be given to the figures relating to packings and wrappings. September's total imports (1,076,561 cwts.) represent a decrease of 217,470 cwts. (16·3 per cent.) compared with a year ago, whilst the value (£1,119,915) registers a decrease of £277,217 (19·8 per cent.). It may be mentioned here that imports of packings and wrappings show a great increase and exports a decline. Referring to the total paper and cardboard imports, these for the first nine months of the year and the two preceding corresponding periods were as follows:—

1925	...	10,514,686 cwts.	£10,787,051
1924	...	10,092,145 „	10,404,393
1923	...	8,984,961 „	9,587,321

As will be seen, imports for the first nine months of the year show respective increases in quantity of 422,541 cwts. (4.1 per cent.), and 1,729,725 cwts. (19·6 per cent.), contrasted with the corresponding period last year and two years ago. In value the imports during January to September were up by £382,658 (3·6 per cent.), and £1,199,730 (12·5 per cent.), compared with the corresponding periods of the last two years. Packings and wrappings (3,254,516 cwts.) are the largest item in the imports during the nine months, recording an increase of 238,321 cwts. compared with the shipments of January to September last year. They were also 30·9 per cent. of the total quantity of paper and cardboard received. Printings (2,879,754 cwts.) came next, but recorded a decline of 3,483 cwts. Consignments of strawboards (2,710,793 cwts.) and millboards (1,031,368 cwts.) were again numerous, the former showing a slight decline of some 7,000 cwts., whilst the latter appreciated to the extent of 83,075 cwts.

* * *

PRINTINGS from Newfoundland (743,951 cwts.) easily represented the largest item in this category of imports, and were heavier by 112,089 cwts. than in the same period last year. The second position is occupied by Norway (596,841 cwts.), which country improved her position to the extent of 235,292 cwts. Finland (507,473 cwts.) came next, and then Sweden (495,762 cwts.), figures which show declines respectively of 164,172 cwts. and 69,846 cwts. contrasted with the corresponding period last year. Canadian shipments were much larger, however, imports from that source having risen from 42,107 cwts. during January to September last year to 168,120 cwts. in the nine months of the current year.

SUCCESS

"There is nothing that succeeds like success"—*runs an old saw.*

THE SPECIAL EXPORT ISSUES of the "British and Colonial Printer and Stationer" have been increasingly successful since they were started some 37 years ago. That this success has been shared by our advertisers is shown by the following testimonials which have reached us :—

"We, ourselves, have taken your journal in for a great number of years and have always found it interesting and have frequently referred to the advertisements for any special requirement that we were looking for."—R. R. & Co., Ltd.

"We take advantage of this opportunity to express our great satisfaction as to the efficiency of your paper as an advt. medium both in the U.K. and abroad. It is gratifying to note that enquiries from the remotest parts abroad are the direct results of our advertisements in the "British & Colonial Printer."-T.&T. Co., Ld.

However successful a firm may be, it is always on the look-out for new worlds to conquer and in suggesting that your advertising should appear in our Next Export Issue, we are presenting you with an economical method of obtaining forceful overseas representation.

"The British and Colonial Printer and Stationer" specially circulates in the following countries:—

Australasia.	**East Indies.**	**Canada.**
India.	**West Indies.**	**United States.**
South Africa.	**China.**	**South America.**
	Japan.	

The next Special Export Issue will be published on

DECEMBER 3rd, 1925.

Space is now rapidly being booked.
One of our representatives is at your disposal.
Let us know to-day when he shall call upon you.

Stability

PROGRESS SERIES: No. 4. The Bank of England was founded by William Paterson (a Scotsman) in 1694 to stabilize the monetary system. Chartered by Act of Parliament July 27th a corporation to be styled "The Governor and Company of the Bank of England," as official bankers to the Government, with sole rights to issue bank notes. The subscribed capital on formation was £1,200,000. The present Proprietors' Capital is £14,553,000.

SINCE the 17th Century, in the reign of Charles I, through periods of glut and financial stress, boom and commercial prosperity, London has been the hub of the world's finance. And the imposing grey stone building that borders Lothbury to the North and Threadneedle Street to the South has stood through its 230 years of financial history, a monument of stability.

In commerce, as in finance, public confidence is vested in those firms who observe but one code of business ethics; whose reputation has been built up by fair dealing and honest merchandise; whose products have stood the test of time.

For almost four score years—since 1848—the House of Winstone have progressed, consolidating public confidence by supplying only the best that British craftsmanship can produce.

Inks, rollers, sundries and time-cost-and-labour-saving specialities supplied by the House of Winstone carry the acknowledged guarantee of value—the reputation of 77 years' unfailing service to the printing trade.

Bonds, Ledgers and Fine Papers.

Difficulty of Distinguishing between them; Need for Standardisation; Conditioning and Testing.

By Mr. W. D. SOMERVILLE.

It is difficult to draw the line where these grades begin and where they end. The term, "bond paper," usually includes any paper from 13 pound folio to 24 pound folio, which is reasonably hard, of moderate finish, and intended to be written upon either by pen and ink or by typewriter. This probably seems a wide generalisation, but in late years any papers within these limits have been called bonds, and quite a number outside of them. The same generalisation applies to ledgers except that these papers, as a rule, are from 20 pound folio up and carry a higher finish and have a longer formation.

Source of the Names.

Originally, the term "bond and ledger" was a well defined type of paper; bond papers being made entirely of rags and being used for legal documents and papers which had to withstand constant handling and being capable of the maximum resistance to deterioration from age. Ledger papers were used, as the name implies, in ledgers and also had to stand constant handling and erasures. From the two beginnings have descended a multitude of papers which, in many cases, only bear a very faint family likeness to their ancestors, whose name they bear. The old bonds and ledgers were made regardless of cost and of the very best quality of materials; their only aim in life was to be good, and every effort was made by the papermaker to make the best sheet of paper.

At present the manufacture of these papers is a constant struggle to give the customer the best for the current prices of the different grades. A few bonds are still manufactured on the basis of quality alone, but the majority are a compromise of many factors, trying to resemble the higher grades in as many of their good qualities as the cost of manufacture will allow.

The papermaker of bygone years, with his own aim, quality, had a very different task from the modern papermaker who knows that with a given furnish and the maximum speed, he can just make the average bond show a very small profit, so that every time he tries to improve one quality in the paper he does it at the expense of several other qualities.

No Present Standards.

The paper business is very far from being standardised, and the fine papers probably less than other grades of paper. There are multitudes of sizes, weights, colours and finishes, which complicate matters unduly and cause many changes on the paper machine which would have been avoided if the product was more standardised.

Some mills run several hundred shades, including from forty to fifty shades of white, which makes the burden of the fine paper superintendent heavier, especially as the gradations between some of the colours are so slight that for all practical purposes they could be cut down very considerably. In addition, the cost of the paper is increased, owing to the numerous changes and lost time.

The sooner some reasonable amount of standardisation is injected into the fine paper business, the better it will be for everybody.

Conditioning the Paper.

One of the most important factors in finishing is conditioning, which is having paper of the right temperature and moisture so that it can take the proper finish with the minimum broke being made.

The proper temperature and moisture can only be maintained by humidity control. In summer the humidity is high enough to enable paper to be handled easily, but in winter unless a humidity control is installed there is usually trouble with static electricity. Static can be eliminated more or less by numerous devices, but a reasonably moist atmosphere so that the paper will contain about 5 or 6 per cent. moisture will enable paper to be handled easily at all operations with a minimum of broke, and will also insure the shipping of paper at a moisture content which will assist the printer or converter in handling it to the best advantage. Static is the cause of a lot of trouble to printers. Many troubles laid to curly paper are really caused by static, as the sticking together of the paper hinders the feeding in a press so much that it gives the appearance of curl, although the paper will not react to the usual curling tests. In cases of this description the trouble can be remedied in the print shop by raising the relative humidity in the vicinity of the press, but it is undoubtedly better for the paper to be shipped at a moisture content that will minimise this trouble.

In addition to the humidity control of the air, different finishes require different degrees of moisture content, which moisture has to be supplied either by making the paper with the required amount or by sweating it to the necessary point.

Plated finishes need moisture of varying degrees relative to the degree of cut and two-tone effect required, and it is a difficult matter to get the moisture correct at first and then to hold it uniformly until the finishing operation is complete, especially as paper in the load changes its moisture content first at the edges.

Provided the paper is made correctly, conditioning for finishing is one of the most important factors common to nearly all fine papers, inasmuch as it helps handling and to a great extent limits the degree of finish and leaves the paper in the best condition for the customer.

Inspection and Sorting.

Practically all high grade papers are sorted, and it is a matter of long experience to hit the happy mean and not leave imperfect paper mixed with the perfect and vice versa. In sorting, many different factors have to be considered, such as what the paper is to be used for, what defects will come out afterwards in the load, and what defects must be sorted out. A periodical examination of the sheets sorted out will tell the superintendent if too much perfect paper is going into broke, while the routine inspection of perfect paper will tell if too much imperfect paper is going into the perfect.

The inspection of paper after the last operation is very important in the finer grades. This should insure that the paper leaves the mill in good condition and is a check on all finishing operations and incidentally catches a number of manufacturing defects. The inspection will tell the superintendent how efficiently the mill is operating, and will enable him to bring to the attention of any department any undue amount of errors it is making.

In addition to the inspection at the sealers it is well to keep records of the quality of every finish order coming through. This is a check against faulty paper getting out, and a means of telling whether any complaint made by the customer is justified.

The department handling this work has to save samples from every finish order and make necessary tests to ensure it is up to standard.

The Tests to be Made on the Paper.

Bonds and ledgers should be inspected for tear, pop, colour, formation, dirt, watermark, curl, ink resistance, finish and evenness of caliper. These tests cover nearly all the qualities desired in these papers. Colour, formation and watermark have to be matched against a standard for these qualities, whilst the other tests can be carried out mechanically. In the case of finish I do not know of any very accurate

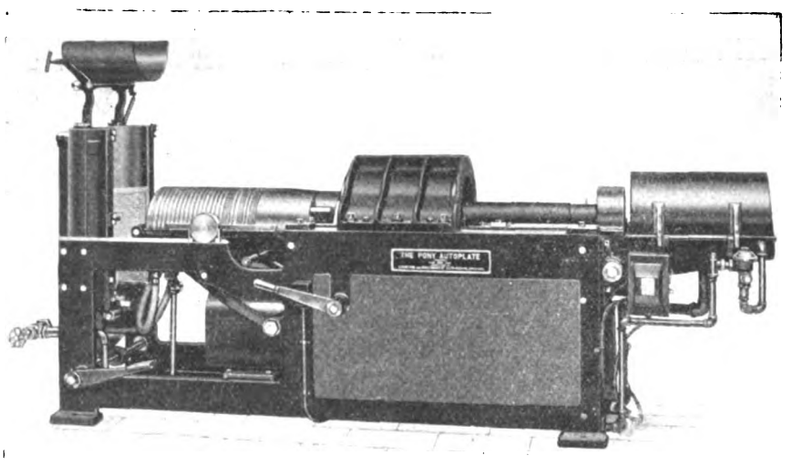
WHY BE CONTENT

To cast your plates in a hand box, and lift them out;

To cut off their tails on a hand worked tail cutter, and lift them off;



To shave them out in a hand worked shaving machine, and lift them out;

To finish them on a hand trimming block, and lift them off;

To cool them in a hand dipping tub, and lift them out; and finally

To dry their faces by hand with a rag;

WHEN A PONY AUTOPLATE WILL DO ALL THE ABOVE THINGS?

LINOTYPE AND MACHINERY LTD.
9 KINGSWAY, LONDON

mechanical means of testing, as most instruments measure gloss or polarised light, while bond finish consists of both gloss and feel. A paper which feels smooth often tests low for finish and vice versa, as the instrument does not take into account felt impression and other marks which do not interfere greatly with the reflection of light. This machine is of value, however, when testing high finishes.

In the case of papeterie papers there are other factors to take into account, namely, a great variety of finishes, also the folding qualities, it being essential that papeterie papers fold without cracking.

There are numerous other defects that are sometimes found in high-grade papers, but if a paper is up to standard in the foregoing qualities it will be correct in its major features.

Big Paper Mill Fire.

Damage to Messrs. Reed's Bridge Mill, Tovil.

A destructive fire broke out in the early hours of Monday last week at the Bridge Paper Mills, Maidstone, which are owned by Messrs. A. E. Reed and Co, Ltd. The fire originated in the engine-room, situated in a building of three bays, of which the other two formed the boiler house. Taking a course through the belt race, the flames attacked the beater house, a three-storey building, which within half-an-hour was a roaring furnace. The timber-built galleries used for the hoisting of wood pulp from barges lying in the river alongside burnt with great vigour. In its passage from the engine room to the beater house the fire, fanned by a light breeze, caught a calender machine, which suffered some damage, and completely destroyed a large roll of paper at its base.

The fire swept through the beater house, but fortunately a large machine house escaped. A party wall also prevented the flames from attacking another papermaking machine which was housed in a building to the eastward of the beater house. At the time of the conflagration a number of barges were lying alongside the wharves of the Medway, containing large quantities of wood pulp, but fortunately these were removed from the danger zone, although not without considerable risk to those who carried out this manœuvre.

Some alarm was occasioned by a series of explosions, which were due to the bursting of the slates of the roof of the engine house, owing to the intense heat. The engine-room was completely gutted and, according to a local report, it is stated that the mills will probably be closed down for two months.

It is impossible at present to estimate the amount of the damage, but this must be considerable in view of the injury done to the buildings.

THE cigarette paper works of Messrs. Smith and Meynier of Susak, the only cigarette paper mill in the Balkans, has closed down and discharged all the workers on August 1st. Production was 100 waggons per year, 50 of which were exported.

The Wrapping Paper Inquiry.

Concluding Stages.

The inquiry into the state of the wrapping paper industry, held at the Board of Trade offices under the chairmanship of Sir John Brunyate, has now completed the taking of evidence, the later stages being devoted to witnesses who opposed the application. Following Mr. Entwistle's review of the considerations which have actuated the opponents of the application, he proceeded to call evidence for the opposition.

Consumers' Evidence.

Mr. E. S. Jones (managing director of Samuel Jones and Co., Ltd., gummed and coated paper makers, London), giving evidence against the application, said the imposition of a duty as low as even 5 per cent. would prove disastrous to the trade in this country. The kraft paper they imported was the raw material of their industry, in which the price was highly competitive. Their chief competitors were the United States and Germany. They were working up an export trade, which was a growing one, in gummed tape and stay papers.

In reply to Mr. Swan, witness said they had got quotations from various mills in this country for their paper, but the prices were too high and the quality was not what they wanted. If British mills could offer the paper at the price they could afford to pay, they would be glad to place the orders with them. Generally the Canadians made a superior paper to the British, the Canadian and Swedish being approximately equal. He regarded 100 lbs. to the square inch as a good strength.

Asked whether he had considered what the position would be if the British wrapping industry were destroyed, witness said he could not say he had thought of that, but they all lived by competition, which did any amount of good.

Witness was asked by Mr. Swan to make a test of a gummed paper circle handed in, and on a Mullen tester being brought forward, Mr. Jones described it as an old machine.

Having made the test, which showed a low bursting strain, witness was asked if he doubted he could get a better paper in England, and he replied, amid laughter, that he hoped so.

The first witness for the opposition on Wednesday, October 14th, was Mr. G. Ernest Clark, a director of Messrs. Fisher, Clark and Co., Ltd., of Boston, Lincs, manufacturers of tags, labels and tickets. Witness said they had been manufacturing labels since 1850. They employed manilla paper as their raw material. In 1924 732 tons of foreign and 209 tons of British paper were purchased and in 1913 550 tons foreign and 186 British. But they were still dependent for the major portion of their requirements on foreign mills.

If a 33⅓ per cent. duty were imposed on foreign manilla, their export trade, which was largely with the Colonies, would certainly be lost to America. Only two months ago they made arrangements for developing a promising market in South America, and these arrangements would be nullified if the proposed duty was levied. Their export business was practically entirely of post-war growth, but had already developed to about 12 per cent. of their entire business.

In reply to Mr. Swan, witness said whether they bought paper from British mills or abroad was a question determined by the price. A duty of 33⅓ per cent. would increase the cost by from 24 per cent. to 29 per cent., the calculation being made on the assumption that the cost of the foreign material would rise. Witness stated that 99 per cent. of their export trade was with the Colonies, including India, and in order to obtain the preference obtaining they had to state the amount of British labour and material in their goods.

Re-examined by Mr. Entwistle, Mr. Clark said in addition to losing 10 per cent. of their export trade if a duty were imposed, the home trade would also be affected, because Americans were already selling tags in this country.

Paper Bag Manufacture.

Mr. Joseph Chadwick, a director of Joseph Chadwick and Sons, Ltd., of Warrington, Lancs, paper bag manufacturers, said their business had been established since 1873, and they employed about 250 hands. Their output of bags was upwards of 3,000 tons a year. They were opposed to a duty upon paper because their business was largely built up on imported paper. In the manufacture of bags they used krafts and M.G. sulphites. Practically the whole of the purchase of their raw material was from Scandinavia. The only English papers they bought were wrappings for the purpose of wrapping their own goods, and these wrappings would represent 5 per cent. at the outside. In pre-war days their purchase of foreign paper was about the same in comparison as to-day.

In his view if a duty were imposed upon foreign papers chaos would result in the trade, because there would be a run on English mills. A bag paper manufacturer who made his own paper would be in a better position, because his paper would be protected. The reason they bought largely foreign papers was price coupled with quality.

If a duty were put on paper, and not on bags, the foreigner would then export into this country not only paper but manufactured bags, and they would not be able to compete with him. Hitherto they had been able to hold their own in competition in bags. This competition in bags would increase unemployment, as for every 100 tons made up in this country approximately 400 people were employed.

Witness added that a duty on foreign paper which would increase the price of bags would tend to reduce the amount of printing which was done upon bags, and might reduce employment in the printing trade.

Mr. Chadwick put in letters from 13 firms, which he said took the same view as he did of the application.

Cross examined by Mr. Swan, witness said he had sent out about 40 circular letters and there were only four of the replies which he would not wish to put in.

Mr. Swan: If there were a duty on the foreign paper and bags, do you say it would produce chaos?

Witness: It would dislocate the trade. Four-fifths of the M.G. sulphites used for making bags were imported. A duty would give an advantage to those bag makers who were at the same time papermakers.

Witness added that of the 280 members of the Paper Bag Makers' Federation about 100 were manufacturers of paper bags and about four were manufacturers of wrapping papers.

Mr. Swan: So that the prejudice, if there is any, does not go very deep?

Witness: They represent a very big output.

Mr. Chadwick said he would be surprised to hear that 95 per cent. of the business of the four firms was paper bags and only 5 per cent. wrapping paper.

In reply to Lord Erleigh, witness said his brother was a member of the committee of the Paper Bag Makers' Federation, and he believed he was appointed with Mr. Jackson to take steps to put the views of the Federation before the Inquiry Committee.

Answering Mr. Entwistle, witness said his brother was opposed to a duty on wrapping paper, and in reply to the chairman he said the cost of paper in a completed bag on an average would be roughly about 61 per cent.

As to whether it was possible to obtain the paper required made to a definite specification which could be tested, witness said even in the case of Scandinavia, only a few mills made paper sufficiently good for their purpose.

In answer to Mr. Wenham, witness stated that they could make 290,000 1 lb. bags out of one ton of paper of 16 lbs. substance. The price per 1,000 made up from a standard substance (13 or 14 lbs.) would be 1s. 6·45d.

Mr. Mutimer's Evidence.

Mr. John Mutimer, managing director of Davies and Royle, Ltd., said he was chairman of a committee appointed by a group of British firms engaged in the industrial use and distribution of imported wrapping papers, formed at the London Chamber of Commerce for the purpose of co ordinating evidence desired to be presented at that inquiry in opposition to the present application.

His firm had been established in the paper trade in this country for 58 years, and he himself had been in the trade for 24 years. He spent four years in a British mill and had frequently during the past 17 years visited many paper mills in Norway, Sweden, Finland and Germany. For some 20 years he had had an almost exclusive and a very extensive experience in the wrapping and packing sections of the trade.

With reference to the statement of applicants that 90 mills in the United Kingdom were, at the commencement of 1925, fitted for the manufacture of wrapping and packing paper, witness said the definition "fitted for the manufacture" could include many mills or machines that did not make wrapping papers. It would cover practically all paper mills in the United Kingdom.

As to applicants' claim that "the wrapping mill as a rule is a self-contained mill and not part of a general mill," Mr. Mutimer submitted a schedule of the 41 mills comprised in the Union of Wrapping Paper Makers, giving the number and widths of their papermaking machines, and some of the classes of paper manufactured. This was public information obtained from the companies' own advertisements.

These papers had been divided into two grades: (1) wrapping papers; (2) other than wrapping papers. It would be seen that quite a considerable portion of the 41 made papers other than wrapping papers. Papers made which were not wrapping papers and which did not come within the scope of the inquiry included: Drawing paper, cover papers, M.G. litho papers, M.G. poster papers, jacquard cards, chemical papers, lining and pasting papers, writing papers, printing papers, supercalendered printing papers, carpet and roofing felts. Witness specially mentioned Messrs. Crabtree and Co., Ltd., and Messrs. Cannon and Clapperton. In the latter case the only wrapping paper made was apparently glazed casing.

Mr. Mutimer put in an advertisement of Robert Craig and Sons, Ltd. (Caldercruix), in which a large variety of papers were specified. The mill was not regarded as a wrapping mill.

On Guard.

At this point the chairman called attention to the nature of the evidence in view of the fact that the particulars were taken from advertisements in the directories. His colleague (Mr. Wenham) had drawn his attention to one important point on which the negative evidence afforded by the directory was very misleading.

Mr. Wenham said he happened to have some knowledge of one of the paper mills mentioned in the list and they had one mill at which, so far as he knew, they did nothing but make paper. They also had on quite different premises another establishment in the nature of a factory where they bought all kinds of paper not from their own mill exclusively. They bought foreign paper and made a great many articles mentioned by Mr. Mutimer. The only point was if they were sending any information to the directory, he had no doubt that this particular firm, and other firms, would put in everything they had to sell, whether it was made in their mill or obtained some other way. Therefore it occurred to him to say that in taking particulars from a directory it might be misleading information.

The chairman said he had enlarged upon that by suggesting the warning that as far as practicable they should keep to the witness' knowledge as a trade expert.

Mr. Entwistle pointed out that the evidence they were on now was directed to the point as to how much reliance could be placed on the figures of estimates which had been put in by the applicants. He thought it was right that the committee should be put in possession of the information for what is was worth.

Mr. Wenham added that he did not suggest the evidence should be rejected.

The chairman said he was not complaining of the way Mr. Entwistle was putting his case, but the précis suggested there was a danger of getting beyond what, in any case, might be considered as evidence.

Mr. Entwistle agreed the witness was not proving his figures, but was only making his point. His friend's précis of evidence was full of import figures and he (Mr. Entwistle) never objected. In fact, it had been quite customary in these précis to get the witnesses to deal with the heads of the White Paper.

EVERY PRINTER HANDLING LITHO AND OFFSET WORK SHOULD USE

TYPON

PAPER NEGATIVES

TYPON gives perfect results from any black-white original, whether printed on one or both sides, or maps, plans, line drawings, etc. The blacks are of uniform density, the whites sharp and clear cut. Streaks, pinholes, or any of the usual troubles are absent.

TYPON negatives are indestructible; they can be used again and again, and are filed like correspondence in a fraction of the space required for glass plates.

TYPON requires no oiling, or special treatment in developing; highly skilled labour is therefore not required.

TYPON adds to the resources of the Printer engaged on Litho, Offset and Planographic work, Photogravure and Rotogravure and reduces his working costs.

TYPON processes are much quicker than wet plate methods, and more than 50 per cent. cheaper. There is no heavy initial outlay — no special and expensive plant to purchase.

TYPON eliminates re-setting, electrotypes, make-ready, and the use of glass—think of the saving by cutting out breakage losses alone! There is no silver bath needed.

TYPON material can be obtained as required, in sheets or rolls. The cost works out at about sixpence a sq. foot, and there are no licence fees or royalties.

TYPON Paper is used in any contact printing frame for exact size work; or in the camera for enlarged or reduced reproductions.

The Typon Catalogue, fully illustrating and describing the process, will be sent on request.

Trade Notes.

Price and Son v. Pioneer Press, Ltd.—Judgment for the plaintiffs, with £10 damages, was awarded by his lordship in the action which Messrs. Price and Son, printers to the Conservative party at East Woolwich, brought against the Pioneer Press, Ltd., printers to the Labour Party in the same constituency, claiming damages for libel in issuing a document at the last General Election with the plaintiffs' name imprinted upon it and without their authority.

The Newton Press, Ltd., Macklin-street, Drury-lane, were at Bow-street Police Court last week ordered by Mr. Graham Campbell to pay £85 17s. 5d., including costs and arrears, for failing to pay health and unemployment insurance contributions in respect of seven of their employees.

A King's Bench Divisional Court, on Monday, fined the editor of the *Evening News* £100 for contempt of court in comments made in the *Evening News* which it was alleged were calculated to prejudice the fair trial of the Communists at present on remand, charged with offences under the Incitement to Mutiny Act.

In the pocket of a coat stolen (with about £100 of jewellery) from the house of Mr. S. Cox, editor of the *Barnet Press*, was the MS. of an article on the need for more police protection in the district.

Mr. P. Anderson Graham, for many years editor of *Country Life*, died on Monday. His son, Mr. Stephen Graham, is the well-known traveller and author.

Mr. Samuel Digby, C.I.E. (72), of the National Liberal Club, Whitehall-place, S.W., for 35 years secretary of the Indian Section of the Royal Society of Arts, and formerly assistant editor of the *Times of India* and later London correspondent of the *Bombay Gazette* and the *Indian Daily News*, left £1,944 (net personalty £1,837).

The death has occurred in France, of Lieut.-Col. John Little, Northamptonshire Regiment, at the age of 63. Col. Little, on the outbreak of the Great War, was appointed to the Press cable censorship, in which he served with ability until the conclusion of hostilities.

The death is announced at Cape Town of Mr. Ernest Glanville, the journalist and author. He was in turn on the editorial staffs of *South Africa*, the *Cape Argus*, the *Bulawayo Chronicle*, and the *Johannesburg Star*.

The funeral took place at Withnell Parish Church last week of Mr. W. Whittle. Mr. Whittle, who was 81 years of age, worked at the Withnell Fold Paper Mills of Messrs. Wiggins Teape and Co. (919), Ltd., for 60 years, retiring in 1918. He was cashier and buyer for many years. The directors of the firm sent a wreath, "In grateful remembrance of 60 years' faithful service at Withnell Fold Paper Mills." There was also a wreath from the office staff. Mr. T. L. Parke (director of the firm) was unable to attend, but was represented by Mr. S. N. Cozens-Hardy (manager). Mr. R. Wilson (cashier) represented the firm. The chief mourners were Mr. and Mrs. H. Whittle and Mr. and Mrs. R. Whittle. Mr. Whittle was the doyen of Lancashire golfers. At 60 years of age, he joined the Pleasington Club, at 70 he was captain, and at 80, treasurer.

The late Mr. Frederick John Hall, Oxford, Controller of the Oxford University Press, left £6,083.

Trade Charity Dance.—We have received particulars of the first annual dance and fun carnival to be held on Monday, December 7th, at the Shoreditch Town Hall. The committee that in the past managed this branch of activity has now been absorbed by the Printing and Allied Trades Charity Sports Association, which body has already distributed over £20,000 to various trade institutions. Every endeavour is being made to make the event as successful as possible, and the dance programme is of an attractive character. Four lucky spot dance prizes will be given, whilst the "Fleur-de-lis" Dance Band will be in attendance. Tickets of admission, price 1s. 6d., can be obtained from 21, John street, Holborn, W.C. Any further particulars concerning the event will be gladly furnished on application to the corresponding secretary, Mr. A. McLeod, 94A, Alexandra Park-road, London, N.10.

Sittingbourne Mills Athletics. — A report on the activities of the Sittingbourne Paper Mills' Cricket Club during the past season indicates the high prowess which has been obtained by the players. Mr. A. J. Evans heads the batting list with an average of 41·8 in six innings and an aggregate of runs reaching 209. Mr. Wilson takes the second place with an aggregate of 322 and an average for 14 innings of 24·76. Both Mr. Evans and Mr. Wilson also appear fairly high up in the bowling averages, Mr. Evans being second with an average of 17 wickets for 8.0 and Mr. Wilson fifth, taking 36 wickets for an average of 13·69. Mr. R. Bush, who is described as one of the rising juniors, heads the bowling list with 35 wickets at an average of 7·91. In the second eleven A. Ives heads the batting averages with 22·55 for 11 innings and an aggregate of 203 runs. At the top of the bowling averages is Mr. E. Landen, who took seven wickets for an average of 4·71. The largest number of wickets, however, for the second string were taken by S. Rostron, who secured 28 wickets for an average of 6·6 runs

The *Southern Reporter*, published at Selkirk, has celebrated its 70th birthday, having been first published in October, 1865.

Summarising figures relating to trade disputes in the first nine months of 1924 and 1925, the Ministry of Labour *Gazette* shows that there were nine disputes in the paper, printing, etc., group of trades in each of the two years. In the nine months of 1924 3,000 workpeople were involved, and the aggregate duration in working days of all disputes in progress was 17,000. In the 1925 period the number of workpeople involved was 70,000.

Amongst recently elected members of the Federation of British Industries is the firm of Messrs. Vick, Ashworth and Co., Ltd., letterpress and lithographic printers, manufacturers of loose-leaf and card index systems, and steel office and works equipment, Blackfriars Works, Salford, and 73, Princess-street, Manchester.

A new and revised edition of the "Handbook of the London Master Printers' Association" has just been issued. Its contents, which include London rates and conditions, agreements in force, particulars of health insurance and unemployment insurance, etc., form a handy compendium of very useful reference matter.

Concerning Flatbed Offsets

WHY be put to the inconvenience of having your old Flatbed machines converted into Offset when you can buy for very little more, a complete machine which has been thoroughly overhauled, but in first class running order, and which is **fully guaranteed?**

Your old machines will be taken out in part payment and **real** Flatbed Offsets delivered and erected in their place.

Electrotypers and Stereotypers' MANAGERS & OVERSEERS' ASSOCIATION

A Talk on Provincial Newspapers by Mr. Glen Steel.

The October meeting of this Association was held on Tuesday of last week at the usual headquarters, St. Bride Institute, Bride-lane, E.C.4, under the chairmanship of Mr. A. Chadwell (president). At the conclusion of routine business Mr. Glen Steel (Jubbs' Metal Foundry) delivered an interesting address on the subject of "Some Provincial Newspapers." Among those present were Mr. W. J. Light (W. J. Light and Co., Ltd.), and Mr. A. H. Mundey (Fry's Metal Foundry).

After the reading of the minutes, which were duly confirmed, Mr. Bullett (secretary) spoke of the necessity of the members giving early notice of their intention to be present at the Association's annual dinner, to be held at the Trocadero Restaurant on November 14th.

The Chairman then announced that the November meeting of the Association would be brought forward a week earlier than usual, in order not to clash with the Printers' Pension Dinner. He also expressed a wish that the members with their friends would attend in large numbers the November meeting, which was to be addressed by Mr. A. H. Mundey.

On the proposition of Mr. D. Bowles (seconded by Mr. H. Clark) Mr. Albert Sunderland (overseer of the foundry department, Amalgamated Press, Gravesend), was unanimously elected to membership and received from the president a welcome to the ranks of the Association.

The Lecture.

Before commencing his lecture Mr. Glen Steel placed on the table for inspection more than fifty different types of flongs and matrices, loaned for the purpose of the lecture from twenty representative provincial newspapers. The matrices and flongs exhibited were principally of the Light and Dixon make, and were from the following newspapers:—The *Belfast Telegraph*, *Birmingham Gazette*, *Bradford Daily Telegraph*, *Bristol Times*, Darlington *Northern Echo*, Dublin *Irish Times*, *Edinburgh Evening News*, the *Scotsman*, *Glasgow Herald*, Leeds *Yorkshire Post*, Leeds *Daily Chronicle*, *Liverpool Daily Post*, *Liverpool Daily Courier*, *Daily Dispatch* (Manchester), *Manchester Daily Mail*, *Newcastle Chronicle*, *Eastern Daily Press* (Norwich), *Nottingham Guardian*, *Nottingham Journal*, *Sheffield Telegraph* and *Sheffield Independent*.

British Composing Equipment Abroad.

In commencing to deal with his subject, the speaker said his main reason for addressing the members was to elicit a discussion on the present methods of production of matrices and plates in newspaper work. Methods of production on the Continent differed very slightly from those that obtained in this country, but there was a vast difference in the extent of production. On the Continent very small towns had a daily paper. In this country there were only 77 morning and 102 evening papers. It was a surprising fact that, notwithstanding the great number of large towns in this country, they could not boast of 200 daily papers. Newspapers in Paris and Berlin had got enormous circulations, but nevertheless in many small towns on the Continent one found a flourishing daily paper. This he considered a good thing for British trade, because many of the Continental newspapers installed composing machinery made in this country. In Boulogne, with less than 70,000 inhabitants, there were three daily papers. In each of these papers, he was pleased to say, the composing machines were British. Only 28 miles away from Boulogne there was Calais, also with not more than 70,000 inhabitants, yet with two daily papers, also equipped with British-made composing machinery. Similar conditions prevailed in Holland and Belgium and in many other parts of the Continent.

The development of newspaper production in this country had not been along these lines, he regretted to say, and he often wondered if there would ever be greater enterprise shown, or whether they in this country had reached what he might term the saturation point.

Three Important Questions.

Mr. Glen Steel then went on to say that he had put the three following questions to the twenty provincial newspaper managers who had kindly loaned the matrices and flongs: (A) What kind of flong do you use? (B) How do you mould your matrices, by mangle or direct pressure? (C) What casting machines do you use? The speaker felt sure that if these questions had been put to the respective managers twenty-five years ago their answers would have been very different from the ones he had received.

The answers received to question A showed that fourteen of the twenty firms were using dry flongs, whilst four were using wet flongs and two using both wet and dry flongs according to requirements.

As regarded question B, there were three of the twenty firms with presses for producing the "mats" by direct pressure, and seventeen who still used the mangle.

In reply to question C, he found that the Junior Autoplate had a long lead. Fifteen of the firms had Junior and Senior Autoplates, one having in addition a Senior Autoplate and another a Rotaplate, and five had Hoe casting boxes.

Provincial Newspapers' Enterprise.

In dealing with the production of several newspapers, Mr. Glen Steel said that although the provincial newspapers did not experience the same rush and hurry as did the London papers, they showed a considerable amount of activity and efficiency in production. He then gave an interesting account of the early beginnings and gradual rise of the *Sheffield Daily Telegraph*, which was the first penny paper published in this country, and which was started in 1855. Allusions were then made to the publicity enterprise displayed by the *Liverpool Post and Echo* management in catering to the great variety of industries in Liverpool.

He thought it was a testimony to the provincial newspapers that they attempted to do something which London papers were not disposed to do, and that was to start as many branches as they could afford. These branches in some cases were also stationers' shops, where the news was collected and phoned to headquarters. Referring to the different methods of transmitting news from London to the provinces, the speaker described—with the aid of a length of "Creed" perforated paper—the working of the Creed telegraphic apparatus, which he said was capable of transmitting 80, 90 or 100 words per minute, and sometimes 120, and on rare occasions 150 words per minute. The importance of this apparatus was shown by the fact that between 6 a.m. and 12 p.m. something like 50,000 words could be sent to every newspaper in the country which installs the Creed system.

In alluding further to the enterprise of provincial papers, he said he thought they were in many respects more enterprising than in London and the home counties, where there were practically only three evening papers. All the towns from Reading in the west, Southend in the east, Luton in the north and Chatham in the south east had to rely on and wait for three London evening papers. Such a thing in France, Belgium or Holland was unknown. In the provinces, too, they would not wait as people in London and the home counties were compelled to do. Several of the towns like Torquay and Doncaster had their own local edition of an evening paper from a larger city where perhaps one page of the issue was printed and produced locally. That kind of thing prevailed throughout many other parts of the country, which of course meant a greater demand for printing presses and machinery and workers. The enterprise resorted to by the provincial newspapers in the direction he had indicated also resulted in big profits to the proprietors of the journals, derived mostly from small advertisements.

Mr. Glen Steel concluded by briefly referring to the shrinkage occurring in the matrices, which he said was a question that led to a great deal of discussion between the printing and advertising departments.

Discussion.

Mr. Sunderland, in opening a discussion, said the specimens of work in front of them showed, from the stereotyping point of view, that in the provinces they were able to do just as good work as they did in London. With regard to the question of the shrinkage of the flong, the policy now adopted by the advertising agents to get over the difficulty of shrinkage was to order space by the quarter page, half page and so on instead of by inches. With regard to the question of cold moulding, he contended a lot of their troubles were due to the firms making dry flongs, who, he believed could go a long way in helping them. He was aware, however, that many of the makers were giving this matter their close attention.

Mr. A. H. Mundey said he had been greatly interested in Mr. Glen Steel's remarks regarding the differences that exist between London and provincial newspapers. In travelling about the country he had generally found that men in the various foundries often spoke with pride of the fact that they had started as apprentices in London or had worked there at some time or other. Though it was imperative to-day that they should use machinery in order to get a livelihood, they could not but admire real handicraft, as exemplified by an excellent brush moulding shown amongst the specimens. Mr. Mundey then dealt from a purely scientific aspect with many of the questions raised. He could quite understand the shrinkage of the moulds, considering their chief substance was cellulose.

The question of shrinkage was further dealt with by several speakers, it being the generally agreed opinion that the only solution of the difficulty lay with the papermaker, although it was contended that the stereotyper was able to get over the trouble up to a certain point, but could not entirely prevent it. The question of atmospheric conditions in the workshop was also discussed in relation to its action on the flong.

Direct pressure for moulding was fully discussed in all its aspects, particularly as to whether it was more advantageous to allow the pressure to remain on the forme, or whether better results were obtained by the pressure being put on and then taken off at once.

It was agreed that the specimens of moulds sent from the provinces came up to the standard of the work produced in London.

Mr. Light, in replying to a question by Mr. J. Miller, who inquired if there was a limit of pressure used on dry moulding on the Winkler machine, said there was no limit.

Amongst others who contributed to the discussion were Messrs. A. Chadwell, G. Sharvell, W. J. Light, W. M. Forsyth, J. Miller, E. Warren, and A. W. Hersey.

On the proposition of Mr. Sharvell, a vote of thanks was heartily accorded to the lecturer.

A reply from Mr. Glen Steel brought a very useful and instructive evening to a close.

Printing, Bookbinding and Kindred TRADES OVERSEERS' ASSOCIATION.

Opening the Winter's Programme.

The winter programme of the Printing, Bookbinding and Kindred Trades Overseers' Association was inaugurated at the Talbot Restaurant on Tuesday evening last week, when the monthly gathering took the form of a members' re-union smoker and concert. Prior to the concert the majority of the company sat down to the enjoyment of a supper, which served to add to the amenities of the evening.

The tables having been cleared, the chairman, Mr. J. Fleming, opened the meeting by declaring that the only business that needed attention was the election to membership of Mr. J. C. Green and Mr. H. J. Brautigan. Mr. Fleming said the qualifications of these two gentlemen had been thoroughly investigated by the executive committee and the candidates had the committee's hearty recommendation for election. On this recommendation the two candidates were duly elected to membership.

Routine business having been disposed of, Mr. Sidney Jerome opened the concert with a pianoforte solo. This was followed with a galaxy of talent provided mostly by the members of the Association. These included Messrs. Archer, Cuthbertson, Cox, Esler, Fox, T. Hunt, and his son Maurice Hunt. In addition to these gentlemen some friends of members helped to fill the bill, some excellent items being rendered by Mr. Drysdale with humorous songs and Mr. Gaylor with some very fine bass songs. A welcome addition was the singing of Miss Porter, a young lady who has a well trained voice, whose songs were much appreciated for diction and articulation. Duets by Messrs. Ash and Ogilvie were also much enjoyed.

At the end of the evening Mr. Fleming voiced the feelings of the members present in thanking all those who had contributed to the evening's enjoyment; and the National Anthem brought the proceedings to a close.

A Trade Printery's History.

Growth of Messrs. F. W. White and Co.

In the new premises to which Messrs. F. W. White and Co., have recently moved, this well-known firm of London trade printers are now entering upon the fourth decade of their existence.

It was in 1895 that a beginning was made by Mr. F. W. White in a small shop at 181, Great Portland-street, W. From that time onwards the firm's history has been a record of steady progress.

In 1898, only three years later, the business had outgrown this accommodation, and it was necessary to seek larger premises. A lease was accordingly secured of Cavendish Works, Hallam-street, Portland-place, W., and here

"Albion House," New North Street.

the growth of the firm's connections continued. In 1902 still further room was required, and considerable alterations and additions were made in order to cope with the demands of an ever-increasing clientele. The growing business, however, found these extensions inadequate, and eventually a new building was felt to be necessary.

Hence, in 1912 a building lease was obtained of 14-18, Emerald-street and a large factory was specially designed and erected to meet the requirements of a modern trade printer and to accommodate the large staff by this time necessary for the rapidly increasing business. Expansion still continued, and in 1918 additional premises were purchased at 1, Princeton-street, Bedford-row.

This respite from growing pains lasted only about five years, for by 1923 limitations of space had begun to be felt once more, and it was found necessary to look ahead and again provide more scope for growth. Accordingly a large corner site was secured upon which was commenced the building of the imposing structure known as "Albion House," New North-street, Theobalds-road, W.C.1. This year has seen the removal to the new premises safely accomplished, and the business is now carried on in more commodious and better equipped premises than ever before in its history.

We are able herewith to illustrate the new premises as seen from the front. The several and extensive floors now accommodate a wide variety of machinery and workpeople for the carrying out of the numerous different services which the trade printer is nowadays called upon to render. The composing department, with layout and designing section, executes display work of all kinds as well as straight setting of such things as catalogues and brochures, whilst the production of weekly and monthly journals and magazines is a growing feature. The machine department is equipped not only with a varied and most useful range of up-to-date platens, but also with modern presses capable of the finest three and four colour and catalogue work up to quad demy. Lithography is also a strong feature, and there is available the latest offset machinery, backed with the service of lithographic artists and others who can see commercial lithographic work through from inception to finish. In the folding and binding departments also there are facilities for the carrying out of folding and despatching, flush binding, numbering, wire-stitching and many other operations with which printers often need to be helped out. "Albion House," is, indeed, a house which many an harassed printer finds it good to know.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies, Machinery for Sale and Wanted, Businesses for Sale and Wanted, Partnerships and Investments, Miscellaneous.

One Insertion	3/0
Three Insertions	6/0

For every line exceeding three lines **6d.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion	1/6
Three Insertions	3/0

For every line exceeding three lines **6d**

Sales by Auction, Tenders, Patents for Sale, Legal and Financial Announcements.

Per line	1/0

Telegrams: Stonhill, Lud, London.
Telephone: 2439 Holborn.

Situations Vacant.

TRAVELLERS, calling on Printers, wanted in most districts, to carry SIDE LINE on generous commission; write, in confidence, stating ground covered and lines carried.—"Printer," care Dixons, 195, Oxford-street, W.1. 14708

Managers, etc.

MANAGER, wanted immediately (London suburb), with all-round knowledge of Printing, Ruling, Bookbinding, Buying and Estimating, also capable of Editing a Small Weekly Newspaper.—State age, experience and send references, to Box 14706.

Situations Wanted.

ADVERTISER desires situation; for several years had charge of small offices doing good-class Printing; accustomed to complete control and including Reading, Estimating, Charging-up, Buying, Interviewing; good references.—Full particulars, to Box 14703.

BOY (passed 7th Standard) seeks APPRENTICESHIP (CASE), willing to learn Lino or Machine if required; good reference.—84, Huxley-road, Leyton. 14704

Machinery for Sale.

FOR SALE.—Messrs. Augener, Ltd., 287, Acton-lane, W.4, have for disposal Quad Crown Flatbed LITHO MACHINE, by Geo. Mann; full equipment of Inkers, Riders and Dampers; Taking-off Apparatus in perfect condition.—Can be seen by appointment at 287, Acton-lane, W.4. Telephone: Chiswick 1391. 14707

FOR SALE, TWO Quad Royal Two-Revolution PERFECTING MACHINES, by Payne; speed 1,350 per hour.—Can be seen working, and further particulars can be had on application, to Box 14705.

QUAD DEMY WHARFEDALE (Elliott), with Flyers, etc.; good condition.—Wm. Macdonald and Co., Ltd., Directory Press, London-road, Edinburgh. 14691

SECOND-HAND Quad Crown Furnival Flat-Bed LITHO MACHINE, with Flyer delivery and complete with One Set of Rollers, Clothed, and Two Sets of Spare Stocks; excellent condition.—H. O. Strong and Sons, Ltd., Norfolk Works, St. Paul's, Bristol. 14694

SECOND-HAND MACHINERY.—If you are wishing to dispose of Second-Hand Machinery relating to the Printing, Bookbinding, Box-making, Envelope and Bag-making Trades, etc., secure prompt and effective service by advertising in the *British and Colonial Printer and Stationer*.—Apply for special rates to the Publishers, Stonhill and Gillis, 58, Shoe-lane, London, E.C.4.

SMYTH-HORNE, LTD.,
1-3, Baldwin's-place,
Gray's Inn-road, London, E.C.1.

Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

Machinery Wanted.

SECOND-HAND MACHINERY.—If you are in the market for Second-Hand Machinery relating to the Printing, Bookbinding, Box-making, Envelope and Bag-making Trades, etc., secure prompt and effective service by advertising in the *British and Colonial Printer and Stationer*.—Apply for special rates to the Publishers, Stonhill and Gillis, 58, Shoe-lane, London, E.C.4.

Miscellaneous.

TRADE PRINTERS wanted to undertake the PRINTING of PAPER BAGS in Sheets and Bags; must be near E.C. district.—By letter to Box 14699.

A well-known London House desires to get into touch with buyers in the Colonies & Abroad who will find the re-sale of second-hand printing machinery, furniture, type, etc., a profitable business.

Enquiries are invited from established firms prepared to handle big business.

BOX 17176
British & Colonial Printer & Stationer.
58, Shoe Lane, E.C.4.

RAPHAEL TUCK AND SONS, LTD.—The annual general meeting of Raphael Tuck and Sons, Ltd., was held on Tuesday at Winchester House, Old Broad-street, E.C. Sir Adolph Tuck, Bart., the chairman, said that the 59th year since the establishment of the business and the 24th of its existence as a public company found them in a well-entrenched position. The volume of the company's business during the year under review exhibited an appreciable increase, the percentage of that increase over that of the preceding year being the largest of any of the past five years. With regard to the company's prospects, shareholders would be pleased to know, within rather less than a week of the completion of the first half of their new financial year, commencing May 1st, that the invoice value of the goods sent out for that period, gave every promise of exceeding the high figure of the corresponding period of last year.

A FURTHER letter to the Board of Trade, urging upon the Government the necessity for the marking of imported goods with the name of the country of origin, has been sent by the Federation of British Industries.

From the London Gazette.

PARTNERSHIP DISSOLVED.

J. Boaler and G. H. Chown, printers, 39 Albion-hill, Leicester, under the style of Boaler and Chown.

THE BANKRUPTCY ACT, 1914.
RECEIVING ORDERS.

A. Michael (trading as Morgan's Publications), of 4, Fitzroy-square, London, W.C., publisher.

A. H. Pilborough, 8, Rayleigh-road, Woodford Green, Essex, lately residing at 874, Forest-road, Walthamstow, Essex, compositor.

TO CELEBRATE the 110th anniversary of the arrival at its present Fleet-street offices of the *Morning Advertiser* (founded in 1794) a luncheon was given on Tuesday at the Connaught Rooms, Great Queen-street, the editor claiming that it was the third oldest newspaper in London.

WITH the imprint of the Euston Press, a neat booklet reaches us comprising a reprint of a recent lecture by Mr. Alfred Langley on "The Development of the Letterpress Poster." The verbatim report of this lecture, which first saw the light in the pages of the *British and Colonial Printer and Stationer*, was reprinted in the *Inland Printer*, Chicago, with highly commendatory comments.

Unemployment.

In view of the Wrapping Paper Inquiry and the anxiety concerning the general industrial situation, more than usual interest attaches to reports concerning employment in the paper and allied industries. Employment in the paper trade continued fair on the whole during last month; there was a slight improvement compared with August in some districts, but some slackness was again reported in the wrapping and hand-made sections. With letterpress printers employment generally continued fairly good, and showed an improvement compared with September, 1924. At Birmingham and Leeds there was a further slight improvement, but in London a slight decline was reported at the end of the month. Employment with electrotypers and stereotypers was very good in London and Edinburgh and good in most other districts. In the lithographic printing trade there was a slight decline compared with August, but employment remained fairly good generally, and was rather better than during September, 1924. With lithographic artists employment was reported as fair in London and slack at Manchester, and worse than in August in both centres. Employment continued moderate on the whole with bookbinders and some short time was reported in most of the large centres. There was a slight decline on the previous month at Manchester and Leeds, and in the former town employment was reported as bad. The percentage unemployed amongst insured workpeople covered by the Unemployment Insurance Acts in the printing and bookbinding trades was 4·3 at September 21st, compared with 4·5 at August 24th and 5·0 at September 22nd, 1924. In the paper and paper board industry, the percentage was 6·7 at September 21st, compared with 7·2 at August 24th and 8·6 at September 22nd, 1924. In the cardboard box, paper bag and stationery trades the percentage was 5·3 at September 21st, compared with 5·7 at August 24th and 6·4 at September 22nd, 1924.

Comparison with Germany.

Percentages of unemployment in printing and bookbinding in Germany during August are available and may be interesting for purposes of comparison with the figures relating to Great Britain. Out of a union membership in printing of 75,100, the percentage unemployed at the end of August last was 1·4, which compares with 1·2 in July, 1925, and 3·9 in August, 1925. In bookbinding the union membership was 55,540 and in August last the percentage unemployed was 3·0 as against 2·1 at the end of July and 12·5 at the end of August, 1924.

* * *

Wrapping Paper.

Wrapping paper is coming very much into the limelight at the moment. It is something of a coincidence that at the same time as the Inquiry is being held into the application of the Union of Wrapping Papermakers, the attention of the executive committee of the National Food Council should be drawn to the weight of sugar bags used in retail shops. This point was incidentally mentioned at the Inquiry, but the points before the respective meetings were of an entirely different character. It would appear from the letter to the Food Council Executive that if the paper manufacturers are not making anything out of their product, the sugar merchants, at all events, are getting a fair percentage of profit indirectly. A paper merchant has written to the Council pointing out that the price of sugar could be materially reduced if the sugar bag was not weighed in with the sugar. To his knowledge the stores with a large number of branches invoice in the bags to their branches at the current price of sugar, and the branch manager has to account for these bags to the head office as if they had been weight in sugar. This particular merchant goes on to point out that papermakers try to keep the thickness of their paper down to a respectable weight, but the shopkeepers want a very thick sheet. The suggestion is made that if the bags were not counted in the weight of sugar the demand would not be for the heavy blue bag, but for the thin strong bag. He goes on to show that the cost of sugar bags is 17s. 6d. to 18s. 6d. per cwt. delivered to the shop, and that these are sold by weight as sugar. If the total production of sugar bags, he points out, is taken into account per annum, it can be seen what an enormous amount of paper as sugar is sold to every home in the country.

* * *

Fashion in Wrapping Paper.

An interesting sidelight on this question was afforded at the Wrapping Paper Inquiry, when it was stated by Mr. H. Bradly that although the bag made of the heavy sugar bag paper was old fashioned, there was still a big demand for it in spite of the newer and thinner weights of paper, such as kraft. This question of wrapping foodstuffs in paper or cartons is becoming one of very great importance, and it would, of course, be a retrograde step to check this system of supplying goods to the public. Public health, after all, is of the greatest importance, and paper wrappers of various kinds render very valuable service in the direction of hygiene. But they have also an additional advantage in that they present commodities to the public in a very much more attractive style and at the same time afford excellent opportunities of advertisement. The question, however, which is now before the Food Control Council and also before the Public Control Committee of the L.C.C., has reference to the problem of supplying the purchaser with the full weight of the commodity he is buying. It is, perhaps, not reasonable to expect either wholesalers or retailers to present the public with a very useful and, after all, valuable paper bag or carton without making some charge for it. Perhaps some decision on this point will emerge from the various inquiries which are at present in progress.

Master Printers of E. & N.-E. London.

Address and Discussion on Costing.

The subject of costing occupied chief place on the agenda of the October meeting of the Association of Master Printers of East and North-East London, which took place at the Langthorne Restaurant, Stratford, on Wednesday evening of last week. Mr. A. D. Hull, F.C.W.A., cost accountant of the Federation of Master Printers, was the principal speaker, and a goodly number of members attended to hear him.

As is usual at these meetings, a social tea opened the proceedings, and then, the table having been cleared, members settled down to the meeting proper, the chair being occupied by Mr. W. H. Gillard, a vice-president.

Arising out of the minutes of a recent committee meeting, the projected programme for the session was considered. Mr. T. D. Hawkins (hon. sec.) was able to intimate that some interesting lectures were in prospect. A good deal of discussion occurred on the question of the December meeting, agreement being eventually reached that this should take the form of a whist drive and concert.

One firm was elected to membership of the Association.

Costing and the Small Printer.

Mr. Hull, on being called upon by the chairman to address the meeting, proceeded in a very practical and non-academic manner to discuss the subject of costing, regarded particularly from the standpoint of the small printer. Speaking with evident knowledge of the inside of many a printing office, and a wide acquaintance with the methods actually used by printers in dealing with costs and accounts, Mr. Hull proceeded to outline the principles of scientific cost-finding. He recalled first the inception and steady development of the costing movement amongst printers in this country, and then went into details as to the way in which the standard system enables the printer to know the costs of his business as a whole, the cost of each department, the cost per hour for all the various operations, and thus the cost of the individual job. Stress was laid upon the importance of accurate costing for indicating where leakages of profit occur, the speaker being of opinion that 35 per cent. of all printing orders executed are done at a loss. He maintained that the system is very simple to work, and strongly refuted the suggestion sometimes made that it involves big commitments in number of clerks employed and multiplicity of forms used.

The address was followed with close interest throughout, and evoked a live discussion at the close. Handling charges on materials, the economics of reserve plant for occasional use, average job rates as a guide in charging, the value of cost records of past jobs—these were some of the points upon which discussion turned, amongst those participating being the chairman, Messrs. Tomkin, Wood, Hawkins, Hurrell and Jackson, Mr. Hull ably replying to questions raised.

At the call of the chairman, Mr. Hull was heartily thanked by the meeting.

Boosting Print.

Voting papers were collected in connection with the Association's "'Ideas' Competition," the purpose of which is to produce, by local effort, advertising literature to be used by local members for attracting orders for printing. Members had been invited to submit wording in the first instance, the best wording to be chosen by vote and a decision afterwards made as to the form in which it should be printed, a further competition to be held for the setting of the job. There were 26 entries of copy, all of which had been printed in galley form (without names of senders), and circulated to members along with voting papers. The voting papers were scrutinised in the course of the meeting and the winning entry announced. This proved to be the work of Mr. F. H. Gapp (G. Reynolds, Ltd.), and read as follows:—

"To men of business in this district.—Are you satisfied with your trading? With your turnover? With your profits? If you are, pass on. If you are not, send for the printers in this district who can help you to increase your trading. Double your turnover. Multiply your profit. Advertise your business. The most successful traders in the world are the largest advertisers. The more advertising printing a trader buys, the more he will need—because it pays for itself, delivers a profit to the man who sends it out; and traders like profits. Consult: (name of local printer)."

The committee has now to decide the form in which this copy is to be used, and then arrange a competition for its lay-out.

A vote of thanks to the chairman concluded the meeting.

Master Printers at Whist.

Two Successful Drives.

Whist is evidently a popular recreation with master printers and their ladies. The holding of whist drives to encourage the social element in M.P.A.'s is becoming general. Last week saw two successful drives amongst London associations.

North London M.P.A.

With the view of still further strengthening its organisation the members of the North London Master Printers Association opened the season with a whist drive on Monday of last week at Wortley Hall, Finsbury Park, N. In spite of a very wet evening the attendance was quite satisfactory, and the event was entirely successful. Though whist formed the *pièce de résistance* of the evening, the opportunities afforded for engaging in friendly intercourse were taken advantage of to the full. The company present included Messrs. W. Wilson (president), W. J. Mizen (secretary), L. F. Hunt, D. A. Whitehead and E. G. Baker. Preceding the drive some excellent selections of music were ably rendered by an orchestra.

During the evening the president (Mr. Wilson) took the opportunity of bringing before those present the advantages attaching to membership of the Association. He said he knew of cases where printers outside their organisation took up the attitude that they would not join the Association because other printers in their immediate neighbourhood were not members. He deprecated that sort of thing very much, for it was the wrong spirit to adopt. He appealed to all present to persuade those master printers outside the Association to become members.

Great keenness was evinced throughout the drive, the prizes being won by the following: First ladies, Mrs. Greenway; second ladies, Mrs. Sellins; mystery, Miss Doo. First gents., Mr. Dooley; second gents, Mr. Soule; mystery, Mr. Sellins.

The prizes were presented by Mrs. Hunt, to whom a hearty vote of thanks was accorded, on the proposition of Mr. Mizen.

The efforts of Mr. Mizen, who was largely instrumental in bringing about the success of the evening, were appreciatively referred to in a vote of thanks moved by Mr. Whitehead.

South-East London M.P.A.

The monthly meeting of this Association, held at the Bridge House Hotel on Tuesday, October 20th, was in the nature of a whist drive and dance, and proved to be one of the most successful functions of its kind the South-East have organised. A company of 112 members and friends were present, at the invitation of the president (Mr. H. R. Grubb) and his executive.

The president, ably assisted by Mrs. Grubb, received the guests on their arrival, and shortly after 7.30 p.m. the whist drive commenced. Mr. Mason was in charge of the drive, and little time was lost in the "change over" at the end of each "hand." At 8.45 p.m. the last game was played, and, score cards having been checked and re checked, the following ladies and gentlemen were declared successful and entitled to receive the prizes which had previously been displayed for all to see on a table in the centre of the room: 1st ladies, Mrs. West; 2nd ladies, Mrs. Lack; mystery, Mrs. Reeves. 1st gents., Mr. Allen; 2nd gents., Mr. Kempsall. The prizes were presented to the successful contestants by Mrs. Grubb, the winners receiving the cheers and congratulations of the gathering.

Younger members of the company found relaxation in dancing to the accompaniment of the Grafton Band, and from the insistant demand for an encore following the termination of each dance, it would seem that they were thoroughly enjoying themselves.

Refreshments were served at separate tables, and the laughter and noise testified to the comfort and happiness of all present.

The president addressed the gathering and emphasised the advantage of such functions, also drawing attention to the serious side of the work of the Association. He particularly welcomed Mr. Mizen of the North, and Mr. P. G. Crannis of the W. and N.-W., also several members of the S.-W. Association who were present.

Dancing was continued until 11 p.m., when the company joined hands in the singing of "Auld Lang Syne," thus bringing to a conclusion a most enjoyable and delightful evening.

Hudson and Kearns Presentations.

Overseer's Long Service Recognised.

A presentation marking a particularly rare occasion, took place on Friday, October 16th, at Messrs. Hudson and Kearns, Ltd., Blackfriars, London. Mr. W. J. Champion, overseer of the die-stamping and envelope departments, celebrated his fiftieth year of service with the company and his splendid record was fitly honoured by a double presentation.

Mr. R. Hulme (managing director) on behalf of the Board, presented Mr. Champion with a gold watch (suitably inscribed) and also a very fine portrait which had been produced in the firm's process department. "Mr. Champion," he said, "probably knows more of the history of the firm than any of us. He knows the beginnings—and from those small beginnings there has arisen the present very large firm." He expressed, on behalf of the directors and of all those present, the hope that Mr. Champion would live very many healthy and happy years. In concluding his remarks, Mr. Hulme, on behalf of all present, asked that their compliments be conveyed to Mrs. Champion who was, he felt sure, responsible in no small degree for the very healthful and youthful appearance of Mr. Champion.

Another presentation followed—that of the employees of the firm—and took the form of a cheque. This was presented by Mr. E. Gordon Smith, the next oldest employee of the firm. Having conveyed the employees' congratulations and good wishes, Mr. Smith mentioned that he had served the firm for 44 years and hoped the happy association of Mr. Champion and himself would continue for many years to come.

Mr. Champion, who was very much moved by the occasion, thanked Mr. Hulme and Mr. Smith for their respective presentations and kind wishes. "I feel overwhelmed," he remarked, "and all I can say is that from the bottom of my heart I thank you all. The presents I shall cherish and I feel sure that these things, when I am gone, my children will cherish also."

Mr. E. K. Maeers (sales manager), another old servant of the company also paid high tribute to Mr. Champion both as a man and a conscientious worker, and explained that he did so as the result of a personal association of very many years—dating back to the time when the firm occupied premises in Southwark-street and when Mr. Champion was only a presshand. In the course of his remarks, Mr. Maeers also reminded the gathering there were many other employees who have served the company for over 40 years.

At the conclusion of the meeting Mr. Champion was the recipient of many personal congratulations and handshakes from his fellow workers.

Stereo Tissue Prices.

English tissue papers for stereotype matrices have been advanced in value by the American customs officials, because of the discovery by special investigators that certain concessions were being made to American purchasers or agents. American manufacturers have complained of difficult competition on tissue papers, particularly on the special types, and one of the investigations made abroad showed that special discounts were being given to certain American purchasers. When this report was received the customs appraisers advanced the valuation to meet the English home market price. The importers appealed to the courts, and the customs courts have upheld the position of the customs officials, and disallowed the 10 per cent. special discount which had been given.

Messrs. R. W. Crabtree and Sons, printing machine manufacturers, of Water-lane, Leeds, have just installed a new double decker two-reel press, capable of printing a 16-page paper at the rate of 30,000 per hour, in the office of the *Stratford Express*.

PAPER MERCHANT'S AFFAIRS.—At Norwich Bankruptcy Court, last week, before the Registrar (Mr. F. W. Cooke), the public examination of Tom Lincoln French, paper merchant, of 47, Clarence-road, 34, Elm-hill, and 1, Cross-lane, Norwich, was resumed. Gross liabilities were placed at £2,338 14s. 5d.; expected to rank, £1,869 18s. 1d.; deficiency, £1,466 10s. 6d. Replying to the official receiver, debtor said there had been a compromise with regard to his furniture in favour of the creditors. At the last examination he cited as one of the causes of his insolvency loss on property. This loss, he would agree, was about £100. It would not be fair to say that his insolvency was due to his connection with a certain person. The examination was closed.

Country News.

Edinburgh.

Arrangements have been made by the proprietors of the *Scotsman* for a scheme whereby each member of the mechanical departments, including the composing-room, stereotyping-room and machine-room, will be given a night off with pay once a fortnight. The arrangement will be in force from October to April or May, but will not apply to the summer months, when the staffs are depleted owing to the annual holidays. The scheme will entail a heavy expenditure on the part of the proprietors.

At a gathering of the staff of Messrs. W. and R. Chambers, publishers, Edinburgh, recognition was made of the jubilee in the service of the firm of Mr. W. J. Brander, works manager. It was mentioned by Mr. C. E. S. Chambers that Mr. Brander's father also served the firm for 50 years; while Mr. Winning, who spoke on behalf of the workers, has a record of sixty years' service.

Leeds.

At the offices of the *Yorkshire Post*, on Friday last, Mrs. E. G. Swannack, the lady editor of that journal, was presented with a tea set in Crown Derby on leaving to take up a similar position on the *Evening Standard*, London. The presentation was made by the editor, Mr. A. H. Mann, and tributes were also paid by Mr. W. J. Finnesty, news editor; Mr. W. Scott, chief reporter; and Mr. J. W. Miller overseer of the composing room.

The Leeds University Appeal. — The following are among the donations to the appeal for £500,000 for the purpose of extending the University of Leeds, of which Mr. E. G. Arnold, an ex-president of the Federation of Master Printers, is Pro-Chancellor: Messrs. E. G. Arnold and Son, printers, Leeds, £3,000; the *Daily Mail*, £2,100; the *Yorkshire Post*, £1,000; Messrs. Jowett and Sowry, printers, Leeds, £250; Messrs. Tapp and Toothill, printers, Leeds, £250; Messrs. Chorley and Pickersgill, printers, Leeds, £100; Messrs. Henry Walker, booksellers, Leeds, £100; Halifax and District Master Printers' Association, £25. The individual subscriptions include: The Hon. Rupert E. Beckett, chairman of the *Yorkshire Post*, £3,000; Mr. F. C. Macaskie, managing director of the *Yorkshire Evening News*, £500; Mr. A. H. Mann, editor of the *Yorkshire Post*, £50; Mr. F. Peaker, President of the Institute of Journalists, £5 5s.

Bradford.

Mr. F. Hargreaves, the overseer of the composing room of the *Yorkshire Observer*, Bradford, retired on Saturday after 41 years' service with the firm. At a staff gathering in the canteen on Friday night, he was presented by the employees with a gold watch, a fountain pen, and a wallet of Treasury notes. Mr. E. C. Baker, father of the chapel, presided at the gathering, and the presentation was made by Mr. H. C. Derwent, the general manager. Other speakers included Mr. Charles Ogden, the editor, and Mr. J. W. S. Bailey, the head reader. Mr. Hargreaves is going South to reside at Bournemouth.

Birmingham.

The funeral of the late Mr. F. W. Bishop, overseer of the *Birmingham Mail*, took place at Harborne Old Church. Those present included Mr. B. J. T. Ford, general manager of the *Birmingham Mail*; Mr. H. F. Harvey, editor; Mr. A. Williams, works manager; Mr. F. Booth, overseer of the *Birmingham Post*; Mr. W. B. Smith, father of the *Mail* chapel; and members of the editorial, commercial, composing, machine and publishing staffs of the paper. Mr. B. G. Palmer, secretary of the Birmingham Typographical Society, represented Mr. J. J. Atkins, the president, who was unable to attend.

Blackburn.

At Blackburn County Court last week D. C. Thompson and Co., Ltd., newspaper publishers, of 39, Chapel-street, Salford, applied for a diminution of the weekly compensation paid to Herbert George Harper, a stereotyper, of 252, Wensley-street, Blackburn. It was stated that on January 24th, 1924, the respondent was found to be suffering from lead poisoning, and twelve months later it was agreed to settle the case for £350, but the registrar, holding the amount insufficient, declined to register the agreement. The applicants' contention was that the man's condition had improved, and that he was fit for light work. The respondent's case was that his health was such that he was virtually unemployable. The applicants offered £375 in settlement, and this amount was accepted by the respondent.

Leicester.

At the October meeting of the Leicester Centre of the Printers' Managers and Overseers Association a "Monotype" lecture and cinema film was given at the College of Arts and Crafts. Mr. H. Kettel gave a most interesting and instructive talk, and the film (shown for the first time out of London) was a great success. About 100, including students, attended, Mr. W. H. Crane, president of the Centre, occupying the chair.

Norwich.

Saturday was a great day for Norwich, it being the date of the visit of the Duke of York who arrived early to attend the centenary celebrations of Norwich Museum. Bridewell Museum is placed in one of Norwich's finest old houses, and contains representative exhibits of the various industries, including printing, carried on in the old Norfolk city. Norwich is "At Home" for the whole of this week, this "At Home" being organised by the Norwich Rotary Club, with the intention of making the citizens and others "better acquainted with the city's many features of historic interest and its varied civic and industrial activities." The programme opened on Monday with visits "under expert guidance" to many important municipal and industrial institutions, including printing works.

Ramsgate.

Mr. Lewis Shandel, partner in the firm of Shandel and Flowerdew, proprietors of the *Thanet Advertiser*, passed away at Ramsgate General Hospital on Wednesday of last week. Mr. Shandel, who was 46 years of age, had suffered from bad health for a long time, and had been back at work for but a few weeks, when he collapsed at his offices on Tuesday, and failed to recover. Mr. Shandel had been previously on the staffs of the *East Kent Times* and Keble's *Isle of Thanet Gazette*, and, with his partner, took control of the fortunes of the *Thanet Advertiser* in 1914. The firm purchased the *Broadstairs and St. Peter's Echo* and absorbed the *Kent Argus* at later dates. Mr. Shandel, who was a capable and virile journalist, was also a prominent Freemason and one of the first Rotarians in the district. He was secretary of Kent District Institute of Journalists, chairman of the Ramsgate Advancement Association, vice-chairman of the local Employment Committee and a member of the King's Roll and School Attendance Committees. The Ramsgate Hospital and the children of the town have lost in Mr. Shandel one of their greatest friends and benefactors. The funeral, which took place on Friday, was attended by representatives of the many organisations with which he was connected and by representatives of all branches of the staff.

Derby.

Arranged by the Derby Master Printers' Association in conjunction with the Joint Industrial Council, a very successful lecture was held in the Derby Technical College on Friday evening. The lecturer was Mr. T. H. Cunane (Universal Paper Agencies, Ltd.—H. M. Stevenson, jun.), who once more proved his ability to hold the attention of an audience of printers in speaking of the mysteries of paper. Entitled "Papermaking—from Raw Materials to Printing Works," the lecture was illustrated by about 90 lantern slides, and Mr. Cunane showed the treatment of raw materials, the sorting, boiling, bleaching and beating processes, the making, supercalendering, cutting, reeling, sorting, counting, packing and despatching to the printing works. The slides were an excellent collection, and the lecture was made the more interesting by the fact that the lecturer dealt with the failings and weaknesses of paper as discovered in the printing process. A practical suggestion he made was the formation of a research committee of practical workers to seek to eradicate these troubles. The chair was occupied by Mr. H. Cheney Bemrose.

South Wales.

On Sunday, October 18th, there passed away at Aberdare, South Wales, in the person of Mr. John Mills (Tarianydd) one of the oldest printers and journalists of the Principality. Mr. Mills was 92 years of age when he died, and was known far and wide as the founder, jointly with the late Mr. Francis Lynch, of *Tarian y Gweithiwr*, which when under his control was regarded as the organ of the Welsh miners. This paper had many famous contributors, and representatives of capital and labour had many a controversy in its columns. The paper was sold some thirty years ago to the late Mr. Gwilym Evans, who disposed of it to its present owners. The late Mr. Mills, being a printer by trade, worked hard at the "case" with his partner, Mr. Lynch, and together they had the satisfaction of seeing the paper attain a position of considerable influence and wide circulation throughout the coalfield. Mr. Mills was a traveller and writer, and amongst his publications was a book on Welsh names, a history of Llanidloes (of which he was a native), and an account of Bethany Church, Aberdare. He was his own printer and publisher, and nothing seemed to give him greater pleasure than to be at the little treadle machine on which his books were worked off. Mr. Mills was a familiar figure at chapel and religious conferences, having served and been a member of the Bethany Welsh Calvinistic Methodist Church, Aberdare, for over 63 years.

Trade Union Matters.

London Machine Operators.—The quarterly meeting of the London Machine Compositors' Vigilance Association reports that it was decided to increase sick benefits from 10s. for six weeks to 12s. for ten weeks. The death benefit to be increased from £7 10s. to £10 in the case of members having more than five years' consecutive membership.

Readers' Wages. — Mr. W. E. Fursland, national secretary of the Provincial Guild of Printers' Readers, reports that the wages for Tonbridge are now £4 for 47 hours. At the Oxford University Press an advance of 5s. per week and reduction of 2½ hours was reported.

Provincial Guild of Printers' Readers. —The provisional committee for the Northern Section of the above Guild are: Chairman, H. C. Glynn (Manchester); secretary, Mr. W. E. Timms (Manchester); treasurer, Mr. A. M. Ward (Liverpool); committee, Messrs. L. Ramwell and S. H. Davidson (Manchester), Mr. C. W. Bruce (Sheffield), Mr. R. Sanders (Bradford), and Mr. A. Tyreman (Leeds).

The executive council of the Typographical Association in response to a request from the committee of the Northern Group of the Association, have appointed Mr. T. Roberts to undertake special organising work.

Working Difficulties at Bolton.—Mr. G. Holmes has reported to the executive council of the Typographical Association on a visit to Bolton, Lancashire, for the purpose of inquiring into working difficulties in the rotary department of an office in that branch. There was strong objection on the part of men who were called upon to work a long night on Thursdays, and also to the system in operation of commencing late in the mornings and taking an hour and a half for dinner. A joint meeting was arranged of the combined chapels of the composing and machine rooms, when the difficulties were to be fully discussed.

Scottish Association and Female Compositors.—The secretary of the Typographical Association has received official intimation from the Scottish Typographical Association that on a ballot vote it had been decided to reject the proposal of the Typographical Association that female compositors must be confined to the Scottish area as a condition of the proposed amalgamation.

T.A. Jobbers and the News Bonus.—The Executive Council of the Typographical Association have had under consideration the question of the applicability of the news workers' bonus to jobbing members who are employed on news work for about two hours per day. The secretary of the branch has informed the Council that the members concerned did not previously receive the 2s. 6d. extra given to newspaper workers. The members are receiving the ordinary branch rate, and the hours are so arranged that they work 48 hours per week. The Council have asked the secretary to supply a full schedule of the hours worked.

Personal.

AMONGST those who intend to be present at the 98th annual dinner of the Printers' Pension Corporation at the Connaught Rooms on November 17th, under the presidency of Sir Herbert Morgan, are: The Duke of Marlborough, the Marquess of Carisbrooke, Lord Birkenhead, Lord Ampthill, Lord Riddell, Lord Illingworth, Lord Ashfield, Lord Blanesburgh, Sir Frederick Sykes, Sir Hugo Hirst, Sir Neville Pearson, Sir Ernest Hodder-Williams, Sir William Berry, Sir T. Vansittart Bowater, Sir George Lewis, Sir Robert Baird, Sir Ernest Benn, Sir Rowland Blades, Sir William Waterlow, Sir Andrew Caird, Sir Alfred Butt, M.P., Messrs. J. Gomer Berry, John Walter, J. L. Garvin, Lieut.-Col. E. F. Lawson, Lieut.-Col. H. R. Fletcher, Brig.-Gen. Bemrose, Messrs. C. A. McCurdy, W. R. Codling, and G. Holt Thomas.

MR. STANLEY RHEIN, who was recently appointed a director of John Horn, Ltd., has retired from the position of joint managing director of Wadman, Rhein, and Skinner, Ltd.

MR. E. W. DAVIES, secretary of the Newspaper Society, was quietly married at the Marylebone Registry Office, on October 10th, Mr. A. W. Foster, secretary of the Paper-makers' Association, being one of the two witnesses.

MR. PERCY W. RYDE, F.R.G.S., managing director, G. W. Bacon and Co., Ltd., is to be the next lecturer at Stationers' Hall in the series arranged by the Stationers' Company & Printing Industry Technical Board. He will lecture on Friday, November 13th, his subject being "How Maps are Made."

MR. R. A. AUSTEN-LEIGH, M.A., past president of the Federation of Master Printers, will preside at this lecture, which will be illustrated by lantern slides and specimens of maps, and which promises to be of great interest.

MR. H. B. NAYLOR will address the South-West London Master Printers' Association on Tuesday next at Arding and Hobbs' Restaurant, Clapham Junction. He will speak on "The Printer at Work," and the meeting is to be open not only to members of the Association but to their employees also, entrance being by ticket.

MR. WILLIAM MAXWELL, editor of the *Aberdeen Press and Journal* and allied newspapers, has been elected a member of the board of directors.

MR. C. P. GASQUOINE, chairman of Messrs. Woodall, Minshall, Thomas and Co., Ltd., Caxton Press, Oswestry, has retired from the board of directors of this company, and also from the editorship of the *Border Counties Advertiser*.

MR. F. W. GREEN, a linotype operator on the staff of the *Leicester Advertiser*, has been presented with an extending easy chair on the occasion of his marriage. The presentation was made by the overseer of the composing room, Mr. A. Harrison.

MR. EDWARD GRIFFITH, of Oxford, has resigned the editorship of the *Oxford University Gazette*, which he has held for the past nine years. He has served on the University Press for more than 50 years.

MR. W. J. THOMPSON, head of the publishing and advertisement department of the *Church Times*, has been the guest of the proprietors at a dinner given in celebration of his completing 50 years' service.

MR. J HALL RICHARDSON, of the *Daily Telegraph*, has been elected, to a seat on the board of Estates Governors, to succeed Mr. William Clifton, lately deceased.

MR. ROBERT DRENNAN, editor of the *Totnes Times*, who is to be Mayor of Totnes, has been for nine years a member of the council whose proceedings he reports as a journalist.

MR. A. W. BROCKBANK, of the editorial staff of the *North-Western Daily Mail*, has been presented with an attache case and a pipe on leaving to take up an appointment on the *Penang Gazette*.

MR. A. G. HARKER, a member of the staff of the *Newcastle Journal* and *North Star*, has won the Newcastle Press Golfing Society's Victory Cup, defeating Mr. R. J. Wright, of the same office, by one stroke.

ROTARIAN J. RUDD, of Bishop Auckland, spoke on "Printing" at a Bishop Auckland Rotary luncheon last week.

MR. PERCY V. BRADSHAW is to speak on "Art in Advertising" at a meeting of the Publicity Club of London, to be held on Monday evening next at the Hotel Cecil.

"WYNKYN DE WORDE AND HIS CONTEMPORARIES FROM THE DEATH OF CAXTON TO 1535." A chapter in English Printing, by Henry R. Plomer. London: Grafton and Co., Coptic House, W.C.1. 21s. net.

Any book that throws light on the work of the early English printers should be welcomed by their successors of the present day, who seldom think of the difficulties, trials and, in many cases, the persecution encountered by the pioneers of their craft. After the death of William Caxton, the first English printer, his mantle fell on the shoulders of Wynkyn de Worde, who, with his fellow craftsman Pynson, printed and published a remarkable number of books—remarkable that is, considering the primitive methods of the craft at that early date when the art was but in its infancy in this country. Mr. Plomer in his book gives an excellent *résumé* of the work of de Worde and his contemporaries, their types and appliances, the books they printed and the troubles they had to contend with in respect of the importation of foreign printed books which they considered was detrimental to their business; and one cannot wonder at their objections when we note that in one year over fourteen hundred volumes reached London from the Continental printers, this number in those early days of the art being a considerable one. A good deal of interesting information is given as to those foreign books, their printers and their titles. As there was no Copyright Act in those days, they even reprinted the works of William Caxton and sent them over here for the supply of English buyers. "Wynkyn de Worde and his contemporaries had to contend against the full weight of this foreign competition, and, whatever their shortcomings, they put up a good fight and eventually drove the foreign printer out of the country." Wynkyn de Worde was a native of Alsace, and was brought to England by William Caxton, remaining in his service until Caxton's death and rising to be the foreman of the printing office. He practically took over Caxton's business and then continued it on his own account. De Worde's contemporaries are dealt with by Mr. Plomer, and we get many interesting particulars of the work of Richard Pynson, Lettou, Machlinia and Notary, Copland, Berthelet, Faques, Rastell, Pepwell and others, and a chapter is devoted to provincial and Scottish presses. The book itself is a good specimen of present-day printing and is illustrated with facsimiles of pages of the works of early printers and with specimens of their types that add to the interest of the text. Mr. Plomer has done his work well and has produced a volume of great interest to all connected with the craft.

HUTCHINSON AND CO.—In connection with the forthcoming issue of 250,000 7 per cent. cum. part. 1st pref. shares of £1 each in Hutchinson and Co. (Publishers), Ltd., it is announced that in addition to taking over the extensive and successful business of Hutchinson and Co., the following undertakings will be acquired:—Hurst and Blackett, Ltd.; Geographia (1923), Ltd.; Skeffington and Son, Ltd.; Rider and Co.; The Anchor Press, Ltd.; Hill and Co. (Engravers), Ltd.; The Hutchinson Paper Co., Ltd.; Hutchinson's Publicity Ltd. The combined profits for 1924-5 were £51,900.

Government Contracts.

BUYERS' GUIDE TO SOURCES OF SUPPLY.

Rates per Insertion: 3/- Minimum (not exceeding three lines)—each additional line, 1/- extra.

Discounts on Weekly Insertions: 13 times, 10 per cent.; 26 times, 15 per cent.; 52 times, 20 per cent.

BOOKBINDERS' MACHINERY AND SUPPLIES.

ALBION SEWING COTTON CO. LTD., Fawley Mills, Tottenham Hale, N.17.—Bookbinders' Threads, Linen and Cotton on cones, reels and in skeins.

COMPOSING AND TYPE-SETTING MACHINES.

INTERTYPE LTD., 15, Britannia-street, London, W.C. 1. Text and Display Machine, flexible, and economical. Send for descriptive literature.

ENVELOPE MACHINES.

CARLAW, DAVID & SONS, LTD., 31, Finnieston Street, Glasgow. High Speed Adjustable Envelope-making Machines for all sizes and shapes; Blank Cutting Machines; Cutters; Embossing Machines, etc.

FOLDING MACHINES.

CANADIAN-AMERICAN MACHINERY CO., LTD., 63, Farringdon Street, E.C.4. ('Phone Cent, 1165). The "Cleveland" and "Camco" series. A Folder for every need, from Eight Crown down to Demy Folio.

GELATINE (WASTE).

MERCIER, V., 9, Rue Blasset, Amiens, France, is a ready purchaser of Waste Gelatine from old printing rollers.

GUILLOTINES, Etc.

ALBION SEWING COTTON CO., LTD., Fawley Mills, Tottenham Hale, N.17.—Hand Cutting Machines from 27/-; Bevel Edge Cutters from 60/-. Ask for Illustrated Price List.

OFFSET MACHINES.

CRABTREE, R. W., & SONS, LTD., Water Lane, Leeds, makers of "Ensign" Super-Offsets in all sizes for Sheet or Reel feed, in One, Two or Three Colours, or for Perfecting.

PAPER BAGS AND CARRIER BAGS.

ALBION SEWING COTTON CO., LTD., Fawley Mills, Tottenham Hale, N.17.—Cords for stringing. Plain colours, mixtures, etc., in balls or cut lengths.

STONEHOUSE PAPER AND BAG MILLS, Stonehouse, Glos., for all classes of Paper Bags, printed and plain. Keenest Trade Prices.

PAPER FEEDERS.

CANADIAN-AMERICAN MACHINERY CO., LTD., 63, Farringdon Street, E.C.4. ('Phone Cent, 1165). The "Camco" (Spiess Patents) Automatic Feeder.

CROSS PAPER FEEDER CO., LTD., 92, Fleet Street, E.C.4. Manufacturers and Sellers of the Cross Patent Automatic Feeder.

PRESS BLANKETS.

LIGHT & CO., LTD., W. J., 36-38, Whitefriars Street, London, E.C.4. 'Phone; Central 3839. "LIGHT'S-EVERWEAR" Press Rubbers. Oil and Ink-Proof and Reversible.

PRINTING METAL MANUFACTURERS.

FRY'S METAL FOUNDRY, Holland Street, Blackfriars, London, S.E.1. Branches at Manchester, Bristol, Glasgow, Dublin. "Stypotype" SERVICE, *i.e.*, Prompt Dispatch, Superlative Quality, Competitive Prices in Printing Metals, Spacing Materials and Melting Equipment.

PRINTING PRESSES, ETC.

CANADIAN-AMERICAN MACHINERY CO., LTD., 63, Farringdon Street, E.C.4. ('Phone Cent, 1165). The "Kelly" High Speed two rev. presses.

ROTARY WEB PRESSES.

CRABTREE, R. W., & SONS, LTD., Water Lane, Leeds, and 7, Farringdon Road, London. NEWSPAPER (Speciality) & MAGAZINE ROTARIES.

HOE & CO., LTD., R., 109-112, Borough Road, London, S.E.1. Telephone: Hop 4028-9. Telegrams: Expugnator Sedist, London. Cables: Hoe, London.
LARGEST MANUFACTURERS OF HIGH SPEED ROTARY NEWSPAPER AND MAGAZINE PRESSES. Patentees and Suppliers of Automatic Ink Pumps.

STEREO.

DIXON & CO., LTD., L. S. 38, Cable Street, Liverpool. DRY FLONG "DIXOTYPE" All British. Wet process; Tissue, Blotting & Backing.

STEREO AND ELECTRO PLANTS.

HOE, & CO., LTD., R., 109-112, Borough Road, London, S.E.1. Tel.: Hop 4028-9. Telegrams: Expugnator-sedist, London. Cables: Hoe, London. Complete lines of Rotary and Flat Stereo and Electro Plants.

STEREO DRY FLONG.

LIGHT & CO., LTD., W.J., 36-38, Whitefriars Street, London, E.C.4. 'Phone: Central 3839. "IDEAL" Hand-casting Dry Flong and "CLEARTYPE" Autoplate Dry Flong.

STEREOTYPING MACHINERY, ETC.

CRABTREE, R. W., & SONS, LTD., Water Lane, Leeds, and 7, Farringdon Road, London. ROTAPLATE (Reg. Trade Mark) and ROTASHAVER Casting and Finishing Machines.

LIGHT & CO., LTD., W.J., 36.38, Whitefriars Street, London, E.C.4. Sole Agents for the "WINKLER" Automatic Moulding Press, Automatic Plate Casting Machine, etc.

TRADE PUBLICATIONS.

BRITISH AND COLONIAL PRINTER AND STATIONER, THE. Publishers: Stonhill and Gillis, 58, Shoe-lane, London, E.C.4. Founded in 1878, this weekly journal is the recognised medium for Printers, Stationers, Box Makers, Envelope Makers, Bookbinders, etc. Its pages contain the latest improvements in machinery, descriptions of new processes, and commercial intelligence and current news. Subscribers get the paper for 52 weeks for 13s.

TRADE PUBLICATIONS.

BOOKBINDER, THE, forms a Monthly Section of the *British and Colonial Printer and Stationer*, and subscriptions are booked for these issues at the rate of 3s. 3d. per annum, including postage. Special contributions appear from the pen of leading authorities. Publishers: Stonhill & Gillis, 58, Shoe-lane, London, E.C.4.

DICTIONARY OF PAPER TERMS.—Definitions of the Terms as used in the Manufacture and Merchandising of Paper. Published in book form by the Lockwood Trade Journal Co., Inc., New York. Bound in cloth, 6 × 9, 87 pp. Price 7s. 6d. Copies may be had of Stonhill & Gillis, 58, Shoe Lane, London, E.C.4.

LITHOGRAPHIC TRADE REVIEW, THE. This forms the subject of a monthly section of the *British and Colonial Printer and Stationer*, and these issues are obtainable at an annual subscription of 3s. 3d. Publishers: Stonhill and Gillis, 58, Shoe-lane, London, E.C.4.

PAPER TRADE REVIEW, THE WORLD'S. Publishers: Stonhill and Gillis, 58, Shoe-lane, London, E.C.4. This weekly journal established in 1879, gives particulars of Papermaking Machinery and Processes, Current Prices of Raw Materials, Market Reports, Interviews with Leading Men associated with the industry, Commercial Intelligence, etc. Annual subscription: 26s. plus postage (Inland, 30s. 4d.; Foreign and Colonial, 32s. 6d.)

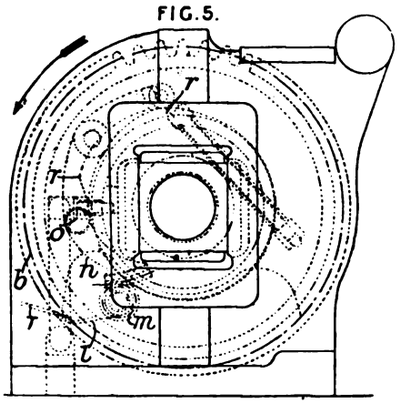
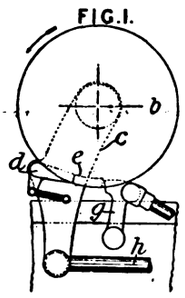
New Inventions

Cylinder Gripper Mechanism.

Under an invention patented by Messrs. Dawson, Payne & Elliott, Ltd., and E. Stott, an under-fed single or two-colour stop-cylinder machine is arranged to take sheets fed to gauges on a stationary table T, the cylinder being rotated for nearly a whole revolution during the forward motion of the bed, and having its rotation completed during the backward movement of the bed. The grippers *l* on the cylinder *b* are controlled by a cam *r*, which is freely mounted on the impression cylinder and is stationary for the greater part of the move-

FIG.5.





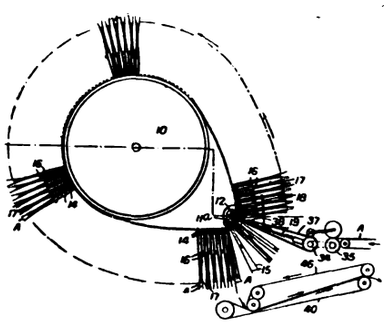


FIG.1.

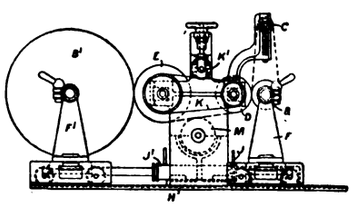
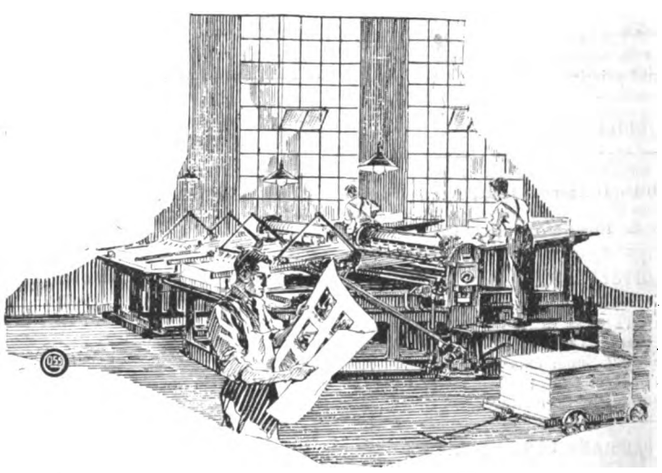
ment of cylinder *b*. The cam *r* is adapted to act on a bowl *o* on a spring-pressed lever fitted with a gear sector *n* geared to the gripper shaft *m*, the grippers being closed by spring action when the bowl *o* is adjacent the low part of cam *r*. During the printing-stroke a raised part of the cam *r* opens the grippers to permit of delivery, and while the grippers are passing the feed board they are rotated counterclockwise into a recess in the cylinder so as to clear the table T and the registering-gauges. The grippers are finally closed upon the sheet while the rotation of the cylinder is completed, the cam *r* being moved clockwise by a cam-and-link mechanism to permit of this gripper movement. The final movement of the cylinder is effected by a pawl *d* on an oscillating lever *c* operated by a link *h* and a cam. The pawl *d* acts on a projection *e* on a brake disc on the cylinder shaft, and to prevent the cylinder from being rotated too far, a lever *g* engages the front of projection *e*; this lever is operated by a cam to check the movement of the cylinder *b* and ensure its stopping in the correct position.

Making Envelopes.



Apparatus for drying wet sheets, such as gummed envelope blanks, as patented by Messrs. H. C. Brooks & H. F. Warbey, comprises a number of abutting fingers 15 hinged together in an endless series and constrained to turn through a sharp angle, as by passing over a sprocket 12, guards 18 limiting the entry of the blanks A between the fingers to prevent them adhering. The fingers are carried by bars 14, there being two rows of fingers on each bar, and the fingers on adjacent bars are either splayed by blocks 16 or supported at their tips by blocks 17, so that pressure is exerted between the fingers when the series is moving in a substantially straight path. The blanks are released by the fingers passing over a sprocket 11*a* and fall between delivery-belts 40, 46. The pairs of fingers on the bars 14 may be placed out of alignment to corrugate the blanks. The guards 18 are adjustably mounted on supports 19, which may be placed between any desired fingers, and the blanks are fed against the guards 18 from the delivery rollers 34, 35 by cords 37 pass-



ing over pulleys 38 on the supports 19. The drum 10, over which the fingers pass, is surrounded by a casing on the sides of which are air ducts. Air heated by a burner is faced by a fan along one duct, from which it passes through perforations into the casing and across the blanks and thus into the other duct. The apparatus may be used in conjunction with an envelope-gumming machine of the kind described in Specification 207,333.

Unwinding and Winding Reels of Paper.

Mr. A. R. Winpenny has patented an apparatus for unwinding a paper or other web from a reel and winding it upon another reel, which comprises a driven main cylinder in contact with the take-up reel, and a secondary cylinder in contact with the let-off reel and driven frictionally from the main cylinder, the reels being mounted on carriages operated by fluid pressure to hold the reels in contact with their cylinders. The apparatus is particularly applicable for winding remnants of paper from the supply rolls of printing machines to form full-sized rolls, but may be used for re-

winding badly-wound rolls. The let-off reel B and take-up reel B¹ are mounted in wheeled carriage F, F¹ running on rails H and are yieldingly pressed by fluid pressure cylinders J, J¹ into contact with a secondary cylinder D and a main cylinder E, which is driven from any suitable source of power. The cylinder D is driven frictionally from the cylinder E by a belt K, the slip of which can be adjusted by a jockey pulley K¹ to tension the web. The speed of the cylinder D is slightly less than that of the cylinder E when the belt is tight. The web passes from the reel B over a spring-mounted roller C and round the cylinders D, E as shown. A web-damping apparatus M may be provided. The Provisional Specification also states that the apparatus may be used for winding fabrics.

Good Inks mean Better Production

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

THERE are those who seriously hold the opinion that British industry is in for a better time in the very near future, basing their argument on the fallen bank rate, improvement in European relationships, operation of the Safeguarding Act and the better tone which is already pervading some of our important industries.. Within the last few days one of the most reliable authorities on economics demonstrated in a convincing manner that outside Great Britain, with the exception of one or two minor countries on the Continent, trade was plentiful and there was no lack of spending power. Even in the Far East, it was clearly shown that buying conditions were not nearly so black as they are sometimes painted and only in China was there a real inability to purchase. That we have not been receiving what we would consider to be our share in the business of the world is put down to the debit side of our financial policy ; and if this is so, industry has little for which to thank official economists. High finance and political economy are subjects beyond our ken and even to experts they seem abstruse problems mainly dependent for their solution upon conviction or opinion.

* * *

THE layman will note with satisfaction that our artificial silk industry is leaping forward, that motor-car engineers are exceedingly busy, and that some very fine contracts have been secured by British engineering firms. He will appreciate the possibilities of increased trade that have been opened up in South America through the personal popularity of the Prince of Wales. The papermaker with a big overdraft will vastly appreciate the drop in the bank rate. In much the same way we all realise how much it means to get a step nearer to a firm international understanding, and for that reason we look upon the outcome of the Locarno Conference as a distinct help in the direction of trade recovery. All this is on the credit side of our survey of industrial prospects. There is, however, a debit side which may still be heavy, but is at least so much lightened by a little transference to the other side of the list.

* * *

THE immediate outlook in our own industry is not especially impressive, and comfortable assurance, if there is any, must chiefly be ensured by inference. If general trade improves, as is so confidently anticipated in some quarters, the paper industry will benefit because trade is built and based on paper. There has certainly been a better tone among paper buyers since October set in. Merchants claim to be handling a larger volume of orders, particularly in printings and coateds. Fine papers are in moderate demand but slow in recovery, and there is no lack of competition for available business.

* * *

JUST touching on this issue, we wonder if papermakers, or merchants for that matter, when fixing their prices, credit terms and discounts, ever take into account the effect upon printers' prices. The printer buys his paper, marks it up at invoice price, and puts it into stock. The price marked is accepted by warehouseman, cost clerk or estimating clerk for costing or estimating purposes. If an estimate is required and the paper is not stocked, a price list is referred to, and the stated price accepted. Take the case of two papers, one supplied at 10d. per lb., less 10 per cent , and the other at 9d. nett. To the estimator the respective prices are 10d. and 9d. and in competition the nett paper secures the order. This is an instance from everyday practice, and many orders are lost to the firms who offer heavy discounts as an inducement to get business From our experience we should say that very few printers or stationers work on any other than invoice gross price where reams of paper are concerned. The exception would be in the case of important tenders where the compiled costs would be ruthlessly scrutinised by a principal. As the rates of discount offered in the paper trade vary from nett to 10 per cent., it would seem that there is a need for a common standard.

(Continued from page 319).

Wrapping Paper Inquiry.

The chairman intimated that he only wanted Mr. Entwistle to be on his guard on matters which did not pertain to the witness.

Home and Imported Percentages.

Mr. Mutimer then submitted the following schedule of percentages of qualities manufactured by the home trade and imported, representing imported percentages on an ascertained tonnage of 156,185 tons:—

British.	p.c.	p.c.	Imported.	Tons.
Krafts, glazed and unglazed	4·04	24·08	M.G. kraft ...	37,613
		21·56	Ungl. kraft ...	33,679
		·1	Glazed kraft ...	150
		2·08	Imit. Ungl. kraft	3,250
		6·3	„ M.G kraft	9,834
M.G. caps and sulphites ...	22·21	29·44	M.G. sulphite ...	45,993
		3·08	M.G. envelope paper	4,819
		3·50	M.G. cap. ...	5,472
		·59	M.G. deep-col. sulphite ...	927
Glazed casings	12·16	1·8	Glazed casings	2,028
		1·12	Label manilla...	1,755
Brown wrap'ng	36·78	·68	M.G. Dutch brown... ...	1,072
Royal - hands, tube & sugar papers ...	22·63	?	Tube papers ...	?
		nil	Royal hands ...	nil
Common caps...	2·18			
		·33	M.G. nature ...	519
		·50	Ungl. nature ...	785
		1·77	Unglazed imit. parchment	2,771
		·76	Smallhand ...	1,190
		1·00	News offcuts ...	1,571
		1·77	Ochre glazed ...	2,757
(per cent.)	100	100		156,185

Witness gave some average present-day selling prices. Imported kraft, first grade, was £23 and second grade £22 10s. per ton c i.f. principal British ports; M.G. was £23 10s. and £23; M.G. sulphite £24, £23 10s. and £23.

British glazed casings were selling at £22 to £29 10s. delivered destination, and British wrapping papers had been sold at £13 to £16 delivered London. There were also samples of common brown at £10 10s. delivered London; royal hands and royal hand sugar papers £12 to £13 10s. delivered London. The lowest price he had seen was £12, less 2½ per cent., delivered.

Mr. Mutimer added that there had been a lot of wild selling and they had been doing everything possible during the last six months to steady the market and get people to quote fair prices.

Fashion in Paper.

Mr. Mutimer then continued his evidence.

In answer to Mr. Entwistle, witness said the demand for M.G. papers had increased. As to the reasons for this, some of the users seemed to think an M.G. paper was rather more waterproof than the unglazed paper. Many of the textile houses used the M.G. paper for packing purposes, and where materials were kept in stock the dust which accumulated was easily removed. In addition M.G. paper was largely superseding unglazed paper for flour bag-making in heavy weights.

Mr. Entwistle called witness' attention to the average prices per ton of paper imports for the years 1912 to 1924 taken from the Board of Trade figures. This showed that prices in 1920 were very high. The average price per ton in 1912-13 was £13 17s. 8d. per ton and in 1920 it was £60 15s. 10d. That was the market price. The average price in 1924 was £24 9s. 5d. Witness said he spoke of these figures from his own knowledge.

On Tuesday, October 20th, Mr. Mutimer completed his evidence and withstood a long cross-examination by Mr. Swan.

There then followed further evidence on behalf of the opponents to the application from representatives of a number of confectionery and other undertakings, including Messrs. James Pascal, Ltd., Cadbury Bros., Fry's, Clarke, Nicholls and Coombs, Ltd., Thomas Smith and Co., Ltd., and J. Lyons and Co., Ltd. Each of the witnesses explained the types of wrapping paper used in his business and testified to the effect which he anticipated a duty on imported paper would have. There was also further evidence from two paper bag manufacturers.

Envelope Makers' Opposition.

Mr. Kingsley Griffiths, towards the close of the afternoon, opened the case of the Employers' Federation of Envelope Makers and Manufacturing Stationers, and explained the reasons for the opposition of this body. The essence of the case for the Federation, he said, was that the small amount of benefit that would accrue to papermakers in this country if envelope papers were excluded (particularly M.G. manilla) was out of all proportion to the injury which would be caused to the British envelope makers by the taxation of their essential raw material. Of the consumption of paper required for envelope making, about 10,000 tons per annum was imported, and this quantity produced no fewer than 2,500 million envelopes.

Mr. Kingsley Griffiths went on to point out that to make 10,000 tons of paper would give employment to 200 persons, whereas the conversion of 10,000 tons of paper into envelopes provided employment for over 1,000 persons, excluding printing and other subsidiary activities.

Mr. T. Owen Jacobsen (chairman of Jacobsen, Welch and Co., Ltd., and president of the Employers' Federation of Envelope Makers and Manufacturing Stationers) gave evidence in opposition to the application. In addition to the effect of a duty on the home market for envelopes, witness was concerned about its effect on export. He mentioned the small margins on which the export trade was carried on, and a very small increase in their selling price, he said, would easily knock them out of foreign markets.

Mr. Jacobsen was still under examination when the Inquiry adjourned until Monday morning next, in the hope that an end will be reached during the day. The envelope makers have still one other witness to come forward after Mr. Jacobsen, namely Major Dove, and then counsel will make their closing speeches.

Donside Paper Co., Ltd.

The report of the directors of the Donside Paper Co., Ltd., of which Sir Frederick Becker is chairman, for the year ended September 30th last shows a profit, after writing off repairs, etc., of £29,733 3s. The debenture and loan interest paid amounts to £11,789 4s. 5d., and the sum of £4,840 is applied to depreciation, leaving a net profit of £13,103 18s. 7d. Of this amount two sums of £973 7s and £6,022 10s. have been transferred to debenture sinking funds for the redemption of first and second debentures respectively, leaving a balance of £6,108 1s. 7d. to be carried forward to profit and loss account, making this account £29,826 5s. 5d. at credit.

It is very unusual for companies to issue their annual accounts with promptitude, and, therefore, the example set by the Donside Paper Co. deserves special mention. As already stated, the year ends September 30th, and the directors' report, balance-sheet, etc., in printed form, bears the date of October 7th, ready for circulation, an interval of only seven days. The annual general meeting of the shareholders will be held at the mills on Monday, the 19th inst.

DONSIDE PAPER CO.—The annual meeting was held at Donside Paper Mills, Woodside, Aberdeen, on Monday, Sir Frederick Becker, chairman of the company, presiding. The accounts for the year ended September 30th were passed unanimously. Major Mathew Hay, chairman of Callendar Iron Co. (Ltd.), Falkirk, was elected a director in room of Mr. Fielding Gill, resigned.

SUCCESS

"There is nothing that succeeds like success"—*runs an old saw.*

THE SPECIAL EXPORT ISSUES of the "British and Colonial Printer and Stationer" have been increasingly successful since they were started some 37 years ago. That this success has been shared by our advertisers is shown by the following testimonials which have reached us :—

"We, ourselves, have taken your journal in for a great number of years and have always found it interesting and have frequently referred to the advertisements for any special requirement that we were looking for."—R. R. & Co., Ltd.

"We take advantage of this opportunity to express our great satisfaction as to the efficiency of your paper as an advt. medium both in the U.K. and abroad. It is gratifying to note that enquiries from the remotest parts abroad are the direct results of our advertisements in the "British & Colonial Printer."-T.&T. Co., Ld.

However successful a firm may be, it is always on the look-out for new worlds to conquer and in suggesting that your advertising should appear in our Next Export Issue, we are presenting you with an economical method of obtaining forceful overseas representation.

"The British and Colonial Printer and Stationer" specially circulates in the following countries:—

Australasia.	**East Indies.**	**Canada.**
India.	**West Indies.**	**United States.**
South Africa.	**China.**	**South America.**
	Japan.	

The next Special Export Issue will be published on

DECEMBER 3rd, 1925.

Space is now rapidly being booked.
One of our representatives is at your disposal.
Let us know to-day when he shall call upon you.

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES:

1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.
2.—It occupies a space of only six feet on the run, and is quite noiseless.
3.—The power required is such a small amount that it can be driven from any existing shafting
4.—Centres of any kind or width can be worked on the machine.
5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.
6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.

MACHINES SUPPLIED FROM STOCK.

Printing Trade Craftsmanship.

Mr. George Eaton Hart Addresses the Association of Master Printers of West and North-West London.

At the meeting last Thursday of the Association of Master Printers of West and North-West London, a general report of which appears on another page, the principal speaker was Mr. George Eaton Hart, of St. Clement's Press. Mr. Hart—who besides being an expert in printing house management, is a veteran enthusiast in the cause of technical education and the upliftment of printing trade craftsmanship—had a good deal to say that was interesting and inspiring, particularly to the younger printers, of whom there were many in the audience.

Bricks Without Straw.

After referring to the interest he always takes in craftsmen's competitions, Mr. Hart proceeded in reminiscent vein, remarking that he was old enough to remember the days when compositors had to work with a much more limited range of types and materials than were commonly available to-day. The mainstay of the compositor at that time consisted of the Egyptian, Clarendon and sans-serif faces, with sometimes a little Caslon and Old English. The old-time compositors were to a large extent called upon to make bricks without straw, yet he thought that much of the printing even of those days was very creditable, considering the limitations under which it was produced. Gradually, however, the number of type faces multiplied, and, though the compositors were at first puzzled as to the uses of the new faces, these were quickly utilised for all they were worth. The new type had not long been in the office before the boxes were continually empty, because no job looked quite right without at least a line or two of the new type in it. (Laughter.)

The Days of "Rule-Twisting."

Then came ornaments He remembered with pleasure many of the ornaments of the period, chapter headings, tail pieces, floral ornaments and elaborate borders. Ornaments in those days were often sold by travelling vendors, and he remembered a German who used to call regularly with such material—scrolls, floral and other decorations, including ornaments for cheques and certificates; these the vendor sketched himself, and afterwards produced a stereotype which he mounted on a rough metal base. That was the time of "rule-twisting." Some of the younger men to-day had no conception of what could be done with brass rule. (Laughter.) He remembered, for instance, setting up for an advertising agent a Sutton seed advertisement, consisting entirely of bent rule and twisted lines. The compositor had always to carry a pair of round-nosed pliers in his pocket for manipulating rules, and used to look with pride on some of the freak productions thus obtained.

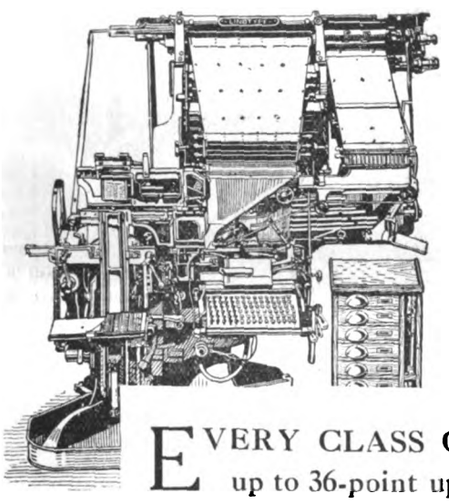
The American Invasion.

Next came the craze for American ornaments, and the printer put into the corners of circulars, and utilised in every other way he could, representations of Japanese gardens, birds and floral devices These were available in great variety, and became very popular. American type faces followed the ornaments, and there came into this country some very beautiful American type faces, which were still in use to-day. He thought all these served a good purpose in inspiring English typefounders to bring in some really good new series of type in addition to the faces then available. English typefounders, he thought, had benefited by the incentive that came from America, and were to day well to the fore in the initiating of good faces.

Typographical Prevision.

An outstanding remembrance of those far-away days was the compositor who took up his manuscript and studied it for ten minutes or so in order to perform in his mind's eye what is done to-day by the lay-out; if he was a really clever compositor he would be able, after this study, to take his stick and proceed to set up the job just as though he had a lay-out in front of him. Such men were great craftsmen, men whom their employers prized and of whom their fellows were proud. It was no simple matter to take the copy for, say, a heavy double crown broadside ordered by an auctioneer, and visualise the setting so accurately as to be able to get to work and set up that poster without either undersetting that would necessitate whiting out immoderately, or oversetting that meant some of the matter having to be distributed. How highly were such men esteemed in the office, and with what pride did the younger journeymen aspire to follow such examples! As to whether such men existed to-day as plentifully as in the pre-machine days, the speaker suggested that they must be looked for in lay-out positions.

Advertising and Enterprise.



Unfortunately lay-out had passed very largely out of the hands of the printer into those of the advertising agent. Though this was rather a reproach to printers, masters and journeymen alike, the situation had its advantages, as the advertising agent had certainly been the means of very largely extending the printing industry. A great proportion of the printing done to-day was due to the advertising agent, who had specialised in the design of artistic brochures, catalogues and other productions, often in colours and of very high order. The printer, too, had risen to the occasion and produced these conceptions in accordance with the highest standards of the printing art, aided as he now was by wonderfully improved machinery and appliances, and supplied with the beautiful faces of type in vogue to day.

A class of printing that had not changed at all for 60 years was the auctioneer's poster. Its severely plain black and white was made more effective by contrast with the masses of colour on the hoardings at the present day.

New Printing Processes.

Change, however, was now very manifest in the printing industry generally. Offset and photogravure, particularly the former, were coming very rapidly to the front, to the detriment of the letterpress printer and the electrotyper and stereotyper. Already two composing machines had been invented for the express purpose of producing reading matter without the use of type, providing composition for the photo-offset and photogravure processes. There was never so great an upheaval in the printing craft as was proceeding to day. This upheaval would mean displacements in some directions; but the compositor had little to fear as somebody must put copy into printed form, whether for photogravure or any other process, and the compositor would therefore always be necessary. It was the duty and the privilege of the younger craftsmen of to-day to seek by industry and initiative so to improve themselves as not only to ensure their own future progress but also to contribute to the upliftment of the craft to which they belonged

There is a Linotype for every Printer— and proved service behind it always.

EVERY CLASS OF TYPE SETTING up to 36-point upper and lower-case and 48-point caps can be set on the Linotype ***direct from the keyboard.*** Such matter is not only ready for immediate make-up but takes only about half the time required for handling movable type. Distribution is effected in bulk by means of the metal pot. Thus the Linotype effects three economies in the composing department alone—in the actual setting of the matter, in the make-up, and in the distribution.

The Linotype-set forme effects another economy in the press room, where the entirely new type matter needs practically no make-ready.

British Industries Fair.

Record Number of Applications for Space

The eleventh British Industries Fair, to be held in London and Birmingham from February 15th to 26th next year, promises already in many ways to be the most interesting and representative of the series. Although forms of application for space have been in the hands of potential exhibitors only a few days, over 100,000 sq. ft. of space has already been applied for, and new applications are being received daily. This exceptional demand is, no doubt, due to the fact that so many firms realise the advantage of exhibiting in a fair, on the advertising of which the Government has decided to expend the sum of £20,000 in a world-wide publicity campaign. Further, the charge for space has been reduced this year at both London and Birmingham, the charge in London being 2s. 6d. per sq. ft.

Up to the middle of the past month 110 different firms had made applications for space at the London section, and some idea of the value and importance which exhibitors attach to the British Industries Fair may be realised from the fact that of the applicants 18 have shown at all the previous fairs, 21 firms have shown at from six to nine previous fairs, 14 have shown at five previous fairs, 11 have shown at four previous fairs, 33 have shown at more than one previous fair, and 14 are entirely new firms.

Public to be Admitted.

The Fair is essentially a trade Fair and as on previous occasions will be confined to actual British manufacturers and during business hours only buyers will be admitted. At the request of the great majority of the exhibitors a novel feature is to be introduced next year. After 5 p.m. each day, and from 1-8 p.m. on Saturday, February 20th, the public is to be admitted.

Another asset of the Fair to the exhibitor and buyer which is being more and more appreciated is the fact that every exhibitor at the Fair is the actual manufacturer of the goods displayed, thus the buyer realises that he is getting the articles at the first source of supply.

The catalogue of the Fair printed in nine different languages and containing the names and addresses of all the exhibitors together with a note of their productions will be distributed to all buyers who attend the Fair, and will also be circulated to all the important buyers throughout the world. It is obvious, therefore, that this catalogue constitutes a very valuable advertisement for exhibitors, and long after the close of the Fair many firms have stated that they have been able to trace large orders in the past through this medium.

IN a report on industrial co-operative societies in 1924 the Ministry of Labour *Gazette* shows that in papermaking, printing, etc., associations of consumers represented 2,856 employees, whose wages totalled £378,928, with a value of production running to £1,166,509. The number of employees in associations of workers was 1,013, the wages amounted to £152,648 and the value of production reached £317,985.

Wrapping Paper Inquiry.

Safeguarding Committee's Public Sittings End.

As indicated in our last issue, the Wrapping Paper Inquiry came to an end on Tuesday of last week. On the Monday, further evidence in opposition to the application was submitted on behalf of the envelope makers.

Mr. T. Owen Jacobsen.

Mr. T. Owen Jacobsen, chairman of Jacobsen, Welch and Co., Ltd, and president of the Employers' Federation of Envelope Makers and Manufacturing Stationers, was the first witness called by Mr. Griffiths. He stated that the Federation represented about two-thirds of the industry. The sole ground of their objection to the imposition of a duty was because of its effect upon the paper which was their raw material.

The envelope-making industry had been going ahead in recent years, and the capital represented by the machinery was something like two and a half million pounds. Some of the envelope makers, including his own firm, manufactured their own machinery. The manual workers employed by the members of the Federation numbered 7,200, and to bring that figure up to the total employed in the industry they should add another one third. That would mean there were 10,000 adults employed in the manufacture of envelopes, and this compared with the figure given by the applicants of 4,352.

Witness went on to refer to the export trade in envelopes, and said the effect of a duty would be to check this branch of the trade, because the foreigners would make the envelopes themselves and send them to their customers, or their customers would buy the paper themselves and make it up into envelopes. In the overseas trade exporters worked to very small margins, and a little increase on the selling price would be sufficient to knock them out altogether. Orders were sometimes obtained by the mere fact that the manufacturers did not charge for the packing case in which the goods were packed, which gave them the advantage as against the American or German house.

Witness mentioned the connection between the export trade and the home market. Manufacturers lived entirely by the number of envelopes they made, and if they lost one market the overhead charges would be so high that injury would be done to the other branch of the trade, either home or export.

History of the M.G. Manilla Envelope.

Major R. S. Dove, general manager of Messrs. Millington and Sons, Ltd., envelope makers and manufacturing stationers, and associated with John Dickinson and Co., said these two companies represented the largest producers of envelopes in the United Kingdom.

Examined by Mr. Kingsley Griffiths, witness said he was opposing the application only so far as it applied to M.G. envelope papers.

Tracing the history of the manufacture of envelopes from such papers, Major Dove said M.G. manilla—hard-sized for writing purposes—was first used for the manufacture of envelopes about 1896. It was a phenomenal success. Taken up by their competitors, the envelope making trade had enormously increased. Owing to the cheapness of the envelopes uses were found for them which did not exist before. To-day these envelopes formed the greater part of the whole of the envelopes made in the United Kingdom.

Of the cheap M.G. paper used for the manufacture of envelopes 50 per cent. was of foreign derivation and 50 per cent. was made in this country, and they made 250,000 envelopes from a ton of paper. There was a difference of £2 a ton in the present price of British as compared with the foreign paper.

As to the effect of a duty, the present result would be that the cost of envelopes would go up 24 per cent., assuming the duty was 33⅓ per cent. He did not anticipate that within a reasonable time they would be able to get the whole of their supplies of M.G. paper made in England.

Witness was in agreement with the licensing suggestion. He thought a member of the Envelope Makers' Federation and the Papermakers' Association and a gentleman from the Customs could evolve a plan that would be simple and easy to work. If the Committee took the view that this scheme would not work, the only alternative for his Federation was to oppose the imposition of a duty.

In cross examination by Mr. Swan, witness suggested there were 4,000 to 5,000 envelope-folding machines alone in this country, in addition to which there was all the subsidiary plant.

Closing Speeches.

Lord Erleigh then, on behalf of the British Paper Bag Federation, made his closing speech. He indicated that the inquiry was of vital importance to the industry which he represented. His Federation decided to support the application because they felt that the applicants' case was so well grounded that they were likely to get some assistance from the committee. Paper bag manufacturers could not contemplate a situation in which a duty should be put upon wrapping papers but not extended to paper bags or the paper included in paper bags. If they put a tax upon paper and not upon paper bags, what would happen would be that the foreign manufacturer, who at present did not find it worth his while to import paper bags into this country, finding his trade in paper affected by the introduction of a tax, through a consequent increase of price and a consequent falling off of the market in this country, would turn to that market where the situation was not affected by any duty and in which he could continue to compete at a price which enabled him to compete successfully with the British manufacturer and he would thereupon turn to the paper bag trade.

Proceeding to refer to what he called the ingenious proposal of the envelope makers, Lord Erleigh said their desire was that the particular raw material they used should be admitted into this country under some form of licence. That immediately raised feelings of jealousy and envy and various forms of economic uncharitableness in the breasts of other people who were at a little loss to see why the envelope makers should be favoured.

Mr. Kingsley Griffiths, in his closing speech, thought the case put by his witnesses might fairly be said to represent the view of the envelope makers. The Envelope Makers' Federation represented two-thirds of the industry, and the applicants were only able to find one envelope maker who gave any indication of views opposite to theirs and that one witness gave a very qualified support. That one witness' evidence seemed to be in support of an application which was not before the committee, viz., upon the limit being fixed at 15 lbs.

Mr. Griffiths went on to say that the point which was only brought out at a late stage in the inquiry by himself seemed to have the curious effect of uniting everyone against him. He referred to the suggestion of a licence for his particular kind of paper. That suggestion was not in the least inconsistent with anything his clients had done from the beginning of the case. They objected, and still objected, to any kind of taxation being put upon their raw material. In suggesting the licence, they were only trying to indicate to the Committee a way in which their raw material might be excepted without entirely destroying the advantages which Mr. Swan looked to gain from the application. If Mr. Swan's clients said, and if the Committee themselves said, that some kind of duty on machine glazed manilla paper was inextricably bound up with the rest of the application, then the result was that the whole force of the objection raised by his (Mr. Griffiths') clients went to the application as a whole.

In his closing speech Mr. Entwistle referred first of all to the evidence he had called on behalf of the Manufacturing Confectioners' Alliance. He urged that applicants, on their own admission, failed unless they could regard as a necessary corollary of any duty which was put on wrapping paper a duty on the paper in bags or any other article, whatever that article might be. The onus was on applicants; and if they failed under paragraph 7, if their witnesses said they would be ruined by a tax on wrapping paper unless there was a tax on other articles which contained wrapping paper—if that was so, then they ought to have had evidence to show not only the practicability of the tax being put upon those articles, but also as to the effect which would follow if a duty were levied on every article which contained wrapping paper as one of its ingredients. It only wanted to be looked at to see how impracticable that would be. No case had been made out on that.

Mr. Entwistle went on to speak on the most important question of output of the foreign and British mills.

On the question of quality, Mr. Entwistle said that one could not contend that British mills could not make kraft, because 4 per cent. of their production was kraft. But whether they could make it of the same substance and the same strength and under anything like reasonable conditions to bear the test of competition, that was a very different proposition on which a great deal of evidence had been placed before the committee.

Counsel went on to contest the suggestion of abnormal imports of foreign wrapping papers coming into this country; and with regard to efficiency—the foreign mills having wet pulp which resulted in better quality, economy of production and larger output, together with width of machines and various natural advantages—there he declared they had raised a very strong and important issue.

Mr. Swan, in his closing speech, referred first of all to the onus of proof which was thrown upon the applicants. Taking the question of the substantiality of the industry, all he would say about that was this: that there was in this case a somewhat novel feature that had not appeared in other cases under the Safeguarding Regulations, in that it was clear they were dealing with what was a raw material. There were undoubtedly a certain number of industries which were affected in the sense that they not only used the paper but used it for fabricating it into manufactures. The opposition had brought out to a marked degree the fact that the majority, at any rate, of the opponents were largely dependent upon the British manufacture of wrapping paper as well as the foreign importation of wrapping paper. It was to them a key industry; and not only was it a key industry to those particular consumers, but it was a key industry from a national point of view. In this connection, Mr. Swan referred to the evidence of Mr. Hall Caine as to the immense utility the wrapping mills were to the nation in time of war and as to the extent to which wrapping paper entered in the manufacture of munitions.

His case was that the whole front of the British wrapping paper business was attacked by the foreign article and that they had over the whole front direct competition within the meaning of the White Paper: there was competition between the foreign wrapping paper and the British wrapping paper and it was only price that determined which wrapping paper was adopted. He excepted the special uses to which reference had been made, but taking the generality of uses he thought that was the evidence.

Counsel went on to refer to the differences in hours and wages in this country and abroad and their relation to the prices of foreign paper. He added that the evidence in this case was that it was the German price that was controlling the market and holding down the Norwegian and Swedish prices.

Counsel then dealt with the effect of the duty on other industries and referred to the significance of the fact that the applicants had the support of Mr. Jackson, who came there as chairman of the manufacturing section of the Paper Bag Makers' Federation, representing practically all the bag makers, with few exceptions.

The Chairman observed that that closed their sittings, and on behalf of the committee he expressed sincere and grateful thanks to counsel for the help they had given in dealing with a complicated case. They were grateful also to counsel for the way they had kept the proceedings within bounds, while at the same time he hoped they had conducted an adequate inquiry.

The damage caused by the fire at the Bridge Paper Mills, Tovil, of Messrs. A. E. Reed and Co., is estimated at £20,000, the figure, however, being a moderate one.

TYPON
PAPER NEGATIVES

represent the perfect medium for black-white photo-reproduction work.

The blacks are of uniform density : the whites sharp and clear-cut. There is an entire absence of streaks, pin-holes, or any of the usual troubles.

The Typon Process does not call for exceptional treatment or highly skilled labour. No special equipment is required.

Typon material is inexpensive, sold in convenient quantities, and adds to the resources of the Litho and Planographic Printer while greatly reducing his working costs.

The Typon Catalogue, fully illustrating and describing the process, will be sent on request.

Bookbinders' Cottage Homes.

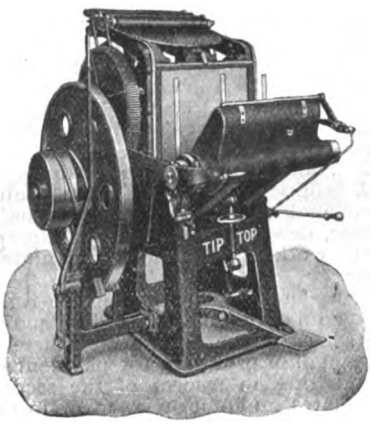
Flag Day and Concert.

Friday of last week was observed in many branches of the printing and allied trades in London as a flag day, held with the laudable object of raising much-needed funds for the Bookbinders' Cottage Homes and Pension Society. The event was also held in celebration of the 96th anniversary of the inception of the Society. The effort had the patronage of the Master Bookbinders' Association, the National Union of Printers, Bookbinders, Machine Rulers and Paper Workers, the London Society of Compositors, etc.

The selling of flags during the day was followed in the evening by a concert at the Memorial Hall, Farringdon-street, under the chairmanship of Sir George Wyatt Truscott, Bart. The seating accommodation of the historic hall was utilised to its utmost capacity, and of well-known representatives of both employers and employees connected with the industry there were present, amongst others, Messrs. J. G. Bain, Hedley Miller (secretary, Master Bookbinders' Association), W. A. Godin, J.P. (manager of the British Museum Bookbinding Department), H. F. Parker (secretary, Lloyd Memorial Home), Chris Atkins, Geo. Harroway (president of the National Union of Printers, Bookbinders, Machine Rulers and Paper Workers), S. Stubbings, E. W. Spackman and Geo. Knight (secretary of the Cottage Homes).

Address by Sir George Wyatt Truscott, Bart.

During an interval in the programme, Sir George Wyatt Truscott, in announcing the taking up of a collection, alluded to the inception in 1829 of the London Bookbinders' Society, which he believed to be the oldest trade union in the world. In those early days, he continued, a number of members of that Society met together and discussed the sad conditions of many of their aged fellow members, and came to the conclusion that it was possible to form a Society to provide pensions for their members in their old age. The members of that society made a donation of ten guineas towards this object, which was the first contribution received by the Bookbinders' Cottage Homes and Pension Society. Following this, meetings were held in which employers and employees took part, with the result that the Pension Society was fully formed in April, 1830. At that time, out of a total membership of 1,100 members of the bookbinding trade, over 600 (or 60 per cent.) became subscribers to the Pension Society. At the present time there were approximately 9,000 in the industry, but only about 2,000 subscribed for pensions, figures which meant that to-day only approximatery 20 per cent. subscribed, against the 60 per cent. in the more difficult times. The subscription in 1830 was 5s. per year, whilst at the present time it was 7s. 6d.



The reason for the deficiency in the funds of the Society at the present time was undoubtedly the change in the law with regard to the income-tax limit of old age pensioners. Previously their pensioners' allowances were modified to suit the Act as it then stood. Immediately the later Act came into force the pensioners were granted their increases to the full amounts, which meant that the Society had incurred an extra expenditure of about £700 since the Act came into force.

He regretted the fact that there were not more subscribers, both employers and employees, to the Society. He also felt very sorry to learn that many chapels had returned their flags. Though many of these chapels had expressed their sympathy with the movement, Sir George thought this was not enough. In concluding, he thought that probably many of those present had not had an opportunity of subscribing to the Society or of purchasing flags. At his request a box was then sent round the company, with the result that a sum of £16 1s. 1d. was collected.

On the proposition of Mr. J. G. Bain, a very hearty vote of thanks was accorded to the chairman, musical honours being given.

The concert, under the direction of Mr. J. R. England, was of excellent character, and artistes in every instance gave their services gratuitously. Amongst these were: Jack Auburn and Jose Ferrars, Joseph Charles, Nora Drake, W. J. Francis, John Hardaker, Charles Harrison, the Marlborough Singers, Mollie Mercer, Eric Mason, Mildred Parr, Edith Penville, Jack Richards and Violet Stevens, and Audrey Smith.

The "Tip-Top" Jobbing Platen

BUILT IN 4 SIZES.

Vertical bed and base in one piece.
Main shaft in split bearings.
Superior Inking Apparatus of latest type.
Platen in one piece.
Simple and efficient impression regulator.
Very handy impression throw-off.
Frisket fingers positively guided and movable.
Special cogwheel drive for roller-carriage.
Runner rails individually adjustable.
Throw-off of Inking Rollers and arrangement to obviate "flats."

Before you buy another Platen Machine investigate the "Tip-Top."

Investigation is insurance against regrets. You cannot be fair to yourself when choosing a new platen, unless you see the "Tip-Top" and the excellent work it turns out. Ask any "Tip-Top" owner for his opinion.

In this platen you will find economy without sacrifice of performance, low price without disappointment in efficiency or looks, great impressional strength without unnecessary weight, high speed, and the lowest upkeep cost, we believe, of any platen in the world.

Investigate the "Tip-Top." Have the demonstration to which you are entitled. It is the *one* way to prevent regrets and to save money.

Delivery from London Stock.

Trade Union Matters.

T.A. AND SHORT TIME.—The secretary of the Kendal branch of the Typographical Association has asked the officials at Manchester if members could be placed on short time without notice being given. The jobbing department at an office in that branch had to lose one and a-half hours a day, and some of the men had been told to take half a-day off without any warning. The Executive Council have discussed the matter, and have decided that any short time must be mutually arranged, but must not be systematic.

HOLIDAY POINT.—The Executive Council of the Typographical Association have had under consideration the claim of a member of the Bolton branch for two days' holiday pay from a firm in that branch. The secretary reported that the member was employed with the firm from August 1st to October 24th, 1924, and from October 31st to December 10th of that year. The Executive Council have informed the branch secretary that the member is entitled to only one day's pay.

THE secretary of the Bristol branch of the Typographical Association has written to the Executive Council stating that the branch committee had been given permission to purchase new premises for the purpose of branch headquarters at a cost of £1,400. The branch would advance £500 or £600, and the Executive Council were asked to provide the balance. The Executive Council have decided to advance £800 to the branch as a loan at a yearly interest of 4 per cent.

SHORT TIME WORKING AT SHEFFIELD.—The secretary of the Sheffield branch of the Typographical Association, has reported to the executive council that, following a notice to work systematic short time being posted by a local printing firm, he had interviewed the management on the subject. At first they declined to withdraw the notice, on the ground that the notice issued by the Typographical Association was not an agreement; but on the secretary pointing out that the instruction had to be carried out, the notice was withdrawn so far as Association members were concerned. Members of other societies continued to work short time. The executive council have since endorsed the action taken by the Sheffield secretary.

Book Trade Strike.

1,200 Workpeople Idle.

Strike notices tendered by the London branch of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers on behalf of its members who are packers and porters in the book publishing houses expired on Saturday, as a result of which some 1,200 workers are idle.

The reasons for this action are thus explained: Following a seven weeks' dispute in 1922 wages were reduced by 19s. 6d. per week. The union on September 31st last gave three months' notice to terminate this agreement, and has been pressing for a new agreement containing a 17s. 6d. increase. As the employers refused to discuss this at a recent meeting the strike was launched.

The Book Trade Employers' Federation states that the wages and hours of the men concerned are more favourable than those in other London trades engaged in similar work. The Federation adds:—"In May, 1919, when the Board of Trade cost of living stood at 105 per cent. over pre-war, packers' and porters' wages were agreed at £3 5s. and £3 2s. respectively. As the cost of living figures rose certain temporary bonuses were granted, and in April, 1922, although the cost of living figure had fallen to 82, wages were nevertheless stabilised at these rates until the end of 1923. The cost of living has now fallen still further to 76, but no reduction has been made, and no reduction has been asked for by the Federation."

For the union it is said that the strike notices were given because the employers challenged the right of the union to select its own representatives at the conference to discuss a new agreement, but this the employers deny.

Other branches of the printing industry view the dispute with grave concern.

Efforts have been made during the week to bring the parties together, but up to the time of going to press there was no change in the situation. Unless there is a speedy settlement, the Christmas book trade will be seriously jeopardised.

Greeting Card Pioneer.

MR. T. M. WOODHEAD, who has died at his residence at Baildon, near Bradford, at the age of 66 years, was the pioneer of the printing of private Christmas greeting cards in the North of England. When he first took up the work the trade was almost entirely in the hands of the Germans, and for a time he had to import the blank cards from the Continent and finish them in Bradford. His business developed to such an extent that in the year before the war he placed on the market no fewer than 17,500 pattern books of private Christmas cards. Mr. Woodhead also specialised in high-class general printing work, particularly in Masonic work. He retired from active work in 1919, and the business had since been carried on as "T. M. Woodhead's Successors." The funeral at Burley on Friday was attended by Mr. H. C. Derwent, general manager of the *Yorkshire Observer*; Mr. T. Geoghean, representing the Bradford Master Printers' Association; Mr. George G. Walker and Mr. G. D. Shand, directors of T. M. Woodhead's Successors; and a large gathering of Freemasons.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

FRANCE.

An old established firm in Bordeaux desire to secure the agency, on a commission basis, of British exporters of waste paper. (Reference No. 457).

CHINA.

A Chinese merchant in Shanghai is desirous of receiving samples and prices from British manufacturers of artificial silk piece-goods and cheap paper for news publication. (Reference No. 480).

Hutchinson and Co. (Publishers).

Hutchinson and Co. (Publishers), Ltd., was registered as a public company on October 30th, with a nominal capital of £500,000 in £1 shares (250,000 first preference, 120,000 second preference and 130,000 ordinary).

The objects are: To acquire the publishing businesses now being carried on by Sir Geo. T. Hutchinson and W. Hutchinson at 33-36, Paternoster-row, E.C., and elsewhere, as "Hutchinson and Co." and "Rider and Co., to acquire the whole of the issued share capital of Hurst and Blackett, Ltd., Skeffington and Son, Ltd., the Anchor Press, Ltd., Hill and Co. (Engravers), Ltd., the Hutchinson Paper Co., Ltd., Hutchinson's Publicity, Ltd., Geographia (1923), Ltd., and the Fleet Sales Service, Ltd., and to carry on the business of publishers, proprietors, editors, printers and producers of books, magazines, maps, journals, tracts, music, newspapers and other literary and artistic works, publications and undertakings, etc.

The first preference shares confer the right to a fixed cumulative preferential dividend of 7 per cent. per annum. In addition thereto, after payment of or provision for payment of all dividends due in respect of the second preference shares, and of a dividend of 10 per cent. on the ordinary shares, the holders of the first preference shares shall be entitled to 25 per cent. of the balance of profits which the directors decide to distribute in respect of such year, provided additional dividends payable in respect of the first preference shares in any year shall not exceed a dividend of 3 per cent. per annum. Subject thereto, the second preference shares confer the right to a fixed cumulative preferential dividend of 8½ per cent. per annum and rank as regards such dividend next after the first preference shares and in priority to all other shares. In a winding up the preference shares rank first for return of capital and payment of arrears of dividend, whether declared or not, up to the commencement of the winding up. Subject as aforesaid the second preference shares, in a winding up have priority to all other shares. The first and second preference shares do not confer any further right to profits or assets of the company. Minimum cash subscription: £7 shares.

The directors are: W. Hutchinson (chairman and managing director), 55, Pont-street, S.W.1; J. D. Beaven, Tiptree Hall, Tiptree, Essex; H. G. Brown, 1C, Mount-road, Wimbledon, S.W.; R. S. Horton, "Acryse," Station-road, Watford; C. H. Terry, 23, Kinggardens, St. John's Wood, N.W.; H. Wright, 131, Howarth-road, Plumstead, S.E. Qualification, £1,000 shares or stock. Remuneration £100 each per annum (chairman £150 extra) free of income tax.

Solicitors: Samuel Price Sons and Robertson, 3, Bond-court, Walbrook, E.C.4. The registered office is at 33-36, Paternoster-row, E.C.4. The file number is 209,350.

Announcement is made by Messrs. G. Haswell, Veitch and Co., Ltd., that the subscription list for the issue of 250,000 7 per cent. cumulative participating 1st preference shares of £1 each of Hutchinson and Co. (Publishers), Ltd., was closed within a few hours, the issue being over-subscribed. Applications received from the country by first post on Wednesday were to have consideration.

Trade Notes.

THE *Shoe Trades Journal*, one of the oldest trade newspapers, having been established in 1869, has been acquired from the proprietors, Messrs. Hodder and Stoughton, Ltd., by the *Shoe and Leather News*, with which it will be amalgamated as from November 26th.

MESSRS. VALENTINE AND SONS, the printing and publishing company of Dundee, propose to reduce their capital from £130,000 to £89,311 by cancelling 15s. per share capital on each of the issued 54,252 ordinary shares. These shares are then to be consolidated into £1 shares at the rate of four such reduced shares for one £1 share, and the capital of the company is to be re-increased by the creation of 40,689 ordinary £1 shares. The arrears of preference dividend up to December 31st, 1924, are to be cancelled, though the fixed cumulative preferential dividend is to be increased from 6 to 7½ per cent. per annum.

DISSOLUTION of partnership is announced in respect of the following: H. W. Darker and H. Pritchard, wholesale stationers, 13½, Lower Free lane, Leicester, under the style of the Darkonian Stationery Co.; J. W. Tyler and C. E. Whipps, paper merchants and paper bag manufacturers, at High-road, Chadwell Heath, Essex, under the style of Tyler and Whipps.

THE seventh annual dinner of the Herts Master Printers' Association will be held at the Holborn Restaurant on Wednesday, November 18th, at 7 o'clock. The chair will be taken by Mr. F. Dangerfield (of the Dangerfield Printing Co., Ltd.). Among those who have promised to attend are Mr. R. A. Austen-Leigh (past president of the London Alliance), Mr. H. H. Potts (president of the Home Counties' Alliance), Mr. P. D. Michael (secretary of the same) and others. It is hoped also that Mr. A. E. Goodwin, Federation secretary, will be present at this social function.

MR. JAMES SUNDERLAND, whose death, at the age of 71, took place on Saturday at Bradford, was well known in local printing circles as the principal of Messrs. Sunderland and Sons, of Leeds-road, Bradford.

MR. JOHN MURDOCH EBENEZER ROSS, Chester-terrace, Regent's Park, editor of the *British Weekly* since the retirement of Sir William Robertson Nicoll, left £10,092.

IN the course of an address on "Books from a printer's point of view," at the opening meeting of the new session of Edinburgh Typographia, Mr. R. Wilson, of Messrs. H. and J. Pillans and Wilson, the vice-president, said those engaged in the production of books should remember that it was an occupation which had had world-wide effects on humanity. Numerous Edinburgh firms had their imprints on books which were typographical masterpieces, such as the Saintsbury Edition of the works of John Dryden and the Edinburgh Edition of Stevenson. He had met an Edinburgh printer who used to relate that his father had been in the printing shop where Burns's poems were being printed, and had helped to set them up. Burns used to sit on a kind of three-legged stool revising his proofs and sipping strong ale. Tne founder of his own firm was a reader in Smellie's printing office in Edinburgh, and must also have read to Burns.

Personal.

The Prince of Wales has promised to attend the dinner to be given by the Government on Monday, February 15th, to celebrate the opening of the British Industries Fair. The dinner will afford the opportunity for a representative gathering of exhibitors at the Fair and of important buyers from abroad, to whom the Government will extend their hospitality.

Lord and Lady Riddell celebrated their silver wedding on Monday.

Viscount Burnham and Major Astor, at Perth, Australia, on Saturday, received honorary degrees from the Western Australian University, on the occasion of the opening of the first permanent building of that institution.

The Federal Premier, Mr. Bruce, delivered a farewell message to the Imperial Press Conference delegates on Saturday, stating that the conference had been of the greatest importance to Australia and the Empire.

Viscount Burnham replied on behalf of the delegation, expressing warm appreciation of the hospitality shown throughout the tour.

Sir George W. Truscott, Sir J. Baddeley, Sir William Waterlow, and Sir Vansittart Bowater, M.P., were amongst those attending the magnificent Mayoral Ball at the Mansion House on Thursday, when a large number of the country's Lord Mayors and Mayors, Lord Provosts and Provosts were the guests of the Lord Mayor and Lady Mayoress of London.

Alderman Sir George Truscott will preside at the annual meeting of the Police Court Mission at 3 p.m. to-day (Thursday), at the Mansion House.

Sir James Owen, ex-president of the Newspaper Society, has been co-opted a member of the Council of the University College of the South-West of England.

Mr. Kenneth Gatey, B.A., M.C., who is a director and secretary of the *Western Times* Co., Ltd., is to be sheriff of the city of Exeter for the forthcoming year. Mr. Gatey married the only daughter of Sir James Owen, J.P., managing director of the *Express and Echo* and *Western Times*.

Mr. E. W. Seymour, one of the partners of W. H. Smith and Son, and great grandson of the first W. H. Smith, was presented with a wedding gift of period silver at the annual staff dinner at Holborn Restaurant on Saturday.

He is to marry Miss Barbara Lascelles, a cousin of Viscount Lascelles, on November 18th.

Mr. A. E. Goodwin, secretary of the Federation of Master Printers, is back in England after his American tour. He arrived by the "Berengaria" yesterday.

Mr. John Taylor, president of the Manchester Printing Crafts Guild, lectured at Conway last week to the Carnarvonshire and West Denbighshire Master Printers' Association, taking as his subject, "Printing that Pays"

Mr. H. B. Naylor gave a very instructive address on "The Printer at Work" at a meeting of the South-West London Master Printers' Association on Tuesday night at Clapham Junction. A large number of employees attended, and took part in an interesting discussion.

Mr. T. W. Sanders (editor of *Amateur Gardening*) gave an interesting lecture, with the lantern, at the monthly meeting of the Printing, Bookbinding and Kindred Trades Overseers' Association on Tuesday at St Bride Institute. The title of Mr. Sanders' lecture was the "Garden Beautiful."

Members of the Association just mentioned will learn with interest of the latest recruit to the order of Boniface in Mr. W. T. Lingham, who has been an active member of the Association for many years. Mr. Lingham, who hopes still to take a warm interest in the Association, is now "mine host" of the "Penshurst Arms," South Hackney, E.9.

Mr. Frank Colebrook is to speak at the Derby Technical College on the 20th inst.

Mr. A. J. Gyngell is to lecture to the Manchester and District Centre of the Printers' Managers and Overseers' Association on the 14th inst. "The Possibilities of Letterpress Offset Printing" will be the interesting title of his lecture, which will be delivered at the Mitre Hotel, Cathedral Gate.

Lieut.-Col. E. F. Lawson presided on Tuesday evening at the annual festival dinner of the Newsvendors' Benevolent and Provident Institution, which was attended by many people prominent in the world of newspaper and periodical production.

Mr. H. W. Bennett, of the *Gloucestershire Echo*, Cheltenham, has been elected president of the Midland Federation of Newspaper Owners, with Mr. C. F. Leake, of the *Wellington Journal*, vice-president.

Mr. H. G. Clarke, of the *Leamington Spa Courier* and associated papers, has been elected president of the Staffordshire and Warwickshire Newspaper Society in succession to Mr. Charles P. Roberts, of the *Walsall Observer*.

TENDERS.

METROPOLITAN ASYLUMS BOARD.

TENDERS are INVITED for (i) PRINTING the Board's Annual Report (3 years), and (ii) LITHOGRAPHING Notification Extracts and Cash Paper (2 years).

Tender forms, returnable by 10 a.m., 24th November, 1925. may be obtained from the Clerk to the Board, Embankment, E.C.4.

G. A. POWELL,
Clerk to the Board.

To PHOTOGRAPHERS, PRINTERS, Etc.

SALE by Tender of the Effects of LOCAL VIEWS LIMITED, consisting of about 12,000 Negatives of Towns throughout England with proofs, 25,000 Printed Post Cards of some 35 Towns, etc., 500,000 View Post Cards in various styles of some 50 Towns, etc., Unexecuted Contracts for the supply of Post Cards, Photographic Apparatus, etc.

A Royal Example.

THERE is little doubt that the increasing vogue of the Christmas card owes no small amount of its impetus to the example which, year after year, is set by the King, Queen and Royal Family. At about this time of the year facsimiles of the Christmas cards chosen by Royalty are circulated to the Press, and the public is thus reminded not only of the approach of the Christmas card season but also of the approval given by our Royal House to a good old custom that does much to foster good will and to maintain friendships. The handsome Christmas cards which Messrs. Raphael Tuck and Sons, Ltd., are accustomed to produce for the Royal House come thus as a reminder and an example not only to this country but also to the Empire, and do much to lead a vast public to the expressing of kindly feelings through the medium of the art of the printer.

* * *

Wrapping Inquiry.

AFTER occupying eleven days spread over four weeks, the Wrapping Paper Inquiry conducted by a Board of Trade Safeguarding Committee concluded its sittings last week. It has been a long and exhaustive affair, but throughout a very creditable spirit of fairness has marked the proceedings. An immense amount of data had been collected in connection with the investigation, and to this the members of the Committee and the parties on all sides have had to give very close and critical attention. Nothing could have been better than the example set by the chairman (Sir John Brunyate). He was obviously anxious that the Inquiry should be thorough; but all the same he had a careful eye to economy of time, and to the need for speeding up the proceedings. Counsel for the four parties served their clients well and made full use of their opportunities, so that whatever may be the outcome, no sting is left behind. All concerned will go back to the manufacture and the selling of wrapping papers with a better understanding of the difficulties and the opportunities presented by the market in this country.

* * *

An Essential Product.

WHILE there will be no indication for some time as to the course the Committee will recommend, the Inquiry has been productive of much good already. It has directed attention to a very valuable, indeed an essential, product of the paper mills. Undoubtedly there has failed to grow up a proper respect for the ordinary varieties of paper, and perhaps of wrapping paper in particular. Yet the service it renders and the skill and cost which enter into its manufacture are very great indeed much more than the lay mind as yet understands.

Copyright in Designs.

Serious Question for Printers.

At the recent quarterly meeting of the Council of the Federation of Master Printers a case was brought forward which raises the important matter of safeguarding property in designs prepared by a printer for submission to customers.

In this case an artist had drawn a design in colours for a cut out which had been accepted by a firm for advertising, and the order had been executed by a printer. A year later the printer had seen a similar design which he had not printed and he had taken an action against the firm. Apparently there had not been sufficiently strong witnesses on the printer's side to prove that the drawing was an artistic work that came under the Copyright Act, and the judge had given his decision that it was a design that should have been registered under the Patents and Designs Act. The printer had lost his case because he had not registered the drawing.

A committee of members interested in such questions had been called and the advice of solicitors had been given. They had stated that an appeal would not be successful because the judge had given a decision on a question of fact—that it was a design and not an artistic work—and had suggested three courses: (1) That a test case should be fought with the object of obtaining a different decision: (2) that steps be taken to get the law altered; and (3) that printers should be advised to register every design they submitted to their customers.

Counsel's opinion had also been obtained, and he had recommended that a report should be secured from one of the highest authorities on copyright. In the meantime printers were recommended, in submitting designs to customers, to state "This design is submitted in confidence." That would protect the copyright, provided the design was registered under the Patents and Designs Act in its finished form before it was actually sold. The special committee had recommended that steps be taken to obtain the opinion mentioned, and the Finance Committee had approved of certain expenditure being incurred for this purpose. It was recommended that representatives of firms who formed the special committee should continue to act, and that certain other names should be added.

The meeting agreed that the precedure outlined be followed, and the following were appointed to form the Committee:—

A representative of Messrs. David Allen and Sons, Ltd., Sir Joseph Causton and Sons, Ltd., A. W. Ford and Co., Ltd., Thos. Forman and Sons, Hill, Stiffken and Co, Ltd., Johnson, Riddle and Co., Ltd., Langley and Sons, Ltd., Nathaniel Lloyd and Co., Johnson, Wykes and Paine, Ltd., Bemrose and Sons, Ltd., Alf. Cooke, Ltd., Hudson, Scott and Sons, Ltd., Fletcher and Son, Ltd., the Ceramic Printers' Association, and the Manchester Ticket Printers.

Master Printers of W. & N.W. London.

Printing Exhibition and Competition.

Last Thursday's meeting of the Association of Master Printers of West and North-West London was devoted to the Association's third annual exhibition of printing and craftsmen's competition. Once again the event proved to be most interesting and instructive. The venture was well supported by specimens of work, and the lecture hall of Westbourne Park Institute was filled to overflowing, the audience consisting of many employees of printing firms in the neighbourhood as well as of employer members of the Association. The principal speakers of the evening were Mr. George Eaton Hart and Mr. H. B. Naylor, whilst amongst others present were Messrs. H. W. Searle (president), W. H. Leveridge (vice-president), J. R. Burt and P. G. Crannis (joint hon. secs), A. Langley (past president, L.M.P.A.), W. Whyte (secretary, L.M.P.A.), J. Emlyn Jones, R. F. Hunger, E. W. Wormald, S. Sidders, S. Heron, S. Goss, A. T. Philp, F. Scarbrook, W. S. Pollock and J. Johnson (organiser, L.M.P.A.).

Prior to the meeting proper, light refreshments were dispensed by Miss Emlyn Jones and Mrs. Addison (daughters of Mr. J. Emlyn Jones) and the Misses Woollston.

A Good Show of Work.

There was ample opportunity also to inspect exhibits showing a very fine range of work done by local printers. Cards, leaflets, brochures, finely printed books, pictures by various processes including beautiful colour work, posters—these were all comprised in the exhibits ranged around the hall, and they constituted a very representative display of high-class modern printing. The firms contributing specimens were the following: Messrs. Morton, Burt and Sons, Ltd., Langley and Sons, Ltd., R. F. Hunger, F. Tebay and Son, Baines and Scarsbrook, Ltd., S. Sidders and Son, Ltd, Westminster Press, E. T. Heron and Co., Ltd., Hunt Barnard and Co., Ltd., Leveridge and Co., H. W. Searle, and H. Philp and Sons.

Entries for the craftsmen's competition formed a further interesting series of exhibits, the successful items being indicated by notices attached. The classes in this competition and the first and second prize-winners in each class are given herewith.

Competition Results.

In the Journeymens' Section the results were as follows:—

Composing.—1. A bazaar or fête announcement (size of paper not to exceed demy 4to. and to be printed in not more than two workings): A. Jones, 1st; R. J. Garratt, 2nd. 2. Double crown poster (printed in not more than two workings): G. F. Murphy, 1st; W. J. Farden, 2nd. 3. Ticket, size large court, 5 by 4 (printed in two workings): A. Jones, 1st; J. Stanner, 2nd. Draft particulars, from which competitors in each division were to prepare their "copy," were furnished, and each competitor was required to provide his own lay-out and colour scheme, compose his forme and make selection of paper used.

Machining.—1. A letterpress forme (in one printing not to exceed quad crown in size; if page matter, to be backed up): Awards postponed. 2. A half-tone forme (in black ink only): J. W. Waddington, 1st; O. J. Britton, 2nd. 3. A three or four-colour process forme of one or more blocks: T. Mayfield, 1st; A. F. Robbins, 2nd. 4. Poster in two workings not to exceed quad crown in size: F. A. Bowser, 1st; J. W. Robinson, 2nd. No copy was provided in this section, and the formes used were left to the competitor's selection, the idea being that any suitable work executed in the ordinary course of business might be drawn upon. The work might be printed on any description of machine, the description of machine used being notified with the work.

A first prize of £1 and a second prize of 10s. were offered in each of the above seven classes.

In the Apprentices' Section the results were as follows:—

Composing.—1. Series of suite stationery consisting of (a) letter heading 4to., (b) invoice 6mo. or 4to., (c) statement 8vo.: C. Edwards, 1st; G. Storck, 2nd; all in two workings (first prize, 15s.; second prize, 10s.). 2. Business card in one working, not to exceed large in size: H. Shelvey, 1st; H. Sumpter, 2nd; (first prize, 7s. 6d.; second prize, 5s.). Copy, lap-out and colours of paper and inks used in each case to be of competitor's selection.

Machining.—1. Letterpress forme in one colour: One entry only, and so no competition. 2. Half tone block in black ink: W. Howe, 1st; A. Mutton, 2nd. In both cases not to exceed demy folio in size and be executed on a platen machine (first prize, 10s.; second prize, 5s. in each class).

In addition to the money prizes mentioned, a certificate descriptive of the award was offered to each successful competitor.

The hall was open from 6 p.m. for inspection of the Exhibition, and it was not until 7 o'clock that speaking commenced, the chair being occupied by Mr. Searle, who was accompanied on the platform by Messrs. George Eaton Hart, H. B. Naylor, J. R. Burt and P. G. Crannis.

The Speeches.

Mr. Searle, after welcoming the large number of persons present, announced that Mr. W. T. Welfare (controller of printing to Messrs. W. H. Smith and Sons) who had acted as adjudicator in the competition, was unable to be present but had sent a few notes on the competition results. These Mr. Searle proceeded to read, indicating that there were 70 entries of employees, representing 13 firms. Eleven of these firms were represented in the prize list which comprised 18 prizes. The speaker added that 19 juniors had entered the competition, and that the work of all, young and old, was excellent.

Mr. J. R. Burt conveyed apologies for absence on the part of Mr. W. Howard Hazell, Mr. MauriceClowes, and Mr. J. R. Riddell. He made fitting references to the past services of Mr. George Eaton Hart and Mr. H. B. Naylor, and expressed his pleasure at their presence on the platform that evening.

Mr. Hart was then called upon to speak and delivered a stimulating address which was very appreciatively received. We have taken the liberty of printing on another page in modified form the substance of this address. At its conclusion Mr. Hart expressed a very high opinion of the work shown in the Exhibition, and referred with special satisfaction to the high quality shown in the examples submitted by apprentices. He also mentioned that he had brought for inspection two volumes of the International Specimen Exchange of about forty years ago, in which were specimens which he had himself contributed.

Mr. H. B. Naylor followed, his address being largely occupied with an instructive series of comments on points previously raised and on the specimens displayed around the room. He had some helpful things to say upon the choice of types, and the need for enterprise in the letterpress field in order that it might withstand the advances of more modern processes, and once again he was very happy in his remarks upon the principles of display as suggested in the exhibited work.

The meeting was next thrown open for questions and discussion, and then came a short speech from the chairman in which he addressed himself particularly to the young people present.

The prize-winners in the competition were announced by Mr. Crannis and the prizes were distributed by Mr. Hart, the recipients being warmly applauded.

A vote of thanks to the speakers and the chairman was carried with enthusiasm on the proposition of Mr. H. A. Beale (The Polytechnic, Regent street), seconded by Mr. Alfred Langley, after which Messrs. Hart and Naylor briefly responded.

A verdict of "Accidental death" was returned by the Birmingham City Coroner (Mr. Isaac Bradley) at an inquest at the Victoria Law Courts recently, relative to the death of John Clifford Smith, 42, a master printer, of The Neuk, Little Aston. Mr. Smith, while motor cyling in the evening to his business in Birmingham on September 25th, collided with a pedal cyclist, Eric Freeman, 18, Warwick Cottage, Newton-road, Great Barr, and died from fracture of the skull in the General Hospital.

The American Miehle Company's Presses

Relativity.

ALL movement is relative—by the installation of an American Miehle Company's Vertical Job Press the printer unquestionably makes progress relatively.

The Printer who has not yet installed the Vertical equally unquestionably has retrogressed relatively to his more up-to-date Competitor.

The Vertical waits in our Showroom for your call—come and investigate.

DIVIDENDS AND REPORTS.

GEORGE NEWNES.—An interim dividend of 6 per cent. has been declared on the ordinary shares in respect of the year to March 31st, 1926, payable November 19th. This compares with 7½ per cent. a year ago, but the present distribution is being made on both the old shares and the bonus shares recently allotted in the proportion of one bonus share for every two old shares then held.

THOMAS OWEN AND CO., paper manufacturers, have declared interim dividend at rate of 10 per cent. per annum on ordinary shares and 6 per cent. per annum on preference shares. (Last year's interim same.)

NEW COMPANIES.

READING, LORD AND BLANDY, LTD.—Capital £5,000, in £1 shares (2,500 7½ per cent. cumulative preference and 2,500 ordinary); to acquire (1) the business of a printer, publisher and bookseller now carried on by F. Reading at Kingston-on-Thames, as "Reading and Son," and (2) the similar business now carried on by Agnes E. Lord and J. Blandy at Kingston-on-Thomas, as "Lord and Blandy." Private company. Directors: F. Reading, J. Blandy and F. B. Reading. Registered office: 74, Eden-street, Kingston-on-Thames, Surrey.

A. V. HUCKLE AND SON, LTD.—Capital £4,000, in £1 shares (1,000 6 per cent. cumulative preference and 3,000 ordinary); printers, photographic printers, photo and chromo lithographers, engravers, designers, draughtsmen, etc. Private company. Directors: A. V. Huckle, W. Roles and R. W. Baddeley.

C. SPURLING AND CO., LTD.—Capital £3,000, in £1 shares (2,000 ordinary and 1,000 7½ per cent. cumulative preference); printers, bookbinders, account book manufacturers, publishers, cardboard and tin box manufacturers, manufacturing, wholesale and retail stationers, booksellers, etc. Private company. Directors: C. Spurling, W. R. Jennings, F. C. Hughes and W. H. Bowyer. Registered office: 1, Bartlett's-passage, Fetter-lane, E.C.4.

WOOTTONS (CASEMAKERS), LTD.—Capital £6,000, in £1 shares (2,500 ordinary and 3,500 5 per cent. preference); manufacturers of jewellery, plate and other cases, window fittings, and cardboard and leather boxes, stationers, etc. Private company. First directors: S. C. Wootton and A. W. Wootton Registered office: 26, Rosebery-avenue, E.C.1.

NORMAN ADLARD ARD CO, LTD.—Capital £1,500, in £1 shares; stationers, printers, lithographers, engravers, die-sinkers, envelope manufacturers, paper bag and account book makers, box makers, etc. Private company. Directors: H. M. Barnes and A. H. Smith. Registered office: 15A, Crown street, Ipswich.

LEETHEMS (IRELAND), LTD.—Capital £10,000, in £1 shares; general merchants and manufacturers, box manufacturers, printers, etc. Private company. Subscribers: John Thomas Rowland and Charles Harold Reynolds.

BRIDEWELL PRINTING AND PUBLISHING CO., LTD.—Capital £100, in £1 shares; printers, publishers, newspaper proprietors and advertising agents, etc. Private company. First directors: P. Baxter and Elizabeth Baxter. Registered office: 8, Bridewell-place, E.C.

KAY'S CODE CO., LTD.—Capital £4,000, in £1 shares; to acquire the right, title and interest in and to the manuscript in "The Kaytex Code" belonging to Max M. Kay, and to carry on the business of printers, publishers, stationers and booksellers, etc. Private company. First directors: M. M. Kay and E. Taylor. Solicitors: Edwin Almond and Sons, 16, Kennedy-street, Manchester.

MERVILLE PRESS, LTD.—Capital £100, in 1s. shares; to acquire that part of the business of H. A. McLaren and Co., Ltd., previously carried on by them as directors of modern progress at Finsbury-pavement, E.C., as "The Merville Press, Ltd.," and to carry on the business of printers and publishers, etc. Private company. Directors: R. W. Perring and Mrs. Aline M. M. Perring. Registered office: 812, High-road, Tottenham, N.

ALDERS PAPER MILLS, LTD. — Capital £50,000, in £1 shares (25,000 preference and 25,000 ordinary); to acquire the business carried on at Alders Paper Mills, Tamworth, Staffs, and all or any of the assets and liabilities of that business in connection therewith, and to carry on the business of manufacturers of paper, pulp of all kinds, and other like substances, paper mill owners, manufacturers of and dealers in card, straw and millboards, paper mache, bags, cases, tubes, envelopes and all other articles made of or from paper pulp or other like substances, stationers, printers, etc. Private company. Subscribers: G. R. Fitzroy Ford, and R. E. Wheeldon. Solicitors: James Turner and Son, Dunedin House, Basinghall-street, E.C.2.

LONDON AND COUNTIES EXCHANGE, LTD.—Capital £10,000, in 9,500 per cent. non-cumulative preference shares of £1 and 10,000 ordinary shares of 1s.; general financiers, advertising contractors, printers, publishers, etc. Private company. Subscribers: E. J. Straker and W. J. Hunter. Solicitors: W. J. Hunter, Norfolk House, Norfolk-street, Strand, W.C.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

PAGE AND PRATT, LTD. (printers and stationers, etc., London).—Issue on October 19th, 1925, of £900 debentures, part of a series already registered.

CHANCERY PRINTING AND STATIONERY CO., LTD.—Particulars filed of £4,000 debentures authorised September 1st, 1925, charged on the company's undertaking and property, present and future, including uncalled capital; the whole amount being now issued.

HUDSON AND MORRISON, LTD. (colour and general printers, etc., London).—Debenture dated October 23rd, 1925, to secure £6,000, charged on the company's undertaking and property, present and future, including uncalled capital. Holders: J. H. Cooper and G. E. B. Bromley-Martin, 68, Lombard-street, E.C.3.

HILL AND AINSWORTH, LTD. (printers, manufacturing stationers, etc., Stoke-on-Trent and Henley).—Satisfaction to the extent of £300 on November 26th, 1924, and to the extent of £200 on January 1st, 1925, of debentures dated March 24th, 1922, securing £5,000.

HUNT PARTNERS, LTD. (manufacturers of cardboard boxes, printers, etc., London).—Satisfaction in full on September 30th, 1925, of charge dated July 26th, 1920, securing all moneys due or to become due from the company to the London Joint City and Midland Bank, Ltd.

PAVITT AND BARTLETT, LTD. (paper, twine, cord and packing material merchants, etc., Kings Langley).—Issue on October 16th, 1925, of £500 debentures, part of a series already registered.

RACECOURSE PUBLISHING CO., LTD. (Leeds).—Particulars filed of £3,000 debentures authorised October 16th, 1925, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

RECEIVER APPOINTED OR RELEASED

LOCAL VIEWS, LTD. (printers, etc., London).—E. W. Gundry, of 7, Great Winchester-street, E.C., chartered accountant, was appointed receiver on October 15th, 1925, under powers contained in debentures dated May 22nd, 1923.

C. MONTFORD AND SONS, LTD. (box manufacturers, stationers, printers, South Tottenham).—J. S. B. Hole, of Monument House, E.C.3, ceased to act as receiver or manager on June 12th, 1925.

GLADSTONE TAYLOR AND CO., LTD. (advertising agents, etc., London).—H. D. Sprague, of 61-2, Chancery-lane, W.C.2, ceased to act as receiver or manager on October 5th, 1925.

WALTER H. ROGERS AND CO., LTD. (old company) (wholesale paper merchants, etc., London).—E. C. Funnell, of 43, Bedford-row, W.C.1, ceased to act as receiver or manager on August 31st, 1925.

BANKRUPTCIES.

Re BEAN, WEBLEY AND CO., LTD., printers, 233 and 235, Long-lane, Bermondsey, S.E.—Mr. G. D. Pepys, the official receiver, has issued to the creditors and shareholders his report upon the history and failure of this company, against which a compulsory winding-up order was made in October, 1924, upon the petition of creditors. The accounts filed under the liquidation show total liabilities £15,370, of which £12,225 is expected to rank for dividend, against net assets valued at £29,892, or sufficient to provide a surplus of £17,666 after payment of all debts. The account with the contributories discloses a deficiency of £14,339, the issued capital consisting of 15,007 ordinary and 17,000 preference shares of £1 each. An outline of the history of the company appeared in our issue of December 4th, last year. As a result of the statutory meetings of creditors and contributories held on November 27th, 1924, Mr. A. Granville White, F.C.A., of 14, Old Jewry Chambers, London, E.C.2, was appointed liquidator of the company, with a committee of inspection. The business has been carried on by the liquidator, with the intention that it should be sold as a going concern, and the important asset of goodwill realised. The liquidator reports that he has entered into an arrangement to sell the goodwill for the sum of £1,800 as from September 30th, 1925. The purchaser is to take over the stock at cost, the work in progress at 10 per cent. over cost, and certain of the machinery at valuation. The liquidator is to realise the remaining plant and machinery and other assets, and to collect outstanding book debts. The liquidator states that while he cannot at present estimate the distribution to creditors, they should receive a very substantial dividend.

"KRAUSE" MACHINERY. — Some well produced publicity literature reaches us from Messrs. Karl Krause, of Leipzig. It includes an illustrated folder, giving full details of the "Record" high-speed guillotine, together with leaflets providing illustrated particulars of various cutting and punching machines, lithographic press and blocking and embossing press.

Country News.

Ipswich.

MR. CHARLES E. BENHAM, of Colchester, is giving an interesting lantern lecture to the printers' associations in various centres of the East Anglian Alliance—Ipswich, Cambridge and Norwich—on "Some Old Customs of the Printing Trade." The first of these was given at Ipswich School of Arts and Crafts on Wednesday of last week, and was well attended. The chair was taken by Mr. F. S. Deyns-Page, of Norwich, president of the East Anglian Alliance. The lecture recalled the quaint customs of the "Chapel" in times past, and showed the strong religious associations of the printing industry as originally founded. The ceremonies presided over by the father of the chapel were detailed in a graphic manner, and the impositions of "solaces," "for the good of the chapel," "benvenue," andother obso lete terms were dealt with and explained. The influences of these old customs in maintaining the high tone of the printing trade in times past were pointed out, and it was contended by the lecturer that though they were for the most part obsolete it was beneficial to keep in touch with such reminiscences of the glorious past of printing.

Bury.

AT Bury (Lancashire) a charge is made for the use of the ambulance for removal cases (not for accidents), the charge being 2s. 6d. within the borough to 15s. for removals to Manchester Infirmary, and the local branch of the National Union of Bookbinding, Printing, Machine Rulers and Paper Workers have protested against this, and at a meeting of the Bury Trades and Labour Council last week a resolution was received from them strongly protesting against the system in operation of the town council charging for the use of the motor ambulance as being mean and not worthy of a town like Bury, and calling for an immediate cessation of the charges for the use of that very necessary vehicle for journeys inside the borough, and in necessitous cases that no charge be made for its use in conveying burgesses of the town outside the borough. A long discussion ensued, the feeling of the members of the Trades Council being that a public need of that description ought to be maintained entirely out of the rates and that the lives of the townspeople were in comparison more important than art galleries and libraries for which money was found. It was unanimously resolved that the secretary of the Trades Council forward a letter to the Town Council protesting against the charges laid down for the use of that necessary vehicle.

Leeds.

THE Leeds School of Art has been awarded the gold medal of the Decorative Arts Exhibition at Paris for technical instruction in papermaking.

Oxford.

A GOOD deal of heart-searching is going on among certain Oxford printers at the advent of the Morris Printing Co. which has recently been formed, mainly to undertake the printing of the *Morris Owner*. The more pessimistic fear that when its gets into its stride it will absorb a good deal of jobbing work which Morris Motors, Ltd, have hitherto been having done locally. Be this as it may, the building and the plant are to be worthy of the work to be done. A fine three-storey building, excellently lighted, has been set aside for the works, and already monotypes are casting the display type for the *Morris Owner* advertisements. It is not anticipated, however, that work will begin for some months yet.

Dewsbury.

TRADE generally in the heavy woollen district is very quiet. As the printers have to rely on the cloth manufacturers for orders it naturally follows that very few orders are being placed for stationery. Whereas business houses in the past ordered envelopes and note paper in large quantities, the orders are coming in for very small quantities. Bazaars, shopping weeks and entertainment printing are the orders that printers have to rely on. Heads of business houses in this district anticipate a good boom in trade in the near future. Printers are not working overtime, but generally speaking, they are working full time.

Rochdale.

ON Saturday last the Rochdale and District Printing Crafts Guild held a very successful whist drive and dance in the large hall of the Provident Hall, Lord-street, Rochdale. There were excellent whist and dance prizes, and music was provided by the Guild orchestra.

Blackpool.

THE *Blackpool Gazette and Herald* have made arrangements with Messrs. J. Foster and Sons, of London and Preston, to convert the existing two-roll high-speed rotary press, which has been in use for two years, into a four-roll press with two folders. When this is completed the full capacity of the plant will exceed 100,000 copies per hour.

St. Albans.

THE St. Albans Committee, in connection with the Printers' Pension, Almshouse and Orphan Corporation, are holding a concert to assist the beneficent work of the fund at St. Peter's Institute, St. Albans, on Thursday, November 12th. The chairman will be Mr. H. S. Gibbs, of Messrs. Gibbs and Bamforth, Ltd., supported by other influential citizens and printers.

Plymouth.

SYDNEY CHARLES FREDERICK CLARKE, managing director of Clarke, Doble and Co., Ltd., manufacturing stationers and paper bag makers, Penrose street, Plymouth, and of the Eagle Paper Bag Co., Sutton Wharf, North Quay, Plymouth, and John Wesley Hunkin, secretary of the two companies, made two appearances before the Plymouth magistrates last week to answer charges brought by the Ministry of Labour. These related to the alleged non-payment to eight women and girl employees of some £60 balance of wages due under the minimum rates laid down by the Trade Board, and they were also charged with issuing eight alleged forged receipts purporting to show payment to the employees in question of the respective sums owing. After a hearing which extended throughout two full days the magistrates adjourned the case until November 16th, intimating their intention on that occasion to commit the defendants for trial at the next Devon Assizes. In the case of Clarke bail was fixed in his personal recognizance of £100 and two sureties of £50 each, Hunkin's bail being half that of his principal.

South Wales.

THE October meeting of the Cardiff Master Printers' Association took the usual form of a luncheon gathering, and was well attended. The Alliance secretary reported upon the business that took place at the recent meeting of the Federation Council, and the many interesting points brought out quite a lot of questions, and much useful information given by the several members that took part in the discussion that followed. Tentative arrangements for a joint conference with the employees to discuss the question of apprentices and young people were confirmed, and the date for the conference fixed for November 4th. This conference was to be held in Cardiff and all the master printers of the town were invited to attend. An invitation was also sent to every master printers' association in South Wales for each to send representatives. All trade unions catering for printing employees having members in South Wales have been invited to send their full local committees or accredited delegates, and according to replies received, this conference promised to be a large and important gathering. The chair was to be taken by Mr. A. E. Harrison, president of the Cardiff Master Printers' Association, supported by Mr. H. Pegler, president of the South Wales and Monmouth Master Printers' Alliance, and Mr. Robert J. Webber, vice-president of the Newspaper Society, while on the trade union side there were to be present Mr. J. D. French, president of the Typographical Society; Mr. E. W. Spackman, (Printing Section secretary of the National Union of Printing, Bookbinding and Paper Workers), and several district secretaries or organisers of other unions.

Dublin.

MR. T. J. W. KENNY, of the *Connaught Tribune*, Galway, has been presented by the members of the Irish Master Printers' Association and the Associated Irish Newspapers with a Chesterfield and two armchairs on the occasion of his marriage. The presentation was made by Mr. T. F. McGahon, president of the Associated Irish Newspapers, who said the original establishment of the two Associations was due to Mr. Kenny's inspiration and tireless work. Mr. O'Haulan also spoke, and Mr. Kenny briefly replied.

FRANK F. PERSHKE, LTD.

THE
AUTOMATIC
PLANO
CYLINDER

is a machine which combines strength of construction, beauty of design and excellence of materials and workmanship.

It will print a sheet 9½" x 12" at a speed up to 2,500 impressions per hour.

It will print thin note-paper or thick card equally well. The finest three or four colour printing leaves the machine as perfect as letter headings or invoice forms.

A special feature of the machine is an attachment by which circulars can be completely printed—the heading from type and the body of the letter through a ribbon at one operation.

Let us quote you.

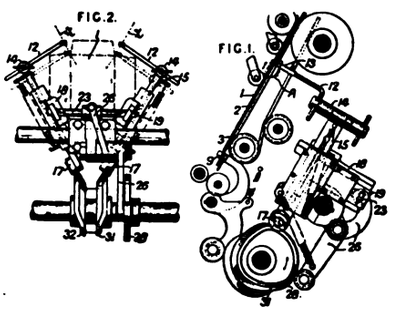
New Inventions

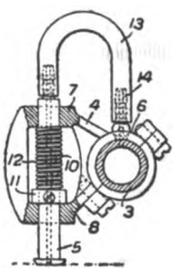
Embossed Printing.



Dies for embossed printing are the subject of an invention patented by Mr. W. J. Ellis. They are produced by providing both sides of a sheet of paper with registering impressions, coating the impressions with powdered resinous or other self-

hardening material, and then heating to cause the resin to swell up and harden. Several such sheets may be superposed to obtain the desired elevation of design, and a female die to co-operate therewith is provided by impressing the die into a soft or pliable substance placed or coated on a block which will harden after receiving the impression. An imprint of the type, &c., is first made, as indicated at 11', Fig. 3, on the bed 11 of a press which carries the usual gauges, so that an imprint on the upper face of a sheet of paper laid on the bed against the gauges will register exactly with that on the bed below the sheet. The imprint on the bed is transferred to the lower face of the sheet at the same time as the upper face is printed. Dusting the impressions with resin and then heating results in a sheet 10 with raised designs 14, 15 on each side, as shown in Fig. 8. The complete die, shown in Fig. 9, comprises three of these sheets 16, 17, 18 with their raised parts 19, 20 superposed.

Envelope Making.



The Smithe Machine Co., Inc., have patented an appliance whereby an envelope blank 1 is fed by a belt 2 beneath folding-blades 3 and against adjustable stops 9. Fingers 12, adjustably mounted in holders 14, are given a movement in the planes *s* by means of the cams 31, 32, which engage rollers 17 on the lower ends of sliding members 15 carrying the holders 14. The members 15 are provided with slides 19 capable of translational movement in guides

18, and are actuated by a cam 28 and lever 26 to move the tips 13 of the fingers 12 into the plane of the blank 1 on the downward movement and out of the plane on the upward movement, as at A, Fig. 1. A bar 23 connects the lever 26 with the guides 19. The blank is thus centred and registered beneath the folding-blades 3.

Sheet Separators.

A suction separating device for feeding sheets to printing and like machines of the kind in which a number of nozzles 5 are carried by a suction tube 3 which is moved to and from the top of a pile of sheets and is displaced longitudinally to carry the separated sheets to the machine, is constructed so that the nozzles 5 can move in a direction perpendicular to the pile independently of the movement of the tube 3

in this direction. To this end, the nozzles 5 are guided by sleeves 7, 8 on frames 4 secured in position at one side of the tube 3 by means of clamps 6, and the nozzles 5 are normally projected below the sleeve 8 by springs 12 acting on the sleeves 7 and on rings 11 secured to pipes 10 carrying the nozzles. When the tube 3 is moved towards the pile, the nozzles 5 which engage the highest parts of an uneven pile move into the frames 4 until finally all the nozzles engage the pile. The pipes 10 are connected by tubes 13 to nozzles 14 on the tube 3, these nozzles being fitted with cocks for controlling the air pressure. The invention is in the name of the Aktiebolaget Dux.

THERE were two fatal accidents in the paper, printing, etc., group of trades during September and two cases of lead poisoning in the printing.

THE FUTURE OF SOUTH AFRICA

THE strong development and progress shown by South Africa, even during the recent depression, indicates in no uncertain fashion the measure of prosperity that country will enjoy in more normal times.

The trade outlook for the Union of South Africa in 1926 is extremely encouraging at the present moment, and the attitude of all in that wonderful country from the Premier down to the smallest Printer - is one of well-founded optimism.

Supply houses catering to the Allied Trades anxious to develop the South African market will be sent a post-free copy of

THE SOUTH AFRICAN PRINTER AND STATIONER

the only Journal printed in South Africa catering to the Printing Trade. Issued monthly.

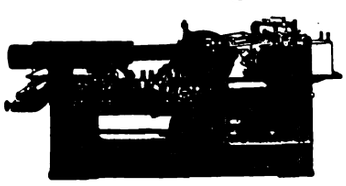
The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

TRADE is maintaining its slightly improved level, and that is just about all that can be said of it at the moment. Some fair orders have been passed along to the esparto mills, and, with the exception of the newsprint section, this would seem to be the busiest side of the industry. Some of the better known Scottish mills are not only on full time with full staffs, but are also booked up well ahead. Others are managing to keep all their machinery in motion by working hand to mouth style. Price cutting is sometimes heard of; and although there is a lot to be said for finding profitless work to keep the mill going, it is a very desperate policy to adopt.

* * *

FREE wood mills are still having to face heavy foreign competition, but in the main they are holding their own. Tenders have been submitted by a number of mills for the Indian Government contract, which comprises a range of papers of miscellaneous nature, varying from imitation kraft to light weight bank. The Indian mills themselves are formidable competitors in this inquiry, and there is no class of paper included in the contract which they cannot make and make well. Paper manufacture in India is a progressive industry, despite obvious natural handicaps. The organisation is good, the practical heads are selected from our own front-rankers, and the managements are enterprising. There are about ten comparatively large mills in India with an approximate output of 25,000 tons, and existing plants are continually being extended and improved.



ENGLISH papermakers will lose nothing by closely observing the methods adopted by manufacturers elsewhere to push their products. American methods are not ours; in some ways they are not so reliable; in others they are more progressive; but whether we like to admit it or not, we are following them in their standards of advertising, even if we are to a large extent maintaining, or rather cultivating, a style of our own. Papermakers in the States make greater use of their trade journals as the base for their publicity. They take a greater amount of space and make better use of it than we do. Where the English advertiser ties himself to rather hackneyed phraseology, the American advertiser draws up forceful, telling and interesting copy which is usually very cleverly compiled. The whole object of advertising paper is naturally to make new customers and sell more to existing clients. Where the average English advertiser contents himself with name, grade, dimensions, and weight and price, his U.S.A. contemporary finds cogent reasons and appealing characteristics of a positive nature. But it is in the use of photo and pictorial effect that American papermakers excel; and perhaps it is in this direction that we have still to make our greatest progress.

* * *

A CLASS of paper which is sold in large quantity to printers and stationers is that known in the trade as Swedish bank. The prototype is "Borregaard," a nice white crisp paper very much appreciated by the user. There are other Swedish banks not nearly so good, and there are a great many other grades brought in from Finland, Belgium and Germany to be sold as "foreign banks" at anything from an eighth to a halfpenny per lbs less than the prototype. Time was when the English user was almost prejudiced in favour of foreign bank, which to the uninformed mind was almost synonymous with Swedish bank. English mills were not then producing a remarkably good sheet of bank at competitive prices, first, because they were working off unsuitable material, and, secondly, because costs were too high and runs too low. Within the last two years English banks, referring particularly to cream woves, have reached a high standard of excellence at competitive prices. Present-day qualities, from the mills that have specialised in this grade, are ahead of foreign makes. The only serious rival is the finest Swedish bank, and even here we are able to offer a price advantage. If we are to offer a candid and helpful criticism, it would be that there will be no English market for even the best Swedish grade when our home mills introduce a slight increase in hardness and whiteness. We have a price advantage now which will help us to do this, and meantime the more the everyday buyer knows of the advantage to be gained by using banks made by English mills the less business will he place to the advantage of the Continental maker.

MILLINGTON AND SHELDRICK, LTD., Manchester, manufacturers of paper coils, gummed paper, etc., have joined the Federation of British Industries.

The Making of Skilled Workers.

A Unique Meeting in South Wales Discusses Education and Welfare of Apprentices.

Far-reaching proposals were discussed at a joint conference held in Cardiff on Wednesday of last week affecting the education and training of apprentices in the printing and allied trades.

This joint conference was the outcome of an invitation that had been sent out by the Cardiff Master Printers' Association to all its members, the executive committee of the South Wales and Monmouthshire Master Printers' Alliance, and representatives of all the Master Printers' Associations in the area, on the employers' side, and the South Wales group executive committee of the Typographical Association, the full Cardiff committee of the T.A., the committees of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers' Unions, the Amalgamated Society of Lithographers, the National Society of Operative Printers and Assistants, the National Society of Electrotypers and Stereotypers and the National Union of Journalists, together with representatives of these unions from wherever they had branches in South Wales.

Industrial Leaders Present.

A unique and representative gathering took place. Mr. A. E. Harrison, president of the Cardiff Master Printers' Association, occupied the chair, and he was supported by Mr. Harold Pegler, president of the South Wales and Monmouthshire Master Printers' Alliance, Mr. Robt. J. Webber, vice president of the Newspaper Society, Mr. Douglas Duncan, Newspaper Society representative on the apprenticeship committee of the J.I.C., Mr. J. D. French, president of the Typographical Society and chairman of the apprenticeship committee of the J.I.C., Mr. E. W. Spackman, printing section secretary of the Printing and Paper Workers' Union, and Mr. W. J. Britton, South Wales district organiser of the Binders and Paper Workers' Union.

Need for Skilled Craftsmen.

The object of the meeting was to discuss the question of improving, co ordinating and encouraging the education and training of apprentices and young people, and in opening the discussion, the chairman, Mr. A. E. Harrison, said that what was wanted so far as the employers required, was a sufficient number of youths of the right kind to carry on the printing trade in its present state of efficiency and to improve the quality of print as commerce demanded. In the past the apprentice had been "nobody's child" and when he finished his time he was often not worth the wage the trade union demanded he should be paid. To produce a skilled man needed years of careful training both in the shops and in technical schools. The responsibility for this training rested jointly upon the employer who engaged the apprentice and upon the craftsman by whose side the lad would be working in the shop. It behoved all who were in the printing trade to see that they got the best type of lad, to care for him during his apprenticeship period and give him the best possible training that he might follow on in the footsteps of the skilled and clever craftsmen who had gone before and who were at the present time turning out work equal to that of any country in the world. He would ask Mr. French to explain the scheme that had been formulated by the apprenticeship committee of the Joint Industrial Council of the Printing Trade, he would ask all those present to give it their earnest consideration and later on would ask if it were possible for all the trade unions in the district to put the scheme into operation in conjunction with the employers' association.

A Scheme Explained.

Mr. French on rising was received with applause and said that according to his knowledge this was the first joint meeting that had been arranged to look into the details of the Joint Industrial Council's scheme for apprentices. After giving a short history of the "Whitley" movement in industrial organisation and the part played by the printing trade in fostering the "Whitley" spirit, Mr. French said that the printing industry's body of that kind, one consisting of half employers and half employees, the Joint Industrial Council, had agreed upon such a scheme as he thought was the first in the field as regards apprentices, and the forerunner of many that would eventually be evolved for other trades.

Local Committees to Operate It.

The printing J.I.C. scheme provided for district committees of employers and employees, which should interview youths wishing to enter the trade, and decide whether they were mentally, physically and educationally fitted for the trade. Having approved of the lad, they could bind him to an employer on the understanding that proper training was to be given him. There were hundreds of shops in the Kingdom where lads would get such training as would fit them to follow in the footsteps of craftsmen of to-day and continue the good work, but unfortunately there were many shops where training facilities for lads were sadly lacking. These joint local committees were instituted for the protection and in the interest of the lad, and incidentally the trade as a whole would considerably benefit by the care thus given for the wellare of the youth who was to be the operative of the future.

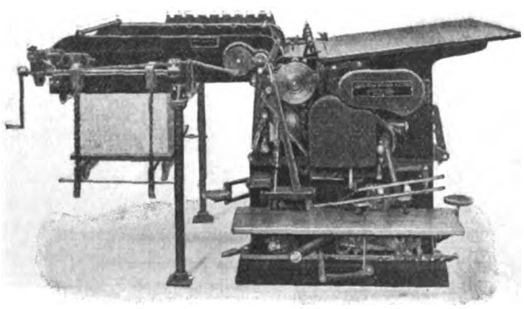
Travelling Teachers for Scattered Areas.

With reference to technical training, the main object of the apprenticeship committee was to recommend at the appointed time that where it was not possible for boys to attend training centres, teachers should take the training to them; in other words, the trade should provide travelling tutors, and by means of the screen, demonstrations and lectures make it possible for the lads to learn facts about their trade outside the knowledge that could be obtained in the establishments where they were at work. Giving them this hint as to what was in the minds of the apprenticeship committee, he was letting them into a secret of some inner knowledge, as only the day before the committee had been exploring the possibilities of such a scheme. They did not know themselves yet how far they could go, but it gave his hearers an idea of what the committee wanted, and how such a body was helping the trade.

The Semi-Skilled.

Whilst building up this scheme for apprentices to the craft side of the industry, they also had to bear in mind the needs of the thousands of semi-skilled workers, and desired to take care that they were not a party to "blind alley occupations." The committee had not lost sight of these young people, and he could assure his hearers they had every sympathy for them and they were having consideration.

Obligations of Employers.



Mr. H. Pegler, president of the South Wales and Monmouthshire Master Printers' Alliance, spoke on the necessity of every employer taking his full quota of apprentices as arranged with the trade unions, and of the apprentices getting the personal attention and interest of the employer himself in the work he was doing. He said the printing industry was an artistic calling, not a second-rate trade, and he hoped the craftsmen of the future would be even better than those of the past.

The Women Workers.

Mr. E. W. Spackman, of the Printing and Paper Workers' Union, described the scheme as "organising the needs of the industry so that sufficient lads and lasses would be brought into it, at the same time safeguarding it from being flooded." He appealed for proper training for those who are wrongly termed "unskilled" workers, and urged that the committee would press on with its plans for dealing with this class.

Mr. W. J. Britton, of Bristol, spoke of the women workers of the trade, and deprecated

Head Office: 9 KINGSWAY, LONDON, W.C.2

those employers who made use of girls up to the age of about eighteen and, when it was necessary to pay them bigger wages, dismissed them and took on younger girls. Not all women, he said, married, and some made their work in printing shops their occupation for life, and, of necessity, their wherewithal to live. These women while young were entitled to full training, and it was to the interest of the trade to see that they got that training. He, too, urged that the committee should treat the matter as of utmost importance.

A Larger Quota Needed.

Mr. Robert J Webber, joint managing director of the *Western Mail*, emphasised the importance of careful attention to the training of lads. The newspaper trade, he said, and printing generally wanted highly skilled men. There were good posts open for them and there was no reason why skilled craftsmen should not go to the top of the tree. Many of the bigger houses and establishments had wonderful facilities for the full training of apprentices, and he urged the trade unions to encourage the training in such shops by allowing more apprentices to be taken than were at present provided for.

Much Interest Shown.

There were several interesting comments from the body of the hall and many questions were asked, much interest being shown in the project of the scheme. We understand that it is to be put to the several branches of the trade unions of the area and further joint meetings called to discuss working details.

Mr. Douglas Duncan, of the *South Wales News*, in proposing a vote of thanks to the visitors and speakers, said the meeting would put new life and blood into the printing trade in South Wales. He prophesied that when the scheme was developed there would be so many benefits from it that, looking back at that evening's meeting, those who were present would feel proud that they were among the pioneers of the movement and wish they had had two pair of hands to hold up to vote for it.

A vote of thanks to the chairman brought an interesting and unique meeting to a close.

Designs in Paper.

The object of an invention by Dr. Ernest Fues is to improve the process whereby highly effective designs in paper or other substances to be produced can be obtained. The substances added to the paper pulp or to the sheet of paper in the course of its formation—such as particles of paper chips, celluloid, etc.—are subjected to a chemical and/or physical preliminary treatment which will change their appearance in a characteristic way, before they are combined with the paper to be produced. The particles of paper, etc., may be previously mercerised, parchmentised, viscosized or subjected to other similar treatment, and may be combined with the paper pulp or the sheet of paper (if desired by mixing several of the substances which have undergone various preliminary treatments). The particles becoming embedded in the paper pulp in layers or in a different degree of depth appear in various forms and positions, producing a variety of effects and designs. The manufacture of security paper is referred to owing to the difficulty of imitation.

TRADES OVERSEERS' ASSOCIATION.

November General Meeting.

Following the members' smoker, which took place last month as a preliminary to the winter's work, the above Association resumed its monthly meetings in very earnest fashion on Tuesday of last week. There was a very good muster of the members and the chair was occupied by Mr. J. Fleming (president), supported by Mr. A. G. Aves (vice president). An outstanding feature of the evening's proceedings was a lantern lecture by Mr. T. W. Sanders, editor of *Amateur Gardening*, who took as the title of his address: "The Garden Beautiful." Mr. Sanders, who has just reached his 70th birthday, has devoted his whole life to the study of both the practical and artistic sides of gardening; he dealt with his subject in a manner which could not but inspire his hearers to give more attention to the improvement and cultivation of their gardens.

Following the reading of the September minutes, which were duly approved, the meeting proceeded to the election of the following two gentlemen to membership: Messrs. T. C. Green (warehouse overseer, Victoria House Printing Co.) and H. J. Brautigan (overseer, ruling department, Waterlow and Sons, Dunstable).

The correspondence submitted included letters from the following: Messrs. T. Hill, J. Tanner, G. A. Eden and W. Bullett (secretary of the Electrotypers and Stereotypers Managers and Overseers Association), the last-mentioned letter containing an invitation for a representative of the Association to be present at the Stereotypers' Overseers annual dinner on November 14th.

Consideration was next given to the Association's annual bohemian concert and ladies' night to be held at the Talbot Restaurant, London-wall, on November 28th. The stewards appointed for this event were Messrs. G. R. Bembridge and W. F. Cribb.

A Question of Amalgamation.

The next business on the agenda was the consideration of a matter that has been agitating the minds of the members for some time, namely, the proposal to amalgamate with the London Printing Machine Overseers' Benevolent Association.

Expressions of opinion were freely made by several members regarding this matter, and generally speaking an amalgamation was not viewed with much favour.

Both the secretary and the president stated that the matter had been before the executive, who had discussed it in all its details.

A resolution was eventually carried to the effect that the members did not think it advisable at the present time to consider the question of amalgamation with the London Printing Machine Overseers' Benevolent Association, but threw out an invitation to its members—if elegible—to join the Bookbinders' Overseers Association.

The Lecture.

Mr. Sanders, who was next called upon for his lecture, spoke first of the debt editors and others owed to gentlemen he was addressing for the efficient and rapid distribution of the printed word. Mr. Sanders then went on to deal fully with the various aspects of gardening, which he described as the "oldest profession on earth," being in existence even before the days of printing. After dealing with the subject as it appealed to people in different stages of history—the flower decorations and scheme of design being vividly shown on the screen—Mr. Sanders emphasised the importance of children taking an interest in the cultivation of gardens and flowers.

At the conclusion of the lecture Mr. Fleming, in proposing a vote of thanks to Mr. Sanders, congratulated him on behalf of the Association upon his reaching his 70th birthday. He was sure that, were it not for flowers and music, life would be an entirely different thing. The lecture he believed had been a real treat to the members.

The vote of thanks was very enthusiastically accorded, and a brief reply from Mr. Sanders brought the meeting to a close.

IMPORTS of paper and paper products into France during the first six months of the current year have been on a level with the two preceding years, the total receipts up to the end of June reaching 73,643 metric tons, compared with 71,807 metric tons in 1924.

British India Customs.

Customs Ruling (No. 14 of 1925), issued by the Central Board of Revenue of the Government of India, states that in the current Tariff Valuation Schedule, under the general head "Packing and wrapping paper," there occur among others two sub-heads: (1) "Nature brown, and machine-glazed pressings and machine glazed wrappings," and (2) "Other sorts, including tissues." There is a tariff valuation for the first sub-head, whereas paper falling under the second of these sub-heads is assessable *ad valorem*.

The question is under which of these two-sub-heads machine-glazed coloured tissue paper intended for wrapping should be assessed. The Central Board of Revenue is satisfied that as a trade term the word "wrappings" ordinarily covers coarse strong papers, and that when the Tariff Valuation Schedule was drawn up it was intended that the expression "machine glazed wrappings" should refer to such coarse papers, since it was used in the same sub-head as the expression "nature brown."

The Board therefore holds that the paper now in question cannot be assessed at the tariff valuation fixed for "nature brown and machine glazed pressings, and machine-glazed wrappings," but must be assessed *ad valorem* as a "tissue paper," whether the value so assessed is higher or lower than the tariff valuation of "nature brown," etc.

MESSRS. LINOTYPE AND MACHINERY LIMITED have recently issued a neat booklet, "A Few Pages about Modern Linotypes and their Flexibility." Containing illustrations and descriptions of five styles of modern Linotypes, this serves well to give an inquirer an idea of the scope of the Linotype, and to enable him to choose the model best suited to his requirements. Beautifully printed in Grandjon Old Face type, the booklet incidentally demonstrates the dignified and effective character of this new Linotype series.

Trade Notes.

HUTCHINSON AND CO. (PUBLISHERS).—It is announced that letters of allotment in connection with the recent issue of 250,000 7 per cent. cumulative participating first preference shares of £1 each at par in Hutchinson and Co. (Publishers), Ltd., have been posted. Only applicants for 25 to 100 shares received allotment in full, and other applications were in most cases allotted less than 50 per cent., while large applications received from 25 per cent. to 50 per cent. of the number of shares applied for.

ALLIED NEWSPAPERS.—Arrangements have been made to issue £1,000,000 5½ per cent. debenture stock of Allied Newspapers, Ltd., which will bear interest at 5½ per cent. per annum, redeemable by a 2½ per cent. cumulative sinking fund at 101 (service to begin immediately), or at the company's option by further additional drawings at 102½. The debenture stock has been sold to Messrs. Myers and Co., the company's brokers, and has been placed privately by them. There will be no offer of sale to the public. The proceeds of this debenture stock will extinguish the bank loan, the balance of approximately £300,000 having been found by the company out of its liquid resources.

EDWIN THOMAS AND CO., LTD. (in voluntary liquidation).—For participation in a first dividend creditors are requested to lodge their claims by the 21st inst. The liquidator is Mr. J. E. Ward, 52, Bedford-square, W.C.1.

PENNY POST.—The Postmaster-General (Sir Wm. Mitchell-Thomson), speaking on the demand for penny postage at the annual meeting of the Rowland Hill Memorial and Benevolent Fund at the Mansion House on Tuesday, said he could assure those present that it was the hope of the Chancellor of the Exchequer, the hope of the Postmaster-General and the hope of the Government that within its lifetime the state of national finances would allow them to achieve that reform. More than that he could not say.

PENSIONS FESTIVAL.—Next Tuesday, Nov. 17th, is the date of the annual festival of the Printers' Pension Corporation, at which a special appeal will be made by the Earl of Birkenhead for the 850 war orpans who are still dependent upon the Corporation.

LITHOGRAPHERS' AUXILIARY.—An attractive musical programme has been arranged for the concert which is to take place on Monday next, November 16th, at the Cannon street Hotel, under the auspices of the Lithographers' Auxiliary to the Printers' Pension Corporation. The very excellent array of artistes include Mr. Robert Easton (bass), Mr. Leonard Lovesey (tenor), Mr. Jock Walker (humorist), and Mr. Joseph Bull (operatic banjoist), whilst the musical arrangements are again in the capable hands of Mr. W. Herring. The chair on this occasion is to be occupied by the Auxiliary president, Mr. Sidney Lamert (chairman of Messrs. De la Rue and Co., Ltd.).

AT the London and Brighton Hotel, Peckham, on Saturday evening, the South London Caxton Musical Society opened their thirty-fourth season of concerts in aid of the Caxton Home, Limpsfield, when Mr. J. T. Portas (imperial father), *Daily Telegraph*, occupied the chair, supported by other representatives of the companionship. The "plate" was announced at £21 and included a generous donation of £10 from Viscount Burnham. The society are devoting the proceeds of the concerts to the fund for the erection of the erection of the west wing to the Home.

NEWSPAPER VAN SEIZURE.—At a meeting of the Council of the Newspaper Proprietors' Association, held this week, reference was made to the recent seizure of a *Daily Herald* van containing newspapers. The following resolution was unanimously adopted:—"That in the public interest as well as in the interest of the newspaper trade, the Council of the Newspaper Proprietors' Association, representing all the London morning, evening and Sunday newspapers, strongly deprecates and condemns any interference by illegal means with the printing, publication and distribution of newspapers." Copies have been sent to the Premier and the Home Secretary.

MR. J. LONG, of Thurles, editor and proprietor of the *Tipperary Star*, died suddenly in an hotel in Clonmel after attending a meeting of the South Tipperary Committee of Agriculture.

MR. THOMAS ARDEN, 62, a well-known Lincolnshire journalist, died on Saturday. He was chief reporter on the *Lincolnshire Echo*,

MR. THOMAS CANNING BAILY, who died at Plymouth last week from heart failure following an operation at the age of 71, was a well-known figure in that town, where he had been for many years a prominent journalist.

THE death of Mr. Edward Webster, a well-known North Lancashire journalist, occurred on Friday night at the residence of his father, 148, Whalley New road, Blackburn.

MR. T. H. PRESTON, proprietor of the Brantford (Ontario) *Expositor*, who represented the Canadian Press at the King's Durbar in India, has died suddenly.

A MEMORIAL service for the late Mr. Peter Anderson Graham, who for 23 years was editor of *Country Life*, was held at St. Martin-in-the Fields on Monday, when many well-known journalists were present.

THE late Mr. George William Lockwood, Hale, Cheshire, printer and stationer, left £8,524.

THE late Mr. George Alfred Horsburgh Douglas, Rutherglen, Glasgow, stationer, left £8,457.

THE late Mr. Wm. B. Knapman, 79, of Southport, lately a director of the Star Paper Mill Co., Ltd., left £22,902 (net personalty £21,776).

THE late Mr. Albert Kay, of the Elms, Tottington road, Bury, Lancs, managing director of Olives Paper Mill Co., Ltd., left £9,606 (net personalty £8,065).

THE card of invitation to the Lord Mayor's banquet was this year produced by Messrs. Daniel Greenaway and Sons, Camomile-street, E.C.3.

A GREAT stir has been caused in Jugo-Slavia through a raid by Italian Fascists on the offices of the Slovene paper *Edinost*..

IMPORTS of paper and paper articles into Lithuania in June represented 565 6 thou lits and exports of paper pulp to 865 2 thou lits.

Trade Union Matters.

THE report of the Leeds branch of the Typographical Association for the quarter ended September 30th states that there was a considerable improvement in the matter of employment, especially towards the close. The quarter opened with 21 members unemployed, and this number gradually increased until the maximum of 30 was reached in the fifth week. Then the turn came, and unemployed members were absorbed until only three members were signing the book, the quarter closing with five requiring work.

T.A. AND DUBLIN ASSOCIATION.—The secretary of the Dublin Typographical Society, in reply to a request from the Typographical Association for an arrangement for the mutual recognition of working cards at all times, has replied that his committee is of opinion that the present arrangement of accepting cards only when there are no local men to fill the vacancies is quite satisfactory. The Typographical Association have replied that unless such an embargo is removed, cards of members of the Dublin Society will not be recognised in the area of the Typographical Association.

HOURS ARRANGEMENT AT PORTSMOUTH.—With reference to the arrangement under the recent agreement for a half-day off per week for day newspaper workers, the secretary of the Portsmouth branch of the T.A. has written to the executive council of the Typographical Association stating that at one office it was proposed that eight hours per day should be worked for six days a week at ordinary rates, and that four hours' overtime should be worked, four members having the half-holiday each day. The executive council have sanctioned the arrangement until it is altered by mutual agreement, in which case there should be no working after 6 o'clock unless at overtime rates.

IN view of the increasing number of new books which they have published relating to the business and commercial world, the McGraw-Hill Publishing Co. have found it necessary to issue a new edition of their sectional catalogue respecting such books.

Country News.

Barnstaple.

THE printing business of Messrs. S. Harper and Sons, of Barnstaple, has been transferred to Mr. Charles Cann, late foreman. Mr. Cann is the secretary of the local branch of the Typographical Association, and at one time was chairman of the branch.

Bodmin.

ON the unanimous invitation of the Bodmin Town Council Mr. A. Browning Lyne, ex-Mayor of the borough, has agreed to go back into the Mayoral chair. Mr. Lyne was Mayor of Bodmin in 1911-12 and in 1923-24. This will therefore be his third year in the office. He is the proprietor of the series of newspapers which he founded about 25 years ago. In his profession he shares in its corporate activities and for some years has been a member of the Council of the Newspaper Society, and is a past president of the South-Western Federation of Newspaper Owners of which he at present acts as hon. secretary.

Bradford.

THE funeral of the late Mr. James Sunderland, head of the firm of Messrs. James Sunderland and Sons, printers, Bradford, took place at Undercliffe Cemetery, and was attended by the following representatives of the Bradford and District Master Printers' Association:—Messrs. H. Gaskarth, F. Treweek, H. C. Derwent, S. Leach, Arthur W. Field, J. R. Foulds, H. J. Gledhill, J. P. Parker, T. Geoghegan and E. B. Rawlinson. The wreaths included tributes from the Master Printers' Association and the employees of the firm.

Glasgow.

MR. ALEXANDER T. DOWNIE, well known in journalistic circles in Glasgow, died at his residence, 28, Florida street, Mount Florida, on Friday night. He had been in failing health for some time. A native of Greenock, Mr. Downie went to Glasgow on receiving an appointment on the *Evening News*. He afterwards joined the staff of the *Glasgow Herald*, on which he served for 24 years. The lines in which he specialised were rifle shooting and yachting.

Leeds.

LEEDS UNIVERSITY APPEAL FUND.—Additional subscriptions to the £500,000 Extension Fund of the University of Leeds include:—Messrs. Alf Cooke, Ltd., colour and general printers, Leeds, £2,000; the *Dewsbury Reporter*, £50; Mr. A. Grime, general manager of the *Yorkshire Post*, £25; and Mr. R. R. Whittaker, editor of the *Yorkshire Evening Post*, £25. Thirty-two Yorkshire newspapers are combining in a ballot competition in aid of the Fund, in which £2,000 in cash and other valuable prizes are provided. The whole of the proceeds will be handed over to the Fund.

Nottingham.

MR. HARRY OVERERD, of the engineering staff of the *Nottingham Journal* and associated papers, has been presented with a dinner service, a card table, and other gifts, on the occasion of his marriage. The gifts were handed over by Mr. W. Raymond Derwent, the managing editor, at a gathering of the staffs. Mr. Overerd is the son of the late Mr. Samuel Overerd, for many years on the staff of the *Nottingham Journal*.

South Wales.

SEVERAL printers were among the candidates for municipal honours in South Wales, three of whom were elected to seats on their respective bodies. Mr. Walter Spurrell, of the well known printing house of Carmarthen, who after 20 years of service on the Town Council, sought re election, and was again successful. In Cardiff Mr. W. H. Parker, proprietor of the Imperial Printing Co., was returned unopposed; and in Swansea Mr. D. T. Beaven, manager of the Swansea Printers, Ltd., standing in the Labour interest, was successful in his ward.

WE regret to record the death of Mr. D. J. Thomas, printer, of New road, Skewen, Glamorgan, which took place on November 3rd with tragic suddeness. Mr. Thomas, a native of Llanelly, Carmarthenshire, went to Skewen some sixteen years ago and has for a number of years been carrying on a printing business in Skewen where he was well known and greatly respected.

London Central Districts M.P.A.

Developments of Offset Printing.

There was a large and representative gathering of printers and others interested in technical developments of printing machinery and processes at the monthly meeting of the London Central Districts Master Printers' Association at Stationers' Hall on Wednesday last week, under the chairmanship of Mr R. A. Austen-Leigh (president). The gathering included many representatives of leading lithographic houses, and amongst those present were: Messrs. R. B. Simnett (vice president, L.M.P.A.), J. Geddes (Caslon's), R. B. Fishenden (Stephenson, Blake and Co.), F. J. Connolly, J. J. Huber (Typon and Typary), J. W. Garner (Amalgamated Press), W. J. Boyle (secretary, Central London M.P.A.), W. Whyte (secretary, L.M.P.A.), J. Johnson (organiser, L.M.P.A.).

The lecturer was Mr. S. E. Bottomley, F.R.P.S., principal of the Printing Department, City of Leeds Technical School, who took as his subject "Developments of Offset Printing." In its researches in the realm of scientific development regarding different aspects of the printing industry this technical institution—which is an affiliated school of the University of Leeds—has always been conducted along what may be described as quiet lines, whilst those connected with it have shown little disposition for their names to be brought prominently before the trade. For this reason the address by Mr. Bottomley is all the more acceptable at the present time, especially when the question of photo-litho offset is so much to the fore.

Mr. Bottomley illustrated his lecture by a number of lantern slides, which showed conclusively the possibility of three-colour photography and also indicated that there was no question that, given a thorough understanding of principles and an accurate knowledge of the manipulations and instruments available, three-colour photo lithographic offset work can be performed satisfactorily.

A large number of scientific instruments and specimens of offset printing were on view from the following firms: Messrs. George Falkner and Sons, Manchester; Stott Bros., Halifax; Government of India; Commercial Press, Shanghai; Charles and Read; W. W. Sprague and Co.; Geo. Philip and Son; Jas. Truscott and Son; Wass Pritchard and Co.; Pictorial Machinery; Blades, East and Blades; Smith, Val Rosa and Co.; Vincent Brooks, Day and Son; David Allen and Sons; John Swain and Son; Ashley Press; Amalgamated Press; Suttley and Silverlock; Chas. Whittingham and Griggs; Waddington Ltd.; Clifton Studio; Kodak Ltd.; Sanger Shepherd.

Amongst the various kinds of apparatus shown were a Sheringham Daylight Lamp—kindly lent by the Sheringham Daylight Lamp Co.—and an Eastman Colorimeter, which were referred to by the lecturer as excellent instruments for measuring and comparing colour values.

Mr. Austen-Leigh, in introducing the lecturer, referred to the distinctions which the City of Leeds can claim as a printing centure.

Mr. Bottomley's lecture—which we hope to report more fully in our lithographic issue next week—emphasised the need for the complete breaking down of the barriers which separate one branch of the industry from another. As a matter of fact the outstanding feature of his address was the co relation of the various sections of the trade and the absolute understanding and accuracy that was necessary in the manipulation of the processes involved. He believed that, rightly understood, offset printing should be a weapon in the hands of the British printing industry, which would enable it to compete economically with the rest of the world.

In the early part of his lecture Mr. Bottomley referred to the technical difficulties encountered many years ago in the printing of textiles. Such difficulties were overcome by ruthlessly scrapping worn-out traditional methods and adopting accurate and up to-date scientific operations. By these means the industry had progressed by leaps and bounds and to day held a paramount position in the world's markets. Similarly, the printing industry, especially on the lithographic side, must drop its traditional methods and adopt new principles and ideas. Much theoretical and practical information on offset printing was given and interesting future possibilities were indicated. Some excellent specimens were shown illustrating the points brought forward.

In proposing a vote of thanks to the lecturer, Mr. Austen-Leigh said the fact that Mr. Bottomley had held the close attention of his audience for an hour and a-half on a highly involved and technical subject, indicated that he had proved himself to be a complete master and expert of his subject.

Mr. J. Geddes recounted experiences gathered from a visit to America, which bore out many of the advantages referred to by the lecturer regarding the closer cohesion amongst the different branches of the industry.

Mr. J. W. Garner, in seconding the vote of thanks, referred to the valuabie message Mr. Bottomley had given them relating to the scrapping of haphazard methods when dealing with a highly intricate subject such as offset printing.

S.-W. London Master Printers.

A Successful Experiment.

A particularly interesting and useful meeting was held on Tuesday, November 3rd, under the auspices of the South West London Master Printers' Association. Mr. H. B. Naylor once more laid the Association under a debt of gratitude by coming forward to give a practical talk, not only to master printers, but to their employees as well. A large number, representative of both sides of the craft attended, and the meeting was one of the most successful which had been held under the auspices of this branch Association.

Mr. R. B. Simnett, president, was in the chair. He described it as a rather unique gathering, and in extending a welcome to co-workers in a great industry he observed that it was only by working together that they could make their industry still greater, both for themselves individually and for the trade as a whole. There were many things in life that they could do without, but no man, whatever his position, could do without printing. Therefore it behoved every one of them to co-operate in making it as perfect and as beautiful a craft as was possible. He appealed to each one present to help on the good work of making typography an art rather than a craft.

The Printer at Work.

Mr. Naylor then proceeded to demonstrate in a very practical manner "The Printer at Work." In an introductory remark concerning the prospect of other methods taking the place of letterpress, Mr. Naylor observed that so long as they could prove letterpress to be one of the finest forms of book printing, so long would it be with them.

The lecturer then dealt with four practical phases of printing office work, each illustrated by his own drawings done on the spot or by specimens. His first demonstration had reference to a simple method of casting off, showing how many pages of 10-point leaded type would occupy compared with 8-point solid.

Mr. Naylor's second phase concerned space values, in the course of which he showed the effect of a judicious use of borders and observed that if the printer was to err at all he should err on the side of giving too much space.

Mr. Naylor then went on to give some useful hints concerning the ordering of blocks, making a sketch in the presence of the audience of a diagram to illustrate a simple method of arriving at the height of a block where the width of the original is required to be reduced to a given size.

The last of Mr. Naylor's four points dealt with press advertisements, of which he exhibited a number of samples, offering criticisms of each.

Proceeding to say a word to the employees, Mr. Naylor urged them to cultivate an interest in their work and a desire to improve. They were sometimes apt to look upon the employers as men on top. That was not so. They had evidence of it that night, because they were sitting down with them.

There was a time a few years ago, said Mr. Naylor, when work was not quite so difficult to obtain as it was to-day. They had now returned to the age of competition, but whilst healthy competition was good it was not good business to deliberately cut prices, because then it became, not a matter of competition and inside service, but of cutting throats, and in the end work was turned out either at rock-bottom prices or at a loss. Healthy competition, on the other hand, developed character, and it was up to printers to make it a good character, one that would retain the confidence of a customer and at the same time earn the respect and regard of the staff. The greatest asset on the books of the employer was a satisfied customer. Get new customers if they could, but do not neglect the old.

Discussion.

An interesting discussion then ensued, being left entirely in the hands of the visitors who represented the employees of various printing houses.

The question was raised as to whether the lay-outs provided by advertising agents did not result in stamping out initiative in the compositor, who, even if he knew the lay-out was unsatisfactory, had to follow directions.

Mr. Naylor thought they would find that to-day the practical man was coming into his own in the offices of the advertising agents. He himself had been the first practical man in a particular office of that description, and others had followed him. A man of typographical experience need not be an artist in order to become a capable lay-out man.

With reference to the use of intermediate sizes, for instance in the case of leads, Mr. Naylor indicated that the printers were to some extent at fault in pandering to the customer. There was need for more standardisation, and in this connection reference was made to the agreement which had been arrived at between the master printers and the wholesale stationers with regard to the quantities and sizes of paper. That was a distinct advance, and if they could do it with paper they could do it in other lines as well.

Asked whether machine composition was likely to affect the quality of display advertisements, Mr. Naylor suggested that for the final touches machine work would always be behind the hand compositor. He agreed with another member of the audience that the fewer the ornaments, the better was the appearance of the finished work.

Another speaker asked if anything could be done to end what he described as "an unholy alliance" between the so-called experts of advertising agencies and typefounders. These experts not only sent very nice lay-outs, but they asked for all the types imaginable and expected the printers to have them in stock.

Mr. Naylor, replying to this point, said he was not aware there was any such alliance as had been referred to. Naturally typefounders provided specimens when they were asked for. Master printers had an equal right to submit specimens of their work and several of them did so.

Gratifying Success.

Mr. Simnett, as president of the South-West Association, said he was particularly pleased with the success which had attended that gathering. The members appreciated the attendance of the employees. It had been an experiment, and his executive would be encouraged to arrange for similar meetings in the future.

Mr. Worthy, as representing the machine minders, proposed a vote of thanks to Mr. Naylor, taking the opportunity of congratulating that gentleman upon the very practical character of his address.

Mr. Naylor's acknowledgment of the vote of thanks brought the meeting to a close.

Price of Newsprint.

The announcement of price by the International Paper Co., of New York, has caused considerable comment in British newsprint circles. The price of $3·25 per 100 lbs. is equivalent to £15 per 2,240 lbs. f.o.b. mill. It is known that the International have sold a large tonnage of newsprint for delivery in Great Britain during 1926 at £16 per 2,240 lbs. delivered, free of rent, tare, and transit damage. This is equivalent to not more than £13 10s. f.o.b. mill, as compared with their price to United States customers of £15. It would certainly appear that this is a very clear instance of dumping, to the tune of at least 30s. per ton. It is stated that the order is a very large one, and it will be obvious that the British sale was made far below the prices asked by British mills for a similar delivery. The International Co. may be operating on the theory that any tonnage dumped abroad helps to keep up their home market, but their action has a very serious effect on British mills, whose operations are restricted to 136 hours per week against 144 hours weekly in the International and other Canadian mills.

Printers' Managers and Overseers

(PARENT) ASSOCIATION.

The November Meeting.

The November meeting of the Printers' Managers and Overseers (Parent) Association was held on Tuesday evening of last week at the "Old Bell," Holborn. The president, Mr. R. H. Berry, was in the chair, supported by the vice-president, general secretary and others, and there was an exceptionally large attendance of members.

The minutes of the previous meeting having been read and adopted, no less than five candidates for membership were elected into the Association, their names being: Mr. R. Anderson (Messrs. Gee and Co., Ltd., Kirby-street, E.C. Overseer, Letterpress Machine Dept.); Mr. E. Knapton (Messrs. Johnson, Riddle and Co., Southwark Bridge-road, S.E. Overseer, Letterpress Dept.); Mr. J. Lillie (Messrs. W. Clowes and Sons, Duke-street, S.E. Overseer, Letterpress Machine Dept.); Mr. H Standley (Messrs. McCorquodale and Co., Ltd., The Armoury, S.E. Overseer, Composing Dept.); Mr. W. J. Westaway (Messrs. Bouch, Ltd.), Markhouse-road, E.17. Overseer, Letterpress Machine Dept.). All these were present and were personally welcomed by the president and the meeting.

The president introduced to the meeting Mr. W. H. Crowther, a prominent member of the Yorkshire Centre and formerly local secretary; and Mr. W. Snelson, of Liverpool, another very active provincial member. Both were given a cordial reception and briefly responded.

Mr. Bateman paid a tribute to the memory of one of the oldest of the Association's members, recently deceased, Mr. Alec Brown. He recalled that that gentleman sat on the earliest P.M. and O.A. Council, and was one of the three members appointed to found the Benevolent Fund.

Several other members expressed their personal appreciation of Mr. Brown, and all present stood for a moment in silence to his memory.

Council and Officers Nominated.

The next business was the receiving of nominations of candidates for Council and offices. Mr. Berry, in announcing his retirement according to rule from the office of president, proposed as his successor their very able vice-president, Mr. A. H. Wilson. The proposal was seconded by Mr. E. H. Berryman and very cordially received, there being no further nomination put forward. For the office of vice-president three names were proposed: Messrs. C. Northam, W. W. Curtis, and J. H. Burton. There were no alternative suggestions for the two trustees of the Association, who are Mr. J. C. Pugh and Mr. G. Phillips. The treasurer (Mr. C. Durston), general secretary (Mr. E. W. Whittle), financial secretary (Mr. W. H. Gill), and technical secretary (Mr. A. E. Jarvis) were all cordially re-nominated for the offices they hold. To replace eight members of the Council who retire (Messrs. S. M. Bateman, E. G. Bausor, T. Ellwood, C. W. French, T. B. Lapworth, L. C. Mennell, A. T. Walters and W. H. Wickden) eleven nominations were forthcoming, viz.: Messrs. J. Acton, F. H. Blatch, R. H. Berry, F. W. Hume, A. E. Brades, R. Simpson, E. H. Jacobs, T. J. Field, E. F. Smith, E. Hutchins and F. E. Baker.

Mr. Acton asked how many members of the P.M. and O.A. were on the examining board of the City and Guilds of London Institute. In reply the general secretary indicated the Association's wish to be represented on this board, and the difficulties that had arisen in this connection. He stated that at present the Association was represented on Stationers' Technical Board by Messrs. J. C. Pugh, A. H. Wilson and A. E. Jarvis.

The meeting next discussed an item of correspondence which was held to be objectionable as reflecting upon the integrity of the Association's leaders. After some very vigorous discussion, the author of the statements in question disclaimed any intention to make such reflections, and the matter ended happily by the passing of a unanimous vote of confidence to the officers of the Association.

Before the meeting concluded, a reminder was given of the current series of whist drives, and both the retiring president and the president elect appealed for members' support of the social items on the Association's programme.

TENDERS.

To PHOTOGRAPHERS, PRINTERS, Etc,

SALE by Tender of the Effects of LOCAL VIEWS LIMITED, consisting of about 12,000 Negatives of Towns throughout England with proofs, 25,000 Printed Post Cards of some 35 Towns, etc., 500,000 View Post Cards in various styles of some 50 Towns, etc., Unexecuted Contracts for the supply of Post Cards, Photographic Apparatus, etc.

On view at the Company's Offices, 9, Goswell Road, E.C.1, any day between 10 a.m. and 4 p.m. where particulars and forms of Tender can be obtained.

Tenders to be sent in to the Receiver, Mr. E. W. Gundry, on or before the 16th. November 1925.

Spalding and Hodge.

Employees' Benevolent Funds.

A question relating to the nature of certain trust funds established for the benefit of the employees of Spalding and Hodge, Ltd., of Drury House, Russell-street, Drury-lane, was decided by Mr. Justice Astbury in the Chancery Division recently. Mr. Danckwertz, for the company, said the Court was asked to determine whether two funds established by Messrs. Spalding and Hodge—the Clerical and Travellers Pension Fund and the Warehouse and Manufacturing Benevolent and Pensions Fund, were valid charitable trusts. The deeds constituting the trusts were both dated January 17th, 1922. The parties before the Court besides the plaintiff company were the trustees of the two deeds, and the Attorney-General. Assuming, said counsel, that the trusts were to be held void, there was no intention on the part of the company to appropriate the money back to their own purpose. But they thought that the administration of the funds had not worked out very well, and that they could be applied better for the benefit of their employees for whom the funds were formed. There was no difference in the two trusts; the only distinction was in the classes of employees, and the trustees were empowered to distribute the fund by making grants to persons who had been in the employment of the company or to dependents of such persons and the distribution was in the absolute discretion of the trustees subject to the consent of the directors. Counsel submitted that the deed did not create a charitable trust because there was no requirement in it that the persons assisted should be either old or poor. It was simply a fund generally for the employees, and it had been held in a previous case that the employees of a firm were not to be classed as poor persons and therefore not necessarily within the purview of a charity. The income of the fund in each of the two cases before his Lordship was only about £120 and the payments out amounted to £400 a year, so that the fund was being diminished by resorting to capital or the company made *ex gratia* payments. He further argued that as the persons to be benefited were uncertain the trust was not enforceable. The trust was also void because it tended to perpetuity.

Mr. Hunt, appearing for the trustees, said as the fund was diminishing they wished to reduce the amount of the grants, but the directors refused to consent to that. The fund was being properly administered and according to the trust.

Mr. Danckwertz, in reply to the judge, said the company were going to create another scheme in place of the present one, but they wanted to control it themselves.

Mr. Dighton Pollock, for the Attorney-General, said he was willing to agree with the company in substituting a new scheme, which would be more workable.

His Lordship said in his judgment this was not a charity at all. It was an attempt to provide a pension or benevolent fund for certain defined classes of persons, but there was not sufficient in the deeds to limit the persons beneficially interested to those who were in want. Further, he thought, the trusts might tend to perpetuity, and were invalid for that reason. He therefore made a declaration that the schemes did not constitute a valid charitable trust, and that the two trusts were invalid as tending to perpetuity. He also declared that there was a resulting trust to the company.

IF a man is a financial success people overlook the means that made him so.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,
Partnerships and Investments,
Miscellaneous.

One Insertion	3/0
Three Insertions	6/0

For every line exceeding three lines **6d.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

THURSDAY, NOVEMBER 12, 1925.

The Book Trade Strike.

As was early feared in the wage dispute between the Book Publishers' Federation and the National Union of Printing and Paper Workers, the printing trade is becoming involved in this matter with which it has no direct concern. The position is a difficult one, not the least difficult feature being the fact that the Book Publishers' Federation is not a party to the Joint Industrial Council of the Printing and Allied Trades. The union's attitude, however, does not seem to us to be in keeping with its relation to the J.I.C., to which it does owe allegiance. The aggressive action now being taken by the union in printing and binding works seems a departure from its pledge of only a few months ago not to take aggressive action of any kind without reference to the J.I.C. We are hopeful that good influences will be brought to bear upon the disputants now that a meeting of the J.I.C. is to be held to consider the extension of the dispute to printing trade territory.

* * *

Stationers and the British Industries Fair.

There was an interesting meeting at Stationers' Hall on Monday, addressed by Sir Charles Higham, who is in charge of the publicity campaign undertaken in connection with the forthcoming British Industries Fair. Apparently there were some members of the Stationers' Association of the United Kingdom who were doubtful as to the proposal of the authorities to extend the hours of the opening of the Fair to 8 o'clock in the evening for the admission of the public and to permit the sale of goods. The chief anxiety appeared to be the interest of the retailer. Eventually, when the sense of the meeting was taken as to whether the Association should support the Fair, a favourable decision was given by a show of hands. Sir Charles Higham and Sir W. H. Clark, Comptroller of the Overseas Trade Department, thus achieved a distinct success by their eloquence. It had been impressed upon the gathering that if the stationery trade did not make a show at the Fair, they would not only be hurting themselves, but would injure British trade as a whole. Mr. Letts (Charles Letts and Co.), at all events, was influenced by the arguments advanced, and intimated that as a consequence he had decided that his firm should exhibit at the White City next year. It was clearly impressed on the meeting that the next Fair would decide the fate of the undertaking in the future, and as the Government has come forward with a grant of £20,000 with the object of giving British industry a chance, the feeling was general that the opportunity should not be neglected.

* * *

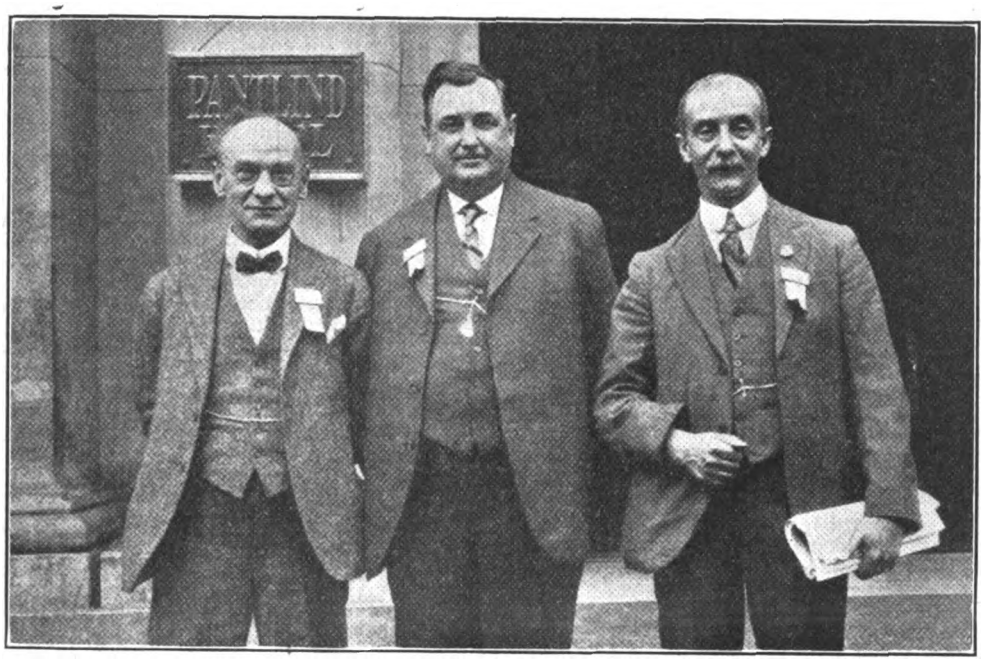
Parliament and Safeguarding.

It seems to be clearly the intention of the Government to press forward the safeguarding measures so far as the recommendations of the various committees allow. At a recent meeting of the Cabinet, it was decided to be necessary to bring in a supplementary Finance Bill during the autumn in order to give effect to the reports of these committees While it is impossible to say at present how many duties will be included in the Bill, as the findings of five committees have yet to reach the Board of Trade, the *Daily Telegraph* Parliamentary correspondent says definite recommendations affecting gloves and gas mantles have for some time been available for legislative action. The Government has determined to withhold publication of these and similar reports until the time arrives when they can be dealt with promptly in Parliament. In this way it is hoped to guard against a rush of imports such as occurred between the date of the Budget statement and the actual reimposition of the McKenna duties at the beginning of July. The estimate in Ministerial circles of the time that will be required for the passing of a supplementary Finance Bill is six Parliamentary days. Parliament will reassemble on November 16th, so the decision so far as wrapping paper is concerned cannot be long delayed.

* * *

Trade Confidence.

There is good reason to try and counteract the impression which America appears to have formed regarding British industry. While it is accounted a virtue to belittle one's own achievements, it is not helpful when other people adopt the same view. Certainly the time appears to have arrived for adopting a more optmistic tone regarding British trade and industry. According to the Hon. Vernon Willey, president of the Federation of British Industries, who has just returned from America, the average American, and, indeed, many even of the leaders of American thought, seem to believe that the old British spirit of initiative and the capacity to battle against difficulties have been lost. That, of course, is far from being the case; but nevertheless it is an unfortunate impression to get abroad; and it should be the aim of all parties in this country to correct it by close and steady attention to work and production with a view to such a reduction in costs that our goods can compete not only in the home market but abroad. Some real encouragement in respect of trade may be derived from the recent utterances of experts, and now *British Industries*, in its quarterly review, states that there are fairly definite signs that the lull in world trade which prevailed throughout the last quarter is coming to an end, and that a new period of expanding trade is about to begin.



The *Monotype Recorder* in its latest issue contains an article giving interesting particulars of "The Ancient House," Ipswich, a quaint old-world building which dates from 1567 and now houses the stationery and printing business of Mr. W. E. Harrison. Claiming to be "antique, but not antiquated," this printery can boast of up to-date Monotype equipment and is meeting with ever-increasing success.

Mr. A. E. Goodwin Back from U.S.A.

An Informative Tour.

As briefly announced last week, Mr. A. E. Goodwin, secretary of the Federation of Master Printers, arrived back in London on the 5th inst. by the "Berengaria," after his trip to Canada and America, for which he left this country on September 26th. He visited Montreal, Toronto, Buffalo, Detroit, Chicago, Boston, Washington and New York, being present at the annual convention of the National Association of Stationers at Grand Rapids from October 12th to 16th, and at the annual conference of Typothetæ (the federation of master printers of America) held in Chicago from October 19th to 24th. He was

An Anglo-American Entente.

Left to right: Mr. A. E. Owen-Jones, Mr. C. L. Mitchell, Mr. A. E. Goodwin.

accompanied by Mr. A. E. Owen Jones, who attended the Stationers' convention as a representative of the British Stationers' Association.

Mr. Goodwin tells us that the conditions of the printing industry in Canada and the United States of America have been very thoroughly investigated by him and that he has an interesting story to tell of his visit. Everywhere he was received with great kindness and meetings were specially arranged that he might tell American employers something of English printing conditions and that he might have first-hand information in American methods of organisation.

An era of prosperity, in which the printers appeared to be sharing, was everywhere apparent, and labour problems were creating no anxiety.

A scheme to promote better salesmanship was discussed at the Chicago convention and exceptional interest was shown in the account of the Federation Collective Advertising Campaign. Mr. Goodwin was impressed with the research work carried out by the American organisation and the efforts now being made to secure the better training of the younger craftsmen.

Our illustration is from a photograph taken at the Grand Rapids Convention, and shows the two British visitors in the company of an American colleague, Mr. Charles L. Mitchell, president of the American Stationers' Association.

A COPY is sent us by Messrs. Intertype Limited of a letter recently received by them from Messrs. Harley and Cox, the Dundee printers. This Scottish firm was one of the earliest in this country to install an Intertype, and the letter puts on record that one of these machines purchased over eleven years ago has done first-class work and given entire satisfaction. The firm has recently installed one of the latest Intertypes.

THE *British and Colonial Printer and Stationer* circulates all over the world.

Personal.

THE KING heads the list of a large number of notabilities who have sent congratulatory messages to the *Saturday Review* on the occasion of its 70th birthday.

FOR the third year Madame Sarah Grand, the novelist, has consented to act as Mayoress of Bath during the mayoralty of Alderman Cedric Chivers, the bookbinder-Mayor.

AMONGST those attending the brilliant reception in connection with the Lord Mayor's banquet on Monday were: Alderman Sir George Wyatt Truscott, Bt., Col. and Alderman Sir T. Vansittart Bowater, Bt., M.P., and Lady Bowater, Alderman Sir John J. Baddeley, Bt., and Lady Baddeley, Alderman Sir George Rowland Blades, Bt., M.P., and Lady Blades, Alderman Sir William A. and Lady Waterlow, Mr. Alderman and Mrs. Baddeley.

MR. G. A. ISAACS, when he attends the complimentary dinner which the National Society of Operative Printers and Assistants is to give in his honour on December 15th, will find gathered to meet him a great number of personal friends, political associates and representatives of bodies with which he has had official contact in his capacity of general secretary of the union.

AMONGST those who have indicated their intention to be present are: The Rt. Hon. J. Ramsay MacDonald, M.P., the Rt. Hon. Lord Riddell, Rt. Hon. Arthur Henderson, M.P., Rt. Hon. J. H. Thomas, M.P., Rt. Hon. F. O. Roberts, M.P., T. E. Naylor, M.P., W. S. Cluse, M.P., Herbert Morrison, L.C.C., A. Pugh (president, Trade Union Congress General Council), W. Howard Hazell (president, Master Printers' Federation), A. L. Woodhead (chairman, Newspaper Society), Percy Squire (chairman, Ink Makers' Society), Gen. W. Bemrose (chairman, Joint Industrial Council), Foster Robinson (Paper Bag Makers' Association), A. E. Holmes (secretary, Printing Trades Federation), and also the general secretaries and other leading officials of practically all the printing trade unions and employers' associations.

MR. F. O. ROBERTS is, we regret to hear, ill at Northampton and has cancelled his engagements to speak in Scotland.

MR. A. E. HOLMES (secretary of the Printing and Kindred Trades Federation) and Sir Glynn Hamilton West (chairman of Armstrong, Whitworth and Co.), are members of the committee to consider the working of the Unemployment Insurance Scheme and what changes, if any, should be made.

MR. A. H. MUNDEY (Fry's Metal Foundries, Ltd.) gave a lecture before the Electrotypers and Stereotypers Managers and Overseers' Association at St. Bride Institute on Tuesday, taking as his subject the "Services of Science."

MR. EDWARD W. DAVIES, general secretary of the Newpaper Society, has been appointed hon. secretary of the Newspaper Conference, representing the Press of the United Kingdom outside London.

MR. C. RIPPON, managing director of the *Oxford Times*, has been elected president of the Office Sports and Social Club.

MR. J. A. KENNEDY, editor of the *Lisburn Standard*, is about to leave to take an important position in the *Northern Whig*. The staff of the former paper have shown their regard for Mr. Kennedy by presenting him with a complete smoking outfit.

MR. J. KEMP, who for many years has been associated with the group of papers controlled by Sir Charles Starmer, has been appointed advertisement manager of the *Sheffield Telegraph* and associated papers.

WITH last week's issue of the *Era*, Mr. W. F. Bennett, the advertisement manager, completed 50 years' service on that journal, having joined the paper in October, 1875.

MR. JOHN C. VAN DER VEER is retiring with a pension from the position of London correspondent of the Amsterdam *Telegraaf*, which he has held for 22 years. Mr. Van der Veer is president of the Foreign Press Association in London.

Fifty Years' Service.

On November 3rd, at the R. E. Jones Corner Restaurant, Leicester-square, the present employees of Messrs. Farmer and Sons, Ltd., printers, of 295, Edgware-road, and the family of the late A. J. Farmer gave a dinner to Mr. J. B. Morgan, now director and works' manager, to commemorate the completion of his 50 years' service in the firm.

The toast, proposed by Mr. A. H. Farmer and supported by several members of the staff, paid a tribute to the great service that Mr. Morgan had given to the firm, and particularly to the way that he had established a spirit of friendship and goodwill between the directors and employees, and expressed the hope that Mr. Morgan, who was still in the prime of life, would enjoy for many years to come prosperity, health and happiness.

Mrs. A. J. Farmer then made the presentation of a clock as a token of gratitude from the present employees and the family, after which the toast was honoured, the company joining whole-heartedly in "For He's a Jolly Good Fellow" and cheering their guest to the echo.

Mr. Morgan, in reply, after expressing thanks for the clock and the way in which the toast had been received, outlined the progress of the firm since he joined it, when there was only one man and a boy, to the present day, when they had just re built their factory and had the most up-to-date machinery and a staff of about 40.

Songs and dancing were then enjoyed until the company gathered round for "Auld Lang Syne," after which they once more spontaneously burst into "For He's a Jolly Good Fellow," and so brought to a close a very happy evening and one that will remain for long in the memory of all those present.

The Bookbinder

Notes and News.

Trade Improving.

There has been a slight improvement in trade since our last notes appeared a month ago. The Board of Trade statistics of employment bear this out and reflect hopefully upon the winter outlook. Publishers' binders are fairly well placed and commercial bookbinders are finding a bit more business about. Scholastic stationers, too, are coping with a satisfactory volume of trade whilst conditions in the stationery trade are also improved. Wholesale manufacturing stationers are still busy working off late orders for seasonal books, diaries and specialities.

Mass Production in the Bindery.

More interest is being taken in modern bookbinding machinery by the progressive houses whose volume of product presents opportunities for an instalment of mass production methods. The up-to-date publishers' binder is able to practically cut out handwork, although there are many establishments whose heads are apparently unaware of the fact. It is not too much to say that there is a machine for every operation or process in the sequence of conversion from printed sheets to packed parcels of books. The machines, especially the more highly specialised ones, are mainly of foreign extraction, and they are costly, but they are indispensable to achieving the object of increased output at relatively less cost. Ordinary guillotines are replaced by three-edge cutters; case making, casing in, stripping, lining and blocking are all performed by modernised machinery and the bookbinder of the day requires to have a leaning more towards mechanics than binding craftsmanship. From the employer's point of view modern machinery is an economic and progressive necessity. From the employee's point of view cheaper production means greater output, more work and better pay for those who become specialists in mechanical operating.

Straw Board Prices.

Dutch strawboards are stiffening slightly with the advent of the winter season. Agents are quoting £7 17s. 6d. per ton for unlined 8–18 oz. at store, with the usual extras for heavy substances and lined boards. Mill quotations to users are in the region of £5 15s. per ton plus shipment and carriage charges. The time for delivery has also to be taken into account when comparing prices. British boards are steady at the slightly higher level, and once again it may be stressed that there are advantages to be gained by using the home product.

Other Boards.

Scandinavian leather boards are listed at £16 10s. per ton for first quality, and £16 for second. White wood pulp boards are quoted £16 10s. per ton for 60's to 350's; £17 10s. per 400's to 450's; and £18 per ton for 600's, carriage forward. English millboards are unaltered in price, and, according to quality, the figures range between £26 and £38 per ton, the last-named for highest grades of hand made board, which is the finest make of binders' board obtainable.

British v. Foreign Marble Papers.

The import of foreign marble papers must certainly be decreasing very considerably, a fact which cannot be wondered at, having regard to the prices which merchants are compelled to charge. A correspondingly increased quantity of English printed marble paper is being used by bookbinders and box-makers, who have finally awakened to the advantages to be gained by supporting this home product. There are several kinds of printed or imitation marble paper on the market, and there is much to be learned by studied comparison of makes and prices. Our own preference is for the dull-finished thick variety made in a special large size with a reverse side particularly suitable for pasting or glueing. The price is favourable in comparison with other makes, and gives a substantial saving against the foreign variety.

Unique Designs.

Where the foreign makers do excel is in the production of these elegant marble papers used principally in the covering of fancy boxes and as end papers for de-luxe presentation books and cases. Before us now are some French marble and end papers which reach a very high standard, including gold and effective colourings and unique patterns. There are also reproductions of seventeenth century designs and colourings which we understand have been copied exact from the originals. A noteworthy feature in the collection is a series of book jackets with marble effects produced on kraft brown wrapping. The colour of the kraft paper mingles beautifully with the other colours embodied in the pattern and only by reference to the under side can it be seen what the base really is. Obviously there are combined advantages in cheapness and strength.

Leatherette Papers.

A series of leatherette papers issued by Messrs. J. S. Darwen and Co., Ltd., 38, Featherstone-street, City-road, London, E.C., includes a very comprehensive range of grades and designs. Here again it will be noted what a prominent part is being played by kraft wrapping paper as the base for worked up material. Several English manufacturers have built up a steady business in leather papers for which foreign kraft paper is mainly employed. The reason for using imported product is that it is cheaper and in the opinion of the user better. In the event of a measure of tariff protection being awarded to the British wrapping industry the question of a corresponding tariff on imported leather or marble paper in which kraft wrapping is used, will certainly be raised. British manufacturers will most probably find it advantageous to place their making orders for body paper with home mills.

Improving Your Machine Ruling.

(Specially Contributed.)

Machine ruling is a branch of the printing and stationery trade in which skill and aptitude are both required to produce good work; but, apart from this, there is scope for improvement in the trade, and the whole standard of quality of the work might be raised. Thanks to the use of modern methods and machinery, the mode of executing ruling at the present time is different from that of days gone by, yet the style of the work appears to remain practically the same, and little change can be seen to have taken place.

Use of More Colours.

One of the methods that might be adopted to produce better and more up-to-date work is to put more colours into it. This would greatly improve its appearance, and it would also help to lighten the task of the user by defining certain columns and bringing them out more prominently, and would also banish the monotonous tone of the majority of the work that is prevalent to-day. The use of an additional colour on a job makes little difference in the cost, but the resulting work is undoubtedly far better.

Colours and Dyes.

Various colours are used by the machine ruler. They are: red, dark and light blue, green, violet and black for vertical lines; pale blue and grey for horizontal lines—all bright and lasting colours. It may be taken that 75 per cent. of these are of British manufacture. In pre-war days Germany had the monopoly in the dye industry, but she is now fast losing her supremacy in this direction, owing to research and perseverance by this country, but we hear the Germans are clamouring to be masters of the industry again.

Memos, Statements, etc.

A headline (horizontal line under the printed heading) containing more than one colour should be substituted for the usual red double line that is so much in vogue at present. A good suggestion is to use three lines together, the outside ones blue and thinner and the middle one red and thicker, or *vice versa*. To a firm of repute one might recommend a more prominent headline still. In the United States of America and Canada what is known as the "ribbon line" is much in use. This is wide, usually containing six lines and three colours. Columns that are to contain matter different from that in the other columns should be in a different colour, so as to attract attention and help to avert mistakes.

Account Books.

The same fancy two-coloured headline should be retained for account book work. The debtor and creditor account on a page of an account book should be distinguished by separate colours, also the line or lines dividing them. The lines nearest the back of the book, known as the boundary lines, should be in black instead of red as at present. This makes a better distinction. Pounds columns that are to contain more than two figures are better with light blue lines down the middle, as these separate the rows and keep them in better order for calculation. The last line but one in horizontal lines should be in red instead of blue, as a dividing line for the total that is to be inserted.

Occasionally ruling is done in black lines, but it is much preferable to use the red tone ordinarily employed by the ruler. The effect is not so dull, and is much better for the eyes. No lines should be allowed to go through the printed words. The starting and finishing of a line or lines is easily brought about by the mechanism of the machine.

Letting the Customer Know.

Exhibit your ruling well if you have the means at your disposal. Show what you can do. If ruling after a long exposure in the light shows signs of fading, as it may do, renew the sheet or change the page of an account book. Keep a copy of each standard pattern for show purposes.

All the suggestions mentioned above could be carried out at little increased cost, but the results would be worth while as ruling looks far better when done really well. This might

Digitized by Google

be pointed out to the customer when he is placing his order, and if he adopts the suggestions made he is more likely to be satisfied with his work when completed. On the modern machines now used in the trade extra colours can be worked together at one operation. Make a speciality of your ruling, bring it well to the front in your stationery binding department, and good results are bound to follow.

Book and Cover Papers.

Help for Binders and Printers.

That sellers of paper are nowadays making increasing efforts to offer real service to those who purchase papers of various kinds for the printing and covering of books is evident from the collection of paper samples reaching us from time to time.

The modern sampling school is exemplified in papers presented in a tasteful dressing by Messrs. L. S. Dixon and Co., Ltd., of Liverpool and London. Simili vellum is turned to good account as a wrapper or cover embodying mediæval tone and flavour. Only a very heartless and entirely art-less printer recipient could put this small sample volume out of sight after seeing this cover. Simplicity in typography and perfectly appropriate illustrative decoration are helped by a balance and spacing that have been arranged by a real craftsman whoever he is. Inside are twelve samples folded in one section and each printed on the first page, giving a blank leaf at the back which the printer can examine, look through or mutilate at will. The printed pages give him some inspiration and education and cause him to ponder whether it is the printing that makes the paper look good or *vice versa*. The conclusion he must come to is that appropriate printing or appropriate papers makes up an ideal combination. Dixon's have achieved their purpose by placing their printing in the hands of someone who understands the fundamentals of good printing and fitness in its treatment. As a consequence, the papers carry an appeal which the good printer cannot ignore and which should stir the more ordinary printer to an appreciation of the possibilities inherent in the papers sampled. These include deckled-edged antiques, offset papers, arts, imitation arts, M.F.'s and Bible printings. The printer who has a standard and recognises the part that paper plays in helping him to attain it needs two copies of "Choice Papers," one for home and one for the office.

"SPICER'S SAMPLES FOR PRINTERS," as the book is boldly titled, contains 470 different qualities of paper, representing something like 15,000 different lines, if we take sizes and substances into account, and fully 95 per cent. of the papers are of British make. For those who question the utility of the merchant there is something to ponder over. No paper mill, no agent, no importer and no dealer, and, for that matter, no one-man concern, can talk of service to the printer or stationer in terms like the real merchanting wholesaler. The function of the merchant is to serve the printer over the whole paper field and to carry the paper in his store ready for conveyance on receipt of an order. A sample book such as the one under review enables the printer to select his paper at will in infinite variety, knowing that he can at once fill his requirements. The classification of the samples is simplicity itself, each section having a projecting tab, numbered and specifying the class of paper shown. Preceding each section is a key to the qualities shown in that section. A separate price list is tabbed, numbered and specified to correspond with the book. References to samples and prices are thus simplified so as to make it possible to go straight to the desired quality or class without waste of time. Where coloured papers are sampled, the separate colours in a range are distinctly displayed across the page by mounting squares of each colour which can be lifted and examined very speedily. Practically every class of paper used by printers or stationers is embodied in the volume. The only criticism we would make is that there might have been an index classification at the front to reinforce the tabbed classification and provide against the possibility of the latter becoming indistinct. In a sense, the price list does this, but it does not always follow that the price list keeps to its pocket in a printing office.

Book Publishing Trade Strike.

Continuation of Deadlock.

Since last week there has been continued deadlock in the strike which brought 1,200 workpeople out on October 31st, those affected being members of the London branch of the National Union of Printing and Paper Workers employed as packers and porters in book publishing houses.

The Book Trade Employers' Federation issued last week a statement in which they pointed out that whilst the wage agreement which the union now seeks to alter was made in 1919 when the index figure of the cost of living stood at 105, the index figure now is 76; that the minimum rates paid compare favourably with similar rates agreed on by other unions for work of a similar description in London; that the publishers cannot see that a substantial wage increase, which would lead to an increase to the public in the price of books, is justified on the ground that the union has been able to get higher wages from other classes of employers.

The executives of the London unions affiliated to the Printing and Kindred Trades Federation met on Friday night to consider the dispute in the book publishing trade. The packers and porters, who are members of the Printing and Paper Workers' Union are claiming an advance of wages of 17s. 6d. a week and they have been on strike for a week. It was announced at the close of the meeting that it had been left to the London executive of the Printing and Kindred Trades Federation to take whatever action they might deem necessary to bring about an amicable settlement. The London executives of the affiliated unions will meet again next Friday or earlier if necessary. It is hoped that resumption of negotiations will be possible.

A disquieting feature is the fact that on Saturday the dispute led to a strike involving three hundred men and girls at the Oxford University Press. Two members of the National Union of Printing and Paper Workers, acting on instructions from their union, refused on Friday to load certain goods consigned to a London publisher, and were accordingly dismissed. The members of the union thereupon gave warning that a lightning strike would begin that night, and on Saturday morning the majority of them were absent from work. As those on strike were the machine feeders—putting the paper on to the machines—the authorities found it necessary on Saturday to give the agreed fourteen days' notice to those members of the Typographical Association who were machine minders that while the strike continued they would be unable to offer them employment.

The London stoppage has seriously hit some hundreds of retail newsagents, and a number of publications have been unable to appear, amongst those being the *Lancet*, *Christian*, *British Weekly*, *Amateur Wireless*, *T.P.'s Weekly*, and *Light*.

On Tuesday there were held consultations between the employers' and the men's representatives, but no settlement was reached.

It was stated on Tuesday night that the Book Trade Employers' Federation had not modified its attitude in relation to the demand of the National Union of Paper Workers. The Book Trade Employers' Federation issued a statement that the strike has had little or no effect on the supply of books for the Christmas trade.

The Joint Industrial Council of the Printing and Allied Trades is likely to meet on Friday in order to consider the position created by the fact that the dispute is now affecting the printing and binding industry.

A MOST interesting and instructive brochure has been issued under the title of "Price Bros., 1817-1925," giving an illustrated account of this great Canadian paper company. Pictures and letterpress both tell of wonderful development which amounts to romance. The brochure is issued in London from the offices of Messrs. Andrew Holt and Co.

AT a recent gathering in connection with Hayle Mill, Maidstone, testimonials were presented to the following, who had completed 50 years of service at the mill: Maria Hadler, Olive Hadler, Harry Longley, Charlie Mills, Alfred Tucker, Walter Weeden, and Herbert Wood. Mr. Herbert Green, who had just previously celebrated his 70th birthday, presented the testimonials.

British Industries Fair Bookings.

Heavy Demands for Space.

That manufacturers are fully alive to the advantages of exhibiting at the British Industries Fair is shown by the heavy demand for space both at the White City, London, and at the Castle Bromwich Aerodrome, Birmingham, where the Fair is to be held from February 15th to 26th next.

Up to and including Thursday, November 5th, some 600 firms from all parts of the country had applied for space at the Fair, while the number of firms who desire to exhibit at the White City is already more than double that for the corresponding period in 1924. Of these firms one-third have exhibited at five or more previous fairs, and 25 per cent. are entirely new exhibitors.

Already manufacturers in two important sections—toys and games and sports goods (including sports clothing)—have taken space in excess of the large amount devoted to those sections in 1924, and further applications are still being received.

In view of the very large number of inquiries received from all parts of the world regarding the Fair, and the fact that not only has the Government decided to spend a substantial sum of money in a world-wide publicity campaign on behalf of the Fair in particular and British goods in general, but the Prince of Wales has given the Fair his patronage, there is every reason to believe that the eleventh Fair will be a very real success both from the exhibitors and buyers' point of view, with increasing benefits to the export trade of the country.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

INDIA.

A manufacturer's agent who has toured the whole of India, Burma and Ceylon over a period of nineteen years has returned to the United Kingdom, and is open to negotiate with British firms who require the services of an organiser and expert salesman. (Reference No. 491.)

An Indian firm of good standing which has been established in the Bombay Presidency for a number of years, is anxious to secure the representation of British firms interested in paper, stationery, etc., for the Bombay Presidency and territory served therefrom. (Reference No. 492.)

GERMANY.

A London firm handling stationers' sundries and claiming to have good connections in Germany, is desirous of getting into touch with British manufacturers of stationery and allied lines, wishing to introduce their goods into that market. (Reference No. 504.)

SOUTH AMERICA.

A British firm of manufacturers of stationers' sundries are anxious to get in touch with manufacturers of allied lines, who already visit South America, with the view of combining with them in a business trip, also with a firm covering the West Indies and Mexico. (Reference No. 514.)

MESSRS. R. W. CRABTREE AND SONS, LTD., write us with reference to a paragraph in our issue of October 29th concerning the *Stratford Express*, and point out that the press in question is capable of printing a 16-page paper at 36,000 copies per hour; it is only geared up to give in this case a maximum output of 30,000 copies per hour, this being the maximum requirements of the office in question.

THE Gummed Paper Manufacturing Co, Ltd., are early in the field with their 1926 calendar. It consists of a very striking picture in colours representing a forest fire ravaging spruce and pine trees. The subject is typical, since it is from these trees that the bulk of the paper used in "Tiger-Tiger" gummed paper products is manufactured. Measuring 13½ in. by 9½ in., the reproduction is suitably mounted, with a monthly date pad attached.

Munro as "The Universal Advertising Agency." Private company. Directors: Norah C. P. Munro, J. P. Munro and R. O. S. Wilson. Registered office: 212, St. Vincent-street, Glasgow.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

JAS. TRUSCOTT AND SON, LTD. (printers, etc, London).—Issue on October 27th, 1925, of £7,250 debentures, part of a series.

THOMAS AND PARRY, LTD. (printers, stationers, etc., Swansea).—Charge on the company's undertaking and property, present and future, including uncalled capital, dated October 28th, 1925, to secure an amount not exceeding £700 which the mortgagee may be called upon to pay under his guarantee to the company's bankers. Holder: D. C. Thomas, Wenallt, Clydach, Swansea Valley.

HERBERT C. HILL, LTD. (printers, stationers, etc., Doncaster).—Debenture dated October 27th, 1925, to secure all moneys due or to become due from the company to Barclays Bank, Ltd., charged on the company's undertaking and property, present and future, including uncalled capital.

GRANT RICHARDS, LTD. (publishers, etc., London).—Issue on various dates from December 30th, 1911, to June 15th, 1920, of £2,680 debentures, part of a series already registered. (Notice filed October 29th, 1925).

CHARLES CRABTREE (BINGLEY), LTD. (papermakers, etc.).—Mortgage dated October 14th, 1925, to secure £1,100, charged on Tube Mills, Dubb lane, and Ferrand-street, with warehouse and other buildings and cottages numbered 22-24 and 26, Ferrand-street, Bingley. Holders: Bingley, Morton, Shipley and Keighley Permanent Benefit Building Society, 4, Park road, Bingley.

RECEIVER APPOINTED OR RELEASED

ZELZER AND GOLDMAN, LTD. (cardboard box manufacturers, etc., Haggerston).—A. J. P. Coleman of 174, High-street, Acton, W.3, ceased to act as Receiver or Manager on October 28th, 1925.

BANKRUPTCIES.

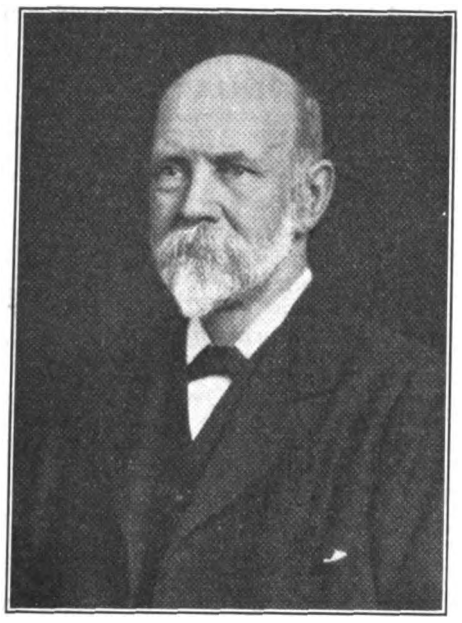
Re C. J. CULLIFORD AND SONS, LTD., printers and lithographers, 42, Wolfington road, Norwood.—The statutory first meetings of the creditors and shareholders of this company were held on November 5th, at the offices of the Board of Trade, Carey-street, W.C., under a winding-up order. A statement of the company's affairs disclosed unsecured debts, £5,089; preferential debts, £375; and debentures, £10,235, making the total indebtedness £15,699. The assets were valued at £9,605; the deficiency in assets to meet liabilities was estimated at £6,094, and with regard to shareholders, the total deficiency was £11,096, the issued capital being £5,002. The winding-up order was made on July 28th, on the petition of Messrs. Grosvenor, Chater and Co., Ltd., creditors for £105. Mr. E. T. A. Phillips (official receiver) reported that the company was formed as a private company in May, 1924, with a nominal capital of £10,000, and was promoted by Mr. Edward Alexander Gishford, to acquire and carry on the business of printers and lithographers previously carried on by C. J. Culliford and Sons (Litho), Ltd. The directors had been Edward Alexander Gishford and Wm. Pottell (both retired), H. B. Hammond, C. J. B. Griffiths, and L. C. Cox. No remuneration had been paid to any directors. By resolution dated May 15th, 1924, the Board appointed Pottell and Cox, managers at salaries of £780 and £400 per annum respectively. The latter was entitled to expenses. The old company—C. J. Culliford and Sons (Litho), Ltd.—was incorporated in May, 1915, under the name of H. G. Banks, Ltd. It went into voluntary liquidation on March 8th, 1923, Mr. H. A. Deed, C.A., having in the previous month been appointed receiver and manager on behalf of debenture holders. The purchase agreement, dated April 10th, 1924, transferred to the company the goodwill of the old company's business, with the exclusive right to use the name, all its assets, and the full benefit of pending contracts, and it undertook to discharge the liabilities. The sale consideration was £11,500, payable as to £1,500 in cash and £10,000 by allotment to the vendor or his nominees, of 100 6 per cent. debentures of £100 each. The agreement provided that on the registration of the new company the trustee should acquire from Mr. Gishford a lease of the freehold factory and premises at Wolfington-road, Norwood, occupied by the old company, for a term of 21 years at a rental of £700 per annum. The company, on May 15th, 1924, created 100 6 per cent. first mortgage debentures of £100 each, payable on demand. Mr. Gishford had stated that he had lost about £10,000 in the old company, and, with a view to recovering part, if not all, of his loss, he arranged further finance for purchasing and carrying on the business, which just about paid its way until December, 1924, when he decided to dispose of his interest therein. Mr. H. A. Deed, C.A., 90, Cannon-street, E.C., was appointed receiver and manager for the debenture holders on May 18th, 1925. The receiver advertised the business for sale in *The Times* on June 20th, 1925, and eventually contracted to sell for £10,000. The company's officials attributed the failure to insufficient working capital, but in the opinion of the official receiver it was due to mismanagement and excessive overhead charges. In conclusion, the official receiver said that the £10,000 was not sufficient to discharge the preferential claims and debentures, and there was no prospect whatever of any payment being made to the unsecured creditors or of any return to the shareholders. The resolution having been moved, the chairman announced that he would continue to fill the post of liquidator, and issue a report in due course.

Re GEORGE GORDON AND SONS.—An adjourned meeting of the creditors of George Herbert James Gordon and Herbert Gordon, trading under the above name as printers at Old King-street, Bristol, was held at the offices of the official receiver in bankruptcy at Bristol. The debtors offered a composition of 6s. 8d. in the £, and the payment of costs incidental to the proceedings. The offer was accepted, the official receiver saying that if the estate were wound up in bankruptcy the dividend would be substantially less than the composition offered. The unsecured liabilities amounted to £3,086 17s. 11d., and assets were estimated to produce £1,660 13s. 9d., after payment of preferential debts.

Re ANDREW MICHAEL (trading as Morgan's Publications), publisher, 4, Fitzroy square, W.C.—The first meeting of creditors was held recently at the London Bankruptcy Court. The official receiver reported that a Mr. A. M. Reisinger had attended under the proceedings, and had stated that the failure was caused by bad trade, the loss of a legal action, and lack of working capital. He returned liabilities £2,100, and assets consisting of an equity of doubtful value. The estate was left in the hands of the official receiver, to be wound up in bankruptcy.

Yorkshire Paper Mills, Ltd.

Presiding at the statutory meeting of the Yorkshire Paper Mills, Ltd., at Barnsley recently, the chairman (Mr. C. Diamond) said the contract for the purchase of the assets described in the prospectus of the company was due for completion on July 18th. The amount of £64,500 was duly paid on that date and the company took possession on July 20th.



There had now been three months' trading, and stock was to be taken to ascertain the result, which he thought would be very satisfactory. Mr. Diamond added they had set a standard in the quality of their paper which was now recognised everywhere, and the result was that they had more orders on hand than they could turn out promptly. A good deal of the output for next year was sold. It was mentioned that a company, to be called the Dearne Valley Gardens, Ltd., was being registered, in which would be vested all their land and other property not used or required for the purposes of the business.

Stationers' Social Society.

Fourteenth Annual Autumn Dinner.

The officials of the Stationers' Social Society provided another delightful evening's entertainment for the members and their friends on the occasion of the fourteenth annual autumn dinner, which was held on Oct. 30th, in the King's Hall of the Holborn Restaurant. Mr. Charles Newell, C.C., the president, had the satisfaction of presiding over what he described as a record gathering, covers having been laid, as he mentioned, for something like 280 diners. As on previous

MR. CHARLES NEWELL, C.C.,
The President.

occasions, Mr. A. E. Mist, the hon. secretary admirably assisted as he always is by the assistant secretary, Mr. E. J. Jesty, made very complete arrangements for the comfort and enjoyment of those present.

The proceedings started with a reception by Mr. Newell, and the half-hour before dinner was served afforded an excellent opportunity for the renewal of friendships and the making of new acquaintances. As for the dinner itself, it afforded every satisfaction, and was rendered the more enjoyable by selections of music by the Endsleigh Ladies' Quartette.

A feature of the Society's functions is the musical programme which follows the banquet. Once more Mr. G. E. Oswick had charge of these arrangements, and, if possible, he may be said to have exceeded previous efforts in this direction.

The Speeches.

Although the toast list was reduced to the shortest limits, the few necessary speeches, which were kept well within bounds, and the presentation of golf and bowls cups served to round off the evening admirably.

The loyal toasts having been honoured, Mr. P. S. Porteous submitted that of "The President." He said he had had the pleasure of knowing Mr. Newell for a good many years, but during the past twelve months he had been closely associated with him in the conduct of the affairs of that Society, and he had got to know the man of many parts which he was.

Association's Progress.

Mr. Newell, responding to the toast, first of all thanked Mr. Porteous for the manner in which he had proposed the toast and all his friends for the enthusiasm with which they had responded to it. However he was going to find words adequately to express his deep appreciation of all that kindness he did not know. From the moment he was elected their president he had received from all round very kind and helpful consideration.

Mr. A. R. Iago, in proposing the toast of "The Visitors," said for the past 13 years they had had the pleasure of welcoming guests at those gatherings, and on that occasion they were pleased to see so many visitors at the tables. (Hear, hear.) They particularly welcomed their distinguished friend, Sir Francis Green, Bt., who, as they knew, held a high position in the greatest Corporation in the world, that of the City of London.

Sir Francis Haydn Green, Bt., Chief Commoner of the City of London, was cordially received on rising to respond. While he fully admitted and thankfully admitted that he had the honour to be a visitor that evening, at the same time the vice-president's badge which was pinned on his coat no less than 20 years ago reminded him that he was possibly not a visitor in the full sense of the word.

Presentation of Cups.

Mr. Newell then proceeded to present to Mr. R. Scott Prideaux the Horsburgh Challenge Cup for golf, the winning of which he said was a solid proof of Mr. Prideaux's skill and prowess in that ancient and noble game. The president recalled the delightful day on which the competition took place and the exceedingly close game, which reflected all the more credit on the winner of the cup. On behalf of the Society as well as on his own behalf, Mr. Newell congratulated Mr. Scott Prideaux on his success, and in addition to the handsome trophy handed to him a replica to be retained by him.

The president then presented to Mr. J. Cairns the Woollacott Challenge Cup and replica which had been won in the bowls competition. He recalled that no one who witnessed Mr. Cairns' play on that gloriously hot day in June would think of challenging his right to it. It was agreed on all hands that his play was at once a wonderful exhibition of skill and of endurance. He (Mr. Newell) only hoped he might have the pleasure of again witnessing Mr. Cairns' fine play.

The concert then proceeded to a happy conclusion and another memorable and successful evening was added to the records of the Society.

THE Newspaper Society take possession of their new offices at Byron House, 85, Fleet-street, as from Friday last. Much better accommodation is provided, and the suite of rooms is regarded as being as close to what ideal offices should be as is possible.

Concerning Flatbed Offsets

WHY be put to the inconvenience of having your old Flatbed machines converted into Offset when you can buy for very little more, a complete machine which has been thoroughly overhauled, but in first class running order, and which is **fully guaranteed?**

Your old machines will be taken out in part payment and **real** Flatbed Offsets delivered and erected in their place.

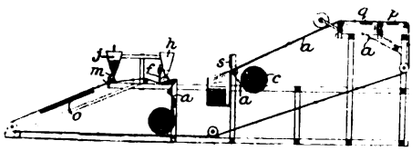
New Inventions

Ruling and Printing Machines.

Ruling-machines.—A machine for ruling sheets and printing headings thereon, as patented by Messrs. R. Bottcher and M. Müller, comprises in combination a ruling-cylinder 2, Fig. 1, an impression cylinder 7, and a reciprocating bed 24 arranged collectively in a frame and geared together, means being provided for conveying sheets to and from the impression cylinder. Two sets of cords 42 carry the sheets over the ruling cylinder 2 and a guide roller 43 to the impression cylinder 7, where the sheets are delivered to grippers 44 on the cylinders. One set of cords passes upwardly over a roller 47, and the other set of cords passes downwards over a roller 48 to co-operate with a third set of cords 42*a* to take the sheets from the cylinder 7 after they have been printed and deliver them from the

machine, guide rollers 50, 51, 52 being provided for the cords.



Bed-reciprocating apparatus. The bed 24, Fig. 1, of the printing-machine is reciprocated beneath the impression cylinder 7 and inking-apparatus 41 by means of two toothed sectors 21, Figs. 4 and 7, engaging racks 25 on the bed 24 and oscillated by intermediate mechanism from the ruling-cylinder 2. The sectors 21 are keyed to the same shaft 20 as a member 18 carrying two toothed sectors 16, 17 and also two slotted lugs 19. The sectors 16, 17 engage respectively with sectors 14, 15 on a shaft 11 and rotated in opposite directions, so as to oscillate the member 18 and therefore the bed 24. To bring the sectors 16, 17 and 14, 15 into and out of engagement without shock, rollers 13 situated near the ends of the sectors 14, 15 engage the slots in the lugs 19 before the beginning of and at the termination of the engagement of the sectors. The sectors 14, 15 are fixed to gear wheels 9, 12 respectively, the gear wheel 12 being fixed on the shaft 11 and meshing with a gear wheel 8 attached to a gear wheel 5 meshing with a gear wheel 4 on the shaft of the ruling-cylinder, and the gear wheel 9 being loose on the shaft 11 and driven from the gear wheel 8 through an intermediate gear 10. The rollers 13 are attached to the gear wheels 9, 12.

Cylinder Machines.—The impression cylinder 7, Fig. 1, has attached to its end a gear wheel 6 meshing with the gear wheel 5 by which it is driven from the ruling-cylinder and its bearing blocks 27 are slidably supported in the machine frame by springs 28. The cylinder 7 is lifted during the non-printing movement of the bed 24 by a rod 29 having one end attached to a bearing block 27 and the other end to an eccentric on an oscillating shaft 30. The shaft 30 is oscillated by means of links 31, 31*a*, and a cam 35 on the shaft 11, the link 31*a* being pivoted at 32 and kept in engagement with the cam 35 by a spring 34. The gear wheel 5 is adjustable relatively to the gear wheel 8 driving the reciprocating bed, so as to adjust the cylinder relatively to the bed.

Throw-out arrangements.—For throwing the printing machine out of gear, the pivot 32, Fig. 1, of the link 31*a* is mounted eccentrically in a disc 36 so as to be moved relatively to the cam 35 when the disc is turned by its handle 46. This movement of the pivot 32 causes the blocks 27 to be given a permanent lift above the bed, so that the cylinder and bed do not contact during the reciprocation of the bed.

Bronze Composition Foils.

Under an invention by Mr. R. Gubin, in making a bronze or ink composition foil particularly for use in embossing, a molten composition is applied to a carrier web *a* from a melting pot *h*, bronze or ink dust in Zapon varnish is next applied from a container *j* and the layers are fused to form a homogeneous coating while passing

over a heater *o*. The web travels in a long path to solidify the foil and is warmed at *p* to allow the foil to separate from the web. Moisture is expelled from the foil by a heater *q*, the foil and web are brought together again, the former is cut into sheets at *s* and the latter is wound up into a roll *c*. The thickness of the molten composition and the bronze are regulated respectively by blades *f* and *m*. The composition may comprise Zanzibar resin, shellac, asphalt, and fat.

New British Patents.

For the benefit of our readers we have arranged for any inquiries relating to Patents, Designs and Trade Marks to be answered, free of all charge, by a Fellow of the Chartered Institute of Patent Agents. Inquiries should be addressed, in the first instance, to the Editor.

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

THE official returns of unemployment serve to support the view that there has been a slight improvement in the papermaking industry. It is satisfactory to note that the improvement is being well maintained in those sections of the industry most affected by the home demand. There is every reason to believe that the unemployment percentage will be further reduced as the season goes on. Other important industries seem to be entering upon a fresh era, and generally there is a good tone in business circles. The papermaking industry is especially quick to sense the trend of national trade fortune, and it unfailingly responds to any movement set up by improved trade elsewhere.

* * *

WE are a long way from the time when trade will have recovered to such an extent as to bring back the old standards of paper consumption and quality. Prolonged industrial depression has played havoc with the habit of using good paper for good paper's sake, and nothing but steady prosperity will rehabilitate the old appreciation of quality. Zeal for economy has outrun its limits to the wholesale detriment of paper in its making and using. Still, after so bad a time as we have experienced these last five years, the first essential is a return to something like normal consumption. After the attainment of this there will inevitably come the cycle of movement in the direction of uplifted quality standards.

* * *

BUYERS and users of wrapping paper are displaying some anxiety as to the probable outcome of the recent inquiry. Their chief concern is, of course, whether they are likely to have to pay more for their wrapping paper. Some of them have a very distorted view of the course of events, and it is really remarkable to what an extent they are sometimes misinformed. Often enough the reports of the daily sittings of the Commission that have appeared in the daily press have been scrappy and even misleading. The best piece of propaganda that the wrapping industry could issue in support of itself would be a verbatim report of the proceedings. Whether this is a feasible or permissible procedure we do not know; but of two things we are certain, and these are that a full report will be an indispensable adjunct to the home papermaker's library and that, rightly used, the data now available will furnish material for an irresistible publicity campaign.

Paper Box Manufacturers.

Annual Meeting of the West of England District.

The West of England District Paper Box Manufacturers' Association held its 16th annual general meeting at the offices of the Bristol Master Printers' and Allied Trades Association, Bristol, on October 30th. The following were present: Messrs. F. W. Lee (chairman) (Messrs. J. J. Lee and Sons, Bath); W. T. Bodey and H. G. Robinson (Messrs. E. S. and A. Robinson, Ltd); C. Elson Bennett (Messrs. Bennett Bros., Ltd); R. Lea (Messrs. J. S. Fry and Sons, Ltd); F. C. Tirkin (Messrs. Mogford, Tirkin and Co); S. A. Underdown (Messrs. Allen, Davies and Co., Ltd.); V. L. Young (Messrs. Mardon, Son and Hall); and A. E. Howell (secretary). The following officers were elected for the year ending September 30th, 1926: Chairman, Mr. C. Elson Bennett; vice-chairmen, Capt. Ernest G. Mardon, R.N.V.R; Messrs. H. G. Robinson and F. W. Lee; Executive Committee, Messrs. C. Elson Bennett (chairman); Capt. Mardon, and Messrs. H. G. Robinson, F. W. Lee, *ex-officio*; W. T. Bodey, E. W. Allen, F. C Tirkin, V. L. Young, R. C. Conyers and S. A. Underdown; Secretary and treasurer, Mr. A. E. Howell.

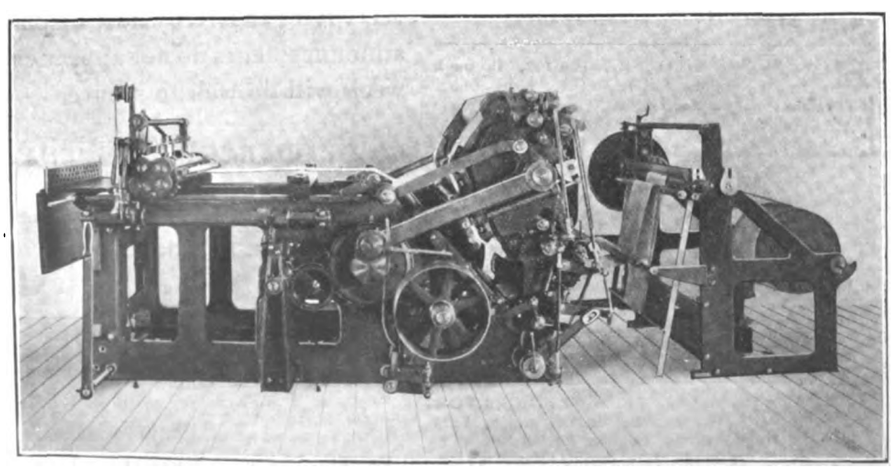
The Dinner.

The meeting was followed in the evening by the first annual dinner at the Royal Hotel, Bristol, Mr. Lee presiding. Thirty-three sat down to a most enjoyable repast, and the remainder of the evening was devoted to a delightful musical programme ably arranged by Mr. Percy Smith. The principal guest of the evening was Mr. C. J. Thorne (London), the newly-appointed secretary of the British Paper Box Manufacturers' Federation, and successor to the late Mr. C. J. Healy. It was a very great pleasure to the Bristol Association to have Mr. Thorne amongst them, and during the evening Mr. Lee proposed a toast to the Federation, to which Mr. Thorne ably replied. Mr. W. T. Bodey proposed the health of Mr. F. W. Lee and eulogised the excellent work he had done for the Association during his two years as chairman. Mr. Lee suitably responded and expressed the hope that the members of the Association would accord to its new chairman, Mr. C. Elson Bennett, the whole-hearted support that had been meted out to him.

Paper Boxes and Bags.

Extent of the Canadian Industry.

A revised report on the paper box and bag industry in Canada for 1924 has been issued by the Forest Products Branch of the Dominion Bureau of Statistics. This is one of the most important of the secondary manufacturing industries depending on the pulp and paper industry for raw material.



The report covers only those firms which specialise in the manufacture of stiff, folding and corrugated boxes, cartons and other paper board containers and paper bags. These firms also manufacture in many cases envelopes, egg case fillers, paper drinking cups, bottle wrappers, mailing tubes and other miscellaneous products. The figures relating to production are not in all cases to be regarded as comprehensive, as some of these products are also manufactured as side lines in other groups of industries.

There were 94 firms engaged in manufacturing paper boxes and bags as their principal product in 1924, involving the investment of $15,678,478 as capital. The industry gave employment to 3,909 people and paid $3,543,193 in salaries and wages. The total cost of materials, which consisted chiefly of paper board, paper, glue, ink and other materials, was $6,058,067, of which $1,635,787 was used in the manufacture of stiff boxes, $1,562,542 in the manufacture of folding boxes, $1,700,516 in the manufacture of corrugated boxes and wrappers, and $1,099,222 in the manufacture of paper bags, envelopes and other products.

The total value of all products of this group of industries in 1924 was $12,556,840, being made up chiefly of stiff boxes valued at $4,103,395; folding boxes valued at $2,842,821, corrugated boxes and wrappers valued at $2,395,254, and paper bags valued at $1,531,998.

THE quarterly magazine, dated October, issued by Samuel Jones and Co., Ltd., contains a great deal of interesting news concerning the staff and some very good photographs. The illustrations include a portrait of Mr. S. A. Platfoot, managing director of Samuel Jones and Co. (Devonvale), Ltd, some fascinating scenes of Mr. S. C. D. Galloway's Eastern trip, and pictures taken on a cycling holiday in the Highlands. Mr. G. R. Searle, who has been 45 years with the firm, contributes a reminiscent article.

Paper Shipments.

Legal Action in London.

In the King's Bench Division, London, last week, Mr. Justice Branson heard an action in which Mr. F. Harcourt, a paper exporter of the Strand Palace Hotel, was sued by the owners of the County Line of steamers who claimed that they were entitled to three sets of bills of lading in respect of a quantity of paper conveyed by them for defendant from Hamburg to Montreal.

Mr. Robertson, for defendant, asked that the hearing might be postponed as defendant was engaged in litigation in Canada.

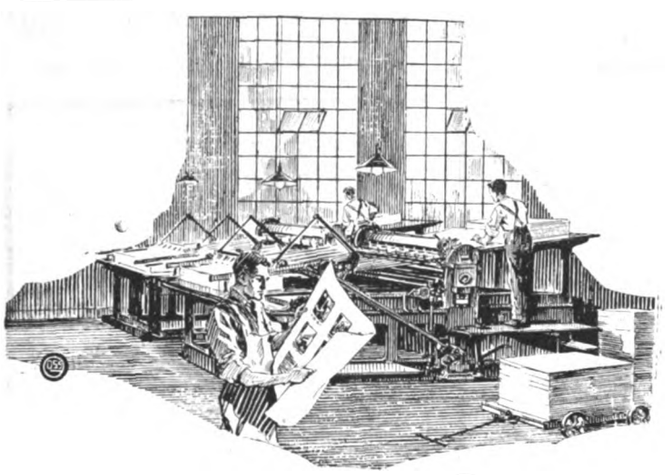
Mr. Hinde, for the plaintiffs, opposed, and his Lordship decided to hear the case.

According to the case as outlined by Mr, Hinde, defendant, in October of last year, called upon Messrs. Japp, Hatch and Co., of St. Mary-axe, the European agents of the plaintiffs' line, and stated that he wanted to export paper from Gothenburg to Canada. Special terms were arranged. He said he was buying paper from Messrs. A. B. Hedstrom and Co., of Gothenburg, and that it would be shipped to Hamburg, where he wanted it to be put on board the ss. "Hastings County" for Canada. Later he called upon the agents, and said that the local bills of lading had by mistake been sent to his bank in London, and could not be forwarded to Hamburg soon enough to get possession of the paper so as to have it shipped on the "Hastings County." He accordingly requested the agents to instruct their agent in Hamburg to give an indemnity to the master of the local steamer in lieu of the bills of lading so as to free the paper for shipment. The agents did so and the paper was duly shipped and the ocean bills of lading were sent to defendant. Defendant never fulfilled his promise to deliver to plaintiffs the local bills, and in fact he was never in a position to deal with the paper. The local bills of lading were c.i.f. Hamburg, cash against documents, but the defendant never took up the documents and thus never acquired any right to the paper. Messrs. Hedstrom gave notice to plaintiffs not to part with the paper except on payment for it, and accordingly they refused to deliver it to defendant, who refused to pay, and thus the paper was still in Customs storage in Montreal. The defendant had deposited the ocean bills of lading with the Royal Bank of Canada, who held them as security for a debt. Under a threat of legal proceedings, the plaintiffs had paid Messrs. Hedstrom $2,960 for the paper and plaintiffs accordingly claimed the price of the paper, the freight, insurance charges, warehouse charges and other relief.

Mr. Robertson said that according to defendant he was merely an agent buying the paper for customers in Canada. When the local bills of lading arrived he could not identify the paper as described on them. He accordingly refused to take up the documents. According to him the plaintiffs gave the indemnity to the local ship on their own account. Defendant was quite willing that the paper should now be sold. The property in the paper was now in the plaintiffs. They were the owners and therefore their present action against the defendant was misconceived.

Mr. Hinde said that defendant still refused to give up the bills of lading and thus plaintiff could neither get the money nor exercise any lien on the paper.

Judgment.



His Lordship, in giving judgment, said plaintiffs were not entitled to the sum they paid for the paper, but they were entitled to all the freight, warehousing, insurance and other charges to which they had been put by defendant's wrongful act in withholding the bills of lading. Therefore plaintiffs would have judgment for $1,333, and defendant must give every facility to enable them to dispose of the goods.

PREPARATORY work has begun on the £3,000,000 mill at Limollu (P. Quebec) of the Anglo-Canadian Co. Tenders will be called for in January, and erection of the mill itself will be undertaken in the early spring.

Developments in Offset Printing.

By Mr. S. E. Bottomley, F.R.P.S., Principal of the Printing Department, City of Leeds Technical School.

There are certain points of view to be considered regarding the usually accepted definition of offset printing. Rightly understood, offset is a weapon in the hands of the British printing industry of the greatest economic and artistic importance. Printers as a rule narrow themselves down to a very limited aspect of the offset process. Do they ever ask themselves how little paper is printed in the world compared with the vast amount of printed textiles, oilcloth, carpets, etc.? It is necessary for us to keep our eyes open to the probably greater results being achieved in other parts of the world by the many and varied applications of offset principles.

The experience gained in producing patterns on fabric enables one to-day to print patterns by offset and analogous methods on any surface, from a door mat or a blanket to the highest surface paper. Much has been said and written as to the origin of offset, and if we limit the term to its paper adaptations, then I think you are all pretty well aware of the various claims made. I, however, prefer to include in the term "offset printing" the printing on any surface, whether as the finished product or any surface which is a means to an end in printing. I submit that offset printing has been a sort of evolution. Apart from the evidence of patent specifications with regard to the machines designed, the principles were well known and used long before the date usually assigned to the introduction of the first machines. In considering offset printing, however, at the present time one links it synonymously with photo-litho methods. Among the medley of secret (and other) processes for producing printing surfaces for the offset machine, it is difficult to avoid confusion and misunderstanding. Aptly it may be said that the only secrets are a thorough knowledge of the "cardinal principles" and the "necessary skill" of the craftsman to carry out the necessary manipulations. Unfortunately, the traditions of chromo-litho die slowly. The litho artist using his analysis of colour does not appreciate that in modern photographic colour analysis he has a different principle to put into operation. Do not let me be misunderstood. The work of the chromo-litho artist, with its many printings, has seldom been beaten—often not equalled—by the semi-automatic methods of synthetic colour photographic processes. But we are to-day, with the wonderful perfection of the instruments and machinery available, endeavonring to do as well and more economically by three and four printings what previously was only possible in many printings. We can produce by photo-litho offset methods equal truth of rendering at greater economy not only in preparation of printing surfaces, but also in the actual printing. I am one of the first to admit that photo-litho offset only justifies itself on these grounds. If we are to compete in the world's markets these principles must apply in printing, or we shall fall into the backwash. Fortunately we have reason for hope. Every grade of worker and employer is examining himself and his methods. The prophecies of our friend Mr. Wm. Gamble have stirred up the printing world. His championship of photographic methods of preparing all printing surfaces has pulled the critics out into the daylight. The photographic "madness" of a few years ago is becoming the sane religion of to day and our hope for the future.

Out of the agony of war there has been an awakening of the need for scientific application of knowledge to all our industries and no industry has taken greater cognisance of this renaissance than has the printing industry. How can one justify this statement in relation to our subject? Here is one all important fact. Before the War the Germans had the entire monopoly of the essential dyes for rendering photographic plates suitable for colour photographic processes. To day we make our own, which are superior to the German product. Along with a colleague in the University of Leeds we reproduced in 1916 the necessary dyes for panchromatising our plates, for colour printing.

Photography and Colour.

This brings me to one of the cardinal points I consider necessary in dealing with this subject. If we are to reproduce a coloured original, we must have a photographic plate that is reasonably sensitive to the colours of the original and of which we can get a record in monochrome. The photographic reproduction of colour, more especially on the basis of the trichromatic theory, does not seem to be grasped by those responsible for using it in photo-litho reproduction. There is an assumption of its weakness totally incompatible with its possibilities. It is, I grant, impossible to reproduce perfectly in printers' inks and aniline dyes the glory of a pure spectrum, the wonderful natural colour effects, the elusive hues of light reflected from many pigments in whatever form they may be; but with all its failings colour photography can and does lend itself, when properly applied, to reasonable accuracy of reproduction, without the need of adventitious faking.

Clerk Maxwell, Helmholtz and Abney, long before the discovery of Lumière, showed conclusively that the primary colours, red, green and blue-violet were sufficient to reproduce all the various shades of colour. If from these "light" records we print in pigmentary complementary colours we can reproduce our orginal.

One must appreciate the fact that colour is only the absorption of white light. No light—no colour. In the Lumière autochrome plate you have exactly the same principle as is adopted in three-colour plate-making. In the Lumière plate you screen each microscopic grain. In the ordinary three-plate process you screen the whole plate.

Now these coloured grains in the Lumière plate are grains of potato starch, dyed red, green and blue in the proportion of four green, three red and two blues. Each grain is roughly between $\frac{1}{1000}$–$\frac{1}{2000}$th of an inch in diameter, so there are roughly 3½ to 4 million separate colour patches per square inch. The theory is roughly this. Only red light can pass through the red filter (or starch grain); only green through the green; only blue through the blue—so that the sensitive emulsion behind is simply a negative record of the coloured original.

Now to quote a simple instance, suppose we are photographing a red sheet of paper—then the reflected red light from the paper only passes through the red particles. We develop the plate and beneath every patch of red we have an opaque spot of silver. If we now dissolve out the unaltered particle of the silver emulsion, we have every red grain blotted out by the black negative, leaving, when viewed by "transmitted" light, the complementary colour, a green blue. In the process, however, a suitable chemical treatment before fixation dissolves out the black spot under the red previously developed, and re-develops on exposure to light the particles under the green and blue spots. This reversal now gives us opaque spots of silver under the blue and green, and a transparent grain under the red, thus giving the colour of the original.

As previously stated, in our photo-litho method of obtaining colour records, three negatives are taken—one each through green, red and blue screens respectively. Similarly, each of our three negatives when developed gives its appropriate colour record. The positive printed from these negatives must therefore be printed in the colour complementary to that of the original filter through which it was taken.

The Essentials of Colour Work.

The above remarks are necessary because so often tri-colour is so little understood that many argue it is not capable of giving satisfactory results. To a certain extent they are

correct, but only because of lack of skill, or lack of understanding of the cardinal points of three-colour reproduction. If a careful calibration of the materials and methods is adopted, then satisfactory colour results with little "faking" can be produced. Within recent years, attention to these points has been a speciality of several firms producing work, or plates for the trade, with eminently satisfactory results.

Briefly the conditions necessary are:—

1. A colour correct lens capable of giving and recording with freedom from coma.
2. The filters, preferably flats, calibrated to the particular lens used.
3. The filters calibrated to the illumination and photographic plate used.
4. A screen and gear on the camera capable of exact adjustment at all positions and angles.
5. Correct proportional exposure for each filter.
6. Correct development for a standard time and standard temperature.
7. Correct printing down to metal.
8. Careful selection of printing inks and paper.

If the above points are standardised, and this is easily done, then accurate printing down can be easily secured. It is with regret, however, that one finds from practical experience that "catch as catch can" guess work is very often the order of the day. Trial-and-error methods are practised in negative-making, *e g.*:—(a) Lenses are used that, even if fairly colour correct, give coma and thus make it impossible to get a solid dot—the *sine qua non* of photo-lithography. (b) Filters are not correct, or not free from distorting effects or strain. (c) Illumination varies. (d) Screen positions are not accurately calculated. (e) Exposures are guesses, and records are carelessly kept. (f) Developing each of a set of three negatives at different times under different conditions, thus getting a lack of uniformity in the colour rendering.

May I suggest that there are simple instruments on the market that should be found in every house where colour negatives are made?—1. A simple standard plate on which every batch of plates should be tested and the record kept. This plate gives a simple record of monochromatic speed, and colour sensitiveness in terms that can be easily understood. 2. A density measurer of the Dawson type with a simply graduated black wedge. 3. A suitable drying cupboard preferably thermostatically controlled—where negatives can be dried at a uniform rate free from dust.

If the negative has been made under the above conditions it should need little or no faking before printing down. One should, however, not go so far as to say that the above conditions are always possible. Variations occur, and it may be necessary by various means to correct, alter, or add to the negatives. The variations of double three-colour—the addition of a fourth printer from a negative taking through the various colour correcting yellow filters—such as K1, K2, K3, etc., may be an advantage in particular circumstances.

By careful consideration of the above points, instead of making haphazard sets of negatives, the necessity for faking and adding or making new plates is largely avoided with all its economic gains.

Aluminium or Zinc?

Now we come to the printing down to metal, and we raise the point "Aluminium or Zinc?" Each has its advantages and disadvantages. My own preference lies with zinc. After all, water plays an all-important point in litho-offset. Where the water contains peat and iron, zinc is less liable to contamination than aluminium. Its co-efficient of expansion is again a strong point in its favour over aluminium. For every degree centigrade of rise in temperature, aluminium expands 1/500 of its length, while zinc expands 1/3000 of its length in a similar change.

Above all, there is a marked superiority in zinc over aluminium in its similarity in treatment to stone.

Work is often difficult to remove, especially when printing down on metal plates, and when resort has to be made to drastic treatment; then zinc is chemically capable of more drastic treatment than aluminium. Both zinc and aluminium have a marked affinity for greasy substances, hence grease inks readily combine with either. Equally important is their property of retaining water when suitably treated. The solutions used produce a new surface which is in direct chemical union with the metal itself. This new surface becomes a perfect grease-resisting medium. In other words, the original zinc surface that has been treated becomes transformed into a new compound body possessing entirely new chemical and physical properties with a preference and affinity for holding water and an absolute inability to hold grease when moisture is present. This is the fundamental principle of surface printing by lithographic methods.

(To be Continued.)

A Danger to Lithographers.

Safety First.

There has of late been a number of comments upon the danger of using etching preparations containing chromic acid supplied to the lithographic trade for use on zinc and aluminium plates.

It appears that unless great care is exercised by the litho printer when using these preparations he may contract chromic acid poisoning, which is a very painful disorder and one very difficult to eradicate from the system. The Amalgamated Society of Lithographic Printers, realising the gravity of this matter, have published in their Year Book a warning to their members about the use of chromic acid in its various forms. It is very obvious, therefore, that it is of the utmost importance from a health point of view that very great care should be taken when using chromic acid.

There are, however, several etching preparations on the market containing no chromic acid which are very effective and reliable from the printer's point of view, and in order to avoid the danger of poisoning these preparations should be used. One of these preparations has been used daily by a large number of lithographic printers for many years, giving excellent printing results although it contains no chomic acid, and is, therefore, safe as to the health of the litho printer.

If any of our readers would like to know where to obtain this preparation, we shall be pleased to put them in communication with the makers.

Who's Who

IN THE

PRINTING & ALLIED TRADES.

Mr. Sidney Lamert.

Mr. Sidney Lamert, the new president of the Lithographers' Auxiliary to the Printers' Pension Corporation, has an interesting and varied life-story. He was educated in Scotland at Loretto, and, like so many Scotsmen, came south after a short spell on an Edinburgh newspaper, seeking an enlarged horizon. After trying his hand at free-lance journalism in London, he joined the staff of the *Sun*, the old halfpenny evening newspaper founded by Mr. T. P. O'Connor. He succeeded as editor there in 1897. In 1899 he went out to the South African war, being attracted to war

Mr. Sidney Lamert.

correspondence, and acted as correspondent for the *Daily Express*, having been selected for the job by Sir Arthur Pearson. Later, he went out to America and was in the machinery business for some time, after which he went to Klondyke. Then he came home and drifted into the City. He wrote leading articles for the *Financial News* and acted as assistant editor on that paper for a time, and then took up various company directorships. In 1910 he acquired the *Money Market Review*, a weekly financial paper of old standing, and subsequently amalgamated that with the *Investors' Chronicle*, which is now one of the most important of the weekly financial newspapers. He was a director of several paper companies and in 1922 was asked to take over the managing directorship of Thomas De La Rue and Co., Ltd., by friends in the City, who were heavily interested in the debentures of that company and were very unhappy with regard to the way things were going. The subsequent history of De La Rue and Co. is fairly well known to most of our readers, but one may safely say now that after drastic financial re-organisation the firm is on the right lines. De La Rue and Co. have such a great record in the printing trade of this country, that it would have been a thousand pities had the firm gone under. The reputation of the house was, of course, at one time mainly based on its excellence as a typographic printing house, but it has always had a strong lithographic department, and latterly has been coming more and more to the front for copperplate printing. Mr. Lamert becomes president of the Lithographers' Auxiliary in response to a most cordial invitation extended to him, and he carries with him the best wishes of the trade.

A NOTABLE development in colour printing is reported. After over two years of experimentation to overcome the problems involved, notably the problem of accurate registration, the Chicago *Tribune* began on September 13th to print successfully in its Sunday supplements two pages of rotagravure in four colours. The presses print on a web of paper the four colours in succession at a speed, it is claimed, of six thousand perfected papers an hour. Rotary gravure in four colours from a sheet-fed press is no novelty, but similar work from a web-fed perfecting machine is an important achievement.

Lithographic Trade Review.

NOTES AND NEWS.

THE state of trade in the lithographic section of the printing industry remains very satisfactory. Certainly it is better than it was at this time last year. Litho printers can congratulate themselves on being comparatively little affected by the seasonal changes which are such disconcerting features of the year's work in some branches of printing.

A BLOCK used in the printing of this week's *British and Colonial Printer and Stationer* is deserving of comment, as it is, we understand, the first process block made in this country by the use of the Typon paper introduced by Messrs. Typary and Typon, Ltd. It is surprising to us that this should be the case, in view of the fact that paper negatives are now an established feature of photographic reproduction work in present-day printing, and are, as is well known, rendering good service in reproducing, without the use of the camera, both text matter and line illustrations for photo-litho and other processes. Messrs. Typary and Typon, Ltd., moreover, have long been able to show very good examples of planographic work the negatives for which were obtained by the simple method of "direct contact" printing. In the direct contact method one takes the original to be copied and places it in a printing frame, face upwards. A sheet of sensitised paper is placed on top of the original to be reproduced (emulsion side down), and the print is made through the original. Still better results are obtainable by the reflex method, in which one prints through the sensitised paper with the aid of a filter, obtaining the image by reflection from the original, the white paper reflecting the light, whilst the printer's ink is practically non-reflective.

THE block to which we have referred is the line block at the head of the advertisement on page 374. In view of the success attending the use of paper negatives it is somewhat astonishing to learn that this is actually the first block made by the Typon paper in this couutry. The fact would seem to suggest that our process houses are very conservative in the direction of experimenting with new inventions touching their sphere of work. This particular block was made from a paper negative taken from an artist's drawing, facsimile size, by the reflex method. Though we have not yet seen a half-tone block that has been produced in this way, we have no doubt this will be the next step. To this end use will be made of the new anti halation paper which the Typary people have just introduced. It is claimed that this paper overcomes the difficulty, inherent in half-tone work, of halation effects around the fine dots of the half-tone image—effects which mar the fine gradations of the half-tone picture. In this connection it may be mentioned that we have already reen a half-tone negative in paper in which the clean dot formation seemed to promise satisfactory results in half-tone block making by this method.

RECENT developments in photo-lithography and offset printing make the subject of security printing a somewhat vexed question in this country. It is interesting to note that in America, when a suggestion of adopting a planographic method of printing for United States money and securities came up before the Congressional Committee on Appropriations, Major Kirby, a former director of the Bureau of Printing, gave the following opinion on the subject: "No method of printing can equal, for safety against counterfeiting, that of steel engraving, duplication of plates and intaglio printing at present used in printing United States bank notes and securities. One reason for this is that there are but 125 skilled steel engravers in the United States, and they are kept employed on legitimate engraving."

TO PROVE that planographic printing could easily be counterfeited, Major Kirby showed a copy he had made of a planographic print submitted to the committee as a substitute for steel engraving. The original planographic print had been enlarged to double its size by photography. On this enlarged photograph artists had redrawn the design in pen and ink. When this drawing was reproduced to the required size by photo-planography the counterfeit could not be distinguished from the original. The major said the adoption of planography might reduce the personnel by about three thousand, but for every person dismissed the Secret Service would have to employ two or three detectives to apprehend counterfeiters. This, however, must be regarded as a personal view. There are British lithographers who could strongly controvert it.

THE new Museum at Munich can boast to show in the department devoted to lithography the original lever press of Alois Senefelder, a hand press and various small test apparatus for reprinting and for autography. A lithographic hand press by Karl Krause, of Leipzig, lithographic stones, together with tools and leather rollers are also exhibited in this room. Objects worthy of exhibition and art prints kept in show cases demonstrate the high perfection attained by the Munich invention of lithography. The process of *offset printing* can be studied on a modern machine dedicated by Messrs. Albert and Co., at Frankenthal (Palatinate); here the Solenhofen lithographer's stone is replaced by the offset zinc printing plate.

Lithographers' Auxiliary Concert.

Handsome Contributions Reported.

There was a large gathering of the members of the printing and allied trades in the Grand Hall of the Cannon-street Hotel on Monday evening, when an excellent concert was held under the auspices of the Lithographers' Auxiliary to the Printers' Pension Corporation. Mr. Sidney Lamert (president) was the chairman for the evening, and amongst those present were: Messrs. Spencer Portal (Portals, Ltd.), John Ash, C. W. Boyce, J. E. Reeve, Chas. Baker, Woodgate Stevens, E. A. Lowe (chairman of the Auxiliary Committee), W. Herring, E. A. Mullins, W. Y. Calder, J. MacKenzie, and J. Mynott (Auxiliary secretary).

At a convenient stage in the musical programme Mr. Lamert took the opportunity of drawing attention to the object that had brought the company together. He said the Printers' Pension Corporation was not a charity, but was one of the best benevolences that he was acquainted with. It was not one of those fashionable charities of which 20 or 30 per cent. of the money received went to defray the cost of administration. In the case of this fund, all the money collected went to provide pensions for lithographers who had reached the time when they could no longer continue their occupations. In expressing his thanks to the many friends who had helped him in raising his plate he mentioned with pleasure the substantial subscription of £500 received from the Inveresk Paper Co., Ltd., and its allied companies. The donors of this gift had asked that the sum be allocated in order to create a pension to be called the Inveresk and Allied Companies' Pension. To this request the Auxiliary committee had cordially acquiesced.

Mr. E. A. Lowe, in proposing a vote of thanks to the chairman, said that when Mr. Lamert was asked to take the chair that evening he sprang to the rather onerous task with alacrity. His magnificent plate of roughly £700—including the collection taken during the evening—showed that he had given up a lot of his busy time in order to help a noble cause. The amount raised that evening, he said, was the second largest figure ever registered at their concerts.

The vote of thanks was very heartily accorded, being accompanied by musical honours and much enthusiastic applause.

The Artistes.

Though no official vote of thanks was moved to Mr. W. Herring, his duties as musical director were carried through to the complete satisfaction of every one present. Contributions to the musical programme were made by the following well-known artistes: Messrs. Robert Easton (bass), Fred Emerton (comedian), Rex Harold (entertainer), Leonard Lovesey (tenor), Joseph Bull (operatic banjoist), Jock Walker (humorist), and the Misses Gertrude Mayo (accompanist), Ethel MacLelland (soprano), and Annie Rees (soprano).

A short biographical sketch of Mr. Lamert appears in another column.

"How Maps are Made."

Mr. Percy W. Ryde at Stationers' Hall.

The November lecture in the series arranged by the Stationers' Company and Printing Industry Technical Board took place on Friday, the lecturer being Mr. Percy W. Ryde, F.R.G.S., managing director of Messrs G. W. Bacon and Co., Ltd, who took as his subject "How Maps are Made." There was a large audience, which was presided over by Mr. R A. Austen Leigh (past president of the Federation of Master Printers), and amongst those supporting the chairman on the platform were Messrs Edward Unwin, Albert Hill (L.C.C. Inspector of Education), S. Hodgson, M. H. Butcher (G W. Bacon and Co.), W. Boyle and J. R. Riddell.

Mr. Austen-Leigh, introducing the lecturer, touched upon the fascination and the importance of map making, and referred to Mr. Ryde's services as a member of the Council of the London Master Printers' Association and his long experience as a lecturer.

Mr. Ryde said at the outset that he would deal rather with map construction than with map printing, and he accordingly began with an historical outline of the history of map drawing. He went as far back as 600 B.C. for the earliest record of the use of maps, and mentioned 500 B.C. as the date of the earliest map which the world knows anything about, that of Hecatæus. He then traced the story of map making from ancient times up to the present day, note being made of the pre-Christian knowledge of the fact that the earth is a sphere, and the loss of that knowledge under Christian influence. The speaker mentioned the use of loxodromic lines, and the introduction of the compass, and indicated the development of astronomical knowledge, explaining also the calculation of latitude and longitude.

At this point Mr. Ryde introduced an excellent series of lantern slides, and with the aid of diagrams, pictures and maps on the screen proceeded not only to illustrate points already mentioned, but also to deal in a most informative and interesting manner with such matters as surveying, the means employed and the principles of the work; travellers' map making, with reproductions of famous explorers' sketch maps; projections—orthographic, stereographic, globular, Mercator, homolographic and conical; and the meaning of scale in reference to map making.

In regard to the methods of reproducing maps through the agency of the printer, limitations of time forbade more than a brief reference, but attention was drawn to examples which the lecturer had brought for inspection. These included map "copy" as provided for the lithographic artist and the photo lithographer, blocks and plates for map printing, and a fine array of maps exemplifying the finished article.

In conclusion, the speaker impressed upon the younger members of his audience two points brought out in the course of the lecture, namely, the map maker's care and attention to detail, and the pleasure he takes in his work—two points in which the map maker might well be emulated by those in every branch of the printing trade.

After the chairman had commented upon the erudition and humour displayed in the lecture, and particularly upon the lecturer's skill in making difficult matters appear simple, a vote of thanks to Mr. Ryde was proposed in complimentary terms by Mr. Albert Hill, and seconded by Mr. Hodgson, being carried enthusiastically.

Mr. Ryde, in responding, made cordial acknowledgement of assistance received from his fellow directors, the works manager and the chief draughtsman of Messrs. G. W. Bacon and Co., Ltd., and he called for an ovation for the chairman, which also was very heartily given.

A copy of Bacon's large-scale map of London was given to every member of the audience, making a useful memento of an excellent lecture.

LOTUS leaves are used in China for wrapping purposes, the claim being made that they are cheaper than paper, and, when fresh, impart an aromatic odour to the contents.

A NEW artificial silk company, with a nominal capital of £1,000,000, is being formed, the directors being all prominent men in Lancashire industries.

North London Master Printers' ASSOCIATION.

Lecture by Mr. Frank Colebrook.

The monthly meeting of the North London Master Printers' Association was held on Wednesday of last week at Wortley Hall, Finsbury Park, N., under the chairmanship of Mr. W. Wilson (president). Amongst those present were: Messrs F. J. Collins, W. R. Cummins, T. Sellens, W. J. Mizen (hon. sec.), J. J. Huber and E. G. Baker (assistant secretary L.M.P.A.).

With a view to ascertaining the best methods to adopt in order to obtain a greater amount of printing in the district the Association had inaugurated a competition amongst the members, which took the form of suggestions in the way of specimens of posters, lay-outs, folders, essays, etc. These were on exhibition during the evening, and as the result of a ballot the successful competitor was found to be Mr. F. J. Collins, who presented an essay round the slogan: "Use More Printers' Ink, It's the Breath of Business." The principal business of the evening was an address by Mr. Frank Colebrook entitled "Printing Production and Printing Salesmanship."

Following the reading of the minutes and the election to membership of one new member, Mr. Colebrook was called upon to address the meeting. He said there should be no division between production and salesmanship and they should not be separated. If they must be placed in any order, however, he would put salesmanship first and production next. He believed they should aim high if they wanted to get a real spirit of co-operation amongst all engaged in the industry to secure improved salesmanship and production. Referring to his recent visit to the United States, he said that in that country there seemed to exist more alertness and fluidity of mind, whilst there were no such things as trade union restrictions. There were also in that country no such things as old age pensions, unemployment insurance, or workmen's compensation. As a matter of fact there was no need for them. The printer in America was always originating. He was of the opinion that the United States beat us in the higher regard they had for the craft, although in some respects the British printer led the way. In that country they did not have such good technical education as we had. He then told of the work of the organisation in Chicago which corresponds to the Federation of Master Printers in this country, and whose secretary is Colonel Miller. This organisation has records of printing production and gives to its members information that will prevent them making mistakes when purchasing machinery.

He described the letterpress section of the industry as the "Letterpress Rip Van Winkle." He gave it this name because it was his firm belief that the letterpress printer had not realised to the full the possibilities of his work. That could be seen from exhibits at the Printing Exhibition, which was essentially a display of litho offset. In the States greater attention was given to the preparing of letterpress plates and the mounting of the blocks, so much so that there was no need to worry about making-ready.

As an example to printers how they might avoid spending money unnecessarily on a multiplicity of type faces, Mr. Colebrook then instanced the success achieved by the firm of Bartlett-Orr, who had built up a big business with only eight or ten faces and who to-day had only some twenty or thirty.

Mr. Colebrook was then invited by the chairman to make comments on the various specimens sent in for competition, and in doing so made several useful suggestions regarding them.

Mr. Wilson asked the speaker if he thought the United States were in front of us so far as printing was concerned. He thought it would not be a bad idea if the officials at Old Bailey adopted a similar scheme to the American Master Printers' Association in keeping records that would guide printers in this country when buying machinery. He was pretty nearly certain that twenty or thirty faces of type would not be sufficient equipment for many printers in this country for nearly every fresh customer wanted his job set in certain type, and if the printer had not got it in stock he would have to buy it.

Mr. Colebrook thought we were not, generally speaking, behind America in printing. The railway posters in this country were better than anything he saw in the United States. So far as photogravure was concerned, there were in this country specimens quite the equal of anything in the States. With regard to quality work, there was nothing to touch the productions of the Rembrandt Co., the Sun Engraving Co., or the Vandyke Co.

Mr. Mizen, in alluding to the practice of stocking only a small number of type faces, said it was customary in such cases to bring in the work of the artist. As an instance of this he said Mr. H. B. Naylor at a recent meeting of the South-Western District passed round the room for inspection a large number of advertisements from daily and weekly papers, and the majority of them were composed of illustrations.

Mr. Whitehead, in a vote of thanks, expressed to Mr. Colebrook the indebtedness of the meeting for the many helpful suggestions he had placed before the members.

Herefordshire Master Printers FRATERNISE.

The Annual Meeting.

On the 10th inst. the members of the Herefordshire Master Printers' Association met for their annual meeting at the "King's Head" Hotel, Hereford, at 4.30 p.m. The energetic and popular secretary (Mr. W. E. Henner) in conjunction with the chairman (Mr. G. H. Peacock) had made arrangements for the proceedings to commence with tea.

Besides the chairman and secretary, there attended: Messrs. Fowler, Jefferies, Dalley, Lowe, Thurston, Bowen, Baker and G. F. Jones, and A. H. Pole (representing the Alliance). Apologies were received from Messrs. Tilley, Phillips and Townsend (the president of the Alliance).

The statement of accounts showed that after an expenditure for the year 1924 of £4 3s. 6d. there was a balance in hand in December last of £5 12s. 8d. On the motion of the chairman, seconded by Mr. Bowen, the accounts were passed. It was decided to call in the Association's subscription for 1925, the amount ranging from 7s. 6d. to £2 2s. according to the number of employees.

Mr. Henner presented his report, in which it was stated that much good was expected to result from members adopting the Federation Costing System. The suggestion was made that meetings should be held more often, and that they should be held more often, and that they should be held for the benefit of the country members. It was also suggested that all estimate forms for printing should have the standard conditions printed at the back. On the proposition of Mr. Dalley, seconded by Mr. Jefferies, the report was adopted, the chairman remarking that they owed a great debt of gratitude to Mr. Henner for the way in which he had stuck to the ship.

The election of officers resulted as follows:—President, Mr. G. H. Peacock; vice-president, Mr. Lowe; secretary and treasurer, Mr. W. E. Henner; committee, Messrs. Jefferies, Fowler, Dalley, Thurston and Baker; representatives to Alliance Executive Committee, Messrs. Baker and Henner.

Mr. Pole then delivered a most interesting address upon the subject, "Can Price cutting be Made to Pay? If Not, What Can?" Basing his remarks upon the figures and illustrations used by Mr. Sessions in his address to the Cost Congress at Buxton, Mr. Pole showed that the effect of cutting prices in order to increase the turnover was in some cases disastrous and under the best circumstances not worth doing. He showed, too, that the best thing to do was to endeavour to get a little better profit on each job that was done, where the profit was too little. Mr. Pole had prepared helpful diagrams to illustrate his remarks.

A good discussion followed the delivery of the address, many difficulties being mentioned and elucidated, emphasis being laid on the value of co-operation and the need of educating public spirit.

The Alliance secretary reminded the meeting of the standardisation of paper, and laid stress upon the importance of every printer ordering his paper in accordance with the new agreement.

On the proposition of the chairman hearty thanks were accorded Messrs. Jones and Pole for their attendance, and it was agreed to arrange another meeting for the early part of January.

Country News.

Birmingham.

On the 12th instant Mr. A. T. Seager, one of the Federation Cost Accountants, gave an interesting lecture on "Costing" at the monthly meeting of the Printers' Managers and Overseers Association. Mr. Clark, the president of the Centre, was in the chair, and in opening the meeting said that careful and accurate costing, in its own department, meant efficiency in that department—but, he thought, it went even further than that, for it laid bare inefficiency in every other department. It was, in fact, what it has been called, the "mirror" of the business. Many of them apparently feared to look in this mirror of their businesses. They had not the time, they said, but sometimes he felt the truth was that the features were too ugly—they left a nasty impression. Mr. Seager then went thoroughly into the "outworking" of the System in the office, showed how it affected for good the firm, the manager, the overseer, the foreman, and the workman. It brought dignity into business; it brought science, and science ousted "rule-of-thumb"; it brought security, it brought a sense of satisfaction with the day's work; and it brought about a good feeling in the workshop. The many illustrations Mr. Seager gave encouraged a good discussion, in the course of which many most interesting points were elicited.

Bath.

A meeting of the Bath Master Printers' Association was held at the Red House Restaurant, Bath, last week. Mr. W. E. Harding (president) was in the chair, supported by Messrs. Botwright, Melluish, Richards, Dando, Higgins (secretary), and G. F. Jones (secretary of the Alliance). On the subject of re grading the chairman stated that the evidence against any alteration in the grading of Bath was being got together and would be ready when the inquiry was held. It was resolved that the secretary should write, in the name of the Association, to the local member of Parliament asking him to support the principle in the Rating and Valuation Bill by which machinery, apart from main driving motors or engines and main shafting which was not part of the hereditament, would not be rated. It was also agreed to endeavour to arrange for a social evening early in the New Year, and for an address upon some topic of interest to be delivered.

Leeds.

A very pleasant evening was spent by a company of about 100 ladies and gentlemen connected with the Leeds printing trades at the Griffin Hotel, Leeds, on Wednesday of last week. The occasion was the annual social gathering in connection with the Leeds and District Printing and Allied Trades Sports Gala, held last July, invitations having been issued by Mr. R. D. Chorley, the president of the sports gala. A capital musical programme was given by the Halton Concert Party, and several members of the Leeds Sylvians Operatic Society also contributed to the evening's entertainment. Mr. Arthur Wigley, president of the Leeds Master Printers' Association, was the chairman in the unavoidable absence of Mr. Chorley.

The following additional subscriptions have been received towards the £500,000 appeal for the extension of the University of Leeds:—Messrs. Petty and Sons (Leeds), Ltd., Whitehall Printeries, Leeds, £1,000; Messrs. George Mann and Co., Ltd., London, £500; Sir Meredith T. Whittaker, ex-chairman of the Linotype Users' Association, £50; Mr. J. A. Stembridge, printer, Leeds, £10; and Messrs. Stembridge and Co., Ltd., Leeds, £10.

Leicester.

Mr. H. E. Bates, the assistant editor of the *Leicester Mail*, has been entertained at dinner by the staffs of that paper on leaving to take up a position as leader-writer on the *Nottingham Guardian*. The chair was taken by Sir Samuel Faire, chairman of the company, and he presented to Mr. Bates a gramophone which had been subscribed to by all departments. Sir Arthur Wheeler, Bart., was also present, and in proposing the health of the staff mentioned that the *Leicester Mail* would enter into new offices early in the new year.

Sunderland.

Mr. S. Varley, who for some years has been a member of the composing-room staff of the *Sunderland Daily Echo*, has been presented with a silver cigarette case on leaving Sunderland to join the staff of the *Newcastle Daily Chronicle*. The presentation was made by Mr. W. Morris (acting overseer), and Mr. W. Armstrong (father of the chapel) presided.

St. Albans.

One of the best concerts that has been given in St. Albans for some time was that which took place on Thursday in St. Peter's Institute, the proceeds being in aid of the Printers' Pension Fund in connection with the Printers' Pension, Almshouses and Orphan Asylum Corporation. The concert was a great success and realised about £50 for its object. The chairman was Mr. H. S. Gibbs (of Messrs. Gibbs and Bamforth, Ltd.) who was supported by Mr. R. J. Dangerfield (of the Dangerfield Printing Co., Ltd), who is president of the local committee of the Printers' Pension Corporation.

Norwich.

Mr. W. H. Gee, a prominent member of the Norwich branch of the Typographical Association, and one of its founders, has been presented by the local members with an inscribed clock on retiring from Messrs. Jarrolds, where he has been employed for nearly 45 years, latterly as a printers' reader.

Derby.

Mr. A. Harrison, the foreman of the stereotyping and electrotyping department of Messrs. Bemrose and Sons, Derby, has been the recipient of various gifts on retiring after nearly 50 years' service From the general works and staff he received a silver mounted umbrella and a wallet of Treasury notes, and from his own department a silver-mounted ebony walking stick. He was presented with a cheque by the directors, who have also made him a retiring allowance.

South Wales.

The proprietor and editor of the *Pembroke County Guardian* has this year been selected as Mayor of Haverfordwest. Councillor Joseph William Hammond went to the town 31 years ago from Dorset, and joined the staff of the *Guardian*, then printed at Solva, as reporter. He became joint managing director of the paper in 1906 and sole proprietor and editor in 1916. In the early part of this year his name was added to the commission of the peace for the county.

Cardiff.

At the Cardiff Technical College classes are held each week for students of journalism, and are very well attended. A special series of lectures has been arranged in conjunction with these, and Mr. David Evans, the editor of the *South Wales Journal of Commerce*, delivered the second of these on Thursday. Taking as his subject "Commercial Journalism," Mr. Evans said that there was no industry, however small, that could not be included in the work of the commercial journalist There was no greater error than that commercial journalism stereotyped activity and stunted the imagination.

East Newport, Fife.

Scotland loses one of the oldest journalists in the country by the death, last week, at the age of 87, of Mr. David Thorne Sandeman, of East Newport, Fife. He was born at Dundee in 1838, and for over sixty years took an active part in his profession. In the 'fifties he was a reporter on the Edinburgh *Caledonian Mercury*, long since defunct, and migrating to England in the 'sixties, became a reporter on the *Leeds Mercury*, and afterwards its chief sub-editor. In 1877, Mr. Sandeman returned to Scotland as chief sub-editor of the *Glasgow Herald*, a position he held for thirty years, while Dr. Charles Russell, his brother-in-law, was its editor. In 1907 Mr. Sandeman retired from active journalism, but not from taking part in all that concerned the welfare of his profession. He was president of the Institute of Journalists in 1906, and continued to be a member of the committee, as well as of its orphan fund, and a member of the Newspaper Press Fund executive until 1917. In 1867 he married a daughter of Mr. John Best Davidson, a colleague on the *Leeds Mercury*, and is survived by two sons and one daughter.

Paper Standardisation.—On behalf both of the National Association of Wholesale Stationers and Paper Merchants and of the Federation of Master Printers, signatures were appended last Thursday to an agreed scale setting forth equivalent weights per 1,000 sheets—an agreed scale made desirable by the recent standardisation agreement. The new agreement is in the form of a table setting forth equivalent weights, per ream of 480 sheets and per 1,000 sheets, covering a range of ream weights from 7 lbs. to 120 lbs.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies, Machinery for Sale and Wanted, Businesses for Sale and Wanted, Partnerships and Investments, Miscellaneous.

One Insertion 3/0
Three Insertions 6/0

For every line exceeding three lines 6d.

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion 1/6
Three Insertions 3/0

For every line exceeding three lines 6d

Sales by Auction, Tenders, Patents for Sale, Legal and Financial Announcements.

THURSDAY, NOVEMBER 19, 1925.

British Industries Fair, 1926.

IT is officially announced by the Department of Overseas Trade that both Canada and the East African Colonies have decided to take part in the British Industries Fair, which is to be held in London and Birmingham in February next. On behalf of Canada, the Canadian Chamber of Commerce in London, by arrangement with the High Commissioner for Canada, is organising a Canadian exhibit at the London Section, whilst for the first time in their history and of the Fair, the East African Colonies — Kenya, Uganda, Nyasaland, Northern Rhodesia, and Tanganyika Territory—will collectively display a combined exhibit of their products. Not only will this decision be of interest to a very large number of overseas buyers, but it will also do much to stimulate the development of Empire trade and carry on the excellent work commenced at the British Empire Exhibition.

* * *

Improving Trade.

THE curve of unemployment is steadily dropping, which is the surest proof of improving trade. Last week saw another substantial decrease in the Ministry of Labour's figures to the extent of no less than 24,696. Unfortunately the total figure is still very heavy, namely, 1,207,700. A reference to previous returns, however, shows that a steady improvement has been in progress. Since the beginning of September this is the eighth week in which a decrease has been recorded, the net reduction in unemployment during the last two months being 146,814. This is certainly a satisfactory tendency. It does not, however, remove the necessity for stimulating business to the very utmost. There is still a great deal of leeway to be made up, and the advance can only be made by whole-hearted effort on all hands. The fact that the movement is in the right direction should afford encouragement, since nothing succeeds like success.

Printers' Pension Festival.

Contributions Total £33,250.

Under the presidency of Sir Herbert Morgan, great success attended the ninety-eighth anniversary festival of the Printers' Pension, Almshouse, and Orphan Asylum Corporation, held at the Connaught Rooms on Tuesday evening. The total of contributions announced was £33,250—the largest sum ever raised at this annual event with the exception of the occasion when the Prince of Wales presided over the festival in 1920.

A telegram from the King wishing success to the work of the Corporation was received and read during the proceedings, and the dinner was, as usual, graced by the presence of so many distinguished representatives of every branch of the printing and allied trades that it would be invidious to single out names for mention.

It fell to the president to propose the toast of the "Continued Prosperity of the Printers' Pension Corporation," and in the course of his remarks he said the Corporation, in truth, represented one of the finest and the greatest of human efforts—the desire to live and to work together—and if that ideal could only be spread over the whole of the industrial community that great corporation would not only have done a magnificent work for its own trade but it would have done a great work for civilisation and for the Empire. (Cheers.)

Mr. C. J. Drummond (deputy chairman of the council) responded.

The Earl of Birkenhead proposed the toast of "The Press" in a witty speech in which he discussed the power and service of the Press in this country.

Lord Riddell responded, also in humorous vein, and amidst cheers announced his willingness to increase his subscription by another £500, provided it was made up to £2,000.

Mr. Justice McCardie proposed the toast of "The Art of Printing," and Sir Andrew Caird replied.

The health of the president was proposed by Sir William Berry.

Trade Union Matters.

A RUMOUR is in circulation in the trade that Mr. T. E. Naylor, M.P., has decided to resign his position as chairman of the London Printing and Kindred Trades Federation. Mr. Naylor has held this position for a period of ten years, and if the rumour be correct his resignation will be regretted throughout the whole of the printing trade, by both employers and workpeople.

L.S.C. WAGES BALLOT.—Announcement is made of the result of the ballot taken of members of the London Society of Compositors on the question "Are you in favour of tendering notice to enforce the demand for a 7s. increase?" Those answering "Yes" numbered 2,457, "No" 7,359, the result being a majority of 4,902 against the proposal.

LIVERPOOL COMPENSATION CASE.—The secretary of the Liverpool branch of the Typographical Association has forwarded to the Executive Council a letter from the solicitor acting in the compensation claim of a member of the branch stating that the insurance company concerned had made the following offer: "Massage treatment until such time as an artificial arm can be properly fitted, and in the meantime the member to receive payment of full wages, and when the arm is properly fitted to receive a lump sum of £400, less the sum per week during the treatment at the figure legally due from the employers." The Executive Council have advised acceptance of the offer.

COMPOSITORS AND OFFICE CONDITIONS.—The secretary of the Redhill branch of the Typographical Association has reported to the Executive Council that he has received a letter from an office where the compositors had refused to work overtime on account of bad lighting arrangements. The firm had replied that there would be no more night overtime, but that overtime would be worked on Saturday afternoons and Sundays. The Executive Council raise no objection to this overtime arrangement, but have directed the secretary of the branch to make inquiries as to the number of hours extra time required. They expressed approval of the members refusing to work overtime in a bad light.

Electrotypers and Stereotypers' OVERSEERS AT DINNER.

Successful Gathering at Trocadero Restaurant.

The annual dinner of the Electrotypers and Stereotypers' Managers and Overseers Association was held on Saturday at the Trocadero Restaurant, Piccadilly, under the chairmanship of Mr. A. Chadwell (president), supported by Mr. J. Black (vice-president). Excellent arrangements were made for the comfort and enjoyment of the company, and altogether a very pleasant and sociable evening was spent. The following were amongst those present:—Messrs. F. G. Lougee (managing director, R. Hoe and Co., Ltd.), John Fry, A. H. Mundey and P. M. Parish (Fry's Metal Foundry), Hugh W. Dixon (L. S. Dixon and Co., Ltd.), Glen Steel (Jubbs'), W. J. Light (W. J. Light and Co., Ltd.), Harry Williams (H. Williams and Co.), A. E. Holmes (secretary of the Printing and Kindred Trades Federation), W. C. Warren (secretary, National Society of Electrotypers and Stereotypers), E. W. Whittle (secretary, P.M. and O.A.), A. G. Aves (vice-president, Printing, Bookbinding and Kindred Trades Overseers' Association), T. W. Senier (Canning and Co., Ltd.), E. Cocks (*Daily Telegraph*), W. Carlin (United Newspapers), J. Parker, G. W. Sharvell, W. Longley, W. M. Forsyth and W. Bullett (Association secretary).

Toasting the Association.

Following the loyal toast, Mr. W. C. Warren said it was again his pleasing duty to give the toast of "The Electrotypers and Stereotypers' Managers and Overseers Association." He was not sure how many times he had been called upon to perform this task, but it was a good many. He could conceive of no surer indication of the good relationship that existed between the Society he had the privilege to represent and the Association than the fact that this duty was again allotted to him. In the presence of many of his immediate colleagues he wished to give the toast with goodwill and sincerity. One of the humorous artists had remarked in his patter, said Mr. Warren, that he had been told to speak reverently of the dead when he (the artist) asked a friend how trade was. So far as conditions in their branch of the trade were concerned it was anything but dead, and he knew of nothing that conduced more to the prosperity of the electrotyping and stereotyping trades than the methods they adopted, because they had learned long ago to recognise the importance of the doctrine of mutuality of interest. He thought it would be a fine thing for trade if all trades and industries adopted similar methods to those of the electrotypers and stereotypers. Certainly they had their difficulties, but they had learned that the best way of dealing with them was to sit down at the table and find ways of agreeing, not of disagreeing. One of the distinguishing virtues of the Association had been its support of the Printers' Pension Corporation. This year he had collected a sum of £830 from the members of the Society towards the Festival List in connection with his stewardship. He then passed on to refer to the difficult circumstances in which Mr. G. K. Naylor was placed at the present time. Mr. G. K. Naylor, he said, was an old friend of the trade and well known to them all. In a week or two an appeal was to be issued on behalf of their friend, and he was sure it would have the backing of the members and officials of the Society, the Overseers' Association and of the many trade houses. Alluding to technical education, the speaker said he gladly recognised the assistance received from the Association in their efforts to frame the model indenture of apprenticeship. That scheme was now not only in full operation but he believed it contained within it the power of doing inestimable good to the industry. He remembered three or four years ago being one of a deputation to the London County Council in putting before that body the necessity of having one full-time instructor for their trade at the London School of Printing. To day they had two whole-time instructors. It was, he concluded, because of the splendid co-operation the Association was exercising towards the Society in all that concerned their best interests, that he felt so much pleasure in proposing the toast, coupling with it the name of Mr. W. E. Longley. Mr. Warren paid a tribute to Mr. Longley as the fairest overseer that any foundry in London or elsewhere could possibly hope to have.

Mr. Longley, in responding, expressed appreciation for the hearty way in which the toast of "The Association" had been honoured, and thanked Mr. Warren for the great compliment he had paid to himself.

The Ladies.

So much do the presence of the ladies conduce to the success of these annual functions that this year the officials placed this toast second on the list. Mr. H. W. Clark, in proposing it, said he could not find words adequate to express the great pleasure they all felt at the presence of the ladies.

The task of replying was assigned to Mr. A. E. Holmes, whose recent experiences as a member of a committee under the Safeguarding of Industries Act appointed to inquire into the importation into this country of foreign-made brushes, formed the thesis of a witty speech.

The President.

Mr. J. Black proposed the toast of "The President" in a clever and humorous speech which was much appreciated, evoking a considerable amount of laughter. The fact that he was sitting next to the president, he said, prevented him from saying anything against him even if he had wished. He had watched Mr. Chadwell's career for the last quarter-of-a-century and he honestly believed that no other overseer or manager could fill the position with so much ability as did their present chairman.

The toast was heartily received, musical honours being rendered.

In responding, Mr. Chadwell, after expressing thanks for the warm manner in which the toast had been received, referred to the presence of many representatives of firms connected with their section of the trade, and those allied to it, who, though competitors in business were brought into comradeship and lasting friendship by such gatherings as they were holding that evening. The reference made by Mr. Warren to Mr. G. K. Naylor, who he described as one of the white men of the industry, would receive from the Association that support of which he was sure it was well worthy.

The Visitors.

Mr. W. Bullett, in submitting this toast, said he was sure there was nothing that tended to the success of their annual gatherings so much as the presence and friendly intercourse derived from their visitors. Though most of those included in the toast were not stereotypers, they in many instances occupied posts of responsibility in the same craft as themselves; and because of that they were often brought into close contact with them in the course of the daily routine of the printing office. Amongst those he mentioned were Messrs. A. E. Holmes, Mr. E. W. Whittle, A. G. Aves, F. G. Lougee, T. W. Senier, Hugh W. Dixon, E. C. Goddard, Harry Williams, W. J. Light and John Fry. Then they had with them two old friends in Mr. Glen Steel and Mr. A. H. Mundey, whose very interesting and instructive lectures at their monthly meetings had been so much appreciated. After a brief allusion to the friendship of Mr. Warren and Mr. E. Cocks, Mr. Bullett concluded by coupling with the toast the names of Mr. Glen Steel, Mr. Fry, Mr. Lougee and Mr. Dixon.

The toast having been heartily accorded a reply was made from each of the four gentlemen last mentioned.

Mr. Glen Steel, in the course of his reply, said he had watched with interest the steady growth of the Association to its present position of importance and wished it still further prosperity.

Mr. John Fry congratulated the Association on the ability it had displayed in arranging such a splendid evening. He also spoke with interest of the wonderful spirit of friendship that existed amongst the members.

Mr. Lougee said he always had a warm corner in his heart for the electrotyper and stereotyper. He believed he was fully acquainted with many of the troubles they had to contend with in their work, and he was always glad to see them and give them every assistance possible.

Mr. Hugh W. Dixon read a letter from his father, Mr. L. S. Dixon, who is now over eighty years of age, in which regret was expressed at his absence from the gathering. The letter contained an interesting outline of the history of stereotyping, with special reference to the developments of dry flong.

Mr. Chadwell then conveyed the gratitude of the company to the stewards (Messrs. W. Bishop, H. Filkins, W. M. Forsyth) and the secretary for the efficient way in which the dinner arrangements had been carried through. He then announced that Mr. Hugh W. Dixon had generously promised a donation of 25 guineas to the Naylor appeal, and that Mr. Lougee had followed with a sum of 10 guineas.

Mr. W. C. Warren, in expressing thanks for these magnificent contributions, mentioned that one of the chapels of 30 hands had already guaranteed to collect £1 each.

The Concert Artistes.

The concert arrangements were admirably carried through by Mr. George J. Harrison, the artistes being as follows:—Misses Nora Blakemore, Evelyn Clifford, Maud Couper, Gwen Lewis and Gioconda Papacini, and Messrs. Billy Dee, Bernard Hudson, John Humphreys, Ben Lawes, Fred Morris, Albert Parkin, Will Thorne, with Chas. Hardy as accompanist.

A very pleasant evening was brought to a close by the singing of the National Anthem.

To CELEBRATE the 110th anniversary of the arrival at its present Fleet-street offices of the *Morning Advertiser* (founded in 1794) a luncheon was given recently at the Connaught Rooms, Great Queen-street, the editor claiming that it was the third oldest newspaper in London.

FRICKER'S, LTD. (printers, etc., Upper Norwood).—H. G. Hamshar, of 49, Chancery-lane, W.C.2, was appointed receiver on November 5th, 1925, under powers contained in debentures dated June 20th, 1921, and June 25th, 1923.

PEACEHAVEN PRINTING WORKS, LTD. (newspaper proprietors, etc. Office: London).—D. Bertwistle, of "Nebyrthlo," Malins-avenue, Peacehaven, was appointed receiver on November 2nd, under powers contained in debenture dated February 18th, 1925.

BANKRUPTCIES.

Re G. and M. Spegelstein (trading as Marks and Getzel Spegelstein), cardboard box manufacturers and tobacconists, 125, Lower Clapton-road, E., and late of 16, Church-lane, Whitechapel. These debtors, who petitioned the London Bankruptcy Court last September attended on November 11th before Mr. Registrar Mellor for public examination upon accounts showing total liabilities £3,016 (unsecured £2,073) and no assets whatever. The junior debtor, Getzel Spegelstein, replying to Mr. Gaine, official receiver, stated that both he and his father were born in Warsaw, and came to this country in 1901, but had not become British naturalised subjects. On arrival in this country his father set up in business as a cardboard box manufacturer, and in 1913 he took premises at 16, Church-lane, Whitechapel, where he also traded as a wholesale and retail tobacconist, witness becoming a partner three years later and entitled to one-third of the profits. On June 29th, 1925, they formed "M. Stone and Co., Ltd.," with a nominal capital of £1,000, to which they transferred the partnership business and assets but not the liabilities. The three directors, who held one signatory share each, were witness's mother, his wife, and Miss Sarah Cohen. As consideration for the business witness and his father each received 400 fully paid shares of £1 each, and the only other shares issued were the three taken by the lady directors. No notice was given to any of the partnership creditors of the transfer to the company, nor was notice of the dissolution gazetted. Both witness and his father had given a bill of sale over their household furniture, and he admitted that the whole of their assets had been placed out of the reach of their creditors. They filed their petition for the reason that a committal order had been issued at the suit of a creditor. He attributed their failure and insolvency to (1) the transfer of the partnership assets to the company; (2) heavy expenses; (3) loss by burglaries; and (4) loss in July, 1924, of their principal cardboard box customer, who spent £600 or £700 a year with the firm. The company had now gone into liquidation and no value could be placed on its shares. During its existence it paid off partnership debts to the extent of £350. They (debtors) realised their insolvency in August, 1924, since which date many of the present debts had been contracted. This was their first failure. The senior debtor was also examined by the official receiver and generally confirmed his son's evidence. The examination of both debtors was concluded.

THE first meeting of creditors was held on November 9th at the London Bankruptcy Court under a receiving order made against Stanley Elmer Young, papermakers' agent, lately carrying on business at 91, Queen Victoria-street, E.C., under the style of S. Elmer Young and Co., and residing at 20, Aynhoe-road, Brook Green. It was reported that it appeared from the debtor's statement that he had been in the trade for 30 years. A statement of affairs had been lodged showing liabilities £683 and assets "nil." The failure was attributed to a long personal illness; insufficient working capital; loss of credit and agencies, and inability of his principals to compete in the English markets. In the absence of any offer, the case was left in the hands of the official receiver to be wound up in bankruptcy.

Book Trade Strike.

As we anticipated last week, the Joint Industrial Council of the Printing and Allied Trades met on Friday to consider the situation created by the fact that printing firms had become affected by the dispute between the Paper Workers' Union and the Book Trade Employers' Federation. It will be remembered that whilst the union is represented on the Council, the Book Trade Employers' Federation is not. At the close of the meeting the following statement was issued by Mr. A. E. Holmes and Mr. A. E. Goodwin, the joint secretaries:—

"The Joint Industrial Council of the Printing and Allied Trades met at the Ministry of Labour to day to consider the dispute in the book publishing trade as it is affecting the printing and binding industry. A resolution was unanimously adopted expressing regret that in the dispute between the Book Trades' Federation and the Paper Workers' Union action was taken by a union in the printing and binding industry before reporting the matter to the Joint InJustrial Council, in accordance with its rules."

On Friday the Paper Workers' Union officially announced that satisfactory terms had been agreed upon with four firms connected with periodical publishing, and that work in those houses had been resumed. The firms in question were Messrs. Cassell and Co, Hutchinson and Co., Hodder and Stoughton and the Religious Tract Society. About 300 employees were reported to have gone back to work out of over 1,200 on strike.

On Friday night, at a meeting of representatives of the London branches of unions affiliated to the Printing and Kindred Trades Federation, it was reported that several other large publishing houses had agreed to the terms of settlement, which provide for an all-round increase of wages of 12s. 6d. a week for men and 8s. 6d. for women.

Members of the Book Trade Employers' Federation other than the periodical houses stood firmly against the new terms.

In the House of Commons on Tuesday, Mr. Penny (Kingston-on-Thames) raised the question of the victimisation of newsagents arising out of the action of the Paper Workers' Union in causing supplies of newspapers to be withheld. Mr. Betterton (Parliamentary Secretary, Ministry of Labour) replied that he was aware of the dispute in the London book publishing trade. The parties to the dispute were aware that the services of the Ministry of Labour in reaching a settlement were available if desired. He was aware that considerable hardship was experienced as a result of the incidents referred to.

At the time of going to press, thirty-two London book publishing firms are still involved in the strike. It appears that the lead of the eight firms who have granted an advance of 12s. 6d. a week, and so secured a settlement, is not likely to be followed by the Federation.

Negotiations between the Paper Workers' Union and the retail newsagents for an agreement by which 300 London shops would be able to draw their supplies of daily papers from other wholesalers than those they normally deal with are still proceeding, and it is hoped to achieve a settlement in a day or so.

SOUTH AFRICAN TENDERS.—His Majesty's Senior Trade Commissioner in South Africa reports that the Union Tender Board invites tenders for the supply of printing paper and boards to the Government Printer at Pretoria. Tenders must be received in Pretoria by 3 p.m. on Wednesday, December 23rd, 1925. Further particulars may be obtained from the Department of Overseas Trade (Room 41), 35, Old Queen-street, London, S.W.1.

GOVERNMENT PRINTER, Pretoria, invites tenders for the supply of stationery requisites (Tender No. 28). Tenders, to the Secretary of the Union Tender Board, Union buildings, Pretoria, must be in his hands by 3 p.m. on December 9th, 1925. A copy of the schedule of requirements (comprising 178 items) is available for inspection by firms desirous of offering stationery requisites of United Kingdom manufacture upon application at the offices of the Department of Overseas Trade (Room 41), 35, Old Queen-street, London, S.W.1.

THE late Mr. George Porteous, of Ardenlea Causewayhead, Stirling, paper mill manager left £8,320.

Trade Notes.

NEWSPAPER AND FOOTBALL BETTING.—In a King's Bench Divisional Court, last week, before the Lord Chief Justice and Justices Avory and Sankey, the proprietors of the *Premier Sporting Times* appealed against a conviction by the Ipswich justices and a fine for running a football betting business and contravening the Ready Money Football Betting Act, 1920. The question was whether a newspaper publishing a coupon and offering money prizes to readers who successfully foretold the results of a number of football matches played on a specified day could be convicted of an offence against the Act. The appeal was dismissed with costs. The Lord Chief Justice said that the newspaper contained what was called "the weekly skill contest and free football competition with coupon." No money was to be sent with the coupon, which was not surprising seeing the price charged for the newspaper. The justices found that this was a ready money football betting business, and in his lordship's opinion, it was reasonable to find that the appellants were conducting a ready money betting business for their own benefit.

THAMES VALLEY M.P.A.—Members of the Thames Valley Master Printers' Association and their guests assembled for dinner on Thursday at the Sun Hotel, Kingston-on-Thames. Amongst the visitors were Major W. Clowes (president, L.M.P.A.), Messrs. R. B. Simnett (vice-president, L.M.P.A.), W. Whyte (secretary, L.M.P.A.), A. Williamson (Federation costing secretary), H. R. Grubb (S.-W. London), and J. D. Wise (S.-W. London). Mr. F. W. Cheyney (president of the Thames Valley M.P.A.) presided, the active local secretary, Mr. T. J. S. Guilford, acting as M.C. The subject of costing took premier place in the speeches made on this very pleasant occasion.

THE South-West London Master Printers' Association has decided to hold a whist drive and soirée on Tuesday, December 1st, 1925, at the restaurant of Messrs. Arding and Hobbs, Ilminster-gardens, Clapham Junction.

JOSEPH SLATER, a collector for the local branch of the National Union of Printing, Bookbinding, Machine Ruling, and Paper Workers, charged at Darwen last week with embezzling over £39 belonging to the Union, was bound over for twelve months and ordered to pay £10 to the Society.

SATURDAY was the 260th birthday of the oldest of existing English newspapers, the *London Gazette*, which owed its inception to the Great Plague of 1665.

MR. JOSEPH CHATT, for 32 years editor of the *West Cumberland Times*, died last week at Cockermouth in his 64th year.

THE death occurred on November 9th at Fulham of Mr. Adolphe Smith, F.C.S., journalist, aged 78.

IN the presence of nearly all the correspondents of the Foreign Press and of the foreign news agencies, a meeting was held at The Hague on Saturday for the purpose of founding a Foreign Press Association in Holland.

Advantages of Tinted Paper.

Intense reflections—quite a series of light and shadows—often appear on the surface of very white paper, which fatigue the eye. In order to avoid this indubitable danger some French publishers have adopted a slightly tinted paper for their publications, yellow, green or blue. Cazin often employed azure paper for his little octavos, which though in small type were very legible. Some years ago another publisher issued a collection of little sixteen-mos on pink paper.

The best tint for the eye appears to be whitey-brown, adopted by some of the French Government offices, where its advantages have no doubt been recognised. As green reflections are easily supported by the eye, preference should be given to them by students for wall-paper, shades, curtains and consequently green writing paper. There is, however, an inconvenience with this paper, as the writing becomes reddish and somewhat indistinct. Yellow paper brings out writing admirably and the reflections are softer than with white paper. The other colours, blue, red, violet do not give good results, it is said. —*Courrier du Livre.*

Personal.

VISCOUNT AND VISCOUNTESS BURNHAM and the other English delegates who have been attending the Empire Press Conference in Australia embarked in the ss. "Comolin" at Fremantle on Monday.

MR. FREDK. H. MILES (Master of the Stationers' Company), presided at a dinner at Stationers' Hall on Thursday, to meet the Lord Mayor of London. He mentioned that the Company might look forward to giving the City its Lord Mayor next year in the person of Sir Rowland Blades.

MR. HENRY HILL said the Stationers' Company had given 22 Lord Mayors to London.

MR. F. O. ROBERTS, M.P., who is suffering from overwork and strain, is much better, but is still confined to bed.

SIR HARRY BRITTAIN, M.P., has arrived in India as the guest of the Viceroy.

MR. J. BECKETT, M.P., for Gateshead, has been appointed organiser to the Retail Book, Stationery, and Allied Trades Employees Association.

MR. W. T. BODEY (E. S. and A. Robinson, Bristol) was last week elected chairman of the British Paper Box Manufacturers' Federation on the occasion of the annual meeting. At the dinner in the evening at the Trocadero Restaurant, Mr. Philip Robinson (Robinson and Sons, Ltd., Chesterfield), the retiring chairman, was presented with the chairman's badge.

MR. FRANK BIRD, formerly secretary of the Newspaper Society, has recovered from his recent illness. He has taken up residence at Buxton, where he will conduct the provincial agency of the Empire Printing Ink Co.

MR. DAVID GREENHILL, director and general manager of the Sun Engraving Co, Ltd, is to lecture before the Royal Society of Arts on Wednesday evening next on "Colour Printing."

THE title of the address which Mr. F. Colebrook will deliver at the Derby Technical College on Friday is "Printing Machinery—some American and British ideas compared."

MR. E. H. ELVY, editor-proprietor of the *Kentish Observer*, has just attained his jubilee on that journal. He is still an active journalist at the age of 73.

MR. CHARLES OGDEN (editor of the *Yorkshire Observer*) addressed the members of the Bradford branch of Toc H, of which he is vice-president, on the subject of "Editing a Newspaper."

ME. F. TURNER, assistant overseer of the composing room of Messrs. W. P. Griffith and Sons, London, has been presented by the directors with a canteen of silver plated cutlery on completing fifty years' service.

MR. F. L. LAWSON-JOHNSTON, B.A., who has been associated with the publishing house of Stanley Paul and Co., Ltd., for some time, has just been appointed a director of the company.

THE Department of Overseas Trade is informed from the Commercial Secretary's Office at Cairo that the Ministry of Finance is inviting tenders for the supply of paper and stationery for the financial year 1926-27. Tenders will be received by the Central Stationery Stores, Ministry of Finance up to 10 a.m. on January 9th, 1926. Copies of the conditions of tender, schedule, etc., are available for inspection by interested United Kingdom firms on application to the Department of Overseas Trade (Room 3), 35, Old Queen-street, London, S.W.1, while a limited number are available for loan.

THE Dominion Commissioners to the British Empire Exhibition were entertained at a farewell luncheon on Friday by the directors and proprietors of *The Times*.

A Dickens Exhibition.

SIR,—The trustees of the Dickens House propose holding an exhibition early in December of all the works of Charles Dickens relating to the Christmas festival. In addition to the many editions of "Christmas Books" and "Christmas Stories," much has been offered *on loan* for the occasion as regards literature; but the exhibition is intended to include not alone books but illustrations, if of a suitable character. In fact, we would welcome Christmas cards, calendars, or anything of that nature.

For this reason I venture to address you, hoping some of your many readers may be disposed to help us either by a supply of cards or calendars for sale or return, or in other directions. Anything they might kindly do to assist us over this Christmas exhibition would be greatly appreciated.

Yours, etc.,
F. W. T. LANGE,
Hon. Librarian.

Write to-day for full particulars to the SOLE AGENTS :—

The "MONOPOL" Art Platen.

- Specially built to produce the very best Heavy Tint and Register Colour Work at a High Speed.
- Embodies many patented improvements.
- The Roller Carriage has a special spurwheel drive, which imparts it a perfectly smooth and noiseless motion. This important improvement does away with the cam action in the main gear-wheel, which is subject to great wear and necessitates frequent costly repairs.
- Throw-off Inking and Distributing Rollers, from each other and from the Inking Cylinder, by a single lever movement.
- Separate Drive for Inking Rollers, permitting inking-up without running the machine, or enabling the platen to be worked for embossing, etc., without the inking rollers moving.
- The forme is supplied with fresh ink both during the downward and upward movement of the roller carriage.
- Automatic Hand Safety Guard, which can also be used as a throw off. Only a gentle touch of the guard is required to stop the machine.

Enquire also for our "Auto-Monopol" and "Tip-Top" Platens.

Electrotypers and Stereotypers

MANAGERS & OVERSEERS' ASSOCIATION

Mr. A. H. Mundey on the "Services of Science."

There was a good attendance of the members of the above Association at the monthly meeting on Tuesday of last week at the usual headquarters, St. Bride Institute, Bride lane, E.C.4. The chair was occupied by Mr. A. Chadwell (president), who was supported by Mr. J. Black (vice-president), and there were also present Mr. Glen Steel (Jubbs'), Mr. Leslie Sarjeant, and several others interested in stereotyping and electrotyping developments. The principal part of the evening's business was the delivering of an interesting lecture by Mr. A. H. Mundey (Fry's Metal Foundries, Ltd.), who took as the tittle of his discourse the "Services of Science." The lecture was followed by a useful discussion which gave to the members an excellent opportunity of exchanging opinions regarding foundry processes and machinery.

The minutes of the previous meeting and other matters connected with the Association having been dealt with, Mr. Mundey was called upon to address the meeting.

At the outset, Mr. Mundey pointed out that he would make no attempt to instruct a body of such highly experienced and skilled men as those he was addressing. In dealing with the "Services of Science" it was rather his desire to remind and ask them for their appreciation of the services of science to the printer, particularly in relation to the craft of stereotyping. The reproach which had frequently been levelled against British industries that proper advantage was not taken of the advances of science could hardly be applied to their own craft. Whilst results of scientific researches were being continually adopted, it was highly probable that it also just as rapidly became a commonplace, and the work of the pioneer and his experiments were set aside or hardly appreciated.

Sciences and the Printer.

The list of sciences to which the printer is indebted and, in fact, dependent upon, is a very much larger one than one would at first imagine—the speaker proceeded. The first of these which impresses itself upon every one is engineering or the mechanical sciences, which are really the practical development of mathematics in its highest and most applied form. When one contemplates the wonderful machinery now at the service of the printer, and considers the development of design which has made such equipment possible, the sense of wonder is almost overwhelming; yet here is the result of generations of mechanicians applying their mathematics to practical construction. Next in importance come physics, heat, light, electricity and colour; the development of methods of heating from the old solid fuel to modern gas heating and electrical heating; the application of light, particularly in photography; the almost universal use of electrical energy for motive power, heating and lighting; the importance of the doctrine of colour to the printer, and then finally the great science of chemistry and metallurgy.

In order to make the subject more concrete Mr. Mundey asked his audience to imagine a forme which had been brought to the stereotyper for him to proceed with his work. He then dealt in a very fascinating and instructive way with the various parts of that forme, commencing with the chase, then the type set with typefounders' type, monotype, linotype, or type prepared by any of the special and ingenious processes now used in the trade, the spacing material, the brass rule, the zincos, and the copper half tones. He then went on to refer from a scientific point of view to the various parts of the forme and the principles underlying their manufacture. In addition to the metallurgy involved, special attention was given to the photographic processes and the chemical and physical theories upon which the work of the stereotyper was based. He then alluded first to the preparation of the matrix in plaster, and then to it in paper or flong, the great work of the chemist in this section being briefly described.

The lecturer then discussed some of the intimate details of preparation of the stereotype plate and in the freest manner possible placed his scientific experience at the disposal of the meeting. Electrotyping and the theories involved were then briefly alluded to.

In concluding, Mr. Mundey urged the members of the Association, as men of high standing and influence, to do their utmost to encourage coming stereotypers to study the fundamental principles of their work as thoroughly as possible, pointing out that the present day was the age of the young man. The study of these not only gave him increased efficiency to meet foreign and other competitors, but also broadened and deepened his influence in the work, and enlarged and strengthened his mind and character, promoting a greater refinement in life and a greater appreciation of all that which makes life worth living.

The lecturer specially referred to the good work which is being done at the London School of Printing, particularly in their branch of the craft, and mentioned the expert technical teaching of one of their own members, Mr. J. S. Sunderland, and the exceptional opportunity of the earnest student to carry on his studies in the higher aspects on the scientific side with Mr. J. B. Farlie, who was peculiarly fitted by training and character to help the young stereotyper.

Mr. Chadwell, in opening the discussion, said the question of the solidification of metal was one that appealed to him very much. If solidification started from the face of the mould, and according to the scientific point of view it did, then it was his opinion that the whole construction of the machinery used to-day was wrong, because the cooling apparatus made solidification start from the back of the plate to the face.

Mr. Mundey said they must remember that solidification actually started before the metal was influenced by the cooling apparatus.

Mr. Black referred to what he considered the important matter of the setting of the metal after it has been poured into the box. Solidification takes place at the back, front and sides of the plate, which meant that metal shrinks off from the centre.

Mr. E. Warren alluded to his experiences many years ago when casting a large plate and said that it was his practice to use the metal in a semi-solid state, and he had no troubles as the result of "sinks."

Mr. Glen Steel expressed his high appreciation of Mr. Mundey's lecture. Whilst admitting the difficulties connected with solidification, he was of the opinion that the skilled stereotyper could do a great deal with his metal, in spite of the rush of modern days. Regarding science and their branch of the trade, he alluded to the work of scientists on the Continent, who were experimenting with a process that menaced their occupations. He then referred to an article in a German trade paper which stated that in that country they were using stereotypes made of "Zellon," and he believed that the possibilities of this material were at any rate well worthy of their consideration.

Mr. W. M. Forsyth inquired if there would be any difference in the effect on solidification of the pouring of metal at an angle of say 45 degs. compared with that of an upright pour.

Mr. Mundey said there would be a difference.

Mr. Chadwell said, in his opinion, the best plate was got from a Junior Autoplate from a straight pour, although in many cases the man using the metal was the cause of bad plates.

Apprenticeship—A Warning.

Mr. Black, in proposing a vote of thanks to Mr. Mundey for his illuminating lecture, said he desired, as the representative of the Association on the Advisory Council of the London School of Printing, to take that opportunity of calling attention to the bad state of apprenticeship in their trade. Much as he appreciated technical education and the need for it, if there was not a drastic change in the conditions prevailing at the present time electrotyping in this country would soon be a thing of the past. In drawing attention to what he described as a very serious state of things, he said the cause of it was to be found in the growing reluctance of the boys to work in the black shop. He thought that here was a chance for the scientist to distinguish himself by inventing a white blacklead, but, joking apart, he hoped they would all realise the seriousness of the position.

The vote of thanks was seconded by Mr. Forsyth and very heartily accorded.

Following a brief reply from Mr. Mundey, Mr. Chadwell, in alluding to the remarks of Mr. Black, said that boys nowadays would not go into the black shop and it was very evident that if electrotyping in this country was to be saved, something would have to be done.

A useful and interesting meeting was then brought to a close.

Colonial and Foreign Paper Mill

AGENTS.

Annual Meeting of British Association.

The annual general meeting of the British Association of Colonial and Foreign Paper Mill Agents was held at the Holborn Restaurant on Monday of last week.

The chief items on the agenda were the passing of the accounts for the year ended September 30th, 1925, and the election of the executive for the current year.

In proposing the adoption of the accounts, the president (Mr. H. B. Legge) shortly reviewed the work which had been carried out and stated that they might look upon the first year of the existence of the Association as having been most successful.

The motion was seconded by the vice-president (Mr. W. A. Dewsnap) and the accounts were duly adopted.

The meeting then proceeded to the election of the Executive, and the following were elected:—

President, Mr. W. A. Dewsnap (Messrs. Davies and Royle, Ltd.)

Vice-president, Mr. H. H. Hardy (Messrs. Burnell, Hardy and Co.).

Treasurer, Mr. A. Wardill (Messrs. Wardill and Gilbert).

Secretary, Mr. W. McIntosh Whyte, F.S.A.A.

Committee: Messrs. W. C. Corke (Messrs. Corke, Sons and Co.), H. B. Legge (Messrs. H. B. Legge and Co.), F. A. Marsden (56, Ludgate-hill, London), M. Relph (Messrs. M. Relph, Ltd.), and E. H. Sharman (Messrs. E. H. Sharman and Co.).

Auditors: Messrs. A. L. Wise (Messrs. A. L. Wise and Son) and H. A. R. Butler (Temple Chambers, London).

New Inventions

Photo-mechanical Printing Surfaces.

In an invention for the production of photo - mechanical printing - surfaces, patented by the Polygraphische Ges., a silver image in a colloidal film is developed and fixed and afterwards transferred from its original support to a printing support, for example, a flat printing plate, and then tanned, for example, by bi-chromate, and rendered capable of being etched. A negative may be used to produce one or a number of positive images which are then transferred to the printing support and tanned. The positive may be laterally correct, or laterally reversed. Gelatine silver paper, capable of being stripped without a collodion base, is preferably used as positive material. After tanning the support may be washed, preferably in warm water, treated in an enamel bath, preferably chromic acid, slightly baked, and finally etched and gummed. Before baking, the support may be dusted over with resin such as colophonium or asphalt.

Inking Rollers for Intaglio Plates.

The inking rollers of cylinder printing machines for printing from intaglio plates are, under a patent by Mr. H. Bonham, positively driven when the ink is being applied to the plate, and on the return stroke the doctor blade is raised and a feed roller or inking roller is operated to arrest the ink supply. The invention is particularly applicable to machines of the two-revolution type wherein the cylinder is reciprocated over the bed and rotated in one direction by fixed racks on the bed, as set forth in Specification 160,685. In the construction shown in Fig. 1, ink is transferred from a metal roller *g* rotating in a trough *h* by a composition roller n^1 to another metal roller g^1, and thence by a composition roller *l* to the intaglio plate *s*. The roller

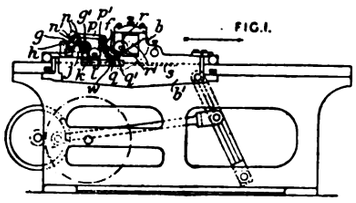

FIG. 1.

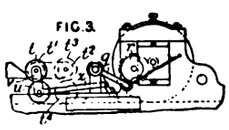

FIG. 3.

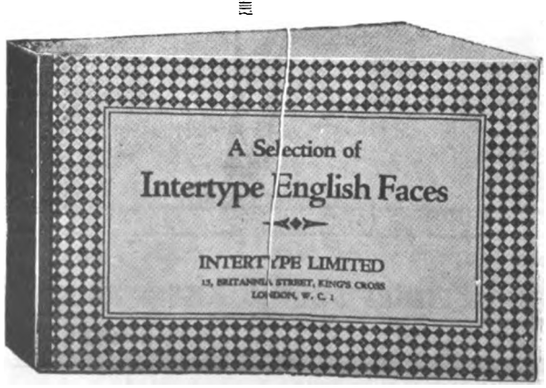
g^1 is driven from one of the racks on the bed through a pinion *k*, and drives the trough roller *g* by means of a chain *j*. The roller *g* is geared to the roller n^1 and the roller g^1 to the plate inking roller *l*. The roller n^1 is carried in arms *n* pivoted to the shaft of the roller *g* and connected by links *p* to arms p^1 on a shaft *f*, which carries the doctor *w* and an arm *q* having a roller q^1 engaging a cam *r* driven by two to one reducing gear r^1 from the shaft of the cylinder *b*. At the time the carriage b^1 moves to the right, which is the non-printing stroke, the roller q^1 engages the low part of the cam *r* so that the doctor *w* is lifted from the plate *s* and the roller n^1 away from the roller g^1, thus interrupting the ink supply, whilst during the printing stroke of the carriage to the left, the doctor *w* and roller n^1 are lowered. In the modification shown in Fig. 3, the trough roller *t* is driven by a chain and sprocket wheels t^1, t^2 from a spur wheel t^3 gearing with a spur wheel t^4 in mesh with a rack on the bed. The plate inking roller *u* is driven by the roller *t* and is carried by pivoted arms *v* connected by links *z* to the arms carrying the doctor blade, which is actuated as before by a cam *r* and arm *q* so that the doctor blade and inking roller are lifted during the non-printing stroke of the carriage to the right.

Etching Prnting Surfaces.

Mr. W. Straub has patented a method whereby printing-surfaces of aluminium or its alloys are etched by means of a solution of a mercury salt. If sharp shallow lines are required, the solution is washed off after a few seconds and the treated surface exposed to moist air. If deep etching is desired, the treated surface is immersed in a solution of any ordinary etching agent such as acetic or sulphuric acid or an alkali. Broad surfaces may be etched by applying the mercury salt solution by means of a brush or sprayer and subsequently treating them to the action of moist air or to ordinary etching reagents. In the latter case, different sections of the surface may be treated with different reagents or for different periods to produce varying grades of tone.

Abrasive Paper.

According to a patent application of the Carborundum Co., U.S.A., abrasive paper or cloth consists of a flexible backing coated with grains of artificial aluminous abrading material substantially uniformly distributed, the grains being so spaced as to leave uncovered portions of the backing, whereby permanent lodgment of the material ground away is prevented. The uncovered space may be from 25 to 75 per cent. of the total surface.



Better Matrices

A large proportion of composing machine stoppages are caused by defective matrices.

By using Intertype matrices —the best obtainable—you can get a better face and will not be bothered with faults in distribution, hair lines, broken characters, etc.

Intertype matrices can be used on all makes of line casting machine in common use. They are of superior design and construction, giving faithful reproduction of characters, perfect alignment, even impression and clear, sharp outlines. They have wider combination teeth than the old type of matrice, a feature which ensures correct distribution and lengthens the life of the matrice.

The Intertype Library contains all the most popular faces for newspaper, book and jobbing work.

THE

ALBERT

SINGLE-SIDE

OFFSET PRESS

has several distinctive features as follows:

It is the only machine that will efficiently print security paper or other form of grained solids without showing roller gear markings. This is due to the fact that it is fitted with helical gears

The position for feeding is extremely simple and easy and the accessibility of both offset and plate cylinders, in conjunction with complete oversight of the work being delivered is unique in Offset Machine construction.

No less remarkable are the front lay marks which move with the sheet until it is quite clear.

A further feature which deserves mention is the inching device foot pedal which can be operated from the position where the cylinders are being dressed or alternatively from the feeder's stand.

Messrs. Albert & Co., are also renowned as manufacturers of Photogravure Machines. 2-Revolution Presses and All-size and Newspaper Rotaries.

Should you contemplate any alteration, addition or replacement in your plant we should appreciate being consulted by you.

SUCCESS

"There is nothing that succeeds like success"—*runs an old saw.*

THE SPECIAL EXPORT ISSUES of the "British and Colonial Printer and Stationer" have been increasingly successful since they were started some 37 years ago. That this success has been shared by our advertisers is shown by the following testimonials which have reached us :—

"We, ourselves, have taken your journal in for a great number of years and have always found it interesting and have frequently referred to the advertisements for any special requirement that we were looking for."—R. R. & Co., Ltd.

"We take advantage of this opportunity to express our great satisfaction as to the efficiency of your paper as an advt. medium both in the U K. and abroad. It is gratifying to note that enquiries from the remotest parts abroad are the direct results of our advertisements in the "British & Colonial Printer."-T.&T. Co., Ld.

However successful a firm may be, it is always on the look-out for new worlds to conquer and in suggesting that your advertising should appear in our Next Export Issue, we are presenting you with an economical method of obtaining forceful overseas representation.

"The British and Colonial Printer and Stationer" specially circulates in the following countries:—

Australasia.	**East Indies.**	**Canada.**
India.	**West Indies.**	**United States.**
South Africa.	**China.**	**South America.**
	Japan.	

The next Special Export Issue will be published on

DECEMBER 3rd, 1925.

Space is now rapidly being booked.
One of our representatives is at your disposal.
Let us know to-day when he shall call upon you.

Scale of Charges :

Achievement

PROGRESS SERIES: No. 5.

Before the construction of the Assouan Dam the Nile lost by evaporation alone 100,000,000 cubic yards of water in each twenty-four hours. This masterpiece of engineering is the product of Sir William Wilcox's fertile brain. The quantity of water retained by the dam is over one billion cubic yards, which roar with a thunderous noise through 180 enormous sluices to irrigate the agricultural lands of the Nile.

THE Assouan Dam is perhaps the greatest achievement of human endeavour to harness the resources of nature. History is crowded with the records of great things done for national well-being. But equally great are achievements in the smaller spheres of life. Around the corner lurks the romance of accomplishment.

Back in '48 Benjamin Winstone opened a little workshop in Wine Office Court and started making printing Inks. That was seventy-seven years ago, and by dint of hard work, service and fair dealing the little one-room laboratory of '48 now comprises two large modern factories.

Members of the craft pay tribute to this record of achievement by justly acknowledging the superiority and high quality standard of Winstone productions, which include Printing Inks, Rollers, Roller Composition, and time-and-cost-saving Sundries and Specialities (Litho and Letterpress).

Developments in Offset Printing.

By Mr. S. E. Bottomley, F.R.P.S., Principal of the Printing Department, City of Leeds Technical School.

(Continued from page 373).

To retain moisture evenly, metal plates are grained. The degree of graining is often a source of contention. If a plate is too lightly grained it will not hold much water, and unless an excess of water is used the purity of the high lights is endangered and may react upon the brightness.

For printing down, insist on a well grained, deep plate, not necessarily coarse. The hand transferrer as a rule prefers a lightly grained plate. For photo-litho work printing down is absolutely necessary. More uniform results are obtained than by transferring, and the life of a plate is much longer than can be obtained by the best transferring.

The vacuum frames now on the market, made by the various process houses, are instruments of precision, and the uniformity of the pressure over a plate—no matter its size—is a condition totally unobtainable by ordinary transferring methods. It cannot be said, however, that, in printing down formulæ, we have yet obtained the ideal. Practically all methods of printing down depend upon the insolubility of bichromated colloids when exposed to light. Whether one works photogravure or photo-litho, the principle is the same. Unfortunately the use of the bichromates has a poisoning effect on certain constitutions, and it is of the utmost importance to warn all workers of the serious menace to health that careless handling involves. In my opinion the poisoning is not taken through the hands, but gets into the system mostly through the mucous linings of the nasal and mouth passages. It is nearly impossible to effect a cure once the poisoning takes hold.

The even illumination of the plate in printing is still another factor that commands success. Especially is this important when printing large plates.

One is often tempted to use a powerful arc to shorten exposures, but unless reflectors are very carefully designed the heat may become concentrated on a small portion of the plate with disastrous results. Again from a point or points of light—such as the electric arc—the difficulty of obtaining the rays at right angles to the surface is another serious hindrance to good results. The dots at the edges of the plate are apt to become "fringy" instead of solid.

The combination of these two points often is the cause of printed down plates "lifting" in a long run and accounts for the prejudice of some workers in this direction. The best method is to illuminate by six mercury vapour tubes. In this method there is little heat and perfect and uniform covering power. It may be a little slower, but this is outweighed by the more satisfactory results.

Preparing for Printing Down.

In preparing the plates for printing down, careful whirling is necessary to ensure the thinnest possible coating, care being taken that every portion of the plate is uniformly coated. Here again is a pitfall in the process.

After exposure the plate is rolled up and evenly coated with a thin, even coating of photo-litho ink, and placed in water. The soluble parts (those not acted upon by light) wash away, the insoluble parts (the image) remaining. A light, very light, rubbing with a pledget of cotton wool helps the developing process and at the same time removes any foreign matter. A final rinse completes the operation. Next the plate is gummed up and afterwards "washed out." It is again rolled up, dusted and cleaned prior to an etch for about 4 minutes. The plate after a final gumming is ready for the printer.

Mezzograph.

There are many methods and processes, and variations of processes, that might with advantage be dealt with, but I propose only dealing with the cardinal points of direct photo-lithography for offset printing. One of the most interesting variations is to use an irregular screen such as the Mezzograph.

In this process a very soft gradated continuous-tone negative is required. Formerly collodion emulsion was used with much success, but since the war this does not seem to have found much favour in this country.

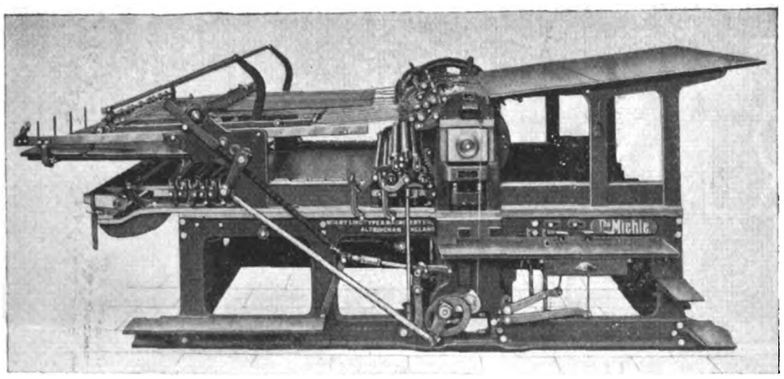
In printing down it is essential that parallel rays only should first pass through the Mezzograph screen. Diffused light would only cause confusion.

Intaglio Offset.

A process, however, of which much more will be heard in the future is an intaglio offset process. This process has been little adapted to paper printing in this country, but the most successful results have been made with it in the preparation of plates for textile printing.

In this process the printing surface of the metal is etched slightly intaglio into the plate. It differs from pure photogravure in that the depth of the etching is practically constant, whereas in pure photogravure the depth varies according to the gradation. The intaglio printing surface is formed by printing on to a bichromatised metal plate through a reversed positive (if for offset work). Afterwards the plate is etched through the exposed and treated film.

Step-and-Repeat Process.



This notable duplication process has certainly made possible rotary processes of printing which otherwise would have been impossible. By this method any number of originals can be automatically reproduced with an accuracy and uniformity that is remarkable. One of its chief claims is the durability and superior printing qualities of such negatives when printed down. Especially does it show its great superiority over transferring processes when dealing with small originals and fine screen work. There is no thickening of the lines or dots as there must of necessity be when one has to drag the surface. Textile fabric designs which require mathematical repetition and precision in the joining up can be done with an absolute certainty of results. At a moderate estimate, work can be done at four to six times the speed that is possible by the most skilful transferrer. The latest pattern of the Lithotex Company is certainly a triumph of accuracy, simplicity and precision. The ability to obtain duplicates in varying size in the same plate is an advantage that cannot be too carefully estimated.

Multi-colour sets can be stepped up with precision. Not least of its many remarkable points is the automatic focussing; and when you add to this its accurate electric timing of the exposure shutter, it makes for results not previously attainable by any method of transferring. If it is required to print from a rotary surface instead of a flat surface for repeat designs for linoleum, textiles, wall papers, still another wonderful application of the offset principle is available. Formerly for printing textiles the rollers were hand or pantograph engraved, taking months in their preparation and often even then not being as accurate as is desirable.

Transfer Offset Machine.

The transfer offset machine accomplishes what at first sight seems well nigh impos-

Salesmanship

YOUR SALESMEN would find it much easier to sell Miehle-quality printing, and at a better price, than ordinary printing. Why not increase your business by installing a Miehle? Many others have done so; some have nothing but Miehles.

The national call to "Buy British Goods" is particularly sound in the case of the Miehle, because whilst helping the Empire a little you would considerably help yourself.

The Miehle

is made at Altrincham, Cheshire, by

LINOTYPE & MACHINERY LTD

9 KINGSWAY, LONDON

sible, that is, it can accurately transfer a repeated design to the circumference of the roller to make an accurate and continuous join. One of the difficulties in the preparation of rollers has been that after a design has been used it has to be cut away from the surface and the total circumference of the newly cut and ground cylinder may be as much as ¼ of an inch in circumference less than the original cylinder, yet an ingenious adjustment enables one to fit the design to the roller. The machine is built very much like a flat bed litho machine. It possesses a cylinder clothed with a rubber blanket and an iron bed holding the zinc plate carrying the stepped and repeated transfers which have been made on the step-and-repeat machine and which have been calculated to fit the circumference of the copper cylinder.

The work on the stepped zinc plate is inked up with transfer ink and first transferred to the rubber blanket. Next the roller is brought into position and, on the machine being put into motion, it receives the transfer from the rubber blanket in transfer ink. Should it be found that an exact join is not made, the work can be cleaned off in a few minutes, then inked up again, when, by an ingenious differential movement of the carriage and cylinder, an exact fit can be made and subsequently transferred. By this means are we enabled by purely photographic and offset processes to produce rollers for textile printing in as many hours as previously took months.

In America particularly, the Huebner-Bleistein process, with its ingenious and accurate system of reproduction, has made some remarkable innovations.

I do not pretend in this survey that we can do justice to the many processes of producing printing surfaces for offset printing. It is, however, of the highest importance that we should reduce the known reliable methods to their simplest forms. Unfortunately at the present time the processes are outstripping the organisation of the trade.

The specialisation necessary in modern industry is often its undoing. The craftsman becomes displaced by the automaton, and it is of vital importance at the present moment that we should place every opportunity in the way of all classes engaged in the trade to gain knowledge not only of their own particular section but of the sections of the trade that precede and follow. To-day it is up to us to see that advances made are thoroughly understood and appreciated by all ranks.

Machinery.

I do not propose dealing in this lecture with the merits and demerits of the various types of offset machines, but if in a broad survey of the general principles one can point out what are the possibilities of the future, it may be of service.

After all, the process of actually bringing into operation the offset principle is a very simple one. It is the preparation of the printing surface that calls out for the real craftsman. Not that one must forget the machineman—but the designers of the offset machine of to-day have to such an extent brought the knowledge of the mechanical world to bear on the construction, that it remains only for those who use the offset machine to appreciate the accuracy with which it is built and to use accurate methods in setting and re-

Digitized by Google

setting the machine. After all the principle is the same in all offset machines, and it is for the skilled machineman to set the cylinders in correct relation to one another, to arrange that his rollers give the most suitable damping, and that the inks are properly selected and distributed.

You are all, I am sure, cognisant of the advantages claimed by offset methods—which I might summarise as follows:—

1. The possibility of printing on any surface of paper.
2. Its speed and the facility with which the work can be handled.
3. Its sharp impression on even the roughest surfaces.
4. No, or little, make-ready.
5. Its economical use of ink.

Further there are two- and three-colour offset presses printing the two or three colours in one operation. Printing from the web and delivering the sheets cut and folded are the latest possibilities.

With regard to the machine, however, there are many points which call for attention, and chief among these mechanical points is a clear appreciation of the root principle of offset—the kiss contact along the whole line contact of the rubber blanket and the paper being printed.

The accuracy with which the bearings of the cylinders are made and the precision of the gearing are the pride of every maker of offset machinery. But how often does one hear faults put down to gear marks which are nothing more than incorrect setting of blankets and cylinders by the craftsman! Naturally, if incorrectly set, then the gearing must bind, and this thrust will show itself by varying pressures in the rubber blanket and consequent lines of greater depth on the print, much in the same way as a heavy lorry leaves its wavy impression on our tarred roads. Much might be written and said on this score, but it cannot be too strongly remarked that in printing fine half-tone colour work even the line impression of the blanket correctly set may cover a considerable number of half-tone dots, seeing the average largest dot with a 133-line screen cannot be more than 1/266 of an inch, and may only be a fraction of this amount. If a solid dot, then, is the *sine qua non* of good photo-litho offset, one can easily see the necessity for not crushing out the dot into an irregular shape with fringes.

The Question of Inks.

Then again there are problems relating to the inks that need attention. The ever-increasing speed calls for an ink of such a consistency that it shall not pull, and yet it must have body and concentrated colouring power. In this respect it is well to note that one of the most important points is to see that the printing room is kept at a constant temperature day and night and under a constant hygroscopic condition, whatever the temperature outside. Too often ventilation and heating are secondary considerations.

The Future.

In conclusion, some remarkable developments in litho and offset printing methods are taking place, some of which were seen at the Printing Exhibition in London in the early part of the year. These methods represent a step in the right direction. A machine is being perfected in England by Messrs. August & Hunter, a photo-composing machine, which is certainly going to make itself felt in connection with offset typography, especially in the newspaper world. With regard to the future, there is no doubt that photo-litho offset and photographic processes generally have come to stay.

At the close of the lecture, specimens were shown in the various stages, illustrating the points advocated by the lecturer.

MESSRS. R. L. LUNDGREN, LTD., after many years' establishment in Queen Victoria-street, have removed their offices to No. 222, Strand, W.C.2 (opposite the Law Courts), where they will be pleased to welcome any of their numerous town and country friends. They have managed to carry with them their telephone numbers, City 6058 and 6059, but their telegraphic address is changed to "Lundgren Estrand London." It is now fifty-one years since the late Mr. R. L. Lundgren commenced business, and forty years since that business was removed from the North of England to London.

Concerning Flatbed Offsets

WHY be put to the inconvenience of having your old Flatbed machines converted into Offset when you can buy for very little more, a complete machine which has been thoroughly overhauled, but in first class running order, and which is **fully guaranteed?**

Your old machines will be taken out in part payment and **real** Flatbed Offsets delivered and erected in their place.

Spicers Limited.

Mr. E. D. Fidler's Departure for India.

Mr. E. D. Fidler, who formerly represented Messrs. Lendrum, Ltd., in India, and who is leaving London this week to represent Messrs. Spicers Limited in the same territory, was the recipient on Tuesday of a handsome cigarette case from his late confreres at Messrs. Lendrum, Ltd.

The cigarette case was accompanied by the following letter:—

Dear Mr. Fidler,—On the eve of your returning to India we ask you to accept a small memento of the esteem and regard in which you were held at Temple-avenue. We are glad to think that this firm, with whom you commenced your business life was, in sending you to India, the means of opening out your career. We all wish you success and happiness in your new sphere, and feel certain that with your ability and personality your future is assured. We shall always be interested to hear of your success.

Yours sincerely,

T. C. Bailie	E. Oliver
A. G. Fairweather	Ernest S. Lendrum
J. H. White	J. F. Sutton
John W. Armstrong	Arthur E. Tietjen
Arthur G. Denison	A. P. Jackson
G. W. Lambe	A. M. Plenderleith
A. W. Tietjen	A. A. Fidler
E. Odds	

The same day Mr. Fidler was the guest at a luncheon given in his honour by Messrs. Spicers Ltd. Mr. J. T. Steele presided.

MR. L. J. HUMPHRIES, who was formerly with the late firm of Messrs. Charles Marsden and Sons, Ltd., has been appointed London representative of the Alders Paper Mills, Ltd., with offices at 10-12. Ludgate-hill, E.C.4. The products, such as common browns, imitation krafts, royal hands, and bags of every description, of Alders Mills are finding an excellent market. The mills are thoroughly up to date in the matter of equipment.

Free from defects!

TYPON
PAPER NEGATIVES

NO camera is needed for the reproduction of existing printed matter, even if the page be printed on both sides. TYPON "N" Reflex Paper will give you the necessary negative on the contact frame.

A STRIP NEGATIVE can be easily made on the contact frame with TYPON "A" PAPER from an original printed on one side. The emulsion of "A" Paper strips off easily with the aid of a glassine paper, and lies perfectly flat.

DONE on TYPON "D" ANTI-HALATION PAPER the finest line and point is truthfully held in true proportion. The emulsion peels easily from the backing paper without the aid of any transferring agency, and gives a tough and brilliant negative.

"K" TYPON STRIP PAPER is the latest of our well-known products, and is offered to fill the demands that users of TYPON have been making for a fast paper for use in the camera. This paper is Anti-Halation and the Film obtained is similar to that of our "D" Paper.

FOR Colour and register work there is no finer medium than TYPON "F" Anti-Halation Celluloid Film. It is superior and cheaper than anything you may have been offered elsewhere.

Trade Notes.

RECEIVING ORDERS made during the week under the Bankruptcy Act, 1914, concern the following:—S. C. De Lamont, of Arlesey, Bedford, a partner in the Arlesey Printing Co., printer; R. D. Wright, of Arlesey, Bedford, a partner in the Arlesey Printing Co., printer; A. W. Forster-Wright, 54, Grosvenor road, Westminster, London, advertising contractor.

A SETTLEMENT was announced in Westminster County Court on Tuesday of the case in which Mr. Ronald Macdonald Hutchinson, better known as the comedian, Harry Tate, was sued by Messrs. Henley and Co., printers, for £67, the cost of 10,000 cardboard "kippers" to advertise his "Fishing" sketch. Judgment was entered for the company for an agreed sum and costs.

JOHN RATCLIFFE CAROL, of Bowman-street, Newcastle, printer, was sentenced to six months' imprisonment at South Shields, last week, for having obtained, and attempted to obtain, small sums of money from a boarding housekeeper, and his domestic servant.

A BOHEMIAN CONCERT has been arranged by the London Central Districts Master Printers' Association, to be held at Stationers' Hall at 7 p.m. on Wednesday next.

A PRINTERS' DANCE—Under the auspices of the Printing and Allied Trades Charity Sports Association a dance has been arranged to take place on Monday, December 7th, at the Shoreditch Town Hall, to which an invitation has been extended to all dancing members of the printing and allied trades. With regard to the future activities of this organisation we understand that the first annual cross-country championship for the printing and allied trades is to be held in March.

MR. ALFRED PRIESTLEY, whose death has taken place at Bacup, Lancashire, at the age of 54 years, had been in business as a printer in that town for many years. He was an ex-president of the Bacup Tradesmen's Association.

THE death has occurred at Plymouth of Mr. Charles James Light (71), for 40 years a member of the printing staff of the *Western Morning News* until the amalgamation with it of the *Western Daily Mercury*.

MR. ROBERT M'MULLEN, whose death has taken place at Beechfield, near Belfast, was the proprietor of the *Lisburn Herald*, and for nearly forty years had carried on business as printer and publisher.

MR. LEWIS SHANDEL, partner in the firm of Shandel and Flowerdew, proprietors of the *Thanet Advertiser*, passed away at Ramsgate General Hospital recently.

A MEETING of the council of the Metropolitan Division of the National Union of Conservative and Unionist Associations passed the following resolution in Caxton Hall:—"It is of vital importance to the party that a Conservative paper should be started which is within the purchasing power of, and of a suitable size for the working classes."

BINDING EXHIBITION.—Lady Northcote opened the fourth annual exhibition of books bound by disabled and ex-service men, at 19, Berkeley street, the offices of the Red Cross Society. The exhibition, which remains open from 10 30 a.m. to 5.30 p.m., until December 4th, is free of charge, and well worth a visit to see the quality of the bindings. These range from a simple covering costing 1s., to the finest binding *de luxe* costing many pounds.

HACKNEY COUNCIL are closing down their bookbinding department at the public library.

THE Printing and Allied Trades Central Chess Club has been formed under the auspices of the Printing and Allied Trades Chess League, to enable individual members to participate in League games. The secretary (Mr. A. T. Taunton, 70, Brook-green, Hammersmith, London, W.6), will be glad to hear from anyone eligible who may be desirous of joining.

IN aid of the Newspaper Press Fund a matinee will be given on December 11th at the Lyceum Theatre, when leading artistes will contribute to a fine programme.

THE formal opening of the new wing of the Samson Clark building, London, by Sir Joseph Cook, arranged for Monday, has been postponed owing to the death of Queen Alexandra.

Personal.

MR. J. R. RIDDELL, the principal of the London School of Printing, is to be the speaker at the next meeting of the Publicity Club of London, to be held at the Hotel Cecil on Monday next at 7 p.m. He will speak to members and visitors on "How Shall I Print It?" dealing with the relative value of intaglio, planographic and relief methods of reproduction.

MR. GEORGE WALES, a delegate of the London Society of Compositors to the London Trades Council, has been elected an Executive Councillor of the London Labour Party.

MR. H. C. CLEWS, of the printing staff of the *Cornish and Devon Post*, Launceston, has been presented with a wallet of Treasury notes by the directors and staff on his retirement after nearly fifty years' service. Mr. Clews was apprenticed to the printing trade in Yorkshire 58 years ago, and has served under three editors of the *Cornish and Devon Post*.

THE marriage took place, at Pancras Register Office on Thursday, of Mr. J. B. Hobman, editor of the *Westminster Gazette*, and Miss Daisy Adler, in the presence of a few personal friends. Afterwards Mr. and Mrs. Hobman left for the South of France.

MR. W. E. DUCKETT, the founder and editor of the *East Kent Times*, which is published from Ramsgate, has completed 45 years of newspaper work in that district.

MR. K. J. KEMP, of the staff of the *Northern Echo*, has been presented by the directors with a solid silver tea service on leaving the firm to become advertisement manager of the *Sheffield Telegraph*.

MR T. L. SCOTT, of the editorial staff of the *Glasgow Evening Citizen*, has been presented with a silver wristlet watch on leaving Glasgow to take up an appointment on the *Penang Gazette*.

MR. ARTHUR BAKER, Mr. A. W. Foster, Mr. F. G. Hawdon and Mr. E. Percy Reed have been appointed to the Grand Council of the Federation of British Industries.

CAPTAIN W. E. NUTTALL is the representative nominated by the papermaking members.

MR. A. W. FOSTER has also been re-elected a member of the Executive Committee of the Federation.

L.S.C. Jobbing Guild.

The London Society of Compositors Jobbing Guild held a most successful meeting on Wednesday of last week, when Mr. John Acton (Aldenham Press, Ltd.), addressed the members on "Register Work and its Difficulties," the address being illustrated by actual printed examples and by diagrams drawn on the blackboard.

Dealing with his subject from the machine minder's point of view, Mr. Acton explained to his audience, most of whom were directly associated with the composing department, the difficulties with which the minder has to deal in obtaining level impressions, both on platens and cylinder machines, including Wharfedale and two-revolution presses. He explained in minute technical detail the causes and effects of uneven impression, and threw out many a hint as to how the composing department could help the machine room by the careful preparation of formes.

At the close of the address a large number of questions were put to the speaker, and he answered these in such a manner as to help towards a sympathetic understanding between the composing and machine departments. Mr. Acton promised to address the Guild again in the early part of next year on another phase of machine work, again with particular reference to the relation of the compositor thereto.

Mr. C. A. Burridge was in the chair.

The Book Trade Strike.

No General Settlement.

A notable development in the book publishing trade strike occurred on Thursday, when summonses against 233 employees of Messrs. James Burn and Co., Ltd., bookbinders, Royal Mills, Esher, who, it was stated, were on strike under instructions from their union, were granted by the Kingston County magistrates on Thursday.

Mr. J. R. Hopwood, who applied for the summonses, said Messrs. Burn had no dispute with their employees, but a strike took place among packers employed by a London firm of publishers. The packers' union forbade Messrs. Burn's men to handle materials bound by them for the publishers, and, as his clients were unable to deliver goods, they were sued in the High Court and ordered to deliver the goods to the publishers. Immediately that order was complied with the union instructed the employees at the Royal Mills to come out on strike, and that was done without notice being given. As it was a trade dispute Messrs. Burn claimed damages from the 233 employees who were on strike. The summonses were made returnable for December 10th.

Mr. T. W. McAra, secretary of the Newspaper Proprietors' Association, announced on Monday that arrangements had been made whereby Messrs. E. Marlborough and Co. undertook to engage all the trade union members, numbering 82, employed by Messrs. Simpkin, Marshall and Co. prior to the strike, and to commence supplying the retail customers of that firm with newspapers and periodicals commencing from Sunday morning next. Messrs. Marlborough are renting the premises at Orange-street, from which the distribution will be made as before the strike. This arrangement may have given rise to a rumour, circulated early this week, but promptly denied, that the strike had been settled.

In a statement issued by the Book Trade Publishers' Federation on Thursday, it was stated that the general position had in no way been affected by the settlement which certain firms had made, whilst several further firms had since joined the Federation; 59 firms (including certain leading London booksellers) had resolved to resist the claims of the union.

A full meeting of the Joint Industrial Council of the Printing and Allied Trades was held at Montague House under the auspices of the Ministry of Labour on Tuesday, when discussion centred upon restricting the area of the dispute—if not removing it entirely from the field of printing and bookbinding. At the time of going to press deliberations as a result of this meeting were still proceeding.

Trade Union Matters.

A BALLOT of the members of the Amalgamated Association of Pressmen was taken at Union-buildings, Fetter-lane, on Saturday, and resulted in favour of amalgamating with the Printing Machine branch of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers.

CHELMSFORD GRADING.—The Executive Council of the Typographical Association have received a resolution from Chelmsford asking them to use their utmost endeavours to raise the branch from Grade 6 to Grade 4.

T.A. AND PARTNER'S SON.—The secretary of the Manchester branch of the Typographical Association has reported to the Executive Council that a firm in his branch wished a son of one of the partners to be allowed to work in the composing room so that he could have a practical experience of the trade before going out as traveller. The branch suggested that, as the firm already had the full complement of apprentices, the boy should be allowed in the room on condition that the next vacancy for an apprentice should not be filled except by the son if he were still engaged on productive work in the room. The local branch of the Master Printers' Association had passed a resolution that they could not admit the principle of an employer's son being prohibited from doing productive work during the period he was learning the business. The Executive Council of the Typographical Association have endorsed the position taken by the branch.

Centenary of a Bristol Printing House.

Messrs. John Wright and Sons, Ltd.

One hundred years ago there came to the city of Bristol from the old world town of Tewkesbury, in Gloucestershire, one John Wright, who set up business in the city as a one-man firm of printers. By dint of hard work, perseverance, and a spirit of enterprise not above taking risks, the printer from Tewkesbury had established in the city, by the time he died in 1894, a well-known and thriving business giving employment to scores of workpeople. Having a bent towards publishing work, Mr. Wright produced a "Steam Packet and Railway Time Table," in 1853, which is still in vigorous life, but similar prosperity did not attend his effort to establish a local newspaper which he named the *Bristol Telegraph*. He was the author of several volumes, and eventually one of the biggest sides of the business became that of printing and publishing important medical works, the *Medical Annual*, the *British Journal of Surgery*, and numberless treatises on medicine, surgery, dentistry, nursing, hygiene, ambulance, and such matters. These books have a world-wide circulation, and are written or edited by the leading authorities of the day on the subjects with which they deal.

The production of the firm have always borne the mark of a high standard of workmanship, a standard well manifested in the beautiful "souvenir" of the firm's centenary which has just been issued.

The business was formed into a private limited company in 1908, the head of which is Mr. Hartland Stuart Wright, who is chairman of the Bristol District Committee of the Joint Industrial Council of the Printing and Allied Trades. In the photograph which we reproduce, those in the group are:—Sitting left to right—Messrs. Reg. J. Wright, Hartland S. Wright, J. S. Wright, and E. A. Pockson; standing, left to right—Messrs. H. T. Jones, J. H. Wright, and F. S. Hunter, L.R.C.P., M.R.C.S.

Hertfordshire Master Printers.

Seventh Annual Dinner.

The seventh annual dinner of the Hertfordshire Master Printers, Lithographers and Bookbinders' Association at the Holborn Restaurant, on Wednesday of last week, was a successful and a happy function.

Mr. F. Dangerfield (St. Albans), the esteemed chairman of the Association, said in replying to a toast, that the fourth or fifth year was the dangerous year in Hertfordshire; but the Association had weathered that storm, and was very much alive, and its members were a band of friends together.

Mr. Albert Bennett (a past president of the Home Counties Alliance), proposing the toast of "The Association," said that after Westminster the Hertfordshire area had the oldest historical association with the printing trade; for it was only three years after Caxton set up in Westminster Abbey that the modest gentleman who went under the pseudonym of "Schoolmaster," established a printing works in the gateway of the monastery at St. Albans, where he was known to have printed some eight books, among them being the first printed books to deal with the national sports of hunting and hawking.

The toast of the "Home Counties Master Printers' Alliance" was proposed by Mr. H. M. Dent (Letchworth), the son of a well-known member of the Alliance and one of the young men who attended the conference for sons of master printers at Jordans in September. He spoke of the remarkable spirit of friendship that animated the conference, and coupled the toast with the names of Mr. H. H. Potts, president of the Alliance, and Mr. P. D. Michael, Alliance secretary.

Mr. Potts, in replying, remarked that the Alliance was indebted to the Hertfordshire Association for providing the Alliance secretary. Although the Hertfordshire Association had had a much longer history, he reminded them that it was only six years ago that the completer organisation of the industry throughout the country had come into existence.

Mr. P. D. Michael, who also replied to the toast, said the Alliance president had travelled many miles in the area in an endeavour to bring other districts up to the same high level as the Hertfordshire Association.

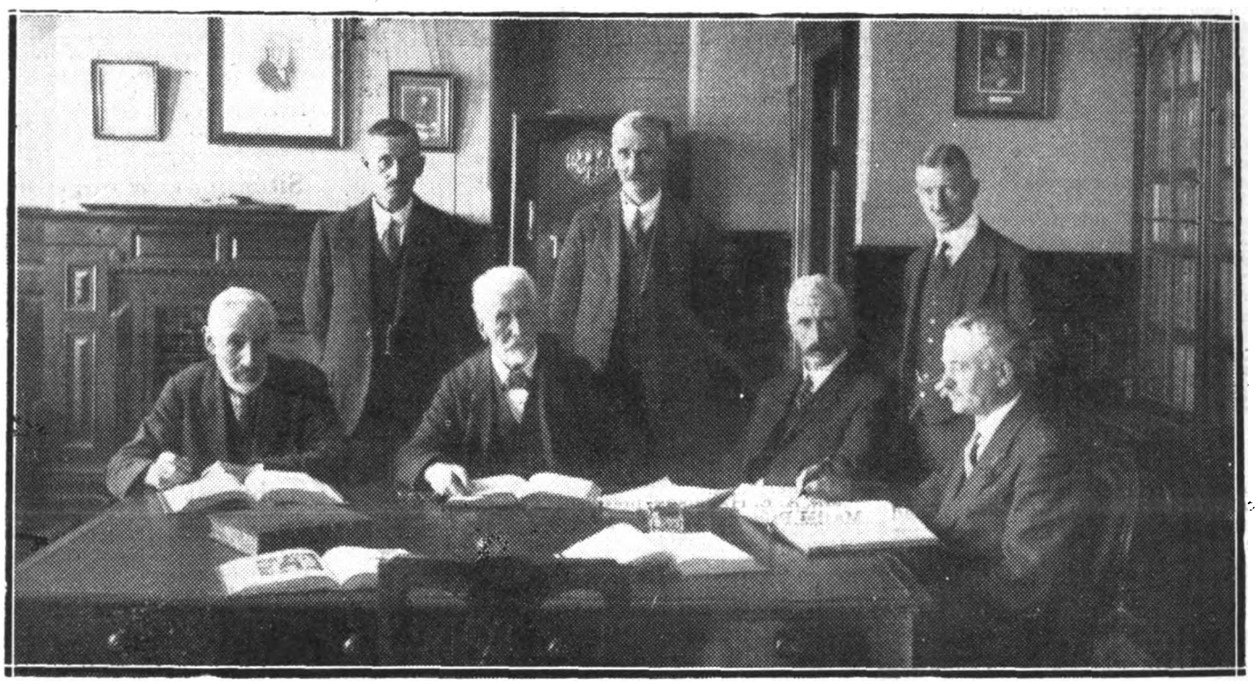
After "The Ladies" had been proposed by Mr. H. S. Gibbs (St. Albans), to which Mrs. Richard Dangerfield replied, the chairman gave the toast of "The Federation of Master Printers," coupling with it the name of the Federation secretary and making reference to his recent return from a visit to Canada and the United States.

Mr. Goodwin on His U.S. Visit.

Mr. Goodwin said it was fitting that the first opportunity he should have of speaking in public of his journey should be at a function in connection with the Home Counties Alliance, because it enabled him to state how much certain incidents at the Jordans conference were appreciated in America. In a large hall in Chicago, where there were some wonderful pictures symbolic of the printing industry, he had tendered greetings entrusted to him by the members of the Jordans conference as they stood around the grave of William Penn, and had presented to the president of the United Typothetæ of America, Mr. George Hebb, of Detroit, a bunch of lavender from the Jordans' garden. The cheers that greeted the presentation he would never forget.

He had been impressed with the greater volume of printing produced in the United States than in this country, and with the way in which the postal services were utilised for advertising and selling purposes. In one establishment a battery of 28 rotary presses was producing nothing but mail order matter. He thought the Government in this country could well consider the impetus that greater postal facilities would give to trade.

The printing industry in America was at the present time entirely free from labour troubles. There was a greater readiness on the part of the workers to accept bonuses and incentives to larger output, and machine composition output was undoubtedly higher.



After explaining a method adopted by the employers' associations for disposing of their members' waste paper to greater advantage than would be possible by individual contracts, Mr. Goodwin spoke of the great attention given to salesmanship. In Washington, one hundred printers' salesmen met monthly and discussed a selling idea, it might be for sale of furs, groceries, or even for increasing church attendance. They would then go out and try to sell the idea, and in a month's time would discuss the difficulties and successes they had encountered, and adopt a similar scheme for another article.

He had discovered that the idea of giving service was not mere talk, but a real feature of American business life. The big stores in America were proud of being able to show British goods. There was no question that England still had a reputation for producing the best goods in the world; although our manufacturers and merchants were not perhaps using the best selling methods.

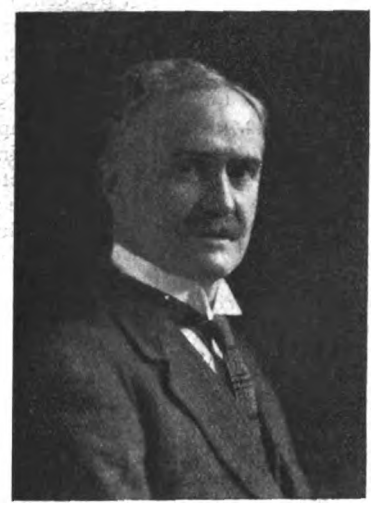
Mr. R. A. Austen-Leigh, proposing "The Visitors," suggested that the Home Counties Alliance should make arrangements for a visit to places of interest to printers on the Continent.

Mr. Dangerfield, proposing the toast of "The Treasurer, Secretary and other Officers of the Herts Association," said he did so for the seventh year in succession in the simple words "We are well served." Mr. H. S. Gibbs (hon. treasurer) and Mr. H. A. Richardson (hon. secretary) briefly replied.

A programme of music was given during the evening under the direction of Mr. Charles Terry.

A Board-Room Group—Messrs. John Wright and Sons, Ltd.

ADDITIONAL subscribers to the Leeds University £500,000 Extension Fund include Messrs. Roberts, Mart and Co., Ltd., paper merchants, Leeds, £100, and Messrs. Joseph Town and Sons, Ltd., paper merchants, Leeds, £100.



ALTHOUGH the list of goods in respect of which certificates of origin are required in order to obtain minimum tariff treatment on importation into Belgium has been considerably reduced, this requirement is still necessary in the case of a long list of paper and paper wares.

Country News.

Glasgow.

MR. JOHN WYLIE, managing director of Messrs. Aird and Coghill, printers, Glasgow, was the guest of honour at a complimentary dinner held on Thursday night in the Grand Hotel. Mr. John Blackie presided, and a representative gathering of master craftsmen in the printing trade included a deputation from Edinburgh headed by the veteran Dr. Blaikie, one of the original founders of the Scottish Employers' Alliance. In the course of the proceedings, the chairman paid tribute to Mr. Wylie, and on behalf of the members of the Alliance presented him with a Chippendale cabinet and a silver salver. He outlined briefly the work Mr. Wylie had done for the trade, how he had passed through every grade of service, having risen from the ranks to the position of importance he now held. Special

Mr. John Wylie.

mention was made of his interest in the technical training of young printers that had so helped to make a success of the school for printers recently established on a sound progressive basis in Glasgow.

Bristol.

AT its meeting in Bristol on the 16th inst. the executive committee of the South-Western Alliance of the Federation of Master Printers decided that it would take steps to organise a conference for young master printers and master printers' sons, similar to that recently held by the Home Counties Alliance. It was also agreed to write to all the members of Parliament in the Alliance area asking them to support the Rating of Machinery proposals in the Government Rating and Valuation Bill. The importance of all printers ordering their paper on the basis of 1,000 sheets, in accordance with the new agreement on paper standardisation was strongly urged, and an important part of the business of the meeting was the re-appointment of Mr. A. H. Pale as organiser for a further period of twelve months. Letters of sympathy, coupled with good wishes, were sent to Mr. J. Corrigan (Bristol) and Mr. J. H. Creber (Plymouth) in their illness.

MR. G. F. STONE, editor of the *Western Daily Press*, has undergone a serious operation, but is now rapidly regaining strength.

THE annual dinner of the Athletic Club of the firm of Messrs. E. S. and A. Robinson, Ltd., was held at the St. Stephen's Restaurant on Saturday night. Mr. Vivian J. Robinson presided, and Mr. H. G. Tanner, replying to the toast of "The Firm," referred to the fine traditions they had inherited, the strength of character and determination of the founder of the firm, Mr. Elisha Robinson, having been handed down to the third generation. The report of the Club showed that there are cricket, tennis, football, hockey, and bowls sections, and that the last year had been a successful one.

Northampton.

MR. J. D. RUDDOCK, the president of the Midland Alliance, visited the Northampton M.P.A. on the 16th inst., and had one of those warm receptions which amply compensate for the time and trouble taken. Mr. D. Goodman, of the Leader Press, Kettering, president of the Association, occupied the chair. Mr Ruddock spoke on the subject of business management in the printing trade. As to keeping records and filing jobs, he compared different systems, and passed on to review the opinions of such diverse thinkers as Mr. Seebohm Rowntree and Mr. Herbert Casson—the former urging that the men should co-operate in management and the latter that divided control was fatal to success. Next he examined the question of increased turnover in relation to the capital required, and expressed the opinion that the average printer really handicapped himself by laying down plant to perform every process that came along. What they wanted to aim at was "fewer machines, running more hours." Mr. Ruddock then passed on to deal with how printers can successfully advertise their businesses, and gave many hints which he had found profitable. The Alliance secretary said he thought the address Mr. Ruddock had given would rank as one of the most interesting ever delivered by an Alliance president. An interesting discussion followed on many points of the address, and the meeting closed with a hearty vote of thanks to Mr. Ruddock.

Keighley.

MR. A. B. SMITH, a prominent Yorkshire journalist, and formerly editor of *West Yorkshire Pioneer*, Skipton, was last week presented by journalists of the Keighley and Skipton district with two large framed photographs of local journalists, in commemoration of his long association with journalism, which extends from 1879. The presentation was made at the Devonshire Hotel, Skipton, by Mr. J. T. Clayton, editor of the *Skipton Herald*.

Portsmouth.

THE quarterly meeting of the Portsmouth District Committee of the J.I.C. was held on Tuesday of last week, the president (Councillor G. J. Winn) occupying the chair. It was reported that excellent attendances of apprentices (21 having enrolled) were being made at the printing technical classes. The action of the Unemployment Committee in their endeavour to stimulate trade in the town was endorsed. The arrangement of a winter programme of whist drives and dances—and, it was hoped, a series of lectures—was left in the hands of the Finance Committee.

Cardiff.

MR. A. E. HARRISON, president of the Cardiff Master Printers' Society, a past president of the North Wales Alliance of the Federation of Master Printers, and the general manager of the *South Wales Journal of Commerce*, delivered an instructive lecture on "Printers' Cost Accounts" to the students section of the South Wales and Monmouthshire District Society of Incorporated Accountants and Auditors at Cardiff on Thursday evening. There was a good attendance, over which Mr. P. A. Hayes presided.

Limerick.

THE printing trade in this city has been for a considerable period in a state of depression, but since the beginning of the present month a marked improvement is quite apparent. The city is blessed with six jobbing offices and four newspaper offices, three of the latter having jobbing attached. One office has two linotype machines and two others one each. It is a source of gratification to know that the proprietors of that world-famous machine are erecting one of their latest machines in the Municipal Technical Institute, so that would-be operators should attain a thorough knowledge of its many parts.

A PLEASING function has just taken place in the offices of the *Limerick Chronicle*. Its foreman, Mr. James O'Fallohan, having completed fifty years' service in the office, was presented by the staff with a smoker's cabinet—silver-mounted oak, and filled with comforting accessories. Many speakers testified to his excellent qualities of head and heart, and tendered him their hearty good wishes for the future.

A well-known London House desires to get into touch with buyers in the Colonies & Abroad who will find the re-sale of second-hand printing machinery, furniture, type, etc., a profitable business.

Enquiries are invited from established firms prepared to handle big business.

Penny Postage.

THE question of a return to penny postage is a matter of such vital importance, not only to the allied industries, but to the community at large, that it is essential it should be handled in straightforward and rational fashion by those in authority. In this connection a good point is made in a forceful letter which Sir Adolph Tuck, Bt., contributes to *The Times*. In this he recalls that, at the meeting of the Rowland Hill Memorial Fund, held at the Mansion House on November 10th, the Postmaster-General is reported to have said that "industry generally was labouring in a trough of depression, but there were signs that the sea was beginning to 'take off.'" The P.M.G. went on to state that: "It was the opinion of many that the ship might get on faster if it carried penny postage on board. . . Both the Chancellor of the Exchequer and himself were fully conscious of the desire for this reform, which presented great advantages, and it was the hope of the Chancellor of the Exchequer, the hope of the Postmaster-General, and the hope of the Government that within its lifetime the state of the national finances would allow them to achieve the reform of penny postage."

* * *

Dangerous Delay.

SIR ADOLPH proceeds to remark: "Is this not simply an illustration of the policy of putting the cart before the horse? In one sentence the Postmaster-General admits that the reduction of the postage will help trade, and in the next he proposes or hopes to achieve the reform after trade has been helped. Seeing, however, that the improvement in the state of the national finances, which he makes a *sine qua non*, can only be brought about in the first instance by an improvement in the state of trade, he is not pledging the Government very much by this expression of his hope. Is it really to be supposed that our legislators are so devoid of financial ability that, with an annual income of some 800 millions sterling derived by heavy taxation, they are not in a position to make this admitted reform for the improvement of trade by an expenditure of five millions, when the Government of Rowland Hill's day took the plunge of making a corresponding concession with a revenue of only 52 millions in all? Delays are proverbially dangerous, and, having convinced itself of the advantages that are bound to accrue from the return to the penny postage, the Government is not justified in holding over this to boom the last year of its existence."

* * *

Larger Paper Imports.

APART from the sad tale of British wrapping exports, imports and exports of paper and cardboard during October reveal a substantial increase compared with the immediately preceding months. Imports last month—1,423,177 cwts.—are larger by 58,426 cwts. (4·2 per cent.) and 18,300 cwts. (1·3 per cent.) than in the October of the two preceding years, and represented the highest figure since June, 1920 when they amounted to 1,840,420 cwts. In value, the month's imports (£1,454,618) show an advance of £42,705 (3·2 per cent.) compared with twelve months ago, but a decline of £19,931 (1·3 per cent.) contrasted with October 1923. During the first ten months of the year, the imports—11,937,863 cwts., of the value of £12,241,669—record increases of 480,967 cwts. (4·1 per cent.) in quantity and £425,363 (3·5 per cent.) in value, compared with the corresponding period last year. The month's deliveries of printings (540,345 cwts.) were considerably larger than has been recorded for many months past, and were 30 per cent. of the total arrivals, exceeding the shipments of 12 months ago by 9,987 cwts.

* * *

Supplies of Printings

SHIPMENTS of printings from Newfoundland and Canada together amounted to 267,518 cwts., compared with 206,711 cwts. from these two sources in the previous October. Supplies from Sweden (101,010 cwts.) were much larger than usual, exceeding the shipments of twelve months ago by 57,576 cwts. Norway (75,345 cwts.) improved her position by some 23,000 cwts. Supplies from Finland (60,379 cwts.) were smaller, showing a decline of some 23,000 cwts.

* * *

Packings and Wrappings.

As regards imports under this heading, Sweden still holds the most prominent position, although contributions from that country (136,893 cwts) declined by 21,734 cwts. Supplies from Norway (92,483 cwts.) increased by 4,248 cwts., whilst deliveries from Germany (65,512 cwts.) increased to the extent of 25,780 cwts.

* * *

Interesting the Worker.

IN seeking to render an industry efficient, the efforts of the employers need to be supplemented by those of the workpeople. An interesting step to attain this end is taken by Mr. Joe Mellor, the manager of the Albert Paper Mills, Retford. He has issued a neat card, made from the mills' own paper, on which the attention of the employees is directed to certain facts which should stimulate their interest in their work. An attempt is made in the first place to arouse pride in the breasts of the workers that they are employed in the only paper mills in the county of Nottingham. Having effectually established this advantage, some striking facts concerning the state of the wrapping paper trade are pressed home, and then the moral is pointed of supporting home industries. The connection between a British paper mill paying a worker's wages and the workers encouraging the use of British-made paper is not always realised; but it is emphasised by Mr. Joe Mellor in a particularly forceful manner which suggests a useful method of propaganda.

Dinner to Mr. A. E. Goodwin.

Federation Secretary Honoured.

A complimentary dinner to Mr. A. E. Goodwin, secretary of the Federation of Master Printers, on his return from Canada and America, was given by the secretaries of the Alliances of the Federation on Thursday last at the Café Marguerite. Mr. D. R King, secretary of the Midland Master Printers' Alliance, presided, and other guests included Mr. W. Howard Hazell, president of the Federation, Mr. J. A. Stembridge, vice-president, Mr. Edward Unwin, Senr., treasurer, Lt.-Col. H. Rivers Fletcher, Major Maurice Clowes, and Mr. A E. Owen-Jones—Mr. Goodwin's fellow traveller.

Mr. W. Whyte, secretary of the London Alliance, who proposed the principal toast, said he could not conceive of a better representative than Mr. Goodwin of the printing industry in this country to tell the whole story of its troubles and how it surmounted them, and he was sure Mr. Goodwin had carried with him something of the spirit of the Joint Industrial Council.

In replying, Mr. Goodwin gave many interesting details of the organisation of the printing industry in America and set forth a number of ideas which might be adapted for use in this country. The great kindness of their hosts made it possible to see in three or four weeks what would normally require three months.

Separate organisations existed in Canada and America for the lithographic industry and the binding industry, whilst letterpress printing was covered by the United Typothetæ of America. An effort towards co-ordination was being made in the States by the setting up of a Graphic Arts Board. This was at present only a consultative body, but it had already been successful in bringing about a uniform system of costing for letterpress and lithography.

In the printing industry, debt collection by the organisation had been very much developed, and throughout the country the credit system had become more general. It was not an uncommon thing to see the sign "Come in and take your car away: no deposit required," and it had been suggested that one way of overcoming the traffic congestion in Detroit would be to ask owners of cars to produce their receipts! A method of credit insurance had been devised, so that the actual seller did not bear the bad debts, and most trade organisations had developed very effective credit inquiry methods.

Methods of production adopted in printing offices resulted in higher outputs than in this country. In one large printing factory machine composition operators were graded—Class A representing workers with an average output of 10–12,000 ens, and Class B, those with a lower average. For the training of apprentices, there were schools controlled by the trade unions, schools controlled by the employers' organisation, and schools controlled by the municipal authorities and supported by the State. One novel idea for training craftsmen was that in every workshop and department the employer should appoint a person who would be responsible for the education of apprentices inside the shops.

The toast of "Our Federation" was proposed by Mr. P. D. Michael, secretary of the Home Counties Alliance.

Mr. W. Howard Hazell, who replied, said that if printers could be persuaded more frequently to visit the great Republic of the West, it would be to their great advantage and ultimately to the advantage of the industry. England was commonly said to lag behind America, but in the standardisation of paper per 1,000 sheets, England had reached the goal while America was still only discussing the subject.

The toast of "The Press" was proposed by Mr. W. George White, secretary of the Lancashire and Cheshire Alliance, and Mr. A. E. Owen Jones replied.

At the conclusion of the toast list, questions were put to Mr. Goodwin on points raised by his address, and a most interesting discussion ensued.

Mr. Thomas Arden, chief reporter of the *Lincolnshire Echo*, has died at the age of 62.

A well-known figure in the paper trade has passed away by the death of Mr. J. H. Grey. Formerly, for many years, he was in the service of Messrs. Spicer Bros., Ltd.

East and North-East London M.P.A.

"The Docket and the Pocket."

Under the chairmanship of Mr. W. H. Gillard, a meeting of exceptional interest was held at the Langthorne Restaurant, Stratford, on Wednesday of last week.

As a result of the recent "Ideas" competition, the committee had arranged another competition for the best setting of the winning idea, and offered a prize of £5 5s. The following winning copy was sent out to the members for setting, the only restriction being that the size of paper to be used was not to exceed 12 by 10 inches, and the job not to be worked in more than two colours:—

> "To men of business in this district. Are you satisfied with your trading? With your turnover? With your profits? If you are, pass on. If you are not, send for your printer, who can help you to increase your trading. Multiply your profits! Advertise your business! The most successful traders in the world are the largest advertisers. The more printing a trader buys, the more he will need — because it pays for itself and delivers a profit to the buyer.—Issued by the Association of Master Printers of East and North East London, 30, Plashet-lane, East Ham, E.6."

The result was very interesting, and fully justified the committee's experiment. The resulting entries were displayed in a variety of forms—including blotters, folders and circulars—and after the formal business of the meeting was concluded the members present were asked to record their votes on the merits of each job submitted, 15 marks being allotted to each job. The lines on which the members were asked to judge the entries being: 1, advertising value; 2, craftsmanship; 3, practicability.

After the voting papers had been collected and while they were being scrutinised, the chairman called on Mr. Tomkin to address the meeting on "The Docket and the Pocket."

Mr. Tomkin prefaced his remarks by referring to a paragraph which recently appeared in a trade paper stating that a suggestion had come from the provinces that the daily work docket should be abolished. There seemed to be a double objection to the use of the docket: (1) that an unfair use of the docket could be made against the worker; and (2) that the docket served no useful purpose.

In dealing with the first objection, Mr. Tomkin said that if such a feeling were found to exist, the master printer should disperse such a misconception. The conscientious worker need have no fear of the entries on his daily docket being used against him. The overseer knew, or should know, what the worker was doing and what he was capable of doing; whether he was efficient and whether his operational times were normal.

"I contend," said Mr. Tomkin, "that the worker can get a decided advantage through the use of the daily docket. If the worker is to get permanent employment with a firm, that firm must of necessity be financially sound. A firm financially sound knows the cost of the work in all departments; it knows the selling price, and it must know its profits. Assuming, as I hope to prove presently, that the daily docket is the essence of this knowledge, the worker who fills in his daily docket forges the first link in the chain of prosperity in the printing trade, for it does not need much argument to show that his position is better in a prosperous trade than in a failing industry."

Dealing with the second objection, that the docket failed to serve any useful purpose, Mr. Tomkin said that the docket was the essence of accurate costing, and was therefore the first step in the financial stability of a business.

Considering what the docket could do, Mr. Tomkin limited his illustration to the composing room, remarking that the principle was, of course, equally applicable to the other departments. He pointed out that—

(1) It records the time spent on a job.

(2) It records non-productive time, distribution, etc. Therefore in a given period the proportion of chargeable hours is easily found.

(3) Through assembling a few other figures, the cost of an hour's composition is also found. This is very important, as without such knowledge a very false idea of cost has been found in many printing offices.

(4) The record of time thus available is a valuable guide when jobs recur, or when a similar job comes along requiring an estimate of cost.

(5) In the case of estimated work, you can see what difference there is between the estimated time and the actual time: surely a very useful guide to the estimator.

The daily docket, he said, was thus the first essential step on the road to success in the printing trade.

Tests of estimated time and actual operational times had been made by the Federation Costing Committee on more than one occasion, and he did not think he was exaggerating when he said that there were cases where some firms had estimated ten times as much as others on certain operations. With an intelligent use of time dockets, he did not see how such a huge discrepancy could be possible.

In conclusion, Mr. Tomkin said, "I do not wish to convey the idea that the mere use of the docket is going to put some more hundreds of pounds in your pocket, but I want to show that the pocket can be very favourably affected. It is possible for each individual to thresh out the matter for himself. It is just correct assembling of figures; but it will save a lot of time and thought if you get someone from the Costing Committee to put you on the right road. I hope you will agree with me, therefore, when I affirm that the docket and the pocket have a very close relationship."

A very lively discussion followed Mr. Tomkin's address, the points raised being very effectively dealt with by the speaker.

After a vote of thanks to Mr. Tomkin for his very able and lucid address, the chairman announced the result of the voting on the competition entries. Appropriately enough, the result went in favour of the entry submitted by Mr. Tomkin—a very effective treatment of the copy in the form of a folder.

The secretary announced that the December meeting would be a concert, to be held at the Pigeons Hotel, Romford-road, Stratford, to which any friends could be invited.

City of London Printers' Musical Society.

The annual dinner of this Society was held at Anderton's Hotel, Fleet-street, on Saturday, when the chair was taken by Lieut.-Col. R. Gordon Brew, J.P., who was supported by Messrs. W. Watts, J.P., J. Mortimer, O.B.E., Capt. E. H. H. Walker, Messrs. C. H. Roud, Gordon Walker, Mrs. Walker, Senr., Messrs. H. F. Parker, Geo. Tams, Arthur O'Connor, Eric W. Muirsmith, E. G. Wilmore, and some 130 other friends. During the excellent repast, which was exceedingly well served, selections of music were admirably rendered by the "Ravenslea" Trio, and, as is customary at these gatherings, the speeches were brief and pithy.

In the course of the evening Mr. W. Watts, J.P., chairman of the committee, presented Mr. G. Tams with a silver cigar box and also a silver cigarette box, as well as a cheque, the inscription upon the boxes being surmounted by the crest of the Musical Society, with the following wording:—

> "Presented by the City of London Musical Society to George Tams in recognition of 21 years' untiring service as honorary secretary of the above Society in connection with the Printers' Pension Corporation."
>
> W. Watts, J.P., Chairman.
>
> November 21st, 1925.

Mr. Tams, who was deeply affected by the warmth of his reception, suitably replied, and expressed the keen enjoyment he had always felt in his labour of love.

Mr. George Hardy, the musical director, provided a capital array of talent for the concert, which was much appreciated, the artistes including Miss Eleanor Sinclair, soprano, Miss Jessica Meade, mezzo, Miss May De La Grange, the happy Dutch girl, Mr. Harold Jacklin, a capital baritone, Mr. Gordon Marsh and Mr. Percy Albert (an old favourite) in humorous items.

The FINAL PLATE MOUNT
(WESEL PATENT)
Provides absolute security to every user throughout every press run.

DIVIDENDS AND REPORTS.

SPORTING AND DRAMATIC PUBLISHING CO.—The profit for the year ended September 30th last amounts to £10,022, against £6,048 for the preceding year, and the ordinary dividend is raised from 5½ per cent. to 7½ per cent., less tax. Reserve receives £3,000, and income-tax reserve £500, £2,663 being carried forward. Last year £1,000 was placed to reserve, and £3,038 carried forward.

SPICERS LIMITED.—Interim dividend of 2s., or 1 per cent. (the same as a year ago), on ordinary shares for six months ended September 30th, payable on December 1st.

NEW COMPANIES.

ANDREW HOLMES AND CO.—Capital £30,000, in £1 shares: to acquire the business of Andrew Holmes and Co., general printers, lithographers, etc., carried on by them at 9, Bell-street, Glasgow. Private unlimited company. Subscribers: J. Paterson and A. S. Howie. Registered office: 9, Bell-street, City, Glasgow.

A. F. SHARP AND CO., LTD.—Capital £1,500, in £1 shares; to acquire the business of news and advertising agents, carried on by A. F. Sharp and Co., at 14, Royal Exchange-square, Glasgow. Private company. Directors: J. Finlay Kennedy, Herbert Mannington Russell and Eric Arrol Hunter. Registered office: 14, Royal Exchange-square, Glasgow.

J. WILKINSON AND SON (BURNLEY), LTD.—Capital £1,000, in £1 shares; to acquire the business of paper and paper bag merchants and printers, carried on by A. Bullock at 94, Hebrew road, Burnley, as "J. Wilkinson and Son." Private company. First directors: A. Bullock and Mrs. A. E. Bullock.

COOK'S COLOUR PHOTOGRAPHY, LTD.—Capital £2,000, in £5 shares; to adopt an agreement with E. S. Cook for the acquisition of Patent No 13,790, 1925, for an invention relating to improvements in and relating to pictures and their production by colour photography and the apparatus and machinery therefor and any subsequent improvements therein. Private company. Directors: E. S. Cook, E. C. Leachman, S. H. James and J. Akers. Registered office: Coventry House, Coventry-street, W.1 (fourth floor).

OPITZ, LTD.—Capital £100, in £1 shares; to carry on business as wholesale manufacturing fancy jewellers, manufacturers of jewellery cases and cardboard boxes, stationery, etc. Private company. Directors: W. Lennard and Mrs. R. K. Lennard. Registered office: 28, Martin-lane, E.C.4.

BECH, NEALE AND CO., LTD.—Capital £5,000, in £1 shares; to carry on the business of general agents, importers, exporters, shipowners, charterers of ships or other vessels, warehousemen, merchants, carriers, forwarding agents, wharfingers, etc. Private company. First directors: O. G. Bech and A. A. Neale. Registered office: "Chronicle" House, 72-78, Fleet-street, E.C.4.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

HUDSON AND KEARNS, LTD. (London).—Satisfaction to the further extent of £6,000 on October 31st, 1925, of 1st debentures dated July 11th, 1922, securing £105,000.

J. B. DYSON AND SON, LTD. (box-makers, printers, etc., Birmingham).—Satisfaction in full on October 29th, 1925, of 1st mortgage debentures dated March 26th, 1914, securing £3,000.

PREMIER LINOTYPING AND PRINTING CO., LTD., (London). — Second debenture dated October 27th, 1925, to secure £5,000, charged on the company's undertaking and property, present and future. Holders: *Electrical Review*, Ltd., 4, Ludgate-hill, E.C.4.

J. B. DYSON AND SON, LTD. (box manufacturers, printers, etc., Birmingham). — Debenture charged on the company's undertaking and property, present and future, including uncalled capital, dated October 31st, 1925, to secure all moneys due or to become due from the company to Barclays Bank, Ltd.

FIELD PRESS, LTD. (London).—Satisfaction to the extent of £6,000 on October 1st, 1925, of debenture stock dated July 31st, 1919, securing £210,000.

F. HEWITT AND SON, LTD. (newspaper printers, etc., Leicester).—Satisfaction in full on September 17th, 1925, of mortgage or charge dated May 7th, 1920, securing all moneys due or to become due from the company to Lloyds Bank, Ltd., not exceeding £40,000.

SCOTT GALLOWAY, LTD. (photographers, photo-lithographers, etc., Torquay). — Particulars filed of £1,000 debentures authorised September 16th, 1925, charged on the company's undertaking and property, present and future, the whole amount being now issued.

W. J. MAINE, LTD. (paper merchants, etc.). —Deposit on November 10th, 1925, to secure all moneys due or to become due from company to the Manchester and County Bank, Ltd., charged on 7 and 9, Mealhouse-lane, Bolton.

YATES DUXBURY AND SONS, LTD. (paper manufacturers and merchants, etc., Heywood). —Satisfaction in full on November 6th, 1925, of trust deed dated October 27th, 1921, securing £150,000 debenture stock.

RECEIVER APPOINTED OR RELEASED

CRANES ADVERTISING, LTD. (London).—W. G. Heathlie of 106, Jermyn street, S.W., ceased to act as Receiver or Manager on November 13th, 1925.

A GENERAL meeting of the members of the Union of Wrapping Papermakers was held in Manchester on Tuesday, November 10th, when the committee reported on the hearing of the application under the Safeguarding procedure. The meeting approved of the way in which the case had been handled, and thanked the committee for their services.

IMPERIAL PAPER MILLS.—The unveiling of the War Memorial Tablet to the memory of 52 men of the Imperial Paper Mills who made the supreme sacrifice in the Great War took place on Saturday. A Memorial Tablet, in honoured memory of Viscount Northcliffe, erected by the employees of the Imperial Paper Mills, was also unveiled.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

CANADA.

A manufacturers' agent in Montreal, who at present represents an American firm for leather advertising novelties, desires to replace this agency by that of a British firm for advertising novelties, calendars, advertising leather goods, etc., suitable for presentation purposes. He proposes to cover Quebec Province on a commission basis. (Reference No. 523.)

ARGENTINE.

PAPER for ARGENTINE MINT.—The Argentine Mint are inviting tenders to be presented by January 5th, 1926, for the supply of paper for printing postage stamps, exchequer and inland revenue securities, etc. United Kingdom firms desirous of quoting for British-made papers of the kind specified can obtain full particulars of the inquiry upon application at the Department of Overseas Trade (Room 41), 35, Old Queen-street, London, S.W.1.

New Rotary for "Petit Parisien."

British-Made Machine.

The French daily, the *Petit Parisien*, installed a new rotary in their printing office some weeks ago. A high-speed machine was required, for which the available space was small, and this problem was solved by the English firm of Messrs. R Hoe and Co., Ltd., who supplied a machine of the double sextuple type, *i.e.*, with six pairs of cylinders, each having 16 plates, one of the pair printing one side and the other the other side of the paper.

The cylinders in one piece give high speed without any vibration. Inking is a special feature. The inkers are of the pump type, the ink being fed automatically by compressed air, lifted by little pumps and thrown on to the transmission rollers. Thus the alternating action of the vibrators which always affects speed is avoided. There are six folders without tapes, a new patent, giving the following productions: 240,000 copies per hour (6 or 8 pages); 144,000 copies per hour (10 or 12); or 108,000 copies per hour (14 or 16).

A Paper Jubilee.

Mr. William Kemp, a director of W. S. Cowell, Ltd., Ipswich, paper merchants, printers, etc., has just celebrated 50 years of service with the firm, and to mark the occasion there was an interesting gathering at the Crown and Anchor Hotel, Ipswich, on Nov. 14th. Mr. Kemp had invited the whole of the male staff to dinner, a very pleasant and informal evening being spent. A surprise was in store for Mr. Kemp, the guests presenting him with a massive silver rose bowl at the hands of Mr. H. Hanson, the managing director.

Presentations did not finish here, as those who were not present on Saturday evening, including all the women workers, received handsome gifts from Mr. Kemp, whilst the directors discovered that amongst their large staff there were three who had topped the half-century with the firm, in the persons of Tom Brown (56 years), Charles Farrow (51 years), and George Pryke (50 years and ten months). For each of them was provided a handsome gold watch.

In the course of a reminiscent speech, Mr. Kemp mentioned that the paper, stationery and printing departments of the business were started by Mr. S. H. Cowell either in 1818 or 1823.

Printers Set Example to Industry.

Mr. W. Howard Hazell on Co-operation.

Relative to the desire of labour to share in the profits of industry, Mr. W. Howard Hazell, in a letter to *The Times* points out that it is worth considering what has been done by one of our important industries to promote profit-sharing and share-purchase by employees. He writes:—

"The Federation of Master Printers appointed a committee a few months ago to examine schemes of profit-sharing and share-purchase suitable for the industry. Their report deals with the subject fully, and explains various methods which have been in existence in the industry for many years. Although the report has been prepared by and for the printing trade, the methods suggested are suitable for any industry or business. One method is, that when the dividend on the ordinary capital is above an agreed minimum, for each 1 per cent. declared above that amount 1 per cent. or some other agreed percentage on their total wages in the financial year shall be paid to the employees. Thus, if 6 per cent. be the minimum dividend, and 10 per cent. be declared on the ordinary capital, the workers would receive 4 per cent. (or some other fixed percentage) on their earnings for that year.

"A second scheme suggested was, after reserving the minimum dividend, to distribute an agreed fraction of the balance of the profits to the workers as a percentage on their earnings. Both schemes have proved successful, and would, with modification, be suitable for any business or industry. The profits thus paid to the workers must be in addition to, and not in lieu of, fair wages. A working man lives by the week and cannot wait until the end of the year for part of his wages. His share of profits must be a bonus over and above a fair rate of wages.

"Any scheme for offering shares to employees should be in accordance with a working man's habits and outlook, and the following method, which has been very successful in the last 25 years, meets this difficulty, and is suitable for a company whose shares normally stand at a premium. A special class of employees' ordinary shares should be created, which can only be issued to the employees at par. The shares can be purchased for cash or by small weekly installments. When a holder wishes to sell he can, and when he ceases to be employed by the company he must offer his shares to the directors, who find another employee willing to purchase at par. If no employee be willing to purchase at par the holder can sell at any price to whom he pleases, but all subsequent holders when selling must offer the shares at par to the directors, so that ultimately the shares will return to the employees for whose benefit they were created. This scheme encourages the invaluable qualities of thrift and self-reliance, and gives to the holder all the dividends and rights of an ordinary shareholder (except a restriction on the rights of sale) on very favourable terms.

"The need of the present day is to increase the efficiency of our industries and to allay unrest. If a profit-sharing or share-purchase scheme be successful, it must increase efficiency, as the workers know that higher outputs or any economies they can make will help to swell the profits in which they share. Unrest will be lessened when the workers realise that high profits are shared between capital and labour. Profit-sharing and share-holding by employees are not a panacea for all our industrial ills, but they are suggested as a means of bridging the gap which too often separates capital and labour."

Papermaker's Scheme.

Messrs. James Cropper and Co., Ltd., the Kendal firm of papermakers, also write to *The Times*, and set forth a scheme which has been in operation at their mills since 1912. Their letter states:—

"Employees may start deposits, which are called profit-sharing savings, interest is paid according to dividends on the share capital with a minimum of 2½ per cent. and a maximum of 10 per cent. The savings can be withdrawn with six months' notice. The amount that may be deposited in a year is limited to one-fifth of the employee's annual earnings. The effect of this is that long-service workers can have the bigger deposits, and that if a man wins promotion to a higher paid position his maximum deposit automatically increases. We have generally been able to pay a good rate of interest, but we have been down to the minimum twice without serious setback. And though the deposits were freely used to help out wages in the short-time period that succeeded the post-war slump (when the six months' notice ordinarily required for withdrawal was temporarily suspended), they have fully recovered since.

"This is a comparatively small concern employing some 450 people with a wages and salaries total of £65,000. Two hundred and three employees now have deposit accounts which amount to £26,000 and are increasing at the rate of £2,000 a year. This already forms no inconsiderable portion of our working capital, and it seems as if the ideal of the workers providing the larger share of the total capital is well within sight. The steady growth of the deposits is sufficient evidence of the popularity of the opportunity given to employees to become financially interested in the profits of their work. And what we lose in paying a higher rate of interest than we should have to pay to a bank is amply repaid in the good feeling and good fellowship engendered."

Leeds Printer's Diamond Jubilee.

Mr. John Sproston.

Mr. John Sproston, principal of the Leeds printing firm of Messrs. John Sproston and Son, Marshall Mills, Leeds, has this year completed 60 years' association with the printing trade, having started work as a clerk at the Newton-le-Willows branch of Messrs. McCorquodale in 1865.

Mr. Sproston was born in Cheshire 74 years ago, and joined the office staff of Messrs. McCorquodale at the age of 14. He is proud to-day of the fact that while still in his 'teens he was selected to keep the private accounts of the late Mr. McCorquodale, and that when the present chairman of the company, Mr. George McCorquodale, went to the Newton-le-Willows office to learn the business he was placed at the desk of Mr. Sproston, who thus acted as coach.

"We had to work long hours in those days," said Mr. Sproston recently, in relating his early experiences. "Fifty-seven hours for the clerks and 60 for the compositors was the rule. We started at eight in the morning and worked till 6, and on Fridays, after an hour's tea interval, we had to go back and work till 10. Mr. McCorquodale set us a good example. He was always down at 7 o'clock to open the letters, never failed to journey to Liverpool to inspect our branch there, and spent the afternoon in the Newton works."

In 1874 Mr. Sproston was transferred to the Leeds branch of the firm, and quickly rose to be joint manager with the late Mr. Robert Chorley, afterwards partner in Messrs. Chorley and Pickersgill, who had also served at the Newton branch.

In 1906, on the closing of the Leeds works, Mr. Sproston became a joint partner in a newly-established firm of Messrs. Culross and Sproston, and in 1914, with his son, the late Mr. William J. Sproston, founded the business which he now controls.

Mr. Sproston, is still in control of his business. He is a man of great energy, and visits Manchester on printing business every week, and recently did the outward and return journey to London on one day.

He is a member of the Leeds and County Liberal Club, of which he has been a member since its inception, and is also a member of the National Liberal Club in London.

Mr. and Mrs. Sproston were married at Leigh (Lancashire) in 1874, and they celebrated their golden wedding last year.

Messrs. Paul Sabel and Co., Ltd., the well-known paper agents, of 26, Upper Thames-street, London, E.C.4, have been appointed sole agents for J. P. Sonntag G.m.b.H., of Emmendingen, Baden, Germany. This mill has a reputation for high-quality manufactures at competitive prices. The specialities include fine rag writings (plain and watermarked), pottery and transfer papers, photographic papers (raw and baryta), carbon process papers, etc. We are informed that special attention is being given to effect quick delivery.

Mrs. Frank Lloyd.

We deeply regret to announce the death, which took place on Monday, of Mrs. Helen Julia Lloyd, wife of Mr. Frank Lloyd, formerly the chief proprietor of the *Daily Chronicle* and head of the great Sittingbourne paper mills. Mrs. Lloyd passed away at Coombe House, Croydon, in her 70th year, after an illness which had rendered her an invalid for many years, and which was borne with tender resignation and fortitude. Mrs. Lloyd was associated with her husband in many works of philanthropy. Her kindly graciousness will be remembered by many employees of United Newspapers, Ltd., in whose welfare she always took the deepest interest, and who join the directors of the company in tendering to Mr. Lloyd their sympathy in the great loss he has sustained. The funeral is at Shirley Parish Church to-day (Thursday) at 12 noon.

The Vatican Printing Office.

The French technical journal *Graphicus* recalls that the Vatican printing office was founded April 27th, 1587, primarily for printing the works of the Fathers of the Church. In the XVII and XVIII century the office was greatly enlarged and reorganised by Pope Leo XII who had a large new building erected. Since that time many remarkable works have been printed. Aldus Manutius (father and son) and Bodoni contributed their professional and artistic skill. The existing magnificent workshops were built by Pius X and the latest types of machine installed, including the Linotype with seven magazines. In this private printing office psalters, missals, and works of propaganda are published in nearly every language. Special work done by hand has included a French-Persian Dictionary, and the History of Music of the University of Oxford, this last mentioned because only the Vatican printery has the signs and notes of the earliest musical notation.

Five paper mills, one pulp mill, and 10 board mills with an aggregate turnover amounting to £455,000, were in operation in Latvia during 1924. During the same year Latvia exported 93,168 tons of pulp, valued at £150,000, and 619 tons of paper, valued at £5,400, and imported 1,231 tons of the former and 993 tons of the latter, valued at £17,000 and £43,000 respectively. In addition to the pulp and paper imported 662 tons of roofing felt valued at £5,000, was also brought in. The importations of raw materials were principally from neighbouring countries, while nearly half the exports went to France, and the balance to England and Germany.

Once more the use of peat as a papermaking material is advocated, this time by the *Belfast News Letter*, which suggests that this is a direction which should render the bogs of Ireland a national asset.

Manchester P.M. and O.A. Lecture.

Letterpress Offset Printing.

The November meeting of the Manchester Centre of the Printers' Managers and Overseers' Association, held at the Mitre Hotel, Manchester, was well attended. After the reading and passing of minutes, roll call and nomination of officers for 1925-1926 was completed, Mr. A. J. Gyngell gave a practical talk on "The Possibilities of Letterpress Offset Printing." Unfortunately, the lecturer was slightly indisposed, and had to curtail his remarks accordingly. Over eighty gentlemen were present, and a bombardment of questions, practical and otherwise, were submitted by them.

Mr. A. J. Gyngell said: This invention relates to what are known as two-revolution flat-bed printing machines, which, as hitherto constructed, are for direct printing, and is designed to convert such machines for offset printing, or to enable them to be employed for offset printing in addition to direct printing. These machines are constructed with a bed for type or litho plate reciprocating beneath a continuously rotating impression cylinder, which carries the paper or material to be printed, and makes two revolutions for each to-and-fro traverse of the bed. In carrying out the invention, an offset blanket is applied to the cylinder, which makes two revolutions as before, and is printed upon from the flat bed printing surface. An impression cylinder is mounted behind the two-revolution cylinder, which will press the paper or other material to be printed upon against the offset blanket on the former after it has taken an impression from the printing surface carried by the reciprocating bed. The additional impression cylinder may be mounted in movable bearings, and a to and fro movement be imparted to it to bring it into contact with the two-revolution cylinder during the revolution of the latter, which is out of contact with the printing surface toggle or other levers being employed for the purpose. The impression cylinder may be so placed in relation to the two-revolution cylinder that the movement of the latter which lifts it away from the traversing printing surface may bring it into contact with the impression cylinder. The two revolution cylinder is fitted with grippers to receive the sheet or material, and this is fed to it during the revolution it is out of contact with the printing surface, and may be delivered from it as at present with flier sticks, chain or other delivery, but this is disadvantageous inasmuch as it delivers the sheet printed side down. In another construction the additional impression cylinder may be fitted with grippers to take the printed sheet from the two-revolution cylinder and deliver it printed side up to a chain delivery of known form or on to strippers, tapes and fly sticks placed below the feed table of the machine. In a further construction a stripper cylinder may be applied to the two revolution cylinder in addition to the impression cylinder with grippers to take the sheet and deliver it to any known form of delivery apparatus. Suitable gearing connecting the impression cylinder with the rotary driving shaft of the machine is employed. The inking and distributing rollers are of the ordinary or known arrangement and construction, and where a litho plate is employed damping rollers are also as before.

The rotary letterpress offset machine has a cylinder grooved both horizontally and vertically, with screw holes between grooves which are one inch apart, allowing the printing plates to be screwed down into position. It is arranged by four automatic ductors to print four colours at once, or four different jobs at one time, providing they were on the same quality of paper. The black being the first plate, the red second, the blue third, and the yellow fourth. The fifth plate is fixed in the same manner, and highly polished, and it is termed the impression plate. The gripper is in front of the impression plate, which takes the paper face up. The diameter of the printing cylinder is 10 feet, and the offset cylinder 2 feet. The offset cylinder is covered with rubber, which makes five revolutions to each one made by the printing cylinder. The offset gripper thus taking a complete set of four colours, the impression plate takes the complete impression from the offset cylinder, and delivers the finished sheets at the rear of the machine by the process of stick delivery, at a speed of 750 copies per hour.

Mr. Gyngell, replying to many questions, said, to print from types with varying heights direct on to rubber blankets would have a damaging effect, therefore it was intended that all such offset printing should be done from electrotypes or zinc plates. The four colour plates, or whatever number was required, were first placed in position on the cylinder, afterwards inked, and an impression taken on the rubber blanket; then the sheet came forward and took off the impressions at one revolution. There was no super-imposition of colours, every colour being fitted to such a nicety that millions of playing cards were economically produced by that method. Offset types could be purchased from American typefounders for special work, and in the ordinary run of an office the reversing was done by the block maker. The advantage of substituting letterpress for lithographic offset was brighter colours, and the use of about one quarter the amount of ink. All plates were planed down to correct height, and any variation desired in an illustration could be obtained by using two thin blankets instead of one, the cylinder blanket containing the additions for pressure and the covering one for receiving the impressions. When a letterpress machine was once converted for offset it was not economical to keep changing.

WEE MAC.

Paper and the Stereotyper.

The Development of British Flong.

Mr. Hugh W. Dixon, a director of L. S. Dixon and Co., Ltd., speaking at the annual dinner of the Electrotypers and Stereotypers Managers and Overseers' Association, at the Trocadero, on Saturday, November 14th, gave an interesting outline of the history of stereotyping, with special reference to dry flong.

The history of stereotyping, he said, is very interesting, and dates back to a long period of about 60 years. About 1875 the introduction of rotary machines gave a great impetus to stereotyping. At that time the stereotyper had great difficulty in producing a good matrix and had to put up with any kind of paper, sometimes old mill wrappers, which were moistened and beaten on to the face of the type with a brush, and backed up with a heavy loading of pipeclay. This, of course, produced very thick mould and required very great care in drying. It was a common practice to leave the mould under the steam chest for twelve to fifteen minutes, and if great care was not taken the type suffered. Of course, this period dates back to about 1875.

Then the idea—why not employ some kind of an absorbent paper?—was suggested to Mr. L. S. Dixon, who set out to provide this want. The idea of a built up matt made of tissue blotting and backing occurred to him, thus producing a thinner mould and requiring less time for drying. The paper, of course, had to be made very strong. The idea took on at once and thus estabilished a world-wide introduction of this method.

Later came the mangle, instead of using the brush, which to a large extent has reduced the labour and time involved.

The introduction of dry flong came along about twenty ago. It was first discovered by the French, and afterwards cultivated by the Germans. It has taken a long time to bring dry flong to its present stage.

The spirit of British enterprise prompted the firm of L. S. Dixon and Co. to purchase their present mill at Hurcott, Worcestershire, where vast sums of money have been spent in installing the latest machinery, and with the most valuable assistance of certain great friends in the stereotyping trade, supplemented by a very strong sentimental feeling in this country and the colonies, that the British flong should come into universal use, and sparing no expense, they are now able to produce a flong which it is claimed is second to none, including the German, although there are still a few who prefer to support him in preference to the Britisher.

On a recent trip to Canada and the United States, from which he has recently returned, Mr. L. S. Dixon discovered that they can teach this country nothing in either place, and are far behind the dexterous methods of the British stereotyper; they all acknowledge that the best work is turned out in the United Kingdom.

THE late Mr. Herbert Bent (62), of The Mount, Shoreham, near Sevenoaks, manager of paper mills for Messrs. George Wilmot, Ltd., left £20,233.

New British Patents.

For the benefit of our readers we have arranged for any inquiries relating to Patents, Designs and Trade Marks to be answered, free of all charge, by a Fellow of the Chartered Institute of Patent Agents. Inquiries should be addressed, in the first instance, to the Editor.

WASHING NEWSPRINT.—A new invention for washing blue prints is exhibited at the Shipping, Engineering and Machinery Exhibition at Olympia by the Precision Photo Printing Plant, Ltd. While carrying out tests it was suggested that, to demonstrate its qualities, a newspaper, which is very difficult to wash without being torn in the process, should be passed through the machine. Accordingly, a copy of the *Daily Mail* was saturated and then dried off, coming through the process without the slightest damage.

New Inventions

Platen Press Inking.

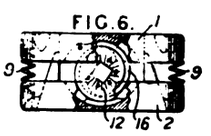
The inking rollers of a platen press invented by the Johnewerk Grafische Maschinen Akt. Ges. reciprocate between an ink cylinder above the type bed and a second ink cylinder below the type bed and roll once only over the forme for each impression, the circumference of the inking rollers being equal to the length of the

forme. One trough roller supplies ink to the two ink cylinders alternately by means of two messenger rollers and two sets of distributing rollers. The inking rollers 1, 2 reciprocate over the forme 3 between upper and lower ink cylinders 4, 5. Messenger rollers 6, 7, contacting alternately with the trough roller 8, deliver the ink to the ink cylinders by means of two sets of distributing rollers 10, 12, 14, 16 and 9, 11, 13, 15.

Printers' Quoins.

A patent by the Stephens & Wickersham Quoin Co. refers to quoins of the kind comprising two opposed members 1, 2, Fig. 6, which, adapted to be separated against the force of springs 9 by a cam 16 operated by a key 8, Fig. 3, are provided with a

FIG. 6.



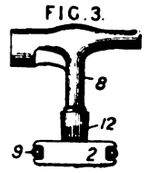


FIG. 3.

scale and a co-operating register-mark for facilitating the adjustment of the quoin to a predetermined position. The register-mark may be placed on the quoin-members 1, 2, and the scale 12 on the key 8 or on the cam 16, or, alternatively, the scale may be placed on the quoin-members and the register-mark on the key.

Half-tone Printing.

Under an invention by Messrs. L. L. Phillipe and H. Luginbuhl in the production of printing-surfaces comprising half-tone pictures and text or other line work the printing value of a half-tone diapositive of the pictorial matter is adjusted relatively to that of the text matter subsequently combined therewith by dyeing or colouring the half-tone diapositive, and so that only a single reproduction stage is necessary for exposing the etching resist and only a single etching may be necessary, the over exposure of the text portions being automatically effected to the necessary extent. The colouring or dying may be done before or after drying the diapositives and either chemically or by powdering. To avoid etching too deeply thick lines (e.g., thick characters, titles, etc.) these parts of the text may be printed in slightly transparent ink. The process is contrasted with other methods involving more than one exposure operation in the printing of the etching resist, or a dual etching operation, or the use of masks and varnishes for the different kinds of matter.

New Trade Marks.

458,422. Wax paper, carbon paper, duplicating apparatus included in Class 39, ink ribbons and duplicating inks. Greif-Werke Vormals Deutsche Burobedarfsgesellschaft Bruer and Co. (a Kommandit Gessellschaft registered under the laws of Germany), personally responsible partner Carl Bruer, 1, Griefplatz, Goslar a Harz, Germany, manufacturers.—April 21th, 1925. (To be Associated. Sect. 24.) Address for service in the United Kingdom is, c/o Boult, Wade and Tennant, 112, Hatton-garden, London, E.C.1.

460,384. Paper (except paper hangings), stationery and bookbinding, but not including fountain pens, post cards, Christmas cards, folders, books, calendars, cigarette cards, and not including any goods of a like kind to any of these excluded goods. Pat Sullivan, 1947, Broadway, New York, United States of America artist.—July 7th, 1925. (To be Associated. Sect. 24.) Address for service in the United Kingdom is c/o Harold J. C. Forrester, Jessel Chambers, 88-90, Chancery-lane, London, W.C.2.

461,740 Typewriter ribbons and carbon papers. James Shannon, trading as Shannon and Shannon, 1, Talbot-court, 57, Gracechurch-street, London, E.C.3, merchant.—August 28th, 1925.

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

ONCE again there is a wave of optimism which is coming forward with accumulating force. Steady and persistent lowering of the unemployment percentage is an indisputably good augury of better times. The Prime Minister recently gave some solid reasons for his belief that industry is in for a new era of something like prosperity. Already there has been a notable improvement in the cotton industry as a result of the record American crop. Woollen manufacturers also are reported to be meeting with an increased world demand for their product. In other spheres the winter outlook is good, and there are definite signs that more paper will be required. To the paper industry this is the thing that matters most, although there is every satisfaction in knowing that a better demand for paper is indicative of a greater measure of prosperity in other quarters. Lancashire and Yorkshire papermakers have a large part of their destiny in the hands of the cotton and woollen mills in their respective counties. It will never be known to what extent the wrapping mills in those districts owe their misfortune to short time in the textile industries. Even with the better times approaching, it is questionable whether certain parts of the demand for cotton have not definitely left us, in which case the papermaker who once depended so largely upon orders associated with the export of low grade cotton goods will have to count that a lost asset.

* * *

THE returns of imports and exports for January-September are well worth a little close study by paperusers. In particular, it will repay the investigator to turn up the pre-war tables for purposes of comparison. We are too apt to base our conclusions on a short reference to recent trading, as though the paper industry were a thing of recent establishment. The more correct viewpoint would be to regard the post-war period of training as the commencement of a fresh lease. The war years do not count for anything in a survey of the industry, because they were unnatural in every way. What matters most is the position that the industry had reached before the war began. From the commencement of our new lease the figures we should work forward from are those with which we terminated the old lease. This was one of the strongest arguments that the wrapping section had to bring forward in its recent application. A glance at the current Board of Trade Returns shows that the export of packings and wrappings for January-September amounts to 160,078 cwts., while imports total 3,254,516 cwts. Referring to 1913 returns, we see that the year's export figures were 905,452 cwts., while imports figured at 4,090,296 cwts. No amount of argument can put any other construction on those returns than the conclusion that this branch of our home industry is going down hill at an extremely rapid speed.

* * *

IN the scheme that is going forward for a British Shopping Week we have so far heard very little of the part that paper is going to play. As it stands it would seem that the inauguration of such a feature has mainly to do with shopkeepers and retailers. It may safely be taken for granted that retailers will not care very much what they sell so long as their takings are good. It is what shopkeepers buy that matters so far as British manufacturers are concerned. A British Buying Week arranged between retailers, distributors and makers would reach its object much more directly than any shopping week. There is a growing interest in the much larger and more fundamental proposal that the Government should finance and initiate a scheme for advertising British goods. It would be a good start if the Government set the lead by making its own contracts more lucrative to British manufacturers. We have yet to meet the papermaker or printer who regards his S.O. work as anything but fodder for machinery.

Paper and Liquid Penetration.

Some Suggested Tests.

In the valuation of many papers, their behaviour in respect to penetration of liquids is of prime importance. Many methods proposed for testing the permeability of paper to liquids are inadequate for the purpose and the Bureau of Standards, Washington, is devoting considerable research in an endeavour to improve existing methods and develop new methods.

Writing paper must be sufficiently resistant to ink that the ink will not spread or penetrate through the sheet before it has had time to dry. Wrapping paper and paper bags are required to be sufficiently water resistant to prevent wetting through by damp articles such as meat and certain other food products. Paper used to protect merchandise in transit or storage, particularly for overseas shipment and storage in damp climates, should be practically waterproof. In testing such papers a specimen is floated on water and on the upper surface is sprinkled a mixture of powdered sugar and a water-soluble dye. Any water which penetrates through the paper is immediately absorbed by the sugar, in consequence of which the particles of dye scattered through the sugar develop their characteristic bright colour, providing a definite end point. In this way it is possible to measure quite accurately the time required for water to penetrate through water. Another method used for the same purpose consists in sealing the paper with paraffin to a glass cylinder, filling the cylinder with water and placing it on a piece of ground glass, which is made more transparent by the water that penetrates through the paper. This method of test is of particular value as regards papers extremely resistant to penetration of water such as various products waterproofed by the use of asphaltum.

At the other extreme from sized and waterproofed paper are absorbent papers such as blotting and towelling. These papers should readily absorb ink or water as needed. Their quality in this respect is found by noting the time required to absorb a very small but definitely measured amount of water placed upon the surface. Improvement in the technique of this method has made greater accuracy possible.

A special type of paper is used for wrapping greasy food products and is required to be fairly resistant to animal and vegetable oils. This type of paper is tested by immersing a specimen in oil after sealing it to a glass cylinder with syrup or glue. If it were attempted to float the specimen on oil the oil would creep over the edges and quickly cover the entire upper surface. The test consists in noting the time required for the oil to penetrate through as judged by the appearance of transparent spots.

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES:

1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.
2.—It occupies a space of only six feet on the run, and is quite noiseless.
3.—The power required is such a small amount that it can be driven from any existing shafting
4.—Centres of any kind or width can be worked on the machine.
5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.
6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.

Quality—IN PRINTING METALS

WE attain the 'FRYOTYPE' Standard of quality by meticulous attention to every detail during manufacture; by providing the most up-to-date technical equipment and expert knowledge; by the absence of every particle of deleterious impurity from our metals.

The Results of using "Metal of Quality" are—

TO THE COMPOSING ROOM—Maximum output, good type.
TO THE FOUNDRY—"Formes" that "stand up" to the Moulding Press. Plates without blow-holes and "sinks."
TO THE MACHINE ROOM—Longer runs; clean clear print; good illustrations.
TO THE PROPRIETORS—A first-class production up to time at less cost; with the elimination of expensive (and irritating) delays.

TYPON
PAPER NEGATIVES

NO camera is needed for the reproduction of existing printed matter, even if the page be printed on both sides. TYPON "N" Reflex Paper will give you the necessary negative on the contact frame.

A STRIP NEGATIVE can be easily made on the contact frame with TYPON "A" PAPER from an original printed on one side. The emulsion of "A" Paper strips off easily with the aid of a glassine paper, and lies perfectly flat.

DONE on TYPON "D" ANTI-HALATION PAPER the finest line and point is truthfully held in true proportion. The emulsion peels easily from the backing paper without the aid of any transferring agency, and gives a tough and brilliant negative.

"K" TYPON STRIP PAPER is the latest of our well-known products, and is offered to fill the demands that users of TYPON have been making for a fast paper for use in the camera. This paper is Anti-Halation and the Film obtained is similar to that of our "D" Paper.

FOR Colour and register work there is no finer medium than TYPON "F" Anti-Halation Celluloid Film. It is superior and cheaper than anything you may have been offered elsewhere.

Two Machines you MUST have!

Patent Two-Colour and Perfecting Rotary Offset.

FITTED with Independent Damping Units to each plate, printed-side-upwards pile delivery, and only three main cylinders, this machine will print either—

Two Colours on the front of sheet, Same Colour front and back (Perfecting), Different Colour front and back (Perfecting), Single Colour front or back.

The change from Two-Colour to Perfecting is made in a few minutes by three simple adjustments.

Either damping units may be used to damp both plates or only one plate.

It is doubtful whether you could find a machine easier to operate.

'Baby' (Demy Folio) Single Colour Rotary Offset.

THIS machine is supplied with or without an Automatic Suction Pile Feeder. Hand fed, the usual speed is 3,000 to 3,500 impressions per hour. With the feeder (as illustration) to 6,000 impressions per hour are obtained.

Of special importance is its surprisingly small floor space. Without the feeder it occupies only $6\frac{1}{4}$ by $4\frac{1}{4}$ feet; and with the feeder, $7\frac{1}{4}$ by $4\frac{3}{4}$ feet.

Two horse power is required.

Mann's "Baby" will just fit that empty corner and turn it into a little goldmine.

Export Notes and Comments

The Export Trade Outlook.

AMONGST the comments of those who review the general outlook for British export trade at the present moment there are not wanting many conflicting expressions of opinion. The present is a time of transition and of change in respect of many of the movements of world trade, and it is easy by narrowing one's outlook upon sectional markets to arrive at conclusions of extreme pessimism or extreme optimism, neither of which are justified by a more comprehensive review of the situation. A moderate optimism would seem to be the soundest attitude to adopt. By way of a broad envisagement of tendencies one may turn to the statistics on the international commerce of 19 countries recently published by the League of Nations. These figures show that in 1924 international commerce became almost equal to that of 1913, although there were great changes in its division among the different countries. It is believed that, taking into account the greater value of the goods, Britain's share of world trade in 1923 was greater than in 1913, but world trade, as a whole, developed more rapidly last year than did British trade. However, Britain appears to have maintained her position.

British Industries Fair.

AN outstanding opportunity for extending one's overseas trade offers itself in the forthcoming British Industries Fair. An example of the facilities and opportunities afforded by exhibiting at the Fair has just been furnished to the Department of Overseas Trade by an exhibitor at the 1924 Fair. While discussing the forthcoming Fair, which is to be held in London and Birmingham in February next, a firm of manufacturers informed a representative of the Department that as a result of exhibiting at the 1924 Fair, they had secured an order amounting to £1,200, and that since the Fair this order had been renewed each month for the last 18 months and was still continuing. The firm in question have decided to exhibit again and will probably book space in excess of the amount secured in 1924. Of the number of applications received up to November 23rd over 25 per cent. are from firms who have exhibited at more than five previous Fairs, nearly 50 per cent. are from firms who have shown at more than one Fair, and nearly a third are entirely new exhibitors.

Inter-Imperial Trade.

MAIL news from Australia indicates that considerable attention was given at the recent Empire Press Conference to the important question of promoting trade within the Empire. The conference passed a motion submitted by Major J. J. Astor, M.P., in the following terms: "That this conference invites the newspaper Press in all parts of the British Empire to take all possible measures to promote the interests of inter-Imperial trade and to impress its importance upon the reading public in the respective countries." Major Astor contended that an Imperial trade policy devised and supervised in council by the Governments of the Empire, supported by the strength and the influence of the Empire would have possibilities wider and richer than any that civilisation had yet realised. The faith that had opened communications, when existing trade did not seem to warrant them, was more than justified. He believed that with the solution of our outstanding Imperial problems the grounds for faith of that kind must become more and more sure.

Empire Publicity.

IN connection with the promoting of trade between Great Britain and overseas parts of the Empire, Major Astor pointed out that one of the questions to be considered was whether the British manufacturer was as fully informed on dominion conditions as he should be. Might it not be possible, he asked, for a big organisation of British manufacturers to launch a large publicity campaign throughout the Empire? It was up to Britain to see that no stone was left unturned. The dominion markets offered to Great Britain her one chance of competing with the system of massed production, which was destined to play such a big part in the future.

Empire's Newsprint Supplies.

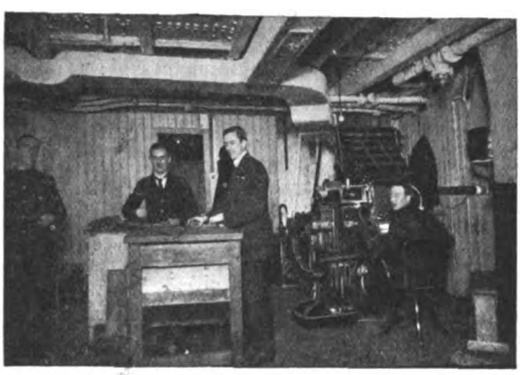
THE subject of providing for Imperial needs in respect of newsprint also came under consideration at the Empire Press Conference. Mr. W. A. Craick (Canada), spoke of the condition and of the capabilities of Canadian mills in respect to supplying paper to other parts of the Empire. Referring to Canadian and United States production, he said that next year Canada would be definitely in the lead—a position which would entitle her to the distinction of being the largest producer of newsprint paper in the world. Mr. Craick proceeded to speak of the erection of a third mill on the British Columbia coast by interests which were taking over the properties of a company which had hitherto manufactured pulp only. There should be from now on a considerable surplus for export beyond the necessities of the home markets and of the United States. He spoke also of the schemes of reafforestation and improved methods of cutting and handing the wood in order to save one of Canada's greatest industries, and went on to say that, whereas five years ago there was not the capacity to supply the current demand for newsprint supplies, manufacturers were now looking for new markets for their products.

British Trade with Australia.

REPORTS to hand of a speech which Lord Burnham delivered at Melbourne emphasise still further the excellent service which his Lordship has been rendering to the cause of British and Imperial trade. The occasion was a luncheon given by the Australian Association of British Representatives. After congratulating his hosts on the formation of such a powerful body for the protection and development of British trade with Australia, Lord Burnham said: "I think there never was a period in which it was more necessary to safeguard the interests of British trade than it is now. During the war we were tremendously handicapped, and undoubtedly lost, at any rate for a time, so many markets in which we previously had been supreme. We do not believe that the industrial supremacy of the old country has come to an end, but we must admit that it has received a set back, and that it is taking our utmost strength to endeavour to recover."

Value of the Home Connection.

IN the same address stress was laid on the advantage to Australia of encouraging trade with the Mother Country. Lord Burnham pointed out that British exports to Australia amounted to 38 per cent., while those from the United States (which received in return export of only 5 per cent.) worked out at 24 per cent. He quite understood there was no such thing as direct trade relationship; but he could not be persuaded that Australia was not doing better by the proportions which existed between herself and Britain than by those that existed between the Commonwealth and the United States. His Lordship thought it was not too much to ask that in regard to Great Britain the Commonwealth and State Ministries, municipal bodies and public corporations, should see to it that in their legislative and administrative measures they did all they could to foster and promote inter-Empire trade. In a closing word Lord Burnham pressed the desirability of British exporters studying for themselves the conditions in the countries with which they desired to trade.



New Zealand Imports.

Statistics regarding the arrivals of paper and stationery into New Zealand during the second quarter of the current year show a total value of £269,252. Printing paper was the largest individual item, amounting to £163,608, and then "other kinds" of paper £54,202, followed by stationery £51,442. Regarding the shares of the chief contributing countries, the United Kingdom holds the premier position in all three varieties of imports. In printing paper the United Kingdom's proportion amounted to £93,249, whilst

THE LINOTYPE ALWAYS STANDS UP TO ITS JOB

Linotypes which are regularly working on the high seas from day to day and year to year are not merely fine-weather machines. The behaviour of the Linotype on the Cunard liner *Berengaria* during the recent exceptionally heavy Atlantic gales, is recorded in the *Daily Mail* dated November 7th, a cutting of which is here reproduced. It affords full evidence of the sturdy construction of Linotypes — built for continuous service and *built to last.*

A corner of the Printing Section on board the *Berengaria.*

...iron becomes decrepit hag.

STORMY EDITING.

"DAILY MAIL" ATLANTIC EDITION IN THE GALE.

Passengers in the Cunard liner Berengaria (52,000 tons), which encountered such a severe two-days gale during her last trip from New York to Southampton, obtained copies of *The Atlantic Daily Mail* throughout the passage.

The linotype machine, which sets the type, came through its severe trial with flying colours.

The machine is screwed to a lower deck with the keyboard fore and aft, and although the operator had difficulty at times in keeping near the machine he set the usual full service of wireless news of world happenings. The molten metal in the pot was kept very low in order to prevent "splashing." Had the liquid lead got into the intricate parts of the machine it is possible that repairs could not have been executed until the ship docked. In addition, splashing metal was likely to injure the operator. Linotype setting is a two-handed job, but there were occasions when the operator worked with one hand, the other clutching a bar of the machine to prevent him sliding across the room.

He laughed when asked to set the following wireless message:—

"Warm sunshine has flooded Southern England and the weather has been summer-like."

Up in the wireless room on "A" Deck news was received from the Leafield Radio Station in Oxfordshire and the Cape Cod Radio Station in Massachusetts. The operators have worked in smaller vessels and the ship's violent motion did not worry them.

The *Daily Mail* Atlantic Edition helped the passengers to remember that they were still in touch with the outside world during the severest portions of the storm.

Canada was responsible for £69,454. In "other kinds" of paper the share to the credit of this country stands at £28,769, those of the other countries being: Canada £15,704, Australia £1,350, Japan £37, and the United States £3,479. Stationery imports from the different countries during the June quarter registered the following values: United Kingdom, £37,825; United States, £6,126; Australia, £5,026; Canada, £215 and Japan £1.

Australia's Customs Tariff.

The complete text of the amendments to the Australian Customs Tariff has been received from the Board of Trade from H M. Senior Trade Commissioner in Australia. They include the following under the heading of paper and stationery:—

	British Pref. Tariff.	Intermediate Tariff.	General Tariff.
Tissue and tissue cap paper for paper patterns, in sheets or rolls, weight not to exceed 9 lb. for 480 sheets 20 by 30 inches per cwt.	6s.	7s.	8s.
or ad val.	15 p.c.	20 p.c.	25 p.c.
whichever rate returns the higher duty			
Writing and typewriting paper (plain), not including duplicating—			
(1) In sheets not less than 16 by 13 inches ad val	Free	5 p.c.	10 p.c.
And on and after 1st January, 1926 ad val.	20 p.c.	25 p.c.	30 p.c.
(2) In sheets less than 16 by 13 inches ad val.	30 p.c.	35 p.c.	40 p.c.
True vegetable parchment—in sizes not less than 6 by 38 inches (or its equivalent) ...	Free	Free	Free
Surface coated paper n.e.i., plain or embossed, also marble and foil paper ad val.	Free	5 p.c.	10 p.c.
(1) Cover paper and pressings ad val.	30 p.c.	35 p.c.	40 p.c.

(3) N.E.I. ad val.	15 p.c.	20 p.c.	25 p.c.
Parchment, cut and uncut ad val.	Free	5 p.c.	10 p.c.

South African Printers.

REPORTS of the eighth annual meeting of the Federation of Master Printers of South Africa go to show that industrial problems to be faced there are as varied and delicate as in the United Kingdom. Printers in the Union are, however, a virile and alert community, and the trade is being organised thoroughly and effectively. The Mayor of Kimberley (Mr. T. G. Belding) attended the annual meeting, at which Mr. E. H. Adlington, the vice-president, occupied the chair. His worship had some useful observations to make concerning the printing industry. After speaking of the harmonious relations existing between employers and employed, he mentioned the great progress that had been made in reference to apprenticeship of South African boys. In this respect the continued prosperity of the industry was vital to the whole country, as it was essential that the boys now undergoing training should be assured of regular employment in the future. The increased Customs duties upon imported printed matter was another matter referred to, the Mayor stating that this would undoubtedly stabilise the trade and give employment to many more people in the industry. Mr. R. Muir, in expressing the thanks of the meeting to Mr. Belding, also dealt with the question of apprenticeship, and said precautions were being taken to see that the apprentices received such training as would qualify them, upon completing their indentures, to hold jobs in any part of the English-speaking world.

The Imprint.

IN their efforts to tighten up the industry in South Africa, master printers are giving attention to the question of the imprint. A delegation from the Transvaal is to ask the appropriate representative of the Government to introduce an Imprint Bill during the next session to deal with imported printing.

Stationery in South Africa.

THE effects of the new Customs tariff has received attention at the hands of the Transvaal Stationers' Association. It is stated that the want of success in the efforts of the Association towards remedial modification is largely accounted for by the meagre state of organisation of the stationery trade throughout the country. The report states that another potent cause was "regrettable, but none the less true, that the aims of the Association were actively countered by the Federation of Master Printers, and in view of what is now known, we can say with justification that the stationery trade has not had a square deal." As regards the section of the tariff with which the Association is particularly concerned, the report says: "It is an appalling bungle, but we may congratulate ourselves that but for the stand taken by this Association it would probably have been much worse."

Messrs. Spicers' New Factory.

IN order to meet conditions set up by the new Customs tariff, Spicers (S.A.) Ltd. are setting up a factory in Durban for the manufacture of envelopes, tags, quarto bound goods such as exercise books, note books, memorandum books, and also paper bags, printers' cards, ruled foolscap, etc. The new tariff has rendered the importation of many items of stationery almost prohibitive. Hence the step taken. The plant is of a thoroughly up-to-date nature, and consists of five envelope making machines of the latest pattern, three ruling machines with automatic feed and deliveries, modern stitchers and folders, and so on. It is expected that by January the factory will be in thorough working order, and able to handle orders of any size with the same efficiency and even greater despatch than was the case when the same class of goods was imported from overseas. Mr. Arthur Herbert, general manager of Spicers (S.A.) Ltd., has charge of the new enterprise.

Business Prospects in Canada.

CANADA offers a growing opportunity for the disposal of printing trade supplies. The industries of the Dominion are developing in a healthy fashion, with the result, of course, that the services of the printing and allied trades are being called upon more and more. The economic condition of the country is giving rise to hopeful prognostications for the future. All the chief industries are setting up record figures. There are indications also that printing is deriving benefit from the improved state of trade.

Paper Activity.

ON the paper side, there is a fair amount of activity. Not only is there a steady consumption on the North American Continent, but export offers very bright prospects. The advantage of preferential treatment in Australia, equal with that enjoyed by the United Kingdom, is giving an impetus to business in all grades of paper. It is anticipated that there will be a big demand for newsprint, as well as for book and other papers, and manufacturers are setting themselves out to capture as much of the custom in the Commonwealth as it is possible to get. In spite of keen competition there orders are expected to flow towards Canada in appreciable volume.

India an Improving Market.

THERE are indications that those who are able to push for business at the present time in India should meet with encouraging results. That country's buying power is undoubtedly increasing. India has had three prosperous years owing to the favourable monsoons, and a fourth is anticipated. Now is the time for British traders to seize their opportunity. Trade is flourishing in the bazaars, which are the distributing centres for all kinds of goods, from a needle to an anchor. Paper, stationery and fancy goods are in great demand. For the period 1923-1924 the share of the United Kingdom in India's total sea borne imports was 57·8 per cent., and it is realised in India that energetic action now would ensure a much larger proportion of next year's total.

Paper for India.

H.M. Senior Trade Commissioner in India states with regard to the new Customs duties on certain kinds of paper imported into British India, that it would be of considerable assistance to the Customs Authorities in India if exporters in the United Kingdom could arrange to send certificates of weight with shipments of the paper in question. The new duties are now leviable on the weight of the paper and not, as hitherto, on an *ad valorem* basis.

REPLYING to questions in the House of Commons regarding the Board of Trade Safeguarding Committees, the President of the Board of Trade recently took the opportunity of expressing the thanks of the Government to the Committees for the thorough manner in which they had conducted the inquiries.

Exports & Imports of Printed Books, ETC.

Statistics Concerning the Trade of British Possessions and Foreign Countries.

CEYLON.—Books imported into Ceylon during the seven months ended July reached 2,72,000 rupees, compared with 2,34,000 rupees in the corresponding period last year, and 3,10,000 rupees in the 1923 period.

AUSTRALIA.—Printed books, directories, etc., entering the Commonwealth during the twelve months ended June represented a value of £1,181,000, contrasted with £1,110,000 in the preceding twelve months, and £1,119,000 in 1923. Imports of stationery (excluding printed books, directories, etc.) were of the value of £1,218,000 during the twelve months ended June, compared with £1,278,000 in the previous year, and £1,113,000 in 1923.

NEW ZEALAND.—Printed books, papers and music imported into New Zealand during the five months ended May were of the value of £169,000, compared with £155,000 in the corresponding five months last year, and £143,000 in the 1923 period.

UNION OF SOUTH AFRICA.—Printed books and music entering the Union of South Africa during the first three months of the year were valued at £92,000, compared with £94,000 in the corresponding period last year, and £89,000 in the three months of 1923. Imports of stationery were valued at £103,000 during January to March, £137,000 in the similar period last year, and £151,000 in the corresponding period of the preceding year.

CANADA.—Books and printed matter entering Canada during the seven months ended July represented $6,555,000, against $6,349,000 last year (seven months), and $5,894,000 in the 1923 period.

IRISH FREE STATE.—Books and printed matter imported into the Irish Free State during the five months ended May amounted to 54,857 cwts. (£217,000), against 52,656 cwts. (£186,000) in the five months last year.

GERMANY.—Given in 100 kilos, the exports of books from Germany during the seven months ended July reached 36,302 (22,309,000 gold marks), compared with 34,462 (18,223,000 gold marks) in the corresponding period last year. Imports of the same class of material, also in 100 kilos, reached 15,082 (6,866,000 gold marks) during the first seven months of the year, compared with 8,185 (3,274,000 gold marks) in the seven months last year.

FRANCE.—Books, pictures, etc., exported from France, in 100 kilos., during the first seven months of the year stood at 87,704 (263,910,000 francs), compared with 87,408 (292,086,000 francs) last year (seven months).

SWITZERLAND.—Printed books imported into Switzerland during January to July, in 100 kilos., amounted to 14,693 (4,301,000 francs), against 14,866 (4,133,000 francs) in the corresponding seven months last year. Printed books exported from that country amounted to 8,422 (2,934,000 francs) to July, as against 5,176 (1,895,000 francs) in the seven months last year.

SPAIN.—In 100 kilos., the shipments of books and other printed matter from Spain during the six months ended June last year reached 1,645, against 1,984 in the 1923 period, and 2,939 in January to June of the preceding year.

BRITISH INDIA.—Stationery goods (exclusive of paper) were imported into British India during the three months ended June to the extent of 22,94,000 rupees, against 20,45,000 rupees in the similar period of the preceding year, and 25,76,000 rupees the year before (three months).

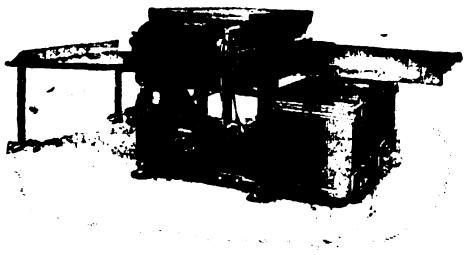
What our Manufacturers are Doing



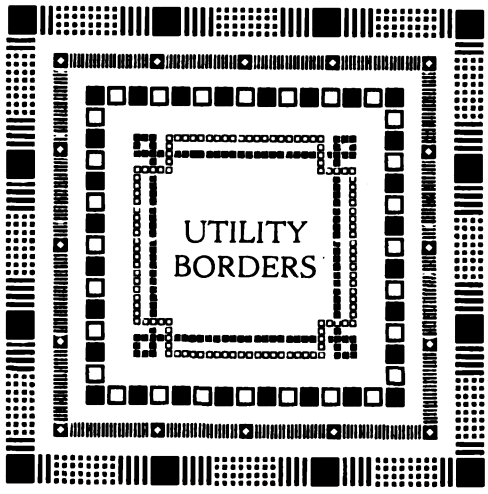
Printing Machinery and Other Products that Merit the Attention of Overseas Buyers.

Electrotyping Machinery: H. Williams and Co.

Messrs. H. Williams and Co. announce the introduction of the "Lioness" Super Router. This house has been making machines for electro, stereo and photo engraving houses since 1870 and have supplied machines to the leading firms in the trade The outstanding feature of the "Lioness" Super Router is that for the first time the motor has been incorporated in the actual construction of the machine. This, of course, reduces cost of installation in view of the fact that a separate motor and driving gear, etc., are not required. The head bearings are in phosphor bronze and the spindle of cast steel, and the latter is fitted with a patent self-centreing chuck for holding the cutters. The cutter can be raised or lowered while the machine is running, and there are fine and positive adjustments on the routing head, convenient arrangements for putting on new belts, and a spacious table giving a good expanse of unbroken surface. The main axis of the machine is made sufficiently strong to carry, quite rigidly, the working strain of both the arms, so that no roller or sliding support of any kind is fitted near the outer end of the main arm. The machine in question is fully described on another page of this issue.

Machinery: Frank F. Pershke, Ltd.

Messrs. Pershke's boast that "if you work with print, paper or card, we have the machine for you" is no idle one in view of the very wide and comprehensive range of machinery they handle. We show herewith an illustration of the "Laco" bronzing machine, which is fitted with all the latest improvements for carrying out this delicate



"LACO" Flat Bronzing Machine.

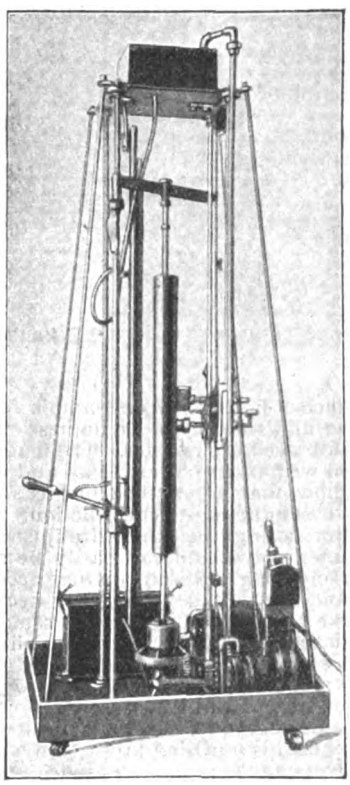
and difficult process with first-class results. This is only one of many machinery items which Messrs Pershke offer. Any of our readers who are interested in offset machines, single colour, two-colour and perfecting machines printing from the sheet or reel, intaglio machines, both sheet-fed and from the reel, newspaper and all-size rotary machines and two-revolution presses should write for particulars to the firm, at Norfolk House, Norfolk-street, London, W.C 2. These machines are made by the well-known firm of Albert and Co., Frankenthal, who have the largest factory building exclusively printing machines in Europe Victoria machines have a high reputation, and it is claimed that all the other plant handled by Messrs. Pershke is of a similar high standard. The reputation of the firm being a high one printers can have confidence when sending enquiries for above-mentioned machines or wire stitching, book sewing, folding machines or guillotines. This does not necessarily mean that prices are high. Only large factories being represented, the machines are built in series, with all parts interchangeable, the price being not only competitive but representing real value for money. Besides the showrooms at Norfolk House they have also a showroom in Manchester, are arranging for opening one in Birmingham, and have agencies all over the world.

Type: P. M. Shanks and Sons, Ltd.

We are able to show herewith a new Border —the Utility—which this firm of typefounders is putting on the market. It is made in five bodies—3, 6, 8, 10 and 12-point—and is furnished in complete sets of about 25 lbs., or

separate at usual border rates. Consisting of very few pieces it will yet make, as specimen sheets show, hundreds of entirely different designs. We think its usefulness in the general printing office and for advertisements will fully justify the name given to it.

Ruling and Gluing Machinery: John Shaw and Sons.



This Honley firm reports that in addition to their already well-known pen ruling machines, single, double and four-sider disc ruling machines, they are now making a small disc machine for jobbing work and short runs. This machine will both feint line and strike two or more colours at one operation. It will also rule, perforate, slit and crease at one operation. It is a handy little machine, and the price is very attractive. They are also making a new gluing and gumming machine. This machine is made in four widths, for gluing or gumming sheets up to 15 in., 21 in., 27 in., and 31 in. wide. It is made for strip work only, whole surface work only, and strip work and whole surface work combined. It can also be fitted with automatic take off and long travelling cloth any length required, for wholesale manufacturing stationers. This gluing machine is a great time and labour saver, especially with the automatic take off and long travelling cloth. It is made on a stand that is very firm and substantial, and it is driven by power from any existing shaft. Readers contemplating installing such machinery will be willingly furnished with full particulars on request.

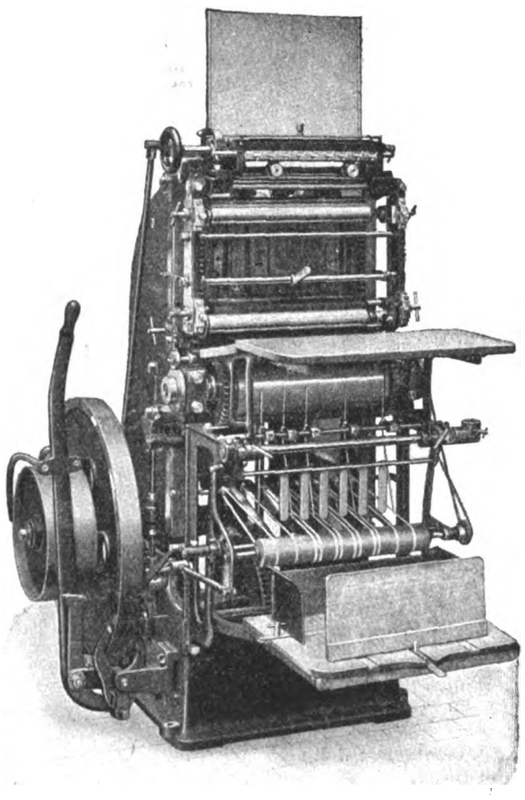
Machinery: W. J. Light and Co., Ltd.

Amongst the many items of machinery provided for the printing and allied trades by Messrs. W. J. Light and Co., Ltd., the "Monopol" art platen may be pointed out as a very serviceable machine. Built in three sizes, it embodies the very latest improvements and is of exceptionally strong construction throughout. There are many special features in the machine. The platen motion can be minutely regulated, thus avoiding slurring, whilst the central adjustment of the impression allows for the most minute regulation. A further advantage is the automatic side lay, which ensures perfect register, even with careless feeding. From a host of other printing plant which Messrs. Light handle may be mentioned apparatus for minimising make-ready according to the Winkler method. Thus the Winkler flat plate milling machine is equally suitable for finishing type-high and plate-high work with the greatest degree of accuracy. I combines the functions of two different appliances—the roughing machine and the shaving machine—because it mills the plate in one operation down to the desired height, thereby saving labour, time and power. A brochure is published describing the special features of the apparatus.

Machinery: A. Edler.

Reduction of works costs are of great importance, and the entirely new vertical Roller Cleaning Machine introduced by the well-known firm of Mr. A. Edler, 78, Southwark-street, London, S E.1, should prove of much interest to progressive printers as a means to this end. The space occupied is only 32 in. by 40 in. It is entirely self contained and portable, being easily moved from machine to machine, and a composition roller is perfectly cleaned much better than by hand in one minute by one operator. No wastage of paraffin takes place, this being filtered after use by the machine, and the used cleaning medium is used again and again. No cleaning rags are

Roller Cleaning Machine (Edler).



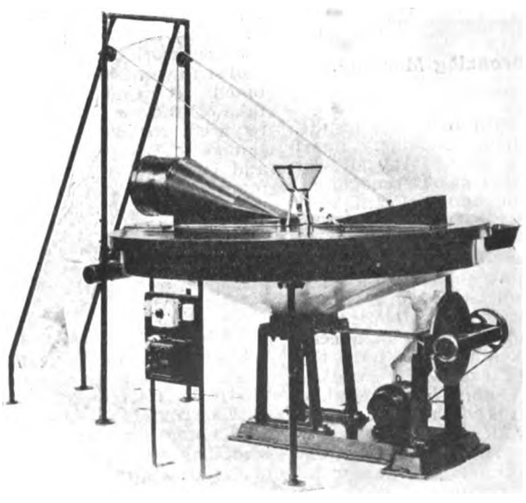
needed. Litho and offset rollers are thoroughly cleaned and re-conditioned in less than two minutes A machine can be seen by previous appointment at work in the firm's show room, where other machines of great interest to the printing and allied trades can be inspected. Another machine deserving of mention is the famous "Perfecta" guillotine, which the many repeat orders received from well known firms prove. For this strong, quick and accurate cutting machine (tested up to 40 cuts per minute), the claim is made that it pays for itself in less than one year. The entirely automatic feed to back gauge works with absolute accuracy, guaranteeing dead true register when working on repetition cutting. Amongst the many other Edler specialities may be mentioned the "Super Lightning" Self-Inking Proof Press, which is fitted with rigid yet adjustable bed automatic inking. This machine is of great value in the composing room, enabling perfect machine proofs,

Digitized by Google

even of three colour process blocks, to be sent out, which should be of great advantage to every firm.

Vertical Jobbing Press: Soldans, Ltd.

An extension of the vertical principle is signalised by a new vertical jobbing press which Messrs Soldans, Ltd., are placing on the market. It certainly goes a long way to fulfilling the ideal of a jobbing press in that it will handle any class of job that comes along, whether letterpress, half tone or register work—and that is just what a jobbing press should do. This desirable end is obtained by the observance of first principles—ample ink distribution and rigid cylinder impression combined with accurate register. The machine is provided with many adjustments and details which show that a practical printer's advice has been sought in its construction. Inkers and reciprocating riders are all adjustable by micrometer screws, and can easily be swung out for cleaning up and giving access to forme, and the cylinder is readily accessible for make ready. Owing to the semi automatic nature of the machine, and the easy stroke-feed to cylinder grippers, a high speed can be maintained—outputs claimed being 2,000 per hour hand-fed, or 2,500 on fully automatic models. Delivery is printed side up, without this touching tapes or flyers, and the delivery table is provided with a three-sided jogger-up. The automatic model is fitted with pile feed table and suction feeder of latest type, with automatically rising pile. The feeder is of most reliable make, and is very easy to control; it will feed any kind of paper from thin tissue to heavy art paper or thin card. If a sheet is wrongly fed the machine automatically comes to a standstill. It is undoubtedly this model which will find the greatest favour. This short description gives some idea of the good points and wide scope of the "Elka," as it is called, and interested parties should write for fuller particulars to Messrs. Soldans, Ltd., at 44-46, Eagle-street, Holborn, London, W.C.1.



"Elka" Vertical Jobbing Press.

Machinery: Practical Machines Co., Ltd.

The "St. George" Machines for glueing, gumming, pasting and varnishing, etc., are still holding their place in trade markets both at home and abroad. The "Silverlock" bronzer notably is in increasing demand, its great advantage being its compactness and the fact that it will bronze, burnish and dust most work in one operation and occupies little space and power. The wide range of this firm's machinery will be found indicated upon another page in this issue, and inquiries will be welcomed at the firm's City office, 125, High Holborn, W.C.1, or at the works, 46, Camberwell-green, S E 5.

Photo-Litho Appliances; Pictorial Machinery, Ltd.

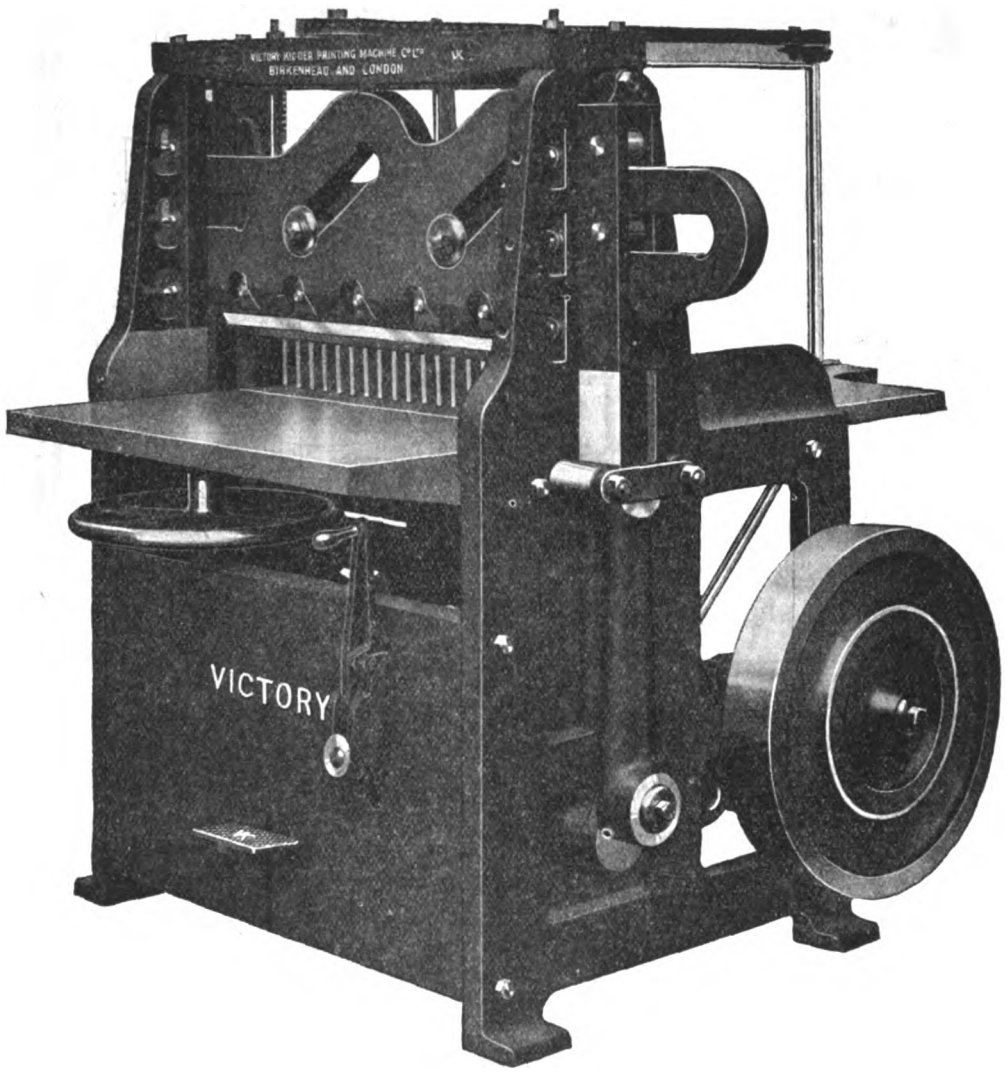
One of the latest appliances evolved by this enterprising firm is the "Lithotex" Super-Whirler, of which an illustration appears herewith. This machine is self-contained inasmuch that it washes, sensitises, developes and dries the printed-down plate in an automatic manner. It is a thoroughly well-tried-out machine, having been installed in working plants in Great Britain, the Colonies and abroad. Pictorial Machinery, Ltd., whose head office and show rooms are at 7, Farringdon-road, London, E.C.1, are specialists in the supply of all photo-litho appliances, having installed plant in many of the most important printing establishments at home and abroad. Among the many appliances which this firm manufactures are the "Lithotex" Step-and-Repeat Machine and the "Printex" Negative Printer. An explanatory booklet, giving full details, can be obtained on application by any printer desirous of learning about these. Pictorial Machinery, Ltd., are also manufacturers of "Pictograph" cameras, specially designed for photo-litho negative making, and also "Lithotex" all-metal printing-down frames, made in various sizes, and, when desired, specially constructed to withstand humidity in tropical climates. A permanent staff of experts are retained by the company, and their advice and assistance is always at the disposal of their clients and prospective customers whether at home or abroad.

"Lithotex" Super Whirler.

Process Machinery and Supplies: A. W. Penrose and Co., Ltd.

The claim of this old-established firm that "pictures speak a universal language" needs no comment. The country newspaper proprietor cannot do without his picture page; and to him the installation of a blockmaking plant for pictures of purely local interest is of great importance. He is specially catered for by this firm whose 33 years' experience places them in a position to supply to the smallest item every necessity for the successful working of such a department. A special feature of Messrs. Penrose's latest model machines for this work is the fitting of a motor with push button control on each, with power adjusted to the work required, thus giving the utmost economy in power and labour. Another advance is the adoption of ball-bearings throughout, which enables the router cutter to rotate at a speed of 15,000 r.p.m., the pulley being turned solid with the spindle to give rigidity. The bevelling machine, too, with its ball bearing cutter head makes 4,500 r.p.m.; this ensures efficiency, and accuracy is attained by all adjustments being controlled by micrometer screws. A great improvement in the illumination of originals has been made by the "Empire Lighting Unit," which employs four arc lamps wired in series, and arranged so that they can easily be adjusted in position either vertically or horizontally. The original can thus be placed in the centre of the four overlapping light circles, which cannot fail to give a more even illumination over a large or small area than the usual method of lighting by means of two lamps placed in a central position with the original. The lamps have automatic scissors-type feed, which maintains the arc in a forward position towards the copy; the carbons, of the white flame type, give a light which is suitable either for black-and-white or colour reproduction; it is very powerful, and by shortening exposures, saves both time and current. A large, well organised factory for polishing both copper and zinc is turning out increasing quantities to meet the demand for metal of uniform surface and etching quality such as Messrs. Penrose supply. For the supply of special chemicals, or the compounding of special formulæ, they have a staff accustomed to this work, from a long experience of the varied demands in every branch of the process trade. In overseas trade the packing of goods so diverse in character as the process man needs is a very important part, and is done by a staff whose long experience ensures the safe transit of the goods, and satisfaction to the overseas customer.

Offset Accessories: Algraphy Ltd.



This old-established firm, the pioneers of perfect lithographic plates of both aluminium and zinc, have lately added considerably to

Digitized by Google

their plant so that they are now in a position to keep up with the increasing demand for their manufactures. With regard to the supply of rubber blankets, they are in the forefront, and printers who use Alco offset blankets are certainly getting a properly matured rubber, so that the life of the blanket is much longer than that generally obtained from other manufacturers. An electrical installation has recently been made for resurfacing plates, and this branch of the business is well catered for, all orders being promptly executed so that customers do not have to wait for the plates for refacing. Taking it all round, these people are alive to the enormous increase in the use of lithographic plates, and are keeping pace with the demand without in any way reducing the quality for which they have such a good name.

Self-Clamp Guillotine: Victory-Kidder Printing Machine Co., Ltd.

These well-known machinery makers, of Victory Works, Birkenhead, and Blackfriars House, London, E.C 4, are manufacturing and selling under the name of the "Victory" the Child Acme Guillotine, for which there has always been a steady demand. This triple geared machine has long been recognised as a "good seller" by reason of its many features which have been specially designed to appeal to the user who requires accuracy and service without the constant attention of the maintenance engineer. The clamping pressure is automatic in action, being controlled by the resistance offered to the knife—in other words, "the harder the cut, the more it clamps." The machine, which is very silent, can be run at thirty five cuts per minute, is adapted for the heaviest and hardest cutting, is practically incapable of getting out of order, and is a most durable cutting machine. The knife-operating mechanism has a minimum number of joints, and this feature ensures the knife travelling perfectly steadily without any presence of knock or jerk. The dimensions, weight and form of main frames ensure maximum rigidity, and the machining of all frame joints and securing of same to cross members by steady pins in addition to bolts, guarantees and maintains perfect accuracy. All gears are of steel and machine-cut from the solid; shaft bearings are of ample dimensions as are all other wearing surfaces. It is, therefore, essentially a machine for long life and low maintenance cost. The machines are constructed strictly to standard, and all parts are interchangeable. Machining and finishing are of the very highest class. The comments of a well-known engineer in the paper trade are expressed as follows: "When reviewing the machine at work, one is struck by its compact form, clean design and silence in running. Upon closer inspection, the machine proves to be well constructed and in a manner conceived to give the greatest possible immunity from gearing and clamping troubles experienced in some makes. It is very rigid in operation and instantaneous yet 'silky' in engagement. The saving in floor on this machine is a commendable feature requiring only a width of 5¼ ft. on the 38 in. machine overall, there being no projections other than the flywheel, in which is incorporated a well designed clutch. From a Colonial point of view a great feature is the absence of a number of small moving parts wherein wear in holes and side play is usually expected." The "Victory" guillotine is British throughout and is built entirely at the works of this old-established firm at Birkenhead. It is made in four sizes.

"Victory" Self-Clamp Guillotine.

Cover Papers and Boards: Bartons' Paper and Cardboard Co., Ltd.

The printer in search of cover papers and boards of adaptability and distinction should obtain the samples of this enterprising Birmingham firm of manufacturers. They have been concentrating upon these lines to good effect. In cover papers they are producing a very big range, which are remarkable for the variations in tint. The "Embassy" series are stocked in sixteen colours, which readily lend themselves to artistic treatment. Bartons' boards are equally varied in substance and shade. The Stafford series, from five sheet to sixteen sheet, are distinguished by finish and colour gradations suitable for printers, ticket writers, pattern card makers, picture framers, showcard makers, etc. Another line deserving of attention are the Baroton ticket boards, also running up to 16 sheet substance and lined either one or two sides. There is a wide range of tints to choose from. Samples will be sent on request.

Variegated Leatherettes: Oriental Leatherette Co. (1908), Ltd.

Good service is rendered the bookbinder and the fancy goods manufacturer by the Oriental Leatherette Co. (1908), Ltd. Their productions are close imitations of the real article. The designs are particularly effective, whilst the tensile strength is a great recommendation. The calf and leatherette papers are beautifully finished, and are also waterproof, being especially suitable for bookbinding and for use in making wallets and high-class boxed goods. Any colour can be made to order, and embossing can also be carried out as required. Highly attractive results are secured in the suede papers, in which the firm specialise. In this type they have 11 shades, three designs, and two substances, giving a selection of 66 kinds. In all the papers turned out, durability and colour retention are features which will appeal to users.

Blocking Foil: Phillips Bros. and Ellis.

This firm's "Goldfilm" blocking foil, recently introduced to the trade, has been selling in large quanties. Since it was originally placed on the market various improvements have been effected, and it will be found to be ideal for the work for which it is intended. It is claimed to give better results than any foil hitherto made, is made in size 16 in. by 10 in., is used without preparation, and will work on any material with splendid results. Inquiries should be addressed to Messrs. Phillips Bros. and Ellis, at 7-8, Rolls passage, Chancery-lane, London, E.C.4.

Printing Inks: Shackell, Edwards and Co., Ltd.

Lithographers will be interested to note that this firm have just issued a set of offset three-colour inks, which are a distinct advance on previous efforts in this direction. The printed specimen of a "Cushion" (in strikingly variegated coloured squares) which they have sent out, shows a wide range of colours, and is comparable with a high class letterpress production from three-colour plates. Progressive workings of these three offset inks are available for those lithographers who care to write for them to Messrs. Shackell, Edwards at Red Lion-passage, Fleet street, London, E.C.4.

Diaries: Charles Letts and Co.

Stationers and printers, both at home and overseas, are getting busy now with the sale of diaries for the coming year, and a very large place in the meeting of this seasonal demand is being met by the specialist firm of Charles Letts and Co, of Southwark-bridge Buildings, London, S.E 1. Year by year this firm introduces new features of convenience and usefulness in their many series of diaries, keeping this line in the forefront of public favour. The newest thing this year is the provision in most of their diaries of a "Printator" tablet on the self-opening tab—a useful means for easily erasable note making This year, as in previous years, Messrs. Letts's series cover a wonderful range, including diaries for the office, the home, the waistcoat pocket, the lady's handbag, for the gardener, the motorist, the schoolboy, the schoolgirl – in fact, there is a diary for everybody's taste, however simple or however elaborate that taste may be.

MR. E. H. SHARMAN and Mr. F. E. Griffiths (Messrs. E. H. Sharman and Co.) had an interesting visit to Germany on their recent trip to the Continent. They were able to inspect the new machinery which Schleipen and Erkens of Julich have installed for the improved production of the raw material for the parchmentising of paper and for the manufacture of vegetable parchment itself. Considerable expense has been involved in bringing the the two 80 in. machines right up-to-date, and the result will be, it is claimed, a vegetable parchment paper as good as anything on the market. The Schleipen and Erkens mill has 50 years' experience on the English market and the products have always been guaranteed pure and harmless for foodstuffs. The new machines will be running full in about a week's time, when the quality and quantity of vegetable parchment available from this source will be something for which the English agents, Messrs. E. H. Sharman and Co., 20-21, Queenhithe, Upper Thames-street, will have reason to be proud.

The World-Wide Links of Print.

Address Delivered in Chicago by Mr. A. E. GOODWIN.

Mr. A. E. Goodwin, as our readers are aware, was present at the Convention of the United Typothetæ of America held in Chicago at the end of October. Probably many printers at home and overseas will be pleased to read the following report of a speech made by Mr. Goodwin on October 21st at the annual dinner to secretaries, cost accountants and employees of the United Typothetæ of America. Mr. Goodwin said :—

This is not the first time that the British Federation of Master Printers has been represented on your platform, but it is exceptional that they should have on this occasion sent their chief administrative officer to take part in your discussions and to learn something of your methods of operation, your methods of organising our great industry, and how you are striving to meet some of the problems that we also have to face in the old country. That is really the main purpose of my visit, to learn something of your methods of organisation and how you are dealing with some of these similar problems.

I feel well repaid already for my visit in seeing such an impressive gathering as that now before me. Two years ago, nearly two years ago, I was present at a great International Congress of Master Printers at which our good friend, Mr. G. H. Carter, represented your Typothetæ. That conference met at Gothenburg, Sweden, and I think every one who attended it must have realised that despite differing conditions, differing races and languages, we had one common purpose; and I find here that I am quite at home in all your gatherings. We are looking at problems from different angles, but we are all seeking to uplift the great industry with which we are all concerned.

A World Brotherhood.

To-day the world needs to keep in mind every tie that can bind us together. There are plenty of factors in the world warring to produce discord and suspicion, and we need to emphasise more and more the points of agreement rather than to look at the slight points of difference.

That big gathering at Gothenburg was the first meeting of employers since the Great War, and I think it is encouraging that the printing industry could give such a lead to the world as that. We had represented there nearly all the Allied Countries and all the enemy countries, and we were able to sit down and discuss our problems in a friendly atmosphere.

I was present only a few months ago in Ireland—and I believe you take some interest in Irish problems even in Chicago—and there at any rate, for the first time for a number of years, we had printers from Dublin, from Belfast, from Londonderry, from Cork, all sitting down at the same dining table and talking together in the friendliest way possible.

I got a newspaper, a printing paper, since I reached Chicago, giving me the particulars of another congress which was still more largely attended, representing the whole of Ireland. So there is some hope, at any rate, for a solution of the Irish problem at last.

I think, Mr. President, that we are all proud of our great industry. We are part of a world-wide brotherhood that provides light and also provides the oil which helps to keep the wheels of industry moving smoothly.

World-famous Names.

There is no other body that can claim to be doing so much for the interests of the community as the printing industry. I think, too, that we are proud of our ancestry. We remember with pride the names of Gutenberg, Bodoni, Caxton, Franklin, William Morris, men of different races, of different countries, all one in the great brotherhood of the craft. These do not belong to any nation; they belong to the world. And when a printer is elected to the proud position of President of the United States, a thrill goes through the whole world of printerdom. And we are glad to know that men in all lands are carrying on the proud traditions of the printing industry. There are the names of British printers that are not unknown in this assemblage. Mr. Howard Hazell, the president of the Federation this year, Mr. R. A. Austen-Leigh, Mr. George W. Jones—these are names that are known in America, almost as well as they are known in England, and we are just as proud of them as you are proud of the great leaders who surround me on this platform.

Costing Problems.

Our industrial and economic problems differ in degree and differ in many other respects, but we are thankful to America for one thing, that at a very difficult stage in the history of the printing trade in Great Britain two of our leaders came over here when you were launching your great costing campaign. They brought back the news; we set about it in the usual British way, a little more slowly, perhaps; we devised a system that is not quite altogether on your lines, we, of course, claim that it is slightly better. But the main essentials are the same. And it was to introduce that system to the British printers that first brought me into Association work. The value of that work is appreciated through the length and breadth of the country, and what the trade would have done through the difficult period of the war and post-war period, it is impossible to state. But we do know that it has steadied the whole industry, and even those who were not working the system accepted the results with thankfulness from those who were, during that difficult time.

We are now starting on a campaign for the education of the estimators. We have reached conclusions, I suppose, somewhat similar to you here, that even when you have discovered the correct hour rate, the correct hour cost rate, that there will still be discrepancies in printers' estimates; and we are striving thoroughly to master that particular difficulty.

Labour Conditions.

I shall say very little about our labour problems. Our labour problems are entirely different from yours. It has been very interesting for me to study here on the spot some of your labour conditions, but there is one thing that I think we can claim: the fact that I am here on this platform tonight is some indication that in the unrest which pervades the British Empire, the printing industry is in a much more reasonable condition than any of the other industries in the country. For the past two years we have had no serious trouble at all. We did have a brief period of 48 hours when the whole of the printing presses of London, with the exception of the daily newspapers, were stopped, about six months ago: but the machinery that we have in our Joint Industrial Council helped us to get over that difficulty, and the friendly relation that exists between the workers and the employers is again a model to the rest of industry in our country.

During the past three years you had a visit—I don't suppose they have made much noise about it, but you have had amongst you as visitors three of the leading trade union officials in the printing world, and it was certainly thought by some of our leaders from the employers' side that it was quite time that they sent someone out who would try, at any rate, to understand the standpoint of the employers in the printing industry in America.

Now, I am straying from my duty, Mr. President. I had a cable to-day from Mr. Howard Hazell. I had the pleasure of meeting your president, Mr. Hebb, in Detroit, spent one of the most delightful days of my life in his company. I met the Detroit printers and they were good enough to send a message to our president expressing appreciation of my visit, and I have received to-day a cable stating that that message was read in London to-day at our British Federation Council meeting, where there were gathered printers from all over the United Kingdom, and asking me to convey in the heartiest possible terms a message of greeting to this assembly.

And I should like, Mr. Chairman, if I may, just to hand you a slight memento of my visit. It has very little intrinsic value, but the week before I left I attended one of the most remarkable conferences that I have ever attended. It was remarkable so far as those who were attending the conference were concerned. We fixed an age limit to this conference and there was no employer or employer's son over the age of 33 allowed to attend this convention. I don't know whether that idea may appeal to some of the organisers here, but it is an idea that we think is a good plan to catch them young. We kept these young men together, playing, eating, sleeping, and they had a jolly time together. We had leaders of the industry talking to them on problems of organisation and others connected with the industry; and it was held at a remarkable place. It was held in an old country village some 25 miles from London at a little settlement called Jordans, and the old hostel in which these boys met is very near the home of William Penn. In fact, in the dormitory in which they slept, the roof is composed of rafters taken from the old Mayflower. And one of these boys, a grandson of the first founder of our Federation, a son of Mr. Ralph Hazell, suggested that it would be a nice thing if I were to convey a greeting from these young master printers' sons, and they thought that they would assemble around the graveside of William Penn, and there, on a beautiful Autumn evening, with the leaves just beginning to fall, these young fellows assembled and quietly and reverently they asked me to convey to you, sir, a message of greeting from the young master printers of Great Britain.

And accompanying that message, they took a bunch of lavender from the garden near which William Penn had lived, and it is with the greatest possible pleasure that I hand you just this little bunch of lavender in their name.

Mr. Goodwin has since stated that the cheers which followed his presentation of the bunch of lavender to the president were such as he would never forget.

An Australian Visitor.

Mr. H. S. Wynne, of the "Melbourne Herald," Investigates British Newspaper Printing.

The big newspaper publishing houses in Australia must be credited with an enterprising policy and a determination to be thoroughly up-to-date. To obtain a personal knowledge of the latest in the way of mechanical appliances and processes connected with paper and print, particularly newspaper production, Mr. H. S. Wynne, the works manager of the *Herald and Weekly Times*, Ltd., Melbourne, is making an extended tour, covering the United States, Canada, the United Kingdom and the Continent. Mr. Wynne's company publish the *Herald*, an evening newspaper; the *Sun News Pictorial*, a morning newspaper; the *Sporting Globe*, a bi-weekly, and other weekly and monthly magazines.

During his stay in London, Mr. Wynne, in conversation with a representative of this journal, referred with great satisfaction to the expansion in size of the Australian newspapers. "Three years ago," he said, "a 16 page evening paper in Melbourne was considered the limit. Now, on several days during the week, 32 pages are common, and 40 pages are likely in the near future. Of course, as far as the morning papers are concerned, 40 pages are not uncommon."

The imports of paper into the Australian market are naturally influenced by the expanding size of the various newpapers, and Mr. Wynne mentioned that for the *Herald*, the *Sun* and the *Weekly Times* they were using more than 1,250 tons monthly, whilst for the several other publications, necessitating a super-calendered paper, the consumption was over 700 tons annually.

"Practically all the paper used is of British manufacture," said Mr. Wynne. "When the import duty of £3 per ton was placed on foreign newsprint some three years ago, it led to the use of British paper in almost every office, and the quality supplied has given all-round satisfaction. The only ground for complaint was in regard to packing. However, since the hessian covering has been abandoned in favour of strong wrapping and hoop iron, with stouter wood ends, there is now no fault to be found, whereas previously, the hessian, being of an elastic nature, concealed any damage sustained in transit, especially when only a casual external examination was made."

During his visit to newspaper offices in the United States Mr. Wynne found in almost universal use a reel carrying device, which he described as most simple and effective in operation. The unit low construction type of printing machines, with printing decks placed in line on the floor level, are fed with fresh reels without stopping the press. The reel-carrying device, in a sub-basement, is directly under each printing deck, and consequently the paper does not go on the machine floor at all, thus freeing valuable space. Another advantage, in addition to the flying paster, giving continuity of run, is the absence of reel spindles. The reels are held entirely on cones. It was noticeable in the majority of the newspaper offices that the paper reel cores are steel-tipped, on the Elixman principle. The paper reels are controlled by wide belts that rest on the reel and feed the paper to the machine at the correct speed. Mr. Wynne said that the type of machine mentioned is already running in several offices in Australia. He understands that Mr. James, of Messrs. Witton-James, Ltd., is building the reel-carrying device in this country, and that a substantial order is now going through the works at Hendon for an English newspaper.

Whilst in New York Mr. Wynne inspected a rotary magazine printing machine, built by Messrs. Hoe and Co., to the order of his firm.

When visiting San Francisco and Los Angeles he was surprised to find that some offices were running on Scandinavian paper. This he considers rather puzzling in view of the modern equipment and capacity of Canadian mills.

Mr. Wynne had the opportunity of making an inspection of the St. Maurice mill, Three Rivers, and also the Laurentide mill at Grand Mere, and as these were the first paper mills he had had the opportunity of visiting, he was greatly impressed with their splendid organisation and the natural advantages enjoyed. "The Canadian papermaker," said Mr. Wynne, "has a valuable asset in the rivers and water-powers." He appreciated the kindness and courtesy extended to him, and the information readily given. Mr. Wynne also covered Vancouver and the Pacific Coast.

During his stay in this country he took advantage of the opportunity, through the kindness of Mr. Stanley Cousins, of visiting several important Kentish newsprint mills. "I was very fortunate," he remarked, "in having Mr. Cousins as guide, as his bright and genial nature and spirit of optimism made the trip a most enjoyable one."

The mills visited by Mr. Wynne were the Imperial at Gravesend, the Empire at Greenhithe, Messrs. A. E. Reed and Co.'s mill at Aylesford, and also the new works at Kemsley of Messrs. Edward Lloyd, Ltd. "To a newspaper man," he said, "much valuable information is obtained by a personal inspection of the various processes of papermaking and the care taken to ensure uniformity of product." Mr. Wynne was greatly impressed with the magnitude of the mills he visited, and their enormous output. The modern mills, he remarked, were a clear proof that we live in an age of steel and concrete.

The Kemsley Garden Village, near the Kemsley mills of Messrs. Edward Lloyd, Ltd., was a great attraction to Mr. Wynne. The houses provided for the workpeople, the supply of electricity for lighting and domestic purposes, and all the amenities that could be desired, evidenced, he said, the generosity and forethought of Mr. Frank Lloyd and the directors of the firm, who evidently showed the deepest interest in the welfare of the workers in their home and social life.

Mr. Wynne, who has spent some three weeks in England, is visiting the Continent prior to returning to Australia.

MR. ROBERT JOHNSTON, of the firm of Messrs. John Dickson and Co., wholesale stationers, Edinburgh, died on Sunday at his residence, 19, Bellevue-crescent. The funeral was on Wednesday.

Australian Paper Imports.

Absorbents and Blottings.

During the twelve months ended June last year the total imports from all sources into Australia of "absorbent paper for copying machines and duplicating paper" reached a value of £7,105, against £10,307 the year before. The United Kingdom was responsible for supplying practically the whole of the shipments, consignments from this country amounting to £7,001. The share of the United States was £104. In the preceding year the contributions of the various supplying countries were: United Kingdom, £9,979; Norway, £268; United States, £41, and Netherlands, £19.

Blotting paper imports represented a total of 8,663 cwts. (£28,922), against 8,332 cwts. (£27,217). The United Kingdom was the largest supplier with 7,843 cwts. (£26,163), compared with 6,606 cwts. (£22,019). The shipments of the other countries during the last completed twelve months were as follows, the figures in parenthesis representing the shipments for the preceding year: United States, 739 cwts., £2,382 (1,672 cwts., £4,976); Germany 52 cwts., £277 (nil); Canada 22 cwts., £80 (nil); Netherlands, 7 cwts., £20 (32 cwts., £135).

EIGHTH WORLD NUMBER OF THE "PAPIER ZEITUNG."—The copy of this well-known journal now before us well maintains the standard set in former years. It is chiefly notable for its wealth of advertisement in which colour is liberally used. The matter is printed in German, English and French, and is of interest to the paper industries generally.

AN advertisement is always working.

The American Miehle Company's Presses

Repetition.

IT is a significant fact that more than two-thirds of all the American Miehle Company's Two-Revolution Presses are bought by printers who already use them—who have had actual experience of their superior EFFICIENCY, ECONOMY and DURABILITY.

In 25 years one Firm purchased 115 American Miehle Company's Two-Revolution Presses, acquiring machines in every one of these 25 years except 1917 and 1918.

Call at our Showroom and let us demonstrate to you the outstanding qualities of these presses.

Supplying the Requirements of Oversea Printers.

Statistics of Exports for the first three-quarters of the year Show Indications of Improved Business.

In the following statistics will be found information regarding the exports from this country of many of the more important classes of goods handled by the overseas printer. In addition to this, the varieties of goods mentioned also show to what an increasing extent the home manufacturer is able to supply the needs of Colonial consumers. Total exports of paper and cardboard during January to September represented 3,675,089 cwts. (£7,175,313), figures which were an advance on both the 3,516,380cwts. (£6,771,315), recorded during the corresponding period last year, and the 2,991,911 cwts. (£6,169,497) registered in the nine months of the preceding year. An analysis of these figures shows that, in quantity, British paper and cardboard exports for the nine months ended September advanced respectively by 158,718 cwts. (4.5 per cent.) and 683,187 cwts. (22.8 per cent.) contrasted with the two preceding corresponding periods. As regards value, the nine months' exports for the present year represent increases of £403,998 (5.9 per cent.) and £1,005,816 (16.3 per cent.) compared with the nine months of last year and the year before.

Printing Paper.

Printing paper, of course, constitutes the principal item in the list of paper and cardboard products sent overseas. During the first three-quarters of the year, shipments of this class of manufacture represented a proportion of over 70 per cent. of the total returns of paper and cardboard exports, whilst compared with the nine months last year and the preceding year, they show increases respectively of 449,962 cwts. and 765,578 cwts. The quantity and value of printing paper shipments during January to September, and the two preceding years, were as follows:—

1925	...	2,702,856 cwts.	£2,399,092
1924	...	2,525,896 cwts.	£3,042,131
1923	...	1,937,278 cwts.	£2,798,612

Australia maintains her position as the most important market for printings of British manufacture, and consumers in that quarter are showing every indication of still further increasing their requirements. The purchases of this class of material by the Commonwealth during January to September represented 1,809,004 cwts. (£1,958,322) compared with 1,309,183 cwts. (£1,455,100) last year and 1,045,671 cwts. (£1,265,015) in the preceding year.

New Zealand, the second largest purchaser, is also an improving market for British printings, and took during January to September, shipments amounting to 194,255 cwts. (£248,030), compared with 172,076 cwts. (£210,046) in the similar period last year, and 164,186 cwts. (£229,143) in the 1923 nine months.

British India, though occupying the third position, bought slightly less in January to September than was the case in either of the two preceding corresponding periods, the actual shipments being: 138,601 cwts. (£215,623), 1925; 140,193 cwts. (£222,215), 1924; 155,341 cwts. (£257,338), 1923.

British South Africa extended her purchases in January to September compared with the corresponding period last year, but took slightly less than in the first three quarters of the preceding year, the figures being as follows:—

93,465 cwts. (£159,554), 1925; 74,491 cwts. (£133,992), 1924; 95,899 cwts. (£168,611), 1923.

Canada made increased purchases of printings from this country, the shipments in the three periods being: 21,840 cwts. (£43,643), 1925; 19,501 cwts. (£42,991), 1924; 18,592 cwts. (£36,023), 1923.

Ceylon also appears as a bigger buyer, the shipments to the market in the three periods being: 20,262 cwts. (£29,000), 1925; 13,786 cwts. (£21,119), 1924; 12,499 cwts. (£23,276), 1923.

The Straits Settlements, in line with other Colonial markets, also took larger quantities of printings during January to September, with consignments as follows: 13,752 cwts. (£26,165), 1925; 9,630 cwts. (£19,513), 1924; 8,015 cwts. (£15,411), 1923.

In addition to the larger shipments consigned to the above enumerated Colonial markets, it is interesting to notice that printings sent to "other British Possessions" amounted to 178,619 cwts. (£227,363) in January to September, against 123,739 cwts. (£188,135) in the corresponding period last year, and 66,559 cwts. (£106,873) in the 1923 period.

Coated Papers.

Statistics relating to the exports of printed and embossed paper hangings were on a fairly satisfactory scale, and show an increase in volume compared with both the corresponding period last year and the preceding year. The actual figures for January to September of the present year and the two preceding years, were: 97,878 cwts. (£438,356), 1925; 96,906, cwts. (£440,822), 1924; 79,737 cwts. (£368,569), 1923.

"All other" sorts of coated papers—except waterproof wrappings and roofing paper—indicated a considerable expansion. During the first nine months of the year, exports under this category amounted to 67,200 cwts. (£333,249), compared with 37,407 cwts. (£244,574) in the corresponding period last year, and 38,044 cwts. (£228,974) in the 1923 period.

Writing Papers.

Writing papers constitute an important item in the British paper and cardboard export list, and although the figures for the first nine months of the year are slightly in advance of those for January to September last year, they show a falling off compared with the 1923 nine months. The actual figures for the three periods were: 168,481 cwts. (£494,954), 1925; 159,643 cwts. (£466,420), 1924; 182,053 cwts. (£497,483), 1923.

Australia was again the largest purchaser of British writings, the shipments to that market amounting to 61,636 cwts. (£161,935), against 56,877 cwts. (£150,999) last year, and 77,292 cwts. (£183,762) in the 1923 period. The extent of the purchases during January to September of the other enumerated Colonial markets, in the order of importance, were as follows (the shipments for the corresponding period of last year being given in parentheses):—

British India, 30,485 cwts., £88,732 (29,691 cwts., £80,740); 23,977 cwts., £55,462 (23,071 cwts., £52,251); British South Africa, 8,699 cwts., £29,916 (8,216 cwts., £27,652); Canada, 3,327 cwts., £12,153 (3,113 cwts., £9,351); Ceylon, 3,270 cwts., £9,826 (2,443 cwts., £7,235); Straits Settlements, 2,617 cwts., £8,062 (1,063 cwts, £4,984). Exports to "other British Possessions" reached 10,166 cwts. (£36,938) during January to September, against 8,282 cwts. (£26,113) last year, and 5,878 cwts. (£25,126) in the nine months of the preceding year.

Tissues.

Exports of this variety of British manufacture have been fairly steady of recent years and from the latest returns do not show signs of any further extension. Shipments overseas during January to September represented 10,156 ctws. (£111,481), compared with 10,866 cwts. (£99,366) in the corresponding period last year, and 10,270 cwts. (£98,117) in the 1923 nine months.

Packings and Wrappings.

The statistics relating to the exports of British packings and wrappings reveal the serious state of this branch of industry. The big decline in exports is shown by the following figures, which cover the shipments for the nine months' period of the present and the two preceding years:—160,078 cwts. (£291,032), 1925; 497,441 cwts. (£421,733), 1924; 384,113 cwts. (£32,775), 1923.

Stationery Exports.

All classes of stationery exports indicate an expansion, which is a very satisfactory feature of the returns, especially when it is remembered that, as far as value is concerned, stationery shipments represent a very important item in the list of paper and cardboard exports. During January to September consignments abroad of envelopes (not including boxed stationery) amounted to 37,839 cwts. (£157,306), figures which compare with 31,572 cwts. (£144,027) in the corresponding period last year, and 30,913 cwts. (£132,068) for the nine months of the preceding year.

An even greater extension took place in the shipments of "other sorts" of stationery, as is indicated by the following figures for January to September of the three years: 146,888 cwts. (£1,041,011), 1925; 128,828 cwts. (£944,520), 1924; 114,640 cwts. (£927,509), 1923.

Total exports of stationery other than paper amounted in value to £1,118,456, compared with £1,090,449 in the nine months last year, and £1,014,721 in the corresponding period of the preceding year. Australia was the principal enumerated purchaser of this class of material with £138,373, figures which compare with £139,645 last year (nine months) and £130,897 in the corresponding period of 1923. British India followed very closely with £134,533, compared with £133,818 and £139,637 in the nine months of the two preceding years. The takings of the other Colonial markets during January to September were as follows (the value of the shipments for the corresponding period of the preceding year being given in parenthesis): Canada, £45,282 (£42,730); New Zealand, £41,972 (£42,739); Straits Settlements and Malay States, £22,927 (£23,492); Ceylon, £44,712 (£14,472). Other countries were responsible for absorbing shipments of the value of £578,751, whilst the United States took £91,070 and France £48,116.

Boards.

This is another branch of trade in which the exports would seem to have been affected by foreign competition. During January to September shipments under the classification of "millboard, strawboard, cardboard, etc.," amounted to 103,665 cwts. (£173,746), against 123,821 cwts. (£196,869) in the corresponding period last year, and 73,909 cwts. (£148,035) in the 1923 nine months.

Printed Books.

The exports of printed books continue to show evidence of further extension, whilst the returns themselves indicate the important position held by this class of manufacture in the list of printing and paper products sent overseas. During the nine months ended September, exports under the heading of printed books reached a total of 367,589 cwts. (£3,225,653) figures which are a substantial advance compared with the shipments of the two preceding corresponding periods, when they amounted respectively to 337,581 cwts. (£2,964,072) and 262,601 cwts. (£2,474,342).

Printing Type.

The overseas demand for printing type of British manufacture appears to be well maintained. Exports during January to September represented 175 tons (£56,768), against 146 tons (£50,958) in the corresponding period last year, and 139 tons (£49,289) in the 1923 period.

Boxes and Cartons.

The statistics relating to boxes and cartons again give every indication of the enterprise being shown by the makers of machinery to cope with the ever-increasing demands being made for this every-day article of commerce. Boxes and cartons sent abroad during January to September represented 48,300 cwts. (£160,358), against 40,894 cwts. (£153,765) in the corresponding nine months last year, and 27,504 cwts. (£117,574) in the 1923 period.

Paper Bags.

The enterprise shown in respect of cartons and boxes is also manifested with regard to paper bags, and statistics again show a satisfactory improvement. During January to September shipments amounted to 46,869 cwts. (£89,602), against 41,517 cwts (£81,884) last year, and 28,636 cwts. (£67,492) in the corresponding period of 1923.

Playing Cards.

Consignments of playing cards of British make continue to show signs of still further increase. Exports, which were practically stationary some few years ago, now evidence an improved demand from oversea consumers. Shipments for January to September of the three years were:—2,599 cwts (£47,000), 1925; 2,317 cwts. (£46,495), 1924; 1,473 cwts. (£27,643), 1923.

World's Paper Trade Statistics.

Official Figures Concerning Various Countries.

The quarterly return dealing with the figures up to September 15th, 1925, issued by the Board of Trade, gives the following interesting statistics relating to the imports and exports of paper of certain foreign countries and British Possessions:—

UNION OF SOVIET SOCIALIST REPUBLICS.—Imports of paper and cardboard into the Soviet Union during the eight months ended May amounted to 67,746 tonnes (of the value of 12,538,000 gold roubles), compared with 27,354 tonnes (6,335,000 gold roubles) in the similar period of last year.

LITHUANIA.—Paper and paper manufactures imported into Lithuania during the six months ended June represented 2,734 tonnes (of the value of 2,734,000 litai), compared with 2,129 tonnes (2,438,000 litai) in the six months of last year. Exports of a similar class of merchandise during the first six months of the year amounted to 1,588 tonnes (1,975,000 litai), against 1,272 tonnes (873,000 litai) in the similar six months last year. [Litai = 43·59 to the £ in 1924 and 48 68 to the £ in 1925].

FINLAND.—In the seven months ended July news-print was exported from Finland to the extent of 87,031 tonnes (of the value of 243,966,000 marks), compared with 72,909 tonnes (207,287,000 marks) in the seven months of last year and 73,031 tonnes (221,755,000 marks) in 1923. Pasteboard exports in the three respective periods were:—27,834 tonnes (58,074,000 marks), 15,872 tonnes (32,948,000 marks), 14,594 tonnes (34,008,000 marks). Packings: 16,710 tonnes (56,721,000 marks), 15,807 tonnes (49,388,000 marks), 15,480 tonnes (55.870,000 marks). Writing paper: 1,962 tonnes (10,698,000 marks), 1,721 tonnes (8,131,000 marks), 3,754 tonnes (19,586,000 marks). Tissue paper: 404 tonnes (6,510,000 marks), 692 tonnes (9,336,000 marks), 633 tonnes (7,681,000 marks).

NORWAY.—Printing paper exported amounted to 115,315 tonnes in the seven months ended July last, as contrasted with 56,489 tonnes in the seven months last year, and 80,417 tonnes in the 1923 seven months. Packing paper dispatched from Norway during January to July last stood at 45,042 tonnes, compared with 27,746 tonnes in the corresponding seven months of 1924, and 36,647 tonnes in the similar period of 1923.

SWEDEN.—Paper "of all kinds" exported from Sweden during the seven months ended July reached 193,996 tonnes, against 170,536 tonnes in the seven months of last year, and 151,495 tonnes during January to July, 1923.

DENMARK.—The value of paper and paper manufactures imported into Denmark in the seven months ended July last stood at 18,164,000 kr., as against 15,217,000 kr. in the seven months of 1924, and 15,718,000 kr. during January to July, 1923.

GERMANY.—Given in 100 kilos., fancy, coloured, varnished, etc., paper exported from Germany during January to July amounted to 126,513,000, compared with 112,905,000 in the seven months of 1924 and 118,159,000 in 1923. Photographic paper exports stood at 7,671 during January to July, contrasted with 6,213 in 1924, and 7,074 in the seven months of 1923.

NETHERLANDS.—Printing and writing paper (including news-print) exported from the Netherlands during the seven months ended July represented 25,834 tonnes (of the value of 6,231,000 guldens), compared with 27,652 tonnes (6,391,000 guldens) in the corresponding seven months of 1924, and 26,258.000 tonnes (6,688,000 guldens) in the seven months of 1923. Imports of the same class of merchandise in the three periods were: 20,310 tonnes (5,003,000 guldens), 1925; 22,834 tonnes (5,120,000 guldens), 1924; and 20,262 tonnes (4,933,000 guldens), 1923. Strawboard exports reached 120,540 tonnes (11,634,000 guldens) during January to July, as against 120,655 tonnes (11,054,000 guldens) in 1924, and 103,411 tonnes (10.973,000 guldens) in 1923.

BELGIUM.—Paper and cardboard imported into Belgium during January to April reached 14,425 tonnes (35,542,000 francs), against 15,094 tonnes (38,128,000 francs) in the corresponding period of last year. Exports for the same periods covering a similar variety of manufacture stood at 10,846 tonnes (42,292,000 francs) in 1925, 10,511 tonnes (31,800,000 francs) in the four months of 1924, and 12,152 tonnes (27,988 francs) in the 1923 period.

FRANCE.—Given in 100 kilos., paper imported into France in the seven months ended July amounted to 810.539 (149,930,000 francs), contrasted with 807,682 (129,167,000 francs) in the seven months of 1924. and 781,839 (107,123.000 francs) in 1923. Exports of paper in the same three seven monthly periods were: 332,281 (154,103,000 francs), 1925; 318,013 (167,431,000 francs), 1924; 286,976 (146,106.000 francs), 1923.

SWITZERLAND.—Exports of printing paper, etc., during January-July, in 100 kilos., reached 74,978 (3,766,000 francs), as against 69,646,000 (3,241,000 francs) in 1924 (seven months).

ITALY.—In 100 kilos. paper (white or dyed in the pulp) exported from Italy during the six months ended June represented 60,850 (of the value of 29,355,000 lire), compared with 83,904 (32,966,000 lire) in the six months of the preceding year, and 23,188 (18,620,000 lire) during January to June, 1924.

HUNGARY.—Given in 100 kilos., the exports of paper and paper manufactures from Hungary during the three months ended March represented 2,698 (of the value of 117,000 gold krona), against 803 (196,000 gold krona), in the corresponding period of last year. Paper imported into Hungary during January-March amounted to 90,564 (3,887,000 gold krona), compared 84,248 (4,147,000 gold krona) in the similar three months of last year. Cardboard imports amounted to 9 890 (310,000 gold krona) during January to March, against 14,135 (374,000 gold krona) last year (three months).

CZECHO-SLOVAKIA.—The exports of printing paper shipped from Czecho-Slovakia during January to June represented 6,596 tonnes, contrasted with 4,036 tonnes in the six months of last year. The following represent the other classes of paper goods (in tonnes) leaving Czecho-Slovakia during January to June, the figures in parenthesis showing the amounts in the six months last year: Packings 5,790 (4,037); cardboard, 2,076 (4,077); writings, 719 (604); cigarette paper, 461 (212).

EGYPT.—Imports of paper and other classes of paper goods imported into Egypt (in kilos.) during January-June were as follows, the figures in parenthesis representing the amounts for the six months of last year: Wrapping paper, 8,572,382 (7,320 442 cardboard, 4,309,822 (7,320,442); printings, 3.997.978 (3,436.350; writings and envelopes, 736,326 (941,631); cigarette paper, 281,347 (314.203). Cigarette paper exported during January-June represented 17 tonnes, compared with 21 tonnes in the 1924 period and 18 tonnes in the first six months of 1923.

BRAZIL.—Paper and paper manufactures entering Brazil during the nine months ended September last year reached 34,254 tonnes (49,348,000 milreis), compared with 37,145 tonnes (53,504,000 milreis) in the corresponding period of 1923, and 31,191 tonnes (34,192,000 milreis) in the nine months of 1922.

CHILE.—Paper imported into Chile during January to June amounted to 8,828 tonnes (2,098,000 pesos fuertes), compared with 7,016 tonnes (1,560,000 pesos fuertes), in the 1924 period, and 9,032 tonnes (2,100,000 pesos fuertes) during the corresponding six months of 1923. [Peso fuerte = 1s. 6d.]

JAPAN.—Paper and cardboard imported into Japan during the first six months of 1925 reached a value of 9.625,000 yen, compared with 14.965,000 yen in the same period last year and 7.543,000 yen in the 1923 six months. Exports of paper from Japan during the six-monthly periods were: 8,718,000 yen, 1925; 8,446,000 yen, 1924; 7,818,000 yen, 1923.

SIAM.—Unprinted paper imported into Siam during the six months ended June amounted to 1,196 tonnes (of the value of 443,000 ticals), against 1,274 tonnes (472,000 ticals) last year, and 1,364 tonnes (494,000 ticals) during January to June, 1923. [Tical in 1922=9.50 to the £, in 1923 10.99, and in 1924 11.00.]

BRITISH INDIA.—During the three months ended June paper and pasteboard imported into British India by sea represented 436,180 cwts. (72,50,000 rupees), against 374,543 cwts. (74,13,000 rupees) in the corresponding period of the preceding year, and 369,077 cwts. (79,59,000 rupees) in the 1923 period.

CEYLON.—Imports of printing and writing paper into Ceylon during the first seven months of the year represented 35,819 cwts. (8,37,000 rupees), against 28,619 cwts. (6,17.000 rupees) last year (seven months), and 22,702 cwts. (6,65,000 rupees) in the 1923 period. Imports of "other" paper in the three periods were: 10,86.000 rupees, 1925; 9,49,000 rupees, 1924; 8,61,000 rupees, 1923.

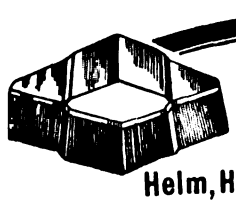
NEW ZEALAND.—Imports of printing paper represented 157,189 cwts. (£196.000) during the five months ended May last, 157,223 cwts. (£207,000) in the preceding year, and 175.788 cwts. (£223,000) in the five months of 1923. "Other paper" imports stood at the value of £236,000 during the five months ended May last, £220,000 in the five months of 1923, and £220,000 in the five months of the preceding year.

BRITISH SOUTH AFRICA.—Printing paper imports (in centals of 100 lbs.) reached 112,185 (£109,000) during the three months ended March last, 82,783 (£95,000) in the 1924 period, and 89,806 (£103,000) during the three months of 1923. Wrapping paper imports in the three respective periods were: 32,908 (£38,000), 1925; 40,452 (£46,000), 1924; 27,083 (£30,000), 1923. "Other paper" imports represented a value of £67,000 in January to March last, £54,000 in the corresponding period of 1924 and £49,000 in the 1923 three months.

CANADA.—Newsprint exported from Canada during the seven months ended July represented 15,699,808 cwts. (55,318,000 dols.), compared with 14,208,364 cwts. (53,529,000 dols.) in the corresponding period last year, and 12,874.489 cwts. (48,472,000 dols) in the 1923 seven months. The value of exports of paperboard in the three respective seven-monthly periods were: 1,841,000 dols., 1925; 2,093,000 dols., 1924; 1,809,000 dols., 1923. Wrapping paper shipments in the periods were: 1,665,000 dols, 1925; 1,938,000 dols., 1924; 1,887,000 dols., 1923.

IRISH FREE STATE.—Paper and cardboard imported into the Irish Free State during the first five months of the year represented a value of £430.000, compared with £431,000 in the corresponding five months last year.

Canadian Newsprint.



Dependence of the United States.

It is expected that reduction in the price of newsprint paper from $70 to $65 per ton will bring about the closing of some of the high cost paper mills in the United States and cause their business to be transferred to Canadian producers, says a Montreal correspondent of *The Times* (Trade Supplement). Despite warnings of overproduction, expansion continues. The International Paper Co., Ltd., is going ahead with its plans for a 400-ton newsprint mill at Chelsea, on the Ottawa River, which is expected to cost about $5,000,000.

While the principal immediate cause of the recent advance in Canadian exchange, which resulted in shipment of gold to the Dominion from both London and New York, appears to have been the increased exports of wheat before the close of lake navigation, it should not be overlooked that Canada's enormous exports of pulp and paper have been responsible more than anything else for restoring the Canadian dollar to parity with gold and maintaining it practically at par for almost two years.

Speaking at the eighth annual dinner of the Canadian Paper Trade Association, Mr. R. I. Finlay, president of the Association, pointed out that already nearly two-thirds of all the newsprint used in the United States is supplied from Canada, either in the form of pulp or as paper. Such exports were growing by leaps and bounds and the time was not far distant when the United States would be entirely dependent upon Canada for newsprint.

PRINTERS' SEASIDE HOME.—Lord Hambleden on Saturday laid the foundation stone of the flats which are being erected in the grounds of the Lloyd Memorial Seaside (Caxton) Home at Deal for retired members of the London Printing and Allied Trades. After the dedication of the stone by the Rector of St. Andrew's, Deal, Mr. Charles H. Roud, chairman of the Home, proposed a vote of thanks to Lord Hambleden.

Colour Printing.

By DAVID GREENHILL, Director and General Manager Sun Engraving Co., Ltd.

Paper read before the Royal Society of Arts on November 25th.

The term, "Colour Printing," embraces so large a field with such variety of method that it is only possible to deal with the subject in a limited way within the scope of this paper.

I therefore propose to deal rather with letterpress colour printing so far as it has developed during the last 30 or 35 years, and more particularly with those branches of the work with which it has been my lot to come, more or less, in direct contact. Some mention will be made of collotype and some thoughts will be given on the new developments of colour printing by means of photogravure.

Wood Engraving.

My first experience in connection with colour printing was with the famous wood engraving house of Dalziel Bros., where, although the general run of work was in fine wood engraving printed in monotone, occasionally work with several colours engraved on wood was done. Very effective results of an enduring nature were obtained by this method, both the ink and paper being of a more permanent nature than those now used. One has often felt that sufficient use was not made of these colour wood engravings before process engraving was available.

A very simple and effective method of colour printing suitable for broad effects followed, with line engravings and flat zinc plates etched or cut; and this process is still practised, although it has never been used so much as its merits would seem to warrant. More might to advantage be done by this method, which is quite artistic and effective when carefully used.

Varying Tone in Line Etchings.

Another step in colour printing by letterpress methods is the endeavour to secure a varying tone whilst still using line etchings. This is quite easy so far as the key plate is concerned, because the artist draws the lines thicker or thinner, closer together or farther apart, as the case may be, and so gets the varying light and shade of the picture, but with regard to the colour plates used, it is not practical to vary the tone on the drawings for each individual colour, and even if it were possible on the drawing, the separation of same for reproduction by line process would be too difficult. Therefore, various screens and mediums were introduced, the most successful of which is termed the Day's Medium, after its inventor, Benjamin Day. The effect of these screens is to break up the surface of the plate so that it prints in lines, dots, or grains of varying degrees. This method has been used more particularly in the development of cheap toy books printed on rough paper, but whilst it has considerable possibilities, it can only be used to advantage in the hands of the skilful workman or artist, otherwise the result is rough and crude in the extreme.

A common failing with this work is the use of colours far too crude, possibly one reason being that the plates are often made by process engraving houses commonly using three-colour process inks, and the normal yellow, red and blue used for three-colour work is far too frequently used for this colour line work. These normal colours, although essential to three-colour process work, give very hard and unhappy effects when used separately on line work, and as a general rule it is better to follow in colour line work the shades of colours more often adopted by the lithographer than the colours used in the three-colour process. With care, quite good and useful results are obtainable, both for commercial and pictorial effects.

"Acqua-tint."

A method used by the House of Dalziel, some 30 or 35 years ago, was quite interesting. I think I am right in saying that they termed it "Acqua-tint" process. It consisted of a method by which an impression of the key plate, which was either a line zinco or a wood engraving, was off-setted on to a series of flat copper plates; the artist then painted out, with an acid resist, portions of the plate which did not require etching, after which a bituminous dust was laid and fixed which, when etched through gave a grain with rather nice feeling and character. This dust-grain was varied to suit the different gradations of the work, and the job was usually printed with one key plate and about six of these tint plates. If my recollection serves me well, there were usually a yellow, a buff, a flesh pink, a red, a blue and a grey-blue beside the key plate. Of course, sometimes one of the former colours would be dropped out or another one or more colours added. The results were quite effective for certain classes of work requiring broad treatment and strong colouring, such as toy books, but the method demanded very considerable skill in its application and it was probably largely due to this that it went out of use.

When this work was being printed a large proportion of varnish was used to reduce the colours and to make the work dry with a glossy surface, but a defect since revealed is that the great reduction in the strength of the ink by the introduction of so much varnish tended to make the colour less permanent. This was in the days before geared inking arrangements were used and the inking rollers ran loose in what were then called the "roller forks": on top of the inking rollers steel rods or riders, as they were called, were placed, and these helped to distribute the ink on the roller and by their weight tended to keep the inker from jumping. The steel riders naturally revolved very fast and in doing so threw off a most disagreeable spray of the colour in use, so that if pink was being worked, all objects and persons round the machine gradually went pink; when blue was worked all changed to blue, and so on. This was not only uncomfortable, but dangerous; indeed, I had my eyes badly poisoned in this way, so much so that one time the doctors thought I would lose my sight. Fortunately, I quite recovered and, more fortunately still, much better methods now prevail.

"Photostone."

Mention must be made of a very interesting process developed and worked for some years by Messrs. Wetherman and Co. of Enfield, by which some very beautiful results were obtained. This method, called Photostone, was worked with a collotype base and litho tints and a very high standard of quality was reached. I am indebted to Mr. Louis Sommer and Mr. Ward Cox for the following description of this very interesting process:

> "The basis of the process was collotype and the procedure was as follows:—After taking a negative intended for collotype a specially prepared emulsion for collotype plate was prepared, which yielded a grained impression, transferable by means of its grained texture on to stone, zinc or aluminium. A set of spare, medium and full transfers was then taken, from 8-12 in number, using as many of the different transfers as were required for the particular job, and adding or eliminating as required. These were then rolled up and proofed in colours in the usual lithographic way. Sometimes, with the better class work a neutral grey printing was included from the collotype plate, giving the job a special finish. As already stated, the number of printings varied according to requirements."

Closely allied to the foregoing is the work which is being executed by the London Stereoscopic Co. at their works in New Southgate, but in this instance the method is, I believe, collotype throughout. This gives very fine results and is particularly suitable for large pictures with short runs.

Messrs. Benrose and Sons of Derby run a very similar process to this in collotype; also another process which appears to be a development of collotype and which they term "Derby Print." With both processes (and particularly the latter) they are successful in producing very beautiful work.

Wharf-Litho.

An interesting and very bold venture in the matter of colour printing was a method launched some years ago under the name of Wharf-Litho, invented by Mr. Hillyard. In this method large zinc plates were used instead of lithostones, the image being largely developed by lithographic means, but instead of relying upon the water and grease principle of lithography, all the portions of the plate not required to print were treated by an etching solution which had the effect of graining the zinc, so that it left in relief very tiny points, so small that they could not pick up sufficient ink to yield a visible impression; the work was then printed on letterpress machines by letterpress methods. It was an extreme development of the idea of the needle-point dot in half-tone.

A factory for this work was developed and run with very considerable success and some very creditable work was produced, but the more modern and more comprehensive method of three-colour-printing, which was rapidly developing at that time, was probably the greatest factor in making it impossible for the Wharf-Litho process to live.

The demand for colour printing has led to many efforts in the direction of so called "multi-colour" work, meaning the production of many colours at one operation. I remember quite well a very clever Russian machine and method called the Orloff which was introduced some years ago and which was worked on rotary principles. It had a series of individual colour plates which were inked by separate devices, and each plate, after being inked, passed under a special composition roller which picked the ink off the several plates in succession, and then relaid the whole of the various coloured inks so collected on to a final key plate, which also contained all the colour areas. One impression was then taken from this plate which yielded the complete coloured result. It will be obvious from this very short description of the method that it was not possible to do tone work, but only lines and flat tints, and the intention was largely to do stamp work, bank note work and label work. Although the whole scheme was very ingenious and the working out extraordinarily clever, it did not survive the test of every-day work and commercial requirements.

The Lambert Machine.

One of the best efforts made in the direction of multi-colour printing was by means of the Lambert machine. This was a French invention and was in effect four flat bed printing machines combined in one. Each forme-bed had its separate inking device, which was equivalent to that of an ordinary flat bed machine, and the sheet was fed into the printing cylinders by means of a very cleverly designed gripper frame, which reciprocated from one cylinder to the next and passed the sheet on for its successive printings with absolute accuracy. On this machine excellent sheets of colour were produced, though perhaps never quite as good as those printed by independent workings of the colours. Astonishingly good results were nevertheless obtained, particularly with four-colour work. The Lambert machine at one time could and did produce a very good average class of colour work on strictly commercial lines, but owing to its limited speed (some 850 per hour) and with the advance of the Miehle Press and the automatic feeder, the method became practically obsolete and faded out. I may mention that a famous series of popular colour books on art, namely, "Masterpieces in Colour," issued by Messrs. T. C. & E. C. Jack, were very largely produced on this machine. Mr. T. Leman Hare, the editor, and his brother, Mr. William Hare, were mainly responsible for the excellence of the work produced; they took great pains to secure the best possible results whilst the printing was in operation, and a reference to their work will reveal the fact that they stressed very largely the importance of the key, or back plate, being printed full and strong, in fact they stressed this point far more than is usual in work of this kind. Another work printed on these machines was the reproduction of 100 pictures from the National Gallery (also published by Messrs. T. C. and E. C. Jack). Some work was also executed for Messrs. Macmillan and Co. on permanent paper, the results secured being very encouraging.

Present-day Multicolour Printing.

Multi-colour printing to-day is developing and will, I think, develop even more

Digitized by Google

in the future. The Cottrell four-colour press is used extensively in America for this purpose with results wonderfully good considering the size of work and vast numbers printed; many of the large magazines use this press and method entirely for the production of their colour plates. The machine and plant, however, has so far proved too costly for use in this country, where the numbers printed are so much below the American requirements. On the Cottrell press one impression cylinder only is used for the whole of the four colour plate cylinders, so that individual make-ready and overlaying is not possible for each colour. There has therefore been developed a most ingenious method called the McKay process, by which the electrotype plates are made in relief, i.e., the solids and darker tones stand up in relief, whilst the high lights and lighter tones are slightly recessed, and this gives a final result very closely approximating to what is obtained by individual make-ready for each forme. The results are very good indeed considering the fact that all colours are printed at one operation and that very large numbers are printed.

A German machine called the "Iris," made by Messrs. Koenig and Bauer, is making some headway in this country and is more adapted to our British requirements. The Iris machine provides for separate make-ready, and in this respect is better than the Cottrell press, but it is very much slower in production. So far, none of the efforts at multi-colour printing have proved really good for everyday work, although in some cases excellent results are obtained for special work.

Colour printing of to-day is done in the main by lithography, offset and the three-colour process, the latter almost exclusively by letterpress methods, although the photographic principle of the three-colour process is being increasingly used to further and develop offset work and also more recently to develop photogravure in colour.

The Three-colour Process.

Without question the greatest development of colour printing in recent years (and particularly of the finer work) has been by the three-colour process. This wonderful and beautiful process relies, firstly, on scientific photography and colour selection, secondly, on skilful fine etching, and finally, on careful, very careful machining or printing. Given these conditions it seems capable of reproducing almost anything in the way of pictorial reproduction in colour.

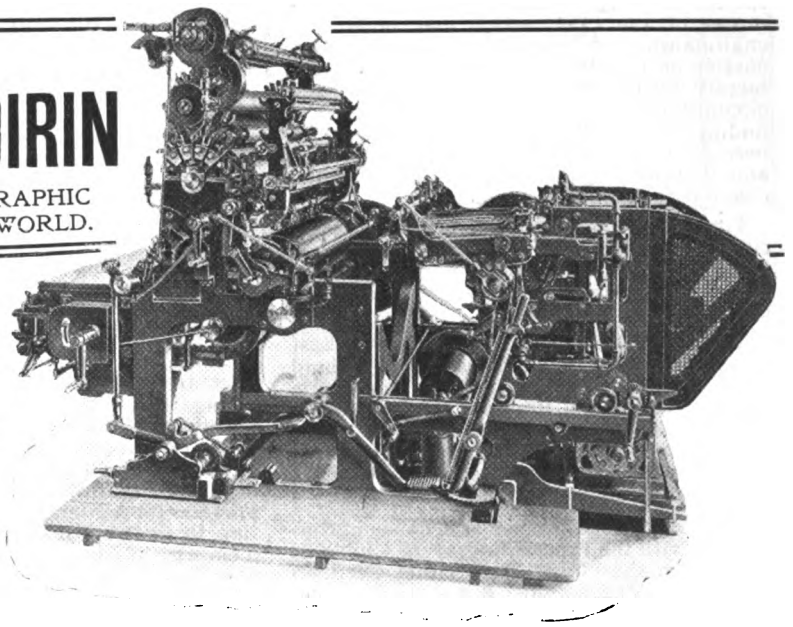
The treasures of our public galleries and art exhibitions, the water-colour painting, educational, scientific or natural history subjects, flowers, fruits, clothes, pottery, carpets and indeed all the hundred-and-one objects of commerce and art are constantly being reproduced by this astonishingly versatile process. Unfortunately the "pressure of price" is at times responsible for some very poor work being produced, and indeed it is a lamentable fact that work of the highest class rarely produces profit in the same way as work less exacting; but notwithstanding the pressure of price, an immense amount of work of a very fair standard is being turned out by this process, and in the case of quite a few well-known firms of a very high average indeed, and fortunately the standard improves.

It is encouraging to note the fact that the Britisher is by no means behind others in this branch of our craft. One can, I feel, fairly claim for the British photo-engravers and the British printers premier place in quality for three-colour process work, although our American friends can and do quite successfully contest the premier position in output.

It is interesting to compare some exhibits one has been able to collect; from a few countries examples are shown from United States of America, Germany, France—these are certainly our keenest competitors. The work from each is technically good, but none show the fine attention to detail and finish which British work in three-colour process shows. The American work displays an excellent average quality considering the immense numbers usually printed and the stock or paper on which it is worked. It is probable that the length of run makes it possible for more time and money to be spent on initial costs of original blocks, electros, and fine mounting bases; the Americans attach very great importance to this latter point and spend far more capital than do English firms on the provision of very fine electros and mounting bases, but I do not find in American work that very close attention to the finer detail and shades of colour which distinguish the best grades of British work. With very few exceptions Continental work by three-colour process is far behind the British standard in quality, particularly since the War; they, no doubt, have found it more difficult to recover.

High Standards of British Work.

The general standard of quality of British colour printing has improved immensely during recent years, notwithstanding the difficult period of the war, this being due to the splendid efforts and rivalry between a number of firms of high standing in the printing and process-engraving sections of the industry. Not less important in this direction too has been the wise and persistent pressure of eminent publishing houses, and I would like to pay a personal tribute to Messrs. Hodder and Stoughton, Ltd., to Messrs. Longmans, Green and Co., also to Messrs. Cassell and Co., Ltd., for their courage and enterprise in not only launching valuable books demanding the greatest skill and care in the reproduction of the colour work in connection therewith, but also for their wonderful persistence and tenacity of purpose in demanding and insisting on that very high standard of work which, although often difficult of achievement, has always been well worth the effort, and has always tended to raise the standard of British colour printing. I say in all humility and with thankfulness that I am the better printer for this friendly but powerful pressure and that the firm I have the honour to be associated with has spared no effort to improve both its staff and its plant to meet this very right and persistent demand for quality.



I am glad to be able to state that the rivalry between some ten or a dozen firms of high repute in colour printing is so great that there is small chance of the standard of work dropping, rather do I feel it will continue to improve.

(To be Continued.)

FRANCIS J. Connolly LTD. UNION WORKS 60, PARK ST. S.E.1

MARINONI - VOIRIN

The OLDEST FIRM OF LITHOGRAPHIC MACHINE BUILDERS IN THE WORLD.

4,000 IMPRESSIONS PER HOUR.

No. 1 (Medium) Single Colour Rotary Offset

WITH

Automatic Pile Feeder and Piling Delivery.

A Completely Automatic Unit

This machine will print perfectly all classes of work: Commercial, Half-tone, Solid Colours and Tints, in absolute register.

Plate, Blanket and Ink Duct are easily accessible from the floor at the delivery end of the machine.

Costly Speed Regulator unnecessary

The new drive by changeable pulleys on the main shaft, which is driven by high speed motor, obviates the necessity of costly electrical speed regulators.

Our Books (printed photo-offset on a medium machine) will be gladly sent on request.

Trade Notes.

THE *Liverpool Weekly Courier* and the *Liverpool Weekly Post* will be amalgamated as from Saturday next, December 5th, when a specially enlarged issue of 16 pages will be published incorporating the principal features of both papers. The *Weekly Post* has a certified weekly sale of 121,884 copies.

THE *Daily Sketch* and *Sunday Herald* have moved from their old offices in Shoe-lane to new premises in Gray's-Inn-road, London. The machine room area of the new offices is 19,000 square feet, and the total floor space reaches 111,200 square feet. The premises contain 3,000 tons of steel girders, 2¾ million bricks, 3,850 tons of Portland cement, 200 steel casements, and 35,000 square feet of glazed partitions. Practically all the equipment has been made in Great Britain.

THE death of Lord Leverhulme left vacant the position of president of the Institute of Cost and Works Accountants. The Council, after allowing the position to be unfilled for a time as a mark of respect to its late president, invited Mr. W. Howard Hazell to become president of the Institute. At a meeting of the Council held on Friday last it was reported that Mr. Hazell had consented to act.

MACHINE RULERS' WAGES.—A request for an advance in wages has been submitted to the employers by the London Society of Machine Rulers, which controls the majority, though by no means all, of the rulers in London. Three conferences have been held and, failing agreement as to differentiation of rates for special machines, the union is demanding a general increase of wages. Notices were tendered on Friday last to all employers in London, including those who are paying above the minimum rate. The attention of the Union has been called to the constitution of the Joint Industrial Council, but they were not prepared to suspend notices in order that the Conciliation Committee might be called to consider the position.

MANCHESTER DISPUTE SETTLED. — A dispute affecting two men, members of the Typographical Association, occurred in Manchesrer and necessitated the calling of a special meeting of the Conciliation Committee of the J.I.C., which met under the chairmanship of General Bemrose in Manchester on Tuesday. The result was a satisfactory settlement of the dispute. All the circumstances were investigated, and the finding was to the effect that the men had been discharged owing to slackness of work and that no stigma at all rested upon the character or ability of the men.

THE North London Master Printers' Association will meet at Wortley Hall, 242, Seven Sisters-road, N., on Tuesday next, December 8th, at 7 p.m., when an address will be given on "Economic Production."

THE Association of Master Printers of East and North-East London has arranged to hold a concert on Wednesday next, December 9th, at the Pigeons Hotel, Romford road, Stratford. The organisers have been fortunate in securing the services of an exceptionally talented concert party, and are assured of an evening's entertainment of a high musical standard.

THE third annual dinner and dance in connection with the Process Engravers' Club will be held in the Grand Hall, Hotel Cecil, on Tuesday next, December 8th. These dances have always proved to be exceedingly interesting and have drawn together a goodly company, this year being no exception to the rule, as a larger number of tickets have already been disposed of than for any of the previous gatherings. The secretary is Mr. T. C. Eamer, 12-14, Farringdon-avenue, E.C.

MR. WILLIAM T. BICKERSTAFF, manager of the Liverpool Printing and Stationery Co., has died at Liverpool. He had recently suffered a nervous breakdown, and had been absent from business for about three months. He was a prominent member of the Liverpool Master Printers' Association, of which he had been for many years an Executive member.

ON Wednesday, December 9th, the anniversary of Sir Arthur Pearson's death, a memorial service will be held at Holy Trinity Church, St. Marylebone, at 6.30 p.m. All friends of Sir Arthur will be welcomed at this service, at which members of the family and many war-blinded men will be present.

THE three principal choral competitions in the North London Musical Festival, last week, were won by the choir trained by Mr. Leslie B. Mackay, of Chatham, vice-president of the Home Counties Master Printers' Alliance. This distinction entitles the choir to "The *Daily Telegraph*" Challenge Shield for mixed voice choirs; the Curwen Challenge Shield for ladies' choirs; and the Federation of British Music Industries' Challenge Shield for male voice choirs.

LITHOGRAPHERS' AUXILIARY.—A meeting of the Lithographers' Auxiliary to the Printers' Pension Corporation was held on the 26th ult., when Mr. Sidney Lamert (president) occupied the chair. Those present included Messrs. E. A. Lowe, J. Mynott, W. Herring, Woodgate Stevens and the vice-presidents. During the course of the proceedings, Mr. Lamert said that his plate for the recent concert had reached the total of £705 and that further amounts were likely to come in. It was decided to found another pension which will make the second pension founded by this Auxiliary within the last few weeks.

SOUTH LONDON AUXILIARY.—An attractive musical programme has been arranged for the concert to be held at the "Horns" Assembly Rooms, Kennington-park, S.E., on December 12th. In making an announcement to the trade, Mr. J. E. Dixon, who is to occupy the chair, states that the principal object of the concert is to assist the War Orphans' Fund of the Printers' Pension Corporation, whose funds at the present time are practically depleted. Donations on behalf of the efforts Mr. Dixon is making will be gratefully received by him at the office of the Amalgamated Press (1922) Ltd., Lavington-street, S.E.1.

Trade Union Matters.

GRADING OF COLCHESTER.—The Colchester branch of the Typographical Association has forwarded to each member of the Executive Council a circular letter giving reasons why Colchester should be raised to Grade III, and requesting that steps be taken to that end. The letter points out that there is a great disparity between the membership of Colchester and the towns in the area which were proposed to be raised to Grade V. The membership of the branch had grown in three years from 47 to 210, the latter figure being higher than many branches who are being recommended for Grades IV and III, and that of the full membership 210 are employed on purely London work.

CHECKING LINOTYPE OUTPUT.—Mr. E. G. Yates, of the Executive Council of the Typographical Association, has forwarded to the Association headquarters a linotype operator's daily time sheet, and asking if members could be permitted to fill in one column of the number of ems set. The Executive Council announce that T.A. members could not be permitted to fill in the column referred to.

LINOTYPE PIECE-WORK QUESTION.—The Executive Council of the Typographical Association, in reply to a question asking for a ruling on the position of piece offices receiving twelve nights' pay for eleven nights' work in its bearing on the recent nights off agreement, state that the Linotype Piece Agreement provides for a guarantee of 60 hours' composition in twelve working days in the case of members working linotype machines on piece-work, and that in the event of such members working less than 60 hours in that period the employer was liable to pay wages for the difference between the number of hours worked and the number of hours guaranteed.

MESSRS. MILLINGTON AND SONS, LTD., have lately put on the market a series of Safety Document Bags, the special feature of which is an extra deep flap gummed all over with the finest pure gum arabic and the very full bottom flap and generous overlap at centre seam, both of which are specially secured. These bags are made in sizes ranging from 9 ins. by 4 ins. to 14 ins. by 10 ins., and in a range of qualities of manillas, cartridges and "Crown Superman"-illa, which is untearable and of much greater strength than a cloth-lined paper. The prices, considering the qualities, are remarkably reasonable and the sample album of patterns which Messrs. Millington supply is one of the finest examples of sampling we have come across. It should be in the hands of every stationer and printer doing a really high-quality business.

Personal.

MR. C. W. BOWERMAN, M.P., president of the Printing and Allied Trades Federation, former secretary of the Trades Union Congress, resumed his Parliamentary duties on Monday after his visit to Australia in connection with the Empire Press Conference.

AT Adelaide he was entertained at a luncheon by the Labour Government of Victoria, Mr. J. Gunn, the Premier presiding.

LORD RIDDELL will preside at the annual house dinner of the Periodical, Trade Press, and Weekly Newspaper Proprietors' Association to be held at the Savoy Hotel on February 19th, 1926.

SIR ROBERT BAIRD, managing director of the *Belfast Daily Telegraph* and president of the Ulster Advertising Club, will sail on December 24th for a three months' tour in South Africa.

THE engagement has just been announced between Alexander Godfrey Collins, eldest son of Sir Godfrey P. Collins, C.M.G., M.P., Lady Collins, and Violet Lilian Rosemary, second daughter of Sir Leicester Harmsworth, Bart., M.P., and Lady Harmsworth.

CAPTAIN G. F. STEVEN and Mr. Alex. C. A. Steven, sons of Major Alexander Steven, the managing director of the Northumberland and Berwickshire Newspaper Co., have been appointed manager and editor respectively of the papers published by the company.

MR. THOMAS A. G. FARRELL, aged 17, an apprentice printer at Bishopbriggs, near Glasgow, has been presented with the parchment certificate of the Royal Humane Society for saving a 16-year-old boy from drowning at Oban, on September 18th.

MR. JOHN SERVICE, of the editorial staff of the *Fife Free Press*, Kirkcaldy, has been presented by the staff with a silver fruit bowl on leaving to take up the position of chief reporter of the *Paisley Express*.

MR. R. C. FOSKETT, advertisement manager of the *Englishman* in Calcutta, has been appointed London manager of that paper in succession to Mr. W. Smith, who is taking up an appointment in South Africa.

MR. T. J. DU TOIT, who was formerly sub-editor of *Die Weste*, the Nationalist newspaper at Potchefstroom (South Africa), and was later correspondent of *Die Burger* in Johannesburg, has been appointed principal clerk to the Union Trade Commissioner in London.

Samson and Goliath Among Derby PRINTERS.

There were some jolly "chippings" at Derby on the occasion of Mr. Frank Colebrook's "hardy annual" talk in the large theatre of the Technical College. The attendance was good, larger even than when he lectured on Charles Knight a year ago. Mr. J. H. Simpson acted as chairman, as he had done at Mr. Colebrook's previous talks. He said the Charles Knight talk had done him real good. He had been quite inspired by it to larger and better aim in his business life; he had felt himself braced up and strengthened.

Mr. Colebrook prefaced his talk (which this time was on American and British printing methods) by saying with what pleasure he heard their good and faithful friend Mr. Simpson acknowledge that Simpson had become Samson. At the end of the talk Scriptural allusion again featured the speeches, for Councillor David S. Butler proposing a hearty vote of thanks to Mr. Colebrook said that he had felt himself so heartened and strengthened by Mr. Colebrook's talk that evening that he who came there a David would go out of the College a Goliath.

As usual a number of questions were put to Mr. Colebrook and answered by him.

Laboratory-tested Printing Inks.

THERE are printing inks *and* printing inks. When you buy Kidd's Inks, whether for Letterpress, Litho, or Offset Litho Printing, you have Kidd's assurance that the component materials have been properly tested in their laboratory. Thus you can be sure of that quality which it has always been Kidd's pride to produce.

Moreover, Kidd's policy is, and always has been, to give value for money, and to treat the small user with as much consideration and courtesy as they would if he were a large consumer.

Kidd's are sole agents for the British Isles for Ullmann's celebrated Bronze Powders and can supply from stock all your needs in that direction.

Printers who cast their own rollers should use J.K. Roller Composition which is made from the same high-grade materials which are used in Kidd's "Resilient" Rollers. It is made in strengths to suit all climates.

If you have not already had a copy of Kidd's Price List it will pay you to send a post card for one to-day.

JOHN KIDD & CO. LTD.

Bookbinding: By Cedric Chivers, J.P.

Full Report of Lecture before the Royal Society of Arts.

It will be remembered that in April last Mr. Cedric Chivers, J.P., the well-known bookbinder, of Bath, lectured before the Royal Society of Arts in London, on the subject of bookbinding. A general report of this lecture appeared in our issue of April 30th. The Royal Society of Arts, however, publishes in the latest issue of its "Journal" a full and revised report of the lecture, with illustrations, reproducing some of the very interesting diagrams and other exhibits used to illustrate the lecture. By the courtesy of the Royal Society of Arts and of Mr. Chivers, we are able to reproduce this illustrated report, which is as follows:—

Nearly 40 years ago my attention was called by a librarian to the difficulty he experienced in keeping books intact and in good enough condition for the purpose of loaning to his readers. On enquiry I heard that he paid 10d. per volume for a binding in half-leather fully lettered. It was impossible even in those days of cheap labour and material to do good work at the price. The sewing, the end-papers and all out of sight work was scamped and only the appearance of the book as a suitable binding was supplied. I was asked to take up the matter and make out a specification for a properly bound and serviceable book. I was able to show and produce a binding for 1s. 7d. which had all the serviceable qualities to be desired.

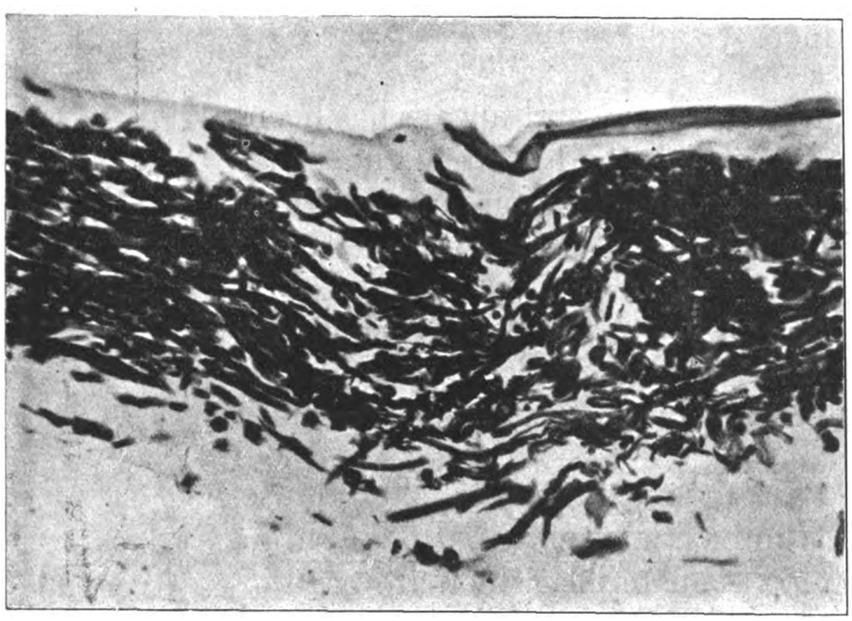

FIG. 1.

This specification was widely published and is still in force in many Libraries, although the conditions of paper to-day make it in many respects most undesirable. Indeed I frequently lose contracts for Library binding because of my refusal to follow the instructions of a specification which under other conditions I personally drew up.

These methods were the best which at that time could be contrived, but presently complaints began to be made as to the durability of some of my bindings. Pages broke away from the sewing. This I remedied by a new system of oversewing. While trying to improve the methods and materials of bookbinding it became apparent that something inimical existed, and I found that the paper of modern books was so bad that traditional methods of sewing and binding were ineffective. A modern bookbinding is necessary to meet the needs of modern papers. The old method of sewing through the folded section was right for the quality of paper to be sewed, but I found it wrong for much modern paper, which is so bad that it loses one-half of its strength in the act of creasing it in the fold.

Fig. 1 shows a photomicrograph of the edge of a piece of an inferior paper which has been folded once only. The crease due to the folding is clearly shown. It is through this broken fibre that the sewing was done, and the book had to depend on it for its strength. It has become necessary therefore for the bookbinder to discover the kind of paper to be bound, and adapt his methods accordingly.

From a great number of tests made on paper used for fiction during a period of twenty years the deterioration shown was from 10 lbs. to 6 lbs. in tensile strength (Fig. 2). The more modern papers actually lose half their strength in folding, and, plus this deterioration, the modern binder has to contend with 77% of papers of undesirable thickness for binding in the ordinary way, against his predecessor's but 5%.

In machine-made paper the fibre is drawn in one direction—this direction is consequently the strongest. Fig. 3 shows a portion of the surface of a roll of paper, the width of which is indicated by the two thick lines. A sheet of double crown paper cut in the vertical from B would, when folded in 8vo have the grain in the direction shown by the arrows, and the paper be stronger in this direction than it would be if cut as A. The latter, when folded, would have the strong direction up and down the page of the book, and consequently it would be weak in the fold.

It had become necessary to learn something about the grain or fibrous direction of the paper. A book sewed through the folded paper may serve well if the grain be across the page, but the same paper would make a weak binding if served in the same manner with the grain running the length of the book. The bookbinder, if he has determined the direction of the grain, may turn the disadvantage of a weak direction to a desirable thing. If the paper be thin it is at least pliable, and while it would be fatal to sew it through the fold, it might be carefully oversewed with advantage. In the course of examining the direction of the grain in the papers of modern books, it was interesting to note that the folding conditions of paper were much better in English-produced volumes than in those coming from America, of which no less than 86% had the grain running in the weak direction.

A COMPARISON BETWEEN THE PAPER OF THE AVERAGE LENDING LIBRARY BOOK

	1890	1909
Tensile Strength	10 lbs	6 lbs
Loss in Folding or sewing-	20%	50%
Of an undesirable thickness for binding in the ordinary way	5%	77%

THEREFORE:—

THE AVERAGE TENSILE VALUES OF THE PAPERS WHEN BOUND ARE AS FOLLOWS:-

1890—8lbs 1909—3lbs

FIG. 2.

Another factor the binder must take into consideration is that of thickness. Fig. 4 shows the largely increased range of thicknesses of paper the binder has to contend with, and it is obvious that while the same specification might serve for books before 1890, it becomes impossible with modern papers.

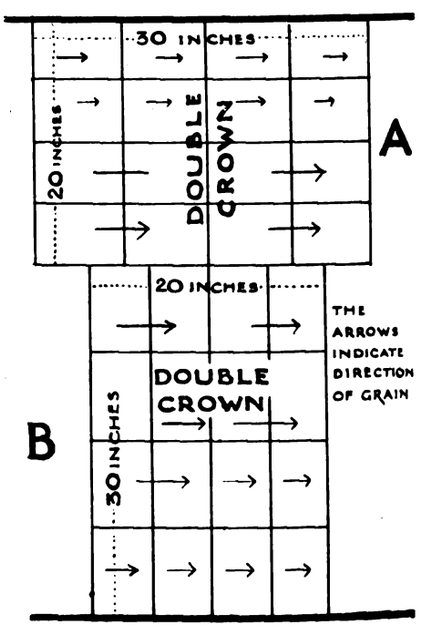

FIG. 3.

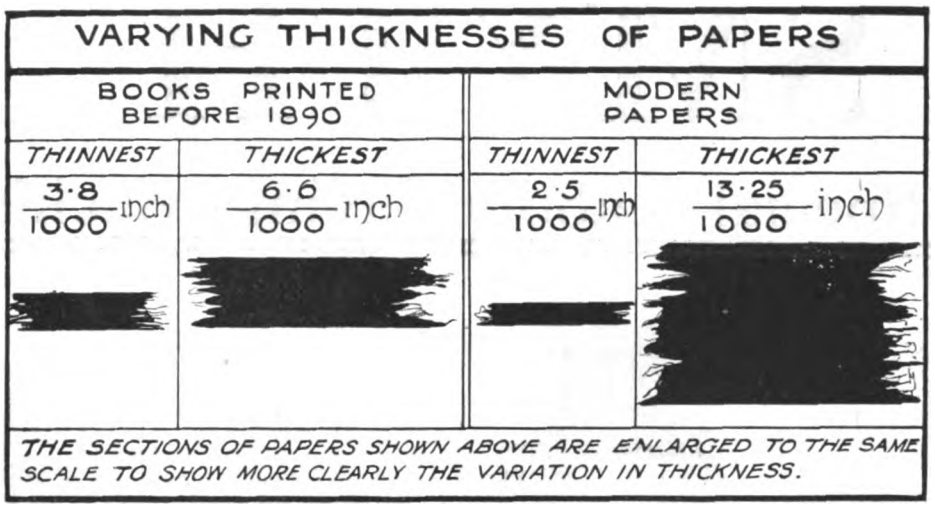
Apart from the thicknesses and qualities of the paper I observed greater variations in the thicknesses of the sections of modern books as compared with those of 1890. The number of leaves in a section must be made to depend upon the thickness of paper. Oversewing makes this possible.

Fig. 5 shows the backs of three books folded and ready for sewing. To bind these three books in the same way would bring about disastrous results—different treatment must be applied in each case.

The greater variation in the qualities of modern books as compared with those of

Digitized by Google

1890 is shown in Fig. 6. It is clear how necessary it is for bindings to be adapted to the varying conditions shown in the diagram.



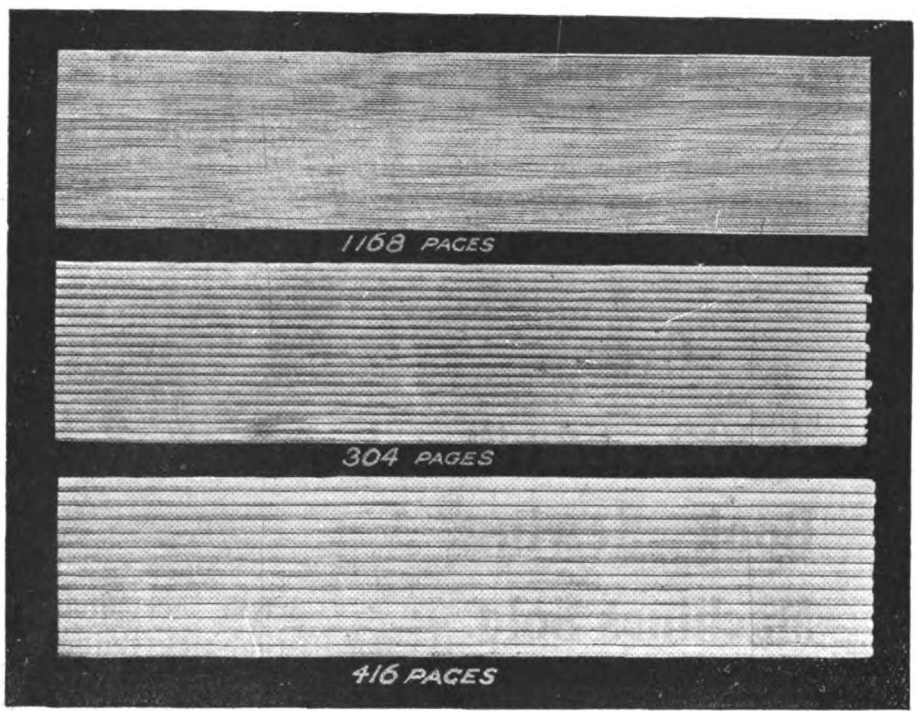


FIG. 4.

1168 pages composed of 73 sections of 16 pages each.
304 pages composed of 19 sections of 16 pages each.
416 pages composed of 13 sections of 32 pages each.

FIG. 5.

The fact that the paper of books has deteriorated in wearing qualities no less than 60% demonstrates the futility of employing bookbinding methods of 1890 at the present day. Fig. 7 illustrates the difference between bookbinding conditions of 30 years ago and those of to-day. The connecting rope represents the bookbinding. A connection which would hold the smaller weight A is seen to be quite inadequate to hold the larger weight B.

With oversewing when properly done, the paper is not weakened nearly so much —with the unfolded sheet pierced for oversewing the loss is only 16% as against 48% with the sheet folded and pierced for sewing through. One other great advantage of oversewing papers suitable for the method is that the paper is not doubled acutely thereby, breaking the fibres (fig. 8). My own oversewing is so arranged that each section is sewed through the previous two sections, making the book intact. The pliable weak modern papers treated this way serve as well as the leaves of better books.

One of my first efforts to reform bookbinding methods was to construct a new end paper. Hitherto it was merely a folded sheet pasted on the first and last leaves of the book, giving no greater strength than the paper joint afforded. It had the bad effect of stiffening the fold of the first leaf of the book—this was either the half-title or title of the book, which in nine cases out of ten broke away after a very little use. (So bad was this that in a Public Lending Library it would be hard to find a book which was intact in its binding at that time.) I contrived an end paper of double linen joint which was independently sewed on, and instead of being a strain on the first and last leaves of the book, protected these, the most used leaves, strengthening them as well as the attachment of the cover to the book. This method of end-papering and jointing the cover of the book is now universally demanded and used in all the Public Libraries of Great Britain and America.

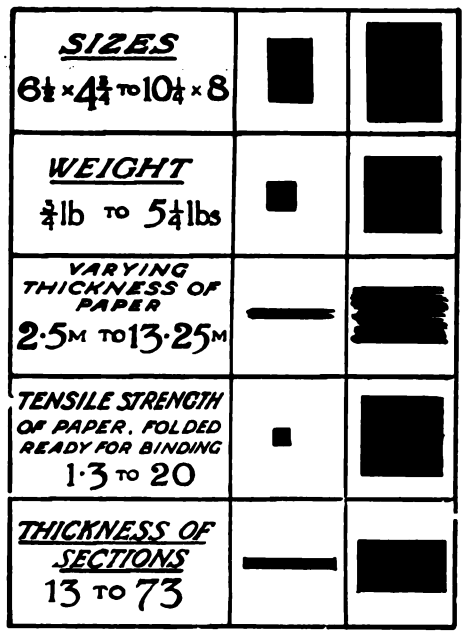

FIG. 6.

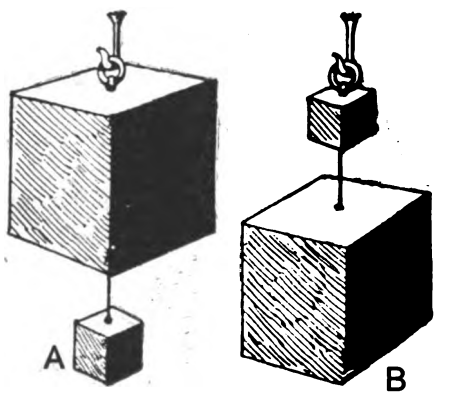

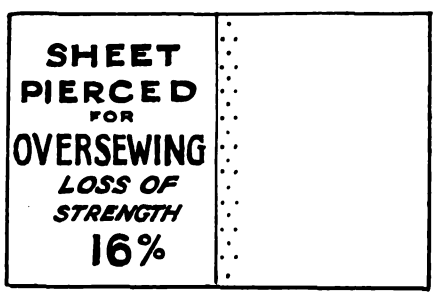

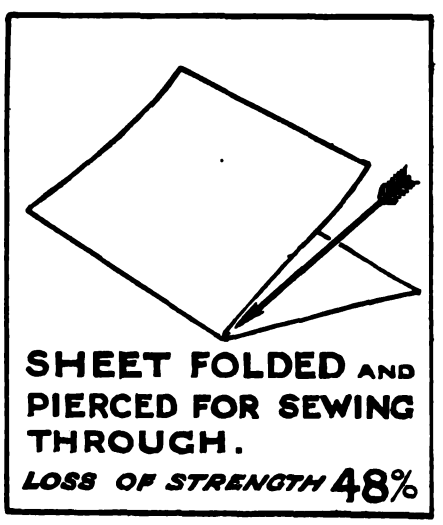

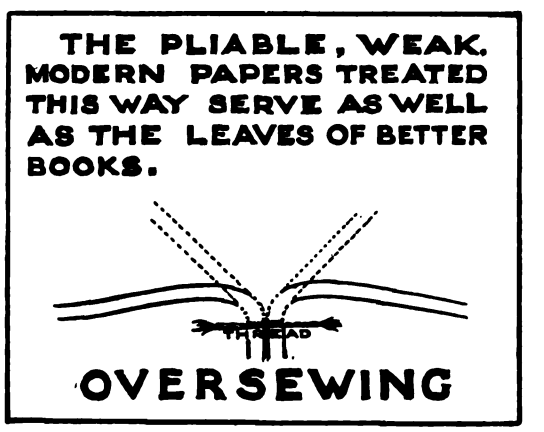

FIG. 7.

Books were originally sewed on strings; these were frequently weakened and broken in hammering them into their boards.

Tapes replaced string and these have now become unnecessary in books with tight backs, the leather of which tightly holds the book together; moreover the use of tapes entails extra work and expense, whilst hindering the free flow of glue and causing excresences on the surface of the back. One point in the excellent Report of the Royal Society of Arts, I think, is open to criticism, in the recommendation of the use of "four unbleached linen tapes." Specifications founded on that Report, insisting on tapes for all books alike, disregard the fact that the binding of a book must be adapted to the individual needs of its paper if it is to render good service.

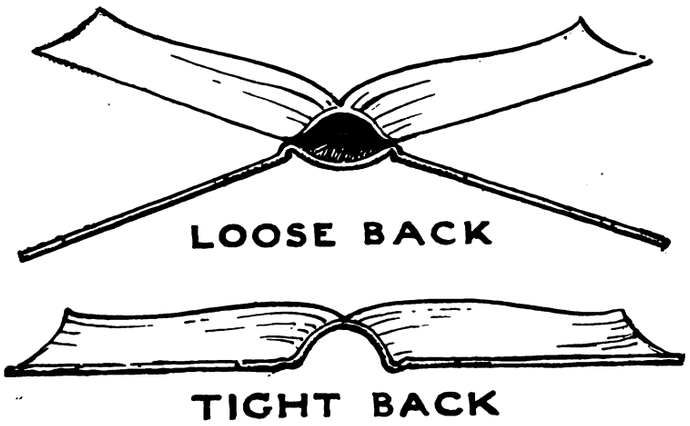

FIG. 9.

The difference between a tight and loose back is shown in Fig. 9. It will be noticed that in the case of the loose back the leather is in contact with the book at two points only; this means the joints are strained and covers soon become detached. A tight back more effectively binds a book, for the leather grips the whole surface of the back, and every section is tightly held.

The leaves of books of thick pulpy paper I now actually strengthen, fortifying the fibre, by re-sizing and pressing, so that a better surface results, less spongy and less absorbent. A book so treated gives a far longer service, and by reason of the improved surface of its paper remains clean longer.

Books of very stiff paper, books of plates on thick paper have hitherto been difficult to bind satisfactorily. By a method of bending the leaves in one or more places some ¾ inch from the back it is possible to make such books open quite freely. Fig. 10 shows a book too bad to sew through and too stiff to oversew. It rapidly breaks and soon soils, since so much handling is necessary to use it. Fig. 11 shows a similar book oversewed and bent. This method is useful for all books of thick paper with sufficient margins. In the case of Fig. 12, which has narrow margins, the leaves have been strengthened by sizing and sewed through the back, each leaf bent to ensure ease of opening. Better facility for handling is assured and the life of the book is much prolonged.

Country News.

Birmingham.

THE annual meeting of the Monotype Users' Association for the Midland Counties of England was held in the Grand Hotel, Birmingham, on Tuesday, November 24th. Prior to the meeting members were entertained to lunch by the Lanston Monotype Corporation, Ltd., Mr. W. I. Burch, the managing director, being in the chair, and in response to the toast of "The Corporation," proposed by Major B. J. T. Ford (general manager of the *Birmingham Post*) and seconded by Mr. B. J. Fletcher (director of Art Education in Birmingham), Mr. Burch said it was a pleasure to meet customers personally. The Corporation left no stone unturned to give a real helpful service in addition to the mere sale of the machine, and as to the value of the machine itself its

MR. R. HUDSON, J.P.,

Senior Partner, Messrs. Hudson and Son, Birmingham, President of the Monotype Users' Association for the Midland Counties of England.

position was undisputed. After lunch, Mr. Reginald Hudson, J.P., president of the Association, took the chair, and after the routine business, such as the re-election of all the office bearers and the election of five more firms to membership, had been transacted, Mr. Fred Waterhouse, national president of the Monotype Users' Association, gave an interesting address on trade matters generally, with especial regard to their bearing upon the monotype. He stated that there was a slight movement in printing for Russia in Russian characters, and in other directions there were evidences of rays of trade sunshine. Mr. Leonard Jay, principal of the Birmingham School of Printing, gave an interesting report of the work done at the Monotype classes, and emphasised the value of the work done for the industry in the printing schools throughout the country—led so ably by the London School of Printing, where his friend, Mr. J. R. Riddell, seemed to move from success to success. A vote of thanks to the speakers and the chairman was replied to by Mr. Hudson.

Cardiff.

THANKS to the generosity and enterprise of the Cardiff Press Bowling Club, with the co-operation of friends, a system of wireless sets and loud speakers has been supplied and equipped in the Cardiff Royal Infirmary. The installation consists of four 4-valve resistance capacity sets, with nearly 50 loud speakers. There is one set in every block of wards, and each loud speaker has a separate plug and switch by means of which it may be put into circuit or cut out without disturbing other instruments. The installation was formally handed over to the Cardiff Royal Infirmary on Friday last when Mr. Douglas Duncan of the *South Wales News*, Cardiff, presided over a little gathering. There was also present Mr. Robt. J. Webber, joint managing director of the *Western Mail*, Ltd., and president of the Cardiff Press Bowling Club, and Mrs. Webber. Sir William Diamond, K.B.E., who acted on behalf of the hospital authorities, the Lady Mayoress of Cardiff, Mr. A. E. Harrison, of the South Wales Printing and Publishing Co., Ltd., the director of 5 WA the Cardiff Broadcasting Station, Mr. A. L. Carter, hon. secretary, and Mr. G. B. Crombey, hon. treasurer of the Cardiff Press Bowling Club, the Medical Superintendent, the matron and officials of the Infirmary. The following endowed loud speakers: Mr. Robt. J. Webber, Mr. Douglas Duncan, Mr. Thomas Armstead (Ely Paper Mills), Mr. A. T. Thomas (*South Wales News*), the *Western Mail* staff, *Evening Express* staff, *South Wales News* staff, *South Wales Echo* staff, *Journal of Commerce* staff, South Wales Printing and Publishing Co. staff, A. McLay and Co. Ely staff, the Cardiff Typographical Association, and Cardiff National Union of Binders and Rulers.

Leeds.

MR. EDMUND ARNOLD DENNY, of Leeds, a nephew of Mr. E. George Arnold, the well-known Leeds master printer and ex-president of the Federation of Master Printers, was married at St. Chad's Church, Leeds, last week to Miss Dorothy Mellish, of Wortley, Leeds. The ceremony was performed by Canon Wynne-Edwards, formerly head master of the Leeds Grammar School. Miss Margery Mellish was the only bridesmaid, and Mr. L. Bointon was best man.

Aberdeen.

AT the annual whist drive, supper and dance, in the Grand Hotel, Aberdeen, on Friday, of the Aberdeen Booksellers, Stationers, and Newsagents' Association, and the members' lady friends, the company numbered about 150. The proceedings were most enjoyable, and a pleasant feature after supper was the presentation of a handsome grandfather clock to Mr. Andrew Ross, past-president of the Association, in recognition of seven years' valuable services to the organisation.

Bristol.

A memorial service for the late Queen Alexandra was held in the Bristol Cathedral at the same time that the service was proceeding at Westminster Abbey. The printing trade was well represented by the Sheriff (Mr. Lionel Goodenough Taylor, of the *Times and Mirror*), Capt. E. G. Mardon, R.N.V.R. (Messrs. Mardon Son and Hall), Mr. G. F. Jones, J.P. (secretary of the Bristol Master Printers' and Allied Trades Association), and Councillors W. H. Ackland and E. W. Savory. Mr. C. J. Satterley, J.P. (linotype operator), was also included in those officially invited.

Bradford.

MR. WILLIAM RYCROFT, who has for some time been on the composing room staff of the *Bradford Daily Telegraph*, has been elected president of the Bradford branch of the Typographical Association. Mr. Rycroft is well known in Bradford musical circles, and is at present choirmaster at Wallis-street United Methodist Church.

Rollers and Composition.

The "Durable" Printers' Roller Co., Ltd.

The degree of efficiency which, during fifty years of service to the printing trade, has been achieved by this well-known London firm, was strikingly brought home to us the other day when we were shown pieces of roller composition taken from printing rollers that had given certain specified periods of service. We were agreeably surprised to find, on handling these specimens, that rollers which had seen very long service at the hands of well-known firms—some on colour printing—still retained a satisfactory amount of tack and resiliency. The capacity for being remelted is rightly emphasised as a strong point about the "Durable" composition, which Colonial and foreign users, indeed all printers making their own rollers, should particularly note. That overseas printers do, in large measure, appreciate the great vital advantage here offered is evident from the fact that "Durable" rollers and composition find their way to all quarters of the globe, being used under all climatic conditions. The "Durable" Printers' Roller Co., Ltd., issue a useful brochure "The Right Hand of the Press" giving much information on the subject of printers' rollers and a copy is offered to any of our readers who care to apply for it to 14, Charles-street, Hatton-garden, London, E.C.1.

THURSDAY, DECEMBER 3, 1925.

A Wrapping Paper Duty.

THE Committee appointed by the Board of Trade to inquire into the application for a duty on packing and wrapping paper has issued its report, the effect of which is to recommend a duty of 17½ per cent. *ad valorem* on packing and wrapping paper, with certain exceptions. The understanding is that the duty will extend also to the wrapping paper in manufactured articles whenever the cost of such paper, as raw material, exceeds some named proportion, perhaps 15 per cent., of the value of the manufactured article of which it it is a component. As to the exceptions, these were specified by the applicants themselves during the course of the public inquiry. Thus the duty will not apply to papers below a substance of 10 lbs. nor to glazed transparents, vegetable parchment and greaseproof papers. A large amount of valuable data is contained in the report, the position as revealed at the inquiry being carefully reviewed in a thirty-page booklet. The resolutions based on the reports of the wrapping paper and other committees were to be submitted to the House of Commons in a Finance Bill on Wednesday and the debate will be continued next week.

* * *

State of Trade.

OFFICIAL reports concerning the state of the allied industries indicate that in the paper trade employment was generally fair in October, and rather better on the whole than at the end of September or a year ago; it was still slack, however, in the wrapping and handmade sections. In the letterpress printing trade, employment was again fairly good on the whole, and showed little change as compared with September. With electrotypers and stereotypers employment continued good; in London and at Glasgow it was reported as very good. Employment with lithographic printers continued fairly good. With lithographic artists it remained fair in London and slack at Manchester. In the bookbinding trade employment continued moderate on the whole, although some improvement was reported in London. The percentage unemployed among insured workpeople covered by the Unemployment Insurance Acts in the printing and bookbinding trades was 4·2 at October 26th, as compared with 4·2 at September 21st, and 5·1 at October 27th, 1924. In the paper and paperboard industry, the percentage was 5.9 at October 26th, compared with 6·7 at September 21st and 7·8 at October 27th, 1924. In the cardboard box, paper bag and stationery trades, the percentage was 4·7 at October 26th, compared with 5·3 at September 21st and 6·4 at October, 1924. The September percentages have been revised on the basis of the new estimates of the numbers of insured workers. The figures show a decrease in unemployment in each section compared with a year ago. Paper and paperboard making made the most substantial improvement, to the extent of 3·1 per cent. In cardboard boxes, paper bags and stationery the decrease is 2·6 and in printing, publishing and bookbinding 1·4. For industry generally the decrease was only 0·3, due largely to greater unemployment in textile and transport trades.

* * *

Business Credit Scheme.

THE Paper and Stationery Export Trades Section of the London Chamber of Commerce' of which Mr. J. T. Steele is the chairman, has formulated a very complete business credit scheme in connection with export trade, which should be of the greatest advantage to the members of the Section. The scheme has been carefully drawn up with the object of providing confidential information with regard to the status of customers abroad or of their buying agents in this country. The question of overdue accounts or the extension of credit is also embraced. The benefits of the scheme are such that they offer a strong appeal to the members of the Chamber who do not already belong to the Section to join up and share in the benefits provided. We understand that the Paper and Stationery Export Section of the Chamber is the only one which has formulated such a scheme which promises to be a very valuable help and safeguard to British traders.

* * *

Paper for India.

THE most remarkable factor in the Indian papermaking situation is the slow progress which is being made in the utilisation of bamboo resources. In small amounts it is being used by one or two mills, but to a great extent India is dependent upon cheap grades of European wood pulp, which material is augmented by rice straw, waste paper and native grasses. In actual fact, India can never come into her own as a self-dependent papermaking country until the problems connected with the collection and conversion of bamboo plant into pulp have been finally overcome. There is common agreement among papermaking authorities that bamboo fibre is not excelled by any other type of fibre for the classes of paper which, next to newsprint, are in the greatest demand. The nearest approach to bamboo furnish is one containing esparto and a percentage of cotton. Eventually, there is no doubt, India will not only make the bulk of her paper from bamboo and grasses, but almost inevitably she will export pulp to other papermaking countries. Meantime the Indian mills are under a debt to Mr. W. Raitt the enthusiastic and indefatigable investigator, who, as the cellulose expert to the Indian Government, has delved more deeply into the intricacies of bamboo as a papermaking material than any other authority.

STATIONERS' TECHNICAL BOARD.—Costing and estimating examinations will be held on Monday, December 14th, 1925, at 6.30 p.m. at Stationers' Hall. Applications must be received not later than December 5th.

West and North-West L.M.P.A.

An Interesting Subject Discussed at the Monthly Gathering.

A very interesting and useful meeting of the above Association was held on Tuesday of last week at the Hotel Gwalia, Euston-road, under the chairmanship of Mr. H. W. Searle. The meeting proper was preceded by an informal and enjoyable supper, which not only provided for the wants of the inner man, but gave ample scope for opportunities of social intercourse. Mr. Sidney Heron, the lecturer, took as the title of his address the rather unusual one of "Twisters I have Met." Amongst those present were: Messrs. R. B. Simnett (vice-president, L.M.P.A.); Alfred Langley, J. R. Burt and P. G. Crannis (joint hon. secretaries); W. J. Boyle (hon. secretary, Central Districts); W. J. Mizen (hon. secretary, North London Master Printers); J. Emlyn Jones, W. L. Sidders, S. Goss, and E. G. Baker (assistant secretary, L.M.P.A.).

The chairman, in introducing Mr. Heron, informed the members that there would be no meeting of the Association during December, but that in January there would be a social gathering, to which the ladies were to be specially invited.

Mr. Heron, in apologising for the unusual title of his address, explained that he was influenced in selecting it from some personal experiences. He instanced several cases of fraudulent customers met with in the course of his business. Amongst the different classes of people that came under his criticism were moneylenders, company promoters, and the class of man that goes to the small printer mostly, gives an order—for a few proofs only—of the order forms of well-known firms, and who, with these proofs, is able to make purchases, leaving the printer liable for the goods purchased. In concluding his address, Mr. Heron hoped that what he had mentioned of fradulent trading would stand as a warning to fellow printers, no matter how plausible the customer might seem to be.

Mr. Searle expressed the thanks of the meeting to Mr. Heron for the usefulness of his address. He advocated the paying of half cash down with orders from customers who were not very well known to them.

Quite a number of cases were enumerated by several speakers that illustrated the innumerable ways in which the printer was liable to be defrauded by the artful and unconscionable trader. Whilst the general opinion existed that a good deal of ordinary business risk was necessary to be encountered, it was felt that reasonable caution should be exercised. Amongst the points discussed were: printing orders from principals of firms, who nearly always made it a rule not to pay for their own private printing jobs, because of the printing orders already given by their firms; the precaution necessary to be taken when taking orders from optimistic company promoters; and printing jobs for moneylenders.

Amongst those who contributed to the debate were Messrs. Davis, W. J. Mizen, A. Langley, J. King, W. L. Sidders, R. B. Simnett, W. J. Boyle and F. A. Perry.

Mr. Baker referred to the assistance master printers were able to receive at the offices at Old Bailey in ascertaining the status and standing of a large number of prospective customers. Many printers took advantage of the valuable information open to them, but a considerable number did not.

The meeting was then brought to a close.

NEW ZEALAND PREFERENCE FOR BRITISH GOODS.—It is reported from Wellington that the Government, in order to encourage importation of British manufactures, has raised from 25 to 50 per cent. the proportion of British material, incorporated in their manufacture, necessary to entitle goods to enter under the British preferential tariff.

IN a written reply to a question relating to the fact that the machines used by the Post Office for cancellation of postage stamps with the words "Buy British Goods" and "British Goods are Best," are of American manufacture. The Postmaster-General states:—"The stamp-cancellation machines in question were obtained from America because—so far as I am aware—there is no British firm making them. If there were such a firm it would, as a matter of course, be invited to tender."

"How Shall I Print It?"

Mr. Riddell Addresses the Publicity Club.

The Publicity Club of London, at its usual fortnightly meeting on Monday evening last, at the Hotel Cecil, W.C.2, was addressed by Mr. J. R. Riddell, the principal of the London School of Printing. The subject of Mr. Riddell's address was "How Shall I Print It?" and the speaker dealt with the relative value of the photogravure, lithographic and letterpress processes in the production of advertising matter.

Mr. Riddell commenced his address with a plea for the closer co-operation between the advertising man and the printer, who could combine with mutually beneficent results. The subject was a difficult one, and if he were asked how a certain subject should be printed he would make a decision based upon his experience. There were no hard and fast rules which he could give them. The question of cost would depend upon the equipment in the office of the printer submitting his estimate, and this very often accounted for variations, in estimation for one particular job. Whilst each of the processes under review had its possibilities, it also had its limitations, and this was a fact that had to be borne in mind. Again he would say that the determination of the process to be employed for a particular job could only be based upon experience.

Mr. Riddell referred to the old time colour work as opposed to the latest mechanical productions, and said that in his opinion, although nowadays they worked in fewer colours, the quality of the work was not so good. People were running wild over offset, but it was a process which had its limitations, and was not always suitable for the work to which it was applied. At the same time it was responsible for beautiful effects, particularly where a softness was required. A lot depended upon the paper, and too little credit was given to the paper mills. It was essential that the paper should be right in order that the most perfect result should ensue.

Lithography, however, could not give the sharpness which was obtained by the use of blocks, and if he were asked generally whether he would employ an electrotype or a stereotype, he would suggest the former.

Touching upon collotype, Mr. Riddell said that it was one of the arts which had come to this country as a result of the war. Before the war it was in the hands of the Germans, but at the present time the finest work was being produced in this country.

They would remember that for something sharp they should use blocks, for something soft offset, and for more weight and tone photogravure.

Mr. Riddell concluded, as he began, with a plea for the closest co-operation between the advertising man and the printer. This co-operation would raise the value of their service and the standard of the craft of which they were justifiably proud.

It was unfortunate that so much suspicion existed; it was difficult to understand, and he thought they should all do their best to see that it was removed by co-operation.

Mr. Riddell dealt satisfactorily with a number of questions at the conclusion of the address.

Mr. Riddell's remarks were illustrated by a number of beautiful specimens hung around the room.

From the London Gazette.

THE BANKRUPTCY ACT, 1914.

RECEIVING ORDERS.

C. Rhodes, residing at 32, Wakefield road, and carrying on business at Salter-row, both in Pontefract, York, printer.

J. B. Bentley, 418, Witton-road, Witton, Birmingham, Warwick, printer.

RECEIVING ORDER ANNULLED.—At Bristol County Court on Friday the local official receiver applied to the judge that the receiving order and adjudication against George Gordon and Son, printers, Bristol, should be annulled. He had, the official receiver said, received a cheque that would satisfy the creditors. The judge made the order asked for.

Photographic Sensitising Dyes.

SIR,—Our attention has been drawn to a paper in your issue for November 19th by Mr. S. E. Bottomley, in which he makes a statement respecting the British manufacture of photographic sensitising dyes.

We are, of course, aware that a good deal of work on sensitising dyes was undertaken at the City of Leeds Technical School under Mr. Bottomley's supervision, but we are afraid that the statement to which we draw attention is apt to give a somewhat misleading impression as to the position in this country respecting sensitising dyes.

We think we may claim that, during the War, by far the major proportion of the panchromatic plates used were produced in our factory and, in fact, we think that we may still claim to be by far the largest producers of panchromatic plates. The only dyes which have been used by us, apart from the original German dyes, were until lately made under the direct supervision of Sir William Jackson Pope in his laboratory at Cambridge University. These dyes were made on our behalf, and were put on the open market by us, and have, in fact, been sold by us to numerous other photographic firms. Practically the same arrangement is still in vogue, except that the manufacture has been transferred from Sir William Pope's laboratory to our own research laboratory. We are not, of course, in a position to say to what extent the dyes produced under Mr. Bottomley's supervision were utilised commercially, but we think it only fair, to Sir William Pope and to ourselves, to draw your attention to the condition as regards at least our own product.

Trade Lectures.

SIR,—Now that the trade lectures arranged by various associations are in full swing, a word of friendly comment might be allowed. Is it not possible for the various associations to combine their interests and have one good series of lectures? Much time, thought and energy are being expended which, if directed into one channel, would be much more valuable and helpful to the trade as a whole.

Also may I suggest that the lecturers be chosen from those who are actually engaged on the work which is the subject of the lecture? Recently there have been a few highly technical printing processes dealt with by those who can only speak on the subject from the theoretical standpoint. The printing trade can always find a number of practical men whose experiences and views on a particular subject would be valuable. Such men only require to be encouraged to come out of their shells to give the fruits of their experiences and knowledge to those in their craft.

E.B.

The Book Trade Dispute.

There is still no general settlement of the book trade dispute. There have, however, been partial agreements.

As a result of the efforts of the Joint Industrial Council of the Printing and Allied Trades, printing and binding offices have been removed from the area directly affected by the dispute, and there was a general resumption of work in such affected offices on Monday. There was difficulty as to the position of firms engaged as both binders and publishers, but this difficulty was removed when the publishers agreed to the suggestion of the J.I.C. to meet the representatives of the union. The union were not prepared to allow their members to deliver work to publishers with whom they were in dispute, but this has not occasioned any considerable difficulty.

As to the main dispute, which continues, a conference was held between the Book Trade Employers and the Union, starting on the Tuesday of last week it was adjourned to the Wednesday and met again on Tuesday of this week. The proposals of the employers were to be submitted to a meeting of the union yesterday (Wednesday) evening.

DIVIDENDS AND REPORTS.

THOMAS DE LA RUE AND CO.—The first report since the capital re-organisation, covering the period of fourteen months to May 30th, 1925, has been issued. A profit is shown of £22,984, after providing for debenture interest. It is proposed to write off the re-organisation expenses (£2,875), and to carry forward the remaining £20,109. Depreciation of plant and machinery has not been charged this time, having regard to the amounts written off. The large contract with the Government of India for supply of postal stores was terminated on December 31st, 1924, the Government having come to the decision to manufacture locally. Trading results in the period under review were seriously affected by the loss of this work, and the effect continues to be felt in the current period. The loss of the contract has rendered necessary a thorough re organisation of the factories. The directors report that measures taken to obtain new work in other directions are meeting with success.

HELY'S (stationers, etc.), announces interim dividend of 7½ per cent. per annum. (Last year's interim same).

NEW COMPANIES.

WATERSPORT, LTD.—Capital £10,000 in 9,850 ordinary shares of £1 and 3,000 shares of 1s.; proprietors of magazines, journals, newspapers and other periodicals, printers, lithographers, photographers, etc. Private company. First directors: E. Johnston-Noad, Lt.-Com. T. Fox and H. Crowhurst. Solicitors: Day, Johnston-Noad and Co., 61-2, Chancery-lane, W.C.1.

HAROLD MOORE, LTD.—Capital £10,000 in £1 shares; stationers and printers, etc. Private company. First directors: D. S. M. Bell, S. Logan and H. Moore. Registered office: 15, Fountain-street, Belfast.

DENNIS AND WEBB (1925), LTD.—Capital £5,000 in £1 shares; to acquire the business of Dennis and Webb, Ltd., and to carry on the business of mechanical engineers, printers, engravers, photographic printers, lithographers, papermakers and dealers, etc. Private company. First directors: C. B. Dennis, P. J. McChesney, H. S. Webb and H. Shackleton. Registered office: 2, Little Montague-court, Little Britain, E.C.

PALL MALL ENGRAVING CO., LTD.—Capital £3,000 in £1 shares; engravers, stationers, lithographers, type founders, stereotypers, photographic printers, die sinkers, bookbinders, advertising agents, booksellers, etc. Private company. Directors: H. T. O. Windsor, F. E. Eaton and E. H. Kemp. Registered office: Silver House, Beak-street, W.1.

INVICTA CO., LTD.—Capital £500 in £1 shares; to acquire the business of printers and stationers carried on as the "Invicta Co., Ltd.," at 73 and 75, Kenton-street, Russell-square, W.C. Private company. Directors: H. J. Card, J. Camp, Junr., and A. W. Tooth.

ALLGOODS PAPER, LTD.—Capital £500 in £1 shares; stationers, printers, type founders, lithographers, photographers and photographic art printers, manufacturers of and dealers in paper and articles made from paper, pulp or waste, manufacturers of envelopes, paper bags, boxes, advertising novelties, etc. Private company. First directors: C. W. R. Gorrill and E. Lee. Registered office: 44, Replingham road, Southfields, S.W.18.

PUBLIC PRESS, LTD.—Capital £250, in £1 shares; to adopt an agreement with H. Kennedy and to carry on the business of printers and advertising experts formerly carried on by him at 277, Southampton-street, Camberwell, S.E.5. Private company. Directors: J. P. Evill and H. Kennedy.

EAST AFRICA, LTD.—Capital £100, in £1 shares; to acquire the business of proprietors and publishers of the journal known as *East Africa*. Private company. Directors: A. E. Bale and F. S. Joelson. Registered office: 91, Great Titchfield-street, W.1.

FULTON'S MARKETING AND SELLING ORGANISATION, LTD.—Capital £100, in 1s. shares; to adopt an agreement with E. R. Fulton relating to services, and to carry on the business of marketing and sales organisers of proprietary or other goods, advertising contractors and agents, printers, publishers stationers, etc. Private company. Subscribers: E. C. Holyoake and P. R. Thompson. Registered office: Aston House, Aldwych, W.C.2.

BOLTON ADVERTISING AND PUBLISHING CO., LTD.—Capital £500, in £1 shares; advertising contractors and agents, printers, publishers, bill posters, newsagents and purveyors and stationers; to acquire interests in copyrights and representation and other rights in plays, music, etc. Private company. Subscribers: W. J. Maine and A. F. Smith. Registered office: 9, Acresfield, Bolton.

ADAM ROBERTSON AND CO., LTD.—Capital £6,000, in 3,000 5 per cent. preference and 3,000 ordinary shares of £1 each; to acquire the business of Adam Robertson and Co., paper manufacturers, carried on at New Calder Paper Mill, Mid Calder. Private company. Directors: J. Wyllie, J. T. Wyllie and A. R. Wyllie. Registered office: New Calder Mill, Mid Calder, Midlothian.

PULP INDUSTRIES, LTD.—Capital £25,000, in £1 shares; to adopt an agreement between E. Katz of the first part, Baumgartner, Dr. Katz and Co, G.m.b.H., of the second part, Spicers, Ltd., of the third part, and this company of the fourth, and to carry on the business of manufacturers of, and dealers in, articles made wholly or partly from pulp of all kinds, etc. Private company. Subscribers: W. R. Chapman and E. R. Gibbs.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

FLEETWAY PRESS, LTD.—Satisfaction (a), to the extent of £2,500 on July 1st, 1925, of "B" debentures dated July 28th, 1920, securing £58,200; and (b), in full on October 20th, 1925, of debenture dated April 3rd, 1925, securing £10,000.

REYNOLDS AND WILSON, LTD. (printers, etc., London).—Debenture dated November 11th, 1925, to secure £500, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: W. Lennard, 28, Martin-lane, Cannon-street, E.C.4.

SPALDING AND HODGE, LTD.—Debenture dated November 19th, 1925, to secure £10,000, and all sums due or to become due not exceeding £50,000, charged on leasehold premises known as Drury House, Russell-street, W.C., freehold land at Horton Kirby, Kent, and the company's undertaking and property, present and future, including uncalled capital, subject as to leasehold premises and the freehold to two mortgages dated September 27th, 1924, securing £35,000 and £40,000 respectively. Holder: J. J. Watts, 72, St., Stephen's road, Hounslow.

ALDERS PAPER MILLS, LTD.—Particulars filed of £30,000 debentures and premium of 5 per cent. authorised November 11th, 1925, and covered by trust deed of even date constituting a fixed charge on certain freehold hereditaments and premises at Wigginton and Tamworth, and a floating charge on the company's other assets, present and future, including uncalled capital; the whole amount being now issued. Trustees: Lloyd's Bank, Ltd.

M.S.S. PRESS, LTD. (printers, etc., London).—Debenture dated October 28th, 1925, to secure £500, charged on the company's property, present and future, including uncalled capital (if any). Holder: R. L. Mond, 9, Cavendish-square, W.

WILLIAM MAY AND CO., LTD. (publishers, etc.).—Particulars filed of £4,000 debentures authorised October 30th, 1925, and covered by trust deed dated November 1st, 1925, charged on printing works and buildings at 45, High-street, Aldershot, and outbuildings belonging thereto and the company's undertaking and property, present and future, including uncalled capital (if any); the whole amount being now issued. Trustees: J. H. May and F. A. Rose.

SELWYN AND BLOUNT, LTD. (proprietors and publishers of books, etc., London).—Issue on November 5th, 1925, of £1,000 debentures, part of a series already registered.

JAMES BRUCE AND CO., LTD. (waste paper and rag merchants, etc., Whitechapel, E.).—Satisfaction in full on November 7th, 1925, of debenture dated March 18th, 1925, securing £300.

GODDARD, WALKER AND BROWN, LTD. (printers, stationers, etc., Hull).—Mortgage on 8 and 9, Market place, and premises in High-street and Temple's Entry, Hull, with fixtures, etc., dated November 10th, 1925, to secure all moneys due or to become due from the company to the Midland, Bank, Ltd.

D. W. SEARLE AND SONS, LTD. (printers, etc. Office, London).—Mortgage dated November 11th, 1925, to secure £420, charged on certain property at Blue Town, Sheerness. Holders: Sheerness and Gillingham Permanent Building Society.

JOHN DIXON, LTD. (bookbinders, etc.).—Further charge on certain land and premises in Stanley-street, Liverpool, machinery and other fixtures and benefit of agreement with the Leeds and Liverpool Canal Co., dated November 10th, 1925, to secure £737 11s. 9d., inclusive of £237 11s. 9d., outstanding on mortgage dated November 10th, 1908. Holders: Burnley Building Society, 12, Grimshaw-street, Burnley.

RECEIVER APPOINTED OR RELEASED

FARRINGDON PRESS, LTD. (London).—L. C. Shergold, C.A., of Kingsway House, W.C.2, was appointed receiver on November 13th, 1925, under powers contained in instrument dated August 30th, 1915.

CRIMLINGS, LTD. (printers, stationers, etc., London).—E. W. Viney, of 11, Queen Victoria-street, E.C., ceased to act as receiver or manager on June 18th, 1925. (Notice filed on November 18th).

G. E. STEVENS, LTD. (printers, etc., Coventry).—M. G. Dailey, of 16, Hertford-street, Coventry, ceased to act as receiver or manager on November 13th, 1925.

ANGLO FOREIGN PUBLISHING SYNDICATE, LTD. (London).—G. W. Potter, of 131, Middlesex street, E.1., ceased to act as receiver or manager on November 17th, 1925.

LEWIS MATHIAS AND CO., LTD. (music publishers, etc., London).—J. Bell, of Windsor House, Victoria-street, S.W.1., ceased to act as receiver or manager on October 25th, 1925.

Early Printing in Norwich.

EXHIBITION AT THE BRIDEWELL MUSEUM OF LOCAL INDUSTRIES, NORWICH.

By GEO. A. STEPHEN, F.L.A., City Librarian, Norwich.

(Author of *Norfolk Bibliography, Commercial Bookbinding, Three Centuries of a City Library*, etc.)

During the past decade the City of Norwich has been the recipient of several magnificent benefactions. On October 25th, H.R.H. the Duke of York formally opened two buildings which had been presented to the city—Suckling House and Stuart Hall, the gift of the Misses Colman of Carrow Abbey, and the Bridewell Museum of Local Industries, presented by Mr. H. N. Holmes, Lord Mayor of Norwich in 1921-22.

The Bridewell, erected probably during the latter part of the fourteenth century, is one of the finest flint-faced buildings in the country, and has many interesting historical associations. From 1584 until 1828 it was used as a Bridewell—whence its present name—or house of correction for rogues and vagabonds, and prior to this it had been a city mansion and the residence of William Appleyard, the first Mayor of Norwich, who kept his first Mayoralty there in 1403. When Mr. Holmes purchased it in 1923 it was in use as a boot factory, but, through his lavish generosity, it has been thoroughly restored and adapted to the purpose of a Museum of Local Industries, past and present. The Museum, under the control of the Castle Museum Committee, is well equipped to show the development of the various local industries. Each section has been prepared and arranged by a sub-committee consisting of experts in that particular craft or industry. Printing being one of the important Norwich industries, a separate room has been allocated for the exhibits, an illustration of which is given herein. The printing sub-committee consists of six members of the Norwich and District Master Printers' Association, a member of the Castle Museum Committee, with the City Librarian as a co-opted member, the chairman being Mr. William Jarrold. By the energies of this sub-committee most of the exhibits have been acquired; the remainder consists of a representative selection of Norwich printed books and broadsides lent from the large and valuable collection of local literature at the Central Public Library, Norwich.

In the annals of printing Norwich occupies an honourable position: it was the tenth provincial town in this country to receive the art of printing; it produced the first English provincial newspaper; the inventions of one of its citizens played an important part in the development of practical printing; and other citizens figure in the history of English typography.

The exhibits include books, broadsides, etc., from the Norwich presses to the end of the 18th century, the books being arranged in chronological order in two glazed exhibition cases, while the broadsides, political squibs, etc., are exhibited in frames on the walls; old presses and appliances; and specimens of modern work.

The visitor to the printing section sees first before him a large framed poster setting forth a brief chronology of the salient features of printing in Norwich, as follows:—

Printing in Norwich.
A Chronology.

1567 Arrival in Norwich of Anthony de Solempne, printer, from Brabant in the Netherlands, who set up the first printing press in Norwich. A book attributed to Solempne's press is dated 1566.

1570 Anthony de Solempne admitted a Freeman of Norwich.

1579 Last book printed by Anthony de Solempne.

1701 Printing revived in Norwich by Francis Burges, who claimed that "A printing house was never here before."

1701 "The Norwich Post," the first English provincial newspaper, was founded about September, 1701.

1706 "The Gazette," founded by Henry Cross-Grove, "the Jacobite printer," made its first appearance on 7th December, 1706; this was continued as "The Norwich Gazette, or The Loyal Packet."

1714 "The Weekly Mercury, or Protestant Packet," founded by William Chase, probably in 1714. This paper was the forerunner of the present "Norwich Mercury," which was so entitled in 1726.

1752 Luke Hansard born at Norwich; he was apprenticed to Stephen White, a Norwich printer, and afterwards became printer to the House of Commons; the official reports of the Parliamentary Debates are still colloquially known as "Hansard."

1761 "The Norwich Gazette and Norfolk Weekly Advertiser" appeared on July 18th, printed by John Crouse, at the "Bible and Star," in Cockey Lane, Norwich. In 1771 the title was changed to "The Norfolk Chronicle, or Norwich Gazette."

Photo, Copyright.] [*Jarrolds, Norwich.*

Printing Section, Bridewell Museum.

1813 Richard Mackenzie Bacon, editor of the "Norwich Mercury" from 1816 to 1844, invented, in collaboration with Bryan Donkin, an improved type of printing machine—*see the Patent Specification which is exhibited.*

1845 "The Norfolk News" first appeared on Saturday, January 4th.

1867 "The Eastern Weekly Express," founded; it was afterwards entitled "The Eastern Weekly Press."

1870 "The Eastern Daily Press," first published on October 10th.

The First Norwich Printer.

In the beginning of the second half of the 16th century there was a great influx of the Protestant Walloons, exiles from the Netherlands, some of whom found refuge in Norwich, where they pursued their arts and crafts to the great advantage of the city. One of them, by name Anthony de Solempne, came to the city with his wife and two sons in 1567, and set up the first printing press in the city. Apparently he was well esteemed, because he was admitted a freeman of the city in 1570, "under the condicion that he shall not occupye eny trade of marchandise eyther from the partes beyond the Seaes or from London, but only his arte of prynting and selling of Rennyssh wine, and for this he have agreid to paye xls."

Eight different productions from Solempne's press are extant, and one other work is attributed to it. All his productions are exceedingly scarce, only nine copies of his least rare book being known. The Norwich Castle Museum was fortunate in securing recently an example from the Solempne press, and it takes pride of place in the exhibition; it is one of four known copies of his book with the imprint, "Gheprint tot Nordwitz, by Antonium de Solemne—the "Belijdenisse ende eenuoudige Wtleghhinge des Waerachtighen gheloofs . . . . gemaeckt . . . . van de Dienaers der kercken Jesu Christi, die daer in Switzerlant zijn." The last book traced to his press—"Chronyc Historie der Nederlandtscher Oorlogen"—is dated 1579.

Francis Burges.

After this early beginning, there is no further record of printing in Norwich until the first year of the 18th century, when the art was revived in the city by Francis Burges, who mistakenly claimed that "a printing house was never here before." He was evidently ignorant or forgetful of his predecessor in the craft. In a pamphlet entitled "Some Observations on the Use and Original of the Noble Art and Mystery of Printing," published on September 27th, 1701, he claimed that that date was "The first day that printing ever was at Norwich." Burges died in 1706, aged 30 years, and his business was continued by his widow, Elizabeth Burges. The specimens from his press which are exhibited are a copy of John Jeffery's "Forms of prayer for the morning and evening of every day in the week" (1706), and John Hoadly's "Sermon preach'd in the Cathedral Church of Norwich" (1704).

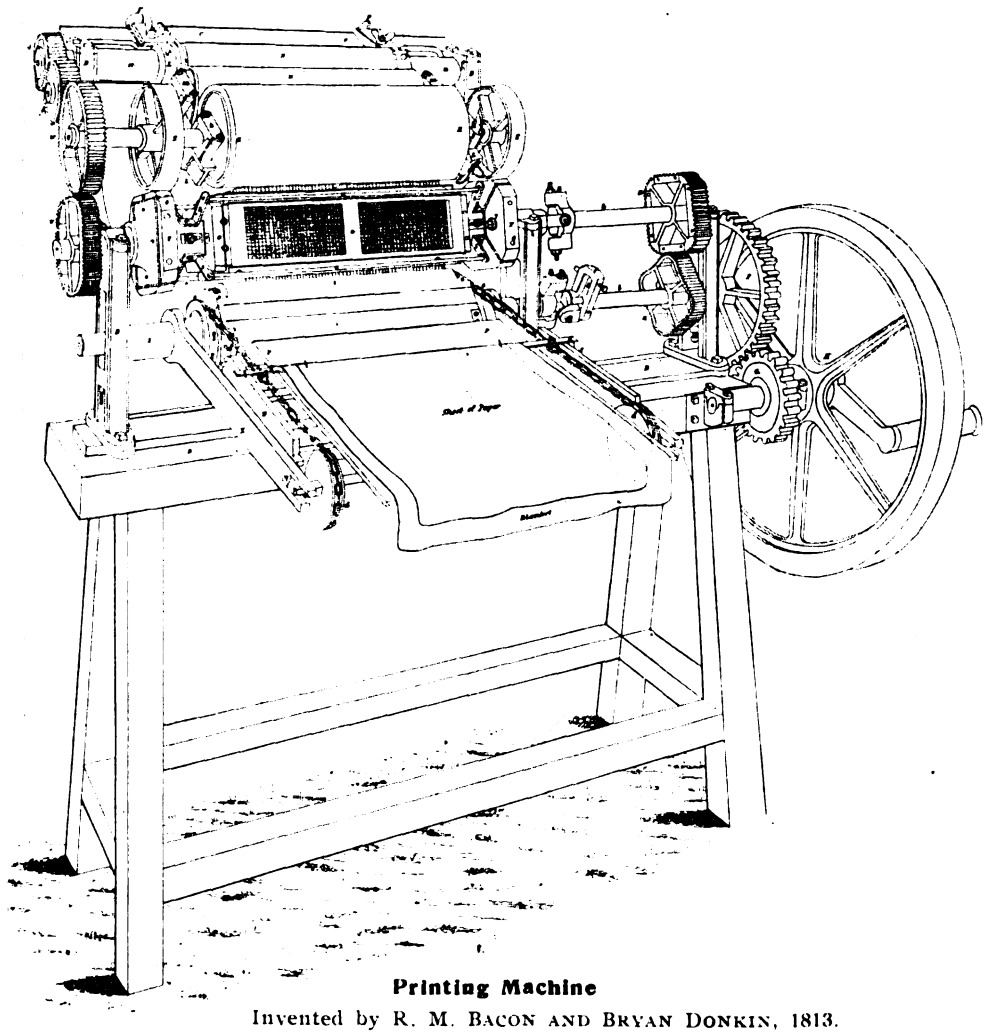
First Provincial Newspaper.

To Norwich belongs the proud claim of having been the first provincial town to produce a newspaper. This also was the work of the enterprising Francis Burges, who, about September, 1701, printed the first number of his "Norwich Post," a weekly newspaper.

Cross-Grove, the Jacobite Printer.

Another early Norwich printer whose work is represented in the Museum was Henry Cross-Grove, popularly known as "the Jacobite printer." Like his predecessor, Burges, he also founded a local newspaper, known as "The Gazette: or the Accurate weekly Intelligencer," which first appeared in December, 1706. It was later continued as "The Norwich Gazette: or the Loyal Packet." The two specimens of Cross-Grove's work displayed are John Hunt's "Doctrine of God's eternal decrees stated" (1726) and "Selected Prayers on several occasions by a Gentlewoman in Norwich" (1739). He died in 1744, being described in his obituary notice as "a man allowed by all Persons of Ingenuity and Learning to be a Man of Learning, Sense and Spirit." In the fifth number of his newspaper Cross-Grove announced the publication of a third and rival newspaper, "The

Digitized by Google



Norwich Postman," which he characteristically described as "a counterfeit ignorant" newspaper.

William Chase.

Norwich appears to have been a thriving-ground for local newspapers in the early 18th century; about 1714 was founded another—"The Weekly Mercury: or Protestant Packet," printed by William Chase, a contemporary of Cross-Grove. This paper was the forerunner of the "Norwich Mercury," by which name it became known in 1726, and by which it is still published.

According to Chambers' "History of Norfolk" (1829), the "Norwich Courant: or weekly Packet" was published in 1714, the printer being S. Collins.

In the year 1761, yet another newspaper, "The Norwich Gazette and Norfolk Weekly Advertiser," appeared, printed by John Crouse at the "Bible and Star" in Cockey Lane, Norwich. The first number was "given gratis," and the second was sold at twopence-halfpenny. In 1771 its title was changed to "The Norfolk Chronicle," and it has so continued to the present time. From Crouse's press two works are exhibited in the Museum, together with a number of specimens of early local newspapers.

Printing Machine

Invented by R. M. BACON AND BRYAN DONKIN, 1813.

Bacon and Donkin's Rotary Machine.

One of the most interesting exhibits in the printing section is the patent specification of an important invention effected in 1813 by Richard Mackenzie Bacon (editor of the "Norwich Mercury" from 1816 till 1844) in collaboration with Bryan Donkin, an engineer, of London. This invention was an improved type of machine, which was a most important development in printing machinery. The type was placed upon a revolving prism (as the inventors called it), but the prism was, in reality, a cylinder having four flat faces, and the paper was wrapped on another prism so formed as to meet the irregularities of the type prism. It was the first machine on which the type was arranged in this manner. The ink was applied by one roller, which rose and fell. This patent contains the first reference to composition rollers, without which rapid machine printing would have been impracticable.

In the year of the invention, Bacon stated that in the city the machine, worked by one man and two boys, was used for the printing of a French Testament for the British and Foreign Bible Society. A deputation from the Syndics of the Cambridge Press inspected the machine, and one was ordered for the printing of Bibles and Prayer Books at the University Press.

Two of the drawings of the machine which were included in the specification are exhibited in frames, and one is reproduced to illustrate this article.

Two of the early metal presses which superseded those made of wood with screw handles have been secured for the Museum. One is an original Stanhope Press (of super royal size), which took its name from Lord Stanhope (the third Earl), who invented it in 1800. It is an all-iron press, in which the lever motion is combined with the old screw motion to cause the descent of the platen. This press was taken out of the Pitt Press, Cambridge, in 1847, when it was sold to Robert Carley, of Thetford (Norfolk). Until a few weeks ago it had been in constant use for the whole work of a jobbing office.

The other press, presented by Mr. George Booth, of Woodbridge, Suffolk, and president of the Ipswich Master Printers' Association, is an "Albion" (of foolscap folio size), an adaptation of the Stanhope and Columbian presses. The Albion was chiefly used for light work. Mr. Booth also presented to the Museum an old wooden press for pressing the sheets after printing.

Messrs. Jarrold & Sons (Norwich) presented an "Imposing Stone," taken from their Yarmouth branch; this old piece of office furniture had been in use for about a hundred years.

The proprietors of the "Norwich Mercury" presented one of Harrild's old cutting presses over one hundred years old.

Several ink-balls, the forerunners of the ink-rollers, were presented by Mr. W. G. Appleyard, the president of the North-Eastern Alliance of Master Printers' Associations.

Mr. George Yelf, the enthusiastic secretary of the Norwich and District Master Printers' Association, gave an old composing stick dated 1808.

Other exhibits of interest are a series of specimens illustrating the processes of half-tone and line engraving, presented by Messrs. A. E. Soman & Co., Norwich; mid-nineteenth century wood-blocks, lent by the proprietors of the "Norwich Mercury"; a cylindrical stereo and flong, presented by the Norfolk News Co.; specimens of the matrices, types, etc., of the Linotype and Monotype, as well as photographs of these machines; and some specimens of modern colour printing.

The Printers' Welfare Council.

How the J.I.C. Works.

Evidence was given before the Committee on Industry and recently week by the Joint Industrial Council of the Printing and Allied Trades of the United Kingdom, represented by Mr. A. E. Goodwin and Mr. A. E. Holmes, joint secretaries of the Council. The following is a summary of the evidence which they submitted to the Committee:—

The Council is formed of representatives of the Federation of Master Printers and Allied Trades, the Newspaper Society, and the Master Bookbinders on the one side, and of trade unions affiliated to the Printing and Kindred Trades Federation on the other. These may accurately be taken as representing the printing industry.

The Council was formed in 1919, but previous to the Whitley report negotiations had been opened for the establishment of a "betterment scheme." From the first the Council had taken the attitude that it is not their function to negotiate on wages or working conditions. The method of negotiation previously in existence had functioned sufficiently well to make that unnecessary.

It was considered that the purpose of the Whitley Council should be to secure complete representation of the printing industry in matters appertaining to its welfare, to bring about a closer identity of interest between the two sides upon all questions affecting their interests, and to bring about a better social understanding. Great importance is attached to the last point, and social functions arranged by district committees all over the country provide an effective method of wiping out misunderstandings which frequently arise by lack of appreciation of the aims, objects, and characteristics of the other side.

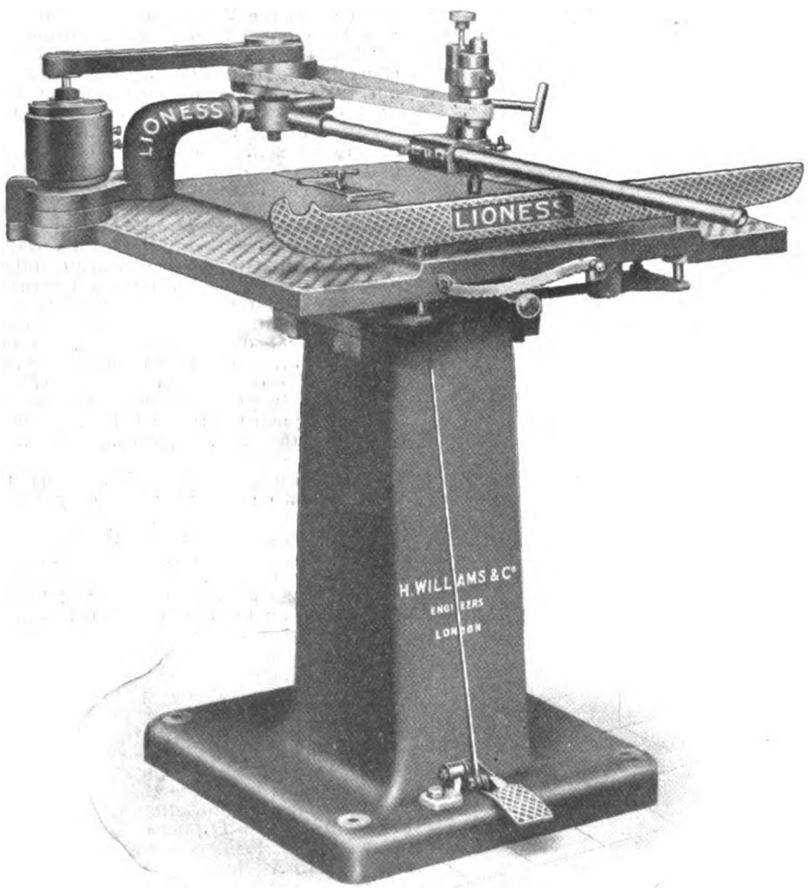
The attitude of the Council is that were the two sides to meet only for the purpose of differing upon wages and working conditions no progress would be possible in the many other activities for which the Council was created.

On occasions when wages negotiations have been acute the Council has made recommendations to the negotiating parties and has sometimes appointed representatives to be present at resumed negotiations to provide suggestions of that character which neither side would be prepared to make for fear of giving away part of their case. The expenses of the Council are borne equally by both Federations, and each year a collection is organised throughout the industry by the Organisation Committee for the Printers' War Orphans' Fund, administered by the Printers' Pension Almshouse and Orphan Asylum Corporation.

The Council holds the principle that in all cases of dispute no aggressive or coercive action is to be taken until the matter has been placed before the Conciliation Committee. The parties have the right to select their respective panels and the judicial atmosphere of the committee has proved that this method of selection has promoted acceptance of its findings. The efforts of this committee have been largely instrumental in maintaining peace in the trade and there is a smaller percentage of lost time in the printing industry owing to trade disagreements than there is in many industries of similar importance in the country.

The Health Committee have issued leaflets compiled under the guidance of health experts upon consumption, lead poisoning, ventilation, and the unhealthy occupation of hand bronzing. They are inquiring into the proper lighting of printing offices and have been invited to assist in designing the construction of more healthy workshops. The Unemployment Committee have endeavoured to regulate the supply of labour from one town to another and also to provide a scheme for contracting out of the National Employment Insurance Act.

The Apprenticeship and Technical Education Committee have drafted a scheme for the training and selection of apprentices and are also considering a scheme to give technical knowledge to those who have occupation in the trade other than through apprenticeship.



Deputations have waited upon the Postmaster-General urging reductions and adjustments in postal arrangements and the Board of Trade on the subject of protection against the import of printing from abroad.

"THE HOUSE OF LIONS."

Important Announcement

To the Electro, Stereo and Photo Engraving Houses of Great Britain & Overseas

WE, THE DESIGNERS AND MANUFACTURERS OF RENOWNED "LION" MACHINERY, HAVE PLEASURE IN INTRODUCING OUR LATEST PRODUCTION:

THE "LIONESS" SUPER - ROUTER

THE POINTS ENUMERATED BELOW WILL ENABLE YOU TO ASCERTAIN WHY THIS SUPER-ROUTER STANDS PRE-EMINENT.

1—Special High-Speed Ball-Bearing Motor.

2—"Lioness" High-Speed Router Head.

3—Front Anti-Friction Elevating Bar.

The Special High-Speed Ball-Bearing Motor

This motor is an integral part of the machine, not only eliminating unnecessary Bearings, Pulleys and Belts, and the subsequent renewal of same; but by driving direct *via* only one intermediate ball-bearing pulley, reduces unwanted friction and consequent loss of power to a minimum.

"LIONESS" High-Speed Router Head

The Silver Steel cutter carrying Spindle runs at a speed of 17,000 R.P.M., in scientifically designed Phosphor Bronze Bearings.
The outer bearing or casing of this Head is of Duralumin, which is an alloy combining strength with lightness; therefore, you will quite understand, the use of this metal greatly reduces the weight on the carrying bar, and enables the operator to obtain a smoother and more accurate movement.

N.B.—We do not manufacture or advocate the use of Ball-Bearing Router Heads, as Ball-Bearing Manufacturers will not guarantee bearings at the speed required.

Front Anti-Friction Elevating Bar

This bar is a solid gun-metal casting, which not only makes for rigidity, but for an almost frictionless movement whilst routing. Another very unique feature is the method employed to raise this bar; this mechanism, actuated by a foot pedal, incorporates a system of ball-bearings which take the upward thrust; therefore, the requisite effort to elevate this bar is reduced to a very small degree.

The price of the "LIONESS" Super Router, as illustrated above, is £100 subject, complete, and considering the pre-eminence of this machine, the price quoted is extremely low.

Printing, Bookbinding and Kindred TRADES OVERSEERS' ASSOCIATION.

Annual Bohemian Concert.

The annual bohemian concert and ladies' night of this active and useful organisation was held on Saturday at the Talbot Restaurant, London-wall, E.C., under the chairmanship of Mr. J. Fleming (president). There was a large gathering and the whole of the proceedings were carried through in a business like way, with the result that a very enjoyable and successful evening was spent. Amongst those present were Messrs. A. G. Aves (vice-president), Arthur Cox (secretary), J. A. Esler, J. Lee, A. W. Sandilands, F. E. T. Fox, A. M. Taylor, J. A. Gouldbourne, A. J. Jones and A. E. Walters. The musical programme was supplied by the Crotchet Concert Party under the direction of Mr. Percy Lawton. The first half of the concert programme consisted of individual items by various members of the party, each rendering his or her part in a much appreciated manner. Mr. Percy Lawton himself sang "On with the Motley" and "'Tis the Day" in a style that well merited the praise that was forthcoming. Mr. Jack Thompson exhibited rare and original humour at the piano, whilst the funny stories and singing of Mr. Will Drysdale were also warmly applauded. The singing of Miss Margaret Stuart and Miss Mary Robbie also met with much approval. The principal part of the second half of the programme comprised a very amusing and cleverly arranged concerted item with the title "Grand Opera Railway Operatics," a musical feature which elicited a considerable amount of laughter and merriment.

During an interval in the programme the chairman, in conveying the thanks of the company to the stewards (Messrs. G. R. Bembridge and W. F. Cribb) said these two gentlemen had worked hard to make the evening a pleasant and sociable one, and he believed they had been successful.

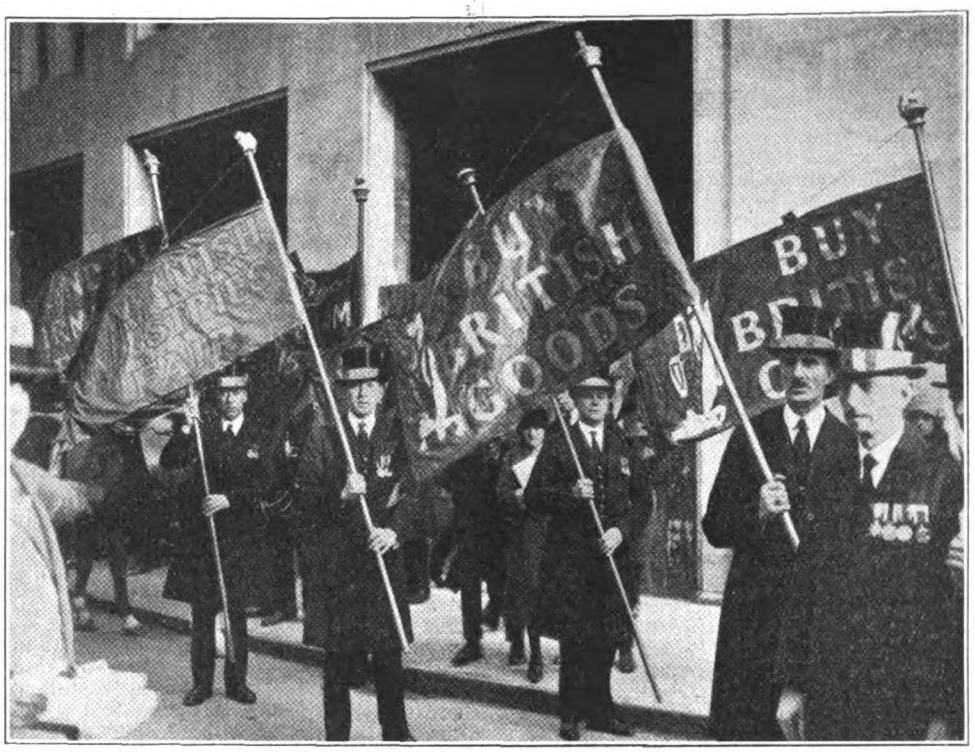
The proposition was very heartily responded to, and Messrs. Bembridge and Cribb made suitable replies.

The proceedings terminated by the singing of Auld Lang Syne.

Fine Paper Conference.

Continental Exporters and Sale Prices.

A further conference of continental producers of fine papers was held early in November, when representatives from Norway, Sweden, Finland, Germany, Austria, Holland, Czecho-Slovakia and Belgium were present. During an exchange of experiences concerning the present situation in the export markets, a unanimous opinion was expressed on the whole that sale prices ought to be increased all along the line.



It was stated that since the preceding conference, which took place last April, the costs of production had considerably increased, mainly on account of the advance in the prices of such raw materials as cellulose and rosin. The interchange of statistics was extended and it was resolved to continue co-operation in this direction and to hold a further meeting at the beginning of next year.

Using Waste Material.

Mr. L. E. Granton suggests a method of using waste material from the water used for washing de-inked printed matter, in conjunction with pulp, for the production of paper suitable for wrappers, hand bills, tickets and similar purposes where an absolutely white paper is not required. The desired proportion of wastage, which may be as high as 60 per cent., is added to the beater or breaker containing the requisite proportion of pulp or waste paper which has been broken down to pulp and agitated until a uniform mixing is obtained. Agents such as rubber latex for increasing the strength or flexibility of the end-product may also be added and mixed in, white colouring matter and bleaching agents such as bleaching powder or peroxides, if desired or required, can likewise be introduced.

British Industries Fair.

Those at the back of the British Industries Fair are displaying considerable enterprise in focussing the attention of traders and the public upon next year's event. A good deal of publicity was obtained in the recent Lord Mayor's Show, in which a detachment of uniformed men were seen carrying banners inscribed "Buy British Goods," "At the British Industries Fair," "London and Birmingham, February 15th to 26th, 1926." These banners were carried appropriately at the head of the Pageant of Empire Trade on November 9th and attracted a good deal of attention. The Fair offers a great opportunity for the display of goods, and every effort is being made to bring buyers from all parts of the world. We understand that paper will form an important part of the Birmingham Section, while in London there is again to be a stationery department which it is hoped will be thoroughly representative of the industry. The photograph herewith emphasises the motive behind the Fair.

Papermaking in South Africa.

Provisional Liquidation of the Premier Paper Mills, Ltd.

The Premier Paper Mills of Klip River, "the only paper mills in South Africa," have found it impossible to meet adverse conditions, and Messrs. S. Sugden and L. C. Goch have been appointed joint provisional liquidators, following an order for provisional liquidation made by Mr. (Acting) Justice Barry, in the Witwatersrand Local Division of the Supreme Court.

The mills are situated at Hidelburg, near Johannesburg, and specialised in the manufacture of wrappings. At the outset, with special rates of carriage, tariff and other advantages, the company were confident of meeting all competition. Increased supplies from abroad, however, apparently upset calculations, and although some relief was found during the period of a dumping duty, it was short lived as the latter duty was revoked.

When Mr. W. D. Fulton, the managing director, was last in London, he was hopeful with increased capital for additional plant to treat baobab, and an increased production, that operations could be successfully carried on, but the scheme has evidently proved futile owing to the company's liabilities and lack of further support.

New British Patents.

For the benefit of our readers we have arranged for any inquiries relating to Patents, Designs and Trade Marks to be answered, free of all charge, by a Fellow of the Chartered Institute of Patent Agents. Inquiries should be addressed, in the first instance, to the Editor.

Applications.

"Towards Composing Room Efficiency."

Mr. R. B. Fishenden Talks to the Printing Crafts Guild.

Nearly 70 enthusiastic printers braved a thick fog and put in an appearance at the College of Technology, Manchester, on the 20th November. Mr. R. B. Fishenden, M.Sc.Tech., past-president of the Printing Crafts' Guild, and now London manager of Messrs. Stephenson, Blake & Co., Ltd., delivered an illustrated lecture entitled "Towards Composing Room Efficiency." The audience was well repaid by the insight that was given into the modern methods of grouping and planning a composing room so that it could be turned into a profit-earning department.

Mr. Fishenden, at the outset, used an old metaphor when he compared the folly of putting new wine into old bottles with the unsatisfactory results obtained by using old composing room equipment under the changed conditions involved in present-day practice. The old fallacy that money was lost in the composing room and made in the machine room had been dismissed by the use of the costing system; or, where there was a loss, it was due to faulty organisation. The compositor's standard wage in London worked out at 1s. 10d. per hour, but the published hourly rate for composition, including all overhead charges, was 5s. In Manchester, whilst the rates were slightly lower, the ratio remained the same.

In order to reduce the overhead charges it was necessary to introduce modern equipment which avoided waste movements and waste time in the composing room, and also provide means whereby floor space could be economised so that the proportionate allocation of rent for the department might be reduced, or, alternatively, permit increased production within the same area. By bringing the equipment and the organisation of the composing room up-to-date the overhead charges would be reduced, and as a result the selling price of the work could be cut down whilst still allowing a satisfactory margin of profit. It was only by working on these lines that output could be increased. If the price of an article was reduced, the spending capacity of the customer was increased.

Referring to the use of mechanical composition, he said that for many branches of work composing machines were necessary, but he deplored the introduction of composing machines into small offices where the volume of work was not sufficient to justify their use or to keep them fully employed. Developments of this kind inevitably led to price-cutting and other harmful effects on the trade at large. In the design of composing room equipment it was necessary to make provision for the changes in method that were necessary for the efficient handling of mechanical composition; but the use of foundry type continued, and there was ample evidence that in many directions it was being used in increasing quantities. The reasons for this were founded on both practical and economic grounds. Increased efficiency in the composing room was made necessary by changed methods of production, changes in the nature of the work done, increased labour costs, and increases in overhead charges in the form of rates, taxes and rent.

There was a tendency among some printers to continue to use obsolete composing room equipment because of the capital outlay involved in replacing it, but the saving in the cost of production and the large increase in efficiency that were made possible by the changes proved that the capital outlay was more than justified.

It was universally recognised that a capital cost that would reduce maintenance charges was much to be preferred to a slight saving in capital cost by the purchase or retention of inferior material and the consequent saving of a small portion of the capital cost accompanied by high running charges.

In order to improve the composing room it was necessary to adopt scientific methods. The standardisation of types by the introduction of the point system had been of great practical value to the printer, but the advantages that were obtained apply not only to the type itself, but particularly to spacing material.

Perhaps it was impossible to calculate the cost of the old practice of fudging and the use of shears and the justification by bits of paper and card. Standardised material throughout represented the only basis upon which a modern composing room could be arranged.

Admitting the point system to be an established fact, the re-organisation of the composing room began by installing models of cases most suited to the character of the work undertaken in that particular office in conjunction with the style of cabinets according to whether required for book, news, periodical or jobbing work. The design of the cabinets themselves was a most essential feature in this regard.

The introduction of steel construction into composing room equipment represented a revolution which had obvious advantages where the space was limited. Both steel and wood had their place in modern equipment, and the choice of material depended on the circumstances governing the particular office. The grouping of the cabinets and the subsidiary tools and appliances used was an important factor in economic production, the aim being to avoid unnecessary movements on the part of the compositor.

The storage of jobs in progress and of standing matter represented one of the greatest difficulties in composing room management, and in this direction great advances had been made both from the convenience point of view and ease of handling, as well as saving of space and lower first costs.

The planning and lay-out of the office has been given the greatest possible attention. An orderly composing room, where the routine of the work had been properly studied, where there were clear passages that would allow free movement without disturbing the men whilst they were at work, was essential for economic production, easy overlooking, and comfort for the compositors.

No set of rules could be laid down for the equipment and lay-out of any particular composing room. Each office presented a new problem, and a number of factors had to be taken into account in suggesting a new scheme—for example, the position of the room and its entrances in relation to those of the other departments of the works, as well as lighting and orientation; in addition, the class of work that had to be undertaken required careful study. Jobbing, catalogues, periodicals, and the various types of newspaper composition, each had their distinct features.

A large portion of Mr. Fishenden's lecture consisted of an interesting collection of lantern slides, which showed the styles in the evolution of the composing room cabinet up to and including the most modern expressions of labour and space-saving designs.

The lecturer said there had been practically no change in the lay of the case, and there appeared to be no object in altering it, because an examination showed that the grouping of the boxes as at present arranged involved the least number of movements by the compositor in setting. An interesting slide was shown taken from "Mechanick Exercises," by Moxon, 1683, in which the lay of the case was practically identical with that in use to-day.

Various methods of storage were also dealt with, as well as the design of randoms and imposing surfaces for special classes of production.

The lecture concluded with a number of slides showing the lay-outs of typical offices for various classes of work, with some interesting comparisons of the advantages obtained by the introduction of the principles which had been described. There were also a number of photographs showing composing rooms with modern equipment.

Discussion and Thanks.

During the discussion which followed, Mr. Phillips objected to an imposing surface stand in which there was no room for the stone hand to get his toes underneath the surface.

The honorary secretary said he preferred the frames or cabinets to be built so that a sweeper could get underneath them and prevent the accumulation of dust and dirt. He also considered that if the bottom cases were near the floor they put an unnecessary strain upon the compositor, as the average craftsman did not frequent gymnasiums for exercise. Some of the trays for standing matter that were shown appeared to be too wide, and a worker would require assistance to draw out and push them in with speed. Whilst he approved the recently-introduced type case that was larger than the standard English size, he did not like the triple capital case, as the boxes were too small for the compositor to remove easily the letters required. Ordinary upper cases were convenient, but an increase in the size of boxes was an advantage, as compositors did not always distribute correctly. He agreed with the lecturer that 30 point was the largest size that should be distributed into ordinary type cases. He considered that where offices were fitted with electricity, the cabinet that had its own self-contained lighting was a great advantage, and would increase the convenience and output of the careful compositor. Referring to the use of extension front cabinets, he suggested that when the cases were filled with type the leverage and strain on the cabinet would be great, and asked whether provision had been made to meet this consideration. With regard to the planning of the room, he preferred it to be arranged so that a compositor could pass between the frame and the window from which the side light came instead of retracing his steps and going the length of the next alley-way to obtain the types he required for use. It had been suggested at various times that dustproof frames induced oxidation. Could the lecturer explain the cause of this? Was it the enclosure of the types, the manufacture of the ink, or the substance used in washing the formes? The illustrations and diagrams shown indicated wonderful advance, concentrated thought, and an endeavour on the part of the manufacturer to help the printer discard the epithet that was so constantly thrown out in ordinary conversation and meetings of printers, that "the composing room does not pay."

Mr. C. E. Kerr asked if the modern form of galley was now supplied which allowed the compositor to build up his matter squarely, as could be done on an ordinary galley. He thoroughly approved of the new pressed steel galleys, but he felt from the samples he had seen there was room for improvement. He noticed in working at an old form of imposing surface that a low support or cross-bar was used as a foot rest, and if this space were filled up he thought the stone hand would not work under such comfortable conditions.

Mr. Fishenden, in replying to Mr. Phillips, said that in modern composing cabinets and imposing surfaces both in wood and in steel, allowance was always made for toe space, so that the compositor could stand close up to the frame or cabinet.

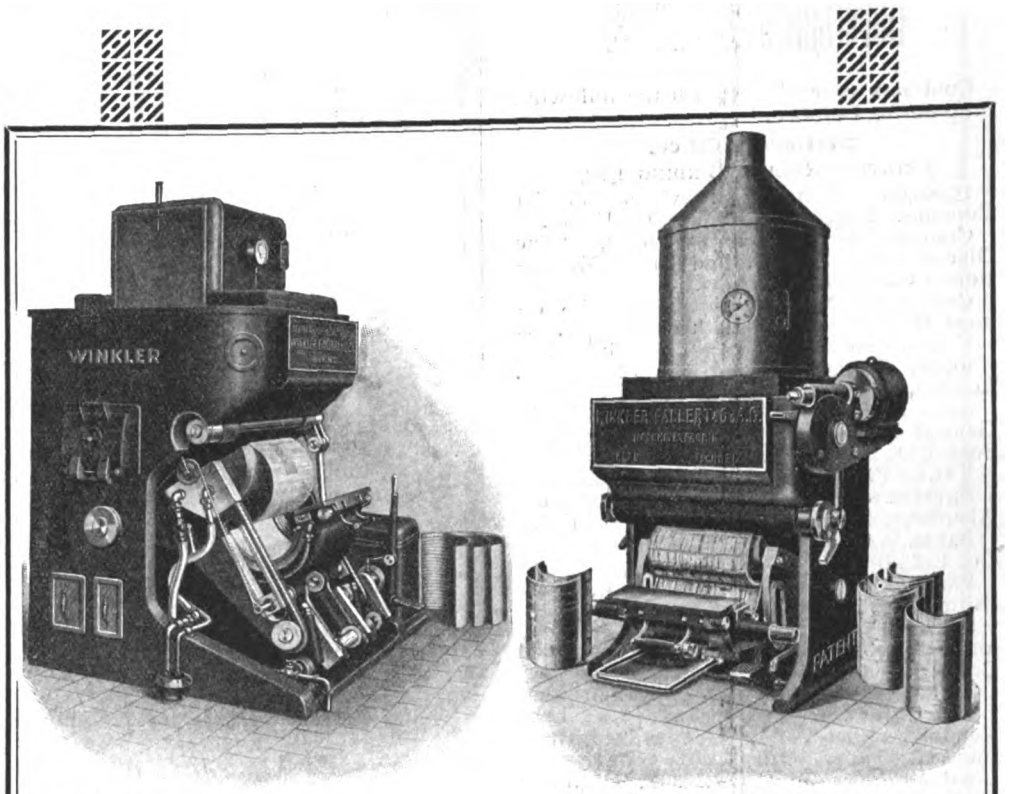
He thanked the honorary secretary for his useful observations, but did not agree with the suggestion that composing frames should be open at the floor. The aim of designers was to make each cabinet a dustproof unit, and, by making it extend to the floor, the dirt did not get inside, and there was therefore no reason to sweep underneath excepting during the periodical "spring cleanings," which would, in any case, be necessary. He had not heard the objection that the cases being near the floor put an unnecessary strain on the compositor, and that when these were used they would, of course, be moved to a higher position in the rack for setting an odd line. The lecturer did not approve of the use of letter boards for standing matter, except in the case of newspaper pages. The trays referred to were built up to suit the requirements of periodical and newspaper offices, so that one person could handle them with safety. He agreed that

Digitized by Google

the triple upper case was not desirable in the general way; but, in special cases, such for example as series where there were three sizes of face cast on one body, they were an undoubted convenience and saved a good deal of space. A satisfactory alternative was the use of loose third or quarter cases inserted in open trays, and these were perhaps more satisfactory.

With regard to the strength of type cabinets, and the special strains induced where extension fronts are used, the lecturer said that the safety margin was very large indeed where either steel or wood cabinets were properly designed and well made, and that even if the compositor were to sit on one of the cases to have his lunch there could be no possible danger to the cabinet! He did not say that he advocated such a misuse being made of the equipment. There was no doubt, however, that in the old style of cabinet with wooden racks there was always the possibility of the runners breaking away under the strain. He did not agree that there should be room to pass between the cabinets and the windows. Every compositor should have his own alley-way, and there should be no occasion for anyone to enter that alley-way unless to use one of the display series that might be housed there. The passages in the composing room should be open, and the alley-ways not arranged as passages. Oxidation had been brought to his notice on three occasions, and he was of opinion that this was induced by the materials that were used in cleansing the types.

Replying to Mr. Kerr, he said the modern pressed steel galleys were made in such a way that a true inner wall was provided as a working surface. He agreed that the earlier designs were unsatisfactory in this respect. Where it was practical to do so, a foot rest was introduced into the design of certain cabinets of modern design.



Mr. Charles W. Gamble, O.B.E., M.Sc.Tech., director of the Department of Printing and Photographic Technology at the College, and chairman of the Guild, proposed a vote of thanks to the lecturer, and referred to the close study and technical understanding indicated by the developments that had been shown and so clearly explained.

Mr. John Taylor, president of the Guild, said that printers were loth to spend the money on modern composing room equipment, yet daily and hourly spent money in waste time by compositors working under unsatisfactory conditions. He referred to instances where even the various sizes of one type series were kept in different parts of the office. Printers were only too frequently prepared to pay rent for waste space which should be put to profitable use. He advised those who were contemplating opening a new office to install the most modern space and labour-saving equipment. He was convinced that it was very bad economy to equip with out-of-date second-hand plant. To established firms he suggested it would be profitable to borrow, say £4,000, and pay 5 per cent. interest thereon, and with this capital purchase time and labour-saving fittings. The result would be, as the lecturer pointed out, that the department could be staffed with eight compositors with efficient surroundings, whereas nine compositors would be required with considerably more space under the old-fashioned conditions. The saving in wages of £4 a week, less the interest paid, would be of benefit to the customers, who would undoubtedly buy more printing, and this would enable more workers to be engaged and profitably employed. That labour-saving devices increased business and absorbed more workers had been proved time and again. He advised the young craftsmen who were present to grasp the essentials of the modern equipment and systems that had been shown that evening, to avoid waste of time and thus ensure lower prices and thereby encourage a greater demand for labour. The president endorsed the remarks of Mr. Gamble and thanked Mr. Fishenden personally for what he had done. He then put the vote to the meeting, which was given with enthusiasm.

Mr. Fishenden briefly replied, and said he was delighted to be among so many old friends, and to find the Guild was continuing its good work, and that the Printing Department at the College was fulfilling its mission in a manner that was highly satisfactory to the industry.

WEE MAC.

THE *British and Colonial Printer and Stationer* circulates all over the world.

ONLY WINKLER CAN BUILD A WINKLER

Winkler Casting Machines

are made to suit the requirements of all Newspaper Offices—large and small—and can be purchased at a price within the reach of every Newspaper. The £ s. d. consideration for not universally adopting Mechanical Plate Casting is therefore removed.

¶ For Newspaper Offices where conditions do not demand the automatically sustained output of the Winkler Casting Machines Nos. I and II, we can supply a smaller model (No. III) of simplified construction, as shown in the illustration.

¶ While the Winkler No. III is not intended to do the heavy volume of work required of the bigger models by the larger daily papers, it is nevertheless capable of producing 1-2 finished plates per minute. To attain this rate of production with the most modern pump-fed hand boxes and their accompanying outfit of tail-cutters, shavers, etc., considerably more labour would be required.

36-38, WHITEFRIARS STREET, FLEET ST., LONDON, E.C. 4.

Writing Paper in Australia.

Imports of "writing and typewriting (plain)," into the Australian Commonwealth during the twelve months ended June last year (the latest period for which complete returns are available) indicate the excellent position secured by the United Kingdom in that market. Total shipments for the twelve months amounted to £479,234, compared with £664,319 in the preceding year. The share of the United Kingdom reached £378,194, contrasted with £477,791 the year before. The second largest supplier was Norway, with shipments valued at £34,450, against £86,823. Consignments from the other sources of supply were as follows, the value of the arrivals for the preceding year being given in parenthesis:—Sweden, £21,291 (£28,553); Canada, £17 657 (£40,185); Finland, £13,018 (£7,526); United States, £10,043 (£17,616); Netherlands, £2,078 (£1,638); Belgium, £271 (£1,257); Italy, £253 (nil); Germany, £225 (£6); Switzerland, £149 (£44).

Paper Exporters' Freight Committee.

At a conference of paper exporters, held at the offices of the Papermakers' Association last week, it was decided to form themselves into an organisation to be called the Paper Exporters' Freight Committee, for the purpose of handling all questions relating to overseas freight.

Mr. H. E. Poole (B. J. Ball and Co., Ltd.), who has been chairman through all the preliminary work of organisation, did not wish to continue in such a responsible position, and the first chairman of the new body is Mr. W. Thain (John Dickinson and Co., Ltd.), Mr. Poole filling the office of vice-chairman.

NEWS HEADINGS.—An interesting variety of news headings set in Haddon-Caxton types cast at the Caxton Type Foundry are set forth in a neat booklet issued by Messrs. John Haddon and Co.

Government Contracts.

Contracts were placed with the following firms during October :—

Stationery Office.

PRINTING, RULING, BINDING, ETC.

15,000,000 National Savings Scarlet Coupons.—Harrison and Sons, Ltd., Hayes.

Contract for Groups 65 (1925), "The Official List," Parts II and III.—H.M. Stationery Office Press, Harrow.

Contract for Northern Area Branch Letterpress Bookbinding in Leather, Buckram, etc. —T. Shackleton and Co., Ltd., Manchester.

100,000 Registry Jackets.—J. F. Warren, London, N.

20,000 Books, D. 184 Admiralty; 800 Books General Ledgers, T.P. 1,085.—Waterlow and Sons, Ltd., London, E.C.

TAGS.—Faire Bros and Co., Ltd., Leicester.

ENVELOPES.—Pirie Appleton and Co., Ltd., Aberdeen; Smith and Young, London, E.C.

PAPER, WAXED STENCIL.—Ellams Duplicator Co., Ltd., Bushey.

PAPER, WATERPROOF PACKING.—Carrs (Birmingham), Ltd., Birmingham.

PAPER OF VARIOUS DESCRIPTIONS.—J. Brown and Co., Ltd., Penicuik; Brown Stewart and Co., Ltd., Glasgow; Caldwell's Paper Mill Co., Ltd, Inverkeithing; R. Craig and Sons, Ltd., Airdrie; J. Cropper and Co., Ltd., Kendal; Golden Valley Paper Mills, Bitton; Imperial Paper Mills, Ltd., Gravesend; London Paper Mills Co., Ltd., Dartford; W. Nash, Ltd., St. Paul's Cray; New Northfleet Paper Mills, Ltd., Northfleet; Olive and Partington, Glossop; Portals, Ltd., Whitchurch; Ryburndale Paper Mills Co., Ltd., Ripponden; Wiggins, Teape and A. Pirie (Sales), Ltd., Bucksburn.

PORTFOLIOS.—Drake, Driver and Leaver, Ltd., London, E.C.

War Office.

CARDBOARD CASES.—H. Stevenson and Sons, Ltd., Manchester.

SODA, CRYSTALS, CAUSTIC AND ASH.—Brunner, Mond and Co., Ltd., London, E., and/or Winnington.

Post Office.

PAPER, PRINTING.—Waterlow and Sons, Ltd., Dunstable and Watford.

SLEEVES, PAPER.—Samuel O'Neill and Sons, Ltd., Castleton; Swailes, Ltd., Rochdale.

Crown Agents.

DRAWING MATERIALS.—S. C. and P. Harding, Ltd., London, S.E.

PAPER.—Dunster and Wakefield, London, E.C.

STATIONERY.—Waterlow and Sons, Ltd., London, E.C.; Bennett and Wood, Ltd., Essex.

Canada's Australian Preference.

The *Board of Trade Journal* sets out the particulars of the papers in respect of which Canada receives as from October 1st the same preferential treatment as Great Britain. The items are as follows, the British preferential tariff being indicated at the end :—

"News" printing, not glazed, mill-glazed or coated, in rolls not less than 10 inches in width or in sheets not less than 20 inches by 25 inches or its equivalent, free.

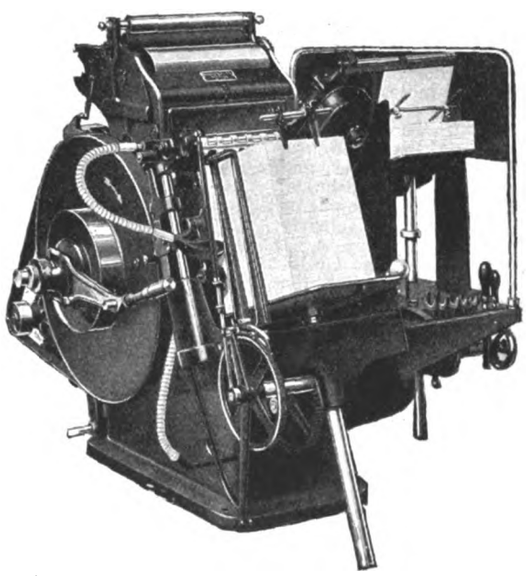
Printing, n.e.i. (glazed, unglazed, mill-glazed or coated), not ruled or printed in any way in rolls not less than 10 inches in width or in sheets not less than 20 inches by 25 inches or its equivalent, free.

Printing, n.e.i., *ad valorem*, 15 per cent.

Writing and typewriting paper (plain), not including duplicating. (1) In sheets not less than 16 inches by 13 inches, *ad valorem*, 5 per cent; deferred duty, *ad valorem*, 20 per cent.

PAPER MILLS AND RIVER POLLUTION.—A fine of £10 was imposed by Sheriff Orr at Edinburgh Sheriff Court recently on John Galloway and Co., Ltd., paper manufacturers, Balerno Bank Paper Mills, Balerno, who pleaded guilty, through a representative of the firm, to having caused a noxious, polluting and discolouring matter to pass from a tank in their mills into a mill lade and thence into Bavelaw Burn and the Water of Leith. It was stated that the mills had not been used for two years until two months ago, when they were taken over by Messrs Galloway. There was no doubt that their plant was thoroughly up-to-date. The prosecuting advocate stated that the offence arose through an accident.

Run it off on the Heidelberg!



THAT'S the slogan of the Jobbing Printer to-day! No more tedious handfeeding, waste of time and broken promises regarding delivery. Run it off on the Heidelberg! Here are some of the advantages—and they are advantages which we can *prove* to you by a personal demonstration.

You get a minimum guaranteed speed of 2,500 prints per hour with the Heidelberg. It is automatic in both feed and delivery, and is fool-proof in action. It takes up very little space and uses very little power. With small formes you can work two on, raising the speed to 5,000 prints per hour. And with two Heidelbergs and only *one* operator (the Trade Union Authorities allow this) you will get the same output as with five ordinary platens and their five feeders. Just consider the saving in overhead and wages costs.

If you haven't yet seen a Heidelberg at work, then your present ideas about costing are wrong. Fix up a personal demonstration with us—bring your own formes if you wish.

Deferred terms can be arranged—£25 down and the balance spread over 12 or 18 months.

Ask us for full details; a copy of "The Home of the Heidelberg," a booklet which gives an insight into the manufacture of these machines, will also be sent on request.

HEIDELBERG AUTOMATIC PLATEN CO.,

43, BELVEDERE ROAD, LONDON, S.E.1

Telephone: CITY 1606. Telegrams: "APTNESS, LONDON."

The Late Mrs. Frank Lloyd.

Tribute to the respect and affection earned by the late Mrs. Frank Lloyd was paid on the occasion of the funeral on Thursday last week. A service was held at Shirley Parish Church, Croydon, conducted by the Rev. G. Jones, vicar, assisted by the Rev. F. E. Coggin (brother-in-law).

The chief mourners included Mr. Frank Lloyd, Col. and Mrs. Garwood (son-in-law and daughter), Mr. Walter Lloyd, Mr. and Mrs. Neville Lloyd, Mrs. Thompson, Mr. and Mrs. Locke, Mr. Charles Hartley, Mrs. Fred Lloyd and Miss Lloyd, Mr. and Mrs. Norman Carr, Mrs. MacRae and others. Mr. and Mrs. Harry Lloyd and Mr. Percy Lloyd were abroad.

The church was full, the staffs of the *Daily Chronicle* and *Sunday News*, of which Mr. Lloyd was the former head, being largely represented. From the Sittingbourne and Kemsley Mills and Ridham Dock the mourners were Mr. and Mrs. R. B. Miller, Mr. and Mrs. A. J. Evans; engineering department, Mr. A. A. Richards and Mr. George Rossiter; papermaking, Mr. W. Pearce, Mr. T. Stubberfield, and Mr. C. Martin; electrical, Mr. E. E. Fuller and Mr. J. Strouts; transport, Mr. W. R. Raynham and Mr. S. Hadlow; clerical, Mr. P. D. Taylor; laboratory, Mr. J. Sanderson; Employees' Sick Benefit Society, Mr. G. E. Garrett (chairman); and ex-Service men, Sergt.-Major W. Drury.

The deputation from the London staff of Edward Lloyd, Ltd., were Mr. Herbert W. Clarke (director), Mr. T. Gerald Denson (secretary), Mr. J. Johnston Smith (sales department), and Mr. H. J. Knell (wharf department).

Mr. Percy G. Denson (managing director) was unable to be present, as he is in the South of France, and Mr. E. H. Raynham (managing director), who is on his way to Australia, was also unable to attend.

By request there were no flowers, except from the family. Exception, however, was made, and two wreaths were sent, one from the staff and employees in London, and another "With deepest sympathy, from the staff and employees of the Sittingbourne and Kemsley Paper Mills and Ridham Dock."

Australian Paper Market.

The following statistics show the arrivals of various descriptions of paper into the Australian Commonwealth during the twelve months ended June last year—the latest period for which complete returns are available:—

Boxmakers' Papers, etc.

Imports under the classification of boxmakers' design-printed, fancy covering paper, marble and foil paper during the last completed fiscal year represented 1,672 cwts, of the value of £9,387. The United Kingdom was the largest supplying country with 857 cwts. (£4,124), compared with 622 cwts. (£2,783) in the preceding year. Shipments from the other countries were as follows, the figures in parenthesis indicating the imports for the preceding year: United States, 405 cwts., £3,254 (88 cwts., £497); Belgium, 226 cwts., £1,351 (182 cwts, £1,412); Sweden, 162 cwts., £507 (24 cwts., £98).

Bag Imports.

Arrivals under the classification of plain bags from all sources reached a total of 695 cwts. (£1,774), compared with 374 cwts. (£1,264) the year before. The United Kingdom was the largest contributor with 581 cwts. (£1,342) compared with 297 cwts. (£913) in the preceding twelve months. Supplies from the other two important countries were as follows, the figures in parenthesis indicating the shipments for the previous twelve months: Sweden, 83 cwts, £314 (60 cwts., £270); United States, 30 cwts., £107 (17 cwts., £72).

Shipments of printed or embossed bags reached a total of 8,998 lbs. (£1,031), against £3,660 lbs. (£244) in the preceding twelve months. Though the United Kingdom was the largest supplier the United States came very close, the shipments from the former country amounting to 4,577 lbs. (£688), against 2,460 lbs. (£168) in the preceding year, whilst those from the latter reached 4,246 lbs. (£309), compared with 1,200 lbs. (£76) the year before.

Containers.

Imports falling under the description of other containers (plain), during the twelve months ended June last year amounted to 7,997 lbs. (£771), compared with the much larger figures of 38,449 lbs. (£1,769) recorded in the preceding year. The United Kingdom was responsible for 4,429 lbs. (£487), compared with 14,833 lbs. (£1,061) the year before. The shipments of the other principal countries were as follows, the figures in parenthesis showing arrivals in the preceding year:—Japan, 2,691 lbs., £198 (2,482 lbs., £192); United States, 70 lbs., £7 (20,344 lbs., £271), Consignments totalling 757 lbs. (£41) were received from "other foreign countries," compared with 465 lbs. (£77) the preceding year.

Printed or embossed containers received in Australia during the twelve months ended June last year amounted to 32,884 lbs (£2,721) against 78,028 lbs (£5,926). The shipments from the different countries, with the amounts for the preceding twelve months in parenthesis, were as follows: United States, 14,677 lbs., £1,410 (12,196 lbs., £387); United Kingdom, 12,100 lbs., £914 (64,974 lbs., £5,454); Belgium, 4,692 lbs., £264 (nil); France, 1,205 lbs., £117 (41 lbs., £14); other British countries, 112 lbs., £2 (475 lbs, £32).

Cartridge and Cover Paper.

Consignments of cartridge paper during the twelve months ended June last year reached 7,711 cwts. (£19,519), contrasted with 6,988 cwts. (£19,110) the year before. The United Kingdom holds by far the most prominent position as a supplier of this class of manufacture with 7,175 cwts. (£18,060), against 5,876 cwts. (£15,926) in the preceding year. Deliveries from the other countries were as follows: Sweden, 197 cwts., £280 (146 cwts., £172); Norway, 113 cwts., £272 (252 cwts., £606); Germany, 107 cwts, £494 (9 cwts., £33); Belgium, 42 cwts, £115 (51 cwts., £130); United States, 38 cwts, £190 (1 cwt., £35).

Receipts of cover papers reached a total of 1,640 cwts (£2,281), against 1,549 cwts. (£2,513) recorded in the preceding year. The Netherlands was the largest contributor with 1,179 cwts. (£1,145) against 853 cwts. (£917) the year before. Shipments from the United Kingdom amounted to 397 cwts. (£912), against 598 cwts. (£1,320), those of Czecho-Slovakia, 33 cwts. (£104) against 1 cwt. (£5), and United States, 31 cwts. (£120), compared with 97 cwts. (£271).

The value of "other" cover paper imports was £14,154, compared with £10,714 in the preceding year. The largest contributor was the United Kingdom with £10,825, against £8,280 the year before The value of the shipments of the other enumerated supplying countries were, the figures in parenthesis representing the values for the previous year: United States, £2,602 (£2,330); Germany, £258 (£32); Sweden, £182 (nil); Netherlands, £105 (£40).

Parchment.

The value of the shipments of cut and uncut parchment represented £3,290, against £2,407 in the preceding year. The United Kingdom sent consignments of the value of £2,696, compared with £1,779 in the preceding year, the value of the imports of the other chief contributing countries being as follows, with the comparative figures in parenthesis: United States, £563 (£657); India, £6 (nil).

Imports of true vegetable parchment, in sizes not less than 8 by 38 inches or its equivalent, were of the total value of £67,282, against £58,725 in the similar period of the year before. Belgium was the largest supplier with £31,715 against £32,847 in the preceding year, the receipts of the other countries being: Italy, £23,183 (against £6,581); France, £9,515 (£9,421); Canada, £868 (nil); Germany, £363 (£3,828); Netherlands, £200 (nil).

Surface-Coated Paper.

Exports under the category of "surface-coated paper, n.e.i., plain or embossed including coated or friction-glazed covering papers," were of the total value of £51,681, compared with £36,528 in the preceding year. The United Kingdom headed the list with £20,170, contrasted with £17,530 the year before. The supplies of the other countries were as follows: Belgium, £15,731 (£11,444); United States, £10,018 (£5,222); Sweden, £2,566 (£1,885); Germany, £1,258 (£88); France, £917 (£268); Switzerland, £676 (£35); Japan, £119 (£9); Austria, £115 (nil).

Wax Paper, etc.

Shipments of wax, sealing and bottling papers reached a total value of £1,237, compared with £946 the year before. The United Kingdom was the largest supplier with £1,117, against £716, and then the United States £100, against £227 in the preceding twelve months.

Australian Notes.

Municipal Binding — New Companies — Printery Fire—Printing Trade Wages—Lost Time—Trade Stamp on Blocks—Australasian Paper and Pulp Co.—Protection Suggested for Australian Books.

(From Our Sydney Correspondent.)

AN important move in the direction of municipal trading has been taken at Sydney. Instead of letting out a contract for the binding of books in the Municipal library, the finance committee of the City Council has recommended that the council should instal its own bindery works at a cost of £2,500. It is the Labour Party's policy to do away with as much contract work of all sorts as possible.

A NEW limited company has been registered at Sydney under the style of the Reliance Linotype Co., Ltd, with a capital of £5,000. Its objects are to take over the business of printers, stationers, etc., now carried on under the style of The Reliance Linotype Co.

ANOTHER new company is the Chain Publishing Co., Ltd., with nominal capital of £10,000, in £1 shares. Its objects are to acquire and carry on the business of Chain Publishing Co. from H. A. Scholer, A. C. Junior, and W. R. Grainger.

THE premises of the *Manildra and Cudal News* in Derowie-street, of which the proprietor is Mr. Ernest G. Triglone, were recently destroyed by fire. The printing plant was insured for £300, and the premises were also insured.

IN the Arbitration Court there has been given a new wages award which relates to the metropolitan areas of Sydney, Melbourne, Adelaide and Hobart, and awards a basic wage separately from the margin. The basic rate in the four capital cities would be £4 6s. per week, reckoned on the weighted averages of 1734. A marginal increase of £1 16s. per week was granted for machine compositors, £1 10s. for proof readers or revisers, £1 4s. for hand compositors, sluggers, bulk hands, stone hands, electrotypers, letterpress machinists (but subject to qualifications), operators of writing press, lithographic machinists, bookbinders, paper rulers, marblers, hand indexers, blockers, finishers, pocket book makers, persons engaged in sawing or rolling books, loose-sheet cover makers, edge gilders, men in charge of envelope-making machines. Various margins were granted for other skilled workers, ranging down from £1 to 6s. The female basic wage is to be 54 per cent. of the male rate, which will be for the present half year £2 6s. 6d.

THE basic wage for Melbourne within a radius of 15 miles of the G.P.O. has been fixed at £4 6s. per week. The Sydney minimum within the county of Cumberland and the districts of Newcastle and Maitland, in New South Wales, has also been fixed at the same rate. The metropolitan rate in Adelaide has been fixed at £4 6s. per week. Within a radius of 15 miles from the G.P.O. at Hobart the same basic rate will apply. Machine compositors receive £1 16s. per week over the basic wage; proof readers and/or revisers £1 10s.; hand compositors, £1 4s.; letterpress machinists, £1 4s.; rotary machinists, £1 4s.; ink grinder and/or varnisher, finisher, £1 4s.; pocket-book maker, £1 4s; envelope angle cutter, 20s.; envelope cutter, 15s.; cutter of playing cards, 15s.; guillotine machine operator, £1 4s.; storeman packer or despatcher, 6s. Male employees who are not specified receive the basic minimum of £4 6s. per week.

STRONG resentment at the action of certain employers who require employees to make up lost time through holidays by working overtime at the ordinary rate was expressed at the last meeting of the process engravers' section of the Amalgamated Printing Trades Employees' Union.

A COMMITTEE was formed for the purpose of making arrangements for a trade stamp on all blocks, and to go into the question of the number of apprentices in the industry.

THE report of the Australasian Paper and Pulp Co., Ltd., shows that after providing £4,000 for the reserve against the Geelong removal, the company netted £84,469 during the year ended June 30th last, as compared with £75,553 for the previous twelve months. A credit balance of £369 was brought into the accounts, making £84,838 available. Preference shareholders were paid the usual 8 per cent., but the ordinary dividend was reduced by 2 to 6 per cent. Payments to shareholders amounted to £58,185, whilst £26,000 was allocated to the reserve for depreciation, raising it to £54,000, leaving £653 to be carried forward. Apart from the provision for removal, reserves and undivided profits total £64,653.

DURING the year the company made an issue of 153,500 preference shares of 20s. each, raising the paid up capital to £990,126. The new money so provided was utilised for extra plant —the installation is now valued at £572,040, as against £548,696 a year ago—and for the partial reduction of the bank overdraft, which was lowered by £77,063 to £66,364. Trade creditors were owed £42,479, making total outside liabilities on the balancing date £108,843, against which the company held liquid assets of £130,797, contrasting with £85,740 a year ago.

AT the yearly meeting of the company the chairman (Mr. N. S. Brookes) explained why the directors had reduced the dividend on ordinary shares from 8 to 6 per cent. During the past twelve months capital had been increased by an issue of 153,000 preference shares of £1 each, and it now stood at £990,126. Therefore, to pay a dividend of 8 per cent. in future it would take practically £80,000 of profits, and with provision for contingencies, earnings should be expected to reach £100,000 to maintain the 8 per cent. dividend on both classes of shares.

MR. BROOKES added the directors had been criticised for allotting £26,000 to the reserve for depreciation. This was a much larger sum than in the two previous years. If such a substantial allocation had not been made, there would have been sufficient profits available to maintain the dividend at 8 per cent. However, it was desirable to provide the allowance, as the directors had decided that some machinery might shortly require to be replaced.

IT was considered by shareholders that the matter of depreciation should be treated scientifically, so that a full and definite sum should be devoted to writing off plant before profits were announced. If it was also necessary to provide for contingencies, a special allocation from profits could be made, which was what the board had aimed to do. In the past depreciation had been on approximately a 2½ per cent. basis. This year it was on a 5 per cent. basis, and Mr. Brookes stated that he would not be satisfied until the company had about £100,000 provided for the account.

MR. MAHONY (N.S.W.) in the House of Representatives, suggested that the idea of an Australian Father Christmas should be encouraged once more in keeping with the sunshine of the Commonwealth than with the frozen snow of England and Germany. Some time ago, Mr. Mahony introduced a deputation to the Minister of Customs on behalf of the writers and artists of Australia with a request for increased duty on imported books, in particular children's Christmas story books, which were admitted into Australia free of duty. He hoped the Minister would give sympathetic consideration to the request of the Australian authors and writers.

A NEW company, E. Whitehead and Co. Pty., Ltd, stationers and printers, has been formed to acquire as a going concern the business of E. Whitehead and Co., at 21, Equitable-place, and Francis street, Melbourne. Capital, £25,000, in £1 shares.

Board Market in Australia.

Twelve Months' Shipments.

The following statistics show the quantity and value of various descriptions of boards imported into the Australian Commonwealth during the twelve months ended June last year, the latest period for which complete returns are available:—

Millboards.

Imports under this heading represented 2,862 cwts., of the value of £4,695. The United Kingdom secured practically the whole of this trade, namely, 2,706 cwts. (£4,374), compared with 2,188 cwts. (£4,064) in the preceding year.

Lined Strawboards.

Shipments of this variety of boards, amounting to 12,868 cwts., of the value of £6,592 came chiefly from the Netherlands (12,603 cwts., £6,417), the share of other countries totalling 102 cwts. (£70). The United Kingdom was represented by only 1 cwt. (£2).

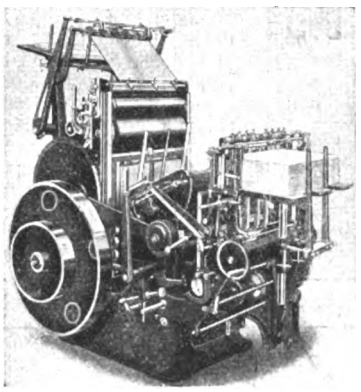
Unlined Strawboard.

Imports under this heading were 35,085 cwts. (£16,297), as against 48,910 cwts. (£26,562) in the preceding year. The Netherlands was by far the largest supplier during the last completed year, with 34,832 cwts. (£16,125). Shipments from Sweden amounted to 140 cwts. (£66), and those of the United States to 105 cwts. (£98). The United Kingdom's contribution was only 8 cwts. (£8).

Corrugated Strawboard.

Receipts were 519 cwts. (£721), compared with 171 (£316) in the preceding year. The United Kingdom supplied the largest individual quantity—414 cwts. (£532), the United States coming next with 22 cwts (£146). Shipments from "other foreign countries" were 93 cwts. (£43).

Other Boards.



Deliveries under the heading of "other boards" during the twelve months ended June last year amounted to 99,648 cwts. (£195 947), contrasted with 93,464 cwts. (£207,480) in the preceding year. Total shipments from the principal countries during the twelve months ended June last year were as follows, the totals for the preceding year being given in parenthesis: Sweden, 41,053 cwts., £70,573 (38,609 cwts., £73,659); United Kingdom, 19,914 cwts., £51,262 (22,541 cwts., £63,553); United States, 1,6679 cwts., £38,301 (17,456 cwts., £48,330); Canada, 6,454 cwts., £8,014 (7,227 cwts, £8,575).

The total quantity of boards of all descriptions imported into the Australian Commonwealth during the last year to which the returns relate amounted to 150,992 cwts. Of this quantity the share of the United Kingdom was only 23,043 cwts.

Machinery at Olympia.

The Problem of Blue-Print Paper.

The International Shipping, Engineering and Machinery Exhibition at Olympia offers one or two exhibits of interest to the paper and allied trades.

Attention is readily attracted to the stand of the Precision Photo-Printing Plant, Ltd., which shows a number of interesting machines for dealing with blue-prints. The combined washing and drying machine is an ingenious device which can safely handle paper of a very light substance. Blue-prints are passed through without any intermediate handling, and, after being thoroughly washed, pass over a drying drum and emerge at the other end in perfect condition. In order to demonstrate the delicacy of the mechanism, sheets of news-print have been passed through without being injured. Practically any grade of newsprint can be treated in this way.

Another interesting exhibit is a ferro coating machine which has only been on the market for about a year. It is hoped by means of this apparatus to supply a good deal of the blue print paper used in this country. The extent to which this particular article is employed may be gathered from the fact that one firm alone contracts for it to the extent of £7,000 a year. Low cost of production and the compactness of the plant are among the claims made by the producers. This machine and all the others on the stand, together with the materials employed, including the base paper and even the chemicals, are of British origin. While the Precision Photo-Printing Plant, Ltd., are the manufacturers, the agents are Messrs. Alfred Herbert, Ltd., of Coventry.

Messrs. J. Halden, Ltd., who provide everything for the drawing office, offer an impressive display of their various apparatus, ranging from the smallest drawing implement up to a continuous electric photo-copying machine in operation.

Messrs. John Musgrave and Sons, Ltd., Bolton, who have installed a good deal of machinery in the paper mills of this country, have a wide range of exhibits. It is claimed for the steam extraction engine that it is the most economical prime mover for paper mills and other works requiring steam for process use.

A further engineering device, which, it is claimed, can be usefully employed in paper mills, is the Arca Regulator for all automatic controls. This device has already been described in the *World's Paper Trade Review* and is on view at Olympia, where its adaptability to a variety of purposes is demonstrated.

Messrs. Norman and Hill, Ltd., show their Lefax products, comprising pocket and desk binders, filing boxes and cabinets, loose-leaf data sheets, loose-leaf blank and ruled forms and so on.

Close to the entrance hall Messrs. Fry's Metal Foundries have a very prominent stand, which illustrates the growth of their activities. While they are well-known in printing trade circles for their type metals, the firm is building up a very important connection for castings. The exhibits illustrate the great variety of work which they are able to turn out, extending from tiny charms to the casting of half a wheel which weighs three tons one cwt. Fry's Metal Foundries are seizing the opportunities opened up by the automobile industry and there is a growing demand for their bearing metal. In addition to general foundry casting and solders, they have a special repair service, which is ever ready to be put into action. As a demonstration of their capacity for making castings, Messrs. Fry have turned out a number of neat ash trays and match holders in the form of a metal melting pot, complete in every detail, and burnished like silver. A *Daily Mail* stereo and type metal were, of course, necessary to complete the range of Messrs. Fry's productions.

To Modern Art Printers and Advertisers.

THEIR special attention is called to the fact that our very extensive selection of Modern and Old Style faces is now cast on the generally accepted British-American Point System,

¶ That we have recently designed and produced a number of beautiful faces for Art Booklets, Magazines and Catalogues,

¶ That the Extra Hard Metal in which for many years our Type has been cast remains unexcelled, and

¶ That the maintenance of our established reputation for accuracy receives our constant attention.

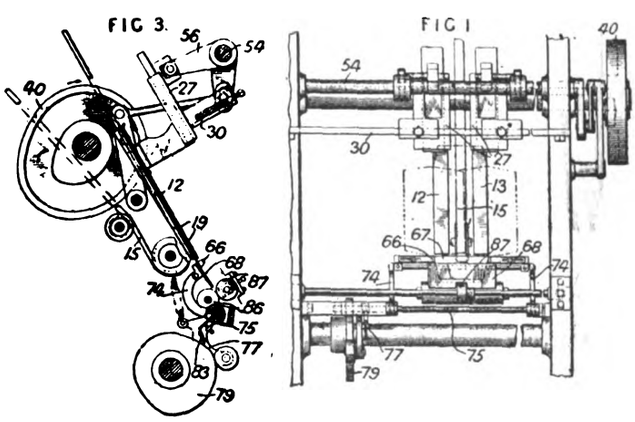
New Inventions

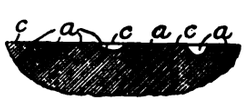
Label-gumming Machines.



Messrs. H. R. Cobbin & S. P. Bucknall have patented an invention by which, in machines for applying adhesive to labels, &c., in which the labels 4, Fig. 1, are supported within a container on a spring-pressed member 5, and are withdrawn singly and intermittently by a picking roller 8 and fed over an adhesive applying roller 17, the labels are retained in the container by a presser member 7 normally pressed on to the surface of the top label by a spring 11, and intermittently raised to release the labels. The spring-pressed member 5 may

be raised or lowered by means of a lever 64, Fig. 2. The presser is adjusted horizontally by screws 13 so as to press on the rear edge of the labels, and is intermittently raised either automatically by a pin 30, projecting from a wheel 31, which engages a bevelled end 32*a*, Fig. 2, of a pivoted lever 32 and lifts the forked end 32*b* of the lever and thereby the nut 32*c*, or manually by a lever 37 having a fork 37*a* disposed beneath the nut 32*c*. The gumming-roller 17 receives its adhesive from a roller 18 revolving in a trough 19. The gum supply may be varied by arranging the rollers 17 and 18 out of vertical alignment, Fig. 5, and pivotally mounting a roller 60 to press against the roller 17. An adjustable scraper is also provided. Roller 16 has circumferential ridges 22, and is provided with a wiping pad 23. The gummed labels are delivered on to inclined bars 26, and are buckled up to facilitate removal by contact with projecting pins 28. In conjunction with the picking roller 8, a stamping or printing device 39, Figs. 3 and 4, contacting with an inking roller 41 supplied by a roller 42 having an ink container 43 mounted thereon, may be provided. Means for automatically affixing the gummed labels upon boxes, bottles, &c., comprises a table 70, Fig. 7, upon which the box 71 is placed, a spring pressed roller 72 carried by pivoted arm 73, and bars 78 sliding in guides 79. The labels are conveyed from the gumming-machine by a conveyer 77 on to the bars 78, which by means of a chain 76 and links 81 are drawn over the box. The bars 78 automatically spring apart and deposit the label, which is pressed on to the box by the roller 72 on the return movement.

Envelope Making.



An invention by the Smithe Machine Co., Inc., relates to means whereby a shaped envelope blank is fed by means of a belt 15 on to fixed guides 19 and against stops 66 adjustably secured to a bar 67 which carries a bottom-flap folding plate 68. Forming blades 12, 13 are carried in slide ways 27 and are reciprocated by means of levers 56

on a rod 54 driven from a cam 40. The slides 27 are adjustably mounted on a cross-member 30. A cam 79 operates levers 74 carrying the folding plate 68 so that the bottom flap is turned upwards by the plate and then folded against the body of the envelope by the descent of the blades 12, 13, which carry the envelope between rollers 86, 87. The levers 74 are carried by a shaft 75 on which the lever 77 co-operating with the cam 79 is loosely mounted. A spring 83 connects the shaft 75 and lever 77, so that in the event of the blade 68 jamming, the mechanism yields and prevents breakage.

Etching Intaglio Surfaces.

By an invention patented by Messrs. C. Hermann and R. W. Horne, an intaglio printing-surface, made from a plate or surface of metal or stone grained in the ordinary way and prepared by positive printing or transfer, is etched so that the depth of the etched areas *a* varies in accordance with the tone values, and the pits are surfaced

with shellac or a similar resin which is insoluble in the fatty menstruum of the printing-ink or in acids and which adheres to the material of the plate and to the ink. The plate, after graining, exposing, and developing, is rolled up with a resist which is of the nature of printing-ink with the addition of a solvent or menstruum of low melting-point, such as vaseline, so that, on the application of heat during etching, the resist will melt and gradually spread over the unprotected areas and progressively stop the etching action. The heat may be applied externally either locally or generally as desired, or may result from the reaction between the plate and the etching acid. If etching is performed with nitric acid, gum is added in order to keep the etched cavities in a condition to take moisture and repel fatty ink. After etching, the resist is removed and the plate inked with fatty ink, a solution of shellac or other resin being then poured over the plate. The shellac, ink, and photographic film are then removed from the unetched areas *c* and these parts are treated to render them fat-repelling.

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

THERE continues to be a better tone in the trade and everything points to its continuance From now until the near approach of Christmas, paper merchants should enjoy their best period in the year. The calls for paper are many and varied at this season and printers as a body are very busy catering to demand. that are inevitably late and hurried. There are no means of checking the consumption of paper in connection with the seasonal demand, but it is undoubtedly a fact that a much greater volume of paper goes every year into Christmas cards and annuals, calendars and diaries, Christmas decoration and dressings. Then there is the steady spread of the advertising leaflet, brochure and catalogue, which is a growing asset to printers and paper merchants. Each year sees a widening area of appreciation of the selling value of the well-arranged piece of publicity and it all helps to ease and increase the custom of Christmas shopping.

* * *

THE wrapping papermakers' application for protection was not put in and considered early enough to have brought about a decision that would have given them the benefit of the seasonal trade, and it is too late for any decision to bring any increased trade to the mills this year. Apropos the incidence of a safeguarded wrapping industry, it is being asked in some quarters what effect will a tariff on imported wrappings have on other classes of paper, particularly cover papers, thick papers generally and wood free papers. It is argued that the demand for English wrappings (all dependent upon the nature and amount of the tariff) might easily be so large as to cause other machines and mills to turn their attention to the protected classes of paper. In this case there would presumably be less competition among makers of other classes of paper and the way would be cleared for advanced prices.

* * *

IT is, of course, quite conceivable that under the operation of an adequate measure of safeguarding there would be a larger demand for wrapping than could be met by existing machinery devoted to that class of manufacture. But it must also be remembered that most of the present mills are capable of expansion and in fact have only been prevented from enjoying normal development by the conditions under which they have hitherto been working. Then there are mills and machines formerly employed in turning out wrappings which are now on other grades as a more or less temporary expedient. Still, again, there are wrapping mills closed down which can be started up on their original occupation once more. After all this, there will certainly be room for more production of wrappings if the hoped-for measure of safeguarding is forthcoming. Considering the fundamental importance of machinery as a prime factor in wrapping paper quality and output, it is not probable that many mills equipped for wood-free or other papers could turn over to wrappings. Whatever the decision may be as regards safeguarding, and whatever the measure of protection that may be accorded (if any), there will be no such margin of difference as will relieve the home manufacturer from the responsibility of attaining a high standard of quality compared with imported grades. We believe that the buyer and user of krafts and sulphites in particular will insist upon a maintenance of standards, and will rather pay a higher price than tolerate a drop in quality. In short, there will be no such opportunity for disposing of shoddy product as was presented by the rationing policy during the war years.

* * *

THAT, to our mind, is the most adequate safeguard against a too prolific entry into wrapping paper manufacture and the strongest argument against a using of the opportunity to force up other paper prices. Apart from this, there is the consideration that foreign papermakers are not in the least likely to allow our mills to have things their own way.

Paper Box Trade.

Description Under the Trade Boards Act.

Mr. C. E. Dyer, K.C., the Commissioner appointed by the Minister of Labour to enquire into a proposal to alter the description of the paper box trade contained in Paragraph 2 of the Schedule to the Trade Boards Act, 1909, has now issued his report.

Reference is first of all made to the fact that in 1920, the Match Making Joint Industrial Council, which was not in existence when the Paper Box Trade Board was established, asked for the exclusion from the scope of the Board of the manufacture of match boxes in match factories. After protracted negotiations, it was finally accepted by all the interests concerned that the making of match boxes in match factories should be excluded from the jurisdiction of the Board, the making of match boxes by home-workers being retained within the scope of the Board. This decision afforded an opportunity to clear up various other points on which the definition of the Board's jurisdiction had proved unsatisfactory, and on December 18th, 1924, the Minister published notice of his intention to make a Special Order altering the description of the Paper Box Trade.

After mentioning that the National Leather Goods and Saddlery Manufacturers' Association were not represented at the Inquiry, the report deals with the case presented by the Soap and Candle Trades Federation and Joint Industrial Council, the following conclusions being presented for the information of the Minister:—

(*a*) The Soap and Candle Trades Employers Federation represents by far the larger and more important part, though not the whole, of the soap and candle making industry.

(*b*) Adequate machinery in the Joint Industrial Council exists for the effective regulation of the wages and working conditions of the employees, including any paper box-makers, of the Federation, and these wages and working conditions are adopted by some other firms in the trade.

(*c*) The employers in the Federation and their employees, including any paper box-makers, are alike satisfied with such machinery and desire to be excluded from the scope and jurisdiction of the Trade Board.

(*d*) The difficulties of applying the Trade Board orders anticipated by employers and employees alike, though formidable, are probably somewhat exaggerated, and with goodwill and experience would doubtless be surmounted by firms of such organising ability as those in question.

(*e*) There are a number of firms outside or unaffiliated to the Federation forming by far the less important part of the soap and candle-making trade; probably a liberal discount should be made from the estimate of the number of such firms suggested at the Inquiry to exist.

(*f*) But as regards such last-mentioned firms, there was no evidence (1) that any adequate machinery existed for regulating the wages and working conditions of any paper box-makers (other than the Paper Box Trade Board Orders) or indeed other employees, except (probably) in so far as ordinary trades union influences may apply, or (2) of any desire either of employers or employees to be within or outside of the scope and jurisdiction of the Trade Board.

Question of Policy.

"The application of the foregoing conclusions," adds the report, "appears to raise an important question of policy. If it be enough to obtain exclusion from the scope and jurisdiction of a trade board that a given industry, or as in the case of the Soap and Candle Trades Employers' Federation, by far the more important part thereof, employing amongst its numerous workers a comparatively small number who would *prima facie* be subject to the trade board orders, can point to (*a*) adequate machinery for regulating the wages and working conditions of its employees, (*b*) the desire alike of employers and employees to be so excluded, then undoubtedly the Soap and Candle Trade Employers' Federation have made out a strong case for the exclusion of their trade. But on the other hand, if such exclusion is not to be granted where the applicants cannot speak for the whole of the trade (as, for instance, it is said that the match-making industry can do)—where the voice of the rest of the trade and consequently of any of the employees therein, who might *prima facie* be subject to trade board orders, is uncertain or silent—and where the success of the application would almost inevitably encourage similar applications from other trades employing workers who are *prima facie* subject to trade board orders, and so lead to the weakening of the trade board, then a claim even so constraining at first sight as the present may be held to fail.

"If, having regard to all the circumstances and to the question of policy involved, the Minister takes the view that he cannot accede to the application of the Soap and Candle Trades Employers' Federation, then the Minister may wish to consider whether some steps might usefully be taken to smooth the operation of the Order.

"In this direction it would appear desirable to make the position of warehousemen and packers clearer, either by a verbal amendment of the Order or by an addition to the Instructional Letter.

"A sympathetic administration of the orders in respect of these border line cases would appear to be justified in the case of those firms applying the Joint Industrial Council Agreement."

A Finished Product.

Mr. Dyer proceeds to deal with the objection of Guest, Keen and Nettlefolds, Ltd., manufacturers of metal screws, and sums up the arguments as follows:—

"The application of the company for exclusion from the Special Order was put forward partly on the ground that the operation of the existing Order in the case of their paper box makers had caused administrative difficulties and dissatisfaction in the works, but this aspect was not developed in detail at the Inquiry. The application was argued rather on a principle, namely, that on a true definition of the paper box trade, the company's paper box makers do not come within the existing Trade Board, but are part of the screw manufacturing industry. This question of principle is obviously one of importance, but it appears to me that the analogy which the company seek to draw from the stamped or pressed metal wares trade is not quite complete. With respect to the stamped or pressed metal wares trade, the excluded section comprises manufacturers, normally engaged in some branch of metal manufacture, who stamp or press metal parts which are embodied in or fitted to a composite article, not itself stamped or pressed. In the present case there is no question of embodying the paper boxes in or fitting them to some composite article; they are themselves a finished product used for enclosing another finished product, viz., screws up to 2 ins. in length.

"The company represent 95 per cent. of the screw manufacturing industry, and the remaining 5 per cent. do not make paper boxes. The machinery for the regulation of the wages and working conditions of the company's employees does not appear to have operated so satisfactorily as that in the match making or soap and candle industries. The wages are on the whole substantially less, and the company's application for exclusion was not, as in the case of the two last mentioned industries, supported by their employees. From this point of view it would appear that the application of the company is not so well founded as was that successfully made by the match making industry or as the present claim of the soap and candle trades, dealt with earlier in this report, and that there is in this instance additional force in the submission of the Trade Board representatives that, if exclusion from the Order were granted to the company, there would seem to be no reason for withholding exclusion from a large number of other industries, with the consequent serious diminution of the activities of the Paper Box Trade Board."

COLOUR PRINTING.

By DAVID GREENHILL, Director and General Manager, Sun Engraving Co., Ltd.

(*Continued from page 427.*)

Good as the three-colour process is, it, of course, has its limitations, and in all directions there is need for persistent effort to improve—

(1) With regard to paper. The finer printed results can at present only be achieved on art or clay-coated paper which lacks artistic merit and is lacking in the very desirable qualities of permanence and toughness. There is a very real need for a paper which will give the same perfect print of the half-tone dot, and the same brilliance of colour which the whiteness of clay coating so readily yields.

(2) In the matter of ink too, density of colour and permanence are most desirable qualities that need emphasis, and considerable further improvement is required.

(3) As to printing—there is too big a drop on the average of work between the block-maker's proofs and the printed results, although considerable improvement has been made in recent years in this direction. In this connection I may suggest that it would be very helpful if (when a series of colour blocks have to be printed in sheet form) the blocks for each row (usually four) were to be proofed together so as to ensure even strength of inking in each of the four subjects. The absence of this simple precaution in so many cases is, I suggest, responsible for a greater loss in quality than any other single cause.

An encouraging sign of the times is the attention now given to technical education, the London School of Printing and many provincial centres doing yeoman service in this respect.

Factors of Good Colour Printing.

Colour printing demands not only good technical education but regular practice as well. Much work is spoilt by employees usually on book-work being suddenly and only occasionally put on to colour work, with the result that it is more by luck than judgment if the job turns out passably well. It is increasingly the age of the specialist and particularly so in colour printing.

Very important too is the close co-operation between the process-engraver and the printer. Much work falls short because sufficient attention is not paid to matters of screen, ink and paper. Quite recently on a most important job requiring nearly one million copies printed on a fairly cheap art paper, the three-colour blocks were made with most painstaking care but with a screen 166 lines to the inch, and after many revisions were sent to the electrotypers for duplication, with the result that the printing plates did not yield the desired result. Finally blocks had to be remade with a slightly coarser screen, etched deeper and the revisions avoided, with the result that the electros then made printed easily and clearly. It is all-important that paper and conditions of printing should be carefully considered when the matter of screen has to be decided. Important too is the point already referred to that many users of three-colour work demand so many revisions and alterations to plates that the re-etching and burnishing required to effect these alterations entirely spoil the printing qualities and render the plates most difficult and sometimes wellnigh impossible for electrotyping purposes.

The general advance of three-colour process printing for commercial purposes has been undoubtedly helped by good electrotyping and good stereotyping. Unfortunately firms doing really good electrotyping are very few indeed, and those doing stereotyping still fewer. There is no doubt with regard to the latter that the Dalziel stereo is of outstanding merit.

Colour Photogravure.

I now turn to what is the latest and I believe the most beautiful method of printing yet evolved—photogravure. Photogravure has made more rapid strides abroad than in this country, but even here considerable progress is being made and photogravure is established as a practical and eminently useful printing process which is constantly gaining ground, so much so, that great efforts are now being made to develop photogravure in colour and that not without some measure of success.

In America, Germany, Holland, Switzerland, France and England earnest workers and enterprising firms are steadily and persistently working at this problem and the progress already made gives great hope for the future. An immensely courageous effort in colour gravure was made by the *Chicago Tribune* people, who made a gallant attempt to produce a large weekly by colour gravure on rapid machines, but although great efforts were made at enormous cost, the attempt was premature and had to be abandoned.

Whilst as yet only in its infancy, colour gravure has already achieved some very beautiful results and at a cost not greatly in excess of good three-colour process by letterpress.

Colour photogravure, although difficult at present, will, no doubt, become more easy to handle as further experimental work proceeds; it promises results well worthy of the efforts already made and still required. It promises, first, to solve the paper difficulty, because it prints readily on beautiful book papers and indeed on almost any uncoated paper, and so permanent papers can be used; secondly, to solve the ink problem, because owing partly to the thickness of the film of ink used and partly to the nature of the colour, the ink is far more permanent—indeed, for all practical purposes it is permanent; and, lastly, it promises very largely to solve the difficulty of the frequent drop in quality between the process-engraver's proofs and the printed result which so often occurs in ordinary three-colour process work, because at present it is not possible to isolate the engraving from the printing. In photogravure, these must be done together in one establishment, so that there is co-operation between the two main parts of the work; very helpful to success and so often lacking in the older process.

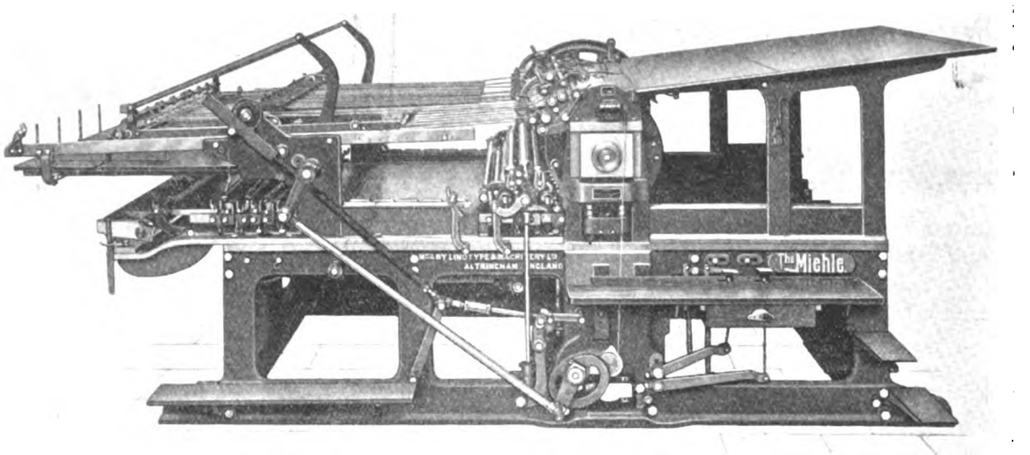
The ink used in photogravure printing dries very rapidly indeed, and the individual colours can be dried by means of heat and air almost instantaneously. This suggests the possibility of printing the second and subsequent colours with a rapidity hitherto unattainable, and for these reasons I believe that the future of colour printing will be very greatly influenced by colour photogravure, printed on multi-colour machinery.

The Exhibits.

A most interesting array of specimens of colour printing were on view to illustrate processes mentioned by the lecturer.

Wood engraving was exemplified by the "Chronicles of England," printed by Messrs. Edmund Evans and published by Messrs. Longmans Green and Co., or, rather, Messrs. Longman, Green, Longman, Robert and Green, as they were then.

An exhibit of colour printing by means of line engravings and flat zinc plates etched or cut was shown by courtesy of Messrs. Hodder and Stoughton, Ltd.



Examples of the use of Day's medium were included, and by courtesy of Messrs. Frederick Warne and Co. there were shown examples of the Acqua-tint process and some toy books done in wood line tints, these books being printed about 1890.

"Photostone," the London Stereoscopic Co.'s Collotype, "Derby" print, Wharf-Litho, work done by the Lambert machine, the McKay process—all were exemplified, and of three-colour process work of to-day there was a very fine selection, by the Sun Engraving Co., Ltd., and others, includ-

Paper read before the Royal Society of Arts on November 25th.

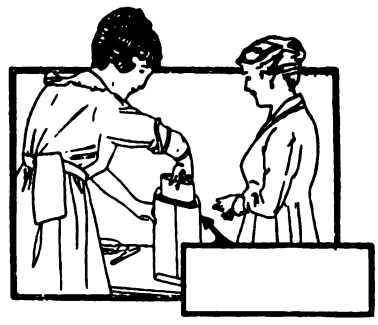
ing: (1) Reproductions of Mr. Archibald Thorburn's bird drawings for Messrs. Longmans Green and Co.; (2) a series of colour book jackets for Messrs. Hodder and Stoughton, Ltd., and reproductions of Mr. Arthur Rackham's drawings; (3) reproductions of gallery subjects and of fine porcelain, etc., for Messrs. Cassell and Co.; (4) a range of natural object work for the National Trade Press and others; and (5) a display of larger subjects and sheets for calendars, showcards and other commercial purposes.

Of special interest was a section devoted to colour photogravure. In referring to this, the lecturer said: "You will, I feel sure, be interested in seeing a book jacket which I believe to be the first printed in colour photogravure, certainly in this country and probably in any other country. It is associated with a famous book and one which was among the greatest of the successes achieved by Messrs. Hodder and Stoughton, Ltd. The book jackets on the first four editions of this wonderful book were printed in colour photogravure, and it was only after the prestige and the wonderful circulation of the book was established that the ordinary four-colour process jackets were resorted to. Of course, there may be differences of opinion as to what effect this had on the circulation, but the fact remains that this is the only book which has ever been issued in this country with a coloured photogravure jacket and the success of the book was extraordinary. There I must leave it.



"Among interesting items shown is a fur catalogue produced for Messrs. Bradley and Co. This is printed throughout in photogravure, the cover being printed in colour and the inside monotone, and I think this is the first time a book of this kind has been printed throughout in this country, cover and inside complete, in colour and monotone in photogravure. Then, too, I have here a most interesting result of a cloth pad reproduced by this method, the result of which shows great possibilities for advertising purposes, and lastly some reproductions of water-colour sea pictures and hunting scenes. The *Illustrated London News*, *Sketch*, the *Graphic* and also *Pears' Annual*, have all been active as pioneers in this work, and I am proud of the fact that the firm I have the honour to be associated with is taking a leading part in this latest, and I believe most important, development of colour printing."

GO NAP AND USE TYPON

PAPER NEGATIVES

NO camera is needed to reproduce copy that is printed on both sides. TYPON "N" REFLEX PAPER will give the negative you require on the contact frame, and without recourse to expensive camera apparatus. Result—a tremendous saving in the cost of reproduction.

A STRIP NEGATIVE can be easily obtained on the contact frame with TYPON "A" STRIP PAPER. For letterpress work this is an excellent medium for printing down your job either for offset or direct litho. The emulsion is stripped from the backing paper by the aid of a thin glassine paper.

DONE ON TYPON "D" ANTI-HALATION PAPER, line and half-tone work are of unsurpassed density and brilliancy. This is an exceptionally fine Paper for Offset Litho and Photogravure, and reproduces fine line and point with absolute truth of detail. The Strip Film produced is tough and practically everlasting.

KEEN Process Photographers are enthusiastic regarding the New TYPON "K" ANTI-HALATION CAMERA PAPER. This Paper is made especially for camera use, and is about THREE TIMES FASTER than TYPON Contact Papers. With the exception of its speed, it is of similar construction to "D" A-H. Paper, and gives a thin tough film which is easily detached from the backing paper without the aid of any transferring agency.

FOR Colour and Register work of all descriptions there is no finer medium on the market than TYPON "F" ANTI-HALATION FILM. For density of blacks and brilliancy of whites this film has no equal, and the finest line and point is held with amazing truthfulness.

Printers' Managers and Overseers
(PARENT) ASSOCIATION.

Annual General Meeting.

The December gathering of the Printers' Managers' and Overseers (Parent) Association, held at the Old Bell, Holborn, on Tuesday of last week, was the annual general meeting of the Association, and the event called forth an excellent attendance of members. The retiring president, Mr. R. H. Berry, occupied the chair, and was, as usual, well supported by officers and council.

The minutes of the November meeting having been read and approved, the following four gentlemen were elected to membership: Mr. W. J. Head, Globe Rotary Press, Ltd., 367, Strand, W.C.—general manager; Mr. A. E. Horner, Broadway Press, Dartford—overseer, letterpress machine department; Mr. A. W. Mason, Messrs. J. Parry and Co., Ltd., Queen Victoria-street, E.C. — overseer, composing department; Mr. F. Matthews, Broadway Press, Dartford—overseer, composing department. All were present to receive a personal welcome from the president and the meeting.

Mr. Arthur Harry Wilson.

Election of Officers and Council.

The elections were the next item of business, and the meeting chose as scrutineers for the voting Messrs. F. C. Fitzgerald, S. Nadal, and C. H. Blenkins, who proceeded to distribute voting papers, to be later collected for the count.

As a result of the nominations at the November meeting, the following were unopposed:—President, Mr. A. H. Wilson (Electrical Press, Ltd.); treasurer, Mr. C. Durston; trustees, Mr. J. C. Pugh and Mr. G. Phillips; general secretary, Mr. E. W. Whittle; financial secretary, Mr. W. H. Gill; hon. technical secretary, Mr. A. E. Jarvis. The election of all these gentlemen was confirmed with acclamation.

For the office of vice-president the November meeting had nominated Messrs. J. H. Burton, W. W. Curtis, and C. Northam. The president, however, now read a letter which had just been received from Mr. Burton, intimating that gentleman's regretful decision to withdraw from nomination for reasons of health. This left Messrs. Curtis and Northam standing as candidates for this post. For seats upon the council (eight vacancies) the November meeting had put forward eleven names: Mr. J. Acton, Mr. F. E. Baker, Mr. R. H. Berry, Mr. F. H. Blatch, Mr. A. E. Brades, Mr. F. J. Field, Mr. F. W. Hume, Mr. E. Hutchins, Mr. E. H. Jacobs, Mr. R. Simpson, Mr. E. F. Smith. Business proceeded whilst the count was being made.

The Year's Work.

The report of the council for 1924 1925 was next read by the president. This recorded that, in regard to finance, the year opened with a balance of £472 16s. 10d., which at the close had increased to £487 15s. 3d. This was considered very satisfactory, bearing in mind the scope and intention of a fund entirely local. The total number of members in the Parent Association was now 779, this being an increase of 10 upon the total of the previous year; 34 new members were enrolled; 5 were transferred from centres to London, and 2 from London to the provinces; 3 resigned and 11 were erased. Record was made of the attendances put in by the council and committees. In respect of the problem of unemployment, it was stated that this continued to be a source of anxiety, and there was still a pressing necessity for the co operation of members in finding work for those needing it; the Council fully appreciated the kindly help of several in this way. Note was made of the fact that the united gathering had been in every way a social success, bringing a pleasant reunion at the Agricultural Hall and at Epping Forest. The report reviewed the various monthly meetings of the year, which had provided a successful series of events of technical interest and social utility, special note being made of the happy revival of the Association's summer outing. In respect of technical education it was stated that the Association had continued its practical interest in the examinations of the London School of Printing and those of the Stationers' Company Technical Board; whilst regarding those of the City and Guilds of London Institute, a deputation had been received by that body, the outcome of which might be looked forward to as a satisfactory settlement of P. M. and O. A. claims to representation on its examining board. Remarking that, with the completion of a second term of one year the president was retiring according to rule, the report stated: "Mr. R. H. Berry has had a very busy time in Association work, regular attendance and punctuality being notable characteristics of a highly successful term of office. Well known and respected throughout the Association, he has worthily maintained the standard of efficiency set by presidents who have gone before." In concluding with the remark that the year under review might be regarded as satisfactory, the report drew attention to the fact that each meeting had elected new members, several of whom occupied important positions in the trade.

Questions and discussion were now invited, and the main feature here was, as is usual on such occasions, a running commentary from Mr. S. A. Dawson, who, in the course of his remarks, put forward some pertinent questions and suggestions which were afterwards replied to by the general secretary.

Satisfactory Accounts.

Next came the reading of the accounts, which showed a substantial balance of assets over liabilities. The auditors, Messrs. W. H. Mann and R. B. Simpson, both spoke in very high praise of the perfect order in which they had found all the Association's accounts.

Call being made for questions and discussion of the accounts, Mr. Dawson was again the principal speaker, and in the course of his comments once more raised the subject of delegations to provincial centres. Mr. L. C. Mennell, as an ex-provincial member, the president, the general secretary and others co-operated in responding, and the members once more showed themselves very definitely in favour of promoting closer intercourse between the parent body and the provincial centres.

Both the report and the accounts were adopted *nem con.*

At this point the president was able to announce the results of the voting, which were as follows: Vice-president, Mr. W. W. Curtis; council, Messrs. R. H. Berry, R. Simpson, E. H. Jacobs, J. Acton, F. J. Field, F. E. Baker, A. E. Brades, and E. Hutchins (in order of votes cast).

Responses were then made from those elected, led by the new president. Mr. Wilson touched upon his long connection with the Association and his experience on the council and as technical secretary. He remarked that as a Red Cross man he was particularly pleased to find he would have as vice-president a gentleman who had devoted time to St. John Ambulance work. He proceeded to refer to his happy relations with the retiring president, Mr. Berry, with whom it had been a pleasure to work.

There followed appropriate responses from the others newly elected: Messrs. Curtis, Pugh, Phillips, Whittle, Gill, Jarvis and Simpson, the last-named speaking on behalf of the eight new council members.

New President Installed.

Mr. Berry then vacated the presidential chair to Mr. Wilson, whereupon the latter proceeded to perform the interesting little ceremony of presenting the past president with a replica of the presidential badge, a ceremony which he remarked was to some extent unique, inasmuch as it had been during Mr. Berry's presidency that the practice of presenting past-presidential badges was inaugurated, Mr. Berry being thus the first retiring president to receive the jewel immediately upon retirement.

Mr. Berry, responding, took the opportunity to thank very cordially those who had helped him during his eventful term of office—vice president, officers and council. He referred especially to his endeavours to strengthen the social side of the Association's activities, and wished his successor the pleasure of seeing greater progress in this direction.

A vote of thanks to the retiring officers and council was suitably proposed by Mr. E. H. Berryman, and carried very cordially, response being made by Mr. W. H. Wicken.

Born in 1873, the new president, Mr. A. H. Wilson, has a life-long acquaintance with the printing trade, having been apprenticed to a Peterborough printer, with whom he received an all round initiation into the mysteries of the craft. Upon termination of apprenticeship he worked as a compositor in London and various towns, as Reading, Brighton, Windsor and St. Albans, and eventually entered the employ of Messrs. H. J. Goss and Co., remaining nearly five years, until appointed assistant works manager in the printing department of Messrs. Geo. Payne and Co., tea merchants. This was followed by an engagement with Messrs. A. E. Pearce, Ltd., as overseer, which endured for 15 months, when, after a period of illness, Mr. Wilson returned to Messrs. H. J. Goss and Co., as assistant general manager, where he remained 20 years, leaving in March, 1924, to take up his present position of printing manager with the Electrical Press, Ltd., in the production of several periodicals. Mr. Wilson became a member of the Printers' Managers and Overseers Association in the year 1909, and served two or three terms upon the Council, being elected technical secretary in 1915. He has given yeoman service to the Association, particularly on the technical side, and during his recent period of office as vice-president has shown that he possesses capabilities that eminently fit him for the presidential chair.

CAXTON CONVALESCENT HOME, - Limpsfield, Surrey.

President—C. J. Drummond, Esq., M.B.E., J.P.
Treasurer—The Right Hon. C. W. Bowerman, J.P., M.P

Devoted exclusively to the use of Men and Women engaged in the Printing, Process Engraving, Bookbinding, Stationery, and Kindred Trades. Patients received from all parts of the Country.

Flats for Retired Printers.

Viscount Hambleden Lays Foundation-Stone at Deal.

Viscount Hambleden on Saturday, November 28th, laid the foundation-stone of self-contained flats which are being erected in the grounds of the Lloyd Memorial (Caxton) Seaside Home, Deal. This organisation is ever extending its magnificent work in the interests of those engaged in the printing and allied trades, and this latest development marks a very valuable addition to its activities.

Lord Hambleden Laying the Foundation Stone of the First of the Flats for Printers at Deal.

Hitherto the efforts of the Home have been mainly in the direction of assisting those whose health has become impaired, and all who have any acquaintance with the working of the institution know how much has been done in the invigorating air of Deal, to bring back to health and strength those who have needed the assistance which the Home was established to provide. Now the committee have turned their attention to the case of those whose active association with the industry has ceased, and who in the eventide of life require the comfort of a home of their own. To meet these cases self-contained flats are being erected at the Princes-street end of the grounds of the original Home. A commencement is being made with four flats, each containing living room, two bedrooms, kitchen, bathroom, larder and convenient cupboards and fittings. These are being erected to the designs of Messrs. H. O. Ellis and Clarke, architects, of London, by Mr. T. T. Denne, Walmer, and it was the foundation-stone of the first of these flats that was laid by Viscount Hambleden, president of the Home, on Saturday of last week.

The Dedication Service.

A brief service of dedication on the site of the new buildings was conducted by the Rector of St. Andrew's (Rev. W. E. Allen), the company present with Lord Hambleden including Mr. C. W. Roud (chairman of the Home), Mr. J. L. Scorgie (vice-chairman), Mr. H. O. Ellis and Mr. Clarke (architects), Mr. F. E. Wood (representing Mr. T. T. Denne, the contractor), Mr. H. F. Parker (secretary), Mrs. Gray (matron), the Town Clerk of Deal, Mr. D. A. Daniels (one of the solicitors of the Home), and members of the committee including the Misses Weller, M. Broughton, A. E. Butler, and Messrs. H. W. Howes, Tucker, Ballest, Bailey, Mundey, Smith, Gaunt, Sargent, Bell, Brimmer, Sankey, Cannell, Geleit, McMullon, Lanham, Allen and Cox, also Mrs. H. F. Parker, Mr. and Mrs. Hobbs, Mr. and Mrs. H. W. Clark, Mr. and Mrs. Jones, Mr. and Mrs. Bugge, Mr. W. Mould, Messrs. Wagdin, Arms, Bresnehan, Setter, etc.

After a prayer of dedication, Mr. Ellis handed to Viscount Hambleden the ceremonial trowel, and, mortar having been spread, the stone was lowered into position. With an ebony mallet handed to him by Mr. F. Wood, on behalf of the contractor, his lordship tested the stone, and declared it to be well and truly laid.

The stone bears the inscription:—

> "The Lloyd Memorial Home Flats for the Printing Trades. This stone was laid by the President, Viscount Hambleden, November 28th, 1925."

A prayer that these homes may be blessed "for ever to the comfort of the aged and weary," followed by the Lord's Prayer and the grace, concluded the brief service.

Votes of Thanks.

Mr. C. H. Roud, as chairman of the Home, said that before proposing a vote of thanks to Viscount Hambleden, it was fitting that he should make one or two allusions. They had met under the shadow of a very great sorrow, not only that of a national character, but, coming closer home, of a sorrow which had afflicted one to whom the Home owed more, perhaps, than to any other person—he referred to Mr. Frank Lloyd, who, as they knew, had lost his wife within the last few days. He expressed to Lord Hambleden their very keen appreciation of his presence there that day. In Viscount Hambleden they had a real president, not a mere ornamental figurehead, but one who had always taken a very keen interest in the Home from its very earliest days, and one who was always willing to attend their meetings. It was therefore a peculiar pleasure to them to have him there to set his seal on what they might justly term a new departure in providing these flats for retired members of their great industry.

The vote of thanks was seconded by Lieut.-Colonel H. Gordon Brew, J.P., in the absence of Mr. Herbert Clarke, private secretary to Mr. Frank Lloyd, owing to the distressing loss which had befallen his principal. Colonel Brew said he thought the institution was a marvellous one. It was doing splendid and good work, and had been the means of restoring many printers to health and strength, and it was extremely good of Lord Hambleden to take the interest he did in the Home, and by his continued interest they would find these Lloyd Memorial Seaside Homes grow and grow.

Viscount Hambleden, in returning thanks, said he was glad that references had been made to the losses they were suffering that day. It might be something to remember in future years that the stone was laid upon the day when Queen Alexandra was herself laid to her last rest, and he was quite sure that the kind of work which was being carried on in the Home was just what would commend itself to her own charitable and sympathetic mind. It was only in the beginning of this year that he first heard of the design to erect these flats, the foundation stone of the first of which he had had the pleasure and honour of laying. It was, he supposed, a slight departure from the previous works of these Homes, but at the same time he thought it might be said to be entirely complementary to it, and he was quite sure that these flats would be very useful for the class of person for whom they were designed. (Hear, hear.) He hoped these flats would be a very great success, and provide for a need which all would like to feel was being met. He felt very glad indeed to have been able to come to lay the foundation stone of the first of them. (Applause.)

THE National Association of Merchants and Manufacturers, which seeks to secure acceptance of the principles laid down by the Brussels Financial Conference, has issued a brochure under the title of "The 'Safeguarding' of Industries: A Criticism." The author, Mr. E. G. Brunker, deals exhaustively with the points in the White Paper.

Trade Notes.

MRS. W. E. ALLEN, widow of the late principal of Messrs David Allen and Sons, the well-known printers and poster experts, opened a new wing of the firm's factory at Wandsworth on Saturday evening. The ceremony took place during an interval in an entertainment organised by the employees of the firm.

THE third annual dinner of the Process Engravers' Club, held at the Hotel Cecil on Tuesday evening last, was a highly successful function. A report of th . proceedings will appear in next week's issue.

FOLLOWING the postponement of the Safeguarding resolution in respect of wrapping paper, the Prime Minister stated in the House of Commons on Tuesday that it was intended to introduce the proposals next session.

THE death has occurred at Stockport of Mr. David Coppock, in his 79th year, for 40 years with the *Manchester Guardian* and *Manchester Evening News*.

CAXTON HOME, LIMPSFIELD.—A successful concert was held on Saturday evening last at the London and Brighton Hotel, Peckham, in aid of this institution, under the chairmanship of Messrs. G. K. Southwell and F. J. Mayer, of the *Daily Express*. The South London Caxton Musical Society provided an excellent and varied programme. The "plate" was announced at nearly £70, and included generous donations from Lord Beaverbrook and the *Daily Express* Companionship of £25 each. The Society propose to name a *Daily Express* bed at the Home, Limpsfield, in the spring of next year.

THOS. DE LA RUE AND CO., LTD.—The 28th annual general meeting of Thomas De La Rue and Co., Ltd., was held in London. Mr. Sidney Lamert, chairman of the company, presided, and said that the accounts had on this occasion been delayed for two months in order that the balance sheet, as presented to the shareholders, should incorporate the changes rendered necessary by the scheme of capital reorganisation. In accordance with the financial reorganisation scheme, a sum of £1,214,640 had been written off, with the result that the balance sheet value of the assets was now a reasonable and proper one. Profit and loss account showed a credit balance in the period under review of £23,666, which, in the circumstances, must be regarded as satisfactory. The record of the past few years was one of steady, if of slow, progress.

Personal.

VISCOUNT ROTHERMERE is due at Southampton from New York to-morrow (Friday).

SIR GEORGE ROWLAND BLADES, BART., J.P., M.P., presided on Monday at a very successful concert held at the Kingsway Hall under the auspices of the Lloyd Memorial (Caxton) Seaside Home, Deal. The effort, which realised £250—was in aid of the funds being raised for the erection of flats for retired printers at Deal.

WE regret to learn that Mr. W. Whyte, secretary of the London Master Printers' Association, has not yet recovered from an injury to the spine, which has confined him to bed for over a week, subsequent to a fall upon frosty ground. A large circle of friends in the printing and allied trades will join with us in wishing Mr. Whyte a speedy return to health.

MR. B. CLAYDON has been appointed secretary of the Employers' Federation of Envelope Makers and Manufacturing Stationers, in succession to the late Mr. F. L. Armstrong, and will take up his duties forthwith.

MR. CLAYDON is secretary of the Fibreboard Manufacturers' Association and the Association of Corrugated Papermakers, and it is proposed that these two associations should be housed with the Federation at their new offices at 69, Fleet-street, London, into which the Federation hope to move before the close of the year.

Country News.

Bristol.

IN connection with the centenary of the firm of John Wright and Sons, Ltd., to which we recently referred, there was a gathering of about 250 employees and friends at the Victoria Rooms, Clifton, on Thursday last, on the occasion of a dinner given by the directors. The musical programme was provided by the celebrated Bristol Glee Singers, and Mr. Hartland S. Wright, who presided, announced that with the New Year a new Benefit or Benevolent Fund would be started, taking the place of the one which was brought to an end during the strike of 1922. The evening was one of presentations. The chairman was presented with an illuminated address; the directors' wives were each presented with handsome bouquets. Every employee of the firm of one year's service or more received a monetary gift varying from 10s. to £6 according to time of service; and 15 employees received diplomas.

AT the office of the Bristol *Times and Mirror*, Ltd., on the evening of the 3rd inst., a presentation of a handsome gramophone was made to Mr. James W. Haskin on the occasion of his retirement after 56 years of service in the composing room.

Bradford.

A FIRE occurred on Saturday morning at the printing works of Messrs. Jones and Stead Parsonage-lane, Brighouse, near Bradford. The Corporation fire brigade were quickly on the scene, but the roof had burnt through before their arrival. The upper floor of the building, which was occupied by the firm, was gutted, and damage was done to printing machinery, type metal and paper. The damage is covered by insurance.

The Publishing Trade Dispute.

In regard to the London book publishing trade dispute, Mr. G. F. Larcy, secretary of the London central branch of the Printing and Paper Workers' Union, stated on Saturday that at a meeting of over 1,000 delegates, held at the Elephant and Castle Theatre that morning, a resolution was unanimously carried recommending the taking of a ballot of members on the question of a special levy for six weeks, or should the dispute not then be settled, for a longer period, such period to be agreed upon by a further delegate meeting. It was decided that in the case of members earning from £3 to £3 7s. 6d. per week the levy should be 1s. per week; over £3 7s. 6d. and up to £3 15s., 2s.; over £3 15s. and up to £4 2s. 6d., 2s. 6d.; over £4 2s. 6d., 9d. per week in respect of each pound of total earnings. Overtime to be counted in all cases. The ballot papers are to be returnable before Christmas.

Improving Trade.

OFFICIAL figures amply confirm the belief that trade has improved considerably during the last three months. In the paper industry alone there is a reduction of the unemployment figure by 2 per cent., *i.e.*, the percentage has fallen from almost 8 per cent. to 5·9 per cent., and it is more than probable that the figure to-day is nearer 5 per cent. Within a month the papermaking industry has absorbed over 3 per cent. of its unemployed, and there is every likelihood of further improvement. We would naturally expect that the trade would be having its busiest period at this time of the year, but it is much more satisfactory to be able to regard the turn that it has taken as being something more than of a temporary nature. It is a new feature in paper buying to find that certain mills cannot give delivery for three weeks, when only a month or two ago the same mills were almost ready to put any new order direct to machine. In our own experience, this has happened a few times lately, and it is the most encouraging evidence that could be provided of a new condition of things.

* * *

Papier Mache.

IN one of its recent issues the *Daily Telegraph* devoted a leading article to the subject of papier mâché, suggesting that this industry was a thing of the past, which died a natural death some years ago and that the hope of its revival was very remote. Mr. Richard Harman, for Display, Ltd., has challenged the contention of the writer. Far from being dead, he asserts, the papier mâché business is very much alive and the output of several large factories is now taxed to the utmost. He proceeds: "This fairly flourishing condition of the papier mâché industry is due to the greatly improved methods of window display which have appeared in this country during the last few years. Many articles used in modern window display must of necessity be made of papier mâché. The many handsome decorative effects, vases, etc., seen in shop windows are made of this material, while blouse forms, costume stands, hose legs, and the bodies of wax figures are also carried out on a similar foundation. It has also been found that the model mannequin as seen in shop windows at the present time can be entirely carried out in papier mâché.

SOUTH-WEST London Master Printers' Association.

Whist Drive and Concert.

Given a congenial company, a pleasant place of assembly, a capable M.C., artistes of excellent talent, the wherewithal to refresh the inner man and an opportunity to pit one's skill against one's fellows', all under the inspiring leadership of the president of the S.-W. L.M.P.A., and you have all the ingredients for a happy evening.

None of these elements was lacking on the occasion of the whist drive and concert arranged by this association and held at Messrs. Arding and Hobbs Restaurant, Clapham Junction, on Tuesday of last week.

On this occasion the S.-W. Association were joined by the S. E. Association as their guests, and members and friends began to assemble at about 6.30 p.m.

The first half-hour was spent in making new acquaintances and renewing old ones and it was quite obvious that the opportunity thus afforded was much appreciated.

Shortly after 7 p.m., in response to the call of the M.C., Mr. A. Spring, the company, numbering in all about 130, seated themselves at the tables for whist.

Those who did not play whist occupied the time with social chat, and also apparently derived considerable entertainment in watching the incidents of the games.

At the close of play the prizes were handed to the successful contestants by Mrs. Simnett.

Mrs. Hornsby and Miss Kempsell both having secured 102 tricks were invited to draw for first and second prizes, the result being that Mrs. Hornsby was presented with a canteen of fish cutlery as first prize, and Miss Kempsell with a case of fruit knives as second prize.

The first gentlemen's prize, a suit case, was won by Mr. Chesworth, who scored 104 tricks, and the second gentlemen's prize by Mr. Watson, who received a set of hall brushes.

Mystery prizes were awarded to Mr. Millington and Mr. W. L. Mead.

Then followed an interval which was devoted to the enjoyment of the excellent refreshments which were daintily served, and supplemented with cigars and cigarettes which were handed round by Miss Ethel Chivers whose services were afterwards acknowledged by the president with the gift of a box of chocolates.

Before passing to the second half of the programme, Mr. Simnett took the opportunity of saying a few words of welcome. He said how glad they were to see Major Maurice Clowes, the president of the L.M.P.A., on the occasion of his first visit, and felt sure he was voicing the wish of all present that Major Clowes should address the gathering.

Mr. Simnett also mentioned the presence of Mr. Keliher, a past president of the L.M.P.A; Mr. H. R. Grubb, president of the S.-E. Association; Mr. W. J. Mizen, secretary of the North London M.P.A.; and also the representatives from headquarters. He went on to say that on behalf of the company assembled he had that evening written to Mr. W. Whyte, the secretary of the L.M.P.A., expressing sympathy with him in having met with an accident which rendered him unable to be present.

Mr. Simnett then called on Major Clowes, who responded with a short speech in happy vein, in the course of which he stressed the importance of two forthcoming events, the L.M.P.A. annual dinner early in the new year, and the Federation annual congress at Eastbourne in May, 1926.

The company then settled down to enjoy the excellent programme provided by the artistes—Miss Doris Burn, Miss May Phillips, Mr. Louis Dare, Mr. Walter Todd, and also their old friend, Mr. Arthur Spring.

Each item on the programme was encored, and the artistes enthusiastically responded.

The proceedings were brought to a close at about 10.45 p.m. by the singing of the National Anthem.

LONDON CENTRAL DISTRICTS

Association of Master Printers.

Successful Bohemian Coacert.

There was a large gathering of master printers and their ladies at the eighth annual bohemian concert of the London Central Districts Association of Master Printers at Stationers' Hall on Wednesday of last week. In addition to the provision of a capital musical programme, the function afforded many opportunities during the evening of engaging in social intercourse, and of so gaining a closer understanding of one another's interests. Those present in a representative gathering were:—Messrs. R. A. Austen-Leigh (president), G. Poulson, A. C. Shaw, W. Trounce, G. F. Tomkin (East and North-East L.M.P.A.), H. R. Danford, F. H. Cole (joint secretary, South-West L.M.P.A.), J. R. Burt (joint secretary, West and North-West L.M.P.A.), W. J. Mizen (secretary, North London M.P.A.), J. Emlyn Jones, W. J. Boyle (secretary, Central Districts L.M.P.A.), J. R. Riddell, A. E. Goodwin (secretary, Federation of Master Printers), E. G. Baker (assistant secretary, L.M.P.A.), and J. Johnson (organiser, L.M.P.A.).

As on former occasions, a choice selection of concert artistes was presented, and full appreciation was accorded to their individual efforts. Mr. William Parkyn was again in charge of the musical programme, and besides fulfilling the duties of accompanist, rendered some excellent songs at the piano. Mr. Reginald Johnson sang sentimental songs in first-rate fashion, whilst Miss Alice Lilley was also a popular soprano. Miss Phyllis Hasluck as a 'cello soloist showed herself a very effective exponent of the capabilities of this instrument. Mr. Maurice Charles ("in chalk and chatter") proved a very entertaining artiste, his lightning sketches being warmly applauded. As a humorist Mr. Ben Lawes was as popular as ever, his funny stories eliciting a considerable amount of laughter.

During a pause in the musical programme some refreshments were agreeably introduced, followed by a brief but witty address by Mr. Austen Leigh, who took the opportunity of extending a welcome from the London Central Districts Association to the visitors present. He also conveyed the thanks of the gathering to Messrs. W. J. Boyle, O. G. Poulson and A. C. Shaw (stewards), and the artistes for providing such an entertaining and enjoyable evening.

Messrs. George Mann and Co.'s

ANNUAL DANCE.

The London branch of Messrs. George Mann and Co., Ltd., held their annual dance on Saturday at Fuller's Restaurant, Regent-street, where a gathering of the staff and their friends numbering 250 had a most delightful evening.

The prizes for the best and the most original fancy dress, together with the "lucky spot" and the "lucky number" prizes, were very kindly presented by Mrs. S. C. H. Wichmann.

During the refreshment interval, several very enjoyable songs were rendered, and the whole evening was voted a great success.

Stereotypers' Auxiliary Concert.

The enterprising committee of the Electrotypers and Stereotypers' Auxiliary to the Printers' Pension Corporation held another very successful bohemian concert on Monday at Anderton's Hotel, Fleet-street, E.C. The chair was occupied by Mr. W. H. Coombs, and there were also present Mr. W. C. Warren (general secretary, National Society of Electrotypers and Stereotypers), A. Chadwell (Auxiliary president), Harry Williams, J. Sunderland, W. M. Forsyth, W. Bullett, J. Black and W. Longley. Mr. George J. Harrison who arranged the concert, was unfortunately unable to be present owing to illness.

The concert programme was of the usual high standard provided by this Auxiliary, and included the following well-known artistes:—Misses Edith Davies (soprano), Kate Mayes (mezzo-soprano), Isabel Leighton (contralto), Doris Stratford (juvenile character comedienne), Valerie Wyngate, Brena Quinion, The Nomad Banjo Bandelette, and Messrs. George Bostock (tenor), Godfrey Cons (baritone), Jock Hillier (Scotch humorist), Fred Temple (comedian), "El Reno" (siffleur and bird mimic), Walter Barker, Edmund Kennedy (comedians), George Bolton, Kit Keen (entertainers), Bert Terrell (Dutch comedian), and the Swanee Coons. It is interesting to observe that the last-mentioned artistes are employed at the *Westminster Gazette* foundry.

At a convenient pause in the musical programme Mr. Warren took the opportunity of proposing the health of "The Chairman," and in doing so said he regretted the absence of Mr. Harrison. He hoped that his illness would be only of a temporary nature, and he would convey to their friend the sincere wishes of the company for his speedy recovery. He then went on to thank the chairman for the splendid efforts he had made. These were all the more noteworthy, he said, because of the large number of appeals that had come before the trade durihg the last few months. That was not the first occasion on which Mr. Coombs had occupied the chair at a similar function. By their chairman's effort that evening they were able to complete the eighth pension and were now on the road to establishing a ninth. At the forthcoming election in March they were putting up four trade candidates and they hoped to secure their election. He was very pleased indeed to be able to announce that Mr. W. M. Forsyth had agreed to take the chair at the next concert to be held on January 25th. Mr. Warren then stated that the financial results of the evening had realised the handsome total of £85, and concluded by extending to Mr. Coombs the Auxiliary committee's best wishes for his future welfare.

Mr. Coombe, in reply, thanked the company for the wonderful support he had received. He then mentioned by name all the officials of the Auxiliary, and referred in a eulogistic manner to the past work of these men.

The singing of Auld Lang Syne terminated a very happy and successful evening.

THE London Society of Machine Rulers has decided by ballot to amalgamate with the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers. The fusion will take effect as from January 1st next. The vote was 294 votes for and 22 against.

Photographic Sensitising Dyes.

SIR,—I am indebted to Messrs. Ilford for drawing my attention through the courtesy of your columns to a paragraph in the report of my lecture, "Developments of Offset Printing," which does not quite accurately interpret either my own or Messrs. Ilford's views.

In cutting down the matter for publication, a section of a paragraph was omitted from my original notes. This paragraph should have read: "Along with a colleague in the University of Leeds we reproduced in 1916 the necessary dyes for panchromatising our plates for colour printing *and carried on during the War and until such times as such dyes were once more available on the British market made by a British firm.*"

After the publication of our report in November, 1916, on the possibilities of the production in this country of colour sensitising dyes it was a source of great satisfaction to us to find the co-operation of Professor Pope with Messrs. Ilford, Ltd., in the commercial production of a series of new sensitisers superior to the German products in 1917.

Although the Leeds Technical School Laboratories had been interesting themselves in colour sensitisers since 1906, it was only a war urgency that influenced them to make a laboratory production. They never intended to produce dye sensitisers on a commercial production basis, simply using the small quantities made for experimental work, mostly on textile printing investigations.

S. E. BOTTOMLEY.

Leeds Technical School,
Department of Printing,
86, Woodhouse-lane, Leeds.
December 6th, 1925.

South-East L.M.P.A.

The Association of Master Printers of South-East London held their monthly meeting at the Bridge House Hotel, London Bridge, on Monday, when there was an excellent attendance.

After the usual business had been conducted, the president of the L.M.P.A., Mr. Maurice Clowes, delighted the meeting with a very able and forceful speech in which he pointed out methods of making the printing business profitable to everybody concerned. That his remarks were very heartily approved was shown in the applause which marked the conclusion of his address, and this was further indicated in the brief discussion that followed, when it was made plain that the speaker had largely voiced the feelings of the whole of the meeting.

Mr. H. R. Grubb, president of the South-East Association, presided over what was a thoroughly successful meeting.

ONE of the greatest lessons of life is to learn, not to do what one likes, but to like what one does.

"GOLDFILM" BLOCKING FOIL

(IN ORANGE, LEMON AND SILVER SHADES)

Made by an entirely New and Patented Process. A boon to all users of Gold Leaf, Foils, &c.

GOLD LEAF in all shades & sizes.

RIBBON GOLD LEAF from ¼in. to 3½in. wide, WHITE TRANSFER BLOCKING FOIL in two qualities. "FEST" specially prepared for fine work.

METAL LEAF, ALUMINIUM LEAF in Schlag or Book Form

OSO-ESI GOLD FOIL.

"GOLDFILM" is the finest Foil on the market. It gives better results than any Foil hitherto made. Is most economical . . . **Made in size, 16 in. x 10 in.,** used without preparation. Will work on any material with splendid results. Be convinced as to its advantages, by ordering a sample box containing 250 sheets for 30/, carriage paid. Small samples will be gladly sent gratis. Special quotations for quantities.

ONCE USED, ALWAYS USED.

We hold stocks of all kinds of Gold and Coloured Foils,&c.

The Bookbinder

Bookbinding: By Cedric Chivers, J.P.

Lecture before the Royal Society of Arts.

(Continued from page 434).

For books of thick paper requiring guarding I use a serrated linen (Fig. 13). This has advantage over the usual method, in that it is cheaper, is more readily pressed into the paper, and the serrations are so arranged as to interlock, resulting in less thickening at the back of the back than with the usual method.

For books not greatly used but required for permanent reference, I have provided

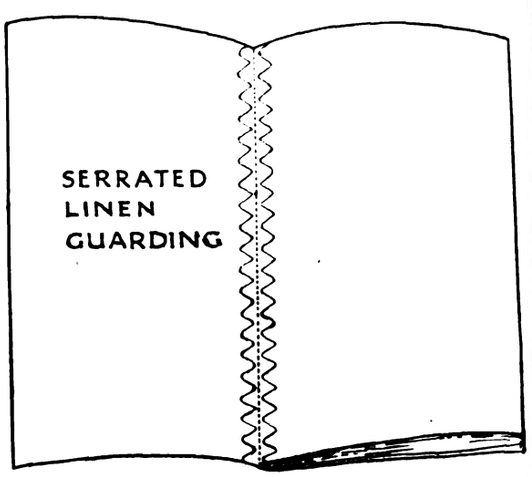

FIG 13

a binding which I call "Storage Binding." It has been made possible by large purchases of Niger leather, using the rougher surfaced portions of skins for this cheaper work, by using machine sewing and the employment of a specially made hard grained board which does not require a cloth covering. This supplies a cheap binding which is efficient for the purpose for which it is intended—for Patent Specifications, Parliamentary Blue Books, and such books as one would hesitate to put in a binding too good for the service required of them.

The photograph (Fig. 14) shows in a graphic way the result of binding all books in the same way. The book A has sustained no less than 483 issues in a Public Library, whereas B has come to pieces after being loaned some 10 times only. It was bound in exactly the same way as A. This illustrates the necessity of adapting the binding to the varying qualities of paper. Had the nature of the paper of B been considered and appropriately dealt with it would have rendered good service.

Leather has qualities which no other materials possess in adaptability to the binding and covering of books. Other materials may cover but they do not bind as leather does—if wisely chosen it has greater variety in thickness, softness, pliability, tenacity of adhesion and strength, being capable of adaptation to the exceedingly varied conditions which the diagrams illustrate modern books to exhibit. The Society of Arts in 1901 gave a very valuable report on the reasons for the decay observed in modern leather, and set forth suggestions as to the better tanning and dyeing. Some amplification of their enquiry appears to be necessary, for supposing the leather is tanned and dyed in the manner the report specifies, it is still desirable to know which leathers supply the best mechanical qualities. I therefore made exhaustive tests of the tearing strains of the various leathers used in bookbinding. Fig. 15 sets out the results of such tests; first the thickness in thousandths of an inch is given, then the tearing strain in pounds. The strength ratio is shown and the order of value of the skins compared with each other. The high value which is shown by the Niger leathers is not a little surprising, when it is remembered that those

and time to operate, with results which give a more satisfactory result than can be obtained under civilized conditions.

(To be Continued.)

LONDON SCHOOL OF PRINTING.—The new term commences on Monday, January 4th, 1926. Those desiring to enrol in the following classes should make early application at the School:—Costing, Salesmanship, Photo-litho, Estimating, Offset, Colour Photo-litho.

Scandinavian Bookbindings.

Publicity for Well-Bound Books.

It is always interesting and helpful to the bookbinder to have the opportunity of seeing bookbindings that have been executed in countries whose arts and crafts have different histories and different traditions from those of the arts and crafts of his own country. In this respect the various international book trade exhibitions that are held from time to time perform a much-needed service, though the pity is that comparatively few, either of master bookbinders or working craftsmen, find it possible to overstep national boundaries and visit such exhibitions.

With these facts in mind we are the more interested to get a glimpse of a group of Scandinavian bindings, very beautifully reproduced by half-tone blocks in monotone and in colours, in a booklet which reaches us from Stockholm. Entitled "Norstedtsböcker i Norstedtsband," the booklet is issued by the publishing firm of P. A. Norstedt and Söners, and incidentally serves well as an example of what pleasing effects can be obtained through the medium of printer's ink by those who wish to produce beautiful publicity matter to convey the attractions of well bound books. When one thinks of the charming colour pictures so freely used by advertisers who press the claims of particular brands of motor cars, pottery and many other goods, one cannot but think that too little use is made by binders or publishers in this country of illustrations capable of showing to prospective buyers the beauties of book-covers; for book-covers, if true examples of bindery craftsmanship, are better suited to artistic reproduction than many species of merchandise more frequently pictured.

The brochure before us suggests very forcibly what a wealth of possibilities there are in the way of backgrounds in which well-bound books can appropriately be shown. To seem naturally placed, a book will usually be pictured as resting on a table or shelf of some kind, but apart from this primary desideratum, the photographer or artist has a limitless field for exploitation in respect of the surroundings that may suitably be chosen. Flowers, vases, *objets d'art*, wall coverings, framed pictures, table covers—things whose beauties of form and colouring touch the whole range of art—all these are naturally to be found upon or close beside the table or shelf which serves as the resting place of books. And a book that is beautiful in its binding can look quite at home amongst such things of beauty; indeed, if the grouping be appropriate, the book may have its own beauty enhanced, and not eclipsed, by its surroundings.

To give but one example, we turn to the first illustration in this booklet. The publisher shows us a set of volumes half-bound in leather, blue with gold lettering and tooling, the edges gilded. Pictured in true colours (or approximately so), such bindings naturally form a pleasing picture. But how greatly is this charm increased when the volumes are shown standing on a table covered with a cloth whose goldish colour forms a pale, but kindred, background to the golden edges, slight touches of ornament toning with the blue of the covers, whilst this blue is more luminously matched by the tints of a blue flower vase standing by, the latter bearing carnations of a strikingly contrasting crimson. Such is but one example from this booklet, in which there are others equally happy. And the field for the making of such pictures is, of course, infinite in extent.

As regards the designs of the bindings, not much can usefully be said without picturing them, but one feature that stands out prominently is a feature to which we have frequently drawn attention as notable in Continental bindings. This is the use of paper, beautifully marbled or printed, to take the place of leather or cloth for the sides. Some delightful effects are thus produced.

Buy British Boards!

Why do not the publishers discard the use of foreign strawboards in favour of the more economical British board? We are aware of the arguments they will extend and we know also that British boards are being used in certain quarters. The fact remains, however, that an increasing volume of imported boards are being used up by publishers' binders and in many cases the merits of our domestic board have not been sufficiently investigated.

Printing, Bookbinding and Kindred TRADES OVERSEERS' ASSOCIATION.

The December Monthly Meeting.

The usual monthly meeting of the Association was held on Tuesday of last week at St. Bride Institute, Bride-lane, E.C., under the chairmanship of Mr. J. Fleming (president), supported by Mr. A. G. Aves (vice president). There was a good muster of the members, and the customary interest was shown by those present in the evening's proceedings.

Following the reading of the minutes which were duly confirmed—several items of correspondence were considered.

Amongst the letters received was one from Mr. Frederick Yeats, an old member of the Association, in which it was stated that he had decided to stand as a candidate at the next election of the Printers' Pension Corporation.

Another letter contained an inquiry from a lady overseer with reference to the formation of a ladies' section of the Association. This matter, the secretary stated, had been considered by the executive; who had come to the conclusion that such a suggestion could not be entertained.

A letter was also read from Mr. England (secretary of the London Printing Machine Overseers' Benevolent Association), in reply to a letter from the secretary of the Bookbinders' Association on the question of the Amalgamation of the two Associations, a proposal which was voted against at the last meeting of the latter Association

The next item on the agenda appeared as "Current Topics," a subject which gave to the members an opportunity of disclosing to their fellow members conditions and difficulties prevailing at the present time as a result of the book trade dispute. Whilst expressions were made to the effect that production and delivery of goods were being curtailed to some extent, most of those who spoke said the dispute was not now interfering with their work.

The chairman next drew attention to the concert being arranged by Mr. J. E. Dixon at the "Horns Assembly Rooms," Kennington, on the 12th inst. As one of their past presidents Mr. Dixon's effort should, he said, be well supported by the members.

As a result of the chairman's remarks a collection was taken up in the room and a sum of close upon £5 was raised by this means.

Mr. Brooks, on behalf of Mr. Dixon, expressed thanks to the members for their generous contribution.

The stewards' report and balance sheet of the 21st anniversary festival was next presented. This was dealt with by Mr. A. H. Smith, who stated that, subject to a few outstanding amounts, the account was on the right side to the extent of a few shillings.

Mr. Fleming, in proposing a vote of thanks to the stewards for their work on that occasion, said the statement just presented did very great credit indeed to Mr. Smith, Mr. A. J. Jones and Mr. A. E. Walters (stewards).

The vote of thanks was seconded by Mr. Aves and very heartily accorded.

The chairman, in a few suitable words, voiced the pleasure of the meeting at the presence of Mr. A. J. Daines, a past president, who had been prevented through ill-health from attending the monthly gatherings for some time.

Nominations for an auditor for next year's accounts were next asked for, and Mr. J. A. Goldbourne was appointed.

The remainder of the evening was devoted to a fascinating little talk by Mr. J. A. Esler, who took as the title of his subject, the "Romance of Journalism." After a few personal remarks with reference to his earliest recollections of several journalists, Mr. Esler went on to speak of Mr. Frank Dilnot, especially mentioning the important part he played in connection with the discovery of crime. Other journalists and authors dealt with were William Le Queux, Harry De Windt, G. B Burgin, Algernon Blackwood and George. Augustus Sala. Both the amusing and serious sides of the lives of these well-known men were told in an interesting manner.

Mr. Arthur Cox said he had enjoyed the lecture immensely, and again they had had an example of the versatility of Mr. Esler's mind.

Mr. Fleming, in proposing a vote of thanks to the lecturer, said each time Mr. Esler addressed them he broke out in a fresh place.

The vote of thanks was warmly received.

At the conclusion of the meeting the president expressed seasonal greetings to the members on behalf of the executive.

DIVIDENDS AND REPORTS.

THE AMALGAMATED PRESS (1922)—dividend at 10 per cent. per annum, less tax, on ordinary shares for half-year, payable January 1st. (Last year dividend same).

"DAILY MAIL" TRUST.—Profit for year to September 30th, £158,231, plus £1,484 brought in, making £159,715. Written off premium on redemption of first debentures, £110,000; forward, £49,715. During year balance of debenture stock £3,999,935 has been repaid. Sum of £553,987, representing part of surplus on liquidation of E. Hulton and Co., has been applied in reducing unpaid liability on ordinary share capital from 18s. to 12s. 6d. per share.

KELLY'S DIRECTORIES.—Interim dividend for the half-year ended September 30th, 1925, of 1s. per share, being at the rate of 10 per cent. per annum, less tax, on ordinary shares, payable December 31st. An interim dividend is also announced for the six months ending December 31st, 1925, at the rate of 6 per cent. per annum on the six per cent. preference shares and at the rate of 7½ per cent. per annum on the seven and a-half per cent. preference shares, in each case less income-tax, payable December 31st, 1925.

UNITED NEWSPAPERS (1918).—Warrants for the dividend on the 7½ per cent. cumulative preference £1 shares for the period from June 15th, 1925, to December 31st next will be posted to shareholders on the 12th inst.

NEW COMPANIES.

KELLY AND KELLY, LTD.—Capital £20,000, in £1 shares; to adopt an agreement with H. M. Kelly, and to carry on the business of manufacturing stationers and printers formerly carried on by him at 42, Moor-lane, Finsbury, as "Kelly and Kelly." Private company. Subscribers: H. A. Smith, Olive E. Pratt and H. M. Kelly. Solicitors: Cameron Kemm and Co., Gresham House, Old Broad-street, E.C.2.

H. H. TETLEY AND SONS, LTD.—Capital £5,000, in £1 shares (1,000 7 per cent. cumulative preference and 4,000 ordinary); to acquire the business carried on by Herbert H. Tetley and E. H. Tetley, at 2, Clarence street, Bradford, as "H. H. Tetley and Son," and to carry on the business of printers, stationers, lithographers, stereotypers, electrotypers, etc. Private company. First directors: Herbert H. Tetley, E. H. Tetley and Harold H. Tetley. Registered office: 2, Clarence-street, Bradford.

RUDOLF MOSSE, LTD.—Capital £1,000, in £1 shares; general advertising agents and contractors, publishers, printers, etc. Private company. Directors: Karl Haepp and F. Popper. Solicitors: Buckeridge and Braune, 3 and 4, Clement's-inn, W.C.2.

BONNER AND CO., LTD.—Capital £5,000, in £1 shares; to acquire the business of printers carried on at 1, 2 and 3, Rolls-passage, and 38, Cursitor-street, E.C., and elsewhere as Bonner and Co., or the Chancery-lane Press. Private company. Directors: A. Bonner and H. Gilham. Solicitors: A. M. Longhurst and Butler, 63, Fenchurch street, E.C.

WALTER LEY, LTD.—Capital £1,000, in £1 shares; to acquire the business of a printer carried on by W. Ley, at 13A, High Ousegate, York. Private company. Directors: W. Ley and Mrs. F. Ley. Registered office: 13A, High Ousegate, York.

SWEDENBORG SOCIETY, INCORPORATED, (word "Limited" omitted from the title by licence of the Board of Trade).—To print, publish, sell and distribute the works and literary remains of Emanuel Swedenborg, etc. Subscribers: E. H. Bayley, J.P., D. Wynter, Rev. J. S. Dufty, L. Gilbey, Rev. W. A. Presland, Rev. J. F. Buss, G. E. Holman, F. A. Gardiner and W. McDowall. Registered office: Swedenborg House, 20, Hart-street, Bloomsbury, W.C.1.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

JAS. TRUSCOTT AND SON, LTD. (printing and stationery contractors, etc., London).—Issue on November 17th, 1925, of £1,000 debentures, part of a series already registered.

MAGNET PRINTING CO., LTD. (Stoke Newington).—Land Registry charge on Victoria Works, Manor-road, Stoke Newington, dated October 27th, 1925, to secure £600. Holder: S. J. Solomon, R.A., Whitecliffe, Birchington.

MAGNET PRINTING CO., LTD.—Satisfaction in full on October 1st, 1925, of charge dated December 5th, 1921, securing £700.

HATTON PRESS, LTD. (London).—Satisfaction to the extent of £300 on December 23rd, 1924, and to the further extent of £1,700 on November 5th, 1925, of mortgage debentures dated July 30th, 1904, securing £2,000.

GRANT RICHARDS, LTD. (printers, etc., London).—Issue on November 24th, 1925, of £320 debentures, part of a series already registered.

SHOP ASSISTANT PUBLISHING CO., LTD. (London).—Issue on November 24th, 1925, of £250 debentures, part of a series already registered.

T. H. CRUMBIE, LTD. (printers, etc., Leicester).—Satisfaction in full on November 9th, 1925, of mortgage dated October 8th, 1923, securing £10,000.

T. H. CRUMBIE, LTD. (printers, etc., Leicester).—Mortgage dated November 16th, 1925, to secure £16,000, charged on certain properties in Leicester. Holder: J. W. Church, Nine Springs, Northampton.

CARLTON PAINT PRINTING PROCESS, LTD. (London).—Satisfaction to the extent of £1,000 on July 31st, 1924, of debentures dated February 7th, 1923, securing £3,000, of which three debentures for £500 each were issued. (Notice filed November 26th, 1925).

RECEIVER APPOINTED OR RELEASED

BRITON'S PRINTING CO., LTD.—J. D. Dell, of 40, Great Ormond-street, W.C.1, was appointed receiver on May 18th, 1925, under powers contained in debentures dated December 18th, 1919. (Notice filed November 27th).

LOCAL VIEWS, LTD. (printers, etc., London), —E. W. Gundry, of 7, Great Winchester-street, E.C.2, ceased to act as receiver on November 17th, 1925.

"MORA" PAPER CO. (1924), LTD. (Manchester).—H. Steele, incorporated accountant, of 25, Brazennose-street, Manchester, was appointed receiver and manager on November 28th, 1925, under powers contained in debenture dated December 20th, 1924.

Trade Union Matters.

PRINTING TRADE FEDERATION AND SECTIONAL DISPUTES.—At a recent meeting of the Executive Council of the Typographical Association a circular was submitted from the Printing and Kindred Trades' Federation drawing attention to the Federation rule on the conduct of disputes, and pointing out that affiliated unions failing to observe the provisions of the rule forfeited the right to dispute benefit. The circular added that the Federation Executive Committee hoped that its effect would be a closer observance of Federation rules, and so enable the Federation to act to the advantage of all concerned.

L.S.C. UNEMPLOYMENT.—According to the "L.T.J." the number of members of the L.S.C. unemployed represented 452 on November 21st, compared with 479 in the preceding week, 481 for the week ending November 7th and 502 in the last week of October. The 452 given as signing the out-of-work book during the week ending November 21st compares with 659 for the corresponding period last year, and 700 two years ago. During October the total number of hours of overtime worked by L.S.C. members registered 96,450, the general trade being responsible for 83,267 hours and the news section 13,183 hours. In the first of these categories the number of men working overtime is given as 6,152, whilst the requirements of the news department represented 1,157.

WORKING POINTS AT NEWPORT.—The secretary of the Newport branch of the Typographical Association has asked the Executive Council for rulings on the following points: 1) Can a working foreman be permitted to continue working full time while a journeyman in the same office is on short time? (2) Is it permissible for a firm to stand men off for a day against the wish of the men, who preferred that each day should be shortened for all in the department? The Council reply that (1) all members must be treated alike; and (2) the attention of the branch is called to the official instruction that systematic short time must cease.

New Inventions

Ruling Machines.

According to an invention by E. C. H. Will, in a ruling-machine, the upper tapes 6a for guiding the sheets are led back directly after leaving the ruling-cylinder 15, and the lower tapes 5a are returned before arriving at the cylinder 15. The sheets are fed from a table between rollers 5, 6, round which the tapes 5a, 6a pass, the roller 5 being eccentrically mounted to enable its distance from the roller 6 to be adjusted. The lower tapes pass over a roller 8, round a roller 10, back under the roller 8, and

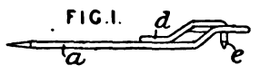
FIG.1

under a roller 7 mounted eccentrically for adjusting the tension on the tapes. The upper tapes, after the lower tapes have returned round the roller 10, pass over an inclined plate P into co-operation with a blanket L running round rollers 1, 4, 9, 12, ruling cylinder 15, and rollers 19, 2, 22. The sheets are carried by the tapes 6a and the blanket over the ruling-cylinder 15 under rollers R. After leaving the cylinder 15, the tapes 6a pass round a tensioning roller 17 and back over the spindles S and roller 14 to the roller 6. The sheets are transferred by the blanket to an endless band E passing over rollers 18, 19, 3, 20, and at the roller 3 are transferred back to the blanket which delivers them between rollers 21, 22.

Gauges for Platen Presses.

A gauge pin for registering paper in platen presses, patented by Mr. D. Aspinall, comprises a single piece of wire bent to provide the usual rearwardly disposed horizontal prong *a* and an integral pointed registering prong *e* at right-angles to the prong *a*. Both prongs penetrate the pad-

FIG.1.



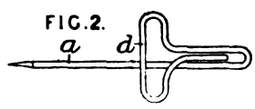


FIG.2.

ding paper, the prong *e* retaining the pin in adjusted position and preventing fed paper sliding beneath the gauge pin and jamming thereunder. The end of the prong *e* is substantially in the plane of the prong *a*. A part *d* is provided to facilitate handling.

Plates for Printing Surfaces.

An invention by Mr. M. Wieland relates to chromate-colloid plates for the production of hand or press deep printing surfaces produced by spreading on plates or films a mixture of glue or like substance which swells in water with an hydraulic cementing or agglutinant medium adapted to set, for example, cement or gypsum, the proportions being such that the capacity to swell of the glue, etc., is maintained. Finely ground quartz or like material may also be added to increase the setting capacity of the cementing medium. When set the layer is sensitised in known manner with chromate salts.

Cleaning Type.

As invented by Mr. B. Pasztor, a composition for cleaning printing-blocks and the like by a dry method, consists mainly or entirely of sticky rubber. The composition may be used in the form of a ball, or a pad prepared by applying a layer of the composition to a band of paper or fabric, the layer being faced with a film of celluloid or the like. Vegetable, animal, or artificial fibres may be incorporated in the composition. The sticky rubber may be prepared by oxidation, depolymerisation, or dispersion in substances such as rosin oils or viscous balsams, in some cases with the addition of natural or artificial rosins.

THE FUTURE OF SOUTH AFRICA

THE strong development and progress shown by South Africa, even during the recent depression, indicates in no uncertain fashion the measure of prosperity that country will enjoy in more normal times.

The trade outlook for the Union of South Africa in 1926 is extremely encouraging at the present moment, and the attitude of all in that wonderful country—from the Premier down to the smallest Printer—is one of well-founded optimism.

Supply houses catering to the Allied Trades anxious to develop the South African market will be sent a post-free copy of

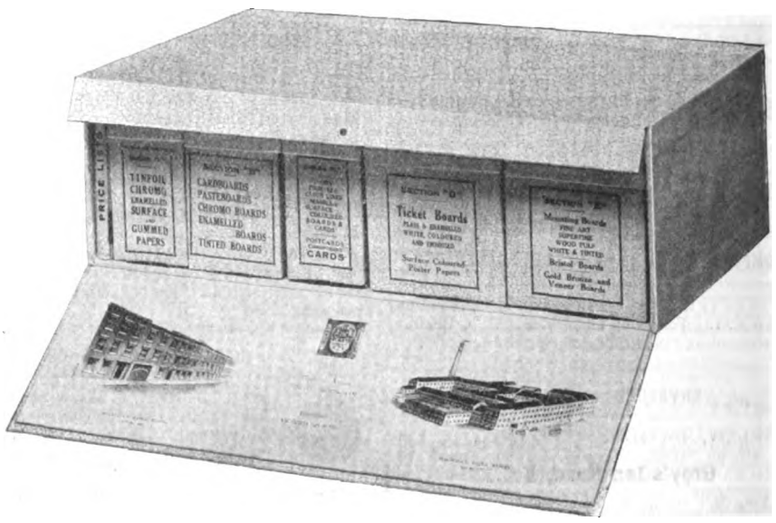
The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

SOME very fine offset cartridge papers are now on the market from various sources, that is from several home mills. We were particularly impressed by a recent new example, which has attained a high standard at an extremely reasonable price. The finish is just right for illustration work in black or colour, a noteworthy feature being that the under side of the paper is almost devoid of wire-mark. We doubt if any but an experienced paper handler could detect a difference between the two sides. Then the colour of the paper is as good a white as could be wished for, a very important point when colour printing has to be executed. A comparison of results of colour printing on several makes of offset cartridge would teach many paper-makers something they have yet to learn about paper. It may not concern some paper-makers what effect paper has upon printing ink, but our own feeling is that a manufacturer who studies users' problems reaps a great advantage, which he can turn to material benefit.

* * *

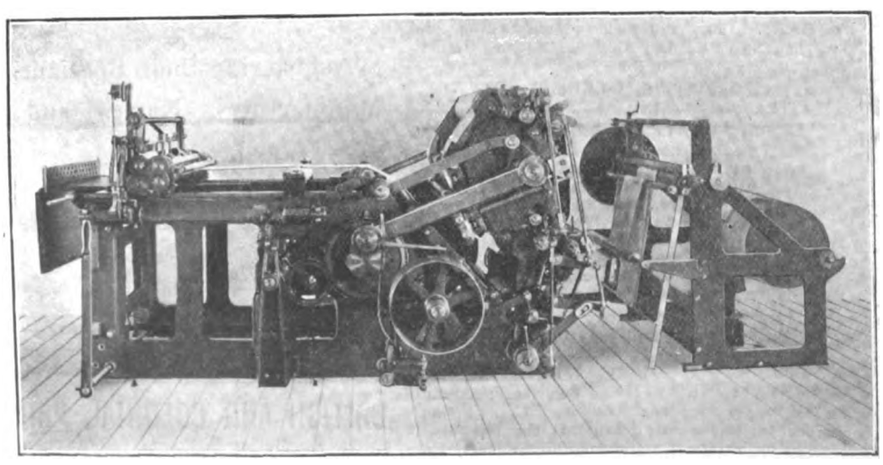


SWITCHING off with a more or less connected thought on advertising, we have in the foregoing the gist of an argument which would be employed by the skilful compiler of sales advertising literature with telling, or shall we say selling, effect. The orthodox method of advertising an offset cartridge would be something like this: "Brandname Offset Cartridge, made in the following sizes and weights, price so much, obtainable from So-and-so." There would be nothing to make that cartridge appeal more than any other, and it would be just one of a large family, with nothing attractive or characteristic about it. The pointer we get from the previous paragraph is that something can be discovered about certain papers that give them definite character, particular adaptability or suitability. Suppose a very prominent house pins its faith to a certain class of paper for certain specialised work. The statement of that fact (with permission, of course) would establish a reputation for that paper, and help to sell it to users doing a similar class of work.

* * *

IMPORTANT changes are taking place in regard to the manufacture of esparto papers. Various countries are endeavouring to undertake production on their own account. As a consequence, there is likely to be a big run on esparto grass. Indeed, it is stated that 20,000 tons are going or have already gone to America, and demand is growing up in other quarters. British papermakers are, therefore, apprehensive that the cost of their raw material will rise.

A New Samples Cabinet.



Something new in samples presentation has been produced by J. and W. Mitchell, Ltd, Bordesley Paper Works, Birmingham, and is illustrated on this page. A wide range of coated papers and boards are contained in a stout box, 15 in. long by 9 in. deep and 4½ in. high. Inside this compact case, which is neatly covered with pale mauve grained paper, are five separate boxes fitted with lift-up lids and tabs, by which any individual box can be easily withdrawn. The interior boxes are

filled with the samples, the front face setting out the contents in clear print Section A comprises tinfoil, chromo enamelled, surface and gummed papers. There are seven sets of examples in this section alone and all are remarkable for variety either of design or tint, as also for the wide range of substances and excellence of finish. These remarks equally apply to the other sets. Section B includes cardboards, pasteboards, chromo boards, enamelled boards, and tinted boards. Britannic and Bordesley ivory boards, cloth-lined boards and cards and linen-faced manilla boards are a feature of Section C, which also represents post cards and correspondence cards. Ticket boards in a great variety of substances and tints, together with poster papers in vivid colours are comprised in Section D. The final Section, E, is as arresting as any. The mounting, Bristol, gold bronze and veneer boards are of supreme quality and finish. For example, the gold bronze board is made by a special process which renders the colour and finish impervious to light and atmosphere for a considerable period. Ten and 12 sheet mounting boards are splendid products which give some idea of the great range in these lines.

We have said sufficient to indicate in some way the extent of the samples which J. and W. Mitchell, Ltd., have got together. All are produced at their own works. The sample box, which is dust proof and so conveniently arranged, is also a tribute to the manufacturing capacity of the firm. Printers, artists, advertising agents and all who use any of these papers or boards will appreciate the neat arrangement of the cabinet. The front, which is held up by a metal clasp, can be easily let down, thus exposing the section boxes, which smoothly slide out of their places. A separate price list gives the necessary particulars concerning all the samples, and being of the loose leaf order, additions or alterations can be inserted as they come forward. The whole scheme is a tribute to the enterprise and ingenuity of the Midlands firm.

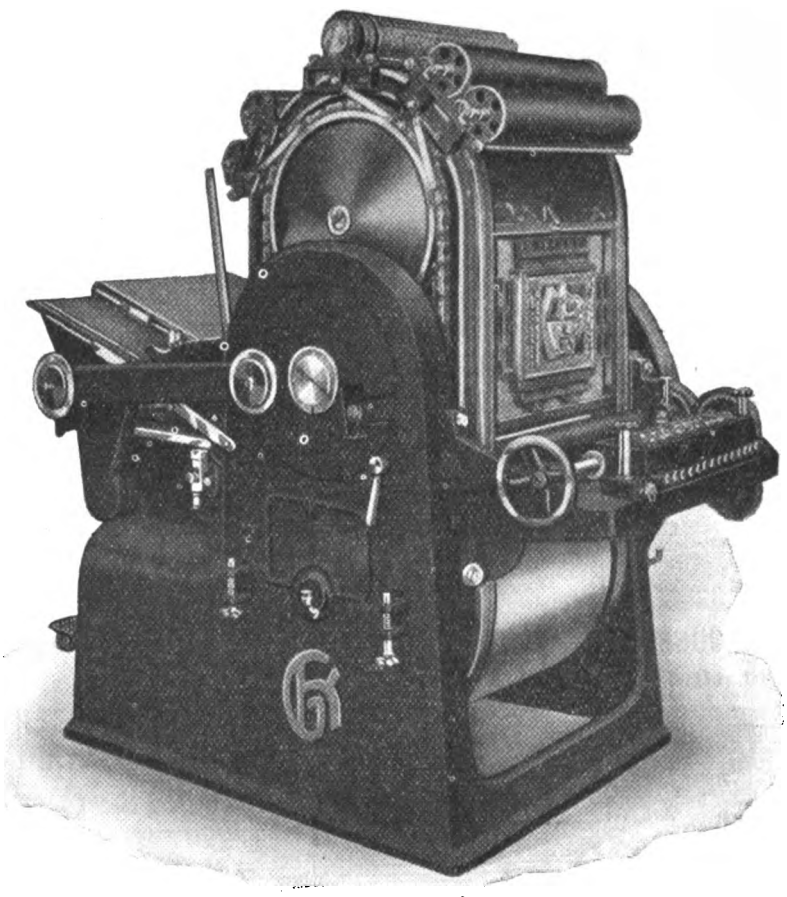
THE TRIUMPH OF Modern Offset Lithography

By JOSEPH GOODMAN, F.R.P.S.,

City and Guilds of London Honours Silver and Bronze Medallist, Lithography and Photo-Mechanical Processes. Author of "Practical Modern Metallithography," etc.

In a little village of Saxony, about half-an-hour's tram ride from the art pottery district of Dresden, is a modern engineering works erected some six years ago. This factory was built to manufacture platen printing machines equipped with a mechanical plant of the latest type of efficiency and precision. Thus equipped, their directorate, engineering experts, and mechanical draughtsmen tackled the difficult problem of adapting and constructing a typographic press to print offset from relief images, type, line, and half-tone blocks, wood cuts, etc., inimitation of and partial competition with the planographic rubber transfer methods of lithography.

The Letterpress Printer's Offset System.



Very wisely they selected the platen principle of manipulation, which, although limiting the productive capacity to the speed and size associated with this type of printing press, nevertheless afforded facilities for the use of a range of materials for printing upon, which are unavailable in any of the more orthodox forms of printing machines, such as letterpress, lithographic and photogravure.

It will be readily perceived and understood that sheets of glass, thin sheets of wood, thick flat plates of millboard, or rigid plates of metal, cannot be fed into a flat bed cylinder machine, a rotary, or reel type of machine; but on the other hand, these difficult materials can be suitably negotiated upon a flat feed platen machine, when equipped with the elastic and delicate impression touch of the rubber transfer principle of printing. At the same time such a machine retains the capacity to print upon supple sheets of paper of every texture and surface similar to that employed upon the lithographic offset machine, but of course with the restricted limitation of size and speed identified with the platen system of printing press. Thus it may be suggested that this new development of offset printing is not so much a rival competitor of the established planographic machine of lithography, but that rather it carries this phase of printing into "fresh fields and pastures new," by opening up new sources and applications and additional services to trade and commerce, thus enlarging the scope of typographic work beyond the whole time areas of application.

Technique of Typo-Offset.

Necessarily there is a difference of technique in the working of this typographic method of offset as compared to the lithographic one, inasmuch as there is no damping procedure in this typo-offset platen machine; the printing, too, is more mechanical and free from the chemical conditions appertaining to the lithographic form of offset.

All the printing surface is in relief here; whilst with the lithographic the printing surface is upon a flat common plane. There are both advantages and disadvantages in this relation. Whilst with the relief or typographic

Letterpress Printer's Offset Platen *(Patented.)*

Digitized by Google

THE LINOTYPE ALWAYS STANDS UP TO ITS JOB

BUILT FOR CONTINUOUS SERVICE AND BUILT TO LAST

From the *Daily Mail*
7th November, 1925

...ion becomes a decrepit hag.

STORMY EDITING.

"DAILY MAIL" ATLANTIC EDITION IN THE GALE.

Passengers in the Cunard liner Berengaria (52,000 tons), which encountered such a severe two-days gale during her last trip from New York to Southampton, obtained copies of *The Atlantic Daily Mail* throughout the passage.

The linotype machine, which sets the type, came through its severe trial with flying colours.

The machine is screwed to a lower deck with the keyboard fore and aft, and although the operator had difficulty at times in keeping near the machine he set the usual full service of wireless news of world happenings. The molten metal in the pot was kept very low in order to prevent "splashing." Had the liquid lead got into the intricate parts of the machine it is possible that repairs could not have been executed until the ship docked. In addition, splashing metal was likely to injure the operator. Linotype setting is a two-handed job, but there were occasions when the operator worked with one hand, the other clutching a bar of the machine to prevent him sliding across the room.

He laughed when asked to set the following wireless message:—

"Warm sunshine has flooded Southern England and the weather has been summer-like."

Up in the wireless room on "A" Deck news was received from the Leafield Radio Station in Oxfordshire and the Cape Cod Radio Station in Massachusetts. The operators have worked in smaller vessels and the ship's violent motion did not worry them.

The *Daily Mail* Atlantic Edition helped the passengers to remember that they were still in touch with the outside world during the severest portions of the storm.

Linotype & Machinery Ltd., 9 Kingsway, London, W.C.

printing surface method there is not the same vulnerability of attrition, or risk of deterioration through unskilful treatment, or through faulty materials such as cheap inks and poor paper; there is, however, the danger of damaging the susceptible and delicate elastic transfer-surfaced cylinder from the use in a "forme" of very thin rule, fine type and small stops, such as fine full points, commas, or from spaces rising, or letters drawing out, etc, indenting and puncturing the surface, which to be fully efficient must be maintained in a perfectly undamaged condition.

Again, in the planographic method a correction can be speedily and appropriately made, either by additional shading, or on the other hand by elimination, according to the artistic or other considerations of the work in hand. There is, further, no unevenness of printing due to old and new founts of type being used in the same forme in the lithographic offset method, but whatever make ready is done in this platen offset method must be done underneath the forme; the difficulty of bringing up a worn letter ranged beside a newer letter of the same fount, is at once apparent, when the only means of doing this is confined to the base of the type itself.

The Machine Illustrated.

The accompanying illustration provides a general view of this typographic offset platen press. The position of the forme is shown and the four inking rollers which rotate in the same continuous direction right round the body of the machine, not backwards and forwards as in an ordinary platen machine. The ink duct or box is placed in a very accessible position in the lower half of the machine, and is fitted with flexible steel ductor blade and adjusting screws. The ductor roller and the ink distribution drum is directly attached and perceivable. The offset roller is also seen in position between the inking rollers.

The four inking rollers as they pass over the forme ink it up; the offset roller then takes the impression from the inked forme and retransfers this ink image to a flat rubber forme, situated at the other side of the press immediately opposite impression platen. The paper or other material to be printed upon is fed into the platen in the usual manner and printed upon by being pressed up to the transferred ink image lying upon the flat rubber blanket sheet affixed to the rigid part of the frame of the machine. The mechanism of the platen is constructed to travel parallel to the rubber blanket sheet and not heel-and-toe manner as in most other platens. There is a wide latitude of adjustment to this platen to meet the requirements of different thicknesses of material from thin paper to thick wood boards, or sheets of metal.

I have examined this machine very carefully and exhaustively on different occasions, once at the Buchdruckerei at Leipzig in the early part of this year, and more recently in November, at the experimental and demonstration department of the manufacturers' works near Dresden, Saxony. I was very anxious to ascertain if there were any gear markings, and found that they favoured the helical gear method. The replacement of possibly damaged surfaces such as the flat rubber blanket forme and cylinder, etc., I found were well catered for. In fact every facility was accorded me to probe out any possible difficulties and tests for efficient registering.

This machine is cleveriy planned, very carefully built and well finished, and is interesting

as the pioneer mechanism for printing from type matter, ordinary blocks, stereos, half-tone, line, etc., upon any quality of paper, rough cardboard, linen, wood, canvas, in mono or multi-colour, without damping or chemical treatment. Another advantage of this press is that it can be used as an ordinary direct printing platen by dismantling the offset roller, and putting the frame in the front of the machine facing the platen.

Genealogy of Photo-Typesetting.

Many Attempts to Solve the Problem.

The question of simplifying the available means for the production of letterpress matter by planographic methods is a very live one at the present day, and the subject of photo-typesetting is attracting much attention amongst lithographers. Very apposite at the moment is an article by H. N. Durham, which appears in the *Offset Printer* (New York), surveying the various photo-typesetting machines which have been patented in the United States Patent Office:—

The possibilities of the photo-typesetting machines are very interesting and the work which can be performed by them makes them a very promising field for the future. Many attempts have been made to devise machines and methods for eliminating the typesetting operation and allow the direct obtaining of a plate or negative. The problem is of more special interest to the lithographic and intaglio printer than to the relief printer. With the former, the composition of text matter is not so simple and involves several steps, the elimination of which would be desirable. Photo-typographic composition attempts to simplify the plate-making process by producing the negative direct, thus eliminating the typesetting operation.

The earliest of the processes patented in the United States was invented by a Russian, Michael Alisoff (182,624 of 1876) and attempted to simplify the composition of music. He printed the musical signs such as notes, bars, etc., on transparent pieces of paper, cut these so as to have a single sign on each piece, and pasted these cut pieces on a sheet having ruled staves. The staves show through the transparent paper, and, when composed, the sheet was photographed to give a negative from which a printing plate was made.

The photo-composing machines for text may be grouped into two general classes: machines that justify; and non-justifying machines. The justifying machines are suitable for book printing and the like, while the others, which do not justify, can be used for display work on advertising, cards, etc. The justifying machines generally compose line by line, and the non-justifying machines letter by letter. In most of the machines the size of the letter can be varied by changing the distance of the camera from the master character.

The First General Machine.

The first machine patented in the United States, to produce a page of composed text, by photography, was patented to George Drummond (198,237 of 1887). A mechanism resembling a typewriter prints on to a white-surfaced elastic strip, which is then advanced to exposing position. Here the strip is stretched until the line is the correct length and photographed. The size of the characters may be changed by varying the distance of the strip from the camera, and the letters may be distorted, by straining in various directions, to give italics, elongated, bulged, or tapering letters. When the negative has been exposed, it is developed, fixed, washed, and printed on to a sensitised metal plate to give a printing plate.

Arthur Ferguson (497,914 of 1893) provided separate characters mounted on bars and so arranged that when a key was depressed the character was moved adjacent the previously positioned character. The bars carry all the letters in line in the same plane, and the spring that moves them is released by a key-actuated trigger mechanism. When the entire line is set up it is photographed. The machine, as shown in the patent, has no means for setting up more than one of each letter per line. When photographed, the characters are returned to their original position. The machine does not justify.

Porzsolt's patent (568,988 of 1896) shows a drum with the characters on rods, arranged radially and pivoted at the periphery of the drum. For each character there is an electro-magnet to draw the character towards the centre of the drum. The depression of a key energises the magnet for the corresponding character, drawing it to the centre of the drum, and when it is positioned a shutter opens, exposing the film. There are four characters on each rod, one on each of four sides of a cube, and the cube can be turned so that any one of the four faces can be presented to the camera, thus providing four fonts on one drum. The negative plate is movable step by step in a horizontal direction and vertically line by line, and is moved horizontally one space after photographing each letter. The machine does not justify the lines.

The patent to Friese-Greene (602,439 of 1898) shows a machine in which the characters are carried on a plurality of long, narrow, vertically movable strips which are raised by weights. These strips are carried by a movable carriage which is fed along letter by letter. When a key is pressed the character strip is released and a stop is placed in the path of the counterbalancing weight to stop it in its downward travel. The position of the stop determines the letter that will show through a long, narrow slot. When the strip has been positioned and the carriage fed one space, another key is pressed to position another character. When the whole line has been set up the strips forming the spaces are moved and their wedge-shaped ends justify the line, in much the same manner as a Linotype justifies. When justified, the line is photographed on an intermittently fed film and the characters are returned to their original position. In this machine each strip carries all the characters and there are as many strips as there are characters to the line.

Step-by-Step Machine.

Richard's patent (636,062 of 1899) is a step-by-step machine setting one letter at a time in which all the characters are carried on a drum. The drum is turned to the proper character by pressing a key. The characters are light stencils and are printed on to a film or plate by contact. His two other patents (636,063 and 636,064) are similar in principle to a typewriter. The type-bars carry the light stencils and a shutter is interposed between the sensitised element and the light. When a key is pressed the corresponding type-bar is raised, pressing the stencil against the sensitised element, and opening a shutter to expose the plate or film. The plate is horizontally and vertically movable, and the entire machine, except the keyboard, is enclosed so that it need not be operated in a dark-room. None of his machines have justifying means.

Wetmore (791,062 of 1905) was drawn to a machine for justifying a line of typewritten matter. The text was first typewritten and then justified line by line either by swinging the line, or by using a cylindrical lens to lengthen or shorten the line as desired. The line was photographed on to an intermittently moved plate.

Blacklidge (943,614 of 1909) provides a character disc mounted over a sheet of sensitive paper on an intermittently fed carriage. An index wheel is turned to bring the desired character into position for exposure, the negative is pressed against the paper and the shutter opened to expose the paper; the shutter is closed and the carriage fed one space and the next letter is then printed in the same manner. The composed negative is then developed, fixed, and used to make a printing plate.

A machine which is essentially a modified Linotype was patented to Cornwall (1126618 of 1915). The customary moulds are replaced by type which is released from the magazine by pressing the keys, advanced to what is ordinarily casting position, justified in the usual manner with wedges, and printed line by line on to a transparent strip. This strip is then severed and printed photographically on to a sensitised line bar which is developed by the machine and stored. Means are also provided within the machine for inking and cleaning the type as it passes through the machine.

The patent to Bunnell (1237239 of 1917) shows a film or paper web supported beneath a negative bearing the characters to be printed. The paper remains stationary and a small masking slit is advanced one space each time a letter is printed. The negative can be moved so as to position any desired character over the slit, and when properly positioned, a lever is depressed, pressing the negative against the paper, and turning on the light to expose the sensitive paper. A scale is provided on the negative carriage to aid in correctly spacing the letters, but aside from this no means for justifying the line is provided. The whole apparatus is light-tight, and may be worked in the open.

Bawtree Patent.

Bawtree (1283394 of 1918) employs a character disc printing letter by letter. The disc is turned by hand and acts as a light stencil which is photographed by a camera so that the size of the letter may be varied at will. The film is advanced relative to the disc for each letter, and its feed is variable so that the spacing between the letters may be changed. Justification is effected by running the line twice. The first run serves only to determine the surplus space at the end of the line, while the second run actually photographs the letters and the computed spaces are inserted where desired.

Savage (1484568 of 1924). The text is printed on paper with even spacing, and at the end of each line there is cut a slit, at a given distance from the last character. The lines are pasted on to an elastic strip, and the paper is cut between the words. A stretching member is inserted into each slit and the lines are stretched until all the slits are aligned, which justifies the line.

Another modification of the Linotype has just been patented to Smothers (1553920 of 1925). The usual moulds are replaced by transparent slugs bearing the characters. These are released from the magazine by the keys and are fed into the casting position, where they are justified and printed photographically on to a sensitised paper web. After development and the other photographic operations, the web is photographed to give the negative from which the printing plates are made. In two of his other patents the transparent slug which acts as a negative has screen lines ruled on the character so that they can be used for making rotary intaglio plates.

Lithographic Trade Review.

NOTES AND NEWS.

The good position in which the lithographic side of the printing industry found itself a month ago appears to be well maintained, and reports received give evidence of still further extension. Within so short a distance of Christmas, printing work of a seasonal character is practically finished with, so far as the printer is concerned. The rush period over, the condition of things prevailing at the moment is regarded as highly satisfactory.

Christmas is always a time of gaily-coloured print, with its calendars, cards, special numbers of periodicals and the like. It is the time of year when the lithographer's work comes more than at any other season to the notice of the public. This year's examples will, we think, show more than ever before what highly artistic picture-making can be done from the lithographer's stone or plate. They will show also that the offset method has made a place for itself which a couple of decades ago the most optimistic would hardly have imagined to be possible.

It is gratifying to note that various technical and art schools and colleges throughout the country are interesting themselves in the new developments of photo-mechanical processes. Quite recently the Free State Government in Dublin has appointed Messrs. J. Mackay and F. Hull as technical instructors at the Dublin Technical School. We note, too, that there has recently been a definite advance on the technical education side of the process trade by the Glasgow Education Committee.

Reference made in this column last month to the first process block produced by the use of "Typon" negative paper brings us a letter from the well known Edinburgh firm of photo engravers and printers, Messrs. Hislop and Day, Ltd. In our reference we by no means claimed that the block mentioned was the first ever made from a paper negative of any kind, and we accept without surprise a statement that Messrs. Hislop and Day, Ltd., have made considerable quantities of line blocks, using negative paper made by Kodak, Ltd. In regard to our comment on the apparent backwardness of photo engravers in experimenting with paper negatives, Mr. W. B. Hislop writes: "The reason why negative paper has not been more rapidly introduced for block making is due partly to a slight loss which takes place both in the shadows and in isolated lines in the case of delicate drawings. In my opinion, this is due to irradiation from the white paper base, and there is no doubt that the Typon Company, in this new so-called "Anti-Halation" paper, have tackled the problem in the right way. I am glad to learn from the company that they are introducing a similar, but faster, paper for use in the camera."

Messrs. Kodak, Ltd., inform us that the use of paper negatives it rapidly extending in the printing trade, and that several of the technical institutions teaching photo-lithography and allied processes are now including the use of negative paper among the methods taught. The Kodak people emphasise the gain made when paper displaces wet collodion glass plates, whose brittleness, impermanence and cost impose disadvantages that are reflected both in the technical and economic aspects. As to time-saving, they claim for these paper negatives that an increase in output of from five to eight fold is possible under properly organised conditions for general work. Their chief advantage, however, arises, it is pointed out, when it becomes necessary to reprint old publications—this being done without recourse to setting up type, by the simple expedient of negative making in the camera any size on the sensitive paper, the negative being then developed and printed down on to the prepared zinc plate ready for printing by direct or offset photo-lithography. Specimens of printing from these paper negatives have proved the reliability and perfection of the process, the finest detail being preserved. We are given to understand that the paper base of their sensitive paper is of the finest quality obtainable, and when oiled it becomes translucent enough to print rapidly with no loss of quality due to irradiation.

A great lithographic artist passes from us by the recent death of Mr. Francis Sydney Unwin at Mundesley-on-Sea. He was born on February 11th, 1885, and was educated at Dean Close School, Cheltenham, and the Winchester School of Art, from which he went to the Slade. In lithographic art Mr. Unwin held a very high position, but he was chiefly known as an etcher, and the skill he displayed in this form of work was remarkable.

This is the day of co-operation, the day of trade solidarity, and the trades that are going to make most headway are the trades whose members are willing to get together and pool resources to some extent for the purpose of solving problems common to individual firms and of pushing business in a way beyond the powers of isolated individuals. We have drawn attention more than once to the fact that the lithographers of the United States have a big move on in this direction, in the establishing of the Lithographic Technical Foundation, which is to promote technical education and research work on behalf of the whole lithographic industry. News now reaches us from New York that a big dinner was held at the Hotel Waldorf-Astoria on the 17th ult. to celebrate the successful starting of this Foundation, contributions of over half-a-million dollars having been collected.

Indeed, the Foundation has already got on to practical work, for there is announced the issuing of the first product of its Research Committee. This is designated "Bulletin No. 1, Research Series No. 1," and the title of the pamphet is "The Characteristics of Paper and Their Relation to Lithography," the writer being Robert Findley Reed.

A step towards the protecting of United States lithographers from the importation of lithographed labels has been made through the efforts of the National Association of Employing Lithographers, who have recently obtained a ruling issued by the Treasury Department to the effect that all labels must have the country in which they were made stamped on them so that it is visible when placed on the articles for which they were intended. "This means," says tne *National Lithographer*, "that cigar bands and the like will either be lithographed here at home or the cigars will run the risk of lying on store shelves until they are unfit to smoke, for we feel that there is still enough of the 'patronise your own country' feeling among Americans to make the use of imported labels inexpedient in the United States."

The National Book Council.

To Promote Distribution of Books.

Of special interest to those concerned with the production and sale of books is the National Book Council (Incorporated), which was registered on November 28th as a company limited by guarantee and not having a share capital, with 25 members each liable for £1 in the event of winding up, the word limited being omitted from the title by licence of the Board of Trade. The income and property of the Council is to be applied solely towards the promotion of its objects, which objects are "To promote the habit of reading and the wider distribution of books, etc." The management is vested in a committee to consist of representatives of the Incorporated Society of Authors, Dramatists and Composers, the Publishers' Association of Great Britain and Ireland, the Publishers' Circle, the Associated Booksellers of Great Britain and Ireland, the Society of Bookmen and such other societies, bodies or institutions as shall be prescribed. The first members are: W. Pett Ridge, S. Unwin, F. A. Denny, G. B. Bowes, G. S. Williams, W. M. Meredith, G. H. Bickers, G. H. Grubb. The organising secretary is M. Marston; solicitors, Field Roscoe and Co., 36, Lincoln's-inn-fields, W.C., and registered office, 30, Little Russell street, W.C.1. The file number is 210,012.

Sir Roderick Jones, as chief proprietor of Reuters, and the Press Association, Ltd., have completed arrangements by which the Press Association and Reuters Trust—the latter composed of the hitherto existing proprietors of Reuters—become joint owners of Reuters' Agency.

Offset, Book and The Art of Advertising.—*Offset, Buch und Werbekunst*, the journal for Printer, Advertiser and Publisher. Der Offsetverlag G.M.B.H. Leipzig. Monthly, M 3.50; abroad, $0.75. No. 9—1925. Special Issue, *Paper*.

This well got up journal is a credit to its producers, and just the sort of thing one would expect to emanate from people thoroughly enamoured of their business. It is clearly printed on good paper and the ample illustrations are good examples of the work represented. A note on the back of the title page states that the type used is that cut in 1670—Janson Antiqua, of the type foundry D. Stempel in Frankfurt; here also the various firms supplying the paper, ink, rubber, machinery, etc., used in the make up of this special issue are named. The matter is varied and interesting. Several imaginative articles, all strictly within the radius of the journal, are followed by 18 full-page pictures illustrating the entire process of papermaking. Each page is offset printed on a different paper representing the make of a mill or the stock of a merchant and forms a very effective advertisement. These are followed by a well-written article on "The Advertisements of Papermakers and Wholesale Stationers" urging a wider use of advertising by the industry and reproducing many advertisements of papermakers and stationers in the U.S.A. to show especially the effective nature of work executed on the mill's own product. Good examples from other countries are also included and the volume also contains some examples of good work by various firms, in the form of insertions. The perusal of this number can be recommended to all who are interested in the industries which it serves.—J.M.A.

Photographic Retouching. — Sir Isaac Pitman and Sons, Ltd., have made an addition to their technical series of books that should be welcomed by all who practice photography either as a means of livelihood or as a hobby. The volume is entitled "Retouching and Finishing for Photographers," and is from the pen of Mr. J. Spencer Adamson, a thoroughly practical worker and expert in the art of improving negatives and working up the finished print. The book deals comprehensively with the appliances needed and the materials used. Retouching of negatives, the working-in and taking out of backgrounds, varnishing and other matters are clearly explained, and the text is illustrated with examples that give an added value to the instructions. As to prints, there is much detailed information for the finishing in monochrome and colour, and several special processes are explained, including the beautiful wax medium method of colouring. Although primarily intended for the photographer, the book has much information of a character that would be found useful to the process engraver in the preparation of prints and negatives for reproduction. It is published by Messrs. Pitman and Sons, Ltd., and Messrs. Henry Greenwood and Co., price four shillings, net.

Christmas Gift Books.—Now in the 28th year of its popularity, "Father Tuck's Annual" comes along once more to bring delight to many a youngster. With its attractive cover and varied contents, it makes an excellent five shillings' worth (net) of Christmas cheer for the nursery. "Little People's Annual" (4s. net) has similar attractive features, both books being well produced, in respect both of letterpress and of pictures, the illustrations including colour plates. The house of Raphael Tuck and Sons, Ltd., also publishes "Brave Deeds by Brave Men," specially written for the Raphael House Library by C. Sheridan Jones, and with a foreword by Sir Arthur Conan Doyle (picture boards, 6s. net; cloth, 8s. net).

Spalding and Hodge, Ltd.

Benevolent and Pensions Fund.

This fund has now been placed in the entire control of members of the staff at Drury House, the new trustees being Messrs. E. Thain and F. Clemence, with Mr. Sydney Spalding as chairman.

Process Engravers at Dinner.

Successful Gala Evening.

The third annual dinner of the Process Engravers' Club was held on Tuesday evening of last week in the Grand Hall of the Hotel Cecil, Strand, W.C., and was in every way a most successful function, the only regrettable feature being the absence, through illness, of the secretary, Mr. T. C. Eamer. About 250 members and friends were present, under the chairmanship of the president, Mr. A. Dargavel.

The only speech made during the evening was that of the president, who, in extending a few words of welcome to the gathering, said that meetings of that description clearly demonstrated the usefulness of the club. Its meetings were beneficial to their craft in discussing matters of importance. As they were

Mr. T. C. Eamer.

no doubt aware, he had recently been to America, representing the Federation of Master Process Engravers at the great annual convention of American engravers. The strongest impression he gained there was that the engravers of America were most efficient in investigating all kinds of technical and business matters affecting process engraving. Everyone he met seemed to be willing and anxious to do everything to further the interests of the whole community of engravers. The Process Engravers' Club was operating in the same spirit, and they wanted all engravers in London, and particularly the younger men, to take a hand. They were out to promote a more generous and friendly relationship amongst engravers.

Mr. Dargavel went on to say that he wished to take that opportunity of saying how much they all regretted that Mr. Eamer had been compelled to give up the secretaryship. Nobody had worked harder in the interests of the trade than Mr. Eamer. The conception of the Process Engravers' Club was his, and he had, amongst many other activities, worked hard to make it a success. The time had come when he had to take things more easily, and after his strenuous life he deserved a period of comparative rest and retirement. He was sure that he could convey to Mr. Eamer the best wishes of everybody present that he might long be spared to enjoy the reward of rest which he had so thoroughly earned. He carried with him the appreciation and respect of the whole trade. Mr. Eamer was to be succeeded by Mr. Knighton, whom they warmly welcomed as their new secretary. (Applause.)

The following telegram was sent to Mr. Eamer in the course of the dinner: "All assembled at Process Club dinner express sincere regret at your enforced absence, and fervent hope of speedy restoration to health.—President."

During the evening Miss Jocelyn Dixon performed a charming solo dance, arranged by M. Idzikowski; Miss Barbara Hellen and Mons. Leon Fiori (of the Italian and Michael Fokine Ballets, etc.), danced the Tango Argentina with much skill, whilst Miss Jocelyn Dixon and Mr. Leon Fiori gave a wonderful interpretation of the Chinese dance "Chin-Chin." Songs were also rendered by Miss Winifride Howey and Mr. Ashmore Burch, Miss Nora Drake being the accompanist, whilst Mr. Will Kings caused much merriment. Mr. Jack Payne's Hotel Cecil Orchestra provided perfect music for the dancing.

The arrangements were in the hands of the following gentlemen: Messrs. Carl Hentschel, F. E. S. Perry, T. C. Eamer, A. Knighton and F. C. Coombs, Mr. Carl Hentschel being the M.C.

Solicitors' Law Stationery Society.

Pension Fund Inaugurated.

At an extraordinary general meeting of shareholders of the Solicitors' Law Stationery Society, Ltd., held at the registered offices of the company, 104-7, Fetter-lane, E.C.4, on Tuesday of last week, a resolution was passed approving of the formation of a pension fund for the benefit of its employees. The scheme, a contributory one is to provide pensions at the age of 65, or at an earlier age in case of failing health, provided that at least 10 years' service with the company has been completed; the maximum pension after 30 or more years' service to be thirty-sixtieths of the average remuneration during the five years previous to the date of retirement. The scheme also provides a death benefit of varying degree according to the number of years' service, provided the employee is a contributor to the fund and dies before reaching pension age.

To enable the older employees of the Society with long service to become contributors to the fund at reasonable rates the Society is involved in a considerable initial contribution. In addition to this the Society contributes a yearly sum equal to that contributed by the employees.

The scheme has been accepted by the requisite majority of the staff as required by the actuary.

Flats for Retired Printers.

The all-star concert held on Monday of last week at the Kingsway Hall, Kingsway, in aid of the funds for self-contained flats for retired printers, which are being erected by the Lloyd Memorial (Caxton) Seaside Home, attracted a very large gathering. The chair was occupied by Sir George Rowland Blades, Bt., J.P., M.P. Mr. Charles A. Roud (chairman of the committee) in introducing Sir George to the meeting, referred to their chairman's work as treasurer of the Home and also to the many sacrifices he had made on its behalf.

Sir George, replying, said that the Home had made great progress, and this latest scheme to which they were giving their attention, namely, the erection of flats for retired printers, would really fulfil a double purpose, because incidentally it would provide an income that would go towards the maintenance of the Home itself. The institution at Deal had made progress from year to year and at the present moment no less than 30,000 persons in the printing trade subscribed weekly towards its support. It was a very pleasing duty, continued Sir George, to announce that the National Sunday League, through its secretary, Mr. Henry Mills, had made a contribution of £100 in order to cover the whole cost of the evening's proceedings. That meant that every penny secured as a result of the concert would go to the funds for the erection of flats for retired printers. In concluding, the chairman thanked Mr. Parker and his committee and the artistes for their valuable services in making the evening such an enjoyable one, and also expressed his gratude to those present for the support they had given the function.

The stage manager was Mr. E. J. Eallett, assisted by Mr. Rowland Carse, whilst amongst the artistes were the following: Kel Keech and his Banjulele Band, Mark Lester, Edith Price, Doris Ashton, Josephine Lamb, Gladys Haysack, Alice Lilley, Leo Mann, Leonard Lovesey, Arthur Carter, Tom Kinniburgh, Edith Faulkner, Gladys Merredew, Joe Pearson, Edith Penville, and Walter Barker.

The amount realised as a result of the concert was £250.

North London Master Printers' ASSOCIATION.

Mr. A. Williamson, F.C.W.A., Addresses the Members on "Economic Production."

The members of this Association held a very useful meeting on Tuesday of last week, at Wortley Hall, Finsbury Park, N., when they were addressed by Mr. A. Williamson (costing secretary, Federation of Master Printers), who took as the title of his lecture "Economic Production." The meeting was presided over by Mr. W. Wilson (president), and there was a good attendance of the members. Amongst those present were: Messrs. R. B. Simnett (vice president, L.M.P.A), L. F. Hunt, W. J. Mizen (hon. sec., North London M.P.A), and E. G. Baker (assistant secretary, L.M.P.A.).

After the reading of the minutes, the secretary announced that blocks of the slogan: "Use More Printers' Ink, It is the Breath of Business," were now available, and could be obtained at the price of 2s. 6d. on application to him.

On being called upon to address the meeting, Mr. Williamson commenced by asserting that nobody had a greater respect and admiration for the craft of the printer than he had himself. He believed they would make considerably more progress as printers and as craftsmen if they entertained a higher regard for the industry with which they were so closely connected. He did not wish to be classed as an expert, but it was his earnest desire to extend to them all the help he possibly could. During his forty years' connection with the trade he had seen many changes, and the changes were more rapid to-day than they were twenty or thirty years ago, and he was confident there would be even greater changes in the next ten or fifteen years than there had been in the last forty years.

Mr. Williamson, in pointing out different ways in which, he thought, economic production could be secured, dealt first with the importance of the office side of the business, and then proceeded to say that profits were made by scheming—scheming with a definite object. The master printer should work more with his head and less with his hands. He was confident that economic production could be greatly stimulated from the office end of the business if work was properly specified and planned before being sent into the works. He believed that 99 per cent. of the people who bought printing had no standard of value, and generally they could not discriminate between the value of one job and another. Their only standard of value was that of price. With regard to this matter Mr. Williamson was of the opinion that in order to conduce to greater production, the printer should thoroughly study the requirements of the customer in order that definite instructions could be given to produce the work. It was also necessary for the printer to make the customer realise that printing had a value so that a proper price could be secured.

After dealing with the question of delivery and service, the difficulties connected with the ordering of the paper from the paper merchants immediately the job was booked were reviewed. The speaker stressed the importance of conferences of the heads of the departments for at least five minutes each morning, to discuss work that had come in the previous day, and work that was still to be sent out, all with the view of securing smooth running in all departments.

Another direction where considerable improvements could be effected was in studying the nature of the work to be executed. Some printers liked to do as comprehensive a range of work as possible, but if they had not got the equipment for it he believed it would very often pay them to farm it out. The speaker next gave useful illustrations showing the desirability of using a smaller number of type faces in order to secure efficiency through simplicity, and then proceeded to give instances of the value of specialising. With regard to this last point he stated that it was often said that the small printer was compelled to take everything that came along. His opinion was that he should not. He believed that a printer who specialised and endeavoured to produce work that had character in it would soon make a name for himself amongst prospective customers and so extend his business. Specific instances were given of success secured where specialised work had been adopted.

Digitized by Google

Examples of the loss of time and money involved through unnecessary movements were given. The speaker quoted the case of a man being compelled to walk round a number of small tables to get to his guillotine from the paper store-room, and then of the time lost by the unnecessary movements of the hand of the compositor because of the old-fashioned lay of his case, and finally the loss of effort caused by unnecessary movements of a girl's body whilst feeding cards into a rotary cutting machine. All these wasteful efforts, when multiplied, represented a very considerable waste of labour.

Reference was made to the difficulties most small printers met with in executing poster work owing to a lack of sorts. The speaker suggested that the members of the Association should pool their poster type and hand it over to the best poster printer. They should then send him all orders for posters which would, of course, when produced bear the imprint of the printer passing on the order. Thus would be secured a better result, giving more satisfaction to the customer and yielding a greater profit to the printer.

Discussion.

Mr. L. F. Hunt said he was not in favour of the printer ordering his paper immediately he secured the order, because sometimes the customer changed his mind about the paper he wanted. The consequence would be that the printer might be left with a considerable amount of paper he did not want. He thought Mr. Williamson's examples about the unnecessary movements of different workers quite to the point and very useful.

Mr. Mizen was in perfect agreement with the lecturer on the question of giving out work by the printer, who, through lack of equipment, was not able to execute it himself. With regard to the loss of time involved in unnecessary movements, he thought they were the result of bad tuition, and pointed to a lack of oversight on the part of those in control in not checking undesirable habits.

Mr. E. G. Baker made a point of the loss of orders sustained by printers in not keeping to their promises regarding the delivery of goods and urged the claims of the trade houses who were members of the L.M.P.A.

Mr. R. B. Simnett made a useful contribution to the discussion. He was very strongly in favour of specialisation of work, but was against the printer refusing orders simply because his equipment did not enable him to do the wo k. He thought the printer should take the order and pass it on to a fellow printer who was better equipped, then he would be able to make a profit on the job for himself. He thought the best doctrine to adopt was that the customer was always right, and contended that it was always best to give the customer the benefit of the doubt because in eight times out of ten the customer knew he was wrong and the printer right. He was very much in favour of the idea of the consultation of the heads of departments once a day in order to discuss work that was going through the establishment. Mr. Simnett finally emphasised the necessity of master printers' gatherings in order that members could get to know one another, so that all traces of suspicion might be removed.

Mr. Williamson, in reply to several of the points raised in the discussion, said he knew that in North London some of the members were not using the Federation Costing System and he would say to them quite frankly that they should be doing so. There could be no economic production in the factory until the facts of their costs were known.

A combined vote of thanks to Mr. Williamson and to Mr. Simnett was proposed by the chairman, and was very enthusiastically carried.

THE *Spectator* announces that a change in the proprietorship of the *Spectator* took place in the summer, when Mr St. Loe Strachey disposed of the control to Mr. Evelyn Wrench, who has been a director of the paper for some years and has been managing director since January 1st, and to his father, Mr. Frederick S. Wrench. Mr. Philip Agnew has also taken a holding in the company, while Mr. Strachey retains a substantial interest and will continue to contribute regularly. Mr. J. B. Atkins, who has been assistant editor of the *Spectator* for many years, and acted as editor during part of the war when Mr. Strachey was suffering from ill-health, has been appointed editor.

MR. WILLIAM WATSON, retired paper manufacturer, of Ardlamont, Millhouse, Kyles of Bute, left £4,659 personal estate in Great Britain.

Machine Compositors' Vigilance ASSOCIATION.

Mr. J. F. D. Dixon (chairman of the Association) presided over the December quarterly meeting of the Machine Compositors' Vigilance Association held at the house of the London Society of Compositors on Friday, December 4th. The report of the committee, read by the secretary (Mr. Albert Henwood) annonnced that 19 members had been admitted during the three months, bringing the total membership up to 1,105, including 773 linotype, 265 monotype and 67 honorary members. The balance sheet for the quarter showed receipts amounting to £190, and expenditure of £131.

The second item on the agenda, the selection of operator candidates for the election of the London Society of Compositors Executive Committee in March next—in which all operators, members of the L.S.C., whether belonging to the Association or not, were invited to take part—resulted in the choice of Messrs. J. O. Hatcher (linotype) and Charles Hart (monotype), both of whom are sitting members.

During the meeting it was announced that the Association's annual dinner would be held at the Hotel Russell, Southampton-row, W.C.1, Mr. G. W. Davis, of Linotype and Machinery Limited, having kindly accepted an invitation to preside. The function will be held in support of the funds of the Machine Compositors' Pension No. 2. It will be recalled that the first ("Albert Henwood") Pension, in connection with the Printers' Pension Corporation, was completed at the last annual dinner in the early part of this year, and it is hoped to give No. 2 a good send off. Ladies are invited, and particulars may be had from Mr. A. Henwood, 27, Stapleton-road, S.W.17, or from Mr. C. R. Flaxman (hon. secretary of the Association's Pension Fund), 48, Arran-road, Catford, S E.

Trade Union Matters.

PRINTING UNIONS AND BOXING DAY NEWSPAPERS.—Two conferences under the auspices of the Printing and Kindred Trades Federation have been held to consider the question of non publication of evening newspapers on Boxing day. Representatives of the Newspaper Society, the Typographical Association, the National Society of Operative Printers and Assistants, the Society of Electrotypers and Stereotypers, the National Union of Journalists, the Society of Lithographic Artists, and the Printing and Kindred Trades Federation were present. A proposal was put forward on behalf of the evening newspaper proprietors that they were prepared to authorise the Council of the Newspaper Society to consider the advisability of recommending suspension of publication of evening papers on Boxing Day when that holiday fell on any day other than Saturday or Monday, and after discussion a resolution to that effect was adopted both sides agreeing to recommend its acceptance to their constituents. The proposal is being placed before the members of the Typographical Association and the other unions represented at the conference in ballot form.

NEWSPAPER WORKERS' AGREEMENT.—The secretary of the Belfast branch of the Typographical Association has forwarded to the Executive Council details of the schedule of hours proposed to be worked by newspaper workers in the branch under the recent agreement between the Association and the newspaper proprietors whereby members working in newspaper offices are granted a night off per fortnight on condition that the time so taken shall be made up on the remaining working nights. The Executive Council have approved of the schedule submitted.

T.A. AND NON-UNION PRINTERS.—At a recent meeting of the Executive Council of the Typographical Association, Mr. H. E. Carss, London, one of the organisers, reported that he had visited Petersfield with the object of inducing non-unionists to join the Association. He was, however, unable to report any progress in the matter, owing to the fact "that the men are satisfied to receive nearly all the benefits of stabilised wages, hours, holidays, etc., without accepting the responsibilities of membership of the Association which has obtained those conditions for them."

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies, Machinery for Sale and Wanted, Businesses for Sale and Wanted, Partnerships and Investments, Miscellaneous.

One Insertion	3/0
Three Insertions	6/0

For every line exceeding three lines **6d.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

Origin of Christmas Cards.

CHRISTMAS cards, which have regained much of their old popularity, were first printed in Newcastle, according to the *Newcastle Chronicle*. In 1845 the Rev. Edward Bradley, known as a writer as "Cuthbert Bede," sent designs for Christmas cards to Mr. Lambert, the well-known publisher and stationer at Newcastle, and they were printed for private circulation. This was repeated in 1846, and in the following year the printers conceived the idea of putting designs on the market. In 1847-8 they offered the cards for sale, and these were the first cards offered to the public. This origin of Christmas cards was vouched for by Mr. Thomas Smith, who in 1845 was Messrs. Lamberts' foreman printer, and who soon afterwards started in business on his own account.

Paper Standardisation.

TOUCHING once again on paper standardisation, we have a letter from a prominent house which gets right down to essentials on this issue. The chief point raised is that reams of 480 or 516 cannot be changed to packets of 500 without affecting the weight and with a basis of 1,000 sheets there is the further question as to whether substance is to be specified as per 500 or per 1,000 sheets. Of course, these problems are not now raised for the first time; as a matter of fact they would have been dispelled for good if an entire scheme of standardisation had been adopted. Our own belief is in substance numbers based on standard sizes and we have very much of a leaning toward grammes per square metre. For either of these aspirations there may be a doubtful future; but so far as substance and weight per 1,000 sheets is concerned, the Master Printers' Federation have planned and sanctioned a scheme for the approval of the Wholesale Stationers and Paper Merchants. We are prompted to ask where the paper mills come in in this standardisation business. However, if the wholesalers will help to push this substance scheme through, we should very quickly remove what ought to be the last obstacle in the path of paper standardisation. Until then there is no reason whatever why merchants should not get rid of their hesitations and philosophic doubts. If 21 lb. large post is to be 500 sheets 22 lbs., let them get their paper made up and labelled that way to keep to the new system until they accept the proposals of the Printers' Federation. The longer they play with what is essentially an accepted custom, the more chaotic will the situation become.

* * *

Paper Trade Changes.

IMPORTANT changes are taking place in the paper markets of the world. Modern methods of communication have speeded up matters to such an extent that no country or locality is free from competition. At the same time new opportunities are arising, while, on the other hand, openings for paper are being forced by manufacturers and merchants. The section of the paper industry which is chiefly concerned with changing markets is, perhaps, newsprint, in regard to which there is proceeding a reshuffling of positions. Canada promises to provide an increasing source of competition both in this county and Australia and British and Continental mills are likely to feel its effects. There are those who are alarmed at the prospects which such competition threatens, while others believe that the situation will not be unduly disturbed, or, at all events, that the readjustment will leave things much as they are. That, however remains to be seen. Providing the world's affairs are allowed to settle down to normal conditions, and increase of consumption proceeds unhindered, there should be a steady growth in the demand for newsprint and other grades of paper. The problem appears to be, how far consumption can keep pace with supply. Canada's output is surely striding ahead of that of the United States, and new mills and plants with enhanced production are coming into operation. So far, official statistics do not indicate any change in the Australian market, though the effects of granting preference to Canada are likely to be felt sooner or later, unless, of course, the Dominion manufacturers find they have not the surplus they anticipated. There are evidences that Australian publishers are not hastening to throw over the assured supplies which this country affords.

"Rushing" Hand-Made Paper.

AN interesting little controversy has been proceeding in the house journal issued from Hayle Mill as to whether it is advisable to rush through an order for hand-made paper or to lose it altogether. One has a good deal of sympathy with Mr. R. Robertson, an old hand-made papermaker, who insists on the advantage of allowing paper to mature. He mentions an experiment he tried with some paper made over 30 years ago and contrasted it with some turned out in the present day. From the old paper he made a paper cap, filled it with water and placed it on the fire and boiled an egg in it; it was on the fire 38 minutes and did not then "give." The new paper of to-day, he asserts, would not hold the water. It is not a question of rags or size, adds Mr. Robertson, it is that the old paper was given time in its maturing and went out of the mill as "paper." In these days of hustle, however, it is not always possible to draw a hard and fast line. Competition is keen, and it is difficult enough to get orders at all. Therefore, there is urgent need to make every effort to fulfil those which do come to hand. As Mr. J. B. Green observes: "The idea of maturing hand-made paper is fine for stock lines, but where is the stationer or printer now who will order special making lots three or four months before he wants them?"

Country News.

Gloucester.

THE fellow printers of Mr. Harry Harmer, both in the City of Gloucester and in the South-Western Alliance, will join in extending to him hearty congratulations upon his unopposed return to the Gloucester City Council. The vacancy in the Council was caused by the elevation of Sir James Bruton to the aldermanic bench. Mr. Harmer is managing director of the Crypt House Press, Ltd, and the British Publishing Co., Ltd., and director of the *Gloucestershire Chronicle*, Ltd. He is a representative of the South-Western Alliance upon the Council of the Federation of Master Printers, and is a keen member of the West of England and South Wales Monotype Users' Association, and in him Gloucester has found a representative who will be alive to the responsibilities of his position.

Bristol.

MR. AND MRS. E. W. ALLEN (Allen, Davies, and Co., Ltd.), have just celebrated their golden wedding. A gathering of the staff and workers assembled in one of the rooms in the new factory in Nelson-street, Mr. C. J. White (a director) in the chair, when a presentation of an arm chair and a wallet containing an address and the names of the subscribers was made to Mr. Allen, and a muff to Mrs. Allen. Mr. Allen is the immediate past president of the Bristol Master Printers and Allied Trades Association.

Tonbridge.

COUNCILLOR F. I. DANN, J.P., the secretary of the Tonbridge branch of the Typographical Association, has been entertained at dinner on the occasion of the 30th anniversary of the foundation of the branch and on his election to the chairmanship of the Tonbridge Urban District Council. The company numbered about 150, and the chair was taken by Mr. W. Woodman, president of the branch. The toast of "The Typographical Association" was proposed by Colonel R. Truscott (Messrs. J. Truscott and Sons). Mr. J. D. French, president of the Typographical Association, also spoke.

Swansea.

THE Swansea Co-operative Printers have recently acquired new premises in Belle Vue-street, formerly used as a chapel. New plant is being installed, including two Monotype machines, a Miehle, and ruling machines.

Chichester.

THE late Mr. T. S. Adcock, J.P., of North-street, Chichester, printer and motor garage proprietor, who left £15,700, bequeathed £200, his stock in trade, type and machinery used in connection with his printing business, a gold watch and chain and gold ring to his "esteemed foreman printer, Thomas Richard Triggs, in memory of long and faithful service," and £100 to William Knight, "in memory of his lifelong service with me."

Manchester.

DR. GUPPY was the guest at the monthly luncheon, on Thursday, of the members of the Manchester Master Printers' Association. Dr. Guppy stated that the art of printing was one in which he was actively interested. He had a good deal in common with the printers. The first librarians were priests, and the first printers belonged to the priestly orders. It was impossible to estimate the services which printing had rendered to humanity. He proceeded to present his hearers with an interesting review of the history of the printing art, and at the close was heartily thanked at the call of Mr. C. H. Makinson.

Hereford.

MR. W. F. ELLIOTT, the head of one of the oldest printing businesses in Hereford, has passed away, after a long illness, on November 29th. The deceased, who was 62 years of age, was proprietor of the Caxton Press, Church-street, and was well known and respected throughout the city. Mr. Elliott leaves a widow, two sons and a daughter. At the funeral, which took place at Hereford Cemetery on Friday, December 4th, there were many floral tributes of esteem.

South Wales.

THE visit of a South Wales police sergeant to a printing office in Crane-court, Fleet-street, was described at the Llanhilleth, Monmouthshire, Police Court on Tuesday of last week, when a local collier of Aberbeeg was charged with using certain premises for the purpose of betting. After evidence of the raid made on the collier's home, the police-sergeant said that when he visited the office of the London printer who supplied the betting slips and coupons, the tables of the office were laden with coupons, and there were six or eight telephones in the room. The London printer, who did not appear in person, was fined £10, and the collier was fined £5.

MEMBERS of the South Wales branch of the National Union of Journalists, with their friends, attended a gathering at Cardiff recently last to take part in a presentation that was made to Mr. T. A. Davies in recognition of his services to the profession, and as a memento of his term of office as president of the Union, the only Welshman on whom this honour has been preferred so far. Mr. A. Stephens, as chairman of the branch, presided, and there was also in attendance the Lord Mayor of Cardiff, and Mr. T. Dickson (Glasgow), this year's president of the Union, the City Coroner, and several other gentlemen of prominence in the City of Cardiff and the county. A very fine programme of music was given, and the evening was a very pleasant one all round.

Cardiff.

A MEETING of the Cardiff Master Printers' Association was held on December 1st, at the Queen's Hotel, Cardiff, following the usual monthly luncheon gathering. Mr. A. E. Harrison was in the chair, and a good attendance was recorded. Interesting reports of Federation labour conferences were received, and the question of forming a District Committee of the Joint Industrial Council for the whole of the South Wales area was fully discussed.

IN celebration of the completion of 25 years as news editor of the *Western Mail* and of the silver jubilee of his marriage, Mr. George H. Sutton was presented by the staff, recently with a suitably inscribed silver salver.

Trade Notes.

RECEIVING ORDERS have recently been made in respect of C. H. Planck, 12, Compton-road, Brighton, Sussex, and lately carrying on business at 26, Henrietta-street, Strand, London, poster and show card specialist, a domiciled Englishman; and of J. E. Gurdon, 25, Queen's-gardens, Hyde Park, London, journalist.

THE BOOK STRIKE.—The dispute between the Book Trade Employers' Federation and the Paper Workers' Union unfortunately continues, seriously interfering with the publishing trade and indirectly causing detriment to printers. A further conference was held on Monday between the union and representatives of the London publishing houses. The negotiations, it was afterwards stated, had had no result. The publishers were still standing by the terms they put forward, and the union was not prepared to accept them. The summonses against employees of Messrs. Leighton, Son, and Hodge, and against employees of Messrs. James Burn and Co. for leaving work without notice were last week adjourned at the Guildhall and Kingston Courts respectively with a view to amicable settlement.

£600 DAMAGES FOR ERROR.—In the King's Bench Division last week, the jury awarded £600 damages against the proprietors of the *Daily Gazette* (Islington), the *Hornsey Journal*, and the *North Middlesex Chronicle*, in the action in which Mrs. Ethel Louise Campbell, of Ferrestone-road, Hornsey, claimed damages for alleged libel contained in the reports published in the three papers of the hearing of her petition for divorce in January last. Owing to an admitted mishearing on the part of the reporter, whose report appeared in each of the three newspapers, it was erroneously stated that in giving evidence in support of her petition, Mrs. Campbell said she was married on June 18th, 1917, when the date she gave was June 8th, 1907. As the plaintiff had three children, one born in 1909, and twins born in 1915, it was alleged that the reports contained innuendo. The defendants admitted the libel, apologised to the plaintiff, expressed regret for the publication, and inserted apologies in their respective newspapers. The only question for the jury was as to the amount of damages.

DAMAGES of £250 were awarded to the plaintiffs on Thursday by a special jury, in the action in the King's Bench Division, brought by Mr. Horace Scott Laycock and Mr. Fredk. James Bird, against Odhams Press, Ltd., the proprietors of *John Bull*, for alleged libels in relation to contracts in connection with the Amusement Park of the Wembley Exhibition.

BETTING PRINTING FINES.—For publishing coupons in connection with football betting, David Wm. Gamage, proprietor and publisher of the *British Sporting Times and Home Journal* was at Ipswich on Monday fined £100, or, in default three months' imprisonment. William M. Allen, printer of the paper, was fined £10, or one month. It was stated that coupons were printed and money prizes offered for guessing football results.

MR. SIDNEY PATERNOSTER, who was for many years connected with *Truth*, has died in a private nursing home at Mill Hill.

THE late Mr. George William Mascord, Barnes, general works superintendent of the *Daily Chronicle* and the *Sunday News*, and a director of the United Newspapers (1918), Ltd., left £12,856.

SOUTH LONDON AUXILIARY.—Mr. J. E. Dixon (Amalgamated Press) presided over a very successful concert on Saturday at the Horns Assembly Rooms, Kennington-park, S.E. The function was held under the auspices of the South London Auxiliary, and the proceeds went to the War Orpans' Fund of the Printers' Pension Corporation. Mr. J. Fleming, the secretary of the Auxiliary, in thanking Mr. Dixon for his efforts, announced that the plate for the evening was a record one of £157. An excellent array of concert artistes included G. Price, Ruby Lester and Phyllis Mayne.

THERE was a good attendance of members of the printing and allied trades at a dance held on Monday of last week at the Shoreditch Town Hall, under the auspices of the Printing and Allied Trades Charity Sports' Association. Mr. J. McLeod, through whose instrumentality and enthusiasm the event took place, is organising a similar function for January 18th at Shoreditch Town Hall, when a fox-trot competition will be held.

GREAT success attended the wonderful "all-star" matinee given by many actors and actresses at the Lyceum on Friday in aid of the Newspaper Press Fund. No less than £1,300 was raised by the effort.

BRITISH INDUSTRIES FAIR.—In the House of Commons, on Thursday, in reply to a question asked by Lieut.-Colonel Sir Frederick Hall, M.P., Mr. A. M. Samuel, M.P., Parliamentary Secretary to the Department of Overseas Trade, stated: "I have been in consultation with representatives of important retailers' associations in regard to the desire of certain exhibitors at the British Industries Fair to be allowed to sell sample articles at retail prices to members of the general public, from 5 p.m. to 8 p.m., and on the afternoon of the one Saturday which falls within the Fair period. In view of the representations made to me, I have now arranged that direct sales to the general public shall not be permitted, except that in the Food Section and Empire Section exhibitors who may desire to do so will be allowed to sell *bona fide* tasting samples at retail prices. The retailers' representatives whom I have consulted have expressed their full agreement with this arrangement, and I am assured that I can now count upon their co-operation for a successful Fair."

WE regret that pressure on our space prevents our publishing in this week's issue the last instalment of the report of the Royal Society of Arts lecture on bookbinding by Mr. Cedric Chivers. We hope, however, to conclude this report in next week's issue.

False Portuguese Bank Notes?

A sensation has been created by the discovery of alleged forged 500 escudo bank notes issued by the Oporto branch of the Angola and Metropole Bank, the notes bearing what appeared to be the marks of a well known London printing firm. The chairman of the London firm is on a visit to Portugal to examine the false notes.

MR. GEORGE A. ISAACS, general secretary of the Nat. S.O.P.A., was given a complimentary dinner at the Holborn Restaurant on Tuesday as a tribute to his 16 years' services to the Union. A sum of over £601 had been collected, whereby Mr. Isaacs was presented on behalf of the Society with a motor car, a pianola, and an illuminated address.

DIVIDENDS AND REPORTS.

WATERLOW AND SONS.—After providing for income tax, depreciation, etc., the profit for the year to September 30th, 1925, amounts to £213,535, compared with £198,656 for the preceding year. A balance dividend of 10 per cent. and a bonus of 2½ per cent., both tax free, are recommended on the deferred ordinary shares, making 15 per cent., tax free, for the year, against 12½ per cent. for 1923–25; £50,000 is again placed to reserve, raising that fund to £500,000, while the "carry forward" is increased from £43,386 to £46 722.

NEW COMPANIES.

CORNISH GUARDIAN, LTD.—Capital £2,000, in £1 shares; to acquire the business of a proprietor of a newspaper now carried on by A. B. Lyne, at Church-square, Bodmin, Cornwall. Private company. First directors: A. B. Lyne, C. B. Lyne and N. S. Lyne. Solicitor: E. W. Gill, Bodmin.

TYPE SUPPLIES, LTD.—Capital £1,000, in 955 7½ per cent. cumulative preference and 45 founders' shares of £1 each; to adopt an agreement with A. J. Churcher, and to carry on the business of typefounders, dealers in metals, printers, lithographers and stationers, etc. Private company. Directors: A. J. Churcher and E. Dean. Registered office: 57, Farringdon-street, E.C.4.

SENTINEL MUSIC PUBLISHING CO., LTD.—Capital £1,000, in £1 shares; to acquire the businesses carried on in London by Rodney Archer (A), of a music publishing and band agency at Sentinel House, Southampton-row, W.C., as the Sentinel Music Publishing Co.; and (B) a musical correspondence school at the same address as the Orpheus Correspondence College. Private company. Directors: Rodney Leonard Archer, Mrs. L. Gascoine and Doris Gascoine. Solicitors: Grundy, Kershaw, Samson and Co., 6, Austin-friars, E.C.

R. J. SKINNER, LTD.—Capital £100, in £1 shares; to acquire the business of a printer carried on by R. J. Skinner, at 4, Fitzroy-square, Tottenham-court road, W. Private company. First directors: G. J. Bird, A. H. James, F. Love and R. J. Skinner. Registered office: 4, Fitzroy square, Tottenham court-road, W.

LIBRART PUBLISHING CO, LTD.—Capital £1,000, in £1 shares; to acquire the business of a press agent, printer, publisher, commercial photographer, artist and designer, carried on by E. A. M. Ackland, at 48A, South road, Waterloo, Liverpool, and elsewhere. Private company. First directors: E. A. M. Ackland and G. R. Rugg.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

EMPIRE REGISTER CO., LTD. (printers, etc., Leeds).—Debenture dated November 26th, 1925, to secure £2,199 0s. 9d., charged on the company's undertaking and property, present and future, including uncalled capital. Holder: Mrs. E. Barnes, Francis-street, Leeds.

DUDLEY AND CO., LTD. (printers, stationers, etc., Holloway, N.).—Particulars filed of £40,000 debentures authorised November 16th, 1925, charged on the company's undertaking and property, present and future, including uncalled capital (if any), the whole amount being now issued.

BRADSTREETS REGISTER, LTD. (London).—Issue on November 30th, 1925, of £1,800 debentures part of a series already registered.

SEYMOUR'S (BRIGHTON), LTD. (picture dealers, printers and publishers, etc.)—Charge on 44, Western-road, and 32, Clarence-square, Brighton, dated November 25th, 1925, to secure £1,000. Holder: Dr. E. Boyd Paget, Flat 1, 28, Clifton-road, Brighton.

EDUCATIONAL SUPPLY ASSOCIATION, LTD. (London).—Satisfaction in full on November 26th, 1925, of charge on property in High Holborn and Drury-lane, dated January 2nd, 1924, securing an unspecified sum in respect of bank overdraft.

RYMAN AND CO., LTD. (fine art dealers and publishers, etc., Oxford).—Satisfaction to the extent of £200 on November 4th, 1925, of debentures dated March 20th, 1914, securing £1,625.

WM. MAY AND CO., LTD. (publishers, etc, Aldershot).—Satisfaction in full on October 31st, 1925, of debentures dated December 4th, 1919, securing £4,000.

ANDREWS FLOWER AND CO., LTD. (stationers, etc, London).—Debenture dated November 11th, 1925, to secure not more than £100, charged on the company's property, present and future, including uncalled capital. Holder: J. S. Allen, 202, Upper Thames-street, E.C.4.

RECEIVER APPOINTED OR RELEASED

JAMES GORDON AND CO. (STATIONERS), LTD (London).—F. Davies, of 245, Kingsland-road E.2, was appointed receiver on November 16th 1925, under powers contained in debentures dated July 26th, 1922, and March 9th, 1923.

COOKE'S MIMEOGRAPH CO. (Old Company), LTD. (London).—A. Willmott, C.A., of 14, Old Jewry Chambers, E.C.2, ceased to act as receiver or manager on December 1st, 1925.

Backhouse and Coppock, Ltd.

We are informed that the Inveresk Paper Co., Ltd., have recently agreed to purchase practically all the share capital of the above company. We understand there will be no change whatever in the management or policy of the company. Mr. A. L. Sharpe will continue to act as managing director, and Mr. Harrison, Mr. Snelling and Mr. Berrill, three of the Inveresk directors, will join the board on completion.

THE Department of Posts and Telegraphs of South Africa is inviting tenders for the supply of miscellaneous telegraph and telephone materials, including paper sleeves for conductor cable. Tenders by January 28th, 1926.

Swiss Duties Increased.

A Decree of the Swiss Federal Council, dated November 5th, provides for the following increased General Customs import duties (in francs per 100 kgs. gross weight) on paper-making material, paper, etc., the existing duties being given in parenthesis:—

Paper and board, printed or lithographed: Of one colour: In loose sheets or sewn, 120 (90); bound or framed, 120 (100); of more than one colour in loose sheets or sewn, 150 (110).

Paper and board printed by other than typographic or lithographic process (phototypes, photogravures, engravings on copper, steel, etc.): In loose sheets or sewn, 200 (150); bound or framed, 200 (180).

Envelopes in boxes, cases, etc., with or without notepaper (stationery), 160 (120).

Machines for typographic printing and other graphic processes; bookbinding machines: Printing presses, 30 (20); other, 30 (10).

Fibrous materials for the manufacture of paper obtained by chemical processes (cellulose, pulp or straw, esparto, etc.), wet or dry: Unbleached 5 (4.50); bleached 6 (5.50).

Grey cardboard; straw and wood pasteboard, leather board, etc., 20 (10).

Packing paper not elsewhere specified in the General Tariff, including oiled paper, 25 (20).

Tissue paper weighing 25 grs. or less per sq. metre, 40 (25, conventionalised for cigarette paper).

Printing, writing, letter and drawing paper of one colour, except newsprint paper, 40 (25).

Paper and board: Coated with chalk on one side only, not worked; coated with chalk on both sides or covered with chalk-coated paper; crinkled, perforated paper; gummed paper; non-sensitised paper, 45 (40); with impressed or coloured designs (shagreened, watered, embossed), 45 (20).

Parchment and parchmented paper and imitations thereof, 40 (25).

New Zealand Tariff Preference.

The new basis for customs duty to enable British goods to qualify for the New Zealand preferential rate will not become operative until April 1st, 1926, says *British Industries*. It had been the intention of the Dominion Government to bring the new system into force on January 1st next.

The proportion of British material to which manufacturers and exporters will have to certify to enable them to secure the advantage of the British preferential rate will be 50 per cent. The present percentage is 25 per cent. Goods emanating from this country will be allowed into New Zealand on the 25 per cent. basis up to and including March 31st, 1926,

ACCORDING to information received from the office of his Majesty's Trade Commissioner at Wellington, the New Zealand Post and Telegraph Department is inviting tenders for memo books, envelopes and paper, to be presented in New Zealand by February 3rd, 1926. Particulars of the inquiry may be obtained by firms interested in the supply of goods of United Kingdom origin upon application to the Department of Overseas Trade (Room 41), 35, Old Queen-street, London, S.W.1.

TENDER FOR PAPER, PRINTING AND BOOKBINDING MATERIAL FOR EGYPT.—The Commercial Secretary at Cairo (Mr. E. H. Mulock), reports that the Egyptian Government Press are inviting tenders to be received in Cairo by January 23rd, 1926 for paper, boards, printing ink, cloth, etc. Further particulars may be obtained by firms interested in the supply of articles of United Kingdom origin upon application to the Department of Overseas Trade (Room 41), 35, Old Queen-street, Westminster, S.W.1.

Paper Bags and the Proposed Paper Duties.

SIR,—We have been severely criticised with regard to an article that appeared in an evening paper on December 3rd last, the day when the Paper Duties were to be discussed by Parliament, and we would appreciate the hospitality of your columns to make our position clear in a question so interesting to all printers, stationers, papermakers and bag-makers.

Under the heading "Paper Bag 'Cookery'—Another Case of Hurting, Instead of Helping, Trade," the writer of the article stated:—

"The House of Commons to-day will consider the question of packing and wrapping paper, in which the 'Star' is informed by Mr. Vincent Pitman, of Crowther and Co., bag makers, that an attempt is being made to secure a duty by trickery.

"The Committee say that the Paper Bag Federation, 'as a whole,' has supported the demand for a duty on foreign paper, although they use it, and this is cited as evidence of the opinion of paper users.

"The fact is that there are 290 members of the Bag Federation, and the resolution supporting a tariff on paper was carried—without notice—by the votes of 26 of them. Some of those who voted are also paper manufacturers.

"But the bag trade has now realised the meaning of this proposal—to put 16 per cent duty on foreign paper and 10 per cent. on foreign bags.

"At present no paper bags are imported, but if this scheme is carried it will pay the foreign manufacturer to send in paper bags instead of paper, and the British paper-bag trade will be seriously damaged.

"This is another case where tariffs injure instead of help an industry."

We did not write this article—although we believe that every statement is absolutely correct, with the exception of the reference to paper bag imports. In giving evidence before the Board of Trade Committee set up to enquire into the demand for a duty, the chief witness for the British Paper Bag Federation said that the amount of paper bags imported from abroad is very small. It appeared in evidence that the quantity was so small that it had been entirely ignored in the Board of Trade Returns.

The witness went on to say with regard to imported bags "They are commencing to come, but so far not so seriously as to affect the market, but they are coming, and we anticipate the possibility of a more serious attack." Our view is that foreign competition in bags is likely to be increased rather than decreased by a duty of a penny or twopence in the shilling. Further than this, it would undoubtedly kill our export trade.

The witness said that he represented 260 bag firms, including manufacturers and dealers. As a matter of fact he only represented the 26 firms who voted in favour of a resolution that was sprung upon an unprepared meeting of 42 members. He therefore had no right to say with regard to the imposition of a duty, "I was instructed to do so at a mass meeting of the Federation at which the whole thing was fully discussed from every aspect."

We think the whole matter is summed up in the following verse written by a well known maker of paper bags on the lines of "Alice in Wonderland" (which evidently anticipated the procedure of the Board of Trade Committee):—

"Perhaps next time the bag men meet,
They'll try to make it clear
Why they aided those who wished
To make their paper dear.
For men who give and do not take,
In trade are counted queer!"

Trade Lectures.

SIR,—The correspondent "E.B." in your issue of the 3rd inst. raised two interesting points on trade lectures. The first concerned the dissipation of effort, and was a plea for a combination of interests into one useful and comprehensive series of lectures on technical subjects. This should present no great difficulty, as the Stationers' Hall is situated in the greatest printing centre in the world, and is within easy reach of all interested.

The second proposition is more difficult, because the man who "knows" and can "do" is not always the man who can "talk." The writer has attended many trade lectures, and though at times he has been arrested by the fluency of certain speakers, he has often come away with a sense of time wasted, knowing that many of the ideas advocated were absolutely impracticable. Men of undoubted practical ability in trade subjects should be encouraged to come forward and do something to make our trade lectures more than mere talk—however pleasing and clever that "talk" may be. The man who has gained practical knowledge through "doing," will always be listened to with respect and with profitable interest, although he may not be an orator or even a fluent speaker.

JOSEPH STUART.

29, Leaside-avenue,
Muswell Hill,
London, N.10.

Personal.

LORD RIDDELL entertained 50 members of the Grandfathers' Club to tea at Browning Hall, Walworth. The oldest guest was 86.

SIR CHARLES HYDE, BART., proprietor of the *Birmingham Post* and *Mail*, has made a gift of £100,000 to Birmingham University.

MR. F. O. ROBERTS, M.P., who has been seriously indisposed, left England on Wednesday to attend a conference of Labour organisations in British West Indies, convened by the British Guiana Labour Union.

MISS SYBIL GRACE TUCK, second daughter of Sir Adolph and Lady Tuck, is to be married to Sir Edward D. Stern, Bt.

WE are now able to state definitely that Mr. T. E. Naylor, J.P., M.P., has decided to resign his position as chairman of the London Printing and Kindred Trades Federation. Although the executive of this body is endeavouring to prevail upon Mr. Naylor to reconsider his decision, it is believed their efforts will not be successful.

MR. T. H. CUNANE, who is well known as a lecturer on papermaking; throughout the country, rendered a further service to the allied industries on Friday last, when he addressed a gathering of the printing industry at Stationers' Hall on the subject of "Printing Papers."

NOT only did he clearly demonstrate the great difficulties which the paper manufacturer has to contend with in dealing with the various fibres at his disposal and in meeting the wishes of the printer, but he also explained some of the reasons for the complaints which users of paper so frequently put forward.

MR. A. W. FOSTER, the secretary of the Papermakers' Association, was an ideal chairman and made an interesting contribution to the subject under discussion.

MR. T. E. WELLS (for many years with Messrs. Eyre and Spottiswoode) has added to his many other associations by being elected a member of the Stoke Newington Borough Council (Lordship Ward).

MR. ROWARTH SPURRELL, B.Sc., son of Mr. Walter Spurrell the well-known printer of Carmarthen, has just concluded a remarkably brilliant career at Guys Hospital, London, by winning the University of London Gold Medal in the Final M.B. examination, with distinction in surgery and pathology.

MR. JAMES EDGELL, the Master, presided at a dinner of the Worshipful Company of Makers of Playing Cards held on Wednesday last week to meet the Acting Lord Mayor (Sir George Truscott) and the Sheriffs.

MR. CHAS. NEWELL, C.C., will preside at the annual general meeting of the Stationers' Social Society, to be held on Tuesday evening, December 29th, at Anderton's Hotel at 6 o'clock. The new president and officers will then be elected.

MR. A. E. MIST, the hon. secretary, has already arrangements in hand for the annual winter dinner at the Hotel Cecil on February 13th.

MR. CLAYDON the new secretary of the Employers Federation of Envelope Makers and Manufacturing Stationers, is not unknown to the paper industry, since during the War he held the office of Director of Labour, Machinery and Transport in the Department of the Paper Control, and in this connection he came into touch with the majority of the firms engaged in pa er and stationery manufacture.

BORN in Lincolnshire in 1882, he was educated at the School of Science, Art and Technology, Peterborough, and later at King's College, London. At the age of 26 he entered the Colonial Civil Service (first class). During the War he was invalided home early in 1916, and in September of that year he was appointed to the Ministry of Munitions, being attached to the Headquarters Staff, Labour Supply Department, and was transferred from there to the Paper Control.

MR. CLAYDON was formerly a member of the Southgate District Council, but did not stand at the last election owing to pressure of work.

MR. JOHN ANDREW FORD, who has been blind since youth, has been presented with a chiming clock in recognition of his 50 years' work as proof-reader and stereotyper at the National Institute for the Blind.

THE KING, in a letter read at the presentation by Sir Michael O'Dwyer, the vice-chairman, expressed admiration for Mr. Ford's patience, devotion, and untiring zeal.

CAPTAIN E. B. B. TOWSE, V.C., the chairman of the Institute, in making the presentation, said that to Mr. Ford belonged the proud record of having written the whole of the Bible in Braille by hand—a process which had involved some 21,000,000 blows with a hammer.

MR. J. CRAWLEY, formerly editor of *Reynold's Illustrated News*, has been reappointed to that position in succession to Mr. W. S. Robinson.

MR. FRANK DILNOT, the chairman of the London Press Club, is indisposed, and was unable to attend the Honorary Members' Dinner on Saturday last.

MR. JOHN RENWICK, of the *North Cheshire Herald*, who is reputed to be one of the oldest working journalists in England, has resigned his position as reporter to enjoy a well-earned retirement at Newcastle, his native town.

MR. H. C. CHERRY, the editor of the *Goole Times* and associated papers, has been presented with a pair of Jacobean candlesticks and a clock by his colleagues on leaving to become chief sub-editor and assistant editor of the *Leicester Mail*.

MR. FRANK NASMITH this month completes 21 years as editor of the *Textile Recorder*, having succeeded his father, the late Joseph Nasmith, in 1904. Mr. Nasmith is the managing editor for John Heywood, Ltd., the proprietors and publishers of the *Texile Recorder* and other textile publications.

MR. FRED B. HARGREAVES, who for some time has been assistant editor of *System*, has been appointed manager of the *Nation*.

MR. JOHN E. BOURNE, of the London staff of the *Liverpool Post and Echo*, has been presented by London colleagues with several books, on leaving to become the news editor of the *Wolverhampton Express and Star*.

SOME interesting changes in the South African staff of John Dickinson and Co., Ltd., have followed the visit of Mr. F. G. Hawdon to the Cape.

MR. R. W. HULSE, the manager in Johannesburg, has been appointed manager of the Australian branches of the company, and his place is taken by Mr. M. A. Willison, who is a product of the Apsley Mill, where he went in 1895. He was transferred to Cape Town in 1903, and proceeded to Johannesburg in 1906.

MR. HULSE, who joined the company in 1904, is already on his way to Australia, if he has not actually arrived, and he was to meet Mr. Hawdon in Sydney.

Employers' Federation of Papermakers.

Annual General Meeting held at Preston.

The twelfth annual general meeting of the Employers' Federation of Papermakers of the United Kingdom, was held at the Park Hotel, Preston, on Friday, December 4th, the president (Mr. Arthur Baker) being in the chair.

The report of the Executive Council was submitted, together with the statement of accounts.

President's Review.

In moving the adoption of the report and accounts, the president said: The period which has elapsed since our last meeting in August, 1924, has been, without question, the most trying time through which the industry and Federation have passed, and, in order to keep members in touch with events, the annual report has been specially drafted in more detailed form than usual.

The bright feature has been the news mills, which, thanks largely to the benefits of Australian preference, have been generally able to run full time. Other branches of the industry have had a very patchy time, whilst the Wrapping Section literally found themselves in a position of "extremis." Several of the weaker mills succumbed under the strain, and many were threatened with extinction.

In desperation application was made by this Section of the trade for relief under the Safeguarding of Industries Act, and, as you know, the Committee of Enquiry has reported in their favour.

The country has passed through the final stages of a rather painful period of deflation leading up to the restoration of the gold standard, which, now accomplished, has undoubtedly had a great steadying effect. The general trade of the country shows indications of a change for the better, but it does not appear that there will be any marked tendency in that direction pending some satisfactory settlement of problems in the coal mining industry.

The Newsprint Situation.

I regret to say, however, that whilst the position of the esparto papermakers is better, the outlook for the News Section of the industry is not so promising. Australian Preference has been extended to Canada, which country has signalised the event by taking orders for about 6,000 tons for immediate delivery, and, according to reports, is hopeful of obtaining about 40 per cent. of the tonnage at present made by us.

You will recollect we have been exporting to Australia at the rate of approximately 100,000 tons per annum.

There is also over-production of "news" paper in North America generally, where the building of "news" mills has been overdone, and it is estimated there will be an excess production in the new year amounting to not less than 2,000 tons per day. We have already had a foretaste of what may happen by the action of the International Paper Co., of New York, who have dumped a large tonnage for delivery in this country over next year at a price equivalent to not less than 30s. a ton lower than the domestic price in U.S.A. for 1926, the home price in the United States having been fixed at such a figure that it is said many mills will find themselves unable to operate at a profit.

Relations With Trade Unions.

I regret to say relations with the Trade Unions have been very strained during the year, and, for a time, worse than at any period in the lifetime of the Federation. We have also encountered the same discordant note which first interfered with the otherwise smooth working between the Unions and the Federation, leading to the disastrous strike at Valleyfield, and was the cause of the latest stoppage at Culter.

As you know, No. 4 National Agreement was signed on February, 24th, 1924, after long negotiations about conditions. The question of wages did not enter into those discussions, and I might emphasise in passing that the National Agreement only lays down the minimum rates of wages, the basic rates of which, subject to rise and fall in the Board of Trade Cost of Living Index Figure, have remained in continuous operation up to the present time since May 4th, 1922.

Hardly was the ink dry upon the No. 4 Agreement than the National Union of Printing and Paper Workers gave notice to terminate on May 26th, 1924, and later put forward a series of demands which the Federation had no alternative but refuse, with the intimation that we were prepared to grant an advance of ½d. per hour on the minimum rates of Class 3 male workers and ¾d. to women.

Serious differences between the two Unions signatory to the Agreement ensued which further complicated matters, and, for a time, negotiations were practically hopeless, as it was impossible to get both bodies to meet us round the same conference table. There followed a period which called for the exercise of a great deal of tact and forbearance on the part of the Federation, during which we felt that, notwithstanding serious misgivings, it was the duty of the Federation to carry on with the conditions and terms of the No. 4 Agreement as though the Agreement was actually in force, in the hope that a time would soon arrive when the two Unions involved would become reconciled and negotiations could be resumed on the old basis.

I am glad to say that ultimately wisdom and the quiet determination of responsible leaders on both sides led to a resumption of negotiations, and finally to an informal unofficial meeting between representatives of the unions and the Federation, when very frank conversations took place as to the desirability and possibilities of future national agreements.

I would like, at this point, to pay tribute to the assistance of Mr. A. E. Holmes, secretary of the Printing and Kindred Trades Federation, who was largely responsible for bringing about a better state of affairs.

Arising out of these conversations and further official meetings between your Negotiating Committee and the Trade Unions, a meeting was held in London on Friday, November 20th last, at which, the conditions of a new agreement being substantially agreed, the Unions decided to accept the suggestions made by us a year ago, namely, that the question of wages be referred to the impartial arbitration of the Industrial Court, and I shall shortly ask you to approve of the proposed terms of reference.

The spirit and atmosphere of the meeting referred to was all that could be desired, and I trust that the contact re-established with our friends will be all the closer and lasting as a result of the very frank conversations we have had together.

Captain Nuttall supported the motion with approbation and said incidentally that he was very pleased the president had referred to the assistance given by the Unions at the Wrapping Section Enquiry before the Board of Trade.

The report and accounts were approved.

The auditors, Messrs. John Adamson, Son and Co., chartered accountants, Spring-gardens, Manchester, were re-elected.

District Boards.

The election of the District Boards as follows was confirmed:—

NORTHERN SECTION.—Messrs. W. E. Nuttall (chairman), Cooke and Nuttall, Ltd.; E. W. Allen, Olive and Partington, Ltd.; S. Riley, John Wild and Sons, Ltd.; S. D. Whitehead, Robt. Fletcher and Son, Ltd.; J. W. Cropper, James Cropper and Co., Ltd.; James Lomax, Darwen Paper Mill Co., Ltd.; John Seddon, East Lancashire Paper Mill Co., Ltd.; William Clough, Ramsbottom Paper Mill Co., Ltd.; J. Hacking, Burnley Paper Works Co., Ltd.; S. N. Cozens-Hardy, Wiggins, Teape and Co. (1919), Ltd.; W. Porritt, Grove Mill Paper Co., Ltd.; J. Elliot Jepson, Star Paper Mill Co. (1920), Ltd.; John Turner, Wall-Paper Manufacturers, Ltd.; and H. Hartley, A. M. Peebles and Son, Ltd.

SOUTHERN SECTION.—A. Ralph Reed (chairman), Albert E. Reed and Co., Ltd.; C. H. Sanguinetti, British Paper Co., Ltd.; A. E. Gooding, Imperial Paper Mills, Ltd.; P. W. Holden, Wiggins, Teape and Co. (1919), Ltd.; F. G. Hawdon, John Dickinson and Co., Ltd.; William Nash, William Nash, Ltd.; and R. B. Miller, Edward Lloyd, Ltd.

SCOTTISH SECTION.—Messrs. R. C. Cowan (chairman), Alex. Cowan and Sons, Ltd.; P. W. Davidson, Hendon Paper Works Co., Ltd.; James Luke, John Luke; W. B. Pirie, Alex. Pirie and Sons, Ltd.; Wm. Watson, R. and W. Watson, Ltd.; J. D. Tod, John Tod and Son, Ltd.; R. A. McLaurin, Smith and McLaurin, Ltd; C. G. Wallace, Wm. Sommerville and Son, Ltd.; Wm. Verden Anderson, Smith, Anderson and Co., Ltd.

National Agreement.

A report of the negotiations with the Paperworkers' Unions respecting the National Agreement was submitted, and it was agreed that the question of wages should be referred for decision to the Industrial Court.

A vote of thanks to the chairman terminated the proceedings.

The "William Vandy" Pension.

It was a happy combination on Saturday last, when the Brixton-Streatham-Clapham Committee co-operated with the Sick Fund Union in an endeavour to complete the above pension, which is the second one connected with the Sick Fund folk. They were exceedingly lucky in having such a chairman as Mr. J. M. Blanch, of the *Observer*, and also in securing as supporters of the chair, the Right Hon. C. W. Bowerman, J.P., M.P., Mr. Joseph Mortimer, O.B.E., Mr. Arthur O'Connor (P.M.A. secretary), Mr. W. A. Perkins, the ever-youthful William Vandy, Mr. W. Franklin (collector to the Printers' Pension), and many others. The concert was excellent in every way and Mr. Tom Wheeler is to be congratulated upon same. The artistes included Miss Elsie Beeley and Miss Boyes, two excellent sopranos, Miss Minnie Parrock and Miss Annie Preston, mezzo-sopranos, Miss Gracie Graham, commedienne, Mr. Arthur Terris, tenor, Mr. Alfred Parrock and Mr. W. Pitham, bassos, Mr. Billy Warren, Mr. Dan Stanley, Mr. Jack Addis, Messrs. Healey and Spencer, and Billy Travers and a Lady, supplied all the humorous items and were much appreciated. Mr. Chas. H. Hardy was the careful accompanist, and high appreciation of the efforts of all concerned was shown in the speeches of Mr. Blanch, Mr. Vandy, Mr. Bowerman, and Mr. J. Mortimer. The result of the evening's work was the sum of £80, which Mr. Blanch undertook to make up to £100. Great praise is due to Mr. R. W. Lee, Mr. Walter Parr, Mr. H. Dueval, Mr. Peter M'Ginty, Mr. Geo. Clow, and the musical director, Mr. Tom Wheeler. Altogether a most enjoyable evening.

Ilford Auxiliary Concert.

The third concert of the season of the Ilford Auxiliary to the Printers' Pension Corporation was held on December 5th at the "Cauliflower" Hotel, High-road, Ilford. The president, Mr. J. G. Williams (Williams, Lea and Co., Ltd.), occupied the chair, supported by Mr. Charles Dalziel (past president) and Mr. C. W. Brown (late financial secretary). The musical director, Mr. Dick Lewis, provided an excellent programme, the large and appreciative audience being delighted to hear the chairman announce that the "plate" had realised £52.

THE historic Locarno Treaty, which was signed in London recently, was printed on special paper known as Treaty paper, and these prints, signed by the plenipotentiaries of the various Powers, constitute the original Treaties.

WINKLER STEREO MACHINES W F C STANDARD OF THE WORLD

With Winkler Stereo Machines you are sure to get quick service, well done, at low cost.

Salesman: "A stereo machine is economical only when a fair selling price is followed by low operating costs. In reliability of operation and freedom from repair bills the Winkler machines have acquired recognised leadership, but *if* a breakdown occurs efficient service is promptly available."

Prospect: "Yes, every salesman brags about his service. But try to get it! . . . . And they stick you on parts."

Salesman: "The Winkler Company regards service honestly—just as it does manufacture. Winkler machines are built with painstaking care and precision in the most modern and scientifically equipped manufacturing plant, and the Winkler Company stands right behind them, throughout their long life, to see that they are kept right. And Winkler service at *low cost* includes Winkler parts at *low cost*. Winkler parts are priced exactly in the same way as Winkler machines—*the cost of manufacture plus a fair profit.*"

Prospect: "This is all right for offices nearby, but what about distant offices like mine?"

Salesman: "The same sort of service is available. Winkler machines are at work all over the U.K. and no Winkler is ever far from interested care. With its system of standardization the Winkler Company can supply practically all machine parts from stock."

Prospect: "Supposing I order a Winkler, will you give me the benefit of your experience to ensure consistently good stereo results?"

Salesman: "Of course we shall. In making use of the service we put at your disposal you have it within your power to standardize your stereotyping method in a manner that will prove most helpful to you The Winkler Company couldn't lead in its field for so many years if it sold just stereo machinery. It has always sold the world's best and most economical stereo machines, *plus efficient service*. We, as Selling Agents, can supply the best and most suitable flongs and moulding materials for your Winkler plant requirements."

A Romance of the Envelope.

The Story of Messrs. Millington and Sons, Ltd.

No 1, Amen-corner, Paternoster-row, E C.4, from January 1st, will be the City address of Millington and Sons, Ltd., the third address the business has known in the course of one hundred years of trading.

In 1824, when George IV was on the throne, William Leschallas, a gentleman of Huguenot ancestry opened a warehouse in Bishopsgate as a paper dealer and rag merchant.

London a Century Ago.

It is difficult to imagine to-day the social conditions of the London of a hundred years ago. The country was slowly recovering from the wounds of the Napoleonic Wars. The power of steam was yet in its infancy. The Stockton and Darlington railroad was in the making. Gas had been used for lighting the streets of London since 1807, but was still used mostly for indoor purposes, and where now at 9 o'clock at night a chain of brilliant electric lamps illuminate a solitary and deserted City and the echo of one's footsteps resound strangely on its pavements, a busy social life of its own occupied the inhabitants; children played in the streets; merchants still lived over their premises, and behind the drawn curtains the City merchant and his friends sat over their wine set on solid mahogany dinner tables. That was at the beginning of 100 years in the course of which London spread out in an almost unimaginable growth.

In those days paper was taxed from three halfpence to threepence per pound, according to quality. Newspapers were taxed fourpence per copy. The merchant who desired to extend his business by an advertisement in the newspapers had to pay a tax of three shillings and sixpence for the privilege.

Under these conditions William Leschallas started his business, which grew and prospered to such an extent that by 1835 a move became necessary to larger premises. In that year there was in Budge-row a warehouse known as "Moiniers' Paper Warehouse" with the proprietors of which he evidently came to some arrangement, as the watermarks of Moiniers are still the property of the present company. At any rate, in 1835 we find William Leschallas in possession of the premises in Budge-row where, in accordance with the prevailing custom, he continued to reside until his death in 1852.

A Vital Reform.

The real growth of the business commenced with the change in the postal system of the country; for previous to 1839 the rates of postage were so high as almost to preclude the use of the Post Office by the poor. It cost one shilling and fourpence to convey a letter from London to Aberdeen, and eightpence from London to Brighton. In 1837 Mr. Rowland Hill made the daring proposition that all existing rates of postage should be abolished, and their place taken by a uniform rate of one penny prepaid by stamps and irrespective of distance. This suggestion, looked upon at first as revolutionary, was adopted by Parliament in 1839. The first penny postage envelope was designed by William Mulready and issued by Rowland Hill in 1840. Under the old system the correspondence of the country averaged four letters per head of the population per annum; by 1875 the average had risen to 33 and an almost unbelievable aggregate of over a thousand million of letters and post cards was reached. William Leschallas was quick to seize the opportunities which the new postal system offered, and envelope-making of a somewhat primitive nature became one of the features of the business.

History of Envelope-Making.

At first envelopes were made on the Budge-row premises, but later a small factory was taken in Skinners'-yard—a quadrangle which lay off Sise-lane—and here the manufacture of envelopes went on for many years.

In 1852 William Leschallas died and Mr. Millington, who had acted as his export manager, came into possession of the business. A few years later he took into partnership a Mr. Hutton, the firm trading as Millington and Hutton till 1880, when the latter gentleman retired.

In 1868, Queen Victoria-street under a City improvement scheme was driven with Roman directness through a number of old City

No. 1, Amen Corner, Paternoster Row.

streets, and Skinners'-yard was amongst the demolished. Messrs. Millington and Hutton then acquired the freehold of an extensive factory in Southwark-street, where very primitive envelope-making machines were installed. These machines creased the envelope blank, leaving the gumming and folding to be done by hand. But gradually the mechanic's inventive brain came to the aid of the handicraft, and the history of the development of the business is the history of the development of envelope-making machinery.

In 1880, as we have already mentioned, Mr. Hutton retired, and Mr. Millington carried on the business with his two sons, all since deceased, as Millington and Sons. In 1883 the Southwark-street factory was burned to the ground and many of the historical records of the business were destroyed. The factory was quickly rebuilt, and in 1885 Mr. Percy Parminter, a nephew of Mr. Millington, entered the business; six years later the late Mr. Henry Godfrey joined the firm of Millington and Sons. Under the directorship of these two men the business made rapid strides. An additional factory in Banner-street was taken in 1896, but the growth of the business was such that neither Southwark street nor Banner-street could cope with the volume of orders, and the site now known as Crown Works, Tottenham, was accordingly acquired in 1901 for the erection of a model factory.

Model Envelope-Making Factory.

This factory, the most modern of its kind, covers an area of over six acres, all on one floor. Here the most up-to-date machinery in the world for the manufacture of envelopes can be seen, the very latest letterpress and lithographic machinery, ruling, boxmaking and binding machines and guillotines of the newest automatic type are here in profusion, and the appearance alone of the place bespeaks efficiency. Crown Works, Tottenham, is the main manufacturing centre of the business, but there are subsidiary factories in Birmingham, Manchester and Leeds, providing prompt service for their immediate areas.

The necessity of keeping this huge machine fed requires a large sales organisation, which has always been centred on Budge row, but it has been recognised for some time that Budge-row is not so central as it was, and the expiration of the lease provided an opportunity of securing premises at No. 1, Amen-corner, Paternoster-row, under the shadow of St. Pauls—a stone's-throw from the ancient Stationers' Hall and in the heart of the stationery trade of London.

By the way, No. 1, Amen-corner—an address known all over the world—bears in its title an echo of the dim and distant past when mediæval monks wending their way along what is now Paternoster-row, repeating the paternoster, reached the "Amen" at the Corner—other echoes of their chants being carried down to us in the names of Ave Maria-lane and Creed-lane.

To-day in Paternoster-row, hustling bagmen take the place of sandalled monks, and expressive English the place of the Latin tongue.

The Printing Trade.

Comparison between Britain and U.S.A.

The industrial relations of the United States to this country have been brought to the fore by the report of the president and the assistant director of the Federation of British Industries on their visit to that country, writes Mr. A. E. Goodwin (secretary, Federation of Master Printers) in *British Industries*.

The printing industry is at the moment particularly interested in American problems, and the recent visit of the writer of these notes to the U.S.A. contributed to the express need of enlightening American public opinion. I went there to investigate the problems of production, management, education, training and labour in the printing industry. I found that labour created few difficulties; there was an ever-increasing tendency towards specialisation, coincident with larger scale production and a decrease in the number of small firms; that advertising is not confined chiefly to newspapers, and is highly developed along direct mail lines; and that experiments are going on all the time with new methods and processes of production.

American industry is, however, less effectively organised than industry in Great Britain. For example, attempts to reform paper sizes by standardisation or, as they prefer to call it, simplification, have made slow progress. Against this, we in this country have the recent introduction of a scheme bringing in new and standardised sizes of paper, and already tnese sizes are being supplied by all the leading paper manufacturers, who have prepared and issued price lists based on them. This is an advantage held by British industry that might be developed along lines like that of collective advertising.

Australian Notes.

September Imports of Printing Paper—Big Decrease in Value—The Tasmanian Newsprint Project—Replies to Criticisms—Further Negotiations—Government's Attitude to a Valuable Industry—New Zealand Newsprint Duties—Smiths' Newspapers, Ltd.—New Companies.

(From Our Sydney Correspondent)

OFFICIAL returns of imports into the Commonwealth for September show that, in printing paper, the value is very much lower than it was in September, 1924. The figure this year is £49,891, as against £123,909 a year before.

A LIVELY little controversy has been under way concerning the Tasmanian newsprint project and the attitude of the Government towards it. Criticism by Mr. Charlton has brought a vigorous reply from the Prime Minister (Mr. Bruce). After putting the critic right at least in regard to one particular, Mr. Bruce says the matter of supporting local enterprise was one involving the closest investigation in view of the fact that paper had never been commercially made from hard wood timber. Following a reference to the proposed bounty of £4 per ton and a deferred duty of the same amount to come into operation when the paper industry was established, Mr. Bruce mentioned an interview he subsequently had with two of the directors of the Amalgamated Zinc Co., who indicated that in their opinion the amount of assistance provided was not adequate to justify them in proceeding with the matter. At the same time these directors intimated that they could submit further information which they were confident would convince the Government that a further measure of assistance was necessary and warranted. To this Mr. Bruce had replied that if the additional information showed that any alteration in the Government's decision was justified, the matter would be reconsidered. He had asked for this additional information in time for it to be reviewed, so that the Government's decision could be given before the date of the expiration of the option of the Tasmanian property, namely December 3rd.

MR. PRATTEN, the Minister of Trade and Customs, has also taken up the challenge of Mr. Charlton. Referring to the projects which had been put before him for the establishment of a paper mill in Tasmania capable of making 20,000 tons per annum of newsprint and writing paper from Tasmanian hard wood at a capital expenditure of £600,000, Mr. Pratten mentioned that if such an undertaking proved commercially successful, consideration was to be given to the expenditure of a sum up to two millions for the purpose of making the whole of the paper requirements of Australia. The benefits of such an industry to Tasmania and to the whole of Australia, said the Minister, was so obvious that the proposal demanded the sympathetic and careful consideration of the Government.

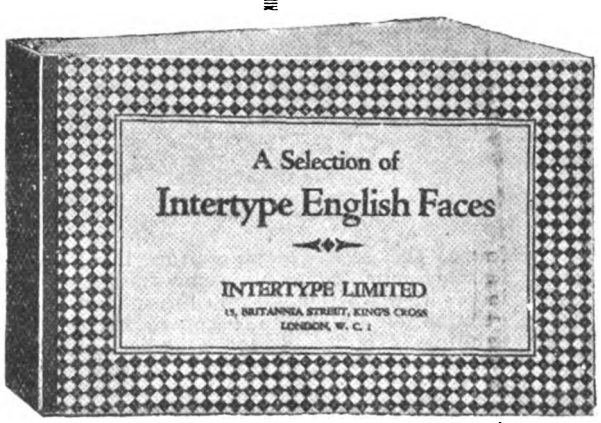
SOME interesting figures relating to the probable cost of manufacture in Tasmania were given by Mr. Pratten. No proved information was available to the Government regarding the costs, quantities or qualities of paper it was proposed to make, and exhaustive world inquiries were therefore made by him as to the costs of processes and wages, so that the Government might arrive at the conclusion as to what was required to enable the industry to be established, which showed that on the basis of Australian rate of wages, the labour cests of making newsprint in Canada and Scandinavia from the tree to the wharf could reasonably be stated at a maximum of £5 a ton, or, say, five men per ton of paper per day. Owing to the more expensive process necessary to convert hardwood into paper, there would be more men necessary in the Tasmanian proposal than in Canada or Scandinavia, the estimate being eight men per day per ton of paper, apart from reafforestation. A total production of 30,000 tons per year for five yeafs from January 1st, 1927, was fixed. That production was 100 tons per day, and on the figures obtained would mean the employment of 800 men in the proposed new Tasmanian venture at a wages sheet of, say, £200,000 per year.

IN view of criticisms which have been made of the scheme by the Labour Party newspaper, it is worth while recalling the statement made by Mr. Charlton that "The advent of Labour will mean the establishment of this industry." It was suggested at the time that Mr. Charlton should be a little more definite on this point. In view of the recent elections, however, the Labour Party will have no immediate opportunity of showing what their policy would be in regard to newsprint manufacture in Australia.

IN a referen ce to the calling of tenders for newsprint by the New Zealand Newspaper Proprietors' Association and the position of Canada in regard to this matter, it is pointed out that during the fiscal year ended March last 10,268 tons of newsprint were shipped to New Zealand and 585 tons to Australia. To the latter country in 1923 there was shipped 30,200 tons. In July of the current year New Zealand took 974 tons of Canada's newsprint.

THE annual accounts of Smith's Newspapers Ltd., covering the twelve months ended June 30th show a net profit on working of £18,357. It is proposed to pay a dividend of 5 per cent. on the ordinary capital, to place £14,000 to general reserve and to carry forward £8,053. Advertising revenue from the *Guardian* is said to have increased by over 62 per cent. on the previous year's figures and the circulations of this newspaper and of *Smith's Weekly* are increasing. The company is concentrating on the development of these two papers rather than immediately launch a Sunday paper.

THE following two new companies have been registered:—The Lismore Printing and Publishing Co, Ltd.: Nominal capital £15,000, in £1 shares; objects, to purchase and take over as a going concern the business of printer, publisher, etc, carried on by J. C. MacCartie at Lismore. The Chinese Republic Newspaper and Trading Co., Ltd.: Nominal capital £5,000, in £1 shares; objects, to carry on all or any of the businesses of merchants, warehousemen, charterers of ships, ship owners, etc.



Better Matrices

A large proportion of composing machine stoppages are caused by defective matrices.

By using Intertype matrices —the best obtainable—you can get a better face and will not be bothered with faults in distribution, hair lines, broken characters, etc.

Intertype matrices can be used on all makes of line casting machine in common use. They are of superior design and construction, giving faithful reproduction of characters, perfect alignment, even impression and clear, sharp outlines. They have wider combination teeth than the old type of matrice, a feature which ensures correct distribution and lengthens the life of the matrice.

The Intertype Library contains all the most popular faces for newspaper, book and jobbing work.

New Inventions

Rotary Offset Web Machines.

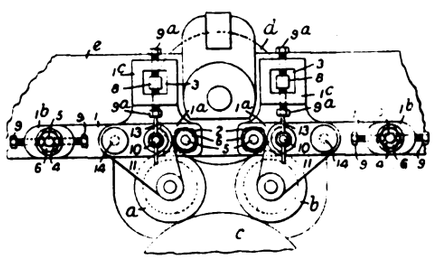
An invention patented by Messrs. Linotype and Machinery, Ltd., and others, relates to rotary offset web-printing machines of the kind in which two coacting offset cylinders can be adjusted during the running of the press by screw-mechanism. Arrangement is made that the two offset cylinders can be simultaneously adjusted to the same extent The web X is perfected between offset cylinders 4, 4a, coacting with plate cylinders 1, 1a, and the offset cylinders are each mounted in a pair of eccentric bearings 5, 5a, carried by slides 6, 6a, on inclined screw rods 12. The pressure between each offset cylinder and the corresponding plate cylinder 1, 1a, is adjusted by rotating the eccentric bearings 5, 5a, by means of cams 8 acting

on notches in flanges on the bearings. The bearings are secured in adjusted position by clamping-bolts 7, which pass through slots in the bearing flanges. The slides 6, 6a, are arranged so as to be capable of independent adjustment, or all the slides can be operated simultaneously. The screw rods 12 are engaged by nuts formed with spiral gears 16, and on each side of the press two spiral gears 17 on a shaft 18 engage the gears 16 and allow of rotation of the nuts, and thus cause the rods 12 to be moved axially. The shafts 18 are connected by bevel gearing to a common operating shaft 22 fitted with a graduated hand-wheel 23 which co-operates with an indicator 24 to indicate the printing-pressure. The gears 17 can be operated by gears 25 on shafts 26 which can be manually operated by tommy-bars. Each of the gears 17 is connected to the hub of its shaft by a clamping-bolt arranged in a slot in the felly of the wheel. By loosening the clamping-belt of one felly, the other gear 17 can be operated independently, so that one end of an offset cylinder can be operated without the other, or one cylinder can be operated without the other.

Offset Blankets.

An invention by Messrs. L. Pepe and D. De Nagy relates to rubber offset blankets, which are provided with a coating of which the basis is a translucent gelatinous neutral solution of lactic casein, legumin, gluten, fibrin or a combination of such materials. This coating protects the printing plates, particularly fine-grained photo-mechanical printing plates, from the deleterious action of the sulphur in the rubber. In preparing the solution, the casein, etc., is treated with hot water or steam and dissolved in an alkaline solution to remove fat and albumen and is then precipitated with oxyglutaric acid. The precipitate is washed and then dissolved at a low temperature in glutaminic acid and dilute ammonia. The solution is then mixed in the proportion of 5 to 1 with a 20 per cent. solution of liquefied gluten or serecin, and a 10 per cent. solution of formaldehyde is added to this mixture in the proportion of 1 to 10 and propenyl alcohol is added in the proportion of 1 to 50. Specification 236,621 is referred to.

Photo-Mechanical Printing Surfaces.



Mr. E. Christeller has invented a process for making printing surfaces for reproducing transparent or scientific specimens, such as physiological or biological specimens, which consists in using the specimens or preparations themselves directly for the production of the block. Grid negatives, either for monochrome or multi-colour reproduction, can be made by an enlarging camera or photo-micrographic apparatus. In the case of thin transparent specimens of normal size a negative may be made by contact printing and the negative used for making the block.

Ink for Dry Litho.

In order to avoid the necessity for the use of damping-apparatus in lithographic and like printing-presses, printing-ink, as patented by Messrs. Schuck, Maclean & Co., Ltd., is mixed with an emulsion of the water-in-oil type formed with an aqueous solution of a salt or salts which are capable, either alone or with the aid of an emulsifying agent, of forming such an emulsion, which are deliquescent, and which have no deleterious action on the pigments. The emulsion is preferably first formed with the solution and lithographic varnish and is subsequently incorporated with the ink. Suitable emulsions are formed from stated proportions of calcium chloride solution, varnish, petroleum jelly, and ammonium chloride or borax. The ammonium chloride or borax is dissolved in the calcium chloride solution and emulsified with other constituents, different amounts, varying according to the consistency of the ink, being added to the ink. Alternatively, the solution may be emulsified with the ink, oil being added during the process if necessary. Materials to impart or counteract acidity or alkalinity may be added.

Damping Rollers for Rotaries.

Supporting and adjusting means for inking and damping rollers of rotary printing machines are patented by Mr. A. R. Timson, and comprise roller-carrying arms pivoted in carrier brackets adapted for horizontal and vertical adjustment on the machine

frame, the roller-carrying arms being releasably mounted to allow movement to an inoperative position. From the ink drum c gelatine, etc., rollers a, b convey ink to the printing cylinder d, the spindles of the rollers a, b being supported at their ends by arms 11 pivoted at 10 to brackets 1 adjustably carried by the framing e of the machine. On the brackets 1 are formed bosses 1a, 1b, 1c, provided respectively with a square hole 2, a slot 4 and a square hole 3 Projecting into the hole 2 and the slot 4 from the framing, are studs 5 provided with securing nuts 6, and into the hole 3 a square rod 8, adjustment of the bracket being effected by opposed screws 9, 9a, carried by the bosses. The arms 11 are held in the operative position by spring pins 14 engaging holes in the brackets 1, the rollers being withdrawn from the inking drum, when the pins are released, by springs or gravity. Wing nuts 13 serve to hold the arms 11 on the pivots 10.

The above extracts are taken, by permission of the Controller of H.M. Stationery Office, from the Illustrated Official Journal (Patents). Full copies of Published Specifications (1s. each) can be obtained from the Patent Office, 25, Southampton Buildings, London, W.C.2.

A COMMISSION agent in Santiago de Chile is desirous of securing the representation of British manufacturers of stationery articles. (D.O.T. Reference No. 647).

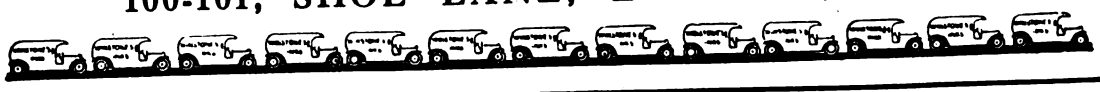
PROGRESS SERIES: No. 6.



In 1848 when the House of Winstone was founded, almost fifty years before the petrol engine took its place on the roads of the world, deliveries were slow and uncertain. It requires little imagination to picture modern business without motor transport, to carry goods from point to point quickly and economically.

SERVICE is the life-blood of modern business—revitalising the worn tissues of trade. Service produces the food you eat, the clothes you wear, the wireless you hear, the magazine you read; without it industries would languish into stagnation.

Since the days of the push-cart, seventy-seven years ago, the House of Winstone have built up the structure of their organisation on Service meeting the printers' every requirement in Inks, Rollers, Sundries and Specialities—promptly, efficiently.

This Service ideal is maintained in every department from their Advisory Board of Specialists, who give advice on any printing problem, to their fast delivery system which operates a fleet of motors to all points within a reasonable radius of London.

PRINTING PAPERS.

LECTURE BY Mr. T. H. CUNANE AT STATIONERS' HALL.

Under the auspices of the Stationers' Company and Printing Industry Technical Board Lectures, a very interesting and instructive address was given at Stationers' Hall on Friday, December 11th, by Mr. Thos. H. Cunane, director of the Universal Paper Agencies, Ltd., his subject being "Printing Papers." Mr. A. W. Foster, B.A., secretary of the Papermakers' Association, presided, and there was a very large gathering which followed Mr. Cunane's lecture with close attention.

The chairman, in introducing Mr. Cunane, mentioned that that gentleman had a long experience of printing papers, both in their manufacture and their sale, and he thought in some instances selling was more difficult than the manufacture. Indicating the course of evolution of the materials on which human thoughts had been recorded, Mr. Foster mentioned that there had been a steady substitution of a thinner and more tenuous substance for the thicker and more opaque material. Following that process through, it would seem as though it would continue to the stage when Mr. Cunane would have nothing to sell—(laughter). Referring to the Babylonians' use of bricks on which they recorded their thoughts, the chairman intimated that the editor of a local paper in those days, when he did not approve of his correspondent, could overwhelm him by returning his own contribution—(laughter). Mr. Foster went on to trace the development of papermaking from parchment, papyrus, straw, and rags, until some ingenious gentleman in the 70's found that paper could be made from wood pulp. Still thinner and weaker writing and printing material was thus made possible. The tendency at the present moment, he feared, was that instead of bricks, parchment, papyrus or paper, the communications of the immediate future would be written upon the air, and he did not see Mr. Cunane going round the country trying to sell patches of air on which printed matter was to be recorded. (Laughter.) There was, however, the remaining difficulty that the wireless enthusiasts had no means of rendering their communications permanent, so that the use of paper would still be necessary, and Mr. Cunane would have a job to carry on. (Applause.)

Characteristics of Paper.

Mr. Cunane, in the course of his lecture, explained the characteristics of papers, and gave an outline of the processes which raw and semi-manufactured materials had to pass through on their way to the finished paper. His address was illustrated by lantern slides, some of which had been specially prepared for that evening, such as those showing the collection and transport of esparto grass from North Africa. There was also here and there a bright touch of humour which relieved the more technical details of the lecture.

Describing the various fibres and their characteristics, Mr. Cunane mentioned that esparto was particularly suitable for printing paper because it was less subject to stretch or shrinkage.

Dealing with this question of shrinkage, the lecturer pointed out that papermakers dried vegetable fibres within 4 per cent. of bone dry. Accordingly, when these fibres got into a moist atmosphere such as existed in Manchester or London, they absorbed some of that moisture and endeavoured to get back to their original state, which was about 7 per cent. to 9 per cent. of moisture, and in that process, of course, they were going to stretch. Therefore, the thinner they got the paper, with a view to avoiding stretch, the better. Incidentally, Mr. Cunane mentioned that papermakers were experimenting with other fibres, including that of banana skin, which had no stretch at all.

Referring to the complaint by printers, which was sometimes heard, that prices of paper were too high, Mr. Cunane said if papermakers were given an advance in price they would be able to produce a better article. The introduction of mechanical pulp had rendered paper very much cheaper, and but for this material newspapers would cost about three times as much as they did at present.

Mr. Cunane went on to observe that if the printers would indicate to the papermaker the particular purposes for which they wanted their paper, he would be better able to meet their requirements. The great trouble was that printers desired a paper to satisfy every demand—which could not be done.

On the subject of loading in paper, the lecturer showed how this was necessary, in order to give a smooth printing surface. He put on the screen a picture which was very reminiscent of shell-holes in France, and explained how china clay and other loadings filled up the crevices and gave a suitable printing surface. There were also views showing the effects of rough handling by printers. Finally, a picture of art paper produced in this country was a remarkable contrast with the original shell-hole illustration.

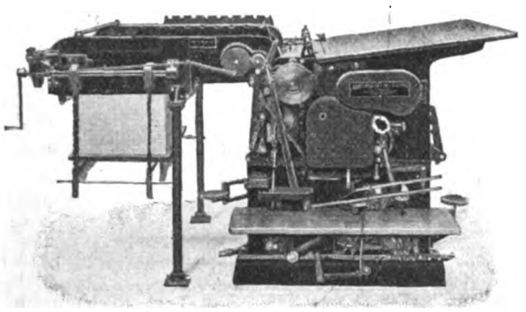
Discussion.

Mr. Fuller opened the discussion on the paper by asking Mr. Cunane if there was a ready means of distinguishing between imitation art and super-calendered paper, observing that he understood that even the papermaker sometimes sold super-calendered for imitation art. (Laughter.)

Mr. Cunane said the explanation he had generally given was that a real imitation art should be a pure esparto and water finish, while super-calendered paper was generally a wood paper, fairly heavily coated. If users would stipulate to the papermakers "water finish," he thought that would get over the difficulty.

In answering a question as to the use of rubber latex, Mr. Cunane did not think there was any particular point in this device. He thought particularly it would not be to the advantage of the printer, because they could easily imagine if they got rubber mixed up with the paper they were going to have a bit of stretch going on. (Laughter.) Another difficulty in this matter was that they could not use their wastepaper over again, because in the process of drying the rubber would become vulcanised.

Electricity in Paper.



Asked whether the papermaker could not remove the electricity in paper which was such an annoyance to printers, Mr. Cunane said a number of papermakers did take out as much electricity as they could by passing a copper wire or wires over the paper and earthing the wire. While they could remove a good deal of the electricity, he did not think that they were able to take it all out, but they could depend upon the papermakers eliminating as much of the electricity as possible. Mr. Cunane agreed that paper that was well matured and held in stock a fair amount of time would contain less static electricity than paper which had just been made. The trouble was that newly manufactured paper contained electricity generated by passing over the drying cylinders, it not having had time to disappear.

Mr. I. R. Riddell pointed out that whatever the papermaker might do to remove the electricity it came back again in transit between the mill and the printing office. No matter how long paper was matured, if it was shipped in cold trucks and printed right away, they got static electricity. It was well, therefore, to mature a printing paper in the printing office and in the store-room, which should have a temperature the same as in the press-room where the paper was printed.

The Problem of Fluffing.

Answering questions by Mr. Riddell on the subject of fluffing, Mr. Cunane explained this matter. In the production of a featherweight antique paper printers wanted to get a bulky paper and they wanted it to print about 10 million a minute (Laughter.) with

LINOTYPE & MACHINERY LTD.

in their Works at Altrincham, Cheshire.

Head Office: 9 KINGSWAY, LONDON, W.C.2

the idea of producing books which sold at about six for a penny. (Renewed laughter.) The papermakers had to treat the fibre so that the printer could print rapidly. It was necessary therefore for the paper to absorb ink quickly without any set-off. A 30lb. double crown paper had to bulk like a 60 lb. double crown, giving the consumer the impression that he was getting something for nothing. (Laughter.) Then the poor papermaker was blamed because success had not attended the attempt to bluff the customer. Fluffing was caused because the papermaker was getting the fibre or material off "free." He was simply treating the fibre quickly in order to avoid it becoming hard. With some high-class featherweight paper there was not much fluffing. The papermakers had simply to beat the fibres longer and size them harder, but the result was that they were defeating the object for which the papers were bought.

In further answer to Mr. Riddell as to the relative merits of a thick or thin coating of paper, Mr. Cunane said beyond certain limits a thin-coated paper was not so good. In a perfectly coated paper double coating was better than the single coating.

Mr. Ilston Cox, in proposing a vote of thanks to Mr. Cunane, expressed appreciation of the simple language used in explaining the elaborate process of papermaking. Mr. Cunane had given a touch of humour to a subject which was too often dry and wet. (Laughter.) The speaker suggested that it would be an advantage if papermakers had a printing machine on which to test their papers. If they could afford to spend £40,000 on a papermaking machine, a few hundreds on a printing machine would be worth while in helping them to detect any imperfections in the paper before it reached the printer. He felt that co-operation was a valuable asset in trades which were interlocked. If a papermaker was introducing something new in the way of paper which he considered an improvement on something hitherto sold to the trade, he should invite the co-operation of all those concerned in its use, to see if it was really an improvement or if it had defects.

Seconded by Mr. W. H. Brett, the resolution of thanks was very cordially carried.

Research Committee.

Mr. Cunane, in reply, said the suggestion that papermakers should put in a printing machine was being carried out in this respect, that they were trying to get a few papermakers and representative printers and inkmakers together, with the object of forming a sort of research committee to test the various ideas that were brought forward. He thought if that idea could be carried out up and down the country, they would be able to help one another. He assured the meeting that the papermaker was always willing to learn from the printer, and if users would only explain for what purpose the paper was required, that would be a means of avoiding a lot of trouble.

In conclusion, Mr. Cunane proposed a vote of thanks to Mr. Foster for presiding over the meeting. He thought they were to be congratulated on having a gentleman of Mr. Foster's eminence to occupy that position, because he had about ten days a week to put in. (Laughter.)

Mr. Riddell seconded this resolution and also referred to the strenuous life which

Mr. Foster led on behalf of the papermaking industry. Proceeding to speak of co-operation between the papermaker and the printer, Mr. Riddell said he hoped in time the paper manufacturers would unite with the printers and set up a department in the London School of Printing, where already a good deal of paper testing was done, and so get the work really systematically accomplished. The laboratory test, he suggested, might suit the chemist, but the real test was in printing on the paper. The speaker mentioned that it was not always the papermaker who was wrong, because he often found that it was the printer who was at fault. If they could get the papermaker, the printer, and the ink manufacturer together, they would confer a great benefit upon the craft.

Mr. Foster, in acknowledging the vote of thanks, which was cordially carried, said it was always a pleasure to help the good work Mr. Riddell was carrying on.

Wrapping Paper and Safeguarding.

More Questions in the House of Commons.

In the House of Commons on Wednesday, December 9th, Mr. Smedley Crooke asked the Prime Minister if he would consider the advisability of introducing safeguarding as applied to the wrapping paper industry before the Session was over, in view of the imports coming in threatening further unemployment.

Captain Bourne asked the Prime Minister whether he was aware that apprehension had been aroused in the paper manufacturing industry by his announcement that the Government did not propose to introduce the Resolution imposing a safeguarding duty on wrapping paper that Session; and whether it was possible for him to reconsider this decision.

The Prime Minister: I shall answer these questions together. I would refer my hon. friends to the statement which I made on business on Friday last, and to the answer which I gave yesterday in reply to a private notice question addressed to me by my hon. friend the Member for East Dorset.

Captain Bourne: Will my right hon. friend consider the possibility of taking steps to prevent excessive imports between now and the time when the duty is imposed?

Mr. A. V. Alexander: Will the right hon. gentleman also consider the very great advantage to the export trade dependent on paper as raw material of increasing imports?

The Prime Minister: All those considerations will be borne in mind.

Major Colfox: Is my right hon. friend aware that there is considerable difference of opinion among his own supporters as to the advisability of imposing this duty?

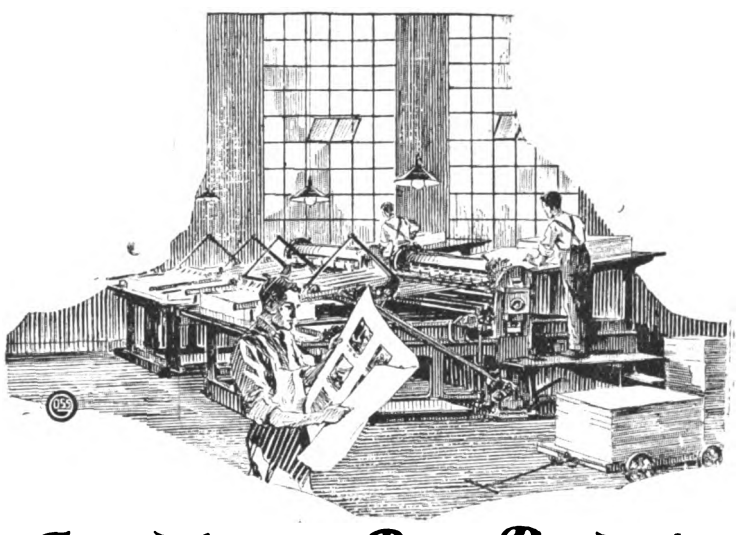
Brigadier-General Sir Henry Croft: Is the Prime Minister aware of the fact that that opposition may be counted on one hand?

Mr. Hall Caine: In view of the injury to the industry by this postponement, will the right hon. gentleman consider making a Government appeal to shopkeepers during the forthcoming shopping weeks to use British and not foreign wrappers?

Australia's Papermaking Project.

Cabled advice from Melbourne states that at the meeting recently of Amalgamated Zinc (De Bavay's) the chairman mentioned that the paper project being *sub judice*, there was nothing to be gained by discussing it. If, however, it was proceeded with, the board desired two or three suitable partners in order that the whole of the company's capital was not required. It was therefore suggested that the company's holding of 300,000 ordinary shares of the Electrolytic Zinc Co. of Australasia be distributed among the holders of the shares of Amalgamated Zinc (De Bavay's) in proportion to three Electrolytic Zinc shares to five Amalgamated Zinc shares.

The necessary meeting to confirm this would be called at the earliest date possible. The directors suggested that the remaining assets which were revenue-producing should continue under the board's control pending a decision as to the company's future which the next half-year should bring. The meeting unanimously endorsed the board's policy.



COMMERCIAL MANAGEMENT.—By Cunliffe L. Bolling. London: Sir Isaac Pitman and Sons, Ltd. Price 10s. 6d. net.

THERE should be many in the printing and allied trades who will find the study of this book a great help in the effort towards increased efficiency in the running of their businesses. A substantial cloth-covered volume of 424 pp. it appears to be well adapted to fulfil the aims of its publishers, who describe it as a comprehensive handbook of modern business practice, specially intended as a guide and *vade mecum* for those who are engaged in the management of business enterprises, and as a textbook for all who aspire to management. The author has selected for particular attention those problems of policy, control and everyday practice which are common to most businesses, and which are liable to cause special perplexity to management. The value of the work is enhanced by a great variety of practical examples and illustrative forms.

PAPER TRADE DIRECTORIES.—The new issue of the Paper and Pulp Makers' Directory of Sweden, Norway, Denmark and Finland, is now published by Hugo Brusewitz Aktiebolag, Gothenburg. It is the eighth edition (1925–26), and largely follows the established lines, with certain useful rearrangements. The list of mills is very complete, and gives the usual particulars regarding personnel, capital, machines, production, etc. Additional scope has been given to the index, which includes the names of companies, firms, etc. The trade marks have now been placed together, each with its page number noted, so as to facilitate direct access to information about the respective mills. There are also included the General Trade Rules agreed upon this year by the respective English and Scandinavian Associations governing business dealings in paper and board and the English and French texts of Conditions of Contracts as regards sales of wood pulp. The Directory is again furnished with a map of the countries concerned, the position of mills being clearly indicated. Copies may be ordered through the office of this journal.

A new issue of the Annuario delle Cartiere Italiane (Italian Paper Mills Directory) has just been published under the auspices of the Italian Review, "L'Industria della Carta e delle Arti Grafiche." The volume, in size cm. 25 by 30, of 300 pages, bound in pasteboard and canvas, with a great deal of information quite revised to date and many new additions, comprises, among the most important rubrics, a review of the present conditions of the Italian paper industry and trade, paper trade customs, paper associations, Italian customs tariff, etc. The entire alphabetical list, classified under the names of firms, of the Italian paper, board and pulp mills, includes the addresses of the selling offices and factories, postal and telegraphic addresses, telephone numbers, number and width of machines, telegraphic code, makes and tonnage of the production, agents, railway services, etc. There is also an alphabetically classified list of mills with the products. A list of about 1,100 commune of Italy, incorporates the addresses of the paper mills pertaining thereto, paper and board agents, papermakers' representatives, wholesale paper merchants, workers in paper, cardboard and paper box manufacturers, printers, lithographers, political newspaper proprietors, etc. The price of the volume, enclosed in a board envelope, is lire 45, post paid, registered abroad.

MESSRS. HERRING, DEWICK AND CRIPPS, 85, Cannon-street, London, E.C.4, have issued a sample book of stock papers which are worthy of attention. The contents comprise:—1, printings, arts, antiques, M.G. poster and pulp boards; 2, cream laids and woves; 3, yellow and blue laids and woves; 4, ledger and account book papers; 5, banks, bonds and loans; 6, blottings; 7, tinted banks; 8, coloured papers (glazed tints, fine tinted writings and cover paper); 9, cartridges, M.G.'s and label manillas; and 10, brown wrappings. A thumb index gives ready access to any particular section. There is a very big range in each section, the quality of the samples justifying the substantial character of the book, which is bound in stout boards.

Good Inks mean Better Production

LETTERPRESS
TRICHROME
PHOTOGRAVURE
LITHO
OFFSET-LITHO
Etc., Etc.

MAXIMUM Production—the secret of running machine-rooms **profitably**—depends largely on the use of inks that will enable the presses to run at their highest possible speeds without sacrificing the quality of the product.

L & B Inks are made to **help** production.

No matter how difficult the subject, they will print it cleanly, easily and with full density of colour **at the maximum speed.**

GO NAP AND USE TYPON

PAPER NEGATIVES

NO camera is needed to reproduce copy that is printed on both sides. TYPON "N" REFLEX PAPER will give the negative you require on the contact frame, and without recourse to expensive camera apparatus. Result—a tremendous saving in the cost of reproduction.

A STRIP NEGATIVE can be easily obtained on the contact frame with TYPON "A" STRIP PAPER. For letterpress work this is an excellent medium for printing down your job either for offset or direct litho. The emulsion is stripped from the backing paper by the aid of a thin glassine paper.

DONE ON TYPON "D" ANTI-HALATION PAPER, line and half-tone work are of unsurpassed density and brilliancy. This is an exceptionally fine Paper for Offset Litho and Photogravure, and reproduces fine line and point with absolute truth of detail. The Strip Film produced is tough and practically everlasting.

KEEN Process Photographers are enthusiastic regarding the New TYPON "K" ANTI-HALATION CAMERA PAPER. This Paper is made especially for camera use, and is about THREE TIMES FASTER than TYPON Contact Papers. With the exception of its speed, it is of similar construction to "D" A-H. Paper, and gives a thin tough film which is easily detached from the backing paper without the aid of any transferring agency.

FOR Colour and Register work of all descriptions there is no finer medium on the market than TYPON "F" ANTI-HALATION FILM. For density of blacks and brilliancy of whites this film has no equal, and the finest line and point is held with amazing truthfulness.

Particulars on application from :—

Trade Notes.

NEWSPAPER PLANT DEVELOPMENTS.—The *Mexborough and Swinton Times*, in order to cope with larger papers now being published, have recently installed a three-roll Scott printing press, which will be running early in the New Year. The *South Eastern Gazette*, Maidstone, have installed a new Cossar web-printing machine, and the paper is now being printed on that machine. The *Essex County Standard*, which is printed at Colchester, have installed a Cossar web-printing machine, capable of producing an eight, twelve, fourteen or sixteen-page paper as required.

THE 21ST annual general meeting of the *Morning Post*, Ltd., was held at the *Morning Post* offices on Friday. The Duke of Northumberland presided. The report and accounts for the year ended June 30th were read and passed. The following resolution was carried unanimously: — "That the shareholders in annual general meeting desire to record a vote of thanks to the employees for their loyal and willing work, to which special reference is made in the directors' report on the production of the newspaper."

A RECEIVING ORDER under the Bankruptcy Act, 1914, has been made in respect of W. Ashworth and Ada Whitfield (married woman), both lately residing at 29, Claremont-villas, Morley-street, Bradford, and carrying on business in co-partnership under the style of "The Standard Printing Company," at 7, Bolling-street, Bradford, commercial printers, lithographers, and pattern card makers.

MACHINE RULERS' STRIKE.—Steps were made by the officials of the Joint Industrial Council with a view to settling the dispute affecting the London Machine Rulers' Society, but a conference held under their auspices on Wednesday of last week did not prove successful. A full meeting of the Joint Industrial Council was accordingly called for Tuesday of this week to consider the whole position.

PUBLISHING STRIKE.—The Book Trade Employers' Federation and the Paper Workers' Union were in conference on Monday of last week but no settlement was reached and at the time of going to press there is no news of any further negotiations.

JOINT INDUSTRIAL COUNCIL..—The Organising Committee of the J.I.C. met on Wednesday last to receive reports of work done by District Committees in all parts of the country. They decided to take further steps in Lancashire and Cheshire to promote the formation of District Committees and will call an area conference. The question of amending the rules relating to disputes was deferred to a special meeting to be called early in January.

FEDERATION COLLECTIVE ADVERTISING.—All the details have now been fixed for the second stage of the Collective Advertising Campaign of the Federation of Master Printers, and arrangements are being made for meetings in all the Alliances to discuss the new programme. Specimens of the advertising literature will be issued early in the New Year.

STAFF INSURANCE SCHEME.—A number of inquiries have been received at the headquarters of the Federation of Master Printers in respect of the staff insurance scheme recently put forward, and several important printing firms are starting the insurance scheme for their staffs in the New Year.

STEREOTYPERS' OVERSEERS ASSOCIATION.—The usual monthly meeting of the Electrotypers and Stereotypers Managers and Overseers Association was held on Tuesday of last week at St. Bride Institute, Bride lane, E.C., under the chairmanship of Mr. J. Black (vice-president). Very little business was before the meeting. Consideration was given to future social arrangements and to the appeal being made by the electrotyping and stereotyping section of the trade on behalf of Mr. G. K. Naylor.

HALFPENNY POSTING TIME.—A request by the Wholesale Tobacco Dealers' Association for a removal during December of the restriction on the time of posting halfpenny matter has brought the reply from the Postmaster-General that if such matter as cannot be posted before 4 30 p.m. is prepaid at the rate of one penny for the first two ounces it will be dealt with after that hour.

A NEW trade union weekly will make its appearance in the first week of the New Year, with the title, the *Trade Unionist*.

FEDERATION ANNUAL MEETING.—The date of the annual meeting of the Federation of Master Printers has now been fixed for May 8th, when the rendezvous will be Eastbourne. It is intended to have special sessions dealing with business management, the training of apprentices and salesmanship.

MR. W. H. ANSELL, who has died, age 83, at Rochester, worked for 60 years in the printing works of Messrs. Parrett and Neves.

THE death has occurred of Mr. William J. COX, printer and stationer, of Ashford, Kent.

MR. JOHN SHERLOCK, who has died at Clapham Park at the age of 55, was attached to the Hansard staff for nearly thirty years, and one of the most popular members of the Parliamentary Press Gallery.

THE death occurred on Thursday of Mr. John Wallasey (for 46 years with the *Liverpool Courier*).

ENGLAND'S oldest angler-journalist, Mr. James Englefield, known as "Red Quill" of the *Field*, has died at Winchester. He would have been 101 on Christmas Day.

MR. W. H. HARRISON, who for more than 50 years was associated with the *Liverpool Daily Post*, has died at Market Drayton.

MR. WILLIAM ROBERTSON, an old Rochdale journalist, had died at the age of 90.

MR. LOUIS COWEN, dramatic critic of *Reynolds' Illustrated News*, died with tragic suddenness on Wednesday, collapsing after a telephone call.

AT an inquest at Hackney on Friday, it was stated that Arthur Edmund Cracke, 63, single, a compositor, who died suddenly, had been walking about while suffering from double pneumonia without being aware of it. A verdict of death from natural causes was recorded.

MR. ARTHUR J. ADLEY, formerly chief accountant at Sittingbourne Paper Mills, has died at the age of 59 years. He had served for nearly 40 years with Messrs. Edward Lloyd, Ltd., when ill-health necessitated his retirement in June, 1924. The funeral took place at Whitstable.

MR. WILLIAM RIPLEY, of Newlands, Maidenhead, and of Silk-street, E.C., printer, left £41,901 (net personalty £37,878).

MR. COLLIN PETER FITZGERALD, of Hampstead, N.W., editor of the *Metal World* and *Australasian World*, and formerly financial editor of *Lloyd's List*, left £786.

THE Council of the Institute of Journalists' meeting at Birmingham on Saturday decided to represent to the Government Committee on Broadcasting that no further material extension of the system of transmitting news by broadcast should be sanctioned.

THE annual dinner of the London District of the Institute of Journalists, which was postponed owing to the death of Queen Alexandra, will be held on January 30th, at the Trocadero Restaurant.

PRINTERS' ALMSHOUSES. — The annual Christmas entertainment at the Printers' Almshouses, Wood-green, took place on Saturday, and was, as usual, a great success. Mr. George Rooke Collingridge presided over the tea and concert, and at the distribution of gifts which followed, the donors of these being the Lord Mayor and the Sheriffs, Viscount Bearsted, Lord Marshall, Sir William Berry, Bt., Sir Chas. Wakefield, Bt., Sir John Baddeley, Bt., Sir George Truscott, Bt., and many others.

THE Brixton-Streatham-Clapham Fund are organising a concert on behalf of the Printers Medical Aid Pension Fund on Saturday, January 16th, at the Oval Tavern, Kennington, and an excellent programme is in predaration for same. The chair will he occupied by members engaged at the Temple Press.

STATE INSURANCE. — The Federation of Master Printers has issued to its members a very useful table setting forth details of rates payable on and after January 4th, 1926, in respect of Health, Unemployment and Pensions Insurance, new conditions being due to come into operation. An accompanying letter points out that the new conditions are: 1. A reduction in the Health Insurance contributions; 2. An additional contribution payable on account of Widows, Old Age and Contributory Pensions (these two contributions are payable in one combined stamp); 3. A reduction in Unemployment Insurance contributions.

Calendars, etc., Received.

MESSRS. T. G. AND J. JUBB, the Leeds manufacturers of printers' metals send two excellent calendars, one being of the daily tear-off variety and the other a large illustrated calendar with two months' dates to the sheet. The former has a tear-off pad with exceptionally bold figures, and the latter is notable for a series of Lawson Wood's humorous pictures admirably reproduced in colours.

To illustrate a monthly tear-off calendar which they are sending to their friends, Messrs. Slater and Palmer, the London manufacturers of printing inks, varnishes and colours, choose a gay garden scene printed with this firm's tri-colour inks. The illustration makes at the same time an attractive picture and an example of the efficacy of the inks employed.

FROM the secretary and staff of the Federation of Master Printers comes a greeting card which is of typographic interest. It is in the form of a folder, and the first page bears only the seal of the Federation in red whilst the third page contains the words of greeting with elaborate line ornamentation. A note on the back records that the page decoration has been re cut on wood from a border on the colophon page of Geofroy Tory's *Champfleury*, printed for him by Giles Gourmont, at Paris, in 1629. The card is printed by George W. Jones at "The Sign of the Dolphin," Gough-square.

VERY creditable to the firm of Messrs. W. S. Cowell, Ltd, letterpress and lithographic printers, of Ipswich, is the daily tear-off calendar that reaches us from them. The main feature is a picture in colours showing a pair of pheasants against a background of snowy landscape. We should judge the picture to be produced by composite process, mainly lithographic. The way the colours and form of the birds are brought out sharply against the comparatively flat background is very effective.

MESSRS. J. L. CALDWELL AND CO., LTD., Manchester, in view of their association with colours, have an appropriate calendar, which is adorned with a beautiful colour reproduction of Jacomb Hood's attractive portrait printing, "Jenny." This specimen of Derby print is highly artistic and the taste shown in the style of the moment and the inconspicuous character of the useful date pad. Seasonable greetings so conveyed are doubly welcome.

MR. HENRY FEATHERSTONE, papermakers' agent, issues a monthly calendar of the practical order. The dates are clearly printed in blue ink, with rulings and the months in red. An ornamental border gives a finish to each monthly sheet, which is also furnished with the dates of bank holidays occurring during the year.

MESSRS. SAMUEL JONES AND CO., LTD, have adopted their familiar "Camberwell Beauty" design to surmount the neat little calendar which they are sending out with their compliments. They also forward a blotter with the advice "use a blotter as a stiffener."

FROM Wycombe Marsh Mill comes a striking leaflet. Headed by the slogan, "Keep the home mills running," there are set forth a number of arguments why British paper should be bought. Consumers are urged to "use British paper, made by British labour."

THE Birmingham Envelope Co., Ltd., has issued a useful calendar for 1926. The dates are boldly printed on monthly tear-off sheets.

CANNON AND CLAPPERTON, LTD., have adopted the desk blotter method of publicity, an excellent Studdy drawing—the dog at the telephone—being reproduced.

MESSRS. L. S. DIXON AND CO., LTD., have reprinted in a convenient form the paper standardisation scheme recently agreed to by the master printers and the wholesale stationers. The details are printed on a stout card, 9½ in. by 6¼ in. On the reverse side are a number of useful conversion tables—centimetres to inches, kilos to lbs., and grammes per square metre to lbs. per ream. There is also shown a method of finding comparative weights and standard sizes.

DIRT in a particular make of paper at Hayle Mill recently was found to be due to a baked potato carried into the chest by a rat!

Honouring Mr. George A. Isaacs.

COMPLIMENTARY DINNER TO THE NATSOPA SECRETARY.

Many well-deserved tributes were paid to Mr. George A. Isaacs (general secretary of the National Society of Operative Printers and Assistants) at a complimentary dinner at the Holborn Restaurant on Tuesday of last week, when he was also the recipient of gifts in the shape of a motor-car, a pianola and an illuminated address, the function having as its object the marking of Mr. Isaacs' sixteen years of valuable service as general secretary of the union. From many points of view the gathering was a remarkable one. There were present officials and secretaries of practically every trade union identified with the printing industry from all over the Kingdom, as well as a considerable number of leading employers or their representatives connected with newspaper or general printing establishments. The proceedings were marked throughout by the utmost cordiality and friendliness. Amongst those present were: Rt. Hon. Lord Riddell; Rt. Hon. J. H. Thomas, J.P., M.P., LL.D.; Mr. T. E. Naylor, J.P., M.P.; Brig.-Gen. Bemrose; Rt. Hon. C. W. Bowerman, M.P.; Mr. H. Morrison, J.P., L.C.C.; Messrs. F. Lougee (managing director, R. Hoe & Co., Ltd.); Mr. A. E. Holmes (gen. sec. Printing and Kindred Trades Federation); T. E. Newland, J.P. (gen. sec. National Union of Paper Workers); A. E. Goodwin (sec. Master Printers' Federation); Maurice Clowes (chairman, L.M.P.A.); T. W. McAra, J.P. (sec. Newspaper Proprietors' Association); Valentine Knapp (Newspaper Society); H. Skinner (gen. sec. Typographical Association); W. Warren (sec. National Society of Electrotypers and Stereotypers); H. W. Howes (sec. Printing Machine Managers' Society); F. W. Bridges, T. Sproat and Woodgate Stevens (Amalgamated Society of Lithographic Printers); R. Neale (sec. Lithographic Artists), J. R. Riddell (principal, London School of Printing); S. C. Crampin (sec., Correctors of the Press); H. F. Parker (Lloyd Memorial Home); The Revs. A. Taylor and T. P. Stevens; Messrs. A. McLean, J. D. French, A. Chadwell, J. Fleming, Geo. Harraway, Mrs. A. Bridge, Messrs. H. Chalk, G. F. Larcey, Arthur O'Connor (Printers' Medical Aid), T. Timberlake (chairman, London Society of Compositors), and E. W. Spackman.

A message was received from Mr. Ramsay Macdonald, M.P., expressing regret at his absence from the meeting, but conveying wishes for success to the gathering and best wishes to the guest of the evening. Also Mr. Geo. Berry (president of the South American Pressmen's Union) cabled his cordial good wishes.

"The Natsopa."

Mr. J. H. Thomas, M.P., an honorary member of the Natsopa, in submitting the toast of "The Natsopa" said that the railwaymen and those he was addressing constituted that great bulwark to industry known as sheltered trades. They all believed that the one thing essential was to bring back pre-war prices in this country, and the only exception to that rule was the trade in which they themselves were engaged. (Laughter.) The newspapers, he went on, were 100 per cent. above pre-war prices, and they rendered a public service by drawing attention to everybody else who was charging 25 per cent. above pre-war prices. (Laughter.) It was a good thing to find that, notwithstanding all that was said about the workers, they did know how to appreciate services rendered, and they also realised when they had got a good man. He was delighted that there were present that night not only representatives of the trade union movement, but also employers represented in Lord Riddell and others. That was a good sign for the future. Lord Riddell was not only a distinguished member of his profession but a distinguished member of the House of Lords. (Hear, hear.) It was a problem to him to know what the Labour Party were going to do with the House of Lords when they came into power the next time. (Laughter.) After paying a tribute to Lord Riddell for his sympathetic efforts on behalf of trade union law in days gone by, Mr. Thomas went on to say that there were a large number of people who were against employers and trade union leaders sitting down together. That doctrine he could not subscribe to, because it was a doctrine that in the end would be ruinous to the cause of trade unionism. The presence of so many employers that evening was not only a recognition of their responsibility and their power as an organisation, but it was a compliment to their general secretary. Speaking of Mr. Isaacs when he was his own private secretary, Mr. Thomas said that, whatever difficulties there were, George Isaacs was always ready to face them in a straightforward, honest and sincere manner. He appreciated the high qualities and great services that George

Mr. George A. Isaacs.

Isaacs had rendered to him, and congratulated the union in also recognising them. He wished Natsopa God speed and still further success, and concluded by coupling with the toast the name of its president, Mr. G. T. Bevan. (Applause.)

Mr. Bevan, in reply to the toast, expressed thanks on behalf of the Natsopa for the kindness displayed by those attending and those who had assisted in making the gathering such a success, and also those who had helped them to show their appreciation of the work of their secretary. Mr. Thomas had not said much about their union, and he was not going to say much himself, but he wondered what the J.I.C. of to-day would say to some of the earlier methods adopted by them. He felt that those methods in those days were fully justified. However, they had moved a long way since then. After referring to the greater friendliness that now exists between employers and workers, Mr. Bevan spoke of that great charity, the Printers' Pension Corporation. With all due respect to Mr. Thomas, he did not think the railwaymen were "in it" with regard to that institution. Then there was the J.I.C., which he thought was one of the most successful bodies of its kind in the country. (Applause.)

"The General Secretary."

Mr. J. Keep, in submitting the toast of "The General Secretary," alluded in eulogistic terms to the hard and unselfish labours spent by Mr. Isaacs on behalf of the Society since he became general secretary in 1909. He particularly referred to the valuable and painstaking assistance he had rendered in disputes that occurred years ago in Manchester, Yorkshire & Scotland, and concluded by mentioning Mr. Isaacs' association with the founding of their Memorial Home. If for nothing else, he believed his name should be honoured for all he did in connection with that. (Applause.)

The toast was very heartily received, musical honours being accorded.

Mr. Bevan then announced that a sum of £601 10s. 6d. had been collected from amongst the members, and was to be used in the purchase of the gifts mentioned above.

Mr. Isaacs' rising to reply to the toast was the signal for another outburst of applause. In returning thanks for the gifts, he said he appreciated very much the spirit that prompted them to pay him the respect they had for his work on behalf of Natsopa, but he was quite satisfied if, by his efforts on behalf of his fellows, those efforts continued to live in their memories. That was the best testimony that he could desire. He believed that the essential thing for a man who occupied a similar position to himself was to play the game, to honour his work, and to stand by his agreement, no matter what that agreement was. (Cheers.) He believed in the motto "Be just and fear not," and that night it was his intention of re-dedicating himself to the doctrine of that motto. He then referred to the co-operation, the loyal assistance and personal devotion received in his work for the Society from Mr. Keep, Mr. Bispham and others. He was confident there was no general secretary in London who was served more faithfully and loyally than he was himself. He was proud of his position on the Printing and Kindred Trades Federation, and was proud of being chosen by the leaders of the trade union movement and by the employers in the printing trade to serve as chairman of their Joint Industrial Council. He then alluded to the necessity of employers and overseers encouraging the workers, and in this respect paid a tribute to that great printer, the late Mr. Mascord of Lloyd's. (Applause).

"The Press."

Mr. T. E. Naylor, M.P., in proposing this toast in the absence of Mr. Ramsay Macdonald, said they all regretted the absence of the ex-Prime Minister. It was a far cry, he said, from the front opposition bench to the last row in the back benches. Mr. Naylor went on to say that the Press was one of the greatest institutions of civilisation. Mr. Thomas had referred to the newspaper trade as being one of the sheltered occupations, and said that the Press, although constantly advising the public of the fact that prices were not what they used to be, still maintained the prices of the newspapers 100 per cent. above pre-war rates. Mr. Thomas might have extended his illustration because in travelling to and from business they found railway fares still above 100 per cent. So that they found themselves in very good company. In regard to the Press, he did not intend to say all he knew about it, because Lord Riddell, in replying, might say all he knew about him. (Laughter.) It was a matter of speculation as to what was the precise influence of the Press upon public opinion. They had had an experience of that at the last General Election. They found that the Press, like all other institutions, was strongly partisan; and to the extent that the Press was partisan to that extent it was not fulfilling its whole duty. The Press had been a great institution in the past, and he thought they could say that the Press to-day, in spite of the enormous circulations of the newspapers, was not quite the same influential institution it was in years gone by. This was largely because it had identified itself very much with the political parties of the State. They were there that night not to criticise the Press, but, as employees and members of it, they regarded it as the finest institution the country had produced. They looked upon the proprietors of the Press as their greatest friends; and the greatest of their friends was undoubtedly Lord Riddell, who was to respond to the toast. (Cheers.)

Lord Riddell, in responding, addressed the gathering as "fellow-members," his reply being punctuated by many characteristic jokes and humour. Proceeding, he said his friend Naylor had said some sagacious things about the Press and its general influence. However, very few people recognised that the Press was one of the greatest manufacturing industries in the country; and that to them was a very important side of it. Recently he had been looking into the question more fully, and he had come to the conclusion that in the production of their dailies, Sundays, weeklies, magazines and periodicals, it was highly probable they paid out in wages and materials £110,000,000 each year. Theirs was a great trade, and hundreds and thousands of people made their living out of it. His Lordship then congratulated Mr. Isaacs, also the Society, for the way it had honoured their principal guest. (Cheers.)

"The Printing Industry."

This toast was proposed by Mr. Herbert Morrison, L.C.C., who said that he had worked in the important industry of printing and had been engaged in both commercial and newspaper offices. The psychology of the printing trade, no matter what branch of it one was identified with, was of very great interest. Mr. Morrison then referred to General Bemrose, who, he said, was not only the head of the famous printing firm at Derby, but was the Chairman of the J.I.C. He (the speaker) had had a lot to do with joint industrial councils, and he knew they were valued by the employers and the workpeople. He remembered in the House of Commons when they discussed the question of joint industrial councils, and he remembered that Mr. Isaacs was one of the warmest supporters of them. The J.I.C. of the printing industry was doing a great work, and its present Chairman was a very just one indeed.

Brig.-Gen. Bemrose, who responded in the absence of Mr. W. Howard Hazell, remarked that the success of their industry depended upon the co-operation of both sides of the trade, and that their responsibility was a joint one. They were fortunate in the printing industry in having good men behind their federations, and it was his wish that they should even improve upon the good relations that existed at the present time. (Hear, hear.) In the House of Commons the other day Mr. Churchill made a very strong plea for peace in industry, and he thought they in the printing industry were going in the right direction to achieve a better understanding. The General, in conclusion, thought it was up to the printing trade to set the pace for other industries in that respect. (Applause.)

The toast of "The Visitors" was allotted to Mr. J. Crawford (Scottish Secretary), who, on behalf of the Society, extended a very warm welcome to the visitors present.

Mr. C. W. Bowerman, M.P., returned thanks on behalf of the visitors and congratulated in a very hearty way the Secretary and Executive on the capital manner in which the function had been arranged.

"The Chairman" was proposed by Mr. A. E. Holmes, who recalled some interesting experiences that Mr. Bevan and himself had had during their visit to the United States.

A brief reply was made by Mr. Bevan.

The dinner stewards—Messrs. James Keep and Charles Hollis—carried through the difficult tasks allotted to them to the satisfaction of everyone present.

During the dinner some excellent musical selections were given by an orchestra comprising Jessie Wildon, Doris Crichlow, Dolly Moody, Claire Nicholas and Louie Selkirk; whilst the toasts were interspersed by musical items from Mr. Leonard Lovesey, Miss Ethel MacLelland and Mr. Charles Chapman and Mr. Billie Dwyer.

A memorable and enjoyable evening was brought to a close by the singing of "Auld Lang Syne."

Newspaper Printing Masonry.

The Imprimere Lodge, No. 4,734, which is connected with newspaper printing, has been consecrated at Freemason's Hall, Great Queen street, W.C. The Grand Director of Ceremonies, Mr. J. S. Granville Grenfell, was the consecrating officer, and was assisted by Captain C. W. Firebrace, J.G.D., as Senior Warden; Mr. G. W. Jones, P.G.D., as Junior Warden; Rev. G. Freeman Irwin, P.A.G., Chaplain, as Chaplain; Mr. C. R. I. Nicholls, D.G.D.C., as Director of Ceremonies, and Mr. John Martin, P.A.G.D.C., as Inner Guard. The first Master, Mr. J. Miller, P P G.P. (Herts), appointed the following officers for the coming year, all of them being founders:—Mr. G. J. Loveland, L.R., as I P.M.; Mr. F. Chadwell as S.W.; Mr. J. W. Parker as J.W.; Mr. C. S. Yeates, L.R., as Treasurer; Mr. C. S. Burdon, P.P.G.D. (Middlesex), as Secretary; Mr. W. Wordham, L.R., as Director of Ceremonies; Mr. W. C. Warren, as S.D.; Mr. J. Coquard, as J.D.; Mr. G. E. Parker as A.D.C.; Mr. W. Carlin as Almoner; Mr. A. Chadwell as Organist; Mr. W. H. Crosby as Assistant Secretary; Mr. W. T. Rourke as I G.; with Messrs. J. H. Witfield, Mr. T. W. Whicheloe, J. J. Garner, S. G. Catt, and W. Edmondson as Stewards.

Printers' Managers and Overseers' ASSOCIATION.

MANCHESTER AND DISTRICT CENTRE.

The twenty-first annual general meeting was held in the Mitre Hotel, Manchester, on December 12th, Mr. F. Scouler (president) being in the chair, and supported by a representative gathering of members.

The minutes were read and confirmed, and then the roll was called.

The following were submitted for membership: Messrs. F. A. Critten (lithographic overseer, Messrs. Norbury, Snow and Co., Ltd.); Jas. Anthony (press-room overseer, Messrs. C. Nicholls and Co., Ltd.); and G. H. Lees (lithographic overseer, Messrs. G. Falkner and Sons). The council recommendations were confirmed.

The annual report recorded a full year's work. During 1924–1925 one member was removed by death, one member had failed to keep himself inside the qualifying rules, and Messrs. R. Hall, C. R. Mason, and J. Entwistle were added to the membership roll, making a total of 89. The balance-sheet showed income (including £4 18s. 3d. brought forward from previous year) amounting to £285 0s. 3d.; expenditure, £252 15s. 6d.; the overplus remaining in the hands of the treasurer being £32 4s. 9d. The report concludes with thanks to Messrs. A. Hellewell, J. H. Nuttall, A. J. Gyngell, E. Garrett, Frank Heywood, F. W. Bridges and the Printing Exhibition Committee, Geo. Mann and Co., and others who have contributed to the progress made. The report was passed.

Correspondence.—Messrs. Henry M. Tovey, George W. Carr, Mrs Eva E. Kealey (London) and Mr. Wm. Hy. Baird (Manchester) had forwarded request cards for the next election to the Printers' Pension Corporation. Mr. and Mrs. Chas. H. Rogers (Birmingham) were celebrating their silver wedding that evening; the hon. secretary was requested to forward a congratulatory telegram. Parent Association notified that new council would deal with the superannuation scheme. Liverpool Centre transferred Mr. Thomas Rignall back to Manchester. Mr. Jos. Ball and Mr. Jas. E. Mayo were reported as indisposed, and all present at the meeting hoped for their early recovery.

The election of officers for 1925–1926 resulted as follows: President, Mr. Frank Scouler; vice president, Mr. A. Hellewell; trustees, Messrs. Edward McVay and J. H. Nuttall; treasurer, Mr. Jas. E. Mayo; executive council, Messrs. Jas. Ball, W. Bardsley, R. W. Hughes and W. H. Connah (second year), Messrs. E. Murphy, J. W. Philbin, Ernest Garrett and H. T. Griffiths (first year); tylers, Messrs. Richard Hall and E. L. Petts; hon. secretary, F. J. Hughes, 424, Moston-lane, Manchester.

Votes of thanks to retiring officers were moved by Messrs. Edward McVay and Ernest Fisher, and carried.

The council recommended: "That each past-president of the Centre be presented, on the night of the coming-of-age dinner, Saturday evening, February 20th, 1926, with a miniature replica of the medallion worn by the Association president. Where the past president has been summoned to the Great Beyond his widow to be the recipient. Carried unanimously.

Business being concluded, the room was soon filled with ladies and gentlemen, who spent a happy social evening listening to artistes who had given great delight on previous occasions, namely, Mr. Tom Green (tenor), Mr. Harry Sargent (baritone), Mr. Frank Ward (character sketch artiste), Mr. Geo. H. Handby (humorous interludes), and Mr. Harold Creech (pianist). The musical directors, Messrs. A. Hellewell and J. H. Nuttall, were paid well-deserved compliments along with the artistes, and then "The King" was honoured in loyal fashion, thus concluding another evening which drives away the thoughts of "the daily round, the common task," of print, print, print.

WEE MAC.

RAPID progress has been made with Wayagamack newsprint plant. The machinery was first ordered about January 1st, ground was broken for the plant on April 1st, and the erection of the machinery began about July 15th. By September 28th the plant was finished and power had actually been turned on to the machines. Regular production of newsprint was expected by December 1st.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,
Partnerships and Investments,
Miscellaneous.

One Insertion	**3/0**
Three Insertions	**6/0**

***For every line exceeding three lines* 6d.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion	**1/6**
Three Insertions	**3/0**

THURSDAY, DECEMBER 24, 1925.

The Spirit of Christmas.

Now relegated to the past is the special rush of work which the approach of Christmas always brings to many sections of the allied trades, and the Christmas holidays arrive to provide a few days at least in which we can all enjoy a little well-earned rest and recreation amid the cheerful social amenities in which the Yuletide is peculiarly rich. It is surely a happy thing for all of us that this season of the year should bring such widespread manifestations of generous goodwill, included in which is so much genuine love and friendliness that the occasion cannot but leave the world somewhat kinder and happier than it was before. Fortunately, too, the spirit of Christmas is by no means confined to the domestic circle; the realms of business also share in its beneficent rays. This is very definitely the case in respect of the trades connected with print and paper, in which are to be found innumerable instances of delightful and helpful business friendships, in which, moreover, is manifest a growing spirit of understanding and co-operation between employers and employed. To be associated with such an industry is a pleasant thing for a trade journal, which necessarily comes into close contact with the individuals, firms and movements comprised. In our own case we are glad to testify to the many kindnesses met with in this intercourse, and we trust that the spirit of goodwill in services rendered and received may long continue to flourish amongst the members of the trades with which we are concerned, and not least between those who produce this journal and those who, in any way, make use of it. To readers, advertisers, and to all into whose hands these lines may come, we extend the BEST OF GOOD WISHES FOR CHRISTMAS AND THE COMING YEAR.

* * *

British Industries Fair.

PROSPECTS for the success of the British Industries Fair, to be held in London and Birmingham, from February 15th to 29th, are considered by the Overseas Trade Department to be thoroughly satisfactory. It is stated that the number of exhibitors will easily constitute a record, and that the Fair will be one of the largest of the kind ever held. Interest in the event is by no means restricted to this country, for the Overseas Trade Department is receiving daily from all parts of the world requests for catalogues and invitation cards. To afford foreign buyers every possible facility the Government has decided to waive visa fees to holders of official invitations. Moreover, the aid of the Postmaster-General has been invoked for the purpose of making the forthcoming Fair widely known both at home and abroad. As from December 20th letters, post cards and other postal packets will be postmarked with the words "Buyers' Opportunity. British Industries Fair. February 15th to 26th London and Birmingham."

* * *

Paper Imports in November.

NOVEMBER recorded decreases in the volume of both paper imports and exports compared with the corresponding month last year, whilst the returns for papermakers' raw materials also show a falling off Last month's arrivals of paper and cardboard — 1,321,345 cwts.— were down by 21,028 cwts. (1·5 per cent.) contrasted with twelve months ago, although compared with November two years ago they show a slight rise of 13,281 cwts. (1·0 per cent.). The value of the month's imports—£1,335,086—indicated declines respectively of £28,074 (2·0 per cent.) and £28,290 (2·0 per cent.) compared with November of the two preceding years. Total consignments of paper and cardboard into this country during January to November—13,259,208 cwts., of the value of £13,576,755—rose by 459,939 cwts. (3·5 per cent.) in quantity and £397,287 (3·0 per cent.) in value contrasted with the eleven months last year. Regarding the principal classes of paper imported during the month, printings (397,211 cwts.) were the most important item, representing a proportion of 29·6 per cent. of the total quantity received; they mark a drop of 39,260 cwts. compared with twelve months ago. Packings and wrappings (379,460 cwts.) were 28·2 per cent. of the total and less by 17,903 cwts., whilst shipments of strawboards (350,543 cwts., *i.e.*, 26·1 per cent.) were not only considerably larger than they have been for many months past, but registered an advance of 16,083 cwts. compared with November last year.

* * *

Sources of Supply.

NEWFOUNDLAND was easily the largest supplier of printings to this country last month, with 184,264 cwts., a figure which was lower by 7,636 cwts. than the quantity received twelve months ago. Norway (56,842 cwts.) occupied the second position, her consignments declining by 7,643 cwts. The third place was taken by Finland (47,151 cwts.), with a big decrease of 26,700 cwts., whilst the contributions of Sweden (42,636 cwts.) were down by 19,892 cwts. Probably the most interesting feature in this category of imports is the increase in printings from Canada during the month, which amounted to 25,894 cwts., against only 5,000 cwts. twelve months ago. With regard to packings and wrappings the 157,710 cwts. sent by Sweden last month not only places that country first on the list, but indicates increased shipments to the extent of 3,888 cwts., compared with November last year. Norway (81,931 cwts.) came next and then Germany (74,877 cwts.), the former country increasing her consignments to the extent of 7,839 cwts., whilst there was a falling off in German shipments of 6,633 cwts. contrasted with a year ago. Deliveries from Finland fell from 34,196 cwts. in November last year to 19,850 cwts. during the month under review.

Portuguese Notes Sensation.

Mystery of Alleged Forgery.

Mystery still surrounds the affair of the alleged forged character of 50-oescudo notes circulated in Portugal to the extent of something like £1,000,000 through the Banco Angola e Metropole. When the sensation gained ground in Portugal, the Government instructed the police and the Inspector of Banking Business to make investigations at the recently established Angola and Metropole Bank. The police found at the Oporto branch of the bank a large number of false 500-escudo bank notes. They arrested Senhor Alves Reis and Senhor Santos Bandeira, the two principal directors, and several leading officials of the bank. The notes, which bore what appeared to be the marks of the well-known London firm of Messrs. Waterlow and Sons, were remarkably well executed.

Later news suggested that the notes were not forgeries. Sir William Waterlow immediately went to Lisbon and it was stated that he affirmed that no illicit dealings were ever made by his firm but only those that were thoroughly authenticated and vouched for. He also produced photographs of documents to prove the reception of orders from the Bank of Portugal to print notes amounting to about £3,000,000. The documents, however, are alleged to bear false signatures.

One of the directors of the Bank of Angola and Metropole who is now in prison is reported to have declared to the police that he made a contract, signed by the governor and vice-governor of the Bank of Portugal, one of the conditions being an inflation, secretly carried out, in paper currency, to meet the colonial financial crisis. The arrested director declares that with this document he went with a Dutchman to London and called on a London printing firm, showing the contract and an order from the Bank of Portugal for the printing of a new issue up to £3,000,000. Another director of the bank who has been arrested made a similar statement.

It is understood that Waterlow and Sons intend to sue the Bank of Portugal for damages to their name in connection with the matter.

Messrs. Bradbury Wilkinson and Co., Ltd., of London and New Malden, who print the major portion of the notes issued by the Bank of Portugal, and have done so for the past 30 years, state that the alleged forgery of bank notes of the 500-escudos denomination recently uttered in Portugal is not in any way connected with any of the issues of bank notes furnished by them to the Bank of Portugal.

Mr. George Foxon, of Messrs. Bradbury Wilkinson and Co., is also in Lisbon, having been asked by the police to give his expert assistance. Both he and Sir William Waterlow, with the assistance of experts and the police, are making extensive investigations into the matter.

Trade Union Matters.

DURING the month of November 20 members of the Typographical Association were added to the superannuation list, 12 of these being placed on the first grade of benefit. The consideration of six further applications was deferred.

SEVENTEEN members of the Belfast branch of the Typographical Association have been notified that if their arrears of subscriptions are not paid immediately they will be expelled from the Association.

APPRENTICE AND LINOTYPE MACHINE.—The secretary of the Hyde branch of the Typographical Association has sent to the Executive Council a letter from a local office asking if a second apprentice could be placed on the Linotype machines. There were four machines worked by three journeymen and one apprentice. A second apprentice wished to learn the machine, and the firm proposed allowing each apprentice to work the machine for half a week. The chapel considered this a breach of the agreement, but the Executive Council have announced that the system would involve no breach of the Linotype agreement.

Personal.

SIR WILLIAM VENO has been appointed chairman of the organising committee of the British Advertising Convention to be held at Blackpool in May, next year.

MR. J. ST. LOE STRACHEY, editor of the London *Spectator*, has received from Columbia University the honorary degree of Doctor of Letters.

A FAREWELL dinner to Mr. C. E. Montague, chief leader writer of the *Manchester Guardian*, who is leaving the paper after 35 years' service, was held in the Manchester Reform Club on Saturday.

MR. C. P. SCOTT, editor, presided, and the company numbered over 200, including representatives of every department of the paper and many former members of the staff.

MR. BEN FRYER, who is now in Sydney, N.S.W., sends us Christmas greetings, which we cordially reciprocate. His card is of his own original design, and bears quotations relating to the printing art.

MR. FRYER was recently in this country for a short time, and made friends with many in the industry. He had a spell in America, applying himself to organisational work in the printing trade, before proceeding to the antipodes.

MR. T. A. SMITH, who for 25 years has been overseer of the composing department of Messrs. Blades, East and Blades, has been presented by the companionship with a clock and a flask on his retirement.

MR. C. JESSUP, of the composing room staff of Messrs. McCorquodale and Co., has been presented with a walking stick and a purse of Treasury notes on his retirement after fifty years' service.

MR. WILLIAM JAMES WEBB, of the staff of the London *Daily News*, has been presented by Mr. Edward Cadbury, chairman of the directors. with a gold watch on completing fifty years' service on the paper. His fellow workers have presented him with a gold albert chain.

MR. AATON WATSON, who was for many years a well-known journalistic figure both in London and in the North of England, and whose recent book of reminiscences attracted a good deal of attention, entered last week upon his seventy-sixth year.

MR. C. STEWART CAINE is to follow the late Mr. Sydney H. Pardon in the editorship of *Wisden's Cricketers' Annual*.

L.S.P. Students Make Merry.

Presentation to Mr. and Mrs. Riddell.

It has now become a practice for whole-time students, members of the staff, and friends of the London School of Printing to lunch together on the day the school breaks up for the Christmas vacation. It was a jolly affair which took place on Friday last, when the captain of the School, W. Scrogie, occupied the chair and was supported by the Right Hon. Lord Riddell, the Right Hon. C. W. Bowerman, M.P., Mr. T. E. Naylor, J.P., M.P., Mr. A. M. Shand, L.C.C., Rev. T. Walton, the principal and Mrs. Riddell. It was a real School function, stories and leg-pulling being the order of the day. Lord Riddell and the Principal were "chaired" round the School under the protection of the School "Bodyguard."

There was a very pleasing interlude when the Principal and his wife were presented by the members of the staff with a silver cake stand and by the whole-time students with a silver rose bowl in commemoration of their silver wedding.

Mrs. Riddell, who was invited to the School without the knowledge of the Principal, was also presented with a magnificent bouquet by the whole-time students.

Letterpress Offset Platen.

SIR,—In your paper of the 17th inst. appears an article called "The Triumph of Modern Lithography" by Mr. Joseph Goodman, which I read with great interest. It will no doubt interest your readers to know that they can, by previous appointment, inspect this letterpress offset platen press in actual operation in my showroom at this address.

A. EDLER.

78, Southwark-street,
London, S.E.1.
December 18th, 1925.

Newspapers and B.B.C.

Lord Crawford's Committee of Inquiry into the scope and future of broadcasting heard on Thursday evidence on behalf of the proprietors of newspapers published in the United Kingdom and Northern Ireland.

A memorandum presented by Lord Riddell and Sir James Owen, on behalf respectively of the London Newspaper Proprietors' Association and the Newspaper Society (Mr. H. D. Robertson, of the Scottish Daily Newspaper Society, also attending), stressed the following points:—

"The reasonable requirements of the public do not necessitate any change in existing arrangements for the supply of broadcast news, and, by placing their news services at the disposal of the B.B.C., subject to certain limitations as to hours, the newspapers have shown sympathy with broadcasting.

"From all points of view it is unnecessary and undesirable to utilise the broadcaster for advertising purposes.

"Adequate safeguards must be imposed to prevent the broadcaster from being used for propaganda or party purposes, and the final decision in such matters should not rest with a Government Department or a Minister of the Crown."

In the collection of news alone, the memorandum stated, newspapers spent each year no less than £5,000,000. The £8,000 paid by the B.B.C. for their news service was therefore a mere bagatelle. Newspaper proprietors had no wish to impede the progress of broadcasting, and had been mainly instrumental in popularising it, but they were anxiously concerned for the welfare of the vast army of employees whose livelihood would be jeopardised if the demands of the B.B.C. were granted.

Amongst evidence given on Friday was that Mr. A. V. Broadhurst, who in a memorandum on behalf of the Music Publishers' Association, said it was the firm opinion of owners of musical copyright that broadcasting had a deleterious effect upon the sale of music, and consequently upon the earnings of composers and authors. He submitted that the fee of 10s. per annum was unnecessarily small, and far too little when one considered what was provided. The annual fee of 10s. might conceivably be retained as a minimum, but from this there should be a graded fee, perhaps according to the rental of the house in which the receiving instrument was placed. This would enable the B.B.C. to pay more adequate fees to composers, authors, and other owners of copyright for the use of their music, which, after all, represented almost the whole attraction of their programmes.

MR. GEORGE AUGUSTUS THEODORE LITTLEBURY, of Larkhill, Worcester, printer and publisher, who died on September 15th, left estate of the gross value of £20,210, with net personalty £16,093. He left £250 and £250 10 per cent. preference shares in the Bristol Printing and Publishing Co. to Lily Wren for valued services.

WARDLE AND ENGLISH, LTD.—Capital £1,000 in £1 shares; to acquire the provisional arrangement made by Frances W. English, to take a lease of 10, Horse-market, Kettering, and to carry on the business of stationers, booksellers, dealers in office requisites, prints, etc. Private company. Directors: Frances W. English, Ellen Wardle and T. H. Seal. Solicitors: Flint, Marsden and Bishop, 42, Full-street, Derby.

MARTINS SUPPLIES, LTD.—Capital £800 in 300 8 per cent. preference and 100 ordinary shares of £1 each and 8,000 deferred ordinary shares of 1s. each; offices suppliers, stationers, printers, typefounders, lithographers, stereotypers, diesinkers, bookbinders, boxmakers, advertising and general agents, etc. Private company. First directors: F. G. Martin, S. J. Heale and A. Brindley. Registered office: 47, Essex street, W.C.2.

HENRY WOLFF AND CO., LTD.—Capital £15,000, in 14,000 8 per cent. cum. preference and 1,000 ordinary shares of £1 each; manufacturers of fancy goods, lamp and candle shades, Christmas crackers and ornaments, paper, cardboard, millboards, wall-papers and all other kinds of paper, imitation leathers and rubbers, all kinds of decorative goods, toys, carnival articles, confetti, etc. Private company. Subscribers: A. Vandyk and H. Oppenheimer. Solicitors: Herbert Oppenheimer, Nathan and Vandyk, 1, Finsbury-square, E.C.2.

ERNEST WARDLE, LTD.—Capital £70,000, in £1 shares (30,000 ordinary and 40,000 8 per cent. cum. pref.); to acquire the business of manufacturers of and dealers in paper, and other materials of all kinds made therefrom, including cardboard or other boxes, or containers, carried on by Packs, Ltd., at Fortess-road, Kentish Town, N.W., to adopt an agreement between the said company of the first part, E. Wardle, B. Foulds, W. E. J. Crosby and J. Mellor, of the second part, and this company of the third part. Directors: E. Wardle, R. Stubbs and B. Foulds. Solicitors: Thomas and Livermore, 59, Chancery-lane, W.C., and Pennington and Higson, 36, Dale-street, Liverpool.

METAL PRINTERS (GLASGOW), LTD.—Capital £1,000, in £1 shares; to act as sole agents and representatives in Scotland for the Birmingham Advertising Tablet Co., Ltd. Private company. First directors: J. M. Maclean, A. Macdonald, P. H. Richmond and R. M. Thorne. Registered office, 55, West Regent-street, Glasgow.

FIELDING PHOTO PRESS SERVICE, LTD.—Capital £100, in £1 shares; to carry on the business of advertising and publicity experts, advertising artists, etc. Private company. Subscribers: J. Fielding, Mrs. M. Fielding. Registered office: 83, Reginald-terrace, Leeds.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

LINCOLN BILLPOSTING CO., LTD.—Satisfaction in full on December 1st, 1925, of mortgage dated July 31st, 1918, securing £200.

ROCHDALE TIMES, LTD.—Satisfaction in full on November 27th, 1925, of mortgage debenture dated February 18th, 1915, securing £2,000.

CARL HENTSCHEL, LTD. (engravers, etc., London).—Particulars filed of £3,000 debentures authorised December 9th, 1925, charged on the company's property, present and future, including uncalled capital, the whole amount being now issued.

WHITEFRIARS PRESS, LTD.—Second mortgage dated December 8th, 1925, to secure £10,000, charged on freehold premises in High-street, Tonbridge, and freehold land on south side of Medway Wharf-road, goodwill of business carried on thereat, and the company's other assets, including uncalled capital. Holders: Bradbury Agnew and Co., Ltd, 10, Bouverie-street, E.C.

LOCAL VIEWS, LTD. (London).—Debenture dated November 30th, 1925, to secure £800, charged on the company's undertaking and property, present and future, including uncalled capital. Holders. Rembrandt Intaglio Printing Co., Ltd., Queen's Mill, Lancaster.

ROCHESTER, CHATHAM AND DISTRICT BILLPOSTING AND ADVERTISING CO., LTD.—Deposit on November 30th, 1925, of deeds of 85, Maidstone road, Rochdale, and freehold land in High-street, Chatham, to secure all moneys due or to become due from the company to Barclays Bank, Ltd.

EDUCATIONAL SUPPLY ASSOCIATION, LTD. (London).—Mortgage dated November 26th, 1925, to secure £55,000, charged on Esavian House, 171-181, High Holborn, W.C. Holders: Trustees of the Liverpool Victoria Friendly Society.

RECEIVER APPOINTED OR RELEASED

EASTERN COUNTIES ADVERTISING CO., LTD. (Great Yarmouth).—A. H. Martin, of 69 London-street, Norwich, Incorporated Accountant was appointed receiver on December 4th, under powers contained in debenture dated August 5th, 1925.

GEORGE WILMOT, LTD. (paper manufacturers and merchants, etc., Shoreham, Kent, office, London).—P. J. Stephens, of 24, Coleman-street, E.C., C.A., was appointed receiver and manager by Order of Court dated December 9th, 1925.

THE Printing & Allied Trades Charity Sports ASSOCIATION.

The following preliminary arrangements regarding future events have been made by the committee of the above organisation:—

Social Section.—(Hon. sec., H. J. Akerman, 53, Rita-road, Clapham, S.W.8); whist drives, 1s. 6d., first and last Monday in the month at 7 p.m. at the Food Reform Restaurant, Cursitor-street, Holborn; dance at Shoreditch Town Hall, January 18th, tickets 1s. 6d.

Committee Dinner.—(W. H. Marshall, 116, Hermitage-road, Finsbury Park), Manchester Hotel, January 16th; chairman, L. Dangerfield, Esq.

Cross-country Section.—(J. McLeod, 94A, Alexandra Park-road, N.10) February 20th, 5 miles Cross-country Championship from Queen Elizabeth Hotel, Chingford; tea 1s.6d.; chairman, Mr. A. E. Holmes.

Boxing.—Hon. sec., Harry Chalk, 51, Waterloo-street, Camberwell, S.E.

Football Section. (Victor Bowman, 21, Vicarage Park, Plumstead, S.E.18) Easter Monday: Nunhead Football Grounds—Paper Workers *v.* Natsopas.

Athletic Section.—(A. Sargent, 23, Granville-square, W.C.) Charity Sports, Herne Hill, Saturday, June 26th, 1926; provincial teams competing.

Miniature Rifle Section.—(A. J. C. Pescud, 158, Erlanger-road, New Cross, S.E.14) August, Printing Trades Rifle League (Winter and Summer Sections) Miniature Bisley, at Ham and Petersham Park, Richmond.

Swimming Section.—(W. H. Marshall, 116, Hermitage-road, Finsbury Park) October, Shoreditch Baths.

Hon. advertisement manager, A. G. Wills, 8, The Mount, Bidborough. (Over 20 trophies and cups are held by this Association).

The objects of the Association are to foster and assist in the formation of office clubs, and to provide sport for charity's sake; the proceeds are distributed annually amongst trade charities only, over £20,000 being thus distributed. Members of the various sections are cordially invited to a seat on the committee, the qualification for which is 10s. per annum as a subscription, or disposal of tickets to the same value; application for votes to be made through a member of the committee. Headquarters: Red Lion Hotel, Red Lion-court, Gough-square, E.C.; Meeting nights, the second Monday in the month at 6.30 p.m., when inquiries will be welcomed. Over £200 was given to trade charities during 1925. Particulars may be obtained from any of the hon. secretaries, or from the hon. general secretary, H. F. Parker, 8, Albion-road, Wandsworth-road, S.W.8.

SIR LAUCHLAN MACKINNON, of the *Melbourne Argus*, died recently at Downes, Crediton, at the age of 77. After gaining his first newspaper experience in the office of the *Scotsman*, Edinburgh, and serving for a period in the office of *The Times*, he went to Melbourne, and joined the service of the *Argus* in 1870. Ten years later he became general manager, and retained that post for nearly 40 years, spending nearly half-a-century in all in furthering the fortunes of the paper.

Country News.

Edinburgh.

THERR has just been celebrated the centenary of Messrs. Mould and Tod (Ltd.), lithographers and printers, 3, St. James-square, Edinburgh. This well-known business had its source in the enterprise of J. B. Mould, who set up as an engraver in Niddry-street in 1825, and in the following year removed to premises at 129, High-street. Some five years afterwards he added a printing department to his business, and became the pioneer of medical label printing in Scotland. The growth of the business called for a further move, and in 1837 it was taken to 31, North bridge, and a few years later James Tod, who was a member of the legal profession, became a partner, a lithographic plant was installed, and the firm received its double name. Rapid strides were made in the development of the artistic side of commercial lithography to meet the demands of the drug trade and soap and perfumery manufacturers, and the letterpress printing branch was also further developed, and directed to law, commercial, bank, and insurance company work. New premises in Waterloo-place, and later (1860) 3, St. James-square, the present address, were further milestones in the firm's progress. Mr. Tod, who carried on the business after the death of its founder, died in 1899, and two years later his nephew, Mr. W. A. G. Graham, succeeded from manager to sole proprietor. The business continued its expansion with connections in various parts of the world, and in 1908 the firm was converted into a private limited company, with Mr. Graham as sole managing director. In 1919 Mr. Thomas Warden, who senior representative of the firm from 1894, and one of the original and principal shareholders, joined the board, and Mr. Graham and he constitute the present directorate. Occasion has been taken to recognise suitably the fifty years' service, completed by a coincidence in this year, of Mr. John Pentland, compositor, and Mr. Thomas C. Bews, lithographic transferer.

Sheffield.

There is at present open to public inspection in the Sheffield Central Public Libraries an exhibition of fine printing arranged in the Reference Library exhibition cases. Here, drawn from the stock of the library and supplemented by generous loans from friends and well wishers, is a modest but fairly comprehensive collection of finely printed books representing modern printing presses from the Kelmscott Press to those of to day. Besides six examples of William Morris's work, including the "Golden Legend," the following well-known presses are represented:—The Doves Press, Ashendene Press, Golden Cockerel Press, Sheffield School of Art Press, Stanton Press, Dolphin Press, Florence Press, Riccardi Press, Pelican Press, Porpoise Press, Merrymount Press (U.S.A.), Essex House Press, Arden Press, Curwen Press, Chiswick Press and the Ballantyne Press.

Aberdeen.

MR. JOHN SLEIGH, reporter on the *Aberdeen Press and Journal*, and doyen of Aberdeen journalists still at work, recently attained his jubilee, and to mark the occasion journalistic colleagues, past and present, entertained him at a complimentary dinner in the Imperial Hotel and presented him with a gold watch and wallet filled with Treasury notes. Mr. William Maxwell (editor, *Press and Journal*) presided over a company of about 70, including Lord Provost Lewis.

Newcastle-on-Tyne.

MR. EDWARD TEBBUTT, managing director of *Newcastle Chronicle*, Ltd., and editor-in-chief of its publications, was entertained at a complimentary dinner, arranged by the heads of the *Chronicle* departments, in the Northumbria Room at Tilley's Restaurant, Newcastle, on the 12th inst. The chair was taken by Mr. V. E. Berry. Mr. Tebbutt complimented those present on their connection with the newspapers controlled by Sir William Berry, Bart., and Mr. J. Gomer Berry, and expressed the opinion that the *Newcastle Chronicle* publications had now entered on a new period of influence and prosperity.

Bristol.

IN connection with the District Committee of the J.I.C. a Christmas collection was organised for the unemployed and other necessitous cases in the printing and allied trades. Employers and workpeople united in the effort with the result that about £190 was realised. From this sum grants were made to several workers who had had long spells of illness; also, to two widows of deceased operatives. The balance was handed over to the treasurer of the local Printing and Kindred Trades' Federation for distribution amongst the unemployed, and others, including women workers.

Leeds.

CONTRIBUTIONS of Leeds printing and similar firms to the Leeds Workpeople's Hospital Fund include £5 1s. 8d. from the *Yorkshire Evening News* Machine Room Department; £5 1s. 5d. from the Yorkshire Paper Stock Company; £2 10s. from the Rose Show Fund of the *Yorkshire Evening News*; £1 6s. 9d. from Messrs. J. D. Hunter and Son, the Union Press, Leeds: £1 14s. 4d. from the machine department of Messrs. Chorley and Pickersgill, printers, Leeds; and £1 2s. from Messrs. Callan, Osborne and Co., printers, Leeds.

Belfast.

SIR ROBERT BAIRD, the proprietor of the *Belfast Telegraph*, presided at the annual meeting of the Belfast District of the Newspaper Press Fund. Mr W. P. Dolan, the secretary, reported that grants of over £700 had been made to local members during the past 14 years. Mr. R. M. Sayers, the treasurer, announced that the receipts included a special donation of £100 from Sir Robert Baird. Sir Robert Baird, who has been chairman of the district since its formation, was unanimously re-elected, as were Mr. Dolan and Mr. Sayers to their positions of secretary and treasurer respectively.

Torbay.

THE premises occupied by the *Torbay Express* for the past five years have proved far too small to deal with the greatly increased circulation which has resulted from the recent amalgamation, and they have therefore been sold, and immediately after Christmas the *Torbay Herald and Express* will remove to the former offices of the *Torbay Herald*, which have been remodelled and from which an increased output of 100 per cent. can be comfortably dealt with.

Bodmin.

MR. A. BROWNING LYNE, Mayor of Bodmin, as proprietor of the *Cornish Guardian* series of newspapers, celebrated the 25th year of their publication by entertaining his staff to dinner at Bodmin on Friday. On behalf of the staff Mr. W. A. Williams, who has been associated with the newspapers since they were first established by Mr. Browning Lyne, presented the latter with a case of pipes as a token of good will and esteem.

Rushden.

A PLEASING little ceremony took place at the *Rushden Echo* office recently, when Mr. C. Cross, the proprietor, made a suitable presentatihn to Mr. Fred G. Felce, on completing 25 years' service in the printing department. Mr. Felce is the fourth man to complete a quarter of a century's association with the printing and publishing of the *Rushden Echo*, and, between them, the four have put in over 110 years' work on the staff.

Jersey.

THE death has occurred in Jersey of Mr. F. E. Cabeldu, who was associated for many years both in the literary and composing departments with the old *Jersey Express*, now non-existent. He leaves a widow and a grown-up family.

Guernsey.

ALL-ROUND progress was reported at the 23rd annual general meeting of the Guernsey Press Co., Ltd., held under the chairmanship of Mr. A. J. Hodges, at the offices, Smith-street, St. Peter Port. Mr. F. F. Peek (managing director) said they had made records in all departments. Mr. Hodges, who was re-elected a director, also presided at the annual bonus distribution to the staff, whose thanks were expressed by Mr. J. S. Irish (editor) and Mr. H. Leroy (works manager). General regret was expressed at the absence of Mr. G. F. Peek (chairman of the board), who is in America with Mrs. and Miss Peek.

ACCORDING to the *Ministry of Labour Gazette* membership of trade unions affiliated to federations in the paper, printing, etc., group of trades has risen as follows:—1913, 82,000; 1923, 178,000; 1924, 179,000. The percentage proportion of federated membership to total membership during the years mentioned was respectively as follows:—98, 99 and 96.

Bookbinding: By Cedric Chivers, J.P.

Lecture before the Royal Society of Arts.

(Continued from page 479).

Figs. 16 and 17 are photomicrographs of the transverse sections of various leathers; these have been prepared with the object of visualizing and examining the fibres of different leathers, comparing their proportions of muscular tissue, and showing the interlocking of the tissues, which are strongest next to, that is, lying next to the animal's body; as the latter are pared away so the tensile strength of a skin is reduced.

Further severe tests under extreme conditions of heat, dryness and moisture have demonstrated that the native tanning of Nigerian leather more effectually preserves it from injury under bad conditions. Under conditions in which

Cowhide and calf lost	99%	original strength
French Levant Morocco	87%	,, ,,
Persian hard grain Morocco	83%	,, ,,
Thin Pigskin ...	75%	,, ,,
Morocco	70%	,, ,,
Thick Calf	50%	,, ,,
Thick Hogskin ...	27.8%	,, ,,
Niger Leather ...	12%	,, ,,

So that with the linen jointed end paper, improved oversewing, methods of dealing with refractory papers and the leather free from acid and the best kind of skin for bookbinding purposes being selected, it is now possible to produce a binding which lasts the very much lengthened life of the book. Bookbinding can effectively be made to hold and protect modern books for Library service, if it is adapted to the many different qualities of paper now used, and allied with materials and leathers specially selected and prepared to give hard and long usage.

A passing reference to the decorated book cover may be of interest. A method of covering original water colour designs with transparent vellum makes possible for the first time the use of colour in a permanent form for the external decoration of books. The design is painted upon paper which is covered with transparent vellum (the unstretched skin), the surface of which is tooled with gold. A book bound in this "Vellucent" binding is shown in Fig. 18. This form of decoration may be used in connection with leather bound books; vellucent panels are inlaid in the leather cover amid surrounding gold tooling. Fig. 19 illustrates a volume so bound. Such a treatment is specially adaptable to Illuminated Addresses in book form, as the panels may be designed to have intimate personal application to the recipient. Old and valuable books may be suitably rebound by reproducing the age and character of the title pages and covering with the transparent vellum. An old and decayed leather binding effectively restored, and its decay arrested (being protected from atmospheric influence) by covering the entire surface of the leather with the vellum while still retaining every detail of the binding and its old appearance, is shown in Fig. 20.

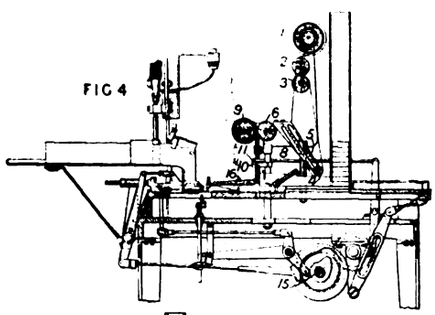
New Inventions

Feeding Foil Webs.

An invention by the Conley Foil Co. relates to means for feeding a continuous web of foil to a knife 10, 11 for cutting it into lengths, comprising a pair of continuously-driven rollers 2, 3 for drawing the web from a roll 1, a pair of intermittently-driven rollers 6, 9 for feeding the web to the knife, and a floating roller 4 between the two sets of feed rollers having pinions 4a at its ends engaging fixed inclined racks 7, 8 to prevent tilting of the roller. Slots 5 are provided in the racks 7, 8 to guide the roller 4. The web passes from the rollers 6, 9 to a vertical guideway 16 which holds it while the knife

FIG 4



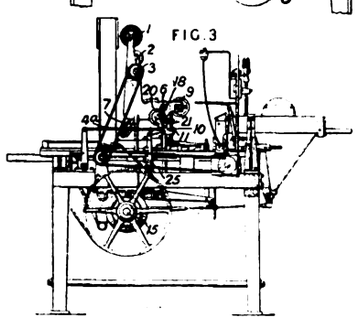


FIG 3

operates. The roller 2 is adjustable with respect to the roller 3 which is driven by chains and sprocket wheels from the main shaft 15. The roller 9 is of yieldable material such as rubber, and is adjustable with respect to the roller 6 which is driven from the shaft 15 through a cam engaging a bell-crank 25 serving to operate a gear-wheel 18 on the shaft of the roller 6 through a pawl 21 and ratchet wheel 20. Specifications 210,067, 225,243, and 233,048 are referred to.

Photo-Mechanical Printing Surfaces.

Messrs. L. Pepe and D. De Nagy have patented a process relating to the production of printing surfaces for photo-litho, and more particularly offset, printing, according to which the coating, which is sensitized with a chromate, consist of a hyaline gelatinous neutral solution of lactic casein, legumin, gluten, fibrin or a combination thereof, prepared by obtaining these substances as a highly pure precipitate and dissolving this in a suitable acid or acid solution. The casein, legumin, gluten or fibrin is subjected to an initial purification by treating it with hot water or steam and then dissolving it in an alkaline or ammoniacal solution, thereby purifying it of fat and albumen. Precipitation is effected with oxyglutaric and the precipitate washed, separating from lactic casein the soluble lime salts, or in the case of legumin or fibrin being precipitated, to separate the insoluble gluten. The pure precipitate is dissolved in glutaminic acid and dilute ammonia to obtain the neutral solution. This solution is mixed with a 20 per cent. solution of semi-gluten or sereen (in the proportion of about 5 to 1), allowed to stand at a temperature below 90 deg. C., tested for wave length transmission, and thereafter is added a small percentage of meta terebenthene and propenyl or glyceryl alcohol. The solution is filtered and sensitized with a chromate. A grained support may be used for the printing plate, which after exposure is rolled up with printing ink and developed, being washed and scrubbed with a stiff brush in cold water and then immersed in weak solution of a metallic halide (e.g., common salt) or formaldehyde to harden the remaining colloid. Fine etching can then be effected as in the half-tone process and to such depth as is comparable with that of the ordinary relief process block. Where a polished copper or other plate is used the plate, after etching and cleaning, is grained on the margins and non-printing parts as by shaking with pumice.

Photo-Mechanical Colour Printing.

A method of securing accurate colour values in the production of photographic colour record negatives for photo-mechanical printing or multicolour photography consists in producing, on thin films stretched on frames, from one or more negatives of the original, a set of coloured positive images or drawings, each representing one component colour, in superimposing these images, etc., upon a white reflecting ground to determine the extent to which the colour rendering is defective, and from the information so obtained either (a) retouching the original colour record negatives and producing copies therefrom, or (b) modifying the colours of the positive images or drawings and producing corrected partial negatives by reproduction therefrom. The films are so thin that the colour of the material of the film is not a disturbing factor, and they are united to their reinforcing frames by adhesive, such as nitro-cellulose or gelatin. When a set of colour record negatives is available, copies of them in colour are made on separate thin films sensitized in any manner. These copies may be coloured reliefs, or toned silver images. If a black component is used it is preferably in untoned silver. To facilitate superimposition the copies are made on films of different sizes, the frames of which fit one within another. The lowermost image may be produced on opal glass, white paper, or white celluloid, which itself forms the reflecting ground when the images are superimposed. When the method of modifying the colours of the positive images is used, these images are made with short graduation, so that any corrections necessary will be by way of intensification. If a set of colour record negatives is to be produced from a single half-tone negative, a copy of the negative is made, upon a thin film or on a white support, to represent one component colour. The remaining components are drawn in colour on thin black films superimposed on the first copy. Alternatively, all the components are produced by selectively colouring copies of the negative on thin films. When the components have been coloured to the required degree, as determined by superimposition, they are placed on white supports and copied to produce half-tone or screen negatives of the required sizes. The invention is by Mr. C. Bletcher.

LECTURES AT STATIONERS' HALL.—The London Central Districts Master Printers' Association announces that the following lectures, completing the winter course, will be given at Stationers' Hall, Ludgate hill, E.C.4, on the following Wednesdays at 6.30 p.m.: January 6th, Mr. Ernest W. Mundy, B.A. (secretary, Labour Co-Partnership Association), "Co-Partnership and Profit-Sharing: The New Spirit in Industry" (discussion to follow); February 3rd, Mr. W. Gamble, F.R.P.S., F.O.S. (editor of *Penrose's Annual*), "Recent Developments in Rotary Colour Printing" (with exhibits); March 3rd, Mr. A. E. Goodwin (secretary, Federation of Master Printers), "How to Secure Industrial Peace: The Example of the Printing Industry"; April 14th, Mr. H. G. Clarke, "Early Colour Picture Printing Processes, with Special Reference to Baxter and His Process" (with an exhibition of Baxter prints). These lectures are open to all members of the London Master Printers' Association or their managerial staff. The exhibitions will be open from 5 p.m. Tea and light refreshments 6 to 6.30 p.m.

Papermaker Builds his own Machine.

By way of celebrating the completion of a unique undertaking, Mr. John Pitts, of the Trews Weir Paper Mills, Exeter, and his wife entertained a gathering of about a hundred of the leading public men of the city at the mills recently to witness the starting of a new papermaking machine, weighing some 50 tons, which has been constructed on the premises by the owner and his engineering staff. After seeing this and inspecting the works, the company, in addition to thirty of the staff, sat down, under the presidency of Mr. Pitts, to luncheon in the mills' store room.

Proposing "Success to the firm of Messrs. John Pitts and Son, Ltd.," the Deputy Mayor of Exeter (Mr. Charles Warren) said they had just witnessed the starting of a new papermaking machine, which was designed by the chairman and constructed by him and his staff. Every bit of the machinery had been made and put together by them, an achievement of which they might well be proud. All the patterns of the metal work were made to Mr. Pitts' drawings on the premises by the engineer (Mr. A. Gould). The whole of the castings were made in Exeter. That was a very important occasion in the history of the firm of John Pitts and Son. It showed what could be achieved by a firm which had a practical head and a business man who knew how to secure the co-operation of his staff. His firm had in operation a bonus system and profit sharing, and the harmony that existed between the employers and the employees had greatly helped Mr. Pitts in the expansion of the business.

Responding to the toast, Mr. Gould said that for four years he had had a large share in the construction of the new machine under Mr. Pitts' instructions. The staff of the mills had striven, in a fine, straightforward, honest manner, to complete the work in record time, everyone working with the thought that the longer the machine was idle the more the expenses were piling up.

Replying on behalf of the staff, Mr. John Cocker (beaterman), who has worked in Trews Weir Mills all his life, said the workpeople realised if they could turn out a few more tons of paper they would turn out a few more shillings for themselves, and if they all put their shoulders to the wheel they could do it.

Mr. Pitts, who was received with musical honours, said in 1921 the papermaking industry was passing through a very anxious time. He was compelled to close down for five weeks, and at the end of that time the men came to him to ask if nothing could be done. He told them the position quite frankly—that there was only three days' work in the office, but that he would open with that if they liked. They did so, and from that day to the present time they had never wanted for an order. The men had put their backs into the work. With the help of Mr. Rowland, his predecessor and present assistant, he had studied the matter out in regard to facing competition. Some of their machinery was a hundred years old, was obsolete, was worked with difficulty, and was not turning out what was desired. A new machine would run into a cost of thousands of pounds, and they hadn't the money to buy it, so the only thing to do was to make one. He thanked the staff for the very energetic way in which they had helped him. Mr. Rowland had been of great assistance. It would be invidious to individualise, but he must refer to the very great help of Mr. Gould in making the patterns. Messrs. Taylor and Bodley had made a first class job of the castings.

It may be of interest to mention that Messrs. John Pitts and Sons, in taking out their old papermaking machine, found one of the drying cylinders stamped "B. Donkin and Co., London." In their early days the firm of Bryan Donkin and Co., when engaged on papermaking machinery, had all their castings from John Hall, of Dartford. Bryan Donkin put down in 1823 a 48 in. machine for Mr. Morgan, Colyton, near Exeter, and in 1824 a similar machine for Messrs. Bevan and Swayne, Bitton Mills, Exeter.

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

IN the paper industry, conditions compared with those which prevailed earlier in the year are much improved. The recent stiffening in prices of wood-free papers is ample evidence of a greater degree of confidence in the present state of that section of the industry and its future prospects. Even among the wrapping mills, despite postponement of the tariff issue, business has improved, and in some cases three to four weeks are required for delivery of special makings. The publicity given to the British wrapping section by the Safeguarding inquiry is largely responsible for a steadier inflow of orders, and as a piece of propaganda it would be difficult to excel.

* * *

THIS Paper Standardisation is a queer and complex issue, despite the sheer simplicity and clearness of its aims and principles. If we are to accept the testimony of paper salesmen whose business it is to sell paper to printers, there is nothing else for it but to believe that only a very small handful of printers are adhering rigidly to the new scheme in the buying and usage of paper. At the same time, it is frankly agreed by those who know, that this minority of adherents embraces the most progressive as well as some of the largest printing and paper-using houses in the country. By this fact alone the future of paper standardisation is assured. Unfortunately, the majority of our paper merchants are allowing their policy to be controlled by the apathetic crowd of smaller printers whose interest in paper is mainly centred on price and terms. Sooner or later, and from an economical point of view, the sooner the better, paper merchants will decide as a body to do what they have agreed to do, *i.e.*, to sell paper by the thousand, boards by the hundred, to pack their stock accordingly, to specify weight on the thousand-sheet paper and hundred-sheet board basis and to adjust their substances to even standards. If they prefer to mix their stocks and suffer all the inconvenience attendant upon a policy of waiting for all printers to gradually recognise the merits of standardisation they will wait until several generations have passed. Meantime opportunities for effecting economy are being sacrificed and merchants are losing business because of their prices compared with those obtainable from the mills.

* * *

WITHOUT giving too much leeway to the pen, let it be said at once that paper merchants are largely blind to their own interests. With anything like a normal range of business vision and with just a tinge of imagination they ought to grip the inestimable importance of working in with the Master Printers' Federation and forcing standardisation to the hilt. It is the keynote to bigger things and the stepping stone to an ultimate and more speedy realisation of the true place and function of paper-merchanting. Amidst all the welter of argument, distrust and doubt as to the relative standings of different sections and sectional interests in the paper industry, the opportunity of straightening out the issue is in danger of being lost for lack of a leader with imaginative genius. What is meant to be conveyed cannot readily be put in plain terms, but it should at once suggest itself to the broader minds in close touch with the key problems of the industry.

IN the paper, printing, etc., group of trades 10,000 workpeople approximately were affected by net increases in wages in the ten completed months of 1925, the net amount of change in weekly wages being £1,400.

Paper Bag Trade Wages.

The Paper Bag Trade Board (Great Britain) at a recent meeting resolved to vary the minimum rates for machine tacklers in accordance with their notice of proposal, and have asked the Minister of Labour to make an Order confirming the variations and bringing them into operation as from January 1st, 1926.

Notice will be sent to all employers in the trade who are known to the Trade Board should the variations in question be confirmed by the Minister, and of the date from which they become effective.

NEWFOUNDLAND POWER AND PAPER.—In order to provide for further extensions, it is proposed to authorise the directors to create £2,000,000 first mortgage debenture stock, carrying interest at a rate not exceeding 6 per cent. per annum.

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES:

1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.
2.—It occupies a space of only six feet on the run, and is quite noiseless.
3.—The power required is such a small amount that it can be driven from any existing shafting
4.—Centres of any kind or width can be worked on the machine.
5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.
6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.

THE BRITISH & COLONIAL PRINTER AND STATIONER

FOUNDED 1878. PUBLISHED WEEKLY.

The Recognised Organ for Printers, Lithographers, Printers' Engineers, Wholesale and Manufacturing Stationers and Makers of Machinery and Appliances for the Paper Bag, Envelope, Box-Making Bookbinding and all Paper and Board Consuming Industries.

VOLUME 97. NUMBER 27. [REGISTERED AS A NEWSPAPER.] LONDON: DECEMBER 31, 1925. EVERY THURSDAY. PRICE TWOPENCE.

The Standardisation of Paper.

By W. HOWARD HAZELL.

Another step has been taken in simplifying the introduction of standard methods in dealing with paper. The Federation of Master Printers and the National Association of Wholesale Stationers and Paper Merchants have agreed on a table of weights, converting a ream of 480 or 516 sheets into the equivalent weight per 1,000 sheets. It was necessary to have an agreed standard for the conversion of weights, and this table has now been circulated to all members of the Federation of Master Printers and the National Association of Wholesale Stationers, and further copies can be obtained at the price of 3d. each from the respective Associations. The tables that have been issued make it perfectly simple for any master printer or stationer to use the new and improved standard methods, even if some of his stocks are packed in the old number of sheets to the ream. A table has been issued, which shows at a glance the cost of 1,000, 100 or 10 sheets when the price per ream containing 480 or 516 sheets is known. This makes it possible for a printer on a given day, such as January 1st (which is a suitable day for making good resolves) to adopt 1,000 sheets as the basis for his costing, estimating, charging, etc. If he then orders all his papers on 1,000 sheet basis, the new stocks will gradually replace the old ones, and from a given date all calculations will be on the improved methods. If a printer wishes to order paper to match some which weighed 21lbs. 480 sheets, he has only to turn to the new table converting the weights to find the equivalent is 44lbs.

Hundreds of letters have been received by the Federation of Master Printers from members who state that they have or are immediately adopting the new standard methods, and are notifying their paper suppliers that they wish all paper invoiced under the new methods, which are, that the number of sheets should be given, the weight per 1,000 sheets, and the price per 1,000 sheets or per lb. whichever may be more convenient.

It is essential that all printers should adopt the new methods which have been agreed on, so as to avoid complication of keeping two stocks, and the sooner every printer notifies his suppliers that he wishes paper supplied on the new methods, the sooner the change-over will be made.

Some persons have misunderstood the standardisation scheme, and think that a ream in future will mean a package of 1,000 sheets. In future papers will be packed in any convenient number of sheets which will make up to 1,000 sheets, *i.e.*, 1, 2, 4 5 or 10 packages: thus, copying book paper will be made up in packages of 1,000 sheets, ordinary papers in packages of 500 sheets, large and heavy papers in 250 sheets, and boards in 100 sheets. It is hoped that the term "quire" will be abandoned and paper will be ordered and dealt with according to the number of sheets required, *e.g.*, 1,000, 2,500, 10,000, etc., and any quantity either less, between or in excess of these numbers should always be ordered in some decimal number, *e.g.*, 50, 280, 500, 750, etc. The decimal method makes it very easy to calculate the price of odd quantities of sheets, and will simplify stock-keeping, etc., 1,000 sheets must be used as the basis for weight and price, and paper should not be ordered in reams nor quoted in weight or price per ream.

Many letters have been received from paper agents and others who are making the change in their stocks.

It is most desirable that printers should cease to order boards in grosses, but order them in 100's, 500's, 1,000's or any other suitable quantity, and the price quoted per 1,000.

One master printer has printed the following slip which is attached to all his paper orders:—

"All paper ordered by us in future will be required packed and invoiced in accordance with the new Paper Standardisation Scheme, agreed to between our Federation and yours. We shall, of course, be prepared to take off your hands any makings you may have on order for us, and also, temporarily, any paper or boards you have in stock packed under the old routine, but we are desirous of establishing this Standardisation at the earliest possible moment."

Another printer, in order to draw attention to the change, has a rubber stamp as follows:—

"The net price and weight quoted must be per 1,000 sheets."

Letters have been received from many paper dealers, which shows they are actively engaged in converting their stocks and changing their price lists. One of the oldest papermakers in the country, dealing largely in hand-made papers, is notifying his customers that on a date in the new year all his paper will be packed in reams of 500 sheets, and he will be dealing on the 1,000 sheet basis. Others say:—

"Gradually our stocks will be converted to meet the wishes of the trade."

"Most of our stock is already put up in packages of 500 sheets each."

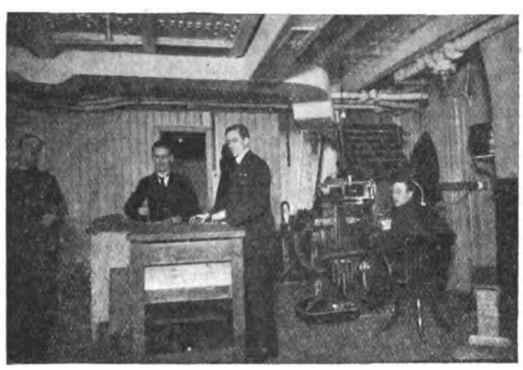
"The majority of our stock papers are now offered in packages of 500."

"We are already converting our stocks of writings, printings and banks on to the 1,000 sheet basis."

"A considerable quantity of our stock is packed in 500 sheets. As soon as this system was suggested, we proceeded to pack all new orders in this way, and it has been our custom for some time to quote the price and weight per 1,000 sheets.

Some master printers who have adopted the scheme for standardisation of paper have sent up testimonials of the advantages of the new methods:—

"I have worked on this method since we started about ten years ago. I determined never more to have the work and worry of the ream and quire method, so all paper received was booked as so many sheets, and the price per 100 and per sheet was worked out for costing purposes."



"We acknowledge the advantages of paper standardisation. We have given the suggestions full trial, and are convinced of their value. We are in comparison 'small fry,' but emphasise the saving that must accrue by reason of the adoption of such methods by the 'big fellows' in our trade."

"When we saw that standardisation was coming, we adopted the 1,000 basis as an experiment in one of our factories last April, and were so satisfied with the result that we have adopted it universally for all our costing, estimating and paper records. Like all improved methods of standardisation or simplification, it saves time, reduces mistakes and increases efficiency."

THE LINOTYPE ALWAYS STANDS UP TO ITS JOB

Linotypes which are regularly working on the high seas from day to day and year to year are not merely fine-weather machines. The behaviour of the Linotype on the Cunard liner *Berengaria* during the recent exceptionally heavy Atlantic gales, is recorded in the *Daily Mail* dated November 7th, a cutting of which is here reproduced. It affords full evidence of the sturdy construction of Linotypes — built for continuous service and *built to last.*

A corner of the Printing Section on board the *Berengaria.*

...ion becomes a decrepit hag.

STORMY EDITING.

"DAILY MAIL" ATLANTIC EDITION IN THE GALE.

Passengers in the Cunard liner Berengaria (52,000 tons), which encountered such a severe two-days gale during her last trip from New York to Southampton, obtained copies of *The Atlantic Daily Mail* throughout the passage.

The linotype machine, which sets the type, came through its severe trial with flying colours.

The machine is screwed to a lower deck with the keyboard fore and aft, and although the operator had difficulty at times in keeping near the machine he set the usual full service of wireless news of world happenings. The molten metal in the pot was kept very low in order to prevent "splashing." Had the liquid lead got into the intricate parts of the machine it is possible that repairs could not have been executed until the ship docked. In addition, splashing metal was likely to injure the operator. Linotype setting is a two-handed job, but there were occasions when the operator worked with one hand, the other clutching a bar of the machine to prevent him sliding across the room.

He laughed when asked to set the following wireless message:—

"Warm sunshine has flooded Southern England and the weather has been summer-like."

Up in the wireless room on "A" Deck news was received from the Leafield Radio Station in Oxfordshire and the Cape Cod Radio Station in Massachusetts. The operators have worked in smaller vessels and the ship's violent motion did not worry them.

The *Daily Mail* Atlantic Edition helped the passengers to remember that they were still in touch with the outside world during the severest portions of the storm.

These are only examples of statements that have been made by many paper suppliers and master printers, and it now rests with master printers to adopt the standard methods universally.

At the recent annual meetings of the Typothetæ, which is the equivalent of the Federation of Master Printers in America, Mr. Goodwin, the secretary of the Federation, announced that English printers had adopted the 1,000 sheet standard, and the statement was loudly applauded by the conference. American printers have for some time been considering improving the methods of dealing in paper, but England on this question is in advance of America, as they have not yet carried through the proposals for improved methods.

BOWATER'S PAPER MILLS, LTD.—A change has been made in the registered office of this company: instead of being 159, Queen Victoria-street, London, E.C.4, it is transferred to the mills at Northfleet, Kent, where the work of administration will be concentrated.

FURTHER comparison between the figures of current and pre-war paper trading demonstrates clearly that we are dependent upon our colonies and the countries constituting the British Empire for any increase in trade that has been made. With all foreign sources we are faced with declining export figures; in short, we are losing our hold on foreign markets. Granting that this is due to what might be termed temporary conditions, the fact seems to emerge that if we continue to trade as a free-trade country it will become vitally necessary to enter into closer trading relationship with the countries within the Empire. We have already received a lesson from Australia which has yet to reach its full significance. India and South Africa have tightened their markets within the last few years For this we have to blame our own lack of vision since the war. It still remains, however, that the Colonies offer the most responsive markets for our manufactures and the widest field for future development. The thing that is wanted to enable us to realise the full potentialities of the Colonial markets is a scheme of inter-trading devised by a Government whose first aim is to help forward the development of British industry.

Government Contracts.

Contracts were placed with the following firms during November:—

Post Office.

PRINTING, PERFORATING, ETC.—McCorquodale and Co., Ltd., Walverton, Bucks.

PAPER CONDENSER.—Brittains, Ltd., Leek, Staffs.

PAPER, PRINTING.—Robert Craig and Sons, Ltd., Airdrie.

Stationery Office.

BOOKBINDING MATERIAL. — Winterbottom Bookcloth Co, Ltd., London, E.C.

CLOTH, TRACING.—Winterbottom Bookcloth Co., Ltd., Manchester; Cousins and Co., Manchester; B. J. Hall and Co., Ltd., Cheadle.

PRINTING, RULING, BINDING, ETC.

Contract for Northern Ireland Group 24 (1926), Process Engraving.—W. and G. Baird, Ltd., Belfast.

Contract for Scotland Group 1 (1926), Miscellaneous Bookwork No. 1.—D. Winter and Son, Dundee.

Contract for Scotland Group 2 (1926), Miscellaneous Bookwork No. 2.—J. and J Gray, Edinburgh.

Contract for Scotland Group 4 (1926), Recurring and Non-Recurring Works.—McCorquodale and Co., Ltd., Glasgow.

Contract for Scotland Group 6 (1926), Indexes to the Register of Deeds and Sasines.—T. Paul, Ltd., Falkirk.

Binding 1,200 Books T.1007 Telegraph Circulations Book; binding 10,000 copies "The Income Tax Acts."—Adams and Harrison, Ltd., London, E.C.

1,333,800 Income Tax Repayment R.O. Cheques.—Barclay and Fry, Ltd., London, S.E.

100,000 Pads for Naval Messages, S.1320B.—John Corah and Sons, Loughborough.

165,000 Forms 3 S/C Inland Revenue; 441,550 Form 38A with 38A (Ins.) inserted.—H.M. Stationery Office Press, Harrow.

484,000 Form 12 in 430 sorts.—G. Hargreaves, Cheetham.

967,925 Form 12 (Ins.).—H. Howarth and Co., Ltd., Manchester.

483,925 Form 12 in 429 sorts.—Illustrations, Ltd., Salford.

170,000 Form R.233; 270,000 Form R.233 (Ins.).—Marsden and Co., Ltd , Salford.

55,250 Books, Customs No. 235; 270,000 Form R.233 and R.233 (Ins.).—McCorquodale and Co., Ltd., Wolverton.

961,425 Form 11E in 1,170 sorts.—Pearce and Gardner, Ltd., Chorlton-cum-Hardy.

1,000 Occurrence Books (55).—Swiss and Co. Devonport

154,000 File Jackets P.F.35 Min. Pensions.—J. F. Warren, London, N.

5,000 Instructional Diagrams for the Lewis Gun, coloured.—J. Weiner and Co., Ltd., London, W.

ENVELOPES.—Chapman and Co. (Balham), Ltd., London, S.W.; Inland Revenue, Official Paid, Edinburgh, contract for supply of, McCorquodale and Co., Ltd., Wolverton.

PAPER, CARBONIC.—Waterlow and Sons, Ltd., Dunstable.

PAPER, MOUNTED.—A. E. Mallandain, Ltd., London, N.W.

PAPER OF VARIOUS DESCRIPTIONS.—J. Baldwin and Sons, Ltd., Kings Norton; H. Bruce and Sons, Ltd., Currie; Caldwell's Paper Mill Co., Ltd., Inverkeithing; R. Craig and Sons, Ltd., Airdrie and Caldercruix; J. Cropper and Co., Ltd., Kendal; Golden Valley Paper Mills, Bitton; Grosvenor, Chater and Co., Ltd., Holywell; W. Nash, Ltd., St. Pauls Gray; Olive and Partington, Glossop; Spicers, Ltd., London, S.E.; Ulverston Paper Co., Ltd., Ulverston; Wiggins, Teape and A. Pirie (Sales), Ltd., Hele, Bucksburn and Chorley.

TAGS.—G. Hughes and Co., London, N.

VELLUMS, MOCK.—H. Band and Co., Brentford.

Crown Agents.

PRINTING.—Waterlow and Sons, Ltd., Ltd., London, E.C.

POST OFFICE regulations frequently handicap business eaterprise, entailing an unlooked for expense. Messrs. Tait and Son, of Inverurie, have unwittingly transgressed the rules. The offence appears to be in shortly describing the method of printing on a calendar prepared for distribution. It involves a cost of a 1½d. stamp for inland dispatch, but, strange to say, it can go abroad for 1d.

Trade Notes.

PREMISES in Upper Thames street, London, occupied, among others, by two firms of wholesale stationers and paper merchants (D. Webb and Co. and Campbell and Price, Ltd.) were involved in a serious fire on Monday morning. The fire, fed by the stocks of paper on the second and the upper floors, obtained a firm hold, and its progress was not stopped until every one of the floors was completely destroyed and the roof burned away. Adjoining premises in the occupation of Messrs. Edward Towgood and Sons, Ltd., and other firms, were reported as having contents slightly damaged by heat, smoke and water.

CITY firemen were called last week to a six-floored warehouse at 47, Lime-street, London, E.C., occupied by Howard and Jones, Ltd., wholesale stationers, where an outbreak caused considerable damage to the stock in the back part of the basement and ground floor.

THE Employers' Federation of Envelope Makers and Manufacturing Stationers have now taken possession of their new offices at 69, Fleet-street, London, E.C.4. The telephone number remains, City 2367.

THE North London Master Printers' Association has arranged for a New Year's whist drive and concert to be held at Wortley Hall, 242, Seven Sisters-road, N., on Monday, January 4th, commencing at 7 p.m.

THE South-West London Master Printers' Association will meet on Tuesday next, January 5th, at 6.30 p.m., at Messrs. Arding and Hobbs' Restaurant, Clapham Junction, when Mr. J. Crowlesmith, J.P., will deliver an address on "Work or Profit—Both or Which?"

THE London Central Districts Master Printers' Association will meet at Stationers' Hall on Wednesday evening next, January 6th, when a lecture will be given by Mr. Ernest W. Mundy, B.A. (secretary, Labour Co-Partnership Association) on "Co-Partnership and Profit-Sharing: The New Spirit in Industry." Members from all districts of the L.M.P.A. and their managerial staffs are invited.

THE East and North-East Association of the London Master Printers' Association, in continuation of their series of practical lectures, announce for the coming season a course of three lectures on the "Efficient Working of a Small Office," followed by discussion: January 20th, "The Composing Room," by Mr. Ernest Pheby; February 17th, "The Machine Room," by Mr. J Acton (Aldenham Press); March 17th, "The Office," by Mr. J. W. Sparks. These meetings are to be held at the Langthorne Restaurant, Stratford Broadway, at 7 p.m., and members of L.M.P.A. from other districts will be cordially welcomed.

"BOOKBINDING" is the subject of a lecture to be delivered at Stationers' Hall on Friday, January 8th, at 6.30 p.m., by Mr. A S. Colley (managing director, Messrs. A. W. Bain and Co., Ltd.). Mr. John L. Mercer (chairman of the Master Bookbinders' Association) will preside over the meeting, which is the fourth of the series arranged by the Stationers' Company and Printing Industry Technical Board.

THE National Committee of Monotype Users' Association are offering prizes in each district for (a) the cleanest and quickest work, irrespective of length of training of the operator, and (b) for the best work submitted by trainees with not more than twelve months' experience on the keyboard. Mr. F. Waterhouse, the chairman of the Committee, is also offering a silver cup for the best work submitted from the whole country. The following committee has been appointed to arrange details of the competitions: Messrs. F. Waterhouse, H. R. Caldwell, T. Corrigan, R. Hudson, and G. P. Riviers, and Mr. W. H. Hazell and Mr. A. Stembridge, president and vice-president of the Federation of Master Printers, are also invited to serve on the committee.

PORTUGUESE BANK NOTES. — The official *Diario de Noticias* has published documents relating to the bank-notes affair. Negotiations for the printing of the notes by a London bank-note printing firm began as far back as January last. These documents include correspondence between the London firm and Marang (one of the founders of the Angola and Metropole Bank) as to certain details—colour, serial numbers, individual numbers, signatures, and date on the notes. There are also letters to London purporting to be signed by the Governor of the Bank of Portugal. Senor Alves Reis, a director of the Bank of Angola Metropole, is alleged to have confessed to the police that the signatures to documents and to letters sent to Messrs. Waterlow and Sons were forged and that the whole plan of the fraud was his own work.

IN connection with the arrest of three Hungarians at The Hague for passing counterfeit 1,000-franc notes, the Budapest Liberal newspaper *Vilag* publishes sensational statements, implicating the Hungarian Government in the matter.

THE *Birmingham Mail* Christmas Tree Fund amounted on Christmas Eve to £13,982, as compared with £13,807. On that day 5,700 poor families were provided with a Christmas dinner and a supply of coal.

THE death took place on Christmas Day, of Mr. Richard Wilson, of Blackburn, who had spent several years on the *Preston Herald*, the *Lancashire Evening Express* and the *Northern Daily Telegraph*, being editor of that paper for some time. He had been a journalist for over fifty years.

THE death occurred last week of Mr. Frank A. Munsey, the well-known American millionaire publisher, age 71. He was the proprietor of the *New York Mail*, *Sun* and *Globe and Evening Telegraph*, and of a number of magazines. Mr. Munsey was born at Mercer, Maine, U.S.A., and began in a country store, later rising to be manager of the Western Union Telegraph office at Augusta. He went to New York in 1882, and started the *Golden Argosy*, a juvenile weekly (now the adult *Argosy-All Story Weekly*), afterwards starting other magazines and eventually launching widely into newspaper proprietorship.

THE funeral took place on Monday morning at West Norwood Cemetery of Mr. Joseph Charles Griffith, for over 30 years a member of the *Daily Telegraph* editorial staff.

INSURANCE STAMPS REMINDER.—An official reminder is given that from January 4th, next, the new rates of contribution under the Old Age Pensions Act and the new Health Insurance and Unemployment Acts will apply. As stocks of National Health and Unemployment Insurance stamps of the old denomination will be withdrawn from Post Offices after January 4th, it is essential that employers should take immediate steps to ensure that Health Insurance Cards and Unemployment Books are stamped up to date at the proper time.

BOXING DAY EVENING PAPERS.—Evening newspapers were published in most provincial towns on Saturday (Boxing Day). At a conference previously held between representatives of the Newspaper Society and the Printing and Kindred Trades Federation, agreement was reached that in years in which Boxing Day falls on a Saturday the publication of evening newspapers shall not be interrupted, and that when Boxing Day falls on a Monday, after Christmas Day on a Saturday, evening newspapers will be published as usual. With these exceptions Boxing Days are to be regarded as days on which evening newspapers will not be published. This arrangement will apply, of course, to provincial evening newspapers which are members of the Newspaper Society.

Country News.

Birmingham.

MR. J. BILLINGSLEY, J.P., of the *Smethwick Telephone*, has completed 50 years' association with journalism in the district, and to mark the event has been the recipient of a gold watch from his colleagues in the profession. The magistrates of the Smethwick Police Court, at the sessions on Christmas Eve, associated themselves with the congratulations to Mr. Billingsley, and hoped he would long be spared to continue his public and journalistic work in the borough.

Sheffield.

A WIRELESS equipment, provided from funds contributed by readers of the *Sheffield Independent*, has been installed at the Sheffield Royal Hospital, and was opened by the Lord Mayor of Sheffield (Alderman J. Benson). The installation was formally handed over by Mr. W. W. Chisholm, a director of the Sheffield Independent Press, and received on behalf of the hospital by Mr. Fred M. Osborn, the chairman.

Leeds.

THE staffs (office and works) of the *Yorkshire Post* and *Yorkshire Evening Post* have made contributions to the Boots for the Bairns Fund of the latter paper to a total of £52 11s. 3d.

Limerick.

THE offices in Limerick are very busy, and as the work is mainly of a commercial nature, it seems to augur well for the future of the printing industry in this city and county.

SOME object lessons are derived from the recent county council contracts for printing and general stationery supplies. Three houses tendered at the following figures: £782, £590, £538. Needless to remark, the first figure was not accepted, although it is really too low for the amount of work to be done and for stationery items to be supplied.

Loughborough.

THE death took place at 20, Radnor-road Loughborough, on December 18th, of Mr. William Robert Whitaker, at the age of 87. Deceased was for 57 years employed by Messrs. Thos. Forman and Sons, of Nottingham, and up to his retirement, some years ago, was foreman of the composing department. He was apprenticed to the printing trade in May, 1852, under the late Mr. Thomas Forman. On his retirement he was presented by his employers with a clock, suitably inscribed, and with an illuminated address, walking stick and purse of gold by his colleagues.

Torquay.

THERE has passed away at Torquay, at the age of 81, Mr. Thomas Dodd, a veteran of the printing trade. Before removing to Torquay over half a century ago, to enter into partnership with Mr. R. Shinner, Mr. Dodd had conducted a printing business at Exeter. The partners' first premises were in Rock-road, but they subsequently removed to Fleet-street, where Mr. Dodd remained until his retirement five years ago.

Rochester.

THE death has occurred, at Rochester, of Mr. William Henry Ansell, who would have been 84 next February. The deceased, who was well known, was a native of Sheerness, and served his apprenticeship to the printing trade at the offices of the *Sheerness Guardian*. He went to Chatham soon after completing his apprenticeship to take up the appointment of foreman at the *Chatham News* establishment, and he continued to work with the firm, subsequently as proof reader, up to the summer of this year, when he retired on pension.

Rochdale.

THE Rochdale and District Printing Crafts Guild held its annual fancy dress ball and whist drive last week, when a very successful evening was spent.

Vibration Caused by Presses In Operation.

The vibration of floors and buildings caused by the running of machinery offers a serious problem and a source of much possible worry and actual loss. Machinery users are not always able to select the ideal premises and floors for their plant, and have perforce to make the best of what they can get. Hence it comes about that the shaking of buildings consequent on operating machinery is unfortunately common enough, so much so that probably all printers are called upon to face the trouble at one time or other.

Printers' engineers may afford much useful assistance in removing or minimising the shaking of floors caused by the moving machinery, but the average architect quite naturally points out that the building itself was not designed to hold machinery thus operated. This is cold comfort.

Some useful notes on at least one distinct phase of the subject are offered by the department of research, United Typothetæ of America. This refers to the prevention of vibration in steel constructed buildings, such as those now so much in vogue. In regard to the construction of buildings, it is suggested that machines therein should be anchored to a foundation too massive to be set in motion. When the buildings are already constructed, vibration may be minimised by insulating with some elastic material.

It is usually accepted that the best type of construction for a printing plant is that known as "flat slab" steel and concrete construction. In this form of building, the heads of the columns are flared out into the ceiling, leaving a surface unbroken by beams or girders.

Vibration from presses in a competently constructed building of the above type should usually not occur. At times, however, a number of presses will synchronise or "get in step" and will vibrate any steel constructed building not especially designed to prevent this.

Prevention of such vibration calls for especially rigid structural design. One of the commonly successful methods for doing this is to turn the reinforcing bars in the concrete floor downward into the flared heads of the supporting columns, which are increased in size. Additional radial reinforcing bars are also added. It is stated that this construction will absolutely eliminate all rocking and structural vibration, even with all presses running and set in parallel.

In the construction of buildings where exceptionally heavy presses are to be put on the ground floor, it has been found advisable to insulate the foundations on which they rest from the column footings to prevent the vibration being transferred to the building. This is done either by providing an entirely separate foundation for the press, or inserting a cushioning element between the press foundations and the column footings.

The question of preventing vibration in buildings already built and more or less ill-adapted to printing plants is another matter. In general, it may be said that the weaker a floor is, the more a press will tend to vibrate it.

The vibration caused by a cylinder press is in reality the result of the energy required to stop the bed. It is ordinarily said that the bed is stopped by means of the bed motion and air cushion, but that means simply that the momentum of the bed (which may weigh half a ton) is transferred to the bed motion and the air chamber, and they in turn must transfer the force to the parts to which they are attached. The floor, or rather the floor beams, must hence eventually absorb the entire momentum.

It is, therefore, evident that the less rigid the floor construction, the more a building will vibrate. It is also true that, other things being equal, a press resting directly across two floor beams will vibrate less than one resting between beams.

The first and most fundamental remedy for vibration in a printing building is hence to brace and support the floor properly to withstand the thrust of the presses. The nature of such braces would, of course, depend upon the circumstances. Concrete or iron pillars, wooden posts and iron angle braces are all used for this purpose.

A further method of assisting the weakness of the floor is to place each press on a larger individual foundation, thus spreading the load over a greater area.

Inasmuch as vibration (rocking) is the resultant of the thrust of the bed at the end of its swing, it is apparent that several presses moving in the same direction will swing a building more than if they are moving at right-angles to each other. This is particularly true if the presses happen to become synchronised so that the end of their swing comes at the same instant.

In buildings that are not exceedingly rigidly constructed, vibration can sometimes be eliminated or minimised by placing the presses so that their movement is at right-angles to each other, compensating the thrust of one by the other.

Two kinds of vibration, while not as serious as rocking, frequently give annoyance to the printer and especially to the other tenants in the building. The first of these is vibration caused by a shock to a very rigid structure. This is really true vibration as distinguished from "swinging" or "rocking," dealt with above. It is such vibration as occurs when a steel beam or a glass is struck, and the more rigid a structure is, the more it will vibrate in this way.

In this case the vibration is that inevitable in a running piece of machinery and is transmitted to the rigid structure of the building when the press is solidly bolted to the concrete floor. Thus the press and building are practically one rigid body.

Such vibration may be prevented by cushioning the press, insulating it from the floor by some resilient substance which will absorb shocks. Probably the best of such insulating material is laminated cork block.

The second sort of true vibration seems to be rather rare and its causes obscure. Apparently, it is caused by sound-wave transference. It has been noted that sometimes when several presses are running together they will emit a vibration of a definite tone to which some portion of the steel structure of the building is tuned. The building (or part of it) will then vibrate to this tone much as a glass will vibrate to a certain note emitted by a violin. The only remedy for such vibration seems to be to discover which part of the building is tuned to the presses and damp the vibration with some unresonant substance.—"Printing Craftsman" (Boston).

THE Empire Press Union is arranging a banquet in honour of Viscount Burnham, president, and other delegates returning to this country from the Third Imperial Press Conference, held in Australia in September last. The banquet will be held at the Savoy Hotel, London, W.C.2, on Monday, January 25th, 1926, at seven for 7.30 p.m. The Right Hon. L. S. Amery, Secretary of State for the Dominions, will be present, and will propose the toast of "The Guests."

New British Patents.

Full copies of published specifications (1s. each) can be obtained from the Patent Office, 25, Southampton buildings, London, W.C.2.

Applications.

Bergstein, S. Manufacture of paper boxes, etc. 30,890

Collard, W. J. Typesetting machines. 31,027.

Hart, H. (Duplex Printing Press Co.). Apparatus for casting tubular stereotype printing plates. 31,414.

Hart, H. (Duplex Printing Press Co.). Inking mechanism for printing presses. 31,415.

Knight, E. J., Robinson, R. G., Robinson, Ltd., E. S. & A., Sargent, T., and Wilde, H. Intaglio printing machines, etc. 30,981.

Standard Compositor Akt. Ges. Distributive devices for typographic machines. 31,058.

Williams, W. H. (Heiss). Attachment of inset sheets in newspapers, etc. 30,848.

Specifications Published.

1924.

Heinrich, F. Wiping mechanism for copper-plate printing presses. 243,833.

Molins, W. E. Intaglio printing device. 243,909.

Snyder, G. C. Bags or envelopes. 243,859.

1925.

Hugo, T. Manufacture of envelopes, paper bags and the like. 243,960.

Mergenthaler Linotype Co. Machine for use in the manufacture of typographical matrices. 238,844.

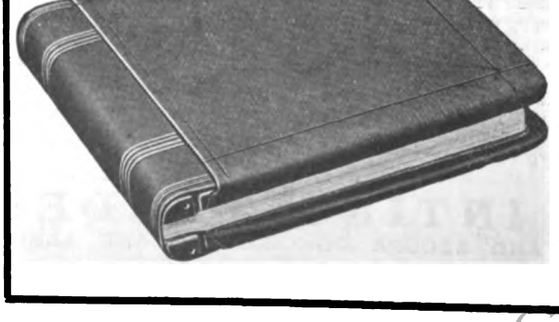
Schwarz-Presse Akt. Ges. Rotary printing Presses. 241,988.

Spiess, G. Sheet feed mechanism for folding machines, printing machines, and the like. 243,977.

Staubli and Co. Geb. Saddle for the table of book-sewing machines. 243,303.

COMPLETE SPECIFICATIONS OPEN TO PUBLIC INSPECTION BEFORE ACCEPTANCE.

1925.



Procedes Bassani. Photo-mechanical apparatus. 244,091.

Spiess, G. Sheet feed tables for printing machines and the like. 244,117.

Witte, O. Bronzing instrument. 244,114.

AN example of twelve colour litho printing varnished on Inveresk super-calendered litho paper and mounted as a calendar for 1926, has been forwarded by Lendrum, Ltd., the London agents of the Inveresk Paper Co., Ltd. It forms an excellent specimen of the high grade paper produced by the company, and at the same time illustrates the very fine effect which can be got by varnishing and by printing. The whole effect of the calendar is very striking. The monthly tear-off sheets are attached to the bottom of the stiff mount, and in no way interfere with the decorative character of the printing itself, which has been done in twelve colours by Nathaniel Lloyd and Co., Ltd. It should be added that Mr. H. M. Stevenson, jun., of Birmingham and Manchester, is the provincial agent for Inveresk papers.

EXCEPTIONALLY IMPORTANT SALE OF VALUABLE PLANT AND MACHINERY

Comprising a Nearly New, Up-to-date Equipment of the highest quality for carrying on, on a large scale, THE BUSINESS OF LITHO, LETTERPRESS, AND COLOUR PRINTING, CARDBOARD BOX MAKING, BOOK-BINDING, &c., including:

IN THE BOX MAKING DEPARTMENT

Eight Box Making Machines, Seven Corner Cutting and Slotting Machines, Five Heavy REMUS and other BENDING MACHINES, UNIVERSAL SIMPLEX TYPE "BRECKNELL" BOX MAKING MACHINE, with three-colour printing attachment; Folding Box Flap Stamping Machine; a No. 7 Babcock Two Revolution CREASING PRESS, two Quad Demy PASTING & LINING MACHINES, by Ratcliffe; Eleven Auto Stokes and Smith CARDBOARD BOX WRAPPERING MACHINES, Seven Cover Glueing Machines, five Carton ditto, five Corner Staying and one Box Lacing Machines, Lombardic Auto BOX GLUEING MACHINE, 42in. Crosland and Elliott SELF Clamp GUILLOTINES, seven Rotary Cutting and Scoring Machines, Twelve Auto Reel Fed Stitching and one Stapling Machines, Eight Heavy ECCENTRIC ACTION CUTTING and CREASING PRESSES, by John Thompson Press Company, Hand Cutting, Studding, Shoulder Pressing, Slitting and Reeling, Metal Edging and other Machines; Formes, Chases, Metal Furniture, and other Box Making Appliances.

IN THE BOOKBINDING SECTION.

One 42in. and One 44in. SELF-CLAMP DIAGONAL GUILLOTINE PAPER CUTTING MACHINE, by Crosland and Grieg and a 44in. Seybold Dayton CUTTER, with Spare Knives, a Seybold Three-knife BOOK TRIMMING MACHINE, five Auto Reel Stitching Machines, Six "Smyth" BOOK THREAD SEWING MACHINES, Two perforating Machines, Four FOLDING MACHINES, five double and treble striker Ruling Machines, and a Three-Colour "Shaw" DISC RULER; Crawley ROUNDING AND BACKING MACHINE, Two LOOSE LEAF LEDGER PUNCHING MACHINES; Glueing, Bevelling, Flexing, Cornering, Eyeletting, Indexing, and other Machines; hydraulic and other Bookbinders' Standing and Nipping Presses, and other Appliances; Three DIE STAMPING PRESSES by Waite and Saville; Quad Crown Varnishing Machine, etc.

COMPOSING ROOM EQUIPMENT,

Including Type Cabinets, Imposing Surfaces, Case Racks, and about 800 Cases; FOUR MONOTYPE CASTING MACHINES and TWO MONOTYPE KEYBOARDS (Models "DD" and "D") by the Lanston Monotype Corp., and Assortment of Matrices, Moulds, etc.; a Large Assortment of TYPE and WOOD LETTER, Metal Furniture, Stereo Foundry Equipment with Nickel Plating Plant, several tons of MONO METAL, Leads, Rule, Galleys, Chases, &c.; Five Proving Presses, DOUBLE CROWN ROTARY OFFSET PROVING PRESS; other minor Machines, and the usual loose utensils in Proving Room; Aerograph Outfit, Five Blocking Presses, and large quantity of Brass Blocks, Lines, and Letters.

LITHO AND LETTERPRESS PLANT

Comprising Seven CROWN FOLIO ARAB PLATEN PRESSES by Wade, and one HALF SUPER ROYAL COLT DITTO.

Three Demy "DEFIANCE" WHARFEDALES, by Elliott.

A Double Royal "THE ELLIOTT" Ditto.

A Ditto by Dawson.

A Quad Demy High Speed ELLIOTT WHARFEDALE.

Two Royal Folio ELLIOTT WHARFEDALES.

Six Quad Crown "CARADOC" FINE ART MACHINES, by Elliott.

Three Quad Crown TWO-COLOUR PERFECTING or ROTARY OFFSET MACHINES by Mann.

Four "RELIABLE" LITHO PRINTING MACHINES (two Quad Crown and two Double Demy) by Ratcliffe.

Three ROTARY OFFSET LITHO MACHINES (Demy, Double Demy and Quad Crown), by Mann.

Two Eight Crown "MIEHLE" TWO-REVOLUTION PRINTING PRESSES, by Linotype and Machinery, Ltd.

Two Quad Demy, Ditto Ditto.

Two Quad Crown "PERCELLER" TWO FEED PRINTING MACHINES, by Dawson;

NEW BRONZING MACHINE, Proof Presses, Ink Mill, Graining Machine, Roller Covering Machine, Six Transveyors, and other Machine Room Equipment,

THE ENTIRE GOING GEAR,

Comprising 300 K.V.A. ELECTRIC TRANSFORMER, 51 ELECTRIC MOTORS, 1-h.p. to 15-h.p., and SWITCH-GEAR, and long lines of Shafting, Belting, &c., Time Clocks, Benching Tables, and Workroom Fittings; also the costly OFFICE FURNITURE AND FITTINGS in Board Room and Suite of Private and General Offices, including F.P. SAFES, Burrough's ADDING AND COMPTOMETER CALCULATING MACHINES, Elliott Fisher and other TYPEWRITERS, &c.

MR. ERNEST JAMES BIGWOOD, P.P.A.I.,
F.S.I. OF THE FIRM OF
EDWARDS, SON & BIGWOOD, F.A.I.,

will Sell the ENTIRE EQUIPMENT IN SECTIONS or LOTS, as per Catalogue, ON THE PREMISES,

ON MONDAY, JANUARY 25th, 1926, AND FOUR FOLLOWING DAYS,

Commencing at Eleven o'clock a.m. precisely each day.

ON VIEW Wednesday, Thursday and Friday, January 20th, 21st and 22nd, 1926, from 10 till 4 o'clock each day.

Catalogues may be had of the Receiver and Manager, Sir Arthur Whinney, K.B.E. (Messrs. Whinney, Smith & Whinney, Chartered Accountants), 4b, Frederick's Place, Old Jewry, London, E.C.2; Messrs. Coward Chance & Co., Solicitors, 30, Mincing Lane, London, E.C.3; or of the Auctioneers, 158, Edmund Street, Birmingham.

Russia's Paper Purchases.

Considerable attention has recently been paid both by the daily and periodical press to Soviet Russia's latest purchases of paper. According to reports circulated by the buyer, the Russian Central Board of Purchases has this time abstained from placing orders in Finland on the ground that it was not possible to come to terms. The *Finnish Paper and Timber Journal* has inquired into this matter and obtained the following information:

During 1924 and 1925, the Finnish Paper Bureau delivered to Russia both newsprint, medium qualities and small quantities of fine paper. To begin with, credit was granted for the deliveries, the buyer simultaneously arranging that full security for the credit was produced by a foreign bank, which discounted the bills without right of recourse. But as, later on, it became impossible to discount the bills without recourse, the terms were revised to cash against documents. These terms, which have been observed during the greater part of this year, were suggested by the Finnish Paper Bureau also for next year's sales. This time, however, the obtaining of credit seems to have been uppermost in the buyer's mind. He broke off the negotiations with his old supplier and approached Swedish, Norwegian and German mills. In Sweden the Russian Board of Purchases, through the medium of a Swedish exporter, succeeded in closing a contract for newsprint and fine paper, the terms being cash against documents. It is very probable that the exporter, a firm closely connected with one of the large banks, granted the credit.

Also in Norway considerable quantities were bought, the manufacturers giving three months' credit for one-third of the orders. How great a weight the buyer put on the matter of credit is gathered from the fact that at least in some instances the Norwegian sellers obtained prices exceeding ruling market quotations by 10 per cent. or more.

Large contracts for newsprint and medium qualities were closed also in Germany, the sellers granting credit against three months' bills.

Finnish manufacturers have been undisturbed by the Russian orders not being placed with those mills, which in view of direct railway communications with Russia and of former transactions should be considered the most natural suppliers, because there has been no difficulty in placing, at ruling quotations and on safe terms, corresponding quantities in West European and overseas markets. These markets also offer the advantage of a steady consumption, in contrast with that lack of continuity which characterises the Russian paper purchases and which, as may be gathered from the foreign trade press, has created a certain attention in the paper exporting countries.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,
Partnerships and Investments,
Miscellaneous.

One Insertion	**3/0**
Three Insertions	**6/0**

For every line exceeding three lines **6d.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion	**1/6**
Three Insertions	**3/0**

For every line exceeding three lines **6d**

TO START WELL is to FINISH WELL

You are a good printer and as such will start the year 1926 well.

To keep well you will need a stimulant.

The best stimulant for the printer is the "British and Colonial Printer and Stationer" published every Thursday.

It keeps you well informed and in touch with trade developments.

It is a mine of information upon every conceivable phase of trade activity and is therefore your best new year investment.

A premium of 13/- for 52 issues will keep you up-to-date in all printing trade matters, and will ensure a progressive policy.

Representatives also in Australia, India, South Africa, Canada, Norway, Sweden, Finland, etc.

THURSDAY, DECEMBER 31, 1925.

Printers and Paper Standardisation.

PARTICULARLY timely and appropriate at the present juncture is the article contributed to our pages this week by Mr. W. Howard Hazell, J.P., president of the Federation of Master Printers. The master printers of this country and the big dealers in paper have jointly approved of the first and most important steps towards the adoption of more rational and economical methods of dealing in paper; but the signing of the agreement cannot alter the customs of the trade save in so far as those who realise the importance of the matter take active steps to put their own houses in order by applying the new standards, thus taking advantage of the big opportunity that is offered them. The arrival of the annual period of stocktaking constitutes a call to revise one's methods of handling and designating paper quantities. The large number of progressive printers who realise the increased convenience and economy involved in the agreed changes can, by decided action now, do much towards wiping out the indeterminate and confusing "ream" and "quire." Not the least interesting part of Mr. Hazell's useful article is his recital of instances of the profitable adoption of the new standards. Those who make the transition will be not only helping to confer a benefit upon the trade in general, but will also be benefiting themselves by laying the foundations of safer and easier reckoning in the important matter of paper supplies.

* * *

A Standardised Price List.

A NEW stock and price-list has just been issued by Messrs. John Dickinson and Co., Ltd., in which equivalent weights and prices per 1,000 sheets are specified throughout. As might be expected, the substance figures are not characterised by the evenness which has been associated with reams of 480's or 516's. In time this will all be rectified by a general adjustment of substances. A 78 lb., double crown (which is the equivalent of 40 lb. 516's), will be made more practical by the addition of 2 lbs. Meantime the list under reference is perhaps the most solid contribution to standardisation that we have had from any merchant. Definitely it compels every wholesaler to follow suit without delay.

* * *

Up-to-Date Publicity.

TALKING of publicity, one of the most successful campaigns is that of a mill in the home counties which has recently opened up a department devoted to the creation of sales. The thing is done efficiently and the way paved for success, because first of all the makings were standardised and there was concentration on certain classes of paper for which there is a settled and growing demand. With the ground planned out and prices definitely fixed at figures which would stand scrutiny, the publicity got down to attractive sampling, persistent circularising and a forceful follow up policy. The advertising is persistent and direct sampling is supported by personal letters and trade press advertisement. Planned campaigns of this kind cannot fail if the mill can make the paper and give the service in keeping with its publicity.

* * *

A Better Paper Outlook.

THERE are signs of improvement in paper business and reports from various centres are more encouraging. Among papermakers there is greater confidence and a significant feature of the situation is that requirements for pulp are being placed for a longer period ahead than has been customary of late. In the woodfree section prices have stiffened as the result of co-ordinated policy, says a writer in *The Times* (Trade Supplement), who goes on to say that for the last few years it has been a most difficult matter to make ends meet in this industry. Competition and the shortage of home consumption, combined with excessive costs of production, made it necessary to sacrifice profits in the endeavour to provide and maintain a sound foundation on which future progress could be based. The turn in the tide has come at last, and although there is still a long way to travel business is decidedly better. The gap between home and foreign prices has been narrowed, and future prospects are bright enough to warrant the steps now taken to place this section of the industry on a sounder financial basis.

* * *

Decline in Esparto.

THE slight decline in the demand for esparto papers is causing some northern mills to become a little bit anxious. It is expected, however, that this section of the trade will revive with the turn of the year. Espartos are the bread and cheese of the commercial printer and stationer, whose policy always dictates a slackening off in buying with the approach of the year end. Merchants, too, are curbing their activities in stock replenishment, partly for stocktaking purposes and partly in view of the fluid condition of the standardisation scheme. The growing insistence on the thousand-sheet basis with five-hundred-sheet packages and new substance standards, *i.e.*, weight per thousand sheets, is at last causing the principal houses to exercise their minds more deeply on the necessity of altering existing methods. Many esparto papers are already being packed in 500 sheet parcels and equivalent weights are being specified. Meantime stocks have been reduced considerably and the time is at hand for replenishment on the new basis. It is not beyond the bounds of possibility that esparto prices will go up as the consequence of newly introduced competition for supplies. Evidence is accumulating to prove that serious efforts are being made in America and France to develop the manufacture of esparto papers.

Who's Who

IN THE

PRINTING & ALLIED TRADES.

The New President of the British Association of Colonial and Foreign Paper Mill Agents.

It is very appropriate that Mr. W. A. Dewsnap, joint managing director of Messrs. Davies and Royle, Ltd., should become president of the British Association of Colonial and Foreign Paper Mill Agents, succeeding Mr. H. B. Legge in this office. Mr. Dewsnap was instrumental in forming the Association a little over a year ago, when he felt there was a need for an organisation which would bring the agents together and enable them to deliberate on any matters which concern their welfare. In its first year the Association has had a number of important problems to consider and the twelve months which have passed since its formation have been more active than could have been anticipated at the beginning.

MR. W. A. DEWSNAP.

Mr. Dewsnap is well known in paper circles in London. Born at Peckham in 1881, he joined the firm of Davies and Royle in 1900, at the same time as his brother-in-law, the late Mr. T. E. Royle, whose father had died in 1899. In 1914 Mr. Dewsnap became a partner in the business and when this was turned into a company in September, 1922, he became a director, together with Mr. Royle and Mr. J. Mutimer. Mr. T. E. Royle passed away in August, 1923, and Mr. Dewsnap and Mr. Mutimer are now joint managing directors of the concern. With the growth and development of the firm of Davies and Royle, Ltd., we have dealt in these columns from time to time, and the spirit of progress is strikingly typified by the joint managing directors.

Mr. Dewsnap is closely associated with the social side of the paper trade. He has been a member of the Stationers' Social Society for many years and is a regular attendant at its functions. A keen golfer, he is a member of the Paper Trade Golfing Society and of similar sections associated with the Stationers' Social Society and the British Association of Colonial and Foreign Paper Mill Agents.

This interest in golf is appropriate in one who distinguished himself as an athlete. In earlier days, Mr. Dewsnap made a name for himself as a sprinter, and some 20 years ago he was the 100 yards' champion of Kent. He was one of the six fastest men in England for the 220 yards, and his time of 21⅘ secs. at the time it was run equalled the world's record. Mr. Dewsnap carried off a large number of prizes in the shape of cups and gold and silver medals, but unfortunately these were lost some years ago when his house was burgled. Mr. Dewsnap lives at Dorman's Park, Surrey, and has four children, the eldest boy being at Cheltenham College.

Personal.

LORD and LADY DOVERDALE are expected to be in London a good deal next season for the benefit of their only daughter, Miss Aline Partington, who reached debutante age this year.

ALDERMAN SIR ROWLAND BLADES, M.P., and his family are spending their Christmas vacation in Switzerland, and are staying at Villars.

WE congratulate Mr. Geo. W. Jones, who is well known for the leading position he holds in the printing trade, on again being elected on the Court of Common Council. At the election last week in the Ward of Farringdon Without he stood high in the list of successful candidates.

MR. FRANK H. BRUFF, J.P., the manager of the Birmingham Printers, Ltd., has been married at Glasgow to Miss Elizabeth L. Fleming.

AT Birmingham University on Friday Mr. Donald Parkinson, who was formerly a compositor at Clitheroe, received the degree of Doctor of Philosophy, for a thesis on original geological work in the Ribble Valley.

DR. PARKINSON, who is also a Bachelor of Science and a Fellow of the Geographical Society, is now assistant lecturer in Geology at Belfast University. He worked as a compositor until war broke out. He was badly wounded in the war, and subsequently he turned his hobby into a career, studying at Birmingham University.

MR. WILLIAM BELL, for more than 30 years connected with the *Newcastle Daily Journal* as compositor, and his wife, have just celebrated their golden wedding. Mr. Bell retired from active work a few weeks ago.

MR. F. J. FREEMAN, the secretary of the National News Guild, has been seriously ill for several weeks, and the secretarial duties have been carried out by his son, Mr. C. F. Freeman.

MR. F. W. DOIDGE, of the *Daily Express*, has been entertained at dinner by the staff on the occasion of his appointment to a seat on the board of directors.

A LARGELY attended banquet was held on December 23rd in Karachi in honour of Mr. G. M. Dyce Keele, the editor of the *Daily Gazette*, who leaves for England on furlough early in January.

MISS MARGUERITE CODY, who was a reporter on the *Daily News* for some years, has been appointed editor of the *Liberal Woman's News*, published monthly by the Women's National Liberal Federation.

MR. ALAN PITT ROBBINS has been re-elected chairman of the London district of the Institute of Journalists for 1926. Mr. S. J. Sewell will again undertake the secretarial duties.

MR. J. STANLEY WALKER (W. F. Stanley and Co., Ltd.) was installed First Principal of the Helio Chapter recently, and Mr. A. V. Hunt (Dixon and Rowe) Second Principal. Other of the officers included Mr. W. J. D. Roberts (W. J. Pollock and Co.) Third Principal, and Mr. R. Hume (Hudson and Kearns), re-elected treasurer.

MR. H. RODWELL, the hon. secretary of the Engineering Department of the Imperial Paper Mills, Gravesend, has been presented with a handsome set of carvers in recognition of his valuable services during the past two years. The presentation was made by Mr. Poll (who described Mr. Rodwell as "one of the best") at the annual dinner of the department, under the chairmanship of Mr. Tootell.

MR. E. F. EILERT, who has been elected to the presidency of the United Typothetæ of America, is head of one of the best-equipped printeries in New York.

Honouring Mr. John Mutimer.

The regard in which Mr. John Mutimer is held by his hosts of friends among the paper agents of this country was strikingly demonstrated at the complimentary dinner which was given to him at the Hotel Cecil on Wednesday evening, December 16th. The dinner, which was quite a private and informal function, was given by the British Association of Colonial and Foreign Paper Mill Agents, and has reference, of course, not only to the position which Mr. Mutimer occupies in the esteem of his fellow agents, but also to the fact of his being appointed chairman of the group formed by the London Chamber of Commerce to oppose the application for a duty on packing and wrapping papers. Ladies were included in the company and helped to enhance the social character of the gathering.

MR. JOHN MUTIMER.

Mr. W. A. Dewsnap, president of the Association, was in the chair and Mr. H. H. Hardy, vice-president, after paying an eloquent tribute to Mr. Mutimer, presented to him a gold watch, a gold and platinum chain, a cheque, and a handsome rose bowl with accessories.

The choice gold keyless watch bore the following inscription: "To Mr. John Mutimer in appreciation from the British Association of Colonial and Foreign Paper Mill Agents, 16/12/1925." The rose bowl bore a similar inscription.

Mr. Mutimer, in acknowledging the presentation, mentioned that the cheque would be handed over to a charitable institution.

At the close of a very enjoyable dinner the company adjourned to the Palm Court for dancing.

Telegrams and messages of greeting to Mr. Mutimer were received from a number of friends who were unable to be present. Those who did attend were the following: Mr. and Mrs. John Mutimer, Mr. and Mrs. W. J. Alcock, Mr. and Mrs. O. Baines and Miss Baines, Mr. and Mrs. Challis, Mr. C. F. Entwistle, Mr. and Mrs. R. Baker, Mr. and Mrs. A. E. Coningham, Mr. and Mrs. Jennings, Mr. Stanley Ward, Mr. and Mrs. H. H. Hardy, Mr. Trice, Mr. Stansfeld, Mr. and Mrs. W. A. Dewsnap, Mr. and Mrs. A. W. Burgess, Mr. and Mrs. F. A. Marsden, Major and Mrs. Barlow, Mr. Barlow, Junr., Mr. E. H. Sharman and three guests, Mr. F. E Griffiths, Mr. A. Wardill, Mr. T. V. Olsen, Mr. and Mrs. C. Pretzlik and Miss Pretzlik, Mr. and Mrs. G. Isaacs, Mr. and Mrs. M. Levy, Mr. and Mrs. C. E. Corke, Mr. C. L. Corke, Mr. Sahlin, Mr. G. Reik, Miss Reik, Mr A. H. Johnson, Mr. and Mrs. W. McIntosh Whyte, Mr. and Mrs. Lightfoot, Mr. G. W. Turner, Mr. Medney, Mr. Peroni, Mr. H. C. Stern, Mr. A. L. Wise, Mr. Wise, Junr., Mr. Mason, Mr. Schmidt, Mr. P. T. Collier, Mr. and Mrs. Stahl, Mr. Goodey, and Mr. Jones.

MR. SAMUEL ARNOLD, 59, of Church-road, Islington, N., for many years publisher of the *English Churchman*, left £3,361.

First directors: A. C. Cosher Bates and A. E. Cosher Bates. Registered office: 132-4, Fleet-street, E.C.

BURKE'S PEERAGE, LTD.—Capital £1,000, in £1 shares; to publish books, journals, works of reference, periodicals, newspapers, magazines, and other literary works, etc. Private company. Directors: A. H. Davis and T. G. Smith. Registered office: 66, Basinghall-street, E.C.

WHOMES, LTD.—Capital £6,500, in £1 shares to carry on in the United Kingdom, the Colonies and elsewhere, the business of manufacturers and dealers in musical instruments, publishers, printers and sellers of music sheets, books, papers, magazines and music publications. Private company. Directors: E. Whomes, E. de G. Whomes, W. S. Whomes and Miss H. Whomes. Registered office: 240-2, Broadway, Bexley Heath.

HELFT AND CO., LTD.—Capital £2,500, in £100 shares; dealers in and holders of exhibitions of pictures, drawings, engravings, prints, books, etc. Private company. Subscribers: J. Helft and Mrs. L. Bonnard. Directors: Yvon Helft and J. Helft. Solicitor: A. E. Churcher, 19, Hanover-square, W.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

HUDSON AND MORRISON, LTD. (printers, etc., London). — Particulars filed of £2,000 debentures authorised December 8th, 1925, charged on the company's undertaking and property, present and future, including uncalled capital; the amount of the present issue being £800.

EYRE AND SPOTTISWOODE, LTD. (printers, etc., London).—Satisfaction in full (a) on January 16th, 1920, of charge dated July 17th, 1918, securing £6,000 and further advances, and (b), on November 21st, 1922, of mortgage dated March 31st, 1920, securing £3,750. (Notices filed November 23rd, 1925).

HOLYWELL PRESS, LTD. (Oxford).—Satisfaction in full on December 1st, 1925, of mortgage dated August 21st, 1920, securing £3,000.

CARL HENTSCHEL, LTD. (engravers, etc., London).—Satisfaction in full on December 11th, 1925, of debentures dated April 22nd, 1920, securing all moneys, etc.

JAS. TRUSCOTT AND SON, LTD. (printing and stationery contractors, etc., London).—Issue on December 14th, 1925, of £1,000 debentures part of a series already registered.

STANDARD CATALOGUE CO., LTD.—Second mortgage dated December 8th, 1925, to secure £10,000 and interest at 8 per cent. per annum, reducible on punctual payment to 7 per cent. per annum charged on the company's assets, including uncalled capital. Holders: Bradbury, Agnew and Co., Ltd., 10, Bouverie-street, Fleet-street, E.C.

GRIMSBY NEWS CO., LTD.—Particulars filed of £5,000 debentures authorised December 2nd, 1925, charged on the company's property, present and future, including uncalled capital, the amount of the present issue being £2,000.

FOURSTONES PAPER MILL CO. (1924), LTD —Debenture charged on the company's undertaking and property, present and future, including uncalled capital, dated December 17th, 1925, to secure all moneys due or to become due from the company to Lloyds Bank, Ltd.

FOURSTONES PAPER MILL CO. (1924), LTD. —Satisfaction in full on December 17th, 1925, of mortgage dated July 3rd, 1924, securing £15,000.

PHILIP ALLAN AND CO., LTD. (publishers, etc., London).—Mortgage debenture charged on lease of 5, Quality-court, W.C., and the company's undertaking and property, present and future, including uncalled capital, dated November 25th, 1925, to secure all moneys due or to become due from the company to the Royal Bank of Scotland, Ltd.

R. FLETCHER, LTD. (publishers, etc., London).—Mortgage or charge on 23, New Oxford-street, W.C., together with appurtenances dated December 7th (supplemental to mortgage dated July 21st, 1925, securing £300). Holder: Mrs. C. M. Waller, 67, Talbot-road, Highgate, N.

Paper Mill Benevolence.

Imperial Paper Mills.

The annual general meeting of the Imperial Paper Mills Sick Benefit Society was held on December 12th, when the club room was well filled with members.

An interesting report for the year was submitted by the secretary. Over £600 has been paid out in sick pay, which is £90 more than last year. Death claims were exceedingly light (4), compared with the previous year (17). After expenses were deducted a surplus of nearly £600 was shared out among 950 members.

The committee, in passing the balance sheet, remarked that in spite of the large amount of sickness among the workers at the mills, they had had a successful year and after passing the usual vote of thanks the following members were elected as officials for 1926:—Chairman, Mr. W. Nicholls; vice-chairman, Mr. H. Waller; treasurer, Mr. J. Latter; sick visitor, Mr. J. Horrigan; auditors, Messrs. T. Hitchen and J. Purves; committee, Messrs. S. Fosbracy, J. Bradley, A. Palmer, F. Poll, C. Watts, T. Percy, H. Peak, R. Aitchison, T. Farr, G. Southgate, A. Batchelor, W. Port; hon. secretary, Mr. C. Taylor.

Empire Paper Mills (1922), Ltd.

The Sick and Provident Society of the Empire Paper Mills (1922), Ltd. (affiliated with the National Union for Insurance), considering the very heavy claims made upon it during the year, shows a satisfactory state of affairs. At the year end the membership was 319—75 one share members, 96 two-share members, and 148 three share members, totalling 711 shares. The amount available for distribution amongst the members was £462 3s., after all expenses had been met and a reserve carried forward to next year's account, 13s. being paid out on each share. The whole of the year has been exceptionally heavy as regards sickness, more especially the months of April and May, 21½ per cent. of the members having been on the funds.

The Society has suffered the loss during the year of two of its oldest members by death, one as the result of illness, and one by a motor cycling accident. Increased shares of old members and new entrants bring the total for the commencement of the new year to 345 members—843 shares. The amount of State benefits paid out during the year was as follows: Sickness, £39 16s. 11d.; maternity, £12 10s.

The Pay Day Fund, also under the control of the Sick and Provident Committee, has been successful in raising during the year for local hospitals and charities £148 10s., and for the Greater London Fund for the Blind, £51.

THE *Rutherglen Reformer*, first issued on December 4th, 1875, has celebrated its jubilee.

MR. H. A. GOLDSBROUGH, who has been associated with the Canadian and European offices of the Hodge Sherriff Paper Co. for the past seven years, has been taken into partnership. The title of the firm will remain unchanged.

JOHN MCDONNEL AND CO., LTD., DUBLIN.—Messrs. G. Brock and D. G. Baird, joint receivers appointed by the Royal Bank of Ireland, announce a meeting of creditors to be held on Friday, January 8th, at Trinity-chambers, 39, 40 and 41, Dame-street, Dublin.

THE £2,000,000 first mortgage debenture stock of the Newfoundland Power and Paper Co., which it is proposed to create in priority of the "A" and "B" debenture stocks, will be privately issued as collateral for loans, and will at no time be placed on the market.

Brussels Printers' Festivities.

Mr. R. A. Austen-Leigh Attends.

Mr. R. A. Austen-Leigh—in place of Mr. W. Howard Hazell, who was prevented by other engagements—attended on behalf of the Federation of Master Printers on December 21st the jubilee festivities of the master printers of Brussels.

The celebrations included a solemn séance at 9 30 in the morning, when speeches were made by the president, M. Odry, and others, giving an account of the history of the organisation. A bronze plaque, showing a pressman at work, was presented to M. Odry in commemoration of the event.

The president gave a private luncheon party at the Industrial Club to about 20 of his friends, and in the evening a banquet was held at the Royal Hotel which was attended by about 100 guests.

Mr. R. A. Austen-Leigh, on behalf of the Federation of Master Printers of Great Britain and Ireland, presented M. Odry with an ivory gavel.

The Printing Crafts Guild.

Recital by Mrs. R. J. Broughton.

Twelve months ago, when the members of the Guild first heard Mrs. R. J. Broughton in her recital on "Charles Dickens," they were impressed with that lady's gift of memory, power of expression and accuracy of deportment when demonstrating the peculiarities of some of the characters of that famous author. Thus an announcement that Mrs. R. J. Broughton would give "An Evening's Recital," in the College of Technology, Manchester, naturally attracted another large and enthusiastic audience of ladies and gentlemen to hear her delightful renderings of "The Glory of the Garden," "Saunders McGlashan's Courtship," "Earthenware," and other contributions in serious and lighter vein. Between the recitals, Mr. Wm. Brierley, L.R.A.M., in his happy handling of Chopin's "Scherzo in C sharp minor" and several other classical selections on the piano proved that he was a master in the art of music. At the conclusion, President John Taylor, who had secured the services of the two gifted artistes, realised in unmistakable fashion that his efforts were appreciated, by the long and hearty applause which followed the remarks of Mr. Jas. W. Worthington and Mr. W. M. Menzies who moved the vote of thanks to Mrs. R. J. Broughton and Mr. Wm. Brierley.

WEE MAC.

The Law of the Imprint.

High Court Decision.

A decision of interest to printers was given in the High Court last week, in a case arising out of the fact that, under the Municipal Elections (Corrupt and Illegal Practices) Act, 1884, a bill, poster, or placard must have imprinted upon it the name and address of the printer and publisher.

When Mr. George Sampson Elliston, who was a candidate for election to the Court of Common Council, applied to a King's Bench Divisional Court for relief because this imprint was omitted, his counsel, Mr. Roland Champness, contended that an election address in the form of a letter to the electors was not really a "bill, poster, or placard" within the meaning of the Act.

Mr. Justice Horridge and Mr. Justice Shearman expressed the opinion that if an election address of the kind in question were put on a wall it might become a bill, poster, or placard, but that if sent to the electors by post or by hand, such address containing the name and address of the candidate himself, it was not within the meaning of the Act, and did not require the printer's imprint.

PAPER imports into Esthonia during October reached 25,299 thousand kilogs., and exports to 99,617 thousand kilogs.

Machine Rulers' Strike Ceases.

As previously announced, the wage dispute with the Machine Rulers' Society, after lasting about three weeks, was referred to a full meeting of the Joint Industrial Council called for Tuesday of last week. The meeting was duly held and the following resolution was unanimously passed by that Council:—"That the Joint Industrial Council endorses the recommendation of the London District Committee to the effect that normal working conditions be resumed and the matter be referred to a Conciliation Committee of this Joint Industrial Council." This resolution was accepted by both of the parties to the dispute, and the secretary of the Society stated that he would instruct his members to return to work at once. It was understood that, on normal working conditions being resumed, the employers would make the usual holiday payments to the men who had been on strike.

Trade Union Matters.

NEWSPAPER AGREEMENT.—The secretary of the Sheffield branch of the Typographical Association has reported to the Executive Council that the management of a newspaper office in that branch, on being approached by the rotary machine chapel in regard to time off under the recent half-holiday agreement for newspaper workers, expressed doubt as to whether the agreement applied to members of the machine room. The management, it was stated, had been officially informed by the Newspaper Society that rotary machine minders were not included in the agreement. The Executive Council of the T.A. have decided that the agreement applies to rotary machine minders, and have written to the Newspaper Society to that effect.

NATIONAL NEWS GUILD AND THE T.A.—The companionship of the *Western Daily Press* and the *Evening News* have passed a resolution "noting with regret the suggestion that members of the National News Guild should be ballotted on the question of withholding their subscriptions to the Typographical Association for six months, meanwhile paying such subscriptions to the National News Guild, in the event of a perfectly legitimate ballot of the Typographical Association being carried, this chapel believing that such a suggestion is detrimental to the best interests of both the Typographical Association and the National News Guild."

T.A. UNEMPLOYED AND SUPERANNUATION.—At a recent meeting of the Executive Council of the Typographical Association a letter was read from the secretary of the Birmingham branch with reference to nine or ten members of that branch, aged 68 to 77, who were practically unemployable on account of age. The branch committee were of opinion that they should be called upon to take up superannuation benefit, but the Executive Council decided that they have no power to interfere with the rules in these cases.

T.A. MEMBERS AND CLOCK RECORDERS.—Mr. E. G. Yates, of the Typographical Association, has reported to the Executive Council that, accompanied by the secretary of the Oxford branch, he had interviewed a firm in that branch regarding the use of a clock recorder for the time of work. The proprietor, after hearing the arguments of Mr. Yates against the use of such a device, agreed that the Association members would not be called upon in future to work the clock.

AN official notice to branch secretaries of the Typographical Association intimates that, under the reciprocity scheme with the Scottish Typographical Association, the weekly contributions by T.A. members in the Scottish area had been reduced from 2s. 9d. to 2s. 5d. Members unemployed and in receipt of the Scottish Association unemployment benefit, pay during such period of unemployment a weekly contribution of 1s. 6d.

T.A. LEVIES.—For the December quarter the Typographical Association will call a levy of 6d. per member for the quarter ending December as the fund is below the recognised sum authorised. For the general fund there will be a levy of one shilling per quarter payable by all members until further notice until the fund reaches the value of £6 per member when it shall cease. Failure to pay the levy will place the member out of benefits.

European Paper Market.

An American Manufacturer's Impressions.

Describing conditions of the paper markets of Europe as he found them, Mr. A. G. Goldsmith, in addressing the Newsprint Service Bureau, N.Y., says: Germany and Russia were named as the countries of greatest present-day interest in all industries. He said that there had been a tremendous rise in Germany's industrial power. There was a fear that with Germany industrially powerful, she would become a menace to other countries, but the situation, according to Mr. Goldsmith, was just the reverse.

The worse off Germany was financially and economically, he said, the greater was the pressure from German competition. The reason for this was obvious. When the home consumption of paper was lowered, the mills had to find an outlet for their production. German production of paper was primarily based on home production and the United States market was a market of last resort, so far as paper was concerned. Basically, it was to the advantage of United States papermakers to have a prosperous Germany, because in prosperous circumstances Germany would consume its own products, the excess being comparatively small. In 1922, German consumption of all grades of paper was just 50 per cent. of pre-war. In 1925, it would be equivalent to pre-war consumption.

Scandinavian Conditions.

The situation in the Scandinavian countries was quite different. Consumption in Sweden and Norway was based principally on export; the rest of the consumption was small. In Norway, financial stabilisation is going on and affecting industry very seriously. The Swedes were at a decided advantage as compared with the Norwegians on account of the stability of Swedish exchange and the depreciation of Norwegian money. The Norwegians could undersell the Swedes as a consequence of the low rate of exchange for the Norwegian dollar, but when, after labour contracts had been signed, the Norwegian dollar went from seven to five to the dollar, it meant that their labour and wood cost was 1·4, say, compared with a price of 1 for the finished product. The rise in Norwegian exchange had made the industrial possibilities for next year rather dark.

The Norwegians, Mr. Goldsmith said, were getting the repercussion of the happy days when they could undersell on account of a falling exchange. The Swedish producer is now at an advantage compared with the Norwegian, though he complained at one time because his Government brought back the parity of the national currency.

British Conditions.

Conditions in Great Britain are not quite so bad as they have been pictured of late. Mr. Goldsmith said there was a considerable inducement for the British industrialist to make a cry about hard times, and he mentioned reduced taxation and the coal subsidy as factors. There was a possibility of other industries being subsidised.

British consumption of paper was stated to be 50 per cent. more than it was four years ago. It was supplied principally from Europe, with less pressure on the American market.

British consumption in certain essential commodities was still maintaining itself, and so long as there must be something to pay for these commodities, their production, although not up to pre-war basis, was still going on at such a rate as to enable Great Britain to keep herself above water. Unemployment in Great Britain is still great, but this existed before the world war.

Russian Competition Impossible.

Mr. Goldsmith made an interesting reference to the Russian situation. It had been thought that with Russia's great resources, its wood reserves and other natural advantages, a development of Russia would bring with it tremendously increased competition in the pulp and paper industry. As a matter of fact it would be just the reverse.

Mr. Goldsmith was of opinion that if Russia was reorganised politically at once, it would simply mean increased consumption in Russia for pulp and paper products, far in excess of any construction that they could put up to keep pace with it. It was his estimate that for 25, or even 50 years, Russia's consumption of pulp and paper would exceed her possibilities for production.

Necrology

Mr. Frank Garrett.

We regret to have to announce the death of Mr. Frank Garrett, chairman of Messrs. R. T. Tanner and Co., Ltd., wholesale stationers and leather goods manufacturers, of Dorset-street, Salisbury-square, E.C. Mr. Garrett had suffered for some years from asthma, and heart weakness developed, resulting in his death on December 22nd at his residence, Red Bank, Hornsey-lane, Highgate. For over forty years Mr. Garrett had been associated with Messrs. Tanner. He was originally a partner in the firm before it was turned into a limited company, when he became a director. On the death of Mr. W. E. Tanner in 1908, he followed that gentleman in the position of chairman. He was particularly identified with the financial side of the business. Mr. Garrett took a considerable part in public affairs in the neighbourhood of St. Bride, showing a personal interest in the St Bride Institute. He was at one time chairman of the National Association of Wholesale Stationers and Paper Merchants. The deceased gentleman's great hobby was the collection of antiques and he had a wonderful collection of old clocks. He is survived by a widow, one son and three daughters. He lost a son last March, and this caused him great grief. The funeral took place on Tuesday at Highgate Cemetery, the service being conducted by the Rev. A Taylor, Vicar of St. Bride. There was a large representation of the staff from Dorset-street, among whom the late chairman was held in very high regard.

Mr. J. R. Booth.

The death is announced from Ottawa of Mr. J. R. Booth, who for a great many years has been an outstanding personality in the pulp, paper and lumber industries of Canada.

John Rudolphus Booth was born in Shefford County, Quebec, as long ago as 1827, so that he was 98 years of age. Starting his career as a millwright in Waterloo, a village in Quebec, he eventually became one of the largest paper and pulp millowners in Canada. He was a millionaire many times over.

In 1921 the various extensive interests created by Mr. Booth were incorporated under the style of J. R. Booth, Ltd., with a capital stock of ten million dollars. For seventy years the business was conducted under the private name of J. R. Booth, and it was said to have been the largest concern in the entire world operated as the property of one man. Besides his gigantic sawmills, Mr. Booth manufactured 140 tons of newsprint daily, 55 tons of board, 200 tons of ground wood, and 90 tons of sulphite pulp. Mr. Booth's two sons, Mr. C. J. Booth and Mr. J. F. Booth, were associated with him in the undertaking; but the founder was the very active head for seventy years or more. A man of remarkable character, he had the instinct for commerce, and was himself the most regular and persistent worker in his concerns.

In 1924 Miss Lois F. Booth, a granddaughter of the late Mr. J. R. Booth, was married to Prince Erik of Denmark.

"THE Printers' and Stationers' Year Book and Diary" for 1926 maintains the useful features of its previous issues. This substantial quarto volume, produced in paper boards, not only contains the year's diary—a week to the page—but it provides also much useful reference matter, including a directory of trade associations and trade unions. Published at the office of the *Caxton Magazine*, it is priced at 5s. to non-subscribers.

THERE reaches us a copy of the well-produced brochure issued as a souvenir by the Bristol firm of Messrs. John Wright and Sons, Ltd., to whose centenary references have already been made in our pages. The booklet is printed on art paper, and is profusely illustrated, and contains much interesting information not only about the Wright firm but also about the City of Bristol and about the history of the printing and allied trades.

THE new steamship "Kapouga," making her maiden trip to Montreal, has loaded 1,000 tons of Canadian paper for Sydney, N.S.W. This paper was shipped by three or four different mills in Quebec.

THE *British and Colonial Printer and Stationer* circulates in every country of the world

Calendars, etc., Received.

MESSRS. WILLIAM J. LIGHT AND CO., LTD., suppliers of machinery and sundries for printers and stereotypers, send a very useful and handsome memento in the form of a desk blotter and diary. Mounted upon stout board and bound in an elegant leatherette, gilt tooled, the blotter provides ample area for writing purposes, whilst the diary is of a kind suitable for office use, providing space for a week's entries at an opening interleaved with blotting paper and including useful postal and other reference data. The whole is finished in excellent style, making a very appropriate accessory to the desk of the business man.

MESSRS. PERKINS, BACON AND CO., LTD., the well known engravers and printers of bank-notes, postage stamps, etc., of Southwark Bridge buildings, London, S.E., adhere for 1926 to the style of calendar adopted by them for so many years. The monthly calendar—of the tear-off variety—is adorned at the sides and the top in the style of security printing characteristic of the particular work done by this firm. The whole calendar and ornamentation are mounted on a substantial board measuring 17 ins. wide by 13½ ins. deep, the whole making a useful and impressive production.

MESSRS. L. S. DIXON AND CO., LTD., the well-known makers and merchants of papers, stereotypers' flongs, etc., have adopted a pleasant method of conveying their greetings for the New Year. It takes the form of a portrait of Mr. L. S. Dixon, who founded the firm in 1870. It will be remembered that Mr. Dixon, in spite of his age, made an extensive tour of Canada and the United States last year, and this photograph was taken on his return. In addition to a smaller reproduction in the form of a seasonable card, there is a larger picture (8½ in. by 6½ in.) suitable for framing, which would make a happy souvenir of a great paper personality and a successful firm.

LITHO-OFFSET printing in gay colours is the striking feature of a wall calendar which reaches us from Messrs. Blackwell and Co., Ltd., printing ink manufacturers, of Holborn and Stratford. A sunny seascape gives scope for the use of brilliant hues, well produced by the Blackwell inks employed. The utility of the monthly tear-off sheets is enhanced by the provision, in smaller size, of the dates of the months immediately preceding and following the current month.

BARTON'S PAPER AND CARDBOARD CO., LTD. Finch-road, Birmingham, have selected a novel and appropriate idea in conveying their compliments for the season. It is a folding blotter made up of a mottled cover paper, carrying a neat purple design on the front. There is a pocket on the inside of the cover for notepaper and envelopes. The ornamental and serviceable character of Barton's cover paper lends itself admirably to this purpose.

IN addition to their previously mentioned monthly tear-off calendar embellished with three colour printing, Messrs. Slater and Palmer, the well-known printing ink, varnish and colour manufacturers, send a useful desk pad, each page of which provides a week's space for diary entries, and bears also the month's dates in miniature.

VERY appropriate to a firm of bookbinders is the daily tear-off calendar issued by Messrs. Leighton, Son, and Hodge, Ltd., of New-street-square, E.C., the mount being in black book cloth elaborately tooled in gold.

THE monthly tear off calendar issued by Messrs. Thomas De La Rue and Co., Ltd., illustrates particularly this firm's facilities for security printing, the ornamentation consisting mainly of delicate and intricate line patterning in great variety.

A MOST excellent specimen of half-tone photographic reproduction is the outstanding feature of a monthly tear off calendar issued by Messrs. Vaus and Crampton, Ltd., process engravers.

FROM Messrs. Wynne and Selby, Ltd., printing ink manufacturers, comes a monthly tear-off calendar bearing a large and gaily-coloured theatrical picture, "Ring up the Curtain," printed by offset litho.

MESSRS. JAS. BROADLEY, LTD., printers and stationers, of Accrington, send a bold figured monthly tear-off calendar.

MR. HERBERT FITCH'S Christmas greeting to the members of the Stationers' Company takes the form of a handsome reproduction, in colour, of the Arms of the Company. The original, which stands 24 ins. high, silver-gilt and coloured enamels, was presented to the Company by Mr. Fitch, as Master, 1922-23.

AN interesting reproduction of an old Dutch printing office (*circa* 1586) is the chief feature of a card that reaches us from Mr. A. E. Wigley, president of the Leeds Master Printers' Association.

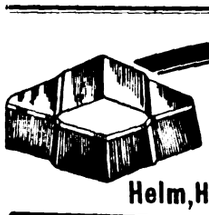
BEARING an interesting reproduction of an aerial photograph of the mills and immediate neighbourhood, a neat calendar printed in gilt on red, reaches us from the *Daily Telegraph* Paper Mills, Dartford. The tear-off pad shows three months to the sheet.

FROM Messrs. W. H. Smith and Co., Ltd., paper agents and merchants, Cape Town and Durban, come greetings for the New Year in the form of a four-page quarto leaflet. In addition to announcing a wide range of papers, there are photographs of directors and staff and of the Cape Town offices.

THE Kellner-Partington Paper and Pulp Co., Ltd., Manchester and London, have selected Molnbacka pure M.G. kraft paper (D.C. 23 lbs.) for the handy scribbling diary for the New Year. The strength of the paper is an attribute in a pad which is to last throughout 1926. There is a week to each page, with the month's dates in one corner, and postal matter and a complete calendar for the year on the back.

MESSRS. COSTA AND CUTHILL, LTD., of York House, 14, York-place, Edinburgh, have forwarded us their pocket diary for 1926, in a pliable leather case adapted for refills. The diary, which takes the form of previous years, is most conveniently arranged. For notes two pages per week are allocated, with each month marginally indicated. There is also an alphabetical index for addresses, cash columns, and ruled spaces for engagements, etc. The diary will be greatly appreciated by recipients on account of its up-to-date character in the matter of information and applicability.

MESSRS. MARTIN, WEAVER AND NURSE, LTD., paper agents and merchants, 11, Queen Victoria-street, London, are sending out a neat calendar. The figures are boldly printed on monthly tear-off sheets, while the dates for the whole year appear at the foot of each.



THE Limehouse Paperboard Mills, Ltd. have sent out, with their compliments for the season, a brass ash tray of serviceable size.

R. L. LUNDGREN, LTD., 222, Strand, W.C.2, convey their good wishes for the New Year in the form of a suede wallet fitted with a variety of pockets suitable for every purpose. It forms a useful and pleasant connecting link between the firm and its friends.

MESSRS. HEDQUIST AND WILKENING, paper and board merchants, Hamburg, have sent to their friends a neat pocket notebook, made upon the loose-leaf principle and serviceably bound. It conveniently fits the waistcoat pocket and refills can be readily substituted on the rings.

MESSRS. E. CHALMERS AND CO, LTD., dealers in papermakers' materials, Bonnington, Leith, have reproduced an illustration of their works on their 1926 calendar. A useful addition to the dates, is a cwt. table and postal information on either side of the tear-off slips.

A COPY is sent us of a brightly produced house organ "Pressings," emanating from the firm of Paper Fasteners, Eyelets and Metal Smallwares, Ltd., Wainwright-street Works, Aston, Birmingham.

CENSUS OF PRODUCTION.—In the House of Commons Sir Philip Cunliffe Lister (Board of Trade) said the forms on which the returns for the census of production in 1924 are to be made were issued some months ago. About 50 per cent. of these forms had been received back, with more or less complete particulars shown on them. He regretted very much that so much delay should occur in securing this very valuable information, and he would like to appeal to all the firms in default to respond at once to these requests for information.

THE NORTHFLEET PAPER MILLS, strongly encouraged by the management, make a strong point in promoting the social welfare of the employees. The sports club during the winter months organise a series of meetings, which take the form of whist drives, dancing, and excellent programmes of vocal and instrumental music. The committee are to be congratulated on the arrangements made, thus ensuring the complete success of these popular functions.

BUILT IN 4 SIZES.

THE "TIP TOP" PLATEN

is the finest and largest selling jobbing Platen on the market.

Low Price, without disappointment in efficiency or looks.

Economy without sacrifice of performance.

Great impressional strength without unnecessary weight.

High speed and utter simplicity in design.

The lowest upkeep cost, we believe, of any platen in the world.

A Good Investment

The man who owns a Tip-Top Platen has the pleasing assurance that it will continue to serve him efficiently long after another platen would have to be replaced.

Even though he should use it twice as long as an ordinary platen, he knows he would still take pride in its performance and appearance.

His Tip-Top is an INVESTMENT that will yield from 50% to 100% dividends on the original cost.

And when he does dispose of it, its resale value will appeal to him as a further sound reason for purchasing another Tip-Top.

Everlasting Paper.

Big Claim by a Vienna Typographer.

The Vienna correspondent of the *Daily Mail* sends a remarkable story of the claim of a young typographer of Vienna (August Groudmann), who, it is stated, has, after some years of experimenting, discovered a method of impregnating paper so that nothing can be written upon it after impregnation that cannot be completely removed with ordinary benzine. At the same time everything written or printed upon it before impregnation remains indelible after impregnation.

The application of the fluid used by Groudmann to paper of all kinds is twofold. Ancient books and manuscripts can be treated with it at a small cost, so that they will permanently withstand moisture and the ravages of insects. This is not a mere varnish. It cannot be washed off or removed by any means whatever without destroying the paper. Parchment can be treated with it just as effectively.

After a document, on the other hand, has been saturated, which takes 10 minutes at the most, and dried, nothing can be added with ink or pencil. The *Mail* correspondent has witnessed several tests where red ink, paint, and other substances were splodged over a letter or map till they appeared hopelessly disfigured, and a rub with benzine, or any kind of soap, followed by immersion in water, has removed every trace. This means, of course, that no forger could successfully tamper with a document impregnated after signature, to which nothing can be added that cannot be washed off with a sponge soaked in benzine.

The cost of impregnating all the millions of volumes in the British Museum and the other great libraries of Europe would not be prohibitive and they would last for ever, it is asserted. The paper is strengthened for handling. For instance, paper money lasts twice as long.

New Inventions

The following extracts are taken, by permission of the Controller of H.M. Stationery Office, from the Illustrated Official Journal (Patents). Full copies of Published Specifications (1s. each) can be obtained from the Patent Office, 25, Southampton Buildings, London, W.C.2

Printers' Rollers.

In an invention patented by Mr. A. B. Davis an inking-roller of the kind comprising a core of resilient material having an outer coating of printers' roller or like composition is formed by applying the composition to the core in a molten state and allowing the surplus to drain in an endwise direction from the roller. Fig. 2 shows an inking roller formed of a main body of rubber 20 provided with a coating of roller composition 21, the ends of the body being rounded to prevent accumulation of the coating material. The roller

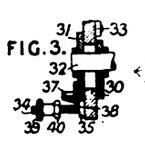
FIG.1.

composition may be composed of glue, molasses, glycerine and Venice turpentine, satisfactory proportions of which are 8½ lbs. of glue, 2 gallons of molasses, 1 pint of glycerine and 2 ounces of Venice turpentine. The coating apparatus shown in Fig. 1 comprises a frame 1 fitted at one end with uprights 3 and cross bars 4 to which a slotted upright 7 is adjustably secured by bolts 5 and wing nuts 6. A bearing is provided at the top of the upright 7 to receive one end of the shaft 10 of the roller R, the other end of the shaft 10 being held in a bearing 11 on a member 12 adjustably secured by bolts 9¹ to the sides of the frame. Molten roller composition is poured from a container 17 along the length of the roller, which is rotated meanwhile by a crank 15. The surplus coating material draining from the roller is caught in a trough 13 and collected in a receptacle 19.

Feeding Sheets.

In sheet-feeding devices for printing presses, &c., provided with suction nozzles capable of being tilted to an adjustable amount, means are provided whereby the adjustment can be effected while the machine is running. Mounted on a guide 4, carried by an arm 3 pivoted at 2 to the framing, is a slide 5 provided with a downwardly projecting lug 6. Pivoted at 7 in the lug 6 is an arm 8 bearing a tube 9

FIG.3.



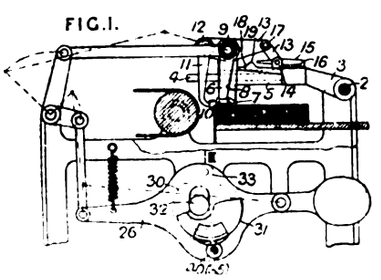


FIG.1.

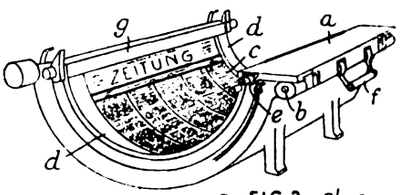
carrying suction nozzles 10, and a tube 12 bearing air blast nozzles 11. The tubes 10 are of such a length that, when tilted, the rear edges of the nozzles lie in the axes of the pivot 7. In the rearward position, as shown in full lines in Fig. 1, the slide 5 is locked to the arm 3 by a pivoted catch 15, which engages a projection 16 on the arm, the catch being carried by a lug 14 on the slide 5. Toggle links 13 connect the tube 9 with the lug 14 on the slide 5. Release of the catch is effected by a roller 17, carried by the links 13, striking the tail of the catch as the links are straightened when the slide 5 moves to the left in its forward movement. The toggle is broken on the return movement of the slide by the engagement of the roller 17 with a cam surface 18, 19 on the slide. Movement of the slide is effected by a spring-retracted lever 26 rocked about its pivot by cams 31, 30 on a shaft 32 engaging rollers 35, 33 on the lever. The amount of tilt imparted to the nozzles for thick sheets is shown in Fig. 1, while for thinner sheets the amount may be varied by an adjustable roller 40 in co-operation with an additional cam consisting of a laterally projecting segment 37 provided with a swell 38. The roller 40 is carried by a nut 39 moving on a screw 34 coaxial with the roller 35, and may be brought, by rotating the net 39, more or less into engagement with the cam 38 to vary the tilt of the tubes while the machine is running. The extent of the forward movement of the parts is shown in dotted lines in Fig 1, the arm 3 being lifted by cam and link mechanism during this movement. The invention is by Mr. H. Heenss.

Casting Stereotypes.

In a mould for casting stereo-plates of the kind in which a matrix clamp *a* holding one edge of a matrix *c* is connected to side bars *d* and thereby to a foot-bar *g* and is moved mechanically, on opening the mould, to strip the matrix off the cast plate, the clamp *a* is hinged to the mould and is provided with a projecting handle *f* by means of which the clamp, side-bars and foot-bar can be raised and lowered, when the mould is open, to ascertain whether the matrix is properly seated in the mould for casting. The clamp comprises movable and fixed jaws a^1, a^2 respectively, the handle *f* being fixed on a shaft *b* carrying eccentrics b^1 for actuating the movable jaw, and the jaw a^2 being pivotal about the shaft *b*, so that initial movement of the handle closes the jaws and further movement tilts the clamp as a whole. The bars *d*



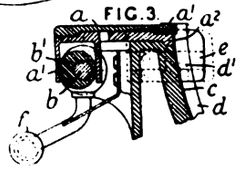


FIG.3.

carry pins d^1 engaging guides *e* fixed on the jaw a^1 such that in the open position of the jaw the bars are disconnected therefrom. This invention is by Mr. C. Winkler.

Printing Inks.

Mr. J. H. Caughlan has patented a process in which printing-ink is composed of a base of air-blown asphalt, a pigment, a binder, and a drier. In an example, air-blown asphalt is mixed with carbon black, linoleate of lead, and a binder composed of liquid asphalt and petroleum oil of the consistency of a thick cream.

The Paper and Board Consumer.

Matters of Interest to Printers, Bookbinders, Paper Box, Paper Bag, and Envelope Manufacturers, etc.

IT may not be particularly wise, but it is especially opportune, to refer once more to the subject of standardisation. As the days go by, the issue is becoming clearer, but not less difficult. Conversation with a good many leading merchants convinces us that they are more ready to give the new standards than most printers are to receive them. There is a growing determination in the trade to force the pace, and at least one very fine house has definitely arranged to make up, specify and sell all its papers entirely on the agreed basis from a given date onwards. Others are replacing their stocks as rapidly as possible with standard product. If the less enthusiastic houses will quickly realise that necessity is bound up with economy in the adoption of the new standards, it should not be very long before the first values of standardisation are appreciated all round, and even by those printers and paper users whose zeal for improvement is cramped by the fear of emergence from a deepened rut.

* * *

OUR own train of thought ran off the lines in the negotiation of that foregoing paragraph, or perhaps it would be more accurately conveyed if we said that we took points leading to another destination. What we did intend to bring forward was the question of stocktaking, as influenced by standardisation. Just about now, or a little later than these notes may be read, printers all over the country will be busily occuped itemising their paper stocks. With part of their stock bought and priced by the ream and part by the thousand-sheet basis, they will have to decide what method they are going to adopt to keep their records uniform. Here is the great opportunity to instal and prove the utility of the new basis. Abolish the use of the term ream, enumerate entirely by the thousand and its decimal parts, use the price conversion table and establish the new standard throughout for simple calculation. By this means the association with the new scheme will be so complete that there will be little thought of reverting to the use of the term ream. Incidentally, let us urge every printer and every papermaker to use the word mille, which is a term already employed in abbreviated form by every printer to denote thousand. What printer does not use the sign "M," which is nothing less than mille or thousand? Our own experience of the new basis teaches us that the use of this sign or term in ordering, specifying or using paper saves time, saves errors and makes for clearness in every conceivable way. For instance, how much simpler to order, specify or issue 150 m. than 150 thousand or 150,000 sheets. Or again 1·5 or 1·75 m. instead of 1,500 or 1,750 sheets.

THE number of labour disputes in the period January to October, 1925, in the paper, printing, etc., group of trades was 12, the number of workpeople involved being 18,000, and the aggregate duration in working days 71,000. In the corresponding period of 1924 there were 9 disputes, involving 3,000 workpeople, and representing an aggregate duration in working days of 17,000.

MESSRS. JOHN GALLOWAY AND CO., LTD., are producing a striking imitation art paper at Balerno Mills, Midlothian. An excellent water supply makes it possible to obtain a very fine white shade. The white paper is produced is seven sizes, each of two or more substances. In addition the firm make tinted imitation art in six useful and artistic shades, namely, blue, primrose, pink, buff, salmon and green. There are four sizes, the substances ranging from 40 lbs. to 80 lbs. The quality of the paper is exceptional, and the specimen before us shows the wonderful effects that can be obtained.

Empire's Newsprint Supplies.

The subject of providing for Imperial needs in respect of newsprint came under consideration at the Empire Press Conference. Mr. W. A. Craick (Canada), spoke of the condition and of the capabilities of Canadian mills in respect to supplying paper to other parts of the Empire. Referring to Canadian and United States production, he said that next year Canada would be definitely in the lead—a position which would entitle her to the distinction of being the largest producer of newsprint paper in the world. Mr. Craick proceeded to speak of the erection of a third mill on the British Columbia coast by interests which were taking over the properties of a company which had hitherto manufactured pulp only. There should be from now on a considerable surplus for export beyond the necessities of the home markets and of the United States. He spoke also of the schemes of reafforestation and improved methods of cutting and handling the wood in order to save one of Canada's greatest industries, and went on to say that, whereas five years ago there was not the capacity to supply the current demand for newsprint supplies, manufacturers were now looking for new markets for their products.

THE EBURITE PAPER CO., LTD., are now installed in their new works at Park Royal, and have a factory more than twice the size of the old premises at Paddington. They are able to cope with a larger turnover, and with the improvement in trade they are exceedingly busy, and hope for even better times in 1926.
